Geshe Jampa Gyatso: According to the Samkhyas, when liberation is attained, twenty-four of the twenty-five categories of objects of knowledge asserted by them vanish like a rainbow in the sky and all that remains is the being that is self, consciousness, and knower. Thus, all objects of knowledge – causes and results – vanish, leaving only the being. This liberation is not a realization of emptiness. When our system says that the mind realizing emptiness is like water poured into water, it means that just as the water present before cannot be distinguished from water that is added to it later on, similarly, the mind realizing emptiness and the object emptiness become one entity.

Student: In the context of discussing attachment, it was said that due to improper mental application, we exaggerate the attractiveness of the object; however, the object itself has some kind of attractiveness. Does this mean that the object has attractiveness from its own side? How is it possible for the object itself to have attractiveness according to Prasangika?
Geshe Jampa Gyatso: In the Prasangika Madhyamika system the beauty of a woman does not exist from its own side. However, the object does possess a factor of beauty. We then exaggerate this beauty, thinking, "It is beautiful. It is really beautiful," and so forth. In short, there is the beauty of the object in regard to which we think, "It is beautiful. It is more beautiful. It is the most beautiful," and then generate the wish to obtain it, whereby attachment is produced.

The object has a nature of attractiveness but that beauty does not exist from its own side. That attractive object is imputed by the conception thinking, "It is beautiful." In the Prasangika Madhyamika system, beauty is imputed by conception. An object can have one of two factors, attractiveness or unattractiveness; upon this basis, we exaggerate these qualities.
Student: Before the mind imputes attractiveness, is there already attractiveness?
Geshe Jampa Gyatso: There is not, because there is nothing that is not imputed by the mind. It can be debated as to which comes first, like in the case of the chicken and the egg. When attachment is produced, it is due to apprehending the object to be an inherently existent attractive object. In other words, due to the conception of true existence, one generates attachment. Aryadeva's *Four Hundred Stanzas* says:

> Like the body sense power [abides in] the body,
> Confusion abides in all.
> Therefore, when confusion is destroyed,
> All the afflictions are destroyed

Also, in regard to the concomitance between attachment and ignorance, it was said that attachment engages an object together with ignorance, this ignorance being the conception of true existence. Due to the conception of true existence, we conceive objects to be inherently attractive or inherently unattractive and then exaggerate these qualities, whereby attachment or anger are produced.

Student: In general, it is said that when two mental factors exist simultaneously in the retinue of the same main mind, they share five similarities. However, when ignorance and attachment exist simultaneously in the retinue of the same main mind, they do not have the similarity of aspect. Could Geshe-la please explain this seeming contradiction?
Geshe Jampa Gyatso: This question arises because the *Illumination* says that the ignorance that is the conception of true existence and attachment are concomitant. However, you are saying that is not clear how they are concomitant, in that ignorance and attachment do not have a similarity of aspect. But perhaps they do have a similar aspect. What is the aspect of attachment? Attachment has the aspect of attractiveness. Ignorance could also perhaps be said to have the aspect of attractiveness, although in general it is said that ignorance engages its object with an aspect of ignorance. There is an ignorance together with attachment that apprehends inherently existent beauty. This can be said to be the aspect of that ignorance. The object has no such aspect, but ignorance conceives it to exist in this way. The aspect of the conception of true existence is the object of negation, inherently existent beauty. Aspects can be understood in terms of objects and in terms of subjects. The conception of true existence is the subject-aspect, not the object-aspect. However, if it is insistently asked what is the object-aspect and what is the object of the mode of apprehension, they can be posited as the truly existent beauty.

Student: Foe destroyers in subsequent attainment have only the appearance of true existence; superiors have the appearance of true existence and occasions of adhering to true existence but disbelieve that phenomena truly exist; and ordinary beings have the appearance of true existence, adherence to true existence, and they believe in true existence. With regard to foe destroyers, is there the appearance of true existence without apprehending it?
Geshe Jampa Gyatso: If it is said that foe destroyers in subsequent attainment have the appearance of true existence, they must be specified to be sentient beings and hearer foe destroyers since buddhas are considered to be mahayana foe destroyers. For a buddha superior, meditative equipoise and subsequent attainment are one entity, therefore for a mahayana foe destroyer there is no appearance of true existence. However, for a hinayana foe destroyer in subsequent attainment there is the appearance of true existence. If it is asked whether they adhere to true existence, the answer is that they do not. If it is said that they must adhere to true existence because true existence appears to them, then the answer to that is there is no pervasion.

Do foe destroyers apprehend the appearance of true existence? There would be no fault in saying that they do. If the appearance of true existence is apprehended, there is no pervasion that a foe destroyer apprehends true existence. In short, a foe destroyer apprehends *the appearance of* true existence but does not apprehend true existence.

Some superiors have the conception of true existence in their continua but do not adhere to true existence. Thus, if a superior has a conception of true existence in his continuum, there is no pervasion that he adheres to true existence.

There is a difference between the way in which a person apprehends true existence and the way in which an awareness apprehends true existence. When it is said that a person adheres to the

true existence of a table, is it due to having the conception of true existence of table in his continuum? It is not. The way a person conceives of true existence is by way of asserting or accepting true existence. Therefore, a person can have realized non-true existence but still have the conception of true existence in his continuum up through the seventh ground. However, on the eighth ground and upward there is no conception of true existence.

According to the hinayana, the conception of true existence exists through the end of the continuum of a non-foe destroyer; therefore, only when the person becomes a foe destroyer is the conception of true existence abandoned. If a person has the conception of true existence in his continuum, there is no pervasion that he accepts true existence.

Although a person on the first ground disbelieves in true existence, there is a conception of true existence in his continuum. If one questions even an ordinary bodhisattva on the path of preparation as to whether things exist truly, he would answer that they do not, yet there is a conception of true existence in his continuum. The acceptance of true existence is the conception of the acceptability of true existence.

Student: In terms of experience what is the difference between an eye consciousness to which the impermanence of pot appears but is not apprehended and not appearing at all?
Geshe Jampa Gyatso: Usually it is said that only a buddha's eye consciousness apprehends both the pot and the impermanence of the pot because a buddha's eye consciousness is omniscient and therefore apprehends everything. With respect to an eye consciousness, appearing and not apprehending compared to not appearing at all are the same. When pot appears to an ordinary being, the eye consciousness does not apprehend the pot to be impermanent, but the person can apprehend it to be impermanent. When pot appears to a person and is apprehended, there is no pervasion that the person apprehends the pot to be impermanent. For example, a cat, which is a person [in Buddhist terminology], has the appearance of pot but does not apprehend the pot to be impermanent. On the other hand, Chogyal's eye consciousness apprehends pot, but Chogyal apprehends pot as impermanent. Thus, the eye consciousness does not apprehend the impermanence of the pot, only the person apprehends this.

END

Lama Tsongkhapa's *Illumination* (Tibetan text page 195-6) says:

> Then, [the sutra] says:
>
> > "Devaputra, the ultimate truth that has passed beyond ranging through to being an object of the exalted wisdom of an omniscient being possessing the supreme of all aspects is not like that expressed saying 'ultimate truth.' All phenomena are false, that is, deceptive, phenomena."
>
> The meaning of this [sutra] citation [is as follows]. "Devaputra, the ultimate truth that has passed beyond ranging through to being an object of the exalted wisdom of an omniscient being possessing the supreme of all aspects" indicates that ultimate truth has passed beyond being an object of the exalted wisdom of an omniscient being. The way in which it has passed beyond being its object is indicated by the statement, "[it] is not like that expressed saying 'ultimate truth,'" in that when "ultimate truth" is expressed, to the conception that follows upon those words object and subject appear as two separate, individual [things]. Likewise, for that exalted knower of modes of an omniscient being, [ultimate truth] has passed beyond being its object in the sense of appearing in this way. Since all phenomena that appear dualistically are false, deceptive phenomena, it is said that they do not exist in the perspective of a seer of the undeceptive which is suchness alone.

The sutra citation explained here by Lama Tsongkhapa also occurs in Chandrakirti's autocommentary. Here, it says that the ultimate truth has passed beyond all 108 phenomena, ranging from form through omniscience. The sutra says: "[it] is not like that expressed saying 'ultimate truth.'" To a conception that follows upon the words "ultimate truth," subject and object appear as two separate, individual things.

There is debate about the statement in sutra: "If ultimate truth has passed beyond through to being an object of the exalted wisdom of an omniscient being, is ultimate truth not an object?" If someone says that it is not that, we say: "Is it not an object of knowledge? If it is not, it is not an existent because it is not that suitable to be an object of an awareness." On the other hand, if someone says that ultimate truth has not passed beyond being an object of an omniscient mind, then we say that this would contradict this sutra.

Following upon the words "ultimate truth" a conception arises. Conception is a subject (an object-possessor), while ultimate truth is its object. How do they appear? These two appear dualistically as if separate, individual things. On the other hand, the subject, the exalted wisdom seeing modes, and the object, ultimate truth, are one entity like water poured into water due to the vanishing of dualistic appearance for the exalted wisdom of meditative equipoise. In other words, in the perspective of the exalted wisdom of meditative equipoise, there is the vanishing of dualistic appearance of subject and object. When ultimate truth appears to an exalted knower realizing modes, it appears in a manner of the vanishing of dualistic appearance. Thus, ultimate truth has passed beyond dualistic appearance. Thus, when the sutra says that ultimate truth has passed beyond being an object of an omniscient being it means that it has passed beyond appearing in a manner that is dualistic.

One can argue: "If an omniscient mind has the appearance of conventionalities it follows that it is not without dualistic appearances because it has the appearance of conventionalities." There are three levels of dualistic appearance: (1) the appearance of conventionalities, (2) the appearance of the object of negation, true existence, and (3) the appearance of subject and object as separate. There is no appearance of conventionalities to a superior's exalted wisdom of meditative equipoise. Based on this, it can be asked: "If there is the appearance of conventionalities is there necessarily dualistic appearance? Is there dualistic appearance for the omniscient mind knowing modes? Because, to that omniscient mind knowing modes, there is the appearance of conventionalities in that all phenomena

appear to that mind. This is because it realizes all phenomena directly due to being an omniscient mind." If someone says that the omniscient mind has dualistic appearance, we answer that it does not because it is an awareness for which dualistic appearance has vanished.

Sutra says: "All phenomena are false, that is, deceptive, phenomena." What are 'all phenomena'? They are conventional truths. But if it is asked "Does 'all phenomena' not include ultimate truth?," one can say that it does. All phenomena are one of the two truths because they are objects of knowledge and objects of knowledge are definitely two in number. There are many ways of being definite in number but here it refers to being definite in number by way of pervasion. Being definitely two in number by way of pervasion means that if it is an object of knowledge it is pervaded by being one of the two, either conventional or ultimate truth. Therefore, with respect to the sutra saying 'all phenomena,' if one says it refers to conventional truth, one can say "Kor sum!" in that if it is asked "Is not ultimate truth included in 'all phenomena?'" it has to be said that it is. Although ultimate truth is included in all phenomena, there is no pervasion that phenomena have to be ultimate truths. This is similar to a debate that occurs in *Collected Topics,* saying: Is object of knowledge a permanent phenomenon or functioning thing? The answer given is that it is a permanent phenomenon. Then it is asked: Are functioning things not included in objects of knowledge? However, there is no pervasion that because functioning things are included in objects of knowledge, object of knowledge is a functioning thing. If it is an existent it must be either a conventional truth or an ultimate truth; thus if it is not an ultimate truth it must be a conventional truth.

In short, in the perspective of the exalted wisdom knowing modes, ultimate truth, or suchness, there are no conventionalities.

Lama Tsongkhapa's *Illumination* (Tibetan text page 195) says:

> All these [sutra citations] are sources for [saying] that conventionalities, the aggregates and so forth, do not appear in the perspective of a direct seer of suchness. Therefore, in the perspective of a direct seer of suchness, all elaborations of phenomena – the two, things and non-things – are not possible because it does not observe the respective entities of those elaborations.

In short, conventionalities do not exist for an exalted knower seeing suchness. Ultimate truth is free from elaboration.

Chandrakirti's autocommentary says:

> Therefore, in suchness, the distinctions of thing and non-thing, one's own thing and another's thing, truth and not truth, eternalism and nihilism, permanent and impermanent, happiness and suffering, clean and unclean, self and selfless, empty and not empty, definition and illustration, oneness and otherness, production and cessation, and so forth are not possible because of not observing their self-entities.

Phenomena, thing and non-thing, one's own thing and another's thing, truth and non-truth, and so forth, do not appear dualistically to an exalted knower of modes. 'Thing' is usually that which is able to perform a function and 'non-thing' that which is unable to perform a function, but here it seems that thing refers to the subject and non-thing to the object. 'One's own thing and another's thing' refers to an object belonging to oneself and that belonging to someone else. A 'truth' is that which has a concordant mode of appearing and mode of abidance, whereas a non-truth is that which does not have a concordant mode of appearing and mode of abidance. Eternalism (the permanent) is inherent and true existence or permanent existence, whereas nihilism is the non-existence of phenomena if they do not exist inherently or truly. A permanent phenomenon is that which is a common locus of being a

phenomenon and not being momentary, and an impermanent phenomenon is that which is momentary.

Happiness is an experience of pleasure or contentment, suffering is an experience of pain. The clean is an aggregate that is not projected by the force of karma and afflictions, whereas the unclean is an aggregate projected by the force of karma and afflictions. Clean and unclean can also be discussed from the point of view of worldly conventions.

Self is discussed in two contexts: a self that is permanent, unitary, and independent and a self that is self-sufficient substantially existent. There is also an inherently existent self. Selfless is the lack of an inherently existent self. Empty is empty of inherent existence and true existence, whereas not empty is not empty of inherent existence and true existence. Empty and non-empty can also be discussed in terms of empty of a self that is permanent, unitary, and independent and not empty of a self that is permanent, unitary, and independent.

A definition is that which fulfills the three qualities of substantial existence (this is not according to the Prasangika Madhyamika system). Illustration is that which is a basis for ascertaining a definition prior to ascertaining a definiendum. Thus, before ascertaining a definiendum, one must first ascertain the definition. This is done by way of the illustration. The definition of definition can also be posited as: that which fulfills the three qualities of a positer of an aspect. What are these three qualities? The three qualities are: (1) in general, it is a definition, (2) it is established in terms of its own basis of illustration, and (3) it is the definition of that which is its own definiendum and not of any other.

Oneness is defined as that which is not diverse. Otherness is defined as that which is diverse. On the other hand, one substance is defined as that which is not diverse and does not appear separately, whereas other substance is defined as that which is diverse and appears separately.

"Cessation" should perhaps be translated as "ceasing." Texts say that if it is a compounded phenomenon, it is produced and ceases. Ceasing, or cessation, should *not* be understood in terms of the attributes of compounded phenomena of production, abiding, and cessation.

"Are not possible" means that these pairs cannot exist inherently. Chandrakirti says that this is because their own entities are not observed.

With respect to this passage in the autocommentary, Lama Tsongkhapa merely says: "Therefore, in the perspective of a direct seer of suchness, all elaborations of phenomena – the two, things and non-things – are not possible because it does not observe the respective entities of those elaborations."

Chandrakirti says:

> Therefore, like that, to contemplate suchness, only the aryas are valid; those who are not aryas, are not.

Ordinary beings are not valid with respect to suchness.

Lama Tsongkhapa's *Illumination* (Tibetan text page 195) says:

> Therefore, with respect to the thought of suchness, explicitly superiors alone are valid; non-superiors are explicitly not valid. Therefore, the refutation of production from other in the perspective of a superior's seer of the ultimate is not harmed by the world.

The world cannot harm the refutation of production from other in the perspective of a superior's seer of suchness.

Tuesday morning, 27 June 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 195) says:

> 3B1C-2B3E-2A1B-2B1B-1B4 Indicating that which invalidates the harm by the world to the refutation [of production from other]

Chandrakirti's autocommentary (Tibetan text page 73) says:

> In case the perceptions of the world about analyzing thusness were also accepted as valid states due to a desire to express the damage of the world, [let it] be like that and:
>
> *If the world were valid, since the world [would] see thusness,*
> *What would be the need for the other aryas?*
> *What could be done by the arya path?*
> *The foolish as valid is also unreasonable.* [6.30]
>
> Because the world is accepted as just valid and just it perceives thusness, if it is necessary that ignorance is accepted as being abandoned, why are the foolish not also reasonable as valid? Whoever has unknowing that is the subject of something, they are seen as not being valid regarding that. For example, with regard to investigating precious jewels and so forth, like those not knowing that.
>
> Because only those with pure eyes and so forth ascertain thusness, since the endeavor in morality, hearing, contemplation, meditation, and so forth in order to bear the arya path in mind also would not bear result – it is not like that. Therefore:
>
> *The world is not valid in all aspects, therefore,*
> *In the context of thusness there is no damage of the world.* [6.31ab]
>
> In the aforementioned fashion, in the context of suchness, the world is not valid in every aspect and in the context of suchness, there is no damage of the world.

There is no harm from the world to the refutation of production from other, although the world maintains that there is production from other. This is because in the context of analyzing suchness, worldly beings are not valid. If worldly beings were valid with respect to analyzing suchness, what purpose would there be for superiors? What would be the purpose of cultivating a path and striving in it since the worldly would see suchness?

Chandrakirti says: "The foolish as valid is also unreasonable." Although the Prasangika Madhyamikas accept the world as valid in general, they say that it is not valid in the context of analyzing suchness. Thus, they say that whereas the seeing of the world is valid, worldly beings are not valid with respect to suchness because, if they were valid in the context of analyzing suchness, there would be no purpose to cultivating and striving in a superior's path.

Chandrakirti says: "Because only those with pure eyes and so forth ascertain thusness, since the endeavor in morality, hearing, contemplation, meditation, and so forth in order to bear the arya path in mind also would not bear result – it is not like that." In order to cultivate a superior's path one must safeguard morality, listen to teachings, contemplate and meditate on them, and so forth. Morality is the foundation or basis on which qualities can be generated, just as the earth is the basis for the growth of all vegetation. Similar to the fact that the better quality the earth, the better quality the harvest, likewise the better the morality, the better the qualities produced. There are different types of morality or ethics such as the vows of individual liberation, bodhisattva vows, and tantra vows, as well as formulated codes of ethics and natural codes of ethics. Observing natural codes of

ethics is refraining from non-virtuous actions that bring the result of suffering in the future and engaging in virtuous actions that bring the result of happiness in the future. The Tibetans say: "If you live in the village of Yalung, you should propitiate the local god," which means that when you live in a certain place you should keep the rules of that place. We should not be like politicians who talk a lot about morality but often behave in the opposite way!

On the basis of morality one should accumulate the hearing of many teachings, reflect on them, and then meditate on them.

In short, there is no harm from the world to the refutation of production from other. This is because the refutation of the production from other is only in the context of analyzing suchness and in the context of analyzing suchness, worldly beings are not valid. For this reason, worldly beings do not harm the refutation of production from other. In other words, worldly beings are not valid with respect to production from other.

Lama Tsongkhapa's *Illumination* (Tibetan text page 195-6) says:

> Chandrakirti says:
>
> > *If the world were valid,*
> > *Since worldly beings would see suchness, what need would there be*
> > *[For it to be seen] by others, the superiors? What could be done by a superior's path?*
> > *The foolish as valid is not even feasible.* [6.30]
> >
> > *Therefore, in all aspects the world is not valid. Because of that,*
> > *In the context of suchness there is no harm from the world.* [6.31ab]
>
> Wishing to express the harm from the world in regard to refuting production from other as ultimate, [there is the following explanation]. In the context of analyzing suchness, if even a seer of the world were asserted to be valid with respect to suchness, it would be as [follows]. *If* a seer of *the world were valid* with respect to suchness, *since* normal *worldly beings would* directly *see*, that is, realize, *suchness* and, in addition, they would have [directly realized it] from beginningless cyclic existence whereby ignorance would have to be asserted to have been abandoned, *what need would there be* for suchness to be directly realized *by others, the superiors?* There would be no purpose. Also *what could be done by* seeking *a superior's path?* There would be no purpose.

With respect to the refutation of production from other, there is no harm from the world. If it were the case that worldly beings realize suchness, there would be no purpose to cultivating a superior's path. This is because if worldly beings were valid with respect to suchness they would have realized suchness, and if this were the case they would have realized it from beginningless time in cyclic existence whereby it would be necessary to say that they have abandoned ignorance. If this were the case, there would be no need for them to cultivate a superior's path as they would have already abandoned the conception of true existence due to having directly realized emptiness. In that case, what need would there be to cultivate a superior's path? In short, a seer of the world is not valid with respect to suchness.

Lama Tsongkhapa's *Illumination* (Tibetan text page 196) says:

> *The foolish*, who are normal worldly beings, *as valid* with respect to suchness *is not even feasible*. *Therefore*, in the context of analyzing suchness, *in all aspects*, that is, in every way, a seer of *the world is not valid* with respect to suchness. *Because of that, in the context of suchness there is no harm from the world*.

The foolish, who are normal worldly beings, are not valid with respect to suchness. Since they are never valid with respect to the analysis of suchness, how could there be harm from the world to the

refutation of production from other? Who is it that says that there is harm from the world to the refutation of production from other?
Student: Perhaps it is the lower Buddhist schools.
Geshe Jampa Gyatso: Why would they say that?
Student: The Svatantrika Madhyamikas say that there is production from other and that production from other exists because other inherently exists.
Geshe Jampa Gyatso: If the Svatantrika Madhyamikas say there is harm from the world to the refutation of production from other, how is there harm?
Student: The Prasangika Madhyamikas assert that there is no production from other, whereas because the Svatantrika Madhyamikas say that there is production from other in the context of the world they say that the Prasangika Madhyamikas' assertion is harmed by the world.
Geshe Jampa Gyatso: Who is the world?
Student: The world includes everyone from uneducated farmers to those who study the Svatantrika Madhyamika tenets.
Geshe Jampa Gyatso: It is correct to say that those who have not trained in terminology are "the world," or worldly beings. They see that, having planted a seed in a field, there is the production of a plant; therefore, there is production from other. The lower schools say that the Prasangika Madhyamikas' assertion is harmed both by reasoning and by the world.

By mentioning the specification 'as ultimate' in the statement, "Wishing to express the harm from the world in regard to refuting production from other as ultimate," the Svatantrika Madhyamikas are included. In the Svatantrika Madhyamika system, production from other is not refuted, whereas production from other *as ultimate* is refuted. Therefore, those who say that the refutation of production from other as ultimate is harmed by the world are the lower schools from the Chittamatra downward. This is because they say that there is production from other as ultimate. They say that if there were no production from other ultimately, there would be no production from other at all. Thus, this outline can be understood in terms of there being harm to both Madhyamika schools from the world. The proponents of true existence say that the two Madhyamika schools are harmed by the world because production from other is seen by the world and established for the world. The proponents of true existence dispute the two Madhyamika schools saying: "Is son not other than mother? If they are not other, are they one?"

When this harm from the world to the Madhyamika schools' refutation of production from other is pointed out by the lower schools, the Svatantrika Madhyamikas respond that they accept that there is production from other but that there is no production from other ultimately. On the other hand, the Prasangika Madhyamikas respond that although there is production of a son from a mother, there is no production from other because the production of a son from a mother is not production from other. The production of a son from a mother is not production from other because an inherently existent mother cannot give birth to an inherently existent son. Thus, the Prasangika Madhyamikas say there is no production from other.

Lama Tsongkhapa's *Illumination* (Tibetan text page 196) says:

> Although there are both those who say "Stating 'in all aspects the world is not valid' (v. 6.31a) demonstrates that this system does not assert [a seer of the world] as valid at all, therefore, that system, moreover, is not pure" and others who say "[Therefore,] that system is excellent," they are similarly said to not realize the assertions of this master, [Chandrakirti]. Therefore, because their respective presentations are limited, with regard to presenting a seer of the world as not valid in all aspects with respect to suchness they understand [Chandrakirti] as not asserting [a seer of the world] as valid in general. A valid cognizer and an object of comprehension, moreover, as is said in *Clear Words*, having been refuted to be established by way of their own entity should be taken, as is

explained, to be posited as valid cognizer and object of comprehension that are posited interdependently. This will be explained later on.

The first opinion, "Stating 'in all aspects the world is not valid' (v. 6.31a), demonstrates that this system does not assert [a seer of the world] as valid at all, therefore, that system, moreover, is not pure," is not correct. When Chandrakirti says that "in all aspects the world is not valid," it means that the world is not valid with respect to suchness in all aspects, not that it is not valid at all.

Likewise, the second opinion, "Stating 'in all aspects the world is not valid' demonstrates that this system does not assert [a seer of the world] as valid at all, therefore, that system is excellent," is also incorrect. Lama Tsongkhapa says that both these people have not understood Chandrakirti's assertions correctly. The line from the root text, 'in all aspects the world is not valid,' means that worldly beings are not valid with respect to suchness; it does not mean that worldly beings are not valid at all. Lama Tsongkhapa says that those who hold such opinions have understood Chandrakirti to mean that he does not accept valid cognition. However, Chandrakirti does accept valid cognition since *Clear Words* says: "A valid cognizer and an object of comprehension, having been refuted to be established by way of their own entity, should be taken, as is explained, to be posited as valid cognizer and object of comprehension that are posited interdependently." A valid cognizer is posited in dependence on its object of comprehension and an object of comprehension is posited in dependence on a valid cognizer. For the Prasangika Madhyamikas, everything is posited interdependently. Dharmakirti's *Commentary on [Dignaga's] Compendium of Valid Cognition* says: "Because there are two types of objects of comprehension, there are two types of valid cognizers." It can also be said that because there are two valid cognizers, there are two objects of comprehension. The two types of valid cognizer are valid direct perceivers and inferential valid cognizers. The first is produced without depending on a reason, whereas the latter is produced in dependence on a reason. The objects of a valid direct perceiver are manifest phenomena, whereas the objects of a valid inferential cognizer are hidden phenomena. Although in general there are two types of valid cognizers, in *Clear Words* there is a presentation of four types.

Lama Tsongkhapa says: "This will be explained later on." 'Later on' refers to a coming passage in the *Illumination* (Tibetan text page 280).

Lama Tsongkhapa's *Illumination* (Tibetan text page 196) says:

3B1C-2B3E-2A1B-2B1B-1B5 Indicating the way of harming that is harm by the world

Chandrakirti's autocommentary (Tibetan text page 74) says:

If asked: Well then, how is there damage by the world?
It is explained:

Since the objects of the world are renowned to the world,
If denied, the world will damage. [6.31cd]

For example, someone mentions, "A substance of mine was stolen," and another disputes and interrogates him: "What is the substance?" Upon his comment, "A vase is the substance," he is refuted by him saying, "A vase is not a substance because of being an object of comprehension, like a dream vase." With regard to such objects and so forth, since the objects of the world are just renowned to the world, to make a denial will be harmed by the world.

When abiding in an arya's perception, learned beings take it as valid, then there will not exist the harm of the world. The learned should also analyze others by this position.

In this example, one person says "A substance of mine has been stolen," to which a second person asks, "What substance?" To this, the first person responds "A pot is the substance," with respect to which the second person says: "A pot is not a substance because it is an object of comprehension, like a dream pot." In other words, the second person says that the first person's pot has not been stolen because it is like a dream pot. However, such a response is incorrect in that it is harmed by the world. In other words, if someone says something that goes beyond what is renowned to the world then the world harms his statement. What is renowned to the world? It is that which is well known to worldly beings. That which is known to them cannot be harmed by the world itself. In addition, the valid cognizer of a superior realizing that there is no production from other cannot be harmed by the world.

Lama Tsongkhapa's *Illumination* (Tibetan text page 195) says:

> Chandrakirti says:
>
> > *When an object of the world is denied*
> > *By means of renown itself, there is harm by the world.* [6.31cd]
>
> QUESTION: Well then, how is there harm by the world?
> RESPONSE: *When an object* that is renowned to and established for *the world* itself *is denied by means of the renown* of the world *itself*, *there is harm by the world* to that person. For example, someone says, "A substance of mine has been taken," and another person questions him asking, "What substance?" Then, in regard to his saying, "A pot," the other refutes this saying, "A pot is not a substance because it is an object of comprehension, like the pot of a dream." Objects such as this refutation and so forth are harmed by the world.
>
> When a being skilled in the ultimate is taken to be valid and suchness is settled in dependence on a superior's seer of the ultimate, there is no harm from the world.

If someone says, "A substance of mine has been taken" and another person questions him, asking, "What substance?," if he answers, "A pen," the other refutes this saying, "A pen is not a substance because it is an object of comprehension, like the pen of a dream." When the second person refutes the first person, does he not set forth a correct proof? Stating "If it is an object of comprehension it is pervaded by not being a substance" is a case of counter-pervasion.

Another example is someone goes to the village of Pomaia and says, "A substance of mine was stolen," and upon being asked what was stolen he answers "My T-shirt." If the second person says, "Your T-shirt is not a substance because it is an object of comprehension, like the T-shirt of dream," this person is not correct. In other words, it is incorrect to say that he has lost the T-shirt of a dream and not an actual T-shirt.

Lama Tsongkhapa also says that that which is established by a superior, for example, the refutation of production from other, cannot be harmed by the world.

Tuesday afternoon, 27 June 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 197) says:

> [The passage from Chandrakirti's autocommentary] "The learned should also analyze others by means of this position" [means as follows]: When [someone] says, "I am not the owner of the pot and Devadatta is not the robber..." and when [someone else] says, "It is produced in my field," and in response to the question, "What is produced?", says, "A sprout," those who assert statements [such as] "A sprout is not produced because it is an object of comprehension" and "Like a person and a sprout in a dream" to be the great reasonings of the Middle Way are shown to be harmed by the world.

The statement "I am not the owner of the pot and Devadatta is not the robber..." is related to the previous dialogue regarding a stolen pot. Lama Tsongkhapa says that the learned should analyze other situations using this same logic.

In the second example, the object under analysis is the production of a sprout in a field. As in the first example, someone says, "It is produced in my field," to which a second person asks "What is produced?" Upon the first person responding, "A sprout," the second person says "A sprout is not produced because it is an object of comprehension, like the sprout of a dream." "If it is an object of comprehension it is not produced" is the counter-pervasion. The example "like a sprout in a dream," is a correct example since it is true that a sprout in a dream is not produced. The argument can be set out as a syllogism: A sprout, as a subject, is not produced because it is an object of comprehension, like a sprout in a dream. This means that if it is an object of comprehension the non-production of a sprout is established upon the basis, a sprout in a dream. Is a sprout in a dream an object of comprehension?
Student: No, it is not an object of comprehension.
Geshe Jampa Gyatso: It follows that a sprout in a dream is non-existent. From this, it follows that there is no person in a dream, etc. Does a sprout in a dream exist?
Student: It does.
Geshe Jampa Gyatso: Does a dream son exist? If so, what is he like? Is the sprout of a dream an appearance that arises for a dream consciousness or for sleep consciousness? Is there a difference between a dream consciousness and a sleep consciousness? Does a sprout of a dream appear to a sleep consciousness or to some other consciousness?
Student: It appears to a sleep consciousness.
Geshe Jampa Gyatso: Can that appearing to a sleep consciousness in a similar aspect be defined as a dream?
Student: A sprout appears to a dream consciousness, but since a dream consciousness is not a valid cognizer, the sprout does not exist because it is not cognized by a valid cognizer.
Geshe Jampa Gyatso: Then what is the sprout of a dream? The son of a dream? The elephant of a dream? The deity of a dream?
Student: Due to the ripening of past karma, images appear to a dream consciousness and are observed by a sleep consciousness.
Geshe Jampa Gyatso: Is the sprout of a dream a consciousness, a form, a non-associated compositional factor, or a permanent phenomenon?
Student: It is the object of a dream consciousness that is dreaming, therefore, it is a form sphere for that consciousness.
Geshe Jampa Gyatso: If it is a form sphere, is it color or shape? The sprout of a dream is not a sprout. But the sprout of a dream has a similar appearance to sprout. Is it like a reflection of a face in a mirror? Think about it.

Lama Tsongkhapa says: "those who assert such statements to be the great reasonings of the Middle Way are shown to be harmed by the world." If someone says that the statement "A sprout is not produced because it is an object of comprehension, like a sprout in a dream" is the great reasoning of the Middle Way this would be harmed by the world. In other words, such reasoning is not the reasoning of the Middle Way.

Lama Tsongkhapa's *Illumination* (Tibetan text page 197) says:

> 3B1C-2B3E-2A1B-2B1B-2 Dispelling harm from the world through production from other not existing even in the conventions of the world

Chandrakirti's autocommentary (Tibetan text page 75) says:

Although, having accepted production from others through the renown of the world, the damage of the world was completely abandoned, now, since even in the world, production from others does not exist, in order to indicate that, "damage of the world does not exist," with regard to accepting production from others as refuted even by abiding in that view, it is explained:

Because, having cast mere seed, the world
Announces, "I produced this boy," and also
Considers that the tree was planted. Due to these conceptions,
Production from others does not exist even in the world. [6.32]

When finely indicating someone made conspicuous due to [having] the male faculty, the comment, "I produced this boy," is made. This [man] did not insert a [boy] of such an aspect within the mother of the [boy] having ejected it from his body.

If asked: Then what [was inserted into the mother]?

A mere impurity that was the seed of that [boy]. Because this [father] brought forth his son having emitted the cause of the [son], therefore, the two, the seed and the boy, are not mere others. [Such] statements are clearly ascertained in the world.

If there were otherness, like another person, that [boy] would also not be finely indicated [saying, "I produced him."]. It should also be applied similarly for a seed and a tree.

Simply said, there is no harm from the world to the refutation of production from other because worldly beings do not accept causes and results as other. In the world, people say "I produced that boy" and when they plant a seed in a field, in regard to the tree that is produced, they say "I planted that tree" and not "I planted that seed." Likewise, when a man puts an impurity in a woman's womb and a son is produced, he says "I produced that boy" and does not say "I put that impurity." Thus, production from other is not accepted even in the world, whereby the refutation of production from other is not harmed by the world.

Lama Tsongkhapa's *Illumination* (Tibetan text page 197) says:

Therefore, even though by asserting production from other in the perspective of what is renowned to the world, harm from the world was abandoned, now, since production from other does not exist even for a seer of the world, in order to indicate "There is no harm from the world" – even from the point of view of those abiding in the views of the world – to the assertion that production from other is refuted there is [the following] explanation.
Chandrakirti says:

Because of that, since worldly beings, having planted a mere seed,
Say "I produced that boy" and
Conceive "I also planted that tree,"
Production from other does not exist even for the world. [6.32]

Because of that reason, when *worldly beings* point out someone with a male faculty they *say "I produced that boy."* Even though they say so, it is not the case that that father ejected someone with a male faculty from his own body and inserted it into the mother of that boy. Then, what [is the case]? He *planted*, that is, put, *a mere* impurity which is the *seed* of that boy's body into the womb of his mother.

The assertion of production from other is not harmed by the world because worldly beings do not understand the meaning of production from other. However, Lama Tsongkhapa then says: "'There is

no harm from the world' – even from the point of view of those abiding in the views of the world – to the assertion that production from other is refuted."

Chandrakirti says: "Production from other does not exist even for the world." Lama Tsongkhapa says: "Because of that reason, when worldly beings point out someone with a male faculty, they say "I produced that boy." Although they say this, it does not mean that this man ejected a boy from his body and inserted it into the mother's womb. Rather, he inserted an impurity that is a seed into the mother's womb, whereby a son was produced. The impurity inserted by him into the mother's womb joined with an egg, into which a consciousness entered, whereby it developed into a child. Due to this, people say "I produced that boy" or "I produced that girl."

Lama Tsongkhapa's *Illumination* (Tibetan text page 197) says:

> Because of that, that father, having expelled the cause of that boy's body, points him out as his son.

The father does not think of the cause, the impurity, and the result, the son, as other. Therefore, production from other is not even mentioned in the world.

Lama Tsongkhapa's *Illumination* (Tibetan text page 197) says:

> Therefore, the statement "The two, the seed and the boy, are not conceived to be an established by way of their own character other" is clearly ascertained in the world.

The seed and the boy are not conceived by the world to be an established by way of its own character other.

Lama Tsongkhapa's *Illumination* (Tibetan text page 197) says:

> Due to that, the conception that the two, the impurity which is the seed and the boy, and the two, a barley seed and sprout, and so forth are *produced from other does not exist even for the world*.

The world does not say that the two – the impurity that is the seed and the boy – are produced from other. For worldly beings they are one, but if asked whether they are one, the answer is that they are not. Worldly beings think "I produced that boy" and do not think that it was produced from other. If a farmer, for example, is asked "Are a barley seed and sprout one?", he would answer that they are not. But if he is asked "Is there production from other?", he would not know how to respond.

Lama Tsongkhapa's *Illumination* (Tibetan text page 198) says:

> If they were conceived to be an established by way of their own entity other, based on that boy, who is like another person, one would not point to him saying "I produced him." Similarly, if having planted the mere seed of a tree, a tree is produced from it, *since* one *conceives* "*I planted that tree*," that there is no production from other and so forth in the perspective of the world is to be applied as before.

If the impurity that is the seed and the boy are conceived to be an established by way of their own entity other, it would be like someone pointing to the son of another family and saying "I produced that son." For example, Maurizio would not point to Gianni's child saying "I produced that son." Also if Nobil plants a seed, no one else would say "I planted that tree;" Nobil alone would say that. Thus, there is no production from other even in the world.

Lama Tsongkhapa's *Illumination* (Tibetan text page 198) says:

> The two seeds that were planted are not a tree and not a boy. However, if, in dependence on planting those two [seeds], a tree and a boy are produced, based on those two, one can posit "I produced them." For example, although a hand that is ailing and a hand that is healed are not the person, that person can be posited as ailing or healed due to an ailing or healed hand.

For example, if one has an ailing hand one says "I am sick," and when the hand is healed one says "I am better." This is in spite of the fact that the hand is not "I," but a limb of the body. Why does one say "I hurt" when the hand is painful? Or why does one say "I am sick" when one has a headache?
Student: Because there is a feeling related to the hand, one says "I am sick."
Geshe Jampa Gyatso: When the hand is burnt, why does someone say "I am burnt"? Is it related to an innate awareness that automatically arises without reasoning? Our hand is part of our body and our body is one entity with the self; therefore, there is an innate awareness thinking, "I am sick." There is a relation of one entity between body and self. What do you think about this?
Student: The hands and so forth are the basis of imputing the self.
Geshe Jampa Gyatso: The aggregates and so forth are one entity with the I. Is the basis of imputation one entity with the imputed phenomenon?
Student: It is.
Geshe Jampa Gyatso: In general it is said that the basis of imputation and the imputed phenomenon are one entity. I once debated this, saying that they are not one entity, and gave the example of a rikshaw driver. My point was that the name 'rikshaw driver' is given on the basis of the rikshaw. Likewise, when we say 'car driver' the basis of imputation is the car itself. These two, the car and car driver, are not one entity. The defendant had a hard time refuting me!

Wednesday morning, 28 June 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 198) says:

> Thus, even though in the conventions of the world there is no production from other, the existence of production from other cannot be refuted by a seer of the world because the refutation of cause and result as inherently different entities is definitely based on the reasoning analyzing suchness.
>
> Therefore, the meaning of production from other asserted by other proponents of tenets is production from an other that is established by way of its own character; it is not [production from an other] that is merely established as another entity since merely that is not even not established in the perspective of the world.

For ordinary worldly beings who are not learned in tenets, there is no convention of production from other. However, a seer of the world cannot refute production from other because in order to refute this one must apply the reasoning analyzing suchness. In other words, in order to refute that cause and result are inherently other, one must use the reasoning analyzing suchness. Analyzing production from other is analyzing suchness. Therefore, in order to refute production from other, one must apply the reasoning analyzing suchness. A reasoning analyzing conventionalities cannot refute production from other. Production from other, for those who assert it, is production of a result established by way of its own character from a cause established by way of its own character, or the production of an inherently existent result from an inherently existent cause. Production from other that is production from an other that is merely established as another entity is not the criteria for establishing production from other because phenomena are accepted by the world to be produced from other. Seed and sprout, according to the world, are established as other entities. Although the sprout being an other entity from the seed is acceptable to the world, this does not mean that the world asserts production from other. This is because production from other means an inherently existent result is produced

from an inherently existent cause. Likewise, the Prasangika Madhyamika system does not assert that seed and sprout are one entity, but that they are different or other entities. However, if someone disputes them, saying "Sprout, as the subject, it follows that it is produced from other because it is produced from a seed which is a different entity," the Prasangika Madhyamikas would say that there is no pervasion.

Lama Tsongkhapa's *Illumination* (Tibetan text page 198) says:

> The meaning of "Production from other does not exist even for the world" (v. 6.32d) is not merely "A normal worldly being does not conceive substantial cause and result, such as seed and sprout and so forth, to be an established by way of their own character other"; it is to be understood also as indicating that production from other does not exist even in conventional terms.

Normal worldly beings do not conceive a substantial cause, the seed, and a substantial result, the sprout, to be an established by way of their own character other. In addition to this, "Production from other does not exist even for the world" is also to be understood as meaning that production from other does not exist even in conventional terms.

Lama Tsongkhapa's *Illumination* (Tibetan text page 198) says:

> Also, the commentary that refutes production from both [in Chandrakirti's text in the context of explaining v. 6.98] clearly states that there is no production from other even in conventional terms, saying:
>
> > Just as indicated above "production from self and other are not feasible either as a worldly conventionality or ultimately," likewise, also propounding two important phrases is not possible due to the reasonings that were explained.

The autocommentary (Tibetan text page 127) says:

> *Production from two is also not a reasonable entity,*
> *Because those faults that were already explained will accrue.* [6.98ab]
>
> There, those [Nirgranthas or Jainas], who propound phrases in two possibilities,[28] consider production from both since production occurs from self and also occurs from other.

"Phrases in two possibilities" (better translated as "two important phrases") refers to production from self and production from other.

In short, production from other is not mentioned in the world even in conventional terms. The Prasangika Madhyamikas say that just as there is no production from other for the world, there is no production from other.

Lama Tsongkhapa's *Illumination* (Tibetan text page 198-9) says:

> *Clear Words* says:
>
> > QUESTION: If there is no production of things from self, other, both, and causelessly, why is it that the Bhagavan said "Karmic formations [are produced] by the condition of ignorance"?

[28] Skt: *syadvada*; Tib: *gal nyi.su smra.ba* – 'those who propound two possibilities.' The phrase 'it might be,' or 'in the case that,' is especially used in Jaina works.

> RESPONSE: I will explain this. They are conventionalities, not suchnesses.
>
> This means that the karmic formations and so forth produced by ignorance are conventionalities; they are not ultimates.

Since there is no production from self, other, both, and causelessly, someone asks why the Buddha said that karmic formations are produced from the condition of ignorance. The answer is that production from other is discussed in the context of the reasoning analyzing the ultimate, whereas the fact that karmic formations are produced from the condition of ignorance is discussed in the context of conventionalities. Conventionally from ignorance there is production of karmic formations, from karmic formations there is the production of consciousness, from consciousness there is the production of name and form, and so forth. Thus, serial production exists conventionally. When the twelve links are discussed in terms of a previous link producing a later link, is this presentation in terms of completing one round of the twelve links or more than one?
Student: It involves more than one.
Geshe Jampa Gyatso: One round of twelve links means that all twelve links occur in a single rebirth. First, there is ignorance. From it, arise karmic formations, which are deposited on the consciousness. These are then nourished by craving and grasping and then intensified by becoming. In the second moment following that, there is birth and simultaneously name and form. In the second moment following that, there can be either aging or death, as well as the link of the six spheres (the formation of the senses). This is followed by contact (the meeting of object, sense power, and consciousness), which in the second moment is followed by feeling. This is the way in which one cycle of the twelve links occurs in a single rebirth. There is another way of explaining the twelve links in terms of their being completed in more than one rebirth.

When the condition, ignorance, produces karmic formations, this is in terms of conventionalities and not in terms of the ultimate. The Prasangika Madhyamika system's presentation of the twelve links is explained in the 26th chapter of *Fundamental Wisdom*.

Lama Tsongkhapa's *Illumination* (Tibetan text page 199) says:

> QUESTION: "What is it that is explained in the presentation of conventionalities?"
> RESPONSE: "Conventionalities are asserted to be established merely by this conditionality; they are not [established] by means of asserting the four positions."
>
> This clearly says that production from the four positions is also not asserted in regard to asserting the production which is the arising of *this* in dependence on *that* condition conventionally.

> Therefore, saying "In this system production from other is not refuted conventionally" is the explanation of those who do not realize this system well.

The question "Why is the presentation of conventionalities explained?" arises from the fact that in terms of conventionalities, karmic formations are produced from the condition of ignorance. The four positions mentioned here are: (1) production from self, (2) production from other, (3) production from both, and (4) causeless production. Conventionalities are not asserted in terms of these four positions.

Lama Tsongkhapa says: "Therefore, saying "In this system production from other is not refuted conventionally" is the explanation of those who do not realize this system well." Someone who says that the Prasangika Madhyamikas assert that production from other exists conventionally but not ultimately has a wrong understanding of the Prasangika Madhyamika system because this system says that production from other does not exist either conventionally or ultimately. On the

other hand, the Svatantrika Madhyamikas say that although there is production from other conventionally, there is no production from other ultimately.

Lama Tsongkhapa's *Illumination* (Tibetan text page 199) says:

3B1C-2B3E-2A1B-2B1C Indicating the excellent qualities of such a refutation

Chandrakirti's autocommentary (Tibetan text page 75) says:

Therefore, in order to indicate the quality in the manner of so explaining [things as without inherent existence][29] by way of establishing dependent arising without eternalism or nihilism, it is explained:

Because the sprout is not other than the seed, therefore,
At the time of the sprout, the disintegrated seed does not exist.
Because oneness is non-existent, therefore, also
At the time of the sprout, one does not express, "The seed exists." [6.33]

If the sprout were just other than the seed, the continuity of the seed would doubtlessly also be cut off while the sprout is existing, because, although cows were to die, it is not that the continuity [of their species] would not be cut due to the existence of wild cattle and although aryas were to pass beyond sorrow, it is not [that their continuity would not be cut off] due to the existence of ordinary beings.

Because otherness does not exist, like the self-essence of the sprout, the seed is not cut off. Thus, nihilism is abandoned. Since oneness does not exist, that itself which is the seed is not the sprout. Hence, because of refuting the non-disintegration of the seed, eternalism is also refuted.

As was taught [in the *Extensive Sport Sutra*]:

If the seed exists, so does the sprout;
Whatever is the seed, that itself is not the sprout.
It is not other than that, it is not that either.
Thus, the *dharmata* is not eternalistic, not nihilistic.

"If the seed exists," means "if the seed were to exist."

If it is said: If the sprout bearing the cause of the seed also arises, it is unsuitable as just other than the seed.

It was taught [in the above citation]: *whatever is the seed, that itself <u>is</u> not the sprout*.

Again, if asked: Why would that very seed not be in the sprout?

Therefore it was taught [above]: *it is not other than that, it is not that*.

Because the position of both thatness and otherness is impossible, therefore, other than that and just not other are unreasonable. Thus, if both positions were refuted, it will become fully clarified as *dharmata* without eternalism or nihilism.

The thusness that is the meaning here should be understood as being, "if there were to exist some self-nature in the two, seed and sprout, the two would be just one or other. Hence, if the self-nature of those is non-existent, then like seeds and sprouts observed also in a dream, how would they become just one or just other?"

This very meaning was explained [*in the Extensive Sport Sutra*]:

[29] LTK, p. 209.

> All [karmic] formations possess the condition of ignorance.
> Those compoundeds are not existent in thusness.
> These two, formation and ignorance, are empty,
> Separated from movement by self-nature.

It was also taught in the *Treatise* [*on the Middle Way*, 18.10]:

> Whatever arises dependent on something, it is not that itself to a small extent,
> nor is it other than that; therefore, there is no eternalism or nihilism.

If one negates production from other in this way, there is the excellent quality of becoming free from the two extremes of permanence and annihilation. The term "dependent-relation" eliminates these two extremes simultaneously because "dependent" means that something depends on an other and therefore it eliminates the extreme of permanence, and "relation" means that something is not non-existent since it exists in relation to an other and therefore it eliminates the extreme of annihilation. For the reason that the reasoning of dependent-relation, or dependent-arising, is able to eliminate the two extremes at once it is said to be the "king of reasonings." Other reasonings are not able to eliminate the two extremes simultaneously. There is a passage in a text that says: "Having examined other reasonings, it comes down to dependent-arising." It is like the fact that no matter how much the ministers discuss a particular matter, the president alone has the final word meaning that if the president does not give his approval all the previous discussion by the ministers becomes useless. In this sense dependent-arising is called "the king of reasonings."

Seed and sprout are different in conventional terms. Thus, at the time of the seed, the sprout does not exist. Likewise, at the time that the sprout is produced the seed has disintegrated. This is what is known and seen in the world. Thus, if we were to plant a wheat seed in a pot of earth and water it, a sprout would be produced, but if we were to look for the seed we would only find its husk. If seed and sprout were an inherently existent other, such transformation could not occur.

At the time of the sprout has the continuity of the seed been interrupted? It has not, yet the seed itself no longer exists. The potency of the seed has transferred to the sprout. Likewise, due to the birth of a son the continuity of the lineage of a king is not uninterrupted, whereas if he does not have a son the continuity of his lineage will be interrupted. This process is similar in terms of both inner and outer causes and results.

Wednesday afternoon, 28 June 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 199) says:

> Therefore, with regard to the way it is explained above that things do not inherently exist like that, in order to indicate the quality of not falling into the extremes of permanence and annihilation by means of establishing dependent-arising as without permanence and annihilation there is [the following] explanation.
> Chandrakirti says:
>
> > *Because of that, a sprout is not other than the seed.*
> > *Therefore, at the time of the sprout there is no disintegration of the seed.*
> > *Because of that, they do not exist as just one. Also because of that,*
> > *At the time of the sprout it is not said "The seed exists."* [6.33]
>
> If a sprout were an inherently existent other than the seed, because the two, seed and sprout, would be unsuitable as cause and result, the sprout being existent without doubt the continuity of the seed would be interrupted. This is because through seed and sprout having become unrelated, although

> the sprout exists, it does not contribute to the non-interruption of the continuity of type of the seed. For example, it is like:
> - oxen having died, the existence of *bamen* [cattle] not contributing to the non-interruption of the continuity of type [of oxen] and
> - the existence of ordinary beings not contributing to the non-interruption of the continuity of superiors circling in their own existence.

Seed and sprout are not an inherently existent other. This is because if they were an inherently existent other, they would not be suitable to be cause and result. If they were inherently existent, it would follow that when the sprout is produced the continuity of the seed would be interrupted because they are unrelated. This is likened to the situation in which, oxen having died, the existence of *bamen* cattle does not contribute to the non-interruption of the continuity of type of oxen because oxen and *bamen* cattle are unrelated. What is a *bamen*? It is another species similar to oxen, perhaps a type of wild cow. An ox is defined in Dharmakirti's *Commentary on [Dignaga's] Compendium of Valid Cognition* as: a composite of a hump and dewlap. A *bamen* is similar to an ox but not exactly the same. Another example is: the existence of yaks not contributing to the non-interruption of the continuity of type of cows or dogs and so forth. Lama Tsongkhapa also gives the example of "the existence of ordinary beings not contributing to the non-interruption of the continuity of superiors circling in their own existence."

In short, if seed and sprout were an inherently existent other they would be unrelated, whereby when a sprout is produced it would not contribute to the non-interruption of the continuity of type of the seed, just as in the two examples.

Lama Tsongkhapa's *Illumination* (Tibetan text page 199-200) says:

> This being the case, *for that* reason with respect to the position that *a sprout is not* an inherently existent *other than the seed* it does not contradict the two, [seed and sprout,] being cause and result. *Therefore*, *at the time of the* existence of the *sprout*, the continuity of its type, that is, *the state of disintegration of the seed*, has [not] been interrupted; thereby annihilation is avoided.

When the seed disintegrates and transforms into the sprout, what happens to its continuity? The continuity of type of the seed transfers to the entity of the sprout; therefore, the continuity of the seed is not interrupted at the time of the sprout. Because of this, one would not say that the continuity of the seed *has been* interrupted, whereby annihilation is abandoned (this discussion refers to the fact that the Tibetan version of the text is missing the negative particle and says "the continuity of its type *has* been interrupted"). In short, the continuity of the seed is *not* interrupted; thus, annihilation is abandoned. If the continuity of its type were interrupted, annihilation could not be abandoned. When a sprout is produced if it is asked "Has the seed disintegrated?", the answer is that it has, whereas its continuity still exists. The seed is the congruent cause of the sprout.

Lama Tsongkhapa's *Illumination* (Tibetan text page 200) says:

> Since it has been explained many times that at the time of the sprout the seed has ceased, the commentary explains the meaning of the state of disintegration of the seed to be that the continuity of the seed has been interrupted and says that the non-disintegration of the seed is refuted. Therefore, saying "the continuity of the seed has been interrupted" is asserted to [mean that] the continuity of *its type* has been interrupted.

This is Lama Tsongkhapa's explanation of Chandrakirti's autocommentary (Tibetan text page 75), which says: "Because otherness does not exist, like the nature of the sprout, the seed is not interrupted. Thus, it being annihilated is abandoned."

Lama Tsongkhapa's *Illumination* (Tibetan text page 200) says:

> *Because of that*, the two, seed and sprout, *do not exist as just one*, therefore, the seed itself does not transfer into the sprout. At the time of the sprout, that the seed is not destroyed is refuted. *Also because of that*, *at the time of the sprout it is not said "The seed exists,"* whereby it is also refuted as being permanent.

This is Lama Tsongkhapa's explanation of Chandrakirti's autocommentary (Tibetan text page 75) which says: "Since oneness does not exist, that itself which is the seed is not the sprout. Therefore, because of refuting the non-destruction of the seed, it being permanent is also refuted."

Does the continuity of the seed become the entity of the sprout? It does. Does this mean that the seed transfers itself into the entity of the sprout? Although Jonathan transfers from Italy to France, he still remains Jonathan. The word "transfer" usually means to change place. Does the seed itself transfers from the place of the seed to the place of the sprout? It is not like that. I think it is better to say that the continuity of the seed goes on to become the entity of the sprout.

Has the seed disintegrated at the time of the sprout? It has, therefore, one should not say that the seed exists at the time of the sprout. In this way the extreme of permanence is refuted. I think that if it is asked "Does the seed exist at the time of the sprout?" the answer is that it does not, whereas if it is asked "Does the *continuity* of the seed exist at the time of the sprout?" the answer is that it does.

When the seed has disintegrated, has the seed become non-existent? It has; however, the continuity of the seed has not become non-existent.

Lama Tsongkhapa's *Illumination* (Tibetan text page 200) says:

> Such an explanation is set forth in the *Extensive Sport Sutra* saying:
>
> > If the seed exists, how could the sprout?
> > Whatever is the seed, that itself is not the sprout,
> > It is not other than it, it is also not that.
> > Therefore, reality is not permanence and is not annihilation.

This sutra is also quoted in Chandrakirti's autocommentary.

Lama Tsongkhapa's *Illumination* (Tibetan text page 200) says:

> The meaning of that is [as follows]. The meaning of these [lines] is that when the seed becomes existent, also the sprout – that having the cause which is the seed – arises accordingly. When [the sprout] arises, it is not suitable to arise from, that is, through, the seed. Therefore, if one thinks "The two, the seed and the sprout, are one entity," although it is not [the case] that the sprout arises from other than the seed, it is not that the seed itself transfers to the sprout.

The seed and sprout are not one entity. If they were one, it would not be feasible to say that a result arises from a cause or, for example, that a sprout arises from a seed. Therefore, seed and sprout are different entities. Because they are different entities, a sprout can be produced from a seed. The sprout is produced only upon the transformation of the seed into a dreg.

Lama Tsongkhapa says: "although it is not [the case] that the sprout arises from other than the seed, it is not that the seed itself transfers into the sprout." The seed itself transferring into the sprout

does not mean that the seed becomes the sprout, it means that the continuity of the seed transfers to the sprout.

Lama Tsongkhapa's *Illumination* (Tibetan text page 200) says:

> What is the reason for that? It is because that sprout is not an inherently existent other than the seed and it is also not one nature with it. Also, whenever such two positions are refuted, the nature of the sprout is clarified to be reality which is free from permanence and annihilation.

In conclusion, a seed is free from the extreme of permanence and free from the extreme of annihilation. It is free from the extreme of permanence because it is free from true existence, and it is free from the extreme of annihilation because its continuity remains.

"Such two positions" refers to:
1. the sprout is an inherently existent other than the seed and
2. the sprout is one nature with the seed.

In brief, through refuting that a sprout is inherently existent it is established to be a dependent-arising, whereby the extreme of permanence is refuted.

Thursday morning, 29 June 2000

Student: What is the difference between the Tibetan words *brgyud* and *brgyun* which have both been translated as continuity?
Geshe Jampa Gyatso: In general the Tibetan words *brgyud* and *brgyun* are similar but in certain contexts there is a slight difference. The first moment of the uninterrupted path of the mahayana path of seeing is a continuity (*brgyun*) of the last moment of the supreme mundane quality level of mahayana path of preparation, but it is not a continuity of type (*rigs brgyud*) because the first moment of the uninterrupted path of mahayana path of seeing is uncontaminated, while the previous moment of the supreme mundane quality level of the mahayana path of preparation is contaminated. Vasubandhu's *Treasury of Knowledge* says that excluding the first moment of the uncontaminated, everything else has a congruent cause. The first moment of the uninterrupted path of mahayana path of seeing does not have a congruent cause because uncontaminated and contaminated are not congruent (literally, not of equal fortune).

Another example is a mule, the offspring of a male donkey and a female horse, which is a continuity of the father but is not a continuity of type. Thus, if it is a continuity it is not necessarily a continuity of type, whereas if it is a continuity of type (*rigs brgyud*) it is necessarily a continuity (*rgyun*).

Lama Tsongkhapa's *Illumination* (Tibetan text page 200) says:

> That very meaning is explained in the *[Extensive Sport] Sutra* saying:
>
> > Karmic formations have the condition of ignorance.
> > Those karmic formations do not exist in suchness.
> > The two, karmic formations and ignorance, are empty,
> > That is, they are free from inherently existent movement.
>
> The first line indicates the reason, this being that karmic formations arise in dependence on ignorance. The second line indicates the thesis: "karmic formations do not exist in suchness." The third line indicates that both cause and result are empty. The fourth line indicates the way in which they are empty, that is, movement is strong formation while the freedom from that is a formation's

> emptiness of formation. Furthermore, "free from inherent existence" indicates the qualification of the object of negation, this being similar in meaning to not existing in suchness.

"Karmic formations have the condition of ignorance" means that from the first link of the twelve links of dependent-arising, which is ignorance, arises the second link, karmic formations. The second link, karmic formations, as the subject, does not exist in suchness or does not exist inherently because it arises in dependence upon the condition that is ignorance. Both the cause, ignorance, and the result, karmic formations, are empty of inherent existence. The sutra says: "The two, karmic formations and ignorance, are empty." This is explained, saying: "That is, they are free from inherently existent movement." Lama Tsongkhapa says: "movement is strong formation while the freedom from that is a formation's emptiness of formation." The word 'movement' implies movement due to causes and conditions, which means that due to causes and conditions there is the strong formation of things. On the other hand, if something existed inherently, it would be without movement in the sense that it would remain the same without changing. In short, things are free from inherently existent movement, but if things were inherently existent they would not move, that is they would not change.

Lama Tsongkhapa says: "'free from inherent existence' indicates the qualification of the object of negation, this being similar in meaning to not existing in suchness." Karmic formations, as the subject, do not exist in suchness because they arise in dependence on the condition of ignorance.

Lama Tsongkhapa's *Illumination* (Tibetan text page 201) says:

> The meaning of this sutra is also taught in the *Treatise [on the Middle Way]*, *Fundamental Wisdom* (v. 18.10) saying:
>
> > Whatever arises in dependence on something,
> > It is not at all that itself,
> > It is also not other than that,
> > Therefore, it is not permanent and not annihilated.

What does "It is not at all that itself, it is also not other than that" mean? If something arises in dependence on causes and conditions, it itself cannot be inherently existent. It also cannot be an inherently existent other. *Fundamental Wisdom* says: "Therefore, it is not permanent and not annihilated." This means that because it is a dependent-arising, it is free from permanence and annihilation. For example, a sprout, as the subject, is not inherently existent because it is a dependent-arising. Hence, a sprout is free from the extreme of permanence and free from the extreme of annihilation. A sprout is not permanent because it does not exist inherently and it is not annihilated because it is not completely non-existent.

Lama Tsongkhapa's *Illumination* (Tibetan text page 201) says:

> 3B1C-2B3E-2A1B-2B1D Indicating that there is never inherent production
>
> 1 Refuting the assertion of establishment by way of its own character
> 2 Dispelling argument regarding the refutation [of the assertion of establishment by way of its own character]
>
> 3B1C-2B3E-2A1B-2B1D-1 Refuting the assertion of establishment by way of its own character
>
> A Refuting [the assertion of establishment by way of its own character] due to it following that a superior's meditative equipoise would be the cause for the destruction of things
> B Refuting [the assertion of establishment by way of its own character] due to it following that truth in conventional terms would withstand analysis by reasoning
> C Refuting [the assertion of establishment by way of its own character] due to it following that ultimate production would not be refuted

These three consequences are mainly flung by the Prasangika Madhyamikas to the Svatantrika Madhyamikas.

3B1C-2B3E-2A1B-2B1D-1A Refuting [the assertion of establishment by way of its own character] due to it following that a superior's meditative equipoise would be the cause for the destruction of things

Chandrakirti's autocommentary (Tibetan text page 76) says:

Just as the statement, "there is no inherent production of anything whatsoever," must be accepted without hesitation; unlike that:

If a self character were dependent,
Because denying that would destroy things,
If emptiness would be the cause of destroying things,
That is unreasonable. Therefore, there is existence of things. [6.34]

If a self-characteristic of things such as form, feeling, and so forth – a self-entity and self-nature were produced by causes and conditions, when this yogi sees things as emptied by self-nature and realizes a phenomenon as without self-nature, at that time he would realize emptiness through denying the self-nature, which is how they were definitely produced.

Therefore, just as hammers and so forth are the causes of the destruction of vases and so forth, if similarly also emptiness were the cause of denying the self-nature of things, that is also not suitable. Therefore, the self-characteristic of things is not to be accepted as produced at any time.

As extensively taught in the *Exalted Pile of Jewels Sutra*:

> Kashyapa, furthermore, the middle path to correctly reflect upon phenomena is: phenomena are not made empty by some emptiness, phenomena themselves are empty; phenomena are not made signless by some lack of signs, phenomena themselves are signless; phenomena are not made wishless by some lack of wishes, phenomena themselves are wishless; phenomena are not made without strong composition by some lack of strong composition, phenomena themselves are without strong composition; phenomena are not made in an unborn state by some non-growing, phenomena themselves are unborn; phenomena are not made to not arise by some non-arisal, phenomena themselves do not arise.

Some, [the Chittamatrins], accept a dependent entity and think that the emptiness that depends on it (i.e., on the dependent entity), having the characteristic of lacking a difference in substance of apprehended and apprehender, is not an object to be expressed as thusness or otherness, like impermanence itself and so forth. If so, [the *Sutra*] would have said, "all phenomena are empty due only to emptiness, they are not [empty] by mere nature."

It is explained in the *Four Hundred* [*Verses*, 8.7]:

> One does not see what is not empty as empty and say, "may nirvana be mine."
> That that wrong view does not pass beyond sorrow was taught by the tathagatas.

It is also taught in the *Treatise* [*on the Middle Way*, 13.8]:

> All views of emptiness are taught by the Conqueror as definite removal.
> Those who view emptiness are taught as lacking proof (achievement).

Inherently existent production does not exist at all; this is what should be asserted. However, in response to someone who says it is not to be accepted, Chandrakirti's root text says:

If a self character were dependent,
Because denying that would destroy things,
If emptiness would be the cause of destroying things,
That is unreasonable. Therefore, there is existence of things. [6.34]

Why does it follow that [if there is inherently existent production] the exalted wisdom of meditative equipoise becomes a cause for the destruction of things? The Prasangika Madhyamikas respond that the non-existence of establishment by way of its character, the object of negation, is realized by a superior's exalted wisdom of meditative equipoise, whereby the object of negation, establishment by way of its character, is negated. Because the exalted wisdom of meditative equipoise negates establishment by way of its character, if things existed by way of their own character they would also be negated by it.

These three consequences are mainly flung by the Prasangika Madhyamikas to the Svatantrika Madhyamikas. When the first consequence, it follows that a superior's meditative equipoise would be the cause for the destruction of things, is thrown to them, the Svatantrika Madhyamikas respond that establishment by way of its own character does exist. To this assertion the Prasangika Madhyamikas respond that it follows that a superior's exalted wisdom of meditative equipoise is a cause for the destruction of things. This is because if things are established by way of their own character they should be seen by a superior's exalted wisdom of meditative equipoise, whereas they are not seen. Because a superior's exalted wisdom of meditative equipoise does not see conventionalities, such as forms and so forth, it follows that they are non-existent.

Gyelwa Gendun Drup's commentary, *The Mirror of the Clarification of Thought* (translated by Martin Willson), says:

If it depended on [existing by] its own nature,
Then negating this would destroy the functional thing,
So voidness would be a cause destroying the thing.
This cannot be so, therefore [such] things do not exist. [6.34]

> It follows that the wisdom-knowledge of the contemplation of the aryas, perceiving voidness, (:) perceives voidness in the manner of negating the nature of a functional thing, and is a cause that destroys the thing. For previously, by hypothesis, the functional thing was dependent on existence by way of its own nature, but it perceives that there is no functional thing existing by way of its own nature. It should be understood that (:) the functional thing does not exist inherently, for if the thing existed inherently, the contemplation perceiving voidness would be the cause destroying the thing, which is impossible.

In summary, [in response to the Svatantrika Madhyamikas assertion that there exists production established by way of its own character] the Prasangika Madhyamikas fling the following consequence to the Svatantrika Madhyamikas: "It follows that a superior's exalted wisdom of meditative equipoise is a cause for the destruction of things." A yogi single-pointedly absorbed in meditative equipoise on the emptiness of inherent existence of phenomena realizes that all phenomena are empty of inherent existence. In the perspective of that meditative equipoise realizing the non-inherent existence of all phenomena there is no inherently existent production. This means that the nature of production is not seen, due to which it is as if this exalted wisdom has destroyed it. Just as upon destroying a cup with a hammer, the cup becomes non-existent, likewise, when a yogi meditates on the emptiness of conventionalities or compounded phenomena of inherent production, they are as if destroyed by his exalted wisdom of meditative equipoise. Just as a hammer destroys a

cup, a superior's exalted wisdom of meditative equipoise destroys phenomena that are inherently produced. Reasoning in this way, it appears that emptiness becomes the cause for the destruction of things; however, it does not. Is emptiness a cause for deprecating the nature of things? It is not. However, the realization of emptiness becomes a condition destroying inherent production. According to the Svatantrika Madhyamikas if something is refuted to be established by way of its own character it becomes non-existent, due to which compounded phenomena would become non-existent. Therefore, the Prasangika Madhyamikas say that because a superior's exalted wisdom of meditative equipoise realizes the emptiness of inherent existence, it becomes a condition for the destruction of all functioning things, compounded phenomena. This is because for the Svatantrika Madhyamikas if something is not established by way of its own character it is non-existent. Therefore, the Prasangika Madhyamikas say to them, "You must accept that a superior's exalted wisdom of meditative equipoise destroys functioning things." Why is this? Because the exalted wisdom of meditative equipoise realizes the non-inherent existence of phenomena. Note that the assertion that the exalted wisdom of meditative equipoise realizes the non-inherent existence of phenomena is according to the Prasangika Madhyamikas, not according to the Svatantrika Madhyamikas.

Lama Tsongkhapa's *Illumination* (Tibetan text page 201) says:

> As [Chandrakirti's autocommentary] says:
>
> > The statement "There is no production of any phenomenon inherently whatsoever" must be accepted inevitably.
>
> This means that it is appropriate to say "It must definitely be accepted," whereas one should avoid saying, that is, one should not say, "It is unsuitable to posit assertions regarding that." Chandrakirti says:
>
> > *If own character were dependent,*
> > *By deprecating it, things would be destroyed. Therefore,*
> > *If emptiness were to become a cause for the destruction of things,*
> > *That would not be suitable. Therefore, things do not exist.* [6.34]
>
> If that were not the case – that is, *if* a nature that is establishment *by way of its own character*, that is, by way of its own entity, of forms, feelings, and so forth *were* produced *in dependence* on causes and conditions – when a yogi directly realizes phenomena as empty of inherent existence, he would realize emptiness by means of *deprecating that*, the nature of things. This is because, while meditative equipoise necessarily does not observe forms and so forth, if they were established by way of their own character they should be observed by meditative equipoise, whereas they are not. At that time [of not being observed] those things would not exist. If they do not exist, *things* that exist prior to meditative equipoise would later become non-existent, that is, they *would be destroyed*, or would disintegrate. Because of that, meditative equipoise itself would necessarily come to be the cause for such destruction, whereby, just as hammers and so forth are causes for the destruction of pots and so forth, likewise, if seeing *emptiness were* also *to become a cause for the destruction of* the nature of *things* and for its deprecation *that would* also *not be suitable*. *Therefore*, since *things* established by way of their own character *do not exist*, one should never assert inherent production.

Lama Tsongkhapa says: "When a yogi directly realizes phenomena as empty of inherent existence, he would realize emptiness by means of deprecating that, the nature of things." This is because a superior's exalted wisdom of meditative equipoise does not observe forms and so forth. It also does not observe the nature of the aggregates and so forth. It follows that when an exalted wisdom of meditative equipoise realizes emptiness, phenomena would become non-existent because they would become non-existent for that exalted wisdom. Forms and so forth previously existed, but they would become non-existent when a yogi meditates on them, whereby, the exalted wisdom of meditative equipoise of that yogi would become a cause for their destruction. For this reason, it follows that a

superior's exalted wisdom of meditative equipoise would become a cause for the destruction of things, just as being hit with a hammer is a cause for the destruction of a pot. The exalted wisdom of meditative equipoise would be analogous to a hammer because just as a hammer destroys a pot, the exalted wisdom of meditative equipoise would destroy things. However, it is not like this. Why? Because establishment by way of its own character does not exist. Due to this, the Prasangika Madhyamikas tell the Svatantrika Madhyamikas that establishment by way of its own character is not to be asserted ever.

Thursday afternoon, 29 June 2000

Lama Tsongkhapa says: "likewise, if seeing emptiness were also to become a cause for the destruction of the nature of things and for its deprecation, that would also not be suitable. Therefore, since things established by way of their own character do not exist, one should never assert inherent production." If it is a Madhyamika, he is pervaded by not being suitable to assert establishment by way of its own character, yet there are Madhyamikas who assert establishment by way of its own character. This is likened to the case of fully ordained monks in that, although they are not suitable to break their vows, there are fully ordained monks who have broken their vows. In short, the Svatantrika Madhyamika system asserts that things are established by way of their own character but are not truly existent.

Lama Tsongkhapa's *Illumination* (Tibetan text page 202) says:

> It is in fact said: "In regard to this, those Madhyamikas who assert production established by way of its own character assert that, although established by way of its own character, it is not truly existent. For this reason, even if forms and so forth are established by way of their own character, they are not necessarily observed by a direct seer of suchness." However, it was also explained before that, through merely that, they are truly existent and that one cannot abandon the faults [that accrue] by means of the reasoning which will be explained again.

"Those Madhyamikas who assert production established by way of its own character" are the Svatantrika Madhyamikas. The Svatantrika Madhyamikas say that the form aggregate and so forth are established by way of their own character but are not truly existent. On the other hand, the Prasangika Madhyamikas say that if it is established by way of its own character it is truly existent. It has been explained before and will be explained again later on that for the Prasangika Madhyamika system the following are synonymous:

1. the measure of establishment by way of its own character,
2. the measure of existing by way of its own entity,
3. the measure of inherent existence,
4. the measure of true existence,
5. the measure of existing ultimately, and
6. the measure of establishment by its own reality.

Lama Tsongkhapa's *Illumination* (Tibetan text page 202) says:

> Here the [auto]commentary says:
>
> > The *Pile of Jewels Sutra* says:
> >
> > Kashyapa, furthermore, the middle way correctly and individually investigating phenomena is: phenomena are not made empty by emptiness, phenomena themselves are empty...

> And likewise [that sutra] is also cited as saying that [phenomena] are signless, wishless, without strong application, unproduced, and non-arising. Thus, if phenomena have a nature that is establishment by way of its own character, since those phenomena would not come to be empty from their own side it would be incorrect [for the sutra to] say "Phenomenon themselves are empty..." Without refuting that they exist by way of their own entity from their own side, they must be presented to be empty in terms of being empty of something else, thereby contradicting the statement "Phenomena are not made empty by emptiness." Therefore, the middle way says that when the nature of phenomena is individually investigated, phenomena are shown to be empty of inherent existence from their own side.

This sutra was also cited in the autocommentary. It says that phenomena are (1) empty, (2) signless, (3) wishless, (4) without strong application, (5) unproduced, and (6) non-arising. In general, there are said to be three doors of liberation, but in tantra there are said to be four: (1) emptiness, (2) signlessness, (3) wishlessness, and (4) without strong application, which are the first four of the six listed in the sutra. The three doors of liberation are:

1. emptiness, which is the entity itself being empty of true existence,
2. signlessness, which is that causes have been pacified of the sign of true existence, and
3. wishlessness, which is not wishing for truly existent results.

Buddha said that due to not knowing these three doors of liberation, sentient beings wander in cyclic existence. The fourth door of liberation, according to tantra, is the door without strong application, which means that there is no truly existent strong application.

These are called "doors of liberation" because without these realizations liberation cannot be attained. When one has these realizations and cultivates them, one enters through the door of liberation. The three or four doors of liberation are explained differently by the three schools.

Phenomena being unproduced and non-arising are similar. The point of the sutra is that one should cultivate the realization of emptiness. Is pot empty of itself? Is pot empty of pot? Pot is empty of true existence. Is this emptiness self-emptiness or other-emptiness? The self-emptiness of the pot is the entity of the pot itself being empty of true existence. Other-emptiness is illustrated by a monastery empty of monks, from which one understand that there are no monks in the monastery. What is the difference between a monastery empty of monks and a pot empty of pillar? One would not say either that a pot is empty of pot or that a pillar is empty of pillar. Other-emptiness is accepted by the Nyingma tradition who say that this view is superior to that of the Prasangika Madhyamikas.

"Phenomena are shown to be empty of inherent existence from their own side" means that the entity of all phenomena is the emptiness of inherent existence.

The statement in sutra "phenomena are not made empty by emptiness, phenomena themselves are empty" and so forth indicate self-emptiness.

Lama Tsongkhapa's *Illumination* (Tibetan text page 203) says:

> This sutra also refutes the statement by the Aspect Cognizers (Chittamatrins): "Other-powered phenomena are not empty of establishment by way of their own character, and apprehenders and apprehendeds are not different substances, therefore, they are empty [of being different substances]."

This sutra refutes the Chittamatrin's assertions that "other-powered phenomena are not empty of establishment by way of their own character" and that since apprehenders and apprehendeds are not different substances, they are empty of being different substances. For the Prasangika Madhyamikas, phenomena are not empty of being different substances because they assert the existence of external object.

Lama Tsongkhapa's *Illumination* (Tibetan text page 203) says:

> The meaning of the above sutra is also explained in [Aryadeva's] *Four Hundred [Verses]* (v.8.7) saying:
>
> > Not seeing what is empty as not empty
> > One says, "May nirvana be mine."
> > Not passing beyond sorrow due to this wrong view
> > Is taught by the tathagatas.
>
> [It is also explained in Nagarjuna's] *Fundamental Wisdom* (v. 13.8) saying:
>
> > All views of emptiness
> > Are taught by the Conqueror as definite deliverance.
> > Whoever views emptiness,
> > They are taught as lacking achievement.

The first line of the verse from Aryadeva's *Four Hundred Stanzas*, translated here as "Not seeing what is empty as not empty," is difficult to understand. Literally it reads: "Not empty / what possesses empty / is not seen." Due to this one can ask: "Not empty of what? What is it that is empty?"

Lama Tsongkhapa's *Illumination* (Tibetan text page 203) says:

> The thought "Phenomena are empty of their own entity" is also the meaning itself. However, it is not at all suitable to say: "Pot not being empty of pot but being empty of true existence is the emptiness of other. Therefore, pot being empty of pot is the emptiness of self." If pot were empty of pot, pot would necessarily not exist as pot. If that were the case, since it does not exist as itself it also would not exist as other, whereby pot would be utterly non-existent.

"Phenomena are empty of their own entity" means that phenomena are empty of establishment by way of their own character and empty of establishment by way of their own entity. It is incorrect to say: "Pot not being empty of pot but being empty of true existence is the emptiness of other." This would mean that pot being empty of true existence is other-emptiness and pot being empty of pot is self-emptiness, but this is not correct. A pot being empty of itself can only be understood to mean either (1) that pot does not exist with respect to pot or (2) that pot is not pot. If pot does not exist with respect to itself it would not exist with respect to other, therefore, pot would be utterly non-existent.

Lama Tsongkhapa's *Illumination* (Tibetan text page 203) says:

> Then, since every other thing would also be like that, even those who say this would be non-existent and any presentation of "empty of this and not empty of that" would not be possible.

If it were the case that phenomena are empty of themselves, like pot being empty of pot, then even those who say this would be non-existent. This is because if the speaker is empty of himself, he would not exist with respect to himself, whereby he would be non-existent.

Lama Tsongkhapa says: "any presentation of 'empty of this and not empty of that' would not be possible." If phenomena were empty of themselves, like pot being empty of pot, then it could not be said that pot is empty of true existence but is not empty of existing conventionally. If things were empty of themselves, such statements could not be made.

Lama Tsongkhapa's *Illumination* (Tibetan text page 203) says:

> Also both those who say that such emptiness is correct and others who assert it to be nihilistic emptiness are ostracized from the fact that the conquerors and the conquerors' children proved it more than once to be dependent-arising free from the extremes of permanence and annihilation.

Lama Tsongkhapa says that there are both those who say 'such emptiness' is correct and others who assert it to be a nihilistic emptiness, but what is that emptiness? Previously two types of emptiness were posited: (1) pot being empty of pot is self-emptiness and (2) pot being empty of true existence is other-emptiness. There are those who say that such emptinesses are correct and those who say that they are nihilistic emptinesses but both of them are incorrect and are distant from the Buddha's presentation of dependent-arising which is free from permanence and annihilation.

Lama Tsongkhapa's *Illumination* (Tibetan text page 203-4) says:

> In particular, asserting a nihilistic emptiness through saying "All conventional truths are necessarily settled to be empty of themselves" is just not suitable because none of the four [proponents of] tenets, through having understood that view to be the view of annihilation, generate it in their continua.

When any of the four proponents of tenets understand this to be the view of annihilation, they do not generate it in their continua. Lama Tsongkhapa says: "asserting a nihilistic emptiness through saying 'All conventional truths are necessarily settled to be empty of themselves' is just not suitable." This would be asserting self-emptiness, that is, emptiness of itself.

Lama Tsongkhapa's *Illumination* (Tibetan text page 204) says:

> Thus, while the basis of negation not existing in the entity of the object of negation and that basis being empty also of the way of being empty of the object of negation are similar, phenomena being empty of establishment by way of their own character is the meaning of being empty by way of their own entity. The reason that modes of emptiness other than that are not an emptiness of own entity is:
>
> - as long as the former mode of emptiness, which has already been established by a valid cognizer, has not degenerated, it is not possible for a [proponent of] tenets to generate a superimposition that conceives that base as either truly existent or as existing as the meaning of [truly existent],
> - whereas even though the meaning of the latter [mode of emptiness] has been established by a valid cognizer and not degenerated, it is not contradictory that a [proponent of] tenets superimposes true existence or the meaning of true existence.

There are two modes of being empty. The former mode of being empty is pot being empty of true existence. As long as one has the realization of pot being empty of true existence and this realization has not degenerated, one will not generate the superimposition that is the conception of pot as truly existent. In other words, while realizing, by means of a valid cognizer, that pot is empty of true existence one does not conceive pot to be truly existent.

The latter mode of being empty is pot being empty of pot. Although this cannot be established by a valid cognizer, if it were established by a valid cognizer even while one has the realization of pot being empty of pot, one could still generate the conception of truly existent pot. Keep in mind that actually there is no realization of pot being empty of pot, but if it did exist it would not at all harm the conception of pot as truly existent.

Friday morning, 30 June 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 204) says:

> 3B1C-2B3E-2A1B-2B1D-1B Refuting [the assertion of establishment by way of its own character] due to it following that truth in conventional terms would withstand analysis by reasoning

Chandrakirti's autocommentary (Tibetan text page 78) says:

> It is mentioned here: Production does not exist ultimately; hence, it indeed depends on refuting production from self and other. Yet, the self-nature of those observed by direct perception and inference – forms, feelings, and so forth, whatever – are doubtlessly produced from other. If such were not accepted, why express two truths? There would be only one truth, due to which production from other just would not exist.

Someone says that it is acceptable that since there is no production ultimately there is no production from self and others. However, this person says that it follows that some phenomena, forms, feelings, and so forth, are produced from others because they are observed by direct perceivers and inferential cognizers and that if this is not accepted, why would two truths have been taught? In other words, if this is not accepted it follows that there is only one truth. This means that if there is no production from other, it would follow that there is only one truth because there would only be ultimate truth and not conventional truth. Chandrakirti says: "There would be only one truth, due to which production from other just would not exist." In short, this person says that if there is only one truth, the ultimate, production from other would be non-existent.

Chandrakirti's autocommentary says:

> [Response:] I shall explain about this. It is indeed true that the two truths are not ultimately existent because it is set forth [in the scriptures:]:[30]
>
> > Bhikshus, this highest [meaning] truth is one. It is like this: that having non-deceiving features, nirvana. All formations have false, deceiving features.
>
> Therefore, that which is deceptive truth, because of being the method of engaging the ultimate truth, is taken as it is accepted by the system of the world without analyzing production from self and others.

The two truths do not exist ultimately. In order to prove this, Chandrakirti quotes a sutra that says: "Bhikshus, this highest [meaning] truth is one." Here the word 'truth' does not refer to the object of negation, true existence, but refers to truth in the context of truth and falsity. Conventional truth is a means for engaging the ultimate truth. Later on, Chandrakirti's *Supplement* says:

> *Conventional truth is the means and*
> *Ultimate truth arises from the means.*
> *Those who do not know the distinction of the two*
> *Have entered a bad path due to wrong conceptions.* [6.80]

Conventional truths, such as forms, feelings, and so forth, are the means for gaining the realization of ultimate truth. This is because first one generates the wisdom realizing conventional truths in dependence on seeing the basis of imputation. Having realized this, one then comes to realize the nature of the basis of imputation, ultimate truth. On the other hand, in another text it says that

[30] Poisson notes that the *Madhyamakavritti* cites this quotation without attribution.

ultimate truth is the means and conventional truth arises from that means. This is to be understood as meaning that in order to realize subtle conventionalities, one must first realize ultimate truth. In other words, the realization of subtle conventional truths comes after the realization of ultimate truth. This is because one first realizes that phenomena do not exist truly and then that they are therefore feasible as agents and actions. In this case, conventional truths are divided into the coarse and subtle. The mind realizing coarse conventional truths is the means for realizing ultimate truth, whereas the mind realizing subtle conventional truths arises from the realization of ultimate truth.

The sutra says: "that having non-deceiving features, nirvana." This passage can be debated as follows: does this mean that only nirvana is truth while all other phenomena are deceptive? What about emptiness? One can say that emptiness is nirvana. Is the naturally abiding lineage, the emptiness of true existence of the mind, not a truth? Is it a nirvana? One can say that it is a nirvana in terms of the four terminological divisions of nirvana – (1) nirvana with remainder, (2) nirvana without remainder, (3) natural nirvana, and (4) non-abiding nirvana – in that a natural nirvana is emptiness. It can also be asked: "If it is a deceptive substratum is it pervaded by being deceptive?" If someone says that it is, one asks: "Are valid direct perceivers and inferential valid cognizers deceptive?" If someone says that they are, one says: "They are not because the definition of a valid cognizer says that it is undeceptive (incontrovertible)." However, in this context, deceptive has a particular meaning, whereas in the context of the definition of a valid cognizer it has another meaning. What is the difference?
Student: The non-deceptiveness of a valid direct perceiver and an inferential valid cognizer is what makes it possible to discriminate conventional truth and understand conventional phenomena, whereas the non-deceptiveness that is ultimate truth is what is found by a superior's exalted wisdom of meditative equipoise.
Geshe Jampa Gyatso: Kor sum! If the ultimate truth is only seen by a superior's exalted wisdom of meditative equipoise, many absurd consequences follow. For example, is there no ordinary being who realizes ultimate truth? Is there no inferential valid cognizer that realizes ultimate truth? Is such an inferential valid cognizer an exalted wisdom of meditative equipoise? So what is the difference?
Student 2: The non-deceptive in relation to a valid cognizer refers to a consciousness which realizes its object in a non-deceptive manner, whereas ultimate truth being non-deceptive is in terms of the way the object appears to a perceiver.
Geshe Jampa Gyatso: That is correct.

Chandrakirti says: "Therefore, that which is deceptive truth, because of being the method of engaging the ultimate truth, is taken as it is accepted by the system of the world without analyzing production from self and others." Thus, it would appear that one should accept what is accepted by the world.

Chandrakirti's autocommentary then says:

> Like this:
>
> *Because, if these things are thoroughly analyzed,*
> *Apart from things having the essence of thusness,*
> *A state is not found; therefore, the world's*
> *Conventional truth should not be thoroughly analyzed.* [6.35]

Chandrakirti says that conventional truths, or truths in conventional terms, should not be analyzed by reasoning because when they are analyzed by reasoning, they are not found. This discussion comes under the outline "Refuting [the assertion of establishment by way of its own character] due to it

following that truth in conventional terms would withstand analysis by reasoning." The argument here is that the Prasangika Madhyamikas say to the Svatantrika Madhyamikas that it follows that conventional truths are able to withstand analysis by reasoning because, according to you, they are established by way of their own character and are inherently existent. However, when conventional truths are analyzed by the reasoning analyzing ultimate truth, they are not found. For example, when one analyzes whether conventional truths are produced from self, produced from other, produced from both, or produced causelessly, such conventional truths are not found. For this reason, the Prasangika Madhyamikas say to the Svatantrika Madhyamikas that, according to their assertions, conventional phenomena should be found because they are established by way of their own character.

Chandrakirti's autocommentary says:

> Like this: If these forms, feelings and so forth are thoroughly analyzed concerning such statements as "What is produced from self" or "What is produced from others?" and so forth with regard to production and so forth, a portion apart from, i.e., other than, having a self-nature ultimately unproduced and unceased, is not a state. Therefore, without engaging in thorough analyses of such statements as "from self and others" and so forth, that universally perceived by the world "If this exists, this arises," merely this much should be accepted by way of engagement that depends on others (i.e., the world).

Conventional truths should be accepted without thorough analysis but just as they are accepted by worldly beings.

Lama Tsongkhapa's *Illumination* (Tibetan text page 204) says:

> OBJECTION: That there is no production ultimately indeed depends on refuting production from self and other. However, the nature of those forms, feelings, and so forth observed by the two valid cognizers is unquestionably produced from other. If that is not asserted, why are two truths mentioned? There would only be one truth, due to which production from other would be non-existent.
> Such a challenger, since seeming to assert that there is no production ultimately whereas there is production from other in conventional terms, is only a Svatantrika Madhyamika. His saying "If inherently produced production from other is not asserted conventionally there would be only one truth" means "If there is no production by way of its own character conventionally, real conventionalities would not exist. Then, since conventional truths would not occur, there would only be ultimate truth."
> In response to this [objection, the autocommentary] says:
>
> > Indeed it is true, for the ultimate there do not exist two truths because [the Buddha] said:
> >
> > > Monks, the ultimate truth is one. It is thus: the non-deceptive substratum is nirvana. All composites are false, deceptive substrata.

This is similar to what is said in the autocommentary. The Svatantrika Madhyamikas say that if there were no establishment by way of its own character, it would follow that there would be no real conventionalities and therefore no conventionalities. Thus, there would only be ultimate truth.

QUESTIONS AND ANSWERS

Student: What does it mean that because the Vaibhashikas accept simultaneous cause and result, they accept an immediate condition?

Geshe Jampa Gyatso: The Vaibhashikas say that there exist causes and results that are simultaneous but that not all causes and results are simultaneous. Although they accept this, there is no contradiction in their also accepting an immediate condition. For example, together with a compounded phenomenon there exist simultaneously its four characteristics of production, abidance, and so forth. These characteristics are called simultaneously arising causes because they do not hinder production but assist it. A mind and the mental factors in its retinue are simultaneously arising causes because they assist each other, yet they also have an immediate condition.

Student: Are attachment and hatred wrong consciousnesses?
Geshe Jampa Gyatso: They are wrong consciousnesses as well as mistaken consciousnesses. If it is a mistaken consciousness it is not pervaded by being a wrong consciousness because all conceptual consciousnesses are mistaken consciousnesses. It is not said in any text that attachment and hatred are wrong consciousnesses, yet it can be said that they are. Attachment is a mind that perceives its contaminated object to be attractive due to the motivation of improper mental attention. In other words, it exaggerates the beauty of an object. Hatred is a mind that perceives its contaminated object as unattractive due to the motivation of improper mental attention.

Student: In *Illumination* (Tibetan text page 185) it explains that the presentation of the conceptions of true existence in nine levels is to be interpreted. Geshe-la explained that this division into nine was from the point of view of the *hinayana path* for those temporarily unable to realize subtle selfless and that it is not the presentation of the *mahayana path*. Do the Svatantrikas not have a division into nine? Please explain this.
Geshe Jampa Gyatso: The Svatantrika Madhyamikas set forth a division of the conceptions of true existence into ten, there being both coarse and subtle great of the great conceptions of true existence. This division into ten is in relation to the ten grounds of the path of meditation. What is the respective object of abandonment of the first ground of the path of meditation? It is the coarse great of the great innate conception of true existence. In this way, ten objects of abandonment of the ten grounds are posited. Therefore, the Svatantrika Madhyamikas do divide the conception of true existence into further subdivisions.

In the Prasangika Madhyamika system, the conception of true existence is divided into nine but the difference is that they say that a bodhisattva *simultaneously* abandons the three small levels of the conception of true existence.

The nine divisions are posited in terms of the hinayana path, not in terms of hinayana tenets.

Student: In *Illumination* (Tibetan text page 187) the term "conception of appearance" is used. Please explain this term.
Geshe Jampa Gyatso: For a buddha, because meditative equipoise and subsequent attainment are one entity, the conception that is together with appearance in subsequent attainment and the conception without appearance in meditative equipoise do not arise alternately. For sentient beings there is a conception together with appearance while in subsequent attainment, whereas in meditative equipoise there is no conception together with appearance, that is, there is no appearance of conventionalities. Therefore, the conception together with appearance and the conception without appearance are said to occur alternately. To be more precise, in meditative equipoise there is no manifest conception together with appearance.

Student: In *Illumination* (Tibetan text page 186) it says "having an appearance polluted by ignorance and the latencies of that." In what way is the appearance polluted by ignorance?
Geshe Jampa Gyatso: In regard to "appearance polluted by ignorance and the latencies of that," 'polluted' means to be under the influence of ignorance and the latencies of ignorance. Due to the

mind being polluted by ignorance, one is unable to see reality. In subsequent attainment, there is the appearance of true existence due to the mind being polluted by ignorance. Pollution in this context mainly refers to the presence of the latencies of ignorance. The reason for saying ignorance and the latencies of ignorance is just to emphasize that the latencies themselves exist due to a previous ignorance. To an ordinary bodhisattva in subsequent attainment who has realized emptiness, there is the appearance of true existence due to ignorance. A bodhisattva on the higher grounds has the appearance of true existence due to the latencies of ignorance. Thus, the bodhisattvas on the path of accumulation and path of preparation have the appearance of true existence due to ignorance, whereas bodhisattvas on the eighth ground and above have the appearance of true existence due to the latencies of ignorance.

Student: In *General Meaning* (Tibetan text page 172) the definition of a manifest knowledge obstruction includes the word "factor" (*cha*). Why is this word necessary here?
Geshe Jampa Gyatso: In general, the use of the word "factor" blocks certain pervasions. It is often used by Kunkyen Jamyang Shepa in his texts. This word means a part or portion. Jedzun Chogyi Gyeltshen's *General Meaning* says:

> The definition of a manifest knowledge obstruction is: that abiding in a type of obstruction occurring in the continuum of a learner superior who has abandoned all conceptions of true existence without exception that is a factor of mistaken dualistic appearance that is the appearance of one's object, forms and so forth, as truly existent. For example, a factor of mistaken dualistic appearance that is the appearance of the objects of the six engaging consciousnesses, forms and so forth, as truly existent.

If the word "factor" were omitted from the definition of a manifest knowledge obstruction and it were merely said "mistaken dualistic appearance," what would happen? The eye consciousness of a learner superior, as the subject, it follows that it is a knowledge obstruction. Is eye consciousness a knowledge obstruction? In Kunkyen Jamyang Shepa's texts the word "factor" is used in the context of "that which abides in a type," but here it merely means a factor of dualistic appearance.

Student: In *Illumination* (Tibetan text page 186) it states that the latencies of attachment are negative tendencies in hinayana foe destroyers, which cause jumping around like a monkey and so forth and are knowledge obstructions. Do the latencies of attachment, which are knowledge obstructions, cause mistaken dualistic appearances?
Geshe Jampa Gyatso: It can be said that the latencies of attachment cause mistaken dualistic appearances.

Student: What is the earliest point on the path where one would view phenomenon as mere conventionalities?
Geshe Jampa Gyatso: The three persons see phenomena as mere conventionalities in subsequent attainment. In general, from the first ground upward, phenomena are viewed as mere conventionalities. In terms of viewing phenomena as mere conventionalities together with the conception of true existence, a bodhisattva on the first ground has this view. In terms of viewing phenomena as mere conventionalities but without the conception of true existence, this occurs from the eighth ground upward. Viewing phenomena as mere conventionalities is in terms of not adhering to phenomena as truly existent. If bodhisattvas do not see phenomena as mere conventionalities, what do they see them as? Do they realize conventionalities? Do they not realize both truths? The word "mere" in "mere conventionalities" eliminates them being conceived to be truly existent. Bodhisattva superiors in subsequent attainment view phenomena as mere conventionalities.
Student: Can ordinary beings who have an inferential valid cognizer realizing emptiness view phenomena as mere conventionalities?

Geshe Jampa Gyatso: They can.
Student: Can someone who has a mere understanding of emptiness view phenomena as mere conventionalities?
Geshe Jampa Gyatso: They can understand and say that phenomena are mere conventionalities, but this does not mean that they realize it.
Student: Does viewing phenomena as mere conventionalities not imply that one has a realization of calm abiding and special insight?
Geshe Jampa Gyatso: There is no need. If emptiness is realized, it is not necessarily realized by means of one of the two, calm abiding and special insight. If emptiness is realized by means of calm abiding, this person has a wisdom arisen from meditation. Such wisdom arisen from meditation realizing emptiness is developed only on the path of preparation.

END

Monday afternoon, 3 July 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 205) says:

> The meaning of these [statements is as follows]. The meaning of the truth asserted by us is the non-deceptive, therefore, since there would be the non-deceptive truth alone here [Chandrakirti] says: "Indeed it is true."

When Chandrakirti says "Indeed it is true" it is in response to the objection (*Illumination*, Tibetan text page 204): "That there is no production ultimately indeed depends on refuting production from self and other. However, the nature of those forms, feelings, and so forth observed by the two valid cognizers is unquestionably produced from other. If that is not asserted, why are two truths mentioned? There would only be one truth, due to which production from other would be non-existent."

Lama Tsongkhapa's *Illumination* (Tibetan text page 205) continues:

> Saying "for the ultimate" means "in the perspective of a seer of suchness the two truths, the conventional and ultimate, do not exist because [the Buddha] said that in that perspective there is a single one, the ultimate truth." The highest truth is the ultimate truth (highest meaning truth). That conventional truths do not exist in the perspective of that exalted wisdom is to be understood by [the Buddha's] saying that they are deceptive substrata.

In the perspective of a seer of suchness, an exalted wisdom of meditative equipoise, there exists ultimate truth but not conventional truths. In the perspective of a seer of suchness conventional truth is an object of negation. There are two types of objects of negation:

(1) establishment by way of its own character and
(2) conventional truth existing in the perspective of an exalted wisdom of meditative equipoise or in the perspective of a consciousness of [an ultimate] type.

In this context it refers to the second type of object of negation.

Lama Tsongkhapa says: "That conventional truths do not exist in the perspective of that exalted wisdom is to be understood by [the Buddha's] saying that they are deceptive substrata." That which exists in the perspective of an exalted wisdom of meditative equipoise is the undeceptive, therefore, that which does not exist in its perspective is the deceptive. Therefore, the conventional truths not existing in the perspective of an exalted wisdom of meditative equipoise are deceptive substrata.

Lama Tsongkhapa's *Illumination* (Tibetan text page 205) says:

> In short, if phenomena were established by way of their own character, composites would not be established as false, deceptive substrata. Therefore, because conventional truths would not exist, there would not be two truths. The position that there is no establishment by way of its own character means "Both conventional and ultimate truths exist."

If phenomena were established by way of their own character they would be true, due to which they would not be false and deceptive. Therefore, there would not exist conventional truths, due to which there would not be two truths. Lama Tsongkhapa says: "because conventional truths would not exist, there would not be two truths." For the Prasangika Madhyamikas, because there is no establishment by way of its own character, both conventional and ultimate truths exist.

Here it seems to imply that two truths do not exist in the lower schools, whereas they do exist in the Prasangika Madhyamika system. The Prasangika Madhyamikas say that when the lower

schools posit the ultimate, the conventional becomes non-existent, and that when they posit the conventional, the ultimate becomes non-existent. They say that because the lower schools assert establishment by way of its own character one of the truths is lost by their positing the other. On the other hand, the Prasangika Madhyamikas say that by not asserting establishment by way of its own character two truths are feasible.

Lama Tsongkhapa's *Illumination* (Tibetan text page 205) says:

> QUESTION: If, according to the scripture above, nirvana alone is truth, since [the Buddha] said that other composites are false, is it not that nirvana, ultimate truth, is established by way of its own character, although compounded phenomena are not established by way of their own character?

This question is asked in reference to the sutra citation: "Monks, the ultimate truth is one. It is thus: the non-deceptive substratum is nirvana. All composites are false, deceptive substrata." Here someone asks: "Although phenomena are not established by way of their own character, is nirvana not established by way of its own character?" When the sutra says ultimate truth is one it refers to this truth being undeceptive and not to the non-inherent existence of nirvana.

Lama Tsongkhapa's *Illumination* (Tibetan text page 205) says:

> RESPONSE: The truth of that [context] is explained in terms of a non-deceptive object since [that very sutra] says that it is "the non-deceptive substrata," but it is not a truth that exists inherently. Also since [the Buddha] said "All composites are false, deceptive substrata," it is to be understood that the previous truth, [the ultimate truth,] is a non-deceptive object.

Truth and falsity are based on an object being respectively non-deceptive and deceptive. The truth is non-deceptive and the false is deceptive. A truth is that which has a concordant mode of abidance and mode of appearing. These two modes are posited with respect to the subject to which the object appears. This subject (object-possessor) which takes as its object ultimate truth is the exalted wisdom of meditative equipoise. The subject which takes as its object a conventional truth is of diverse types; for example, form is the object of an eye consciousness apprehending form. The main object taken by an eye consciousness is a form sphere, either color or shape. Do form spheres exist in the way that they appear to an eye consciousness? They do not exist in that way because color and shape appear to the eye consciousness to exist from their own side. Thus, form's mode of appearing does not concord with its mode of abidance. There are also particular subjects that take the sound sphere, odor sphere, taste sphere, and body sphere as their main objects.

Lama Tsongkhapa's *Illumination* (Tibetan text page 205) says:

> The commentary on [Nagarjuna's] *Sixty Stanzas of Reasoning* also says:
>
> > Although compounded phenomena act to deceive the childish by appearing wrongly, nirvana, the ultimate, does not deceive through appearing like that. Therefore, nirvana is explained saying 'truth' and the others saying 'non-truth.' Due to this, it is to be unquestionably asserted that the division into the two, truths and non-truths, is the meaning of 'non-deceptive' and 'deceptive.'

Compounded phenomena deceive the childish because their mode of appearing and their mode of abidance are not concordant. On the other hand, nirvana is ultimate truth which appears to the exalted wisdom of meditative equipoise. It is undeceptive. According to the Prasangika Madhyamikas

an ultimate truth is an emptiness. They define a nirvana as: a factor that is the reality of the mind free from the two obstructions. The Prasangika Madhyamikas assert this to be an ultimate truth. On the other hand, the lower schools say that nirvana is a conventional truth, not an ultimate truth. For example, in the Svatantrika Madhyamika system, because all four noble truths are conventional truths, a true cessation is a conventional truth and not an ultimate truth, therefore, a nirvana is also a conventional truth. Why do they assert a true cessation to be a conventional truth? It is because they assert that the object of negation that is negated is a conventionality and therefore the negation of that object of negation is also a conventionality.

Lama Tsongkhapa's *Illumination* (Tibetan text page 206) says:

> Stating in the commentary on [Nagarjuna's] *Sixty Stanzas of Reasoning* that nirvana is a truth conventionally [means that] nirvana existing as an ultimate truth is an object posited in the perspective of a concealer, but in conventional terms it is not asserted to be a truth.

"In the perspective of a concealer" refers to a conventional awareness (*blo kun rdzob pa*). Nirvana exists as an ultimate truth; that nirvana exists in the perspective of a concealer. However, nirvana is not asserted to be a truth in conventional terms.

Lama Tsongkhapa's *Illumination* (Tibetan text page 206) says:

> Thus, because conventional truth is the means of engaging the ultimate truth, just as without analyzing production from self and other the system of worldly beings functions conventionally, similarly do the Madhyamikas also make assertions.

Conventionalities, such as forms and so forth, which are the bases of emptiness are the means for realizing their emptiness. In other words, only by realizing the bases of emptiness can one realize their emptiness. Chandrakirti later (v.6.80ab) says:

> *Conventional truth is the means and*
> *Ultimate truth arises from the means.*

Here Lama Tsongkhapa is commenting on the passage from Chandrakirti's autocommentary that says: "Therefore, that which is deceptive truth, because of being the method of engaging the ultimate truth, is taken as it is accepted by the system of the world without analyzing production from self and others."

The Madhyamikas accept phenomena as they are without analysis as do worldly beings. This is why the Prasangika Madhyamikas are called "the Madhyamikas who take what is renowned in the world."

Lama Tsongkhapa's *Illumination* (Tibetan text page 206) says:

> Chandrakirti says:
>
> *Because of that, when those things are analyzed,*
> *What possesses the essence of suchness is not found*
> *To abide on the side of things. Therefore,*
> *Do not analyze the truths that are worldly conventions.* [6.35]
>
> Therefore, *because of that*, *when those things*, forms, feeling, and so forth, *are analyzed* in terms of, for example, "Is it produced from self?," "Is it produced from other?," and so forth, *they are not found to abide* possessing a part that is produced and so forth on *this side of*, i.e., which is other than, the

> non-production and non-cessation ultimately of *what possesses the essence of suchness*. *Therefore*, *without analyzing truths that are worldly conventions* in terms of, for example, [whether they are] "from self or other," merely that seen by the worldly saying "If this exists, that arises" is to be asserted from the point of view of employing the conventions that depend on others, the world.

The Prasangika Madhyamika system says that one should not analyze things in terms of whether they are produced from self or produced from other, but should assert them as they are posited in terms of worldly conventionalities. This is because if one analyzes phenomena using the analysis of the ultimate nothing is found. Therefore, one should accept what the world sees, for example, from a barley seed comes a barley sprout, from a rice seed comes a rice sprout, and so forth. Because nothing is found when things are analyzed using the analysis of the ultimate, it is said that conventional truths do not withstand analysis. Therefore, one should leave such objects as they are without analyzing them.

In this context Chandrakirti's autocommentary says: "Therefore, without engaging in thorough analyses of such statements as "from self and others" and so forth, that universally perceived by the world "If this exists, this arises," merely this much should be accepted by way of engagement that depends on others (i.e., the world)."

Lama Tsongkhapa's *Illumination* (Tibetan text page 206) says:

> Aryadeva's [*Four Hundred Verses*, (v. 8.19)] says:
>
> Just as barbarians cannot be caught
> In another language,
> Similarly, with the exception of worldly beings,
> The world cannot be caught.

Barbarians are those people who do not have a written language or those who live in a land where there are no Dharma teachings. If something is not included in the world it cannot be caught or apprehended by worldly beings.

Lama Tsongkhapa's *Illumination* (Tibetan text page 206) says:

> Also *Fundamental Wisdom* (v. 24.10) says:
>
> Without depending on conventions,
> The highest meaning will not be realized.
> Without realizing the highest meaning,
> Nirvana will not be attained.

Conventions (*tha snyad*) are expressive sounds and the conceptions that follow from them. Without depending on them, one cannot realize ultimate truth (the highest meaning). If ultimate truth is not realized, one cannot attain nirvana. In other words, in order to attain nirvana one must realize ultimate truth, selflessness; without this realization one cannot abandon the conception of a self. If this is not abandoned, nirvana cannot be attained.

Lama Tsongkhapa's *Illumination* (Tibetan text page 206) says:

> [Nagarjuna's] *Refutation of Objections* says:
>
> Without asserting conventions
> We do not make explanations.

Without asserting conventions, Nagarjuna says that he does not make any explanations. Conventions are designations or terms, for example, saying "This is good," "That is bad," and so forth.

In short, the realization of emptiness depends on realizing conventions.

Tuesday morning, 4 July 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 206-7) says:

> Here analyzing and not analyzing refers to analyzing and not analyzing suchness. Furthermore, since it is important to understand the procedure for analyzing suchness by means of however many systems of analysis there are, when this is explained a bit the Prasangika system [is as follows].
> In regard to, for example the statement "The production of a sprout," without being satisfied by imputing terms, to search for the imputed object which is imputed like that asking "Is it produced from self or other?" is posited as analyzing suchness. Therefore, this is to be understood as not at all like the analyses by means of worldly conventions such as "Where does it come from? Where it is going?" and "Where is it, outside or inside?" and so forth.

The Prasangika Madhyamikas say that analyzing suchness is to analyze whether phenomena are produced from self or produced from other. If one does this analysis phenomena are not found. This non-finding is supreme finding just as non-seeing is supreme seeing; this is the meaning of finding emptiness. For example, when an imputed object, such as a sprout, is sought it is not found; this non-finding is the meaning of finding emptiness. On the other hand, analyzing "Where does it come from? Where it is going?" is not an analysis of suchness, but is merely analysis in terms of worldly conventions. Also analyzing "Where is it? Is it inside? Is it outside?" is not the analysis of the ultimate. This is because such types of analysis do not search for the imputed object.

Lama Tsongkhapa's *Illumination* (Tibetan text page 207) says:

> The Svatantrikas do not posit the analysis of suchness through merely that but [say] that it becomes an analysis of suchness through analyzing whether
> 1. it is posited as existing by the force of appearing to a consciousness, as was explained before, or
> 2. it is an object that is not posited by the force of [appearing to a consciousness] but is established by way of its mode of subsistence.
>
> Due to the significance of the identification of the object of negation being different, there are also two different demarcations of the analysis of suchness.

On the other hand, according to the Svatantrika Madhyamika system the analysis as to whether phenomena are produced from self or produced from other is not the analysis of suchness. Rather, in this system the analysis of suchness is to analyze whether an object is posited as existing by the force of appearing to a consciousness or is not posited as existing by the force of appearing to a consciousness but instead is established by way of its own mode of subsistence. For the Svatantrika Madhyamikas this is the measure of the object of negation, true existence. In other words, in this system the measure of true existence is: establishment by way of its own uncommon mode of subsistence without being posited by the force of appearing to a non-defective awareness.

Thus, because in the Prasangika Madhyamika system and Svatantrika Madhyamika system the identification of the object of negation is different, the demarcations of the analysis of suchness are different.

Lama Tsongkhapa's *Illumination* (Tibetan text page 207) says:

> Without understanding that, through taking into consideration the example of Devadatta – who in reality has not come to this abode but is initially mistaken to have come, and then upon investigating whether he has come or not come is understood to not have come – and then asserting that all non-analyzed presentations have only the wrong meaning, whereas analyzed presentations are not wrong, is not a system of the Madhyamikas and valid cognition because there are many occurrences of non-analyzed presentations by both systems which are established by valid cognition. Since this has already been extensively explained in other [texts], I will not elaborate upon it [here].
> Thus, when analyzed conventionalities are by means of the reasonings analyzing suchness this is to be understood as corrupting all worldly conventions.

For example, although Sonam has not come to Sherab's house, someone, without investigating, mistakenly thinks that he has come. This person then investigates whether or not Sonam has come to Sherab's house and discovers that he has not. On the basis of this example, asserting that all non-analyzed presentations are wrong, whereas all analyzed presentations are not wrong, is not a system of the Madhyamikas. "Valid cognition" can refer either to the Vaibhashikas and Sautrantikas, or else to the Chittamatrins, but it can also refer to the seven scriptures on valid cognition, such as the Dignaga's *Compendium of Valid Cognition*. Even when there is no analysis done by either of these two systems there remain many objects that are established by valid cognition. For example, the statements "This is black," "This is white," and so forth are non-analyzed presentations of objects that can be established by a valid cognizer to exist just as they are presented. Thus, many things are established by a valid cognizer without any analysis. In the Madhyamika system things are established by a valid cognizer without analyzing the imputed object. Colors and so forth exist in the perspective of an innate conventional awareness that does not investigate or analyze the imputed object. If it exists in the perspective of that awareness, it exists. Thus, there are many objects that are posited by the force of conventions without the need for investigation and analysis.

In conclusion, Lama Tsongkhapa says: "Thus, when conventionalities are analyzed by means of the reasonings analyzing suchness this is to be understood as corrupting all worldly conventions."

Chandrakirti's autocommentary (Tibetan text page 78) says:

> As explained by Aryadeva [in the *Four Hundred Verses*, 8.19]:
>
> > Just as barbarians cannot be led by other languages, similarly,
> > without being of the world,[31] the world is not able to be led.
>
> It is also taught in the *Treatise* [*on the Middle Way*, 24.10]:[32]
>
> > Not relying on the conventional, ultimate truth will not be realized. Not realizing ultimate truth, nirvana will not be attained.
>
> If a thorough analysis is made, the conventions of the world will fail. As extensively taught in [the *Extensive Sport] Sutra:*
>
> > For example, wood and string relied upon,
> > The hand exerted; if the three are assembled,
> > Instruments such as lutes and flutes
> > Will also give rise to sounds produced from them.
> >
> > Then, some scholars having investigated,
> > "From where has that come, to where has it gone?." –

[31] Literally, 'not belonging of the world.'

[32] Poisson misattributes it to chapter 14.

When investigation is made in each direction and in between,
Coming or going of sound will not be found.

From such causes and conditions,
All that is compositional will arise.
The yogi of perfect perceptions,
Perceives composites empty, unmoving.

The aggregates, entrances, and elements are
Empty even internally, externally empty –
Concerning sentient beings, emptied by self and without abode,
The character of phenomena is the very entity of space.

When wood, string, and the action of the hand come together, instruments, such as lutes, give rise to sound. Likewise, when a mouth blows on a flute sound is produced. If one analyzes where the sound comes from, where it goes, and so forth it is not found. These sounds arise from the assembly of certain causes and conditions. When a yogi who possess perfect realizations looks upon composites he sees that they are empty and unmoving, that is, they are free from inherently existent movement. Likewise, the five aggregates, twelve spheres (entrances), and eighteen constituents (elements) are also empty. The twelve spheres are internally and externally empty in that both the six spheres that are internal and the six that are external are empty. Just as objects are empty, so too are sentient beings empty of a self. They are empty of an inherently existent self and do not abide as an inherently existent self. Just as space is freedom from obstructive contact, likewise, the character of phenomena is freedom from inherent existence.

In short, phenomena should be posited without investigation and analysis just as they are asserted by the world. There is a story about Ashvagosha, initially a Forder, who, while standing in the doorway of a house, asked Aryadeva whether he was inside or outside. Aryadeva answered that it depended on his mind. When such questions are asked this is not the analysis of suchness.

In brief, one should not thoroughly analyze worldly conventions since by doing so they are corrupted because, when they are thoroughly analyzed, they are not found.

Lama Tsongkhapa's *Illumination* (Tibetan text page 207) says:

3B1C-2B3E-2A1B-2B1D-1C Refuting [the assertion of establishment by way of its own character] due to it following that ultimate production would not be refuted

Chandrakirti's autocommentary says:

In case it is mentioned: [We are] perplexed about what to do[33] if all presence of adherence to such things were also totally cut off. This adherence to conventional truth, being the cause of the fully deluded and the completely pure, necessarily produces some substantial essence.

Also in that case, an excess of mere words will remain concerning what was mentioned. If asked: Why?

In the context of thusness, due to some reason,
Production from self and others were unreasonable –
Since it is also unreasonable conventionally due to that, reason,
By what will your production be [established]? [6.36]

[33] Jayananda explains the Tibetan: *bred.sha thon pa* as *ngas ci zhig bya sNyam.nas bya.ba la rMongs.pao.*

> Just as production from self and others is unsuitable through the reasoning that was explained in the context of [analyzing] the ultimate, similarly, production is unreasonable through that [reasoning] itself even conventionally. So, by what [valid cognizer] will your production of things be established?
>
> Therefore, although not asserting that "production by self-characteristic does not exist in either of the two truths," undoubtedly it is to be accepted.

(Note the Tibetan word translated here as "perplexed" more literally means to be frightened.)

Due to strong adherence to completely pure phenomena and thoroughly afflicted phenomena as inherently existent, there are those who assert that phenomena must be established by way of their own character. This, that is, ultimate production, is what is to be refuted. It is refuted here saying that there is an excess of mere words because when it is analyzed it is not found. Chandrakirti says:

> *In the context of suchness, production from self and other*
> *Is not suitable by any reasonings.*
> *Since, even in conventional terms, it is not suitable by these reasonings,*
> *By what does your production exist?* [6.36]

By what is the production of things from self and others established? Chandrakirti says: "Just as production from self and others is unsuitable through the reasoning that was explained in the context of [analyzing] the ultimate, similarly, production is unreasonable through that [reasoning] itself even conventionally. So, by what [valid cognizer] will your production of things be established?" In other words, by what valid cognizer is the production of inherently existent things established? Chandrakirti says: "Therefore, although not asserting that 'production by self-characteristic does not exist in either of the two truths,' undoubtedly it is to be accepted." This means that even though the Svatantrika Madhyamikas do not wish to do so, they must accept that there is no established by way of its own character production because this is how things actually exist.

Chandrakirti's autocommentary then says:

> Due to some statements, such as "Not from self, [not from others]" and so forth, from the holy speech of Nagarjuna, [some] masters imagine that "only the entitiness of imaginaries are refuted; other-powered entities are not." Since this assertion of theirs, lacking reason, is also not established, those comments mentioned are only objects to be disputed and investigated.

Such comments are to be investigated and analyzed.

Lama Tsongkhapa's *Illumination* (Tibetan text page 207-8) says:

> OBJECTION: Furthermore, in that way, when all strong adherence to things as truly existent is eliminated, one is left alarmed. The adherence to truths in conventional terms as truly existent is the cause of bondage to and freedom from the two, the fully afflicted and completely pure. There must be some production that is of a substantial, that is, established by way of its own character, nature.
> RESPONSE: In regard to the aforementioned, there would be an excess of mere words. Why is that? Chandrakirti says:
>
> *In the context of suchness, production from self and other*
> *Is not suitable by any reasonings.*
> *Since, even in conventional terms, it is not suitable by these reasonings,*
> *By what does your production exist?* [6.36]

> Just as the *production* of forms and so forth *from self and other is not suitable by any of the reasonings* explained before *in the context of* analyzing *suchness*, that is, analyzing the ultimate, likewise, *since*, *even in conventional terms*, production *is not suitable by* those very *reasonings*, *by what* valid cognizer *is your* inherent *production* established? It is not [established by any valid cognizer]. [Chandrakirti's autocommentary] says:
>
> > Therefore, even though you do not wish to say "Production by way of its own character does not exist with respect to either of the two truths," this must inevitably be accepted.

In short, the Prasangika Madhyamikas say that the Svatantrika Madhyamikas must inevitably accept that established by way of its own character production does not exist with respect to either of the two truths.

This person says: "The adherence to truths in conventional terms as truly existent is the cause of bondage to and freedom from the two, the fully afflicted and completely pure." The part of the statement that says 'the adherence to truths in conventional terms as truly existent is the cause of bondage' is easily accepted, whereas the other part, 'the adherence to truths in conventional terms as truly existent is the cause of freedom,' is not easily explained. How can strong adherence to true existence be the cause of freedom? Think about it.

This person then says: "There must be some production that is of a substantial, that is, established by way of its own character, nature." The autocommentary merely says 'substantial nature,' whereas Lama Tsongkhapa explains this as meaning an established by way of its own character nature. What is establishment by way of its own character? In the Svatantrika Madhyamika system, either:

- substantiality, that is, establishment by way of its own character, is the basis for both the thoroughly afflicted and completely pure, or
- the conception conceiving establishment by way of its own character is the basis for both the thoroughly afflicted and completely pure.

Such substantiality being the basis for both the thoroughly afflicted and completely pure means that if there were no establishment by way of its own character things would not exist. Therefore, on the basis of establishment by way of its own character, one creates the causes of bondage to cyclic existence or the causes of freedom from cyclic existence. Or it can be said that strong adherence to true existence is the cause of bondage to cyclic existence, whereas according to the Svatantrika Madhyamikas asserting that conventional phenomena are established by way of their own character is the cause of freedom from cyclic existence.

In short, regarding the cause of bondage to and freedom from cyclic existence, the Svatantrika Madhyamika system asserts that established by way of its own character production is the basis of bondage to and freedom from cyclic existence.

Tuesday afternoon, 4 July 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 208) says:

> Therefore, the production that is refuted even in conventional terms by the reasonings analyzing suchness is explained, in order to make a connection, to be the production which is of a substantial nature. In summary, as explained previously [the production which is of a substantial nature] is only that which is affixed as a qualification to the object of negation, "production by way of its own character"; it is not at all mere production because it is said many times that conventional objects are inappropriate as objects of the analysis of the ultimate.

When the reasoning analyzing suchness is applied even production in conventional terms cannot be found. "Is explained, *in order to make a connection*, to be the production which is of a substantial

nature" refers to the previous passage in the autocommentary that says: "There must be some production that is of a substantial nature." This makes a connection in that the previous meaning, production that is of a substantial nature, is connected with the meaning here, the production that is refuted even in conventional terms by the reasonings analyzing suchness. In other words, production that is of a substantial nature is production established by way of its own character, it is not mere production.

Lama Tsongkhapa's *Illumination* (Tibetan text page 208) says:

> [We] assert that if production which is established by way of its own character in conventional terms is not negated by the reasonings analyzing suchness, ultimately existent production is also not negated. Since through merely being established by way of its own character it comes to be truly existent, [we] assert that affixing and not affixing "in conventional terms" to that [production established by way of its own character] is the same.

The Prasangika Madhyamikas say to the Svatantrika Madhyamikas: "According to you Svatantrika Madhyamikas it follows that production is ultimately existent because you accept that production is established by way of its own character. This is because if production is established by way of its own character it should also exist ultimately. You cannot negate ultimately existent production because you say that production is established by way of its own character."

In short, the Prasangika Madhyamikas say that establishment by way of its own character is true existence, therefore, it makes no difference whether or not the qualification "in conventional terms" is affixed to production established by way of its own character. In other words, the Prasangika Madhyamikas say to the Svatantrika Madhyamikas: "Even if you say that conventionally production by way of its own character exists but ultimately it does not exist there is no difference." This is how the Prasangika Madhyamikas debate the Svatantrika Madhyamikas. However, the Svatantrika Madhyamikas accept that conventionally there is production established by way of its own character whereas ultimately there is no production established by way of its own character. Thus, they make a distinction between these two, whereas for the Prasangika Madhyamikas production established by way of its own character does not exist either conventionally or ultimately.

Lama Tsongkhapa's *Illumination* (Tibetan text page 208) says:

> Since that is the case, the affixing of the qualifications "by way of its own character," "inherently," "by way of its own entity," and so forth to the object of negation occurs untold times in the sutras and in the texts of the two, the father and son, and this master. However, when refuting that they are the same, some Madhyamikas take the previous position and explain it as before. *Clear Words* also says:
>
> > This should be inevitably accepted as that alone. Otherwise, would conventionalities not be admissible? In that case, they would be suchnesses, not conventionalities.
>
> When, not content with mere imputation in conventional terms, the positing of conventional objects is refuted through performing the analysis that seeks the object of imputation, saying "In that case, [forms and so forth] are ultimately existent and forms and so forth are not conventionalities" flings [the consequence] that forms and so forth are not asserted to be ultimately established and are posited as conventionalities. Moreover, it is very clear that this [consequence] is not [flung] to the proponents of true existence but to the Svatantrika Madhyamikas.

"By way of its own character," "inherently," and "by way of its own entity" mean the same. However, when refuting that they are the same, some Madhyamikas take the former position, that of the Svatantrika Madhyamikas.

The citation from *Clear Words* "This should be inevitably accepted" means that if something is asserted to be established by way of its own character it should also be asserted to be ultimately existent.

In short, when one searches for conventional objects one should not investigate and analyze them. This is because if one searches for the imputed object through thorough analysis one does not find it. In the case that it is found by thorough analysis, the imputed object would exist ultimately and be established by way of its own character.

Lama Tsongkhapa says: "saying 'In that case, [forms and so forth] are ultimately existent and forms and so forth are not conventionalities' flings [the consequence] that forms and so forth are not asserted to be ultimately established and are posited as conventionalities." Such a consequence is flung not to the proponents of true existence but to the Svatantrika Madhyamikas. The Prasangika Madhyamikas set forth three reasonings in order to prove that established by way of its own character production does not exist. These reasonings, which are set out in the outlines to *Illumination*, are mainly for the Svatantrika Madhyamikas. Lama Tsongkhapa says that if production established by way of its own character exists:

1. it would follow that a superior's exalted wisdom of meditative equipoise would become the cause for the destruction of things,
2. it would follow that truths in conventional terms would be able to withstand the reasoning analyzing suchness, and
3. it would follow that there would be ultimately existent production.

Lama Tsongkhapa's *Illumination* (Tibetan text page 209) says:

> Here, some masters assert that by means of passages from the holy speech of Arya [Nagarjuna], such as "Not from self, not from other" and so forth, which refute production and so forth, the production of the imputational factor, which is apprehenders and apprehendeds being different substances, is refuted, whereas truly existent other-powered phenomena are not refuted. Furthermore, since the logical reasoning of such commentaries is not established to be non-existent, the aforementioned are only to be tested and investigated. Although those [masters] who proclaim the above position explained by this statement are said to be some past scholars such as Acharya Sthiramati and so forth, they do not appear to explain it like this in their texts.

The assertion that passages such as "Not from self, not from other" and so forth by Nagarjuna refute production of the imputational factor, which is apprehenders and apprehendeds being different substances, is attributed to Acharya Sthiramati but Lama Tsongkhapa say that it does not appear that Acharya Sthiramati actually says this in his texts.

Lama Tsongkhapa's *Illumination* (Tibetan text page 209) says:

> Since Acharya Dharmapala in his commentary on [Aryadeva's] *Four Hundred Stanzas* explains the view of the *Four Hundred Stanzas* as commenting on the Chittamatra [system], when [this position is] attributed to him it is fitting.

The master who actually asserts the above position is Acharya Dharmapala. He comments on Nagarjuna's *Fundamental Wisdom* in accordance with the Chittamatra views saying that there is the production of truly existent other-powered phenomena but there is no production of the imputational factor which is apprehenders and apprehendeds being different substances because apprehenders and apprehendeds are one substance. For this reason, Lama Tsongkhapa says that if it is said that the master making the above assertion is Acharya Dharmapala this is fitting.

Lama Tsongkhapa's *Illumination* (Tibetan text page 209) says:

> QUESTION: Well then, how do those who comment on the meaning of the profound sutra as being Chittamatra comment on the meaning of Arya [Nagarjuna's] texts?
> RESPONSE: In the texts of the great masters, such as Vasubandhu and so forth, although it does not clearly say "The meaning of Nagarjuna's texts are commented in this way," since in [Vasubandhu's] *Suitable Explanations* and so forth the perfection of wisdom sutras seem to be explained to be interpretable meaning [sutras] in dependence on the *Sutra Unraveling the Thought*, it is evident that they explain [Arya Nagarjuna's texts] similarly, [due to which] they cannot refute them. However, if they explain [these texts] literally, it is not that they do not explain the perfection of wisdom sutras literally because when the interpretable meaning [sutras] are explained literally their meaning must be explained as Chittamatra.

Great masters, such as Vasubandhu and so forth, explain Nagarjuna's Six Collections of Reasonings to be interpretable meaning teachings because these masters take the perfection of wisdom sutras to be interpretable meaning sutras and, since Nagarjuna's texts are explanations of them, they say that these texts must also be interpretable meaning. Although these great masters do not say that all sutras are interpretable meaning, they say that the sutras taught during the turning of the middle wheel of Dharma are interpretable meaning sutras. In short, they consider the extensive, middling, and brief mother perfection of wisdom sutras to be interpretable meaning sutras. Then, because these masters comment on the three mother sutras as interpretable meaning sutras they also explain Nagarjuna's texts as being interpretable. Thus, they do not refute Nagarjuna's texts but consider them to be interpretable.

"However, if they explain [these texts] literally, it is not that they do not explain the perfection of wisdom sutras literally" means that if Nagarjuna's various texts are explained literally they also have to explain the perfection of wisdom sutras literally. Lama Tsongkhapa says: "because when the interpretable meaning [sutras] are explained literally their meaning must be explained as Chittamatra." The Madhyamikas take the extensive, middling, and brief mother sutras to be literal and definitive meaning sutras, whereas those who say that the three mother sutras are interpretable are the Chittamatrins. This is because the Chittamatrins assert the middle wheel of Dharma to be interpretable meaning, while the Prasangika Madhyamikas assert it to be definitive meaning.

Lama Tsongkhapa's *Illumination* (Tibetan text page 210) says:

> However, the explanations that all phenomena are not ultimately existent and not established by way of their own character are established by reasonings to be literal. Therefore, because there is no harm to them being literal, [Chandrakirti], thinking that [these masters] cannot comment on [Nagarjuna's texts as] interpretable meaning, says: "[they are] only to be tested and investigated."

Thinking that these masters cannot comment on them as interpretable meaning, Chandrakirti says "they are only to be tested and investigated." Chandrakirti's autocommentary says: "Those comments are only objects to be disputed and investigated."

Lama Tsongkhapa's *Illumination* (Tibetan text page 210) says:

> Indicating the infinite harm regarding the opposite position of their being literal and the infinite proofs regarding their being straightforward, the meaning of [Nagarjuna's] texts is established to not be suitable to be interpreted in other ways due to which here this is not taught other than briefly.

According to the Prasangika Madhyamika system when it is said that there is no establishment by way of its own character this is to be taken literally and cannot be harmed. For this reason, the

Prasangika Madhyamikas say that the mother sutras are literally acceptable and are not interpretable meaning sutras. Chandrakirti, thinking this, says: "[they are] only to be tested and investigated."

In short, the three mothers sutras are literally acceptable without the need for interpretation. When they are accepted as literal, there is no harm but only proof as to how they are definitive.

Lama Tsongkhapa's *Illumination* (Tibetan text page 210) says:

3B1C-2B3E-2A1B-2B1D-2 Dispelling arguments regarding the refutation [of establishment by way of its own character]

Chandrakirti's autocommentary says:

> Well then, if it is said: Self-characterized production does not exist for either of the two truths. Therefore, how will their self-entities be observed in the world?
>
> I shall explain:
>
> *Empty things such as reflections and so forth –*
> *Those relying on collections – are not unknown either.*
> *Just as there, from empty reflections and so forth,*
> *Consciousness will be produced in its aspect.* [6.37]
>
> *Similarly, although all things are empty,*
> *They are strongly produced from emptinesses.* [6.38ab]
>
> All things abide as undifferentiated causes and effects. Although a reflection is posited in the aspect of non-inherent causes and effects, who with intelligence would consciously take [it] as definitely having a self-nature due to observing forms, feelings, and so forth – those abiding undifferentiated from causes and effects – as a mere existent? Therefore, although it is observed to exist, inherent production does not exist. As was taught [in the *Meeting of Father and Son Sutra*]:
>
> In a mirror, very clean all over, just as reflections that
> lack self-nature appear; similarly, Druma, should phenomena be known.

The Svatantrika Madhyamikas dispute the Prasangika Madhyamikas saying that if established by way of its own character production does not exist with respect to the two truths it follows that forms, feelings, and so forth would not be observed. They, therefore, ask the Prasangika Madhyamikas: "Do worldly beings not see them? How do worldly beings observe forms and so forth if this is the case?" Chandrakirti, that is, the Prasangika Madhyamikas, then respond to this question as above.

Chandrakirti says: "All things abide as undifferentiated causes and effects." Although things are actually differentiated into causes and results, they are not differentiated into causes and results that are established by way of their own character. A reflection of a face in a mirror produces a result which is an eye consciousness apprehending the reflection of a face. Therefore, causes and results do exist. Likewise, forms, feelings, and so forth that do not inherently abide as causes and results exist, whereas they do not exist as inherently existent causes and results. Thus, although causes and results are not differentiated into established by way of their own character causes and established by way of their own character results, they are differentiated into causes and results.

The sutra says that just as there exists a reflection of a face in a clean mirror that appears to be a face but does not exist as a face, similarly, one should understand phenomena.

Geshe Jampa Gyatso: Why does a pot not exist from its own side?
Student: A pot, as the subject, does not exist from its own side because it does not exist inherently.

Geshe Jampa Gyatso: That would be like saying: a pot, as the subject, does not exist inherently because it does not exist inherently! Rather one should say: a pot, as the subject, does not exist inherently because of being free from being an inherently existent one and an inherently existent many. Or else: a pot, as the subject, does not exist inherently because of being a dependent-arising. Or: a pot, as the subject, does not exist inherently because it exists. What is a pot? Is this cup a pot?
Student: It is not a pot because it is not a proper basis of imputation for the name 'pot.'
Geshe Jampa Gyatso: Why is not a proper basis since it is able to perform the function of holding liquid?
Student: It is not a round-bellied, flat-bottomed, water container.
Geshe Jampa Gyatso: What about your stomach, is it a pot?
Student: It is not because it is not flat-bottomed!

Wednesday morning, 5 July 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 210) says:

> OBJECTION: If production which is established by way of its own character does not exist with respect to both the two truths, forms and so forth would not exist. If that were the case, eye consciousnesses and so forth would not observe the entities of forms and so forth in the world. On the other hand, if that were not the case, even the horns of a rabbit and so forth would appear to eye consciousnesses and so forth for the very same reason.
> THE RESPONSE TO THAT IS EXPLAINED [AS FOLLOWS]: Chandrakirti says:
>
> *Empty things, reflections and so forth, that*
> *Depend upon a collection are not even not renowned.*
> *Just as for that from empty reflections and so forth*
> *Consciousnesses in their aspect are produced,* [6.37]
>
> *Likewise, even if all things are empty*
> *They are strongly produced from those that are empty.* [6.38ab]
>
> *Empty things*, that is, falsities, such as *reflections and so forth*, i.e., echoes and so forth, which are produced in *dependence on*, that is, based on, *a collection* of causes and conditions – a mirror and a face, a cave and an expelled sound, and so forth – *are not even not renowned* in the world, that is, they are renowned.

The objection made by the Svatantrika Madhyamikas is that if established by way of its own character production does not exist with respect to both truths it follows that forms and so forth would not exist. They say: "If that were the case, eye consciousnesses and so forth would not observe the entities of forms and so forth [to exist] in the world." They say that if something, such as a form and so forth, that does not exist is observed, then even the horns of a rabbit and so forth, which do not exist, would appear to eye consciousnesses for the very same reason. This is because if forms and so forth that do not exist are observed by an eye consciousness and so forth then also the horns of a rabbit and so forth which do not exist would appear to an eye consciousness.

The Prasangika Madhyamikas respond that although things are empty of establishment by way of their own character, in dependence on the conditions of a face and a mirror there is the production of an eye consciousness apprehending the reflection of a face. Likewise, in dependence on the conditions of a cave and an expelled sound an ear consciousness apprehending an echo is produced. These facts are renowned in the world.

Lama Tsongkhapa's *Illumination* (Tibetan text page 210) says:

> *Just as for that* renowned in the world, *empty reflections and so forth*, that is, falsities, *produce* eye *consciousness* and so forth having *the aspect of those* reflections and so forth – that is, a consciousness having the aspect of a falsity is produced from a reflection which is a falsity – *likewise*, *even if all things are empty* of establishment by way of their own character, results which are empty of [establishment by way of their own character] *are strongly produced from* causes which *are empty* of [establishment by way of their own character].

The Prasangika Madhyamikas say to the Svatantrika Madhyamikas that a cause which is empty of establishment by way of its own character produces a result which is empty of establishment by way of its own character. Although the Svatantrika Madhyamikas do not accept this, the Prasangika Madhyamikas say: "just as a consciousness having the aspect of a falsity is produced from a reflection which is a falsity – likewise, even if all things are empty of establishment by way of their own character, results which are empty of [establishment by way of their own character] are strongly produced from causes which are empty of [establishment by way of their own character]."

Lama Tsongkhapa's *Illumination* (Tibetan text page 211) says:

> Here an eye consciousness apprehending [a reflection] is said to be produced from the reflection. Therefore, since a reflection is a thing and a different entity from consciousness it is an external object. In addition, it is an observed object condition of an eye consciousness, due to which it is asserted to be a form sphere.

The reflection of a face is a functioning thing because it is able to produce the eye consciousness apprehending it. It is also a different entity from the consciousness apprehending it, it is an external object, and it is an observed object condition of an eye consciousness, due to which it is a form sphere. Why is it a form sphere? It is a form sphere because it is the appearance of a form which appears as form to the eye consciousness. There is a difference between form and form sphere because sounds, odors, tastes, and tangible objects are form but are not form spheres.

Lama Tsongkhapa's *Illumination* (Tibetan text page 211) says:

> The appearance of two moons and falling hair, mirages and so forth, and echoes and so forth should also be understood similarly. Hence, a face, two moons, falling hair, and so forth which appear to mistaken sense consciousnesses are likened to the establishment by way of its own character which appears to the five consciousnesses that are free from superficial impairment to the sense powers. Even though [the reflection of a face existing as] a face and so forth is not possible, they appear as such, just as even though establishment by way of its own character is not possible, [things] appear as that.

The appearance of one moon as two moons, the appearance of falling hair, and the appearance of the reflection of a face as a face are able to produce eye consciousnesses, are external objects, and are form spheres. The appearance of one moon as two moons is the appearance of a form which appears as form to an eye consciousness. Because it is the appearance of a form which appears as form, it is a form sphere. This can be debated asking: "Is one moon two moons?" If someone says that it is not, one says: "It is because one moon appears to be two moons." In conclusion, one moon appearing to be two moons is mistaken but the appearance of two moons is not mistaken; however, it is a falsity because that appearance is a form sphere.

Lama Tsongkhapa's *Illumination* (Tibetan text page 211) says:

> Reflections, echoes, and so forth are like forms, sounds, and so forth. Therefore, although the five, forms and so forth, that exist inherently are not posited as external [objects], the forms and so forth

> that *appear* to exist inherently are posited as external objects. Likewise, although reflections and so forth are not posited as external faces and so forth, reflections and so forth are posited as external [objects]. These two, [forms and so forth that appear to be inherently existent and reflections and so forth], are similarly posited and not posited as external [objects].

Just as a reflection of a face appears to be a face but is not, likewise, although things appear to exist inherently they do not exist inherently. What is the reflection of a face that appears to eye consciousness as a face? What is the appearance of one moon as two moons, the appearance of falling hair, and so forth? According to what Lama Tsongkhapa says here it appears that they are form spheres. However, the eye consciousness to which one moon appears to be two is a mistaken consciousness. What is the condition for one moon to appear to be two moons?
Student: The condition of one moon and impairment to the eye sense power.
Geshe Jampa Gyatso: What causes the impairment to the eye sense power?
Student: Perhaps drinking too much alcohol!
Geshe Jampa Gyatso: It could also be that, but it is usually said that it is caused by pressing on a particular part of the eye ball. In short, one moon appears to be two due to an impairment of the eye sense power. Without discussing whether or not that appearance is mistaken, what is that appearance? Is it matter, such as form, sound, odor, and so forth, or is it consciousness or a non-associated compositional factor? Since that appearance is not a permanent phenomenon but a functioning thing, it should be either matter, consciousness, or a non-associated compositional factor. The Prasangika Madhyamikas say that if it is a consciousness it is pervaded by being a valid cognizer *with respect to its own appearance*. It can be asked: "Is a consciousness pervaded by being a valid cognizer?" If someone says that it is not, one says: "It must be a valid cognizer because it is pervaded by being a valid with respect to its own appearance." To this one answers that there is no pervasion, because if it is a valid cognizer with respect to its own appearance it is not pervaded by being a valid cognizer. Because all consciousnesses are valid cognizers with respect to their own appearance, there is no need to posit a self-cognizer in order to explain memory. However, this can be debated: "The conception of true existence, as the subject, it follows that it is a valid cognizer with respect to its own appearance because it is a consciousness." If someone says that it is, one asks: "It follows that it realizes its own appearance because it is a valid cognizer with respect to it." If the other person says that it realizes its own appearance, one says: "Is it certain that the conception of true existence realizes its object? Is it a realizing awareness?" If someone says that it is not a valid cognizer with respect to its object but it is a valid cognizer with respect to its own appearance, one answers that there is no pervasion because if it is a valid cognizer with respect to its object it is a valid cognizer with respect to its object of the mode of apprehension.

In short, although there are some Prasangika Madhyamikas who say that a consciousness is not pervaded by being a valid cognizer with respect to its own appearance, Lama Tsongkhapa says that if it is a consciousness it is pervaded by being a valid cognizer with respect to its own appearance. Although a consciousness is pervaded by being a valid cognizer with respect to its own appearance, it is not pervaded by being a valid cognizer.

Student: Why is it that if it is a consciousness it is pervaded by being a valid cognizer with respect to its appearance?
Geshe Jampa Gyatso: It is because there exist wrong consciousnesses. The definition of a valid cognizer in the Prasangika Madhyamika system is: an incontrovertible knower. Another definition of a valid cognizer is: an incontrovertible knower with regard to its main object of comprehension.

However, there is debate concerning the definition of valid cognizer and the conception of true existence. One can say: "The conception of true existence, as the subject, it follows that it is an incontrovertible knower." If someone says that it is not, one says: "It is a valid cognizer because it is a

valid cognizer with respect to its appearance." If someone responds saying that there is no pervasion, one says: "It is a valid cognizer with respect to its appearance because it is a consciousness."

If it is asked: Since the conception of true existence is a consciousness (a knower), what does it know? The Prasangika Madhyamikas respond that it knows its appearance. The lower schools posit a common locus between a consciousness and that which does not know its object, this being a wrong consciousness.

Lama Tsongkhapa's *Illumination* (Tibetan text page 211) says:

> That a reflection is a falsity that is merely empty of being a face is established by all the mature of the world who are learned in terminology but have not directed their minds toward any of the scriptures and reasonings that present emptiness. Therefore, it is just not suitable to assert that what realizes [it to be a falsity] is a coarse consciousness of [an ultimate] type.

That a reflection is not a face is established even by the mature of the world who are learned in terminology but have not directed their minds toward any of the scriptures and reasonings that present emptiness. The Tibetan word *rgan po*, translated here as "mature," usually refers to those who are 50 years old and more, whereas adults are from 18-50 years old, youths are from 6-18 years old, and children are less than 6 years old.

Lama Tsongkhapa's *Illumination* (Tibetan text page 211-2) says:

> QUESTION: In that case, although reflections are renowned, that is, established, to be falsities, they are not established to be the falsities that are posited by the Madhyamikas. Therefore, how is the former an example of the latter?
> RESPONSE: In this context, setting forth reflections and so forth as an analogy is to set forth that already established by the world [to be falsities] as an example; it is not to set forth that already established to be posited by the Madhyamikas to be falsities as an example.

Someone says that although it is renowned that reflections are falsities, they are not the falsities posited by the Madhyamikas, so how are they an example of the latter? The response is as above.

Geshe Jampa Gyatso: On the basis of a table, for example, what do the Madhyamikas establish to be a falsity?
Student: They establish its appearance as truly existent to be a falsity.
Geshe Jampa Gyatso: In order to know that the table as a falsity it is necessary to realize that it is not truly existent? The table appears to be truly existent, but it is not; therefore, its mode of appearance and its mode of abidance are not concordant. What is the measure of the table being a falsity?
Student: The measure of it being a falsity is that its mode of appearing and its mode of abidance are not concordant.
Geshe Jampa Gyatso: Does the measure of the table being established to be a falsity mean that one realizes that its mode of appearing and its mode of abidance are not concordant?
Student: Yes.
Geshe Jampa Gyatso: That is acceptable. Do you realize that?
Student: No, I do not.
Geshe Jampa Gyatso: Although you do not realize it, do you understand it?
Student: I can say the words!

Student: I did not understand what Geshe-la said about the measure of something being a falsity in the Prasangika Madhyamika system because they do not distinguish real and unreal conventionalities.
Geshe Jampa Gyatso: The measure of a particular object being a falsity is that its mode of appearance and mode of abidance are not concordant. More precisely, its mode of appearing and mode of abidance are not concordant with respect to its main subject. Simply put, whenever the two modes of an object are not concordant it is established to be a falsity. Do mature worldly beings realize that a reflection does not exist as a face? Since they do realize it, a reflection is renowned to be a falsity. If it is a falsity renowned in the world is it pervaded by being a falsity? One can debate like this.

Wednesday afternoon, 5 July 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 212) says:

> Furthermore, a reflection that appears to be a face, for example, cannot be distinguished in all ways saying "Merely this part appears as a face, merely that does not appear as a face" on the basis of what appears to be a face. Although [a reflection that appears to be a face] is empty of existing as it appears with respect to all the parts of whatever appearance of face there is, this does not contradict it being produced in dependence on its causes. Taking this as an analogy, likewise, even when blue appears to be established by way of its own character, the two parts, the blue that appears as inherently existent and the blue that does not appear as inherently existent, appear inseparably. Although [blue] appears so, it is empty of existing as it appears with respect to all the parts of whatever appearance there is. Even so it is established that there is no contradiction in it being produced by its causes and in its producing results. Although the reflection of a face does not exist as it appears with respect to all the parts of whatever appearance there is, a reflection is understood to be posited as not being non-existent. [Similarly,] although blue does not exist as an object as it appears with respect to all the parts of it appearing to be established by way of its own character, blue can definitely be posited as existing.

When a reflection of a face appears as a face it cannot be said that "this part of the reflection appears as a face but that part of the reflection does not appear as a face," however, this does not imply that the reflection does not exist. Likewise, when blue appears to be established by way of its own character it cannot be said "this part of blue appears to an eye consciousness to be established by way of its own character but that part of blue does not appear to an eye consciousness to be established by way of its own character," however, this does not mean that blue does not exist, it does exist. Thus, despite not being able to make this distinction there is no contradiction in blue being produced by causes and in its producing results. Although blue appears to an eye consciousness to be established by way of its own character, it is not. The fact that blue does not exist in the way that it appears does not mean that blue does not exist. Therefore, it is feasible for it to be produced by its causes and to produce the result of eye consciousness. Lama Tsongkhapa says: "Although the reflection of a face does not exist as it appears with respect to all the parts of whatever appearance there is, a reflection is understood to be posited as not being non-existent. [Similarly,] although blue does not exist as an object as it appears with respect to all the parts of it appearing to be established by way of its own character, blue can definitely be posited as existing."

Lama Tsongkhapa's *Illumination* (Tibetan text page 212) says:

> Since a fine awareness distinguishing, through the analogy of a reflection, the two aspects "This is to be negated" and "This is not to be negated" on the basis of forms and so forth is indispensable for finding the Madhyamika view, do not be easily satisfied.

What do is to be understood with respect to "This is to be negated" and "This is not to be negated"? "This is to be negated" means that the blue appearing to be established by way of its own character is to be negated. "This is not to be negated" means that the blue appearing to be blue is not to be negated because this blue exists. Distinguishing these two is necessary in order to understand the Madhyamika view.

Lama Tsongkhapa's *Illumination* (Tibetan text page 212) says:

> Then, the [auto]commentary also says:
>
> > Although reflections are presented as causes and results that are not inherently existent, due to observing forms, feelings, and so forth – those [phenomena] abiding undifferentiated from causes and results – as mere existents, what scholar would knowingly ascertain them to have inherent existence? Therefore, they are observed to exist but are not produced inherently.

Reflections do not exist inherently yet they can be posited as causes and results. Likewise, forms, feelings, and so forth are causes and results but not inherently existent causes and results. Thus, although forms, feelings, and so forth are observed to exist, they are not observed to be inherently existent.

Lama Tsongkhapa's *Illumination* (Tibetan text page 212) says:

> With respect to mere existence and inherent existence and the production presented before, here it is indicated that there is no inherent production.

A distinction must be made between mere existence and inherent existence, as well as between mere production and inherently existent production. Mere existence and mere production exist, whereas inherent existence and inherently existent production do not exist.

Lama Tsongkhapa's *Illumination* (Tibetan text page 213) says:

> Therefore, it is very clearly stated that the two, production and inherent production, should be distinguished separately. If they are not so distinguished, through existent things on upward having become existent by way of their own entity and those [things] not existing by way of their own entity upward having become eternally non-existent, one will not pass beyond the two extremes of superimposition and deprecation. The commentary on [Aryadeva's] *Four Hundred Stanzas* says:
>
> > According to the proponents of true existence as long as there is the very existence of things there is also their own entity, whereas, when free from their own entity those things would not exist in all ways, due to which they would be like the horns of a donkey. Therefore, since one does not pass beyond being a proponent of duality it becomes difficult to make all strong assertions regarding that conform.

It is very important to distinguish between mere existence and inherent existence because, if one does not, one would have to say whatever exists exists inherently whereby one would fall into the extreme of superimposition and one would have to say that if phenomena do not inherently exist they do not exist at all whereby one would fall into the extreme of deprecation. The extremes of permanence and annihilation, or the extremes of superimposition and deprecation, are respectively (i) if it exists it exists inherently and (ii) if it does not exist inherently it does not exist at all. This is clear in the commentary on [Aryadeva's] *Four Hundred Stanzas*. However, the meaning of the statement "it becomes difficult to make all strong assertions regarding that conform" is not clear.

Lama Tsongkhapa's *Illumination* (Tibetan text page 213) says:

> Thus, the freedom from
> - all extremes of existence due to not existing by way of their own entity and
> - all extremes of non-existence due to being able to posit causes and results that are not inherently existent
>
> appears to be a particular of Acharya Buddhapalita's and Chandrakirti's commentaries on the thought of Arya [Nagarjuna]. Therefore, it is very important to distinguish the two existents and the two non-existents.

It is important to distinguish:
1. the two, existent and existing existent, and
2. the two, non-inherently existent and non-existent in conventional terms.

Lama Tsongkhapa's *Illumination* (Tibetan text page 213) says:

> That this is settled by the analogy of a reflection [is as follows]. The *Meeting of Father and Son Sutra* says:
>
> > Just as in a very perfectly pure mirror,
> > Reflections which lack
> > Inherent existence appear, likewise,
> > Druma, understand phenomena.
>
> The way of applying the meaning of analogies that are other examples of falsities should also be understood like the previous [analogy of a reflection].

There are many analogies that are other examples of falsities such as one moon appearing as two moons, the appearance of falling hair, an echo in a cave appearing to be the original sound, a magical horse and elephant appearing to be a real horse and elephant, and so forth. Is the sense consciousness to which one moon appears to be two moons a wrong consciousness? Is a sense consciousness to which falling hair appears a wrong consciousness? What is the object of the mode of apprehension of the sense consciousness to which one moon appears to be two moons?
Student: It should be the moon.
Geshe Jampa Gyatso: Does that mean that the sense consciousness apprehends the moon?
Student: No, it apprehends two moons.
Geshe Jampa Gyatso: Just as two moons appear does the eye consciousness apprehend two moons?
Student: It apprehends two moons.
Geshe Jampa Gyatso: How? What is the object of the mode of apprehension of a sense consciousness to which there is the appearance of falling hair?
Student: Hair.
Geshe Jampa Gyatso: Does hair appear to that eye consciousness?
Student: Hair appears to it.
Geshe Jampa Gyatso: Does hair appear to it because there is the appearance of falling hair? Does a snow mountain appear to the sense consciousness to which a snow mountains appears as blue?
Student: It does not appear.
Geshe Jampa Gyatso: If a snow mountain appears as blue to it does not a snow mountain appear?
Student: A white snow mountain does not appear to it.
Geshe Jampa Gyatso: Hair appears to the eye consciousness which has the appearance of falling hair; this was accepted by you! In the case of falling hair what is the superficial cause of error?
Student: It is an inner superficial cause of error within the sense power.

Geshe Jampa Gyatso: What is wrong with the eye sense power?
Student: The clear sense power in the eye is impaired.
Geshe Jampa Gyatso: Is it dirty?! There are superficial causes of error and deep causes of error. When a white conch appears as yellow is it due to a superficial or deep cause of error?
Student: It is due to a superficial cause of error.
Geshe Jampa Gyatso: What is that?
Student: It is jaundice.
Geshe Jampa Gyatso: Does the eye consciousness to which one moon appears as two have the appearance of one moon?
Student: It has the appearance of two moons.
Geshe Jampa Gyatso: If it has the appearance of two moons, does it not have the appearance of one moon? You cannot have the appearance of two without the appearance of one!

When one moon appears as two moons, does the appearance of two moons exist? It does exist. What kind of phenomenon is the appearance of two moons? Is it a functioning thing or a non-functioning thing? If it is functioning thing it would be impermanent, whereas if it is a non-functioning thing it would be permanent. Does the appearance of falling hair to a sense consciousness exist? It does exist, but what kind of phenomenon is it? If asked: "Does falling hair exist?" If someone says: "It does not," then one says: "There should be because there is the appearance of falling hair." To this one replies: "There is no pervasion."

Lama Tsongkhapa's *Illumination* (Tibetan text page 213) says:

3B1C-2B3E-2A1B-2B1E Indicating the excellent qualities of refuting inherent production also with respect to the two truths

1 The excellent quality of easily abandoning the views of permanence and annihilation
2 The excellent quality of the relationship of actions and results being completely appropriate

3B1C-2B3E-2A1B-2B1E-1 The excellent quality of easily abandoning the views of permanence and annihilation

Chandrakirti's autocommentary says:

Therefore:

Because self-nature does not exist in either of the two truths,
They are not eternal nor annihilated. [6.38cd]

Because, thus, things are inherently empty like the aspect of a reflection, therefore, permanence and annihilation just do not exist because a self-nature, an entitiness, does not exist in either of the two, the ultimate and conventional truths.

If one understands the two truths very well, one will easily become free from the extreme of permanence and the extreme of annihilation. A reflection appears to be a real face but is not, likewise phenomena appear to be inherently existent but are not. Therefore, conventional truths and ultimate truths do not have an inherent entity. Because the two truths are not inherently existent they are free from the extreme of permanence; because they are feasible in conventional terms they are free from the extreme of annihilation. Thus, when phenomena are understood to be empty of inherent existence, one becomes free from the two extremes. To abide in the Middle Way means that by realizing that the two truths do not exist inherently one becomes free from abiding in the extreme of permanence. In

addition, when one understands that because the two truths do not exist inherently they are feasible as agents and actions, one becomes free from the extreme of annihilation.

Chandrakirti's autocommentary says:

> As is said in the *Treatise [on the Middle Way*, 15.11]:
>
> > Whatever entitiness exists, it is eternal since not non-existent.
> > "The previously arisen does not exist now;" hence, it follows as annihilated.

(Note this verse is translated by Jay Garfield in *Fundamental Wisdom of the Middle Way* as:

> "Whatever exists through its essence
> Cannot be non-existent" is eternalism.
> "It existed before but doesn't now"
> Entails the error of nihilism.)

The first two lines of this verse in the *Treatise on the Middle Way* mean that whatever is an inherently existent entity is permanent. "The previously arisen does not exist now;" hence, it follows as annihilated" means that whatever existed before but no longer exists is annihilated.

Chandrakirti's autocommentary says:

> Similarly, like the teaching [in the *Treatise on the Middle Way*, 21.14]:
>
> > If a thing were accepted as existent, viewing it as eternal and annihilated
> > would follow because that thing would become permanent and impermanent.
>
> – and so forth.

(Note this verse is translated by Jay Garfield in *Fundamental Wisdom of the Middle Way* as:

> If one accepts the existence of entities,
> Permanence and the view of complete non-existence follow.
> For these entities
> Must be both permanent and impermanent.)

The *Treatise on the Middle Way* is difficult to understand without commentary. However, this verse means that by asserting phenomena to be inherently existent one falls into the view of permanence and by asserting that if a phenomenon does not exist inherently it is non-existent one falls into the view of annihilation.

Chandrakirti's autocommentary says:

> Similarly [in the *Treatise on the Middle Way*, 17.31-33]:
>
> > Just as emanations by the Teacher emanate due to perfect magical emanation,
> > and the emanations also emanate others again; like emanation,
> >
> > Similarly, whatever acts are done by the agent are also like a kind of emanation,
> > for example, like that emanated from an emanation making emanations.

> Delusions and actions, and bodies, agents, and results,
> are like the city of gandharvas, a mirage, and a dream.
>
> Thus, the example of emanation indicates the non-inherent as produced from the non-inherent.

Shakyamuni Buddha emanated emanations, which then created other emanations, which then created other emanations and so forth. A buddha is able to emanate billions of emanations in billions of world systems. When an emanation emanates an emanation, the first emanation is the agent and the second emanation is the object. Similarly, due to afflictions and karma one takes a body; afflictions and karma being the agent and the body the object. Agent and action lack inherent existence and are likened to a city of gandharvas, a mirage, a dream, and so forth. What is "a city of gandharvas"? This is discussed in the context of the instructions regarding putting a small amount of water in an offering bowl before placing it on the altar in order to avoid that the gandharvas build their city there and then by pouring water into the bowl one destroys their city and creates heavy negative karma.

Thursday morning, 6 July 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 213) says:

> Chandrakirti says:
>
> > *Even with respect to the two truths there is no inherent existence.*
> > *Therefore, they are not permanent; they are also not annihilated.* [6.38cd]
>
> Therefore, all things are empty of inherent existence, like reflections, that is, *even with respect to the two truths*, the ultimate and conventional, or with respect to both of them, *there is no inherent existence*. *Therefore*, *they*, forms and so forth, *are not* inherently existent *permanent*. Not only that, *they are also not annihilated*. 'Annihilation' is annihilation as it is explained in the context of [saying that] at the time of the sprout, the disintegrated seed is non-existent. *Fundamental Wisdom* (v. 15.11cd) says:
>
> > "The previously arisen, now does not exist,"
> > Hence, it would follow as annihilated.
>
> Due to asserting inherently existent things, if it is asserted either that
> 1. things that existed before, later do not exist, or
> 2. that they are impermanent [phenomena] which have disintegrated,
>
> it is a view of annihilation. This is because, even though when things are asserted to be inherently existent they are asserted to be either permanent or impermanent, they are said to be views that fall into the extremes of permanence and annihilation.

Here the Prasangika Madhyamikas say to the Svatantrika Madhyamikas: "If you accept forms and so forth to be inherently existent you fall into the extremes of permanence and annihilation." Forms and so forth are neither inherently existent permanent nor inherently existent impermanent. Asserting that inherently existent forms and so forth that existed previously, later become non-existent is the extreme of annihilation. However, if non-inherently existent phenomena that existed before are asserted to later become non-existent this is not the extreme of annihilation because impermanent phenomena do exist and disintegrate. When one realizes the non-inherent existence of phenomena, one easily becomes free of the extremes of permanence and annihilation.

Lama Tsongkhapa says: "This is because, even though when things are asserted to be inherently existent they are asserted to be either permanent or impermanent, they are said to be views that fall into the extremes of permanence and annihilation." If one asserts that inherently existent phenomena are permanent one falls into the extreme of permanence, whereas if one asserts that

inherently existent phenomena are impermanent one falls into the extreme of annihilation. The latter is because if something that exists inherently is impermanent it would be non-existent.

Student: Does there exist an innate view of extremes?
Geshe Jampa Gyatso: Having an innate view of permanence does not mean that one falls into the extreme of permanence. To fall into the extreme of permanence means that one *asserts* inherently existent phenomena are permanent. Only two views, the view of the transitory collection and view of extremes, are both innate and acquired.

Lama Tsongkhapa's *Illumination* (Tibetan text page 214) says:

> *Fundamental Wisdom* says that just as emanations by the Teacher emanate and [those emanations] also emanate others, likewise, also agent, action, and that produced by them are similar to those. Due to this, here the [auto]commentary says:
>
> > [The analogy of emanation] indicates that those that are non-inherently existent are produced from the non-inherently existent.
>
> This statement indicates that due to positing all agents and actions as non-inherently existent there is no view of annihilation. Here, if establishment by way of its own character is not negated conventionally, one will not realize the very subtle selflessness, due to which it also becomes difficult to not generate the very subtle views of permanence and annihilation in one's continuum. Therefore, the abandonment of all views of permanence and annihilation without exception is the excellent quality of refuting the object of negation conventionally. If it is refuted to be conventionally existent, not only will one not fall into the views of permanence and annihilation relative to the ultimate, one will [also] not be polluted by the stains of the views of permanence and annihilation relative to the conventional. Hence, [refuting inherent production] has the excellent quality of easily abandoning the views of permanence and annihilation.

Just as in the example of an emanation emanating emanations, it is feasible to posit agents and actions, or causes and results. The meaning of the analogy is that the Teacher, the emanator, is the agent, and the emanation is the object of the action. In terms of cause and result, the Teacher is the agent, the emanation he emanates is the action, and that emanation making an emanation is like an action producing a result.

Lama Tsongkhapa says: "This statement indicates that due to positing all agents and actions as non-inherently existent there is no view of annihilation." In short, due to positing phenomena as non-inherently existent agents and actions are feasible.

Lama Tsongkhapa says: "Here, if establishment by way of its own character is not negated conventionally one will not realize the very subtle selflessness." If someone asserts that, although inherently existent phenomena do not exist ultimately, they do exist conventionally, the Prasangika Madhyamikas say that this is incorrect because they also do not exist conventionally. Thus, if inherently existent phenomena are not refuted also conventionally one will have difficulty in achieving the realization of the very subtle selflessness. Then, if one does not realize the very subtle selflessness "it also becomes difficult to not generate the very subtle views of permanence and annihilation in one's continuum." Therefore, in order to have a view that is free from the two extremes, one also has to refute inherently existent phenomena conventionally. Lama Tsongkhapa says: "If it is refuted to be conventionally existent, not only will one not fall into the views of permanence and annihilation relative to the ultimate, one will [also] not be polluted by the stains of the views of permanence and annihilation relative to the conventional."

In conclusion Lama Tsongkhapa says: "Hence, [refuting inherent production] has the excellent quality of easily abandoning the views of permanence and annihilation." The two extremes of

permanence and annihilation are also respectively called 'the extreme of existence' and 'the extreme of non-existence.'

Geshe Jampa Gyatso: Who abides in the extreme of permanence and who abides in the extreme of annihilation?
Student: The followers of the lower schools abide in the extreme of permanence because they assert phenomena to be inherently existent, and those who abide in the extreme of annihilation are some of the non-Buddhist schools.
Student 2: Those who abide in the extreme of permanence are ordinary worldly beings like my mother, whereas those who abide in the extreme of annihilation are the existentialists.
Geshe Jampa Gyatso: Who are those who abide in both extremes?
Student: They are superiors who abide on the path of seeing who no longer have the acquired afflictions but have the innate ones.
Geshe Jampa Gyatso: It is not possible for superiors to abide in both extremes because they have realized the non-inherent existence of phenomena and have realized that agent, action, and object exist within that. The measure of falling into the extreme of permanence is to assert that compounded phenomena exist truly. The measure of falling into the extreme of annihilation is asserting that if compounded phenomena do not exist truly they are completely non-existent. In conclusion, there are no superiors who fall into the extreme of permanence and the extreme of annihilation.

Student: If a Svatantrika Madhyamika asserts a phenomenon to be permanent and inherently existent he would fall into the extreme of permanence and if he asserts a phenomenon to be impermanent and inherently existent he would fall into the extreme of annihilation.
Geshe Jampa Gyatso: It can be said that from the point of view of the Prasangika Madhyamikas the Svatantrika Madhyamikas fall into both extremes. However, you can then debate this saying: "It follows that a Svatantrika Madhyamika is not a Madhyamika because he has fallen into the extremes of permanence and annihilation." If rather than saying "inherently existent" you had said "truly existent" then this argument would not apply to the Svatantrika Madhyamikas. The Svatantrika Madhyamikas do not assert that phenomena are truly existent, ultimately existent, and existing as their own reality, but assert that phenomena are inherently existent, established by way of their own character, and existing from their own side.

Student: If someone thinks that nothing exists and therefore it is not necessary to safeguard morality is that a view of annihilation which makes one fall into the extreme of annihilation?
Geshe Jampa Gyatso: That is a wrong view. For example, thinking that there are no future lives or no Three Jewels are wrong views.
Student: Does the view of annihilation follow from a wrong view? Does a wrong view follow from a view of annihilation? What is their relationship?
Geshe Jampa Gyatso: There is no particular order. Wrong views are to hold that the Three Jewels, the law of actions and results, and so forth do not exist, it is not to say "I do not exist" and "You do not exist." The view of annihilation is to analyze with reasonings and come to the conclusion that phenomena do not exist inherently and therefore do not exist whereby one thinks "I do not exist." One thinks that if phenomena do not exist inherently they do not exist at all. Holding the view that phenomena do not exist inherently therefore they do not exist is to fall into the extreme of annihilation. Just to hold the wrong view that the Three Jewels, law of actions and results, and so forth do not exist is not to fall into the extreme of annihilation.

Therefore, who has fallen into the extreme of annihilation and who has fallen into the extreme of permanence? According to the Prasangika Madhyamikas the followers of the lowers schools have

fallen into the extreme of permanence, and only they themselves have not. To fall into the extreme of annihilation, or to generate the view of annihilation, is to analyze emptiness and upon recognizing the object of negation to think that if it is negated then everything becomes non-existent.

Lama Tsongkhapa's *Illumination* (Tibetan text page 214-5) says:

3B1C-2B3E-2A1B-2B1E-2 The excellent quality of the relationship of actions and results being completely appropriate

- A Indicating that with regard to not asserting establishment by way of its own character, it is not necessary to assert a basis-of-all and so forth
- B Indicating an example of a result arising from a action that has ceased
- C Dispelling arguments with respect to indicating in this way

3B1C-2B3E-2A1B-2B1E-2A Indicating that with regard to not asserting establishment by way of its own character, it is not necessary to assert a basis-of-all and so forth

1. Explaining the passage that makes a connection
2. Explaining the meaning of the root verse
3. Explaining the meaning that comes from that

3B1C-2B3E-2A1B-2B1E-2A1 Explaining the passage that makes a connection

Chandrakirti's autocommentary (Tibetan text page 81) says:

> Therefore, since such a self-nature does not exist in either of the two truths, not only is viewing as eternal and annihilated abandoned a long way off, but even if a long time passes after having ceased actions, the relationship with the effect of the actions is admissible even without imagining a consciousness-basis-of-all, a continuum [of mind], not wasting, acquisition, and so forth.

This passage connects: (1) the fact that by the realization of the non-inherent existence of phenomena the views of permanence and annihilation are distanced and (2) the fact that a relationship between cause and result is completely feasible. The Prasangika Madhyamikas say that the ceasing of actions is a functioning thing due to which, although their results arise a long time later, there is no need to posit a site for the depositing of latencies such as a mind-basis-of-all, a continuity of mind, non-wastage, acquisition, and so forth. On the other hand, the lower schools, the Svatantrika Madhyamikas, Chittamatrins, and Sautrantikas, assert that a basis or site is necessary for the depositing of the latencies of actions because without this they could not bring a result. For this reason, they posit a mind-basis-of-all, a mental consciousness, and the continuity of mind as the basis on which these latencies are posited. The Vaibhashikas posit acquisition and non-wastage to explain how actions bring about their results.

The Chittamatrins in general say that a mind-basis-of-all is necessary for the depositing of latencies of actions. However, there are True Aspectarian Chittamatrins and False Aspectarian Chittamatrins, the former of which posit a mind-basis-of-all as the site for the depositing of latencies, whereas the latter posit the mental consciousness. The Svatantrika Madhyamikas also posit the mental consciousness, whereas the Sautrantikas posit the continuity of mental consciousness. Within the Vaibhashikas there are those who posit acquisition and those who posit non-wastage.

What is a mind-basis-of-all? It is an unspecified mind that is other than the collection of seven consciousnesses and is the site for the depositing of the latencies of virtuous and non-virtuous actions. This is discussed in a particular text dedicated to the subject of the mind-basis-of-all, *Ocean of Eloquence, An Extensive Commentary on the Difficult Points of Mentality and the Basis-of-all*.

The Svatantrika Madhyamikas posit the sixth, the mental consciousness, which is the illustration of the person, as the site for the depositing of the latencies of actions. The entity of this

mental consciousness is unspecified or unobscured unspecified. The latencies of actions are deposited on this basis, an unobscured unspecified mind.

Acquisition is defined as: the substance which brings about the possession of the phenomena to be acquired in the person [who acquires it]. Non-wastage is defined as: a potential that does not allow a property to be wasted. It is like, for example, when we put money in the bank we receive a receipt of the deposit in that this receipt is what prevents the loss of that money.

Lama Tsongkhapa's *Illumination* (Tibetan text page 215) says:

> [The passage in Chandrakirti's autocommentary that makes a connection] says:
>
> > Thus, since neither of the two truths are inherently existent, not only are the views of permanence and annihilation abandoned to a far distance, but, even a long time after actions have ceased, it is still feasible for them to be related to the result of those actions even without thoroughly conceiving a mind-basis-of-all, a continuity of mind, non-wastage, acquisition, and so forth.
>
> This [passage] indicates that the position of establishment by way of its own character not existing even in conventional terms has not only the excellent quality of casting the views of permanence and annihilation to a far distance, but also has the excellent quality of the relationship between actions and results being completely reasonable even without asserting a mind-basis-of-all and so forth.

The Prasangika Madhyamikas say that although there is no mind-basis-of-all and so forth the relationship between actions and results is completely reasonable.

Lama Tsongkhapa's *Illumination* (Tibetan text page 215) says:

> The way to comment on Arya [Nagarjuna's] texts [is as follows]. Even though there does not exist a mere atom of establishment by way of its own character, in dependence on this uncommon system – a way of commenting that is admissible due to positing all agents and actions – there are many pure tenets that are uncommon to other commentators. What are they? For the moment, when the main ones are expressed they are:
>
> 1. not asserting a mind-basis-of-all which is a different entity from the six collections,
> 2. not asserting self-cognizers,
> 3. not asserting that the view of suchness is generated in the continuum of a defendant by an autonomous syllogism,
> 4. in asserting consciousnesses, it is also necessary to assert external objects,
> 5. hearers and solitary realizers have the realization of things as non-inherently existent,
> 6. the conception of a self of phenomena is posited as an affliction,
> 7. disintegratedness is a functioning thing, and
> 8. for that reason, there is an uncommon way of positing the three times.

These are the eight uncommon points or eight difficult points of the Prasangika Madhyamika system. The first is that the Prasangika Madhyamikas do not assert a mind-basis-of-all which is a different entity from the six collections. Then, although the Tibetan text actually says "not asserting an uncommon way of refuting a self-cognizer" this means "not asserting a self-cognizer." If a self-cognizer existed it would be a consciousness that is directed only inward and just an apprehender The Prasangika Madhyamikas do not accept such a consciousness.

The Prasangika Madhyamikas also do not assert that the view of suchness is generated in the continuum of a defendant by means of an autonomous syllogism. In fact, they do not accept autonomous signs. What is an autonomous sign? According to the Svatantrika Madhyamika system a defendant can realize the thesis, or probandum, by means of the challenger setting forth a sign having all three inherently existent modes complete. This is not asserted by the Prasangika Madhyamikas.

Of the eight difficult points, three of them are what is not asserted by the Prasangika Madhyamikas and five of them are what is asserted by them. The five are:

1. the existence of external objects,
2. hearers and solitary realizers superiors have the realization of the selflessness of phenomena,
3. the conception of a self of phenomena is an afflictive obstruction,
4. disintegratedness is a functioning thing, and
5. for that reason an uncommon way of positing the three times.

However, in Gyeltshap Dharma Rinchen's *Notes on the Eight Difficult Points, Preventing Forgetfulness of the Foremost One's Speech* it says that, among the eight, four are asserted by the Prasangika Madhyamikas and four are not asserted by them. In Langdok Lama Rinpoche's commentary *Enumeration of the Names of the Middle Way* there are eleven difficult points. Also in the Kunkyen Jamyang Shepa's texts there are more than eight. However, most commentators posit eight difficult points for the reason that there are eight commentaries that are uncommon to the Chittamatra way of commenting and eight commentaries that are uncommon to the Prasangika Madhyamika way of commenting.

Friday morning, 7 July 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 216) says:

> The first, [not asserting a mind-basis-of-all which is a different entity from the six collections,] is presented in this chapter. The way of touching upon the non-assertion of a self-cognizer in terms of not asserting inherent existence will be explained. The way of touching upon the non-assertion of autonomous [syllogisms] in terms of [not asserting inherent existence] has already been extensively explained in other [texts], but it is also briefly explained here. The [way of] touching upon the assertion of external objects in terms of [not asserting inherent existence] will be explained. Also, the way of touching upon the fifth, [the assertion that hearers and solitary realizers have the realization of things as non-inherently existent] in terms of [not asserting inherent existence is as follows]. The non-existent self of the statement "The selflessness of all phenomena within the hearer's basket" by Buddhapalita is establishment by way of its own entity, as was explained previously, and is asserted here as well. Furthermore, this means that it fulfills the definition of selflessness. Therefore, it fulfills the definition of the selflessness of persons and necessarily also that of the person's non-establishment by way of its own entity. In order to realize that properly, it is an essential must to also realize the selflessness of phenomena properly.

The non-assertion of a self-cognizer is touched upon in terms of not asserting inherent existence. In the Prasangika Madhyamika system a self-cognizer is not asserted because they say that a consciousness cannot cognize itself. For example, a knife, no matter who sharp its blade is, cannot cut itself. Likewise, darkness cannot obscure itself and a light cannot illuminate itself. Also a gymnast cannot stand on his own shoulders! In the same way a consciousness cannot cognize itself.

The Prasangika Madhyamika system also does not assert autonomous syllogisms. This means that an inherently existent thesis cannot be realized in dependence on realizing a inherently existent sign that has the three modes complete. This is briefly explained by Lama Tsongkhapa in the *Illumination* but it is extensively explained in his other texts, for example, *Great Exposition of the Stages of the Path*.

Lama Tsongkhapa says: "The [way of] touching upon the assertion of external objects will be explained."

Lama Tsongkhapa then says: "the assertion that hearers and solitary realizers have the realization of things as non-inherently existent." This is because the Prasangika Madhyamikas say that if it is a hearer or solitary realizer superior it is pervaded by realizing the selflessness of phenomena. This was explained extensively in the first chapter of the *Supplement* in relation to:

> *On the Gone Afar he surpasses them with his intelligence.* [1.8d]

Lama Tsongkhapa's *Illumination* previously set out three reasonings and seven scriptural authorities proving that hearer and solitary realizer superiors realize the selflessness of phenomena (see *Illumination* Tibetan text page 45).

Lama Tsongkhapa's *Illumination* (Tibetan text page 216) says:

> The non-existent self of the statement "The selflessness of all phenomena within the hearer's basket" by Buddhapalita is establishment by way of its own entity, as was explained previously, and is asserted here as well. Furthermore, this means that it fulfills the definition of selflessness. Therefore, it fulfills the definition of the selflessness of persons and necessarily also that of the person's non-establishment by way of its own entity. In order to realize that properly, it is an essential must to also realize the selflessness of phenomena properly.

Here Lama Tsongkhapa says that in order to realize a selflessness of persons that fulfills the definition, or a fully qualified selflessness of persons, one must realize a fully qualified selflessness of phenomena. "Fully qualified" means that it fulfills its definition. In both cases, that of realizing the selflessness of persons and the selflessness of phenomena, the object of negation is establishment by way of its own character. Is it certain that one must first realize a fully qualified selflessness of phenomena before realizing a fully qualified selflessness of persons? This is not necessary because one first realizes the selflessness of persons and then realizes the selflessness of phenomena in terms of the basis of attributes. This is because one first realizes that the person exists in dependence on his five aggregates, due to which one realizes the person to exist dependently, that is, to be a dependent-arising. This is what it means to understand the person in terms of the basis of attributes. This is explained in Lama Tsongkhapa's *Middling Stages of the Path*.

Lama Tsongkhapa's *Illumination* (Tibetan text page 216) says:

> When that is the case, since one must definitely assert the conception of a self of phenomena to be an affliction, there exist many different features such as:
> 1. with respect to the identification of the afflictions there are two, the coarse and subtle,
> 2. there are two ways of asserting – (i) that there is freedom and (ii) that there is not freedom – by the mere path of the sixteen [attributes], impermanence and so forth, and
> 3. from what point the knowledge obstructions are abandoned.

Because the hearer and solitary realizers realize the non-inherent existence of phenomena the conception of a self of phenomena is an affliction. The afflictions have two levels, the coarse and subtle. The subtle afflictions are those induced by the conception of persons or phenomena as inherently existent, whereas coarse afflictions are those induced by the conception conceiving the person to be self sufficient substantially existent. Or else it can be said that the afflictions explained in

the two *Knowledges* are the coarse afflictions and those explained by the Prasangika Madhyamikas are the subtle.

By relying on the mere path of the sixteen attributes that is explained in the two *Knowledges* one cannot attain liberation, whereas by relying on the path of the sixteen attributes explained here one can attain liberation.

The knowledge obstructions are abandoned from the eighth ground upward. The Prasangika Madhyamikas say that a bodhisattva does not begin to abandon the knowledge obstructions until the afflictive obstructions have been abandoned. On the other hand, the Svatantrika Madhyamikas assert that a bodhisattva begins to abandon the afflictive obstructions together with the knowledge obstructions from the first ground. They say that a bodhisattva definite in lineage attains the two states of foe destroyer simultaneously, that is, a foe destroyer who has abandoned the afflictive obstructions and a foe destroyer who has abandoned the knowledge obstructions.

Lama Tsongkhapa's *Illumination* (Tibetan text page 216) says:

> QUESTION: Well then, that initially it is possible for there to be a common locus of the two – (i) excellently settling the view of suchness that enters the mahayana and (ii) falling into the hearer and solitary realizer [vehicle] – is also necessarily asserted by both Madhyamikas. In that case, it is also necessary to assert that such [a person], through cultivating the selflessness of phenomena, directly perceives it and meditates on that already seen in this way. If that is the case, it is also necessary to assert that, by means of the path, the acquired conceptions of a self of phenomena are abandoned through the path of seeing and the innate conceptions of a self are abandoned through the path of meditation. Therefore, is the conception of a self of phenomena also asserted to be of two [types], afflicted and not afflicted, in the Madhyamika system that conceives things to be established by way of their own character?

Someone says that the two Madhyamikas must accept a common locus of "(i) excellently settling the view of suchness that enters the mahayana and (ii) falling into the hearer and solitary realizer [vehicle]." There are bodhisattvas who have realized emptiness and who have degenerated the mahayana conventional mind of enlightenment due to which they fall to the hearer vehicle. They think that they cannot enact the welfare of sentient beings, who are difficult to subdue, and think to attain their own liberation due to which they fall to the hinayana. There is a story about this. Once Manjushri taught emptiness to a large number of people, however, the listeners were improper vessels for this teaching and generated wrong views and fell into the extreme of annihilation, due to which they created the causes to be reborn in a hell realm. Shariputra told Shakyamuni Buddha what Manjushri had done and what the result would be. Shariputra said that if he himself had taught the hinayana they would not have created the cause to be reborn in the lower realms but would have followed the hearer vehicle and have attained liberation. Shakyamuni Buddha disagreed with Shariputra and said that Manjushri was skilled in means because, although those people would be reborn in hell, upon exhausting their karma they would be reborn and enter the mahayana and attain liberation, whereas if they had heard teachings from Shariputra they would have attained a hinayana liberation and remained in solitary peace for a long time due to which it would have taken them much longer to achieve full enlightenment.

The question continues: "In that case, it is also necessary to assert that such [a person], through cultivating the selflessness of phenomena, directly perceives it and meditates on that already seen in this way. If that is the case, it is also necessary to assert that, by means of the path, the acquired conceptions of a self of phenomena are abandoned through the path of seeing and the innate conceptions of a self are abandoned through the path of meditation." In general the Svatantrika Madhyamikas say that the acquired conceptions of a self are abandoned by the antidote that is the

path of seeing and the innate conceptions of a self are abandoned by the antidote that is the path of meditation.

The actual question is: "Therefore, is the conception of a self of phenomena also asserted to be of two [types], afflicted and not afflicted, in the Madhyamika system that conceives things to be established by way of their own character?" This person expresses a doubt as to whether the conception of a self of phenomena is an affliction in the Svatantrika Madhyamika system. The conception conceiving form to be an external object is an afflictive obstruction which is abandoned by the solitary realizer path. In general according to the Svatantrika Madhyamikas, the three main objects of abandonment of the three persons are:

1. the main object of abandonment of hearers is the conception of a self of persons,
2. the main object of abandonment of solitary realizers is the conception of forms as external objects, and
3. the main object of abandonment of mahayanists is the conception of true existence.

These three objects of abandonment of the three persons are extensively discussed in Haribhadra's *Commentary Clarifying the Meaning* on *Ornament for Clear Realizations* in the context of the perfect end. Here it says all paths are to be generated and to be known, and that the three persons respectively abandon the conception of a self of persons, the conception of external objects, and the conception of true existence.

Lama Tsongkhapa's *Illumination* (Tibetan text page 217) says:

> RESPONSE: Although it does not appear to be clearly explained, [according to] the Svatantrikas, hearers and solitary realizers cultivate the path in this way. However, it is necessary to assert "Although they achieve a temporary abandonment of the manifest conceptions of a self of phenomena, without the help of the accumulation of the infinite collections, the seeds of neither of the two conceptions of a self of phenomena will come to be abandoned." Therefore, although hearers and solitary realizers can temporarily abandon the manifest knowledge obstructions, it must be said that they cannot abandon their seeds. According to the assertions of Acharya [Chandrakirti], the conception of a self of phenomena is an affliction, therefore, in order to abandon its seeds the help of the accumulation of the infinite collections is not necessary. However, with respect to purifying the knowledge obstructions that are latencies of mistaken dualistic appearance, it is asserted that they cannot be purified without such help.

The Svatantrika Madhyamikas say that hearers and solitary realizers abandon the manifest conceptions of a self of phenomena temporarily, meaning that they are ceased temporarily. However, they do not abandon their seeds because they do not have a sufficient accumulation of the collections. In order to abandon the knowledge obstructions the accumulation of infinite collections is necessary, whereas hearers and solitary realizers lack this. On the other hand, Lama Tsongkhapa says: "According to the assertions of Acharya [Chandrakirti], the conception of a self of phenomena is an affliction, therefore, in order to abandon its seeds the help of the accumulation of the infinite collections is not necessary." The Prasangika Madhyamikas say that since the conception of a self of phenomena is an affliction there is no need to have an accumulation of infinite collections in order to abandon it. Lama Tsongkhapa then says: "However, with respect to purifying the knowledge obstructions that are latencies of mistaken dualistic appearance, it is asserted that they cannot be purified without such help."

Lama Tsongkhapa's *Illumination* (Tibetan text page 217) concludes:

> This is explained since there seems to be very great value in understanding the above explanations.

QUESTIONS AND ANSWERS

Student: Bodhisattva superiors from the first to the seventh ground have appearances of true existence and adhere to it. How often does this occur?

- at all times?
- every time they have the appearance of true existence they grasp at true existence?
- only sometimes, and less and less as they proceed along the grounds?

Could you explain this also with respect to ordinary beings?

Geshe Jampa Gyatso: Bodhisattvas have the innate conception of true existence through the seventh ground. Therefore, in subsequent attainment they have the appearance of true existence, although in meditative equipoise there is no such appearance. Therefore, these bodhisattvas do not have the appearance of true existence at all times. Although there is the appearance of true existence, the person, the bodhisattva, does not adhere to it. In conclusion, there is a difference between the person adhering to the true existence and adherence to true existence. The person adhering to true existence means that he *asserts* true existence, whereas adhering to true existence means to have the conception of true existence.

As a bodhisattva progresses along the path the conception of true existence diminishes. On the eighth ground it is abandoned completely.

Ordinary beings absorbed in meditative equipoise on emptiness do not have the appearance of true existence, but in subsequent attainment they have the appearance of true existence.

Student: If an ordinary being realizes emptiness by means of a meaning generality how can there be no appearance of true existence?

Geshe Jampa Gyatso: As long as an ordinary being is absorbed in meditative equipoise on emptiness there is no appearance of true existence. Do you think that there is the appearance of conventionalities?

Student: Yes.

Geshe Jampa Gyatso: If we say that that meditative equipoise is conceptual it would be a mistaken consciousness because a conceptual consciousness is pervaded by being a mistaken consciousness. Therefore, with respect to what is it mistaken?

Student: With respect to its appearing object.

Geshe Jampa Gyatso: Does it not realize its appearance? We can say that the appearance and the appearing object are different. Think about this.

Student: According to the Prasangika Madhyamikas, does the emptiness of the table appear to the eye consciousness apprehending the table?

Geshe Jampa Gyatso: No, emptiness does not appear to a sense consciousness. If emptiness were to appear to an eye consciousness, it would have to have the appearance of the negation of the object of negation, but it does not. A non-affirming negative cannot appear to a sense consciousness. However, this can be debated asking: "Does empty space, a non-affirming negative that is the lack of obstructive contact, appear to a sense consciousness since there is the appearance of an intermediate pale area?

Student: It is said that buddhas apprehend the appearance of true existence (not because they are polluted by the latencies of the conception of true existence, but because such appearances exist). So what is the difference experientially with regard to the appearance of true existence for a buddha and for a pure ground bodhisattva?

Geshe Jampa Gyatso: Pure ground bodhisattvas have the appearance of true existence or dualistic appearance. Buddhas do not have this. Buddhas have the appearance of true existence that appears to sentient beings. If it is asked whether a buddha has the appearance of true existence, the answer is that he does not. Does he have the appearance of true existence that appears to sentient beings? He

does. A buddha does not have the appearance of true existence, whereas pure ground bodhisattvas do.

Student: Can the etymology of the word *kun rdzob* be "thoroughly false" since conventionalities are falsities?
Geshe Jampa Gyatso: The etymology of *kun rdzob den pa* (conventional truth or truth for a concealer) is a truth in the perspective of a concealer which is a conception of true existence. *Kun rdzob* means falsity. All compounded phenomena are deceptive, therefore they are falsities.

Student: Does a consciousness necessarily have an *observed object*, for example, the consciousness appending the tail of a human being?
Geshe Jampa Gyatso: A consciousness necessarily has an observed object because a consciousness apprehending the tail of a human being has as its observed object a human being. When someone looks at the defects of a human being, such as a tail, he is looking at the defect and observing that person. In short, even a consciousness observing the tail of a human being has an observed object, this being a human being. Once there was the following debate. The challenger asked: "If it is selfless does it have a conception apprehending it?" A geshe, also named Geshe Jampa Gyatso, answered that it is pervaded by having a conception apprehending it. The challenger responded: "Kor sum! Is there a conception thinking that a huge yak is entering your anus?" The geshe replied that there is. The challenger then asked: "Who has this conception?" The geshe answered: "You do!"

Student: The refutation of production from other by the Prasangika Madhyamikas is also made conventionally and not only in terms of an inherently existent other. Thus, seed and sprout are not other even conventionally, not even non-inherently. Therefore, it seems that even conventionally production from other is a non-affirming negative, therefore we cannot say that things are produced from other conventionally. How is this?
Geshe Jampa Gyatso: In the Prasangika Madhyamika system a cause that is a mere conventionality producing a result that is a mere conventionality is not called 'production from other.' Only production of an inherently existent result from an inherently existent cause is called 'production from other.' However, one can debate the Prasangika Madhyamikas asking: "Are seed and sprout not other?" The Prasangika Madhyamika system would say that they are other because they are mere other. One then asks: "Does a seed not produce a result?" The Prasangika Madhyamikas say that a seed produces a result. One then concludes: "Therefore, there is production from other." To this the Prasangika Madhyamikas respond that there is not. One then says: "There is production from other because a seed produces a sprout and they are other." The Prasangika Madhyamikas say: "There is no pervasion." The Prasangika Madhyamikas say that a seed does produce a sprout and that seed and sprout are other, but they maintain that there is no production from other.

Student: A buddha simultaneously and directly realizes all phenomena. A buddha realizes pure conventionalities, such as the major and minor marks of a buddha, through the appearance of the object itself and realizes impure conventionalities through the object's appearance to sentient beings. Please explain these two ways a buddha realizes conventionalities.
Geshe Jampa Gyatso: A buddha realizes everything directly because he has abandoned all obstructions to seeing objects directly. A buddha sees pure phenomena and impure phenomena directly and simultaneously. For example, if we simultaneously observe a clean cup and a dirty cup they both appear to our eye consciousness. There is no contradiction in this. Through seeing both cups we remember one cup is clean and one is dirty. It is similar in the case of a buddha who simultaneously realizes impure and pure conventionalities.

Student: A view holding to an extreme observes the self apprehended by the view of the transitory collection and conceives it to be either permanent or annihilated at death. The self apprehended by the view of the transitory is a truly existent self which does not exist. How can this self be the observed object of a view holding to an extreme?
Geshe Jampa Gyatso: It is generally said that a view holding to an extreme observes the self apprehended by the view of the transitory collection and conceives of it as either permanent or annihilated at death.
Student: But that self does not exist.
Geshe Jampa Gyatso: The views of permanence and annihilation mean that one views the self that is the observed object of the view of the transitory collection as either permanent or annihilated. The self that is the observed object of the view of the transitory collection is a self. Taking that self as the observed object, a view holding to an extreme either conceives it to be permanent or non-existent. The self that is the object of the mode of apprehension of the view of the transitory collection is not the observed object of a view holding to an extreme. In conclusion, the self that is the observed object of the view of the transitory collection is the observed object of the view holding to an extreme.

END

Wednesday afternoon, 27 September 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 217) says:

3B1C-2B3E-2A1B-2B1E-2A2 Explaining the meaning of the root verse

Chandrakirti (Tibetan text page 81-2) says:

If asked: How?

Since that is not inherently ceased, therefore,
Because this [effect] is capable even without a basis of all.
Ceased actions pass a long time in some, yet the action
Should be understood as giving rise to the correct effect. [6.39]

In the case of some [systems], in answer to the dispute stating "The action is ceased; how would an effect arise from that action that has already ceased?" – in order to present the capability of an action that already ceased [they] imagine:

1. a consciousness-basis-of-all (*alayavijÒana*), or
2. another feature like a debt-contract, not wasting, or
3. acquisition, or
4. a continuum of consciousness that is stained by the imprints of actions.

In the case of that [system] in which an action is not produced by its own essential nature (i.e., the Prasangika), neither does ceasing that [action] exist [inherently] nor is it impossible for the effect to arise from the non-disintegrated. Hence, actions not disintegrating, the relationship of actions and effects becomes very extremely admissible.

As was taught in the *Treatise* [*on the Middle Way*, 17.21]:

Because action is unproduced, [it is] thus without self-nature because of that.
Because it is not produced, therefore it will not be wasted.

Also in [a mahayana] sutra:[34]

The human life span is a hundred years, so "To live that long" is indeed expressed,
yet years lack accumulation as a heap. The proof is similar to that.

What is called "unexhausted" and what is called "exhausted action" are indicated
as exhausted in the conventional sense, not exhausted in the sense of empty.

Even for the school that, asserting the absence of inherent existence, does not assert a mind-basis-of-all, a relationship between cause and result is still admissible. The lower schools say that when an action has been created, it yields a result even a long time later because the latency of that action is deposited on a particular basis; however, the Prasangika Madhyamika system asserts that there is no need to posit such a basis. The Chittamatra system asserts that the mind-basis-of-all is the basis upon which the latencies of actions are deposited, whereas other lower schools assert that the latencies of actions are deposited on the continuum of consciousness. The Vaibhashikas assert that the result of an action arises due to acquisition, which is equivalent to non-wastage, this being likened to a receipt of a debt contract or the receipt received when money is deposited in a bank. Thus, each of the lower schools posits a particular basis upon which the latency of an action is deposited. They say that when that latency is nourished by particular conditions, it will yield its result.

Lama Tsongkhapa's *Illumination* (Tibetan text page 217) says:

> QUESTION: With respect to the position that asserts that things do not inherently exist, how does [this school] justify a relationship between actions and results in spite of not asserting a mind-basis-of-all and so forth?
> RESPONSE: That there arise the results of happiness, suffering, and so forth even from virtuous and non-virtuous actions that have a long gap between the action and its result is asserted by all the higher and lower [Buddhist] schools. With respect to this, if an action were to remain through to just prior to yielding a result it would be permanent, but being permanent it would not be able to perform a function, whereby the relationship of a result arising from an action would not be justifiable. [On the other hand], if an action has disintegrated at the second moment of its production then, from that point through to just prior to directly yielding a result, that action would no longer exist, whereas since a disintegrated action is not even a functioning thing how would a result arise from an action? The answer to these arguments [is as follows].

According to the lower schools if, without being deposited on a basis, an action were to remain through to just prior to yielding its result, then that action would be permanent, due to which it would be empty of being able to perform a function. In that case, a relationship between action and result would not be justifiable. On the other hand if an action, having been produced, had disintegrated at the second moment, it would no longer exist. Therefore, there would be nothing to connect an action and its result. This is because for the lower schools a disintegrated action is a non-functioning thing and is therefore unable to yield a result. These schools define a non-functioning thing as that which is empty of being able to perform a function; therefore, it is that which is unable to bring a result. In response to the lower schools' arguments that the Prasangika Madhyamikas' assertions do not permit a relationship between actions and results, the Prasangika Madhyamikas respond as follows.

Lama Tsongkhapa's *Illumination* (Tibetan text page 218) says:

> In order to posit the potential of an action at the time of approaching the cessation of that action, this being prior to it having already ceased at the second moment of the action's production:
> 1. some conceive a mind-basis-of-all;
> 2. some assert a non-associated compositional factor called 'non-wastage,' an object other than the two actions which is like the receipt of a debt contract;
> 3. some conceive a non-associated factor that is an object other than the two [actions] called 'the acquisition of the two actions'; and
> 4. some, because of conceiving a continuum of consciousness that is stained by the latencies of actions, assert that although an action has ceased, there is no contradiction that that action yields a result a long time afterward.
>
> Since an action deposits a latency on the mind-basis-of-all, that latency is the result of that action. Since, in the end, a continuity of a similar type to [the action] yields the result, the result of the initial action is asserted to arise from a continuity. The other three are also to be understood similarly.
> The first, [those who conceive a mind-basis-of-all], are some Chittamatrins.

The Chittamatrins who assert eight consciousnesses, among which the mind-basis-of-all is the basis upon which the latencies of actions are deposited, are the True Aspectarian Chittamatrins, not the False Aspectarian Chittamatrins. The eight consciousnesses are:
(1-6) the six engaging consciousnesses – the eye, ear, nose, tongue, body, and mental consciousnesses;
(7) the mind-basis-of-all, which is an unspecified consciousness; and
(8) the afflicted mentality, which observes the mind-basis-of-all and conceives it to be a self-sufficient substantially existent self.

The Chittamatrins cite scriptural quotations and give reasonings that support the existence of a mind-basis-of-all. What is a mind-basis-of-all? It is the particular consciousness upon which the latencies of all virtuous and non-virtuous actions are deposited. A mind-basis-of-all is said to be unspecified because it is the basis upon which both virtuous and non-virtuous latencies are deposited; if it were virtuous it could not be the basis upon which non-virtuous latencies are deposited and if it were non-virtuous it could not be the basis upon which virtuous latencies are deposited. Therefore, it has to be posited as unspecified. Among the seven types of awarenesses, the mind-basis-of-all is an awareness to which an object appears but is not ascertained (an inattentive awareness).

'The other three' are the other three positions, which respectively assert non-wastage, acquisition, and a continuum of consciousness [to explain the relationship between actions and their results].

Lama Tsongkhapa's *Illumination* (Tibetan text page 218) says:

> The second are explained by Avalokitavrata to be the Vaibhashikas who are other than the Kashmiri Vaibhashikas.

These Vaibhashikas are the Nyeopa Vaibhashikas. They assert non-wastage, which is likened to the receipt of a debt contract.

Lama Tsongkhapa's *Illumination* (Tibetan text page 218) says:

> The third are also a subdivision of the Vaibhashikas.

These particular Vaibhashikas assert acquisition.

Lama Tsongkhapa's *Illumination* (Tibetan text page 218) says:

> Although who the fourth are is not clearly specified, according to the ninth chapter of the commentary on the *Treasury of Knowledge*, these seem to be the assertions of the Sautrantikas and also of the Kashmiri Vaibhashikas.

The Kashmiri Vaibhashikas are known to assert acquisition, whereas the Sautrantikas assert that the latencies of actions are deposited on the continuum of the sixth consciousness, the mental consciousness. Thus, it is not clear why Lama Tsongkhapa says "also of the Kashmiri Vaibhashikas."

Lama Tsongkhapa's *Illumination* (Tibetan text page 218) says:

> Although the Kashmiris assert acquisition, they do not assert that acquisition is produced by the two actions, the phenomenon to be acquired. Here 'those who assert such' is the meaning of stating "According to them" [in the autocommentary].

The translation by George Churinoff of 'According to them' in Chandrakirti's autocommentary reads "In the case of that [system]." What is acquisition and what is the phenomenon to be acquired? What is a virtuous acquisition and a virtuous phenomenon to be acquired? According to what Lama Tsongkhapa says here, it would seem that a virtuous acquisition is not produced by a virtuous action and that a non-virtuous acquisition is not produced by a non-virtuous action.

Lama Tsongkhapa's *Illumination* (Tibetan text page 218) says:

Chandrakirti says:

> *Therefore, they do not inherently cease.*
> *Due to that, even without a mind-basis-of-all, because there is the potential for that*
> *It should be understood that ceased actions in some,*
> *Even after a long time has elapsed, give rise to an appropriate result.* [6.39]

According to the Prasangika Madhyamikas, actions are not produced by their own nature. This being the case, *therefore*, actions *do not inherently cease*. However, although actions do not inherently cease, it is not contradictory for results to arise [from them].

The Prasangika Madhyamikas say that the arisal of a result from a non-inherently existent action is admissible without the need to assert a mind-basis-of-all. This is because for this school a disintegrated action is a functioning thing. Thus, this school asserts that there is no need to posit a basis on which the latencies of actions are deposited because a disintegrated action (an action's disintegratedness) is itself able to perform a function, which is to yield a result later on. In short, the Prasangika Madhyamikas' main argument is that because a disintegrated action is able to bring a result, there is no need to assert the existence of a mind-basis-of-all and so forth. On the other hand, in the lower schools there is need to assert a basis on which the latencies of actions are deposited since, without such a basis, actions would not yield a result. These schools say that a disintegrated action is permanent and a non-functioning thing, due to which it cannot give rise to a result later on. Since a disintegrated action is a non-functioning thing that is unable to bring a result later on, it is necessary to assert a basis upon which the latencies of actions are deposited.

Lama Tsongkhapa's *Illumination* (Tibetan text page 219) says:

> *Due to that*, *even without* asserting *a mind-basis-of-all* and so forth, *because there is the potential for that* – a result – to arise from an action, *it should be understood that* although the production of the two *actions* has *ceased* in *some* sentient beings' continua, *an appropriate result arises* from that action. That is, a result unmistakenly arises from that cause, *even after a long time has elapsed*, i.e., after many eons. Hence, for this school the relationship between action and result is well justified.

Here 'this school' refers to the Prasangika Madhyamika school, which says that without asserting a mind-basis-of-all, a disintegrated action will bring a result even after many eons have passed.

Lama Tsongkhapa's *Illumination* (Tibetan text page 219) says:

> The meaning of [the above assertions] is that all four respondents to the previous debate also assert:
> - production and cessation with regard to actions are established by way of their own character and
> - the cessation subsequent to the production of an action exists inherently.
>
> With respect to this, it not being suitable for the master, [Chandrakirti,] to respond "Although there is such a cessation, due to asserting a mind-basis-of-all and so forth there is no fault," this [assertion] is negated, stating "Because there is no production and cessation of actions in an inherently existent manner." This way of responding is said to be the assertion of Arya [Nagarjuna].

All four positions mentioned above assert actions to be established by way of their own character. The four positions are those that, in order to posit a relationship between actions and results, respectively posit: (1) a mind-basis-of-all, (2) non-wastage, which is like the receipt of a debt contract, (3) acquisition, and (4) a continuum of consciousness. The Prasangika Madhyamikas negate all these positions, saying that a result cannot arise from an inherently existent action. On the other hand, the

four positions say that even a disintegrated action exists inherently. For the Prasangika Madhyamikas, if a disintegrated action were inherently existent, then the arisal of a result from it could not be justified.

Lama Tsongkhapa's *Illumination* (Tibetan text page 219) says:

> As cited in *Fundamental Wisdom* (v. 17.21):
>
> > Actions are not produced,
> > Hence, they are not inherently existent.
> > Therefore, because they are not produced,
> > They do not go to waste.
>
> This means that because actions do not exist inherently they are not produced by their own nature. Because of that, it is not possible for actions to inherently cease. Therefore, considering the cessation subsequent to the production of an action to be inherently existent and then conceiving non-wastage is unsuitable. Although this reasoning is said to negate non-wastage, there is no difference in terms of it also negating the other three [positions] for completely similar reasons.

The Prasangika Madhyamikas respond to the previous four assertions, saying that a result arises from a non-inherently existent action. In fact, the Prasangikas say that a result arises because an action is non-inherently existent. They say that although an action does not cease inherently, the disintegratedness of that action brings a result. Because a disintegrated action is a functioning thing, it is able to give rise to a result.

Some Vaibhashikas assert that disintegratedness in general is a functioning thing and is therefore able to perform a function. They say that because disintegratedness is an existent, it is a functioning thing. This is because they assert two types of functioning things: (i) permanent functioning things and (ii) impermanent functioning things. The Prasangika Madhyamikas respond to the Vaibhashikas, saying: "Although you assert a disintegrated action to be a functioning thing, you assert it to be inherently existent, whereas if it is an inherently existent phenomenon, it cannot yield a result later on. Therefore, your assertion is wrong, because if a disintegrated action were an inherently existent phenomenon, it would be an independent phenomenon; if it is an independent phenomenon, it cannot bring about a result. For example, if something is independent it cannot bring about a result due to particular conditions. On the other hand, when a cause gives rise to a result, it does so in dependence on certain conditions." In this way, the Prasangikas say that due to a disintegrated action being an independent phenomenon for the Vaibhashikas, it cannot bring about a result. This is how they debate the Vaibhashikas.

Lama Tsongkhapa's *Illumination* (Tibetan text page 219–20) says:

> In addition, in sutra it says:
>
> > The lifespan of human beings being a hundred years,
> > It is indeed said, "They live that long."
> > Yet, the years are not piled up in a heap.
> > The proof is also similar to that.
> >
> > Whatever is said to be "without extinguishment"
> > And whatever is said to be "the extinguishment of an action"
> > Are indicated to not be extinguishment in the sense of empty,
> > But extinguishment in the conventional sense.
>
> This citation is the source for positing that inherently existent extinguishment and cessation do not exist and that these two, [extinguishment and cessation], are posited by the power of convention.

A result cannot be produced from an inherently existent action and an inherently existent action can not cease. If an action were inherently existent, there would be no extinguishment and cessation of an action. However, conventionally, actions are extinguished and do cease. For example, although the lifespan of human beings is said to be a hundred years, it does not remain fixed at a hundred years but is consumed year after year; that is, it diminishes year after year. It is like, for example, when one has a hundred lire, if even one lira is exhausted or consumed, one no longer has a hundred lire; in this way the hundred lire are extinguished. For example, it is recounted that once a certain Namtse Ling went to buy a train ticket in Dharamsala but was missing ten *annas* (one *anna* is one sixteenth of a *paese*, which is one hundredth of an Indian *rupee*). In spite of lacking such a small amount of the fair, the ticket seller refused to give him a ticket, even though Namtse Ling insisted he was not given a ticket! Thus, even if a small fraction is missing, the final sum is not reached. Sometimes a small amount does not make a difference, but other times it does. For example, we have to be careful not to create even a small non-virtue, because even a small action can bring a big result.

There is also a story about an ex-abbot of Gomang College from Mongolia, who has now passed away, who would give his students money to shop for him. When he was given the items that had been bought, he would count the change and insist that he be given even one missing cent of his change, whereas if several dollars were missing, he did not even mention it. This was to show the student that he had not been careful enough and had been cheated out of some money. Likewise, we too should not neglect even small things.

Thursday morning, 28 September 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 220) says:

> Nagtso's translation says:
>
> > Just as years are not piled up in a heap,
> > Likewise, see that
> > They are also perfectly collected.
>
> These [assertions] are explained in addition to affixing the qualification to the object of negation saying "not ceasing inherently."

Although a year exists and is made up of a collection of parts, such as months, weeks, and so forth, it does not exist inherently. Similarly, actions exist but do not exist inherently.

Lama Tsongkhapa's *Illumination* (Tibetan text page 220) says:

> 3B1C-2B3E-2A1B-2B1E-2A3 Explaining the meaning that comes from that
>
> - A Non-inherent cessation, the way of proceeding in the reasons for not asserting a mind-basis-of-all
> - B Although not asserting a mind-basis-of-all, positing a basis for the latencies
>
> 3B1C-2B3E-2A1B-2B1E-2A3A Non-inherent cessation, the way of proceeding in the reasons for not asserting a mind-basis-of-all

There is no discussion of this topic in the *Explanation of the 'Supplement to the "Middle Way."'*

Lama Tsongkhapa's *Illumination* (Tibetan text page 220) says:

> OBJECTION: Although there is no inherently existent cessation, due to the statements "Ceased actions in some" and "...which are ceased and not inherently existent," even in our system the cessation of that action subsequent to the action's production would have to be asserted in accordance with the statement "[They are] indicated... to be extinguished in the conventional sense." In that case, if (1) cessation is not a functioning thing and (2) a mind-basis-of-all and so forth as a basis for the relationship between actions and results are not asserted, due to the argument about the inadmissibility of a result arising from a ceased action after a long time has elapsed, the previous responses are not sufficient.
> RESPONSE: There is no fault. Since the very reason [given in the *Supplement*] that states "Therefore, they do not inherently cease. Due to that..." (v. 6.39ab) establishes that a later result arises from the disintegratedness that is a disintegrated action, additional responses are not mentioned. Moreover, for all systems that assert things to be inherently existent, disintegratedness is not suitable to be a functioning thing, whereas, for the Madhyamika system, which asserts that they do not inherently exist, the essential point is that disintegratedness is established to be a functioning thing.

In short, the Prasangika Madhyamika school says that there is no need to posit a mind-basis-of-all that is a basis on which the latencies of actions are deposited. However, this does not mean that the latencies of actions are not deposited; in fact, they are deposited. But upon what are they deposited? The Prasangika Madhyamikas assert that it is admissible to posit the mere I as the basis upon which the latencies of actions are deposited. This basis is not inherently existent.

In addition to not accepting a mind-basis-of-all that is the basis upon which the latencies of actions are deposited, the Prasangika Madhyamikas refute the assertions of the Chittamatrins and Sautrantikas that an action's disintegratedness is a non-functioning thing. What is the reasoning by which they refute the existence of a mind-basis-of-all? It is that actions do not exist inherently. On the other hand, for the very reason that the Chittamatra system asserts that actions are inherently existent, they need to posit a mind-basis-of-all as the basis upon which the latencies of actions are deposited. Thus, the Prasangika Madhyamikas say that because actions are not inherently existent, there is no need to posit a mind-basis-of-all as the basis upon which the latencies of actions are deposited. The Prasangikas set forth an uncommon presentation of the three times, in which an action's disintegratedness is asserted to be a functioning thing and not a non-functioning thing. Due to this, there is no need to posit the latencies of actions, in that the very disintegratedness of an action is able to bring a result. A result arises from an action's disintegratedness even though there elapses a great amount of time after the action is committed. Is an action's disintegratedness permanent? It is not permanent but its continuum is lasting because it remains for a long time. Thus, it is a lasting continuum but is not permanent. The Prasangika Madhyamikas argue with the lower school's assertion that the latencies of actions are deposited on a mind-basis-of-all and remain a long time, asking: "Are the latencies of actions permanent because they remain for a long time?" Because a later continuum arises from a previous continuum, the continuum remains. In short, the latencies of actions are not permanent, they are momentary, but their continuum endures.

Lama Tsongkhapa's *Illumination* (Tibetan text page 221) says:

> **(1) The first system, [the Chittamatrins and Svatantrika Madhyamikas who assert things to be inherently existent]**
>
> When a thing such as a sprout has disintegrated, all the things that are part of the sprout are obliterated. Since no other thing that is different from the sprout, such as a pot and so forth, is acquired, they assert that disintegratedness is not at all a functioning thing. Because neither the functioning things that are individual spheres, such as blue, nor the collection of things that are its parts, such as a pot, are suitable as illustrations of that disintegratedness, it is not a functioning thing.

The Chittamatrins and Svatantrika Madhyamikas assert that the disintegratedness of a sprout is not a functioning thing. This is because upon the disintegration of the former entity, no new object is created. Taking the color blue and a pot as bases of illustration, they say that upon their disintegration, no new thing is produced that can be pointed to as the result of their disintegration. Thus, upon the disintegration of a sprout or the color blue, all of its parts are obliterated and there is nothing that can be indicated as their result that is a functioning thing. These are the assertions of the lower schools, who say that disintegratedness is not a functioning thing.

Lama Tsongkhapa's *Illumination* (Tibetan text page 221) says:

> **(2) The latter system, [the Prasangika Madhyamika]**
>
> For example, both (i) Upagupta's individual five aggregates and (ii) the collection of them, and (iii) that which is a different entity from these two cannot be posited as an illustration of Upagupta, and Upagupta is also not suitable as an illustration of these three. However, it is not contradictory for there to be a functioning thing imputed as Upagupta in dependence on his aggregates. Similarly, although disintegratedness is neither an illustration of (i) the functioning thing that has been destroyed nor (ii) a functioning thing that is a similar type to it, it is a functioning thing because it is produced in dependence on the functioning thing that is destroyed.

Taking the person Upagupta as an illustration, the Prasangika Madhyamikas say that none of the individual aggregates are Upagupta, nor is the collection of aggregates Upagupta, nor is there an Upagupta who is a different entity from the aggregates, yet Upagupta exists in dependence on his aggregates. We can also take Jonathan as an illustration. Although none of Jonathan's individual aggregates, the collection of his aggregates, or that which is a different entity from his aggregates can be posited as an illustration of Jonathan, Jonathan can be posited on the basis of his aggregates. Even before Jonathan was given a name, his aggregates existed. Then, by means of conception, his parents imputed the name 'Jonathan' on those aggregates. If one searches among Jonathan's five aggregates, none of his individual aggregates are found to be an illustration of Jonathan, nor is the collection of his aggregates found to be an illustration of Jonathan, nor is that which is a different entity from his five aggregates found to be an illustration of Jonathan. In addition, Jonathan's shape is not Jonathan. Thus, if we employ the seven-fold analysis in searching for an illustration of Jonathan, Jonathan will not be found to be the same as his aggregates, nor a different entity from his aggregates, nor the support of his aggregates, nor that supported on his aggregates, nor the shape of his aggregates. Does Jonathan not exist? He does exist, but he exists in a manner of non-investigation and non-analysis; that is, he exists conventionally. Being existent in terms of convention, he is able to perform functions such as meditating, studying, talking, and so forth.

Disintegratedness is then established to be a functioning thing on the basis of both scriptural authority and reasoning.

Lama Tsongkhapa's *Illumination* (Tibetan text page 221-2) says:

> In regard to proving this, (1) scriptural authority and (2) reasoning are mentioned in *Clear Words*.
>
> **(1) Scriptural authority**
>
> The *[Sutra on the] Ten Grounds* says:
>
> > Due to the condition of birth there is aging and death.

> Death is the disintegration of the sentient being who dies; it is produced by the condition of birth. In addition, the [*Sutra on the Ten Grounds*] says:
>
> > Death also subsists in two activities: (1) it functions to destroy compounded phenomena and (2) it also issues forth the cause for the non-severance of the continuum of thorough unknowing.
>
> Death is said to perform two activities in that it is said (i) that death is produced by a cause and (ii) that death produces ignorance. Therefore, disintegratedness has a cause that produces it and disintegratedness is able to produce a result. Although [disintegratedness] is the disintegration of a continuum, it is also similar to the disintegration of a first moment at the second moment. However, it is also indicated to be the cause for the disintegration of a first moment at the second moment. Hence,
> 1. the two, the birth and death of a sentient being,
> 2. not remaining for a second moment, and
> 3. not having remained for a second moment
>
> are similar in being posited and not posited as functioning things and in being produced and not produced by a cause.

The quotation from the *Sutra on the Ten Grounds,* "Due to the condition of birth there is aging and death," is the scriptural authority establishing that disintegratedness is a functioning thing. In terms of sentient beings, disintegration is death; the cause of this disintegration or death is birth. Thus, death is disintegratedness in terms of sentient beings; it has a cause, birth, and it also has a result, that of unknowing. This is set forth by the twelve links of dependent-arising, according to which in dependence on birth, there is aging and death. Death is the disintegration of the life force. The death of a sentient being of this life is the cessation of the life force of this life. However, upon the cessation of this life force, the sentient being does not become non-existent. Rather, this implies that upon the cessation of the life force of this life there arises the life force of the future life. In other words, in dependence on the cessation of the life force of this life, the continuum of a future life force arises. Therefore, cessation or disintegratedness acts as a cause, due to which it is a functioning thing.

Here, the death of a sentient being is a disintegratedness; note that it is not an individual moment but a *continuum* of disintegratedness.

Lama Tsongkhapa's *Illumination* (Tibetan text page 222) says:

> Intending this, *Fundamental Wisdom* says:
>
> > Things and non-things are compounded phenomena.
>
> [Nagarjuna's] *Sixty Stanzas of Reasoning* also says:
>
> > Pacification, through the very exhaustion of the cause,
> > Is observed to be that called "exhaustion"...
>
> Since [these citations] say (i) that both the thing that is a sprout and so forth and the non-thing that is its disintegratedness are compounded phenomena and (ii) that the exhaustion of a cause, such as oil and so forth, is the cause of the extinguishment of a result, such as a lamp and so forth, these are to be unquestionably asserted to be the assertions of Arya [Nagarjuna].

Fundamental Wisdom says "Things and non-things are compounded phenomena." In this context, a virtuous action is a functioning thing, whereas its disintegratedness is given the name 'non-thing.' Because the disintegratedness of an action is not an action, it is said to be a non-thing. Although the disintegratedness of an action is not an action, it is a functioning thing. Why is the disintegratedness

of an action not an action? The broken cup is the disintegration of a cup; that disintegratedness is not a cup. However, we can say that the broken cup is a functioning thing, because it produces a result.

Another example is Tashi, who has yet to die and is therefore a functioning thing; when he dies he comes to be called a non-thing because he is no longer Tashi. However, upon Tashi's death a result is produced in that death produces the result of a future rebirth.

Then, if we take an oil lamp as an example, upon the exhaustion of the oil, the oil lamp is also exhausted, but does that exhaustion have a result?

Student: It produces obscurity. Before, there was light and when it is exhausted, there is no longer light.

Geshe Jampa Gyatso: Does the last moment of an oil lamp produce a result? You say it produces obscurity, that is, darkness. During the day when the oil lamp is exhausted what does it produce?

Student: The disintegration of the light.

Geshe Jampa Gyatso: How does it produce the destruction of the light?

Student: Because there is no more oil, the lack of oil produces the lack of arisal of the light, therefore, there is the destruction of the light.

Geshe Jampa Gyatso: During the daytime, when the oil in the oil lamp is exhausted does light become non-existent?

Student: In general, it is not exhausted, but the light of the oil lamp is exhausted.

Geshe Jampa Gyatso: In extinguishing that light, what result arises?

Student 2: Because the light produced heat, the disintegratedness of that light produces the result of the cooling of the element air in that area.

Geshe Jampa Gyatso: What do you think?

Student 3: In that case in the summer one should put out a fire to cool a room instead of opening a window!

Geshe Jampa Gyatso: What do you think?

Student 4: Maybe the result of the extinguishment of the light is that it can be lit again, because without it being extinguished it cannot be lit.

Geshe Jampa Gyatso: When that light is extinguished it no longer exists. What is its result? Think about it.

Lama Tsongkhapa's *Illumination* (Tibetan text page 222) says:

> **(2) Reasoning**
>
> The disintegration of the first moment at the second moment is necessarily realized through eliminating the object of negation directly; therefore, it is a negative. Since it is not a non-affirming negative, it is an affirming negative because disintegration is not merely the elimination of that, but rather implies a disintegration, the elimination of that, which is a functioning thing. The remaining proofs are to be understood from the extensive commentary on *Fundamental Wisdom*. The subtle reasonings of this system have great meaning.

The cessation of a first moment is an affirming negative, not a non-affirming negative. The cessation of the first moment propels a second moment. Therefore, the cessation of the first moment is a negative, but because it propels a subsequent phenomenon, it is not a non-affirming negative.

In short, without birth there is no death. Death is disintegratedness in terms of sentient beings. Without death there is no rebirth. Therefore, death, which is a disintegratedness, produces birth. Thus, disintegratedness gives rise to a result.

Lama Tsongkhapa's *Illumination* (Tibetan text page 222) says:

3B1C-2B3E-2A1B-2B1E-2A3B Although not asserting a mind-basis-of-all, positing a basis for the latencies

QUESTION: Although not asserting a mind-basis-of-all, virtuous and non-virtuous latencies are deposited and results are necessarily asserted to arise from the ripening of those latencies because the *Explanation of the* '*Supplement to the "Middle Way"* says:

> In beginningless cyclic existence, the deposited latencies which are functioning things thoroughly ripen, manifesting as things.

Similar statements also occur in many other [texts]. In addition, since it is not suitable for there not to exist a basis for the depositing of latencies, what is that basis?
RESPONSE: According to those who assert a mind-basis-of-all, the mind-basis-of-all – the basis observed by the afflicted mentality thinking "I" – is asserted to be the location of the latencies. Likewise, this system also asserts that that very observed object of the innate awareness which is the mere thought "I' is the basis for the infusion of the latencies.

While circling in cyclic existence since beginningless time, we have accumulated actions; therefore, it is necessary to posit a way in which these actions bring about a result. The lower schools posit a mind-basis-of-all as the site upon which the latencies of actions are deposited, whereas the Prasangika Madhyamikas posit the mere I as the site upon which disintegrated actions are deposited. Thus, our system posits the mere I as the basis upon which disintegrated actions are deposited.

Lama Tsongkhapa's *Illumination* (Tibetan text page 223) says:

QUESTION: Well then, why does the *Explanation of the* '*Supplement to the "Middle Way"* say that the continuum of mind is the basis of the latencies?
RESPONSE: Since the mere I itself is a continuum that is imputed in dependence on a mind-consciousness, it is also called a 'a continuum of mind.' In the case that a similar type of mind is called 'a continuum of [mind],' it becomes, moreover, the basis for the infusion of occasional latencies.

The Prasangika Madhyamikas posit the mere I that is the continuum of the being as the site for the depositing of occasional latencies.

Lama Tsongkhapa's *Illumination* (Tibetan text page 223) says:

The mode of the latencies of ignorance

The *Explanation of the* '*Supplement to the "Middle Way"* (commentary to v. 12.31) says:

> That which subsequently proceeds to cease and infuse the continuum of mind is the latencies. "Extreme of afflictions," "familiarity," "root," and "latency" are synonyms. Even though the uncontaminated path has already abandoned the afflictions, hearers and solitary realizers are unable to abandon [their latencies], like, for example, even though sesame oil, flowers, and so forth have already been removed, their subtle qualities are observed upon encountering them in pots, woolen cloths, and so forth.

Foe destroyers who have completely abandoned the afflictive obstructions still have the latencies of the afflictions. This is like, for example, when sesame oil is put in a pot or on a cloth. Even though the pot or cloth is washed later, the odor of the oil still remains. Likewise, even though a foe destroyer has abandoned the afflictive obstructions, the latencies of the afflictions still remain.

What is the difference between a seed and a latency?

Student: A latency produces the appearance of true existence, whereas a seed produces a later affliction of similar type.
Geshe Jampa Gyatso: Is a seed a latency? A seed is a latency, but if it is a latency it is not necessarily a seed.

In the citation from the *Explanation of the 'Supplement to the "Middle Way"'* Chandrakirti says: "'Extreme of afflictions,' 'familiarity,' 'root,' and 'latency' are synonyms." Synonyms (*rnam grang*) are of two types: synonym by way of name and synonym by way of same meaning. Here Chandrakirti seems to say that familiarity is a latency, but this is difficult to explain. When we meditate and familiarize ourselves with love and compassion is that familiarization a latency? Think about it.

Thursday afternoon, 28 September 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 223) says:

> Other latencies, such as virtuous and non-virtuous latencies, are suitable to be applied to the two bases as well.
> OBJECTION: Well then, although at the time of the uninterrupted path of the path of seeing the objects of abandonment of the path of seeing, that is, the objects of abandonment of that [uninterrupted path of the path of seeing], do indeed not exist, the dormant latencies that are objects of abandonment of the path of meditation must exist. At that time, since the mental consciousness is uncontaminated, in that it is not polluted by the latencies of mistaken dualistic appearance, the dormant latencies would not be suitable to abide in its entity. Since the sense consciousnesses are also not a basis for [the dormant latencies] and form is also not suitable as a basis for [the dormant latencies], by also not asserting a mind-basis-of-all, there would not exist a basis for [the dormant latencies].

This is an objection set forth by the lower school. The objects of abandonment [of the path of seeing] do not exist at the time of the path of seeing because when the antidote is generated, the objects of abandonment no longer exist. However, at that time, the objects of abandonment of the path of meditation *do* exist, although they are dormant. When the uninterrupted path of the path of seeing is generated, the mental consciousness is transformed into an uncontaminated entity. This mind is not polluted by mistaken dualistic appearance. Thus, the lower school says that because the consciousness is an uncontaminated entity, the dormant latencies that are objects of abandonment of the path of meditation cannot abide on it. In addition, the sense consciousnesses cannot be the basis of those dormant latencies, because when the uninterrupted path of the path of seeing is generated, the sense consciousnesses are not manifest. Also, forms cannot be the basis of these dormant latencies. Therefore, because the Prasangika Madhyamikas do not assert a mind-basis-of-all, it follows that there is no basis for the dormant latencies that are the objects of abandonment of the path of meditation. The Prasangika Madhyamikas reply that there is no such fault.

Lama Tsongkhapa's *Illumination* (Tibetan text page 223) says:

> RESPONSE: There is no fault because, at that time, the mere I is the basis of the dormant latencies that are the objects of abandonment of the path of meditation. The other objects of abandonment and antidotes should also be understood similarly.

In the Prasangika Madhyamika system, it can be said that either the mere I is posited as the basis of the dormant latencies that are the objects of abandonment of the path of meditation, or the mere I is posited as the basis for the infusion of the latencies of actions. This formula can be applied to other objects of abandonment and antidotes.

Lama Tsongkhapa's *Illumination* (Tibetan text page 224) says:

> [The autocommentary] says:
>
> > When the uncommon way of positing by the people of this system is understood, then when a supramundane, uncontaminated mind becomes manifest in the continua of superiors who have been born in Infinite Space, Infinite Consciousness, and Nothingness, since there are no other mundane minds their being migrating beings will be turned back.
>
> And:
>
> > When an uncontaminated mind included in the level of Nothingness becomes manifest in superiors who have been born in the Peak of Existence, the migrating being included in the level of both the Peak of Existence and Nothingness will be turned back because the abode of an uncontaminated mind is not suitable to be the two migrating beings or a migrating being who has passed beyond sorrow.

The lower schools say that when an uncontaminated mind becomes manifest in the continua of superiors who have been born in Infinite Space, Infinite Consciousness, and Nothingness, then, according to the Prasangika Madhyamikas, there are no other mundane minds. Due to this, these beings would no longer be migrating beings. The lower schools say that this follows because migrating beings must have a mundane mind, otherwise they would not be migrating beings. This is because the lower schools do not posit a migrating being with an uncontaminated mind. They say that an uncontaminated mind only exists in the levels of Nothingness and below. Because there are no uncontaminated minds in the Peak of Existence, beings born there are turned back from being migrating beings, because they do not have a mundane mind. The abode of an uncontaminated mind also cannot be a migrating being who has passed beyond sorrow, that is, a foe destroyer. In brief, foe destroyers do not take rebirth in the Peak of Existence. In this context, migrating beings are to be understood in this way and not in terms of the six classes of migrating beings.

Lama Tsongkhapa's *Illumination* (Tibetan text page)224 says:

> Even these reasonings do not bring about harm because, although neither a contaminated nor an uncontaminated mind are posited as illustrations of migrating beings, they are admissible by means of positing migrating beings.

What is a migrating being? The Prasangika Madhyamikas say that when each of the individual five aggregates is thoroughly searched, none of them is found to be a migrating being. On the other hand, if one of them were found to be a migrating being, it should be the mental consciousness but, according to the Prasangika Madhyamika system, even this is not found to be a migrating being. The Prasangika Madhyamikas say that when an imputed object is searched for, it is not found. What is the way in which a migrating being is posited? An innate, non-investigative, and non-analytic awareness imputes the I upon the five aggregates. Thus, without using reasoning, one naturally thinks "I." In the perspective of this non-investigative and non-analytic awareness, there exists an I that is merely imputed on the five aggregates. Since such an I exists, a migrating being also exists. A migrating being is merely imputed on that which continuously takes rebirth here and there. This is the meaning of Lama Tsongkhapa's statement: "neither a contaminated nor an uncontaminated mind are posited as illustrations of migrating beings."

Lama Tsongkhapa's *Illumination* (Tibetan text page 224) says:

> The system of the former school is that this is in terms of the unafflicted, unspecified entity of migrating beings who have not entered a path and those who are learners.

Here 'the former school' refers mainly to the Chittamatra system in that the Chittamatrins posit the person to be the mind-basis-of-all, which is an unafflicted, unspecified entity. The Chittamatrins say that the basis upon which the latencies of virtuous and non-virtuous actions are deposited is necessarily unspecified. Likewise, according to the Prasangika Madhyamikas, if it is a basis for the infusion of latencies it is necessarily unspecified.

Lama Tsongkhapa's *Illumination* (Tibetan text page 224) says:

> Since these responses are similar to my own, how could I express the great systems by means of my own strength? Rather, they are expressed in dependence on the system of the great charioteers who completely set them out and understood them precisely in accordance with the intention of the protector Nagarjuna. According to them even the remaining reasonings establishing a mind-basis-of-all do not harm this system, thus, they should be examined by those of great intelligence and fine acuteness.

Lama Tsongkhapa says that he bases his explanation on the intention of Nagarjuna. 'The remaining reasonings' refers to the remaining seven of the eight reasonings that are used to establish the existence of a mind-basis-of-all. Therefore, those of great intelligence and fine acuteness should examine these.

Lama Tsongkhapa's *Illumination* (Tibetan text page 224) says:

> 3B1C-2B3E-2A1B-2B1E-2B Indicating an example of a result arising from an action that has ceased

Chandrakirti's autocommentary (Tibetan text page 82) says:

> I shall explain, by way of an example, the very meaning that was related:
>
> *Having perceived dream referent objects,*
> *Even awake, longing will be produced in the childish.*
> *Similarly, an effect does exist even from actions*
> *That ceased and are non-inherently existent.* [6.40]
>
> As was taught in the *Sutra of Transference [in] Existence:*
>
> > Great King, it is like this. For example, a man dreamt of enjoying himself together with a lovely townswoman in a sleeping dream. If, having arisen from sleep, he recalls the lovely townswoman, Great King, what do you think about this? He who dreamt of enjoying himself together with a lovely townswoman of a dream, does the man who recalls the lovely townswoman having awakened from sleep have a wise nature?"
> >
> > [The king] replied: "Bhagavan, that is not so. If asked: on account of what? Bhagavan, the lovely dream-woman does not even exist and, since not observed, how could there exist consummation with her? Such a man would have a destitute and wearied fortune."
> >
> > The Bhagavan said: "Great King, similarly, also childish ordinary beings bereft of hearing, having perceived forms with [their] eyes, strongly settle upon forms that make the mind happy. Having strongly settled, it acts to produce longing. Having longed, they strongly compose [actions] with body, speech, and mind that arose from attachment, arose from hatred, and arose from bewilderment. Having strongly composed that action, it ceases. When ceased, it does not abide relative to the southern direction,

from that through:

> … it does not in the intermediate directions.

In this sutra, the Buddha describes a man who enjoys himself with a lovely townswoman in a dream, due to which attachment arises and remains even when he awakes. Buddha then asks the king whether this man is wise or foolish. The king replies that such a man is foolish because the dream woman does not exist and, since she does not exist, how can he enjoy himself with her? Thus, if he thinks that he can, he is foolish. Similarly, when childish ordinary beings see forms as inherently existent , they consider them to be attractive or unattractive and respectively generate attachment and hatred toward them. Due to attachment, hatred, and so forth they then create actions of body and speech. But once the action is accumulated it ceases. Having ceased, if one searches for it in the eastern direction, the southern direction, the intermediate directions and so forth, it cannot be found. This fact of not finding the ceased action indicates that it does not exist inherently because, if a ceased action were inherently existent, it should be found when sought in the various directions.

Chandrakirti's autocommentary continues:

And:

> At some other time, when abiding near to the time of death, having exhausted actions that are similar fortune to that, when the final instant of consciousness ceases, it is like this: for example, like the lovely townswoman of the man who arose from a long sleep, he approaches that very mental action.
>
> Great King, thus, the final consciousness ceases and the initial consciousness included in the part of rebirth, yet again [will arise] among the gods...

– from that through:

> ... yet again will arise with the hungry ghosts.

And:

> Great King, as soon as the initial consciousness ceases, there arises a continuum of mind of similar fortune to him who manifests full maturation to be experienced. Great King, there, no phenomenon whatsoever transfers from this world to the other world, yet, obvious death-transference and rebirth do exist.
>
> Great King, there, the cessation of any final consciousness is called "death-transference." The arisal of any initial consciousness is called "rebirth." Great King, even when the final consciousness has ceased, it does not go anywhere. Even when the initial consciousness included in the part of rebirth arises, it does not come from anywhere. If asked, why that is? It is because [they] are devoid of inherent existence.
>
> Great King, there, the final consciousness is emptied by the final consciousness. Death-transference is emptied by death-transference. Action is emptied by action. Initial consciousness is emptied by initial consciousness. Rebirth is emptied by rebirth. It is obvious also, that actions are not wasted.

Birth and cessation are empty of inherent existence, yet they do exist conventionally; therefore, actions are created and experienced conventionally. The sutra says that an initial consciousness is empty of an initial consciousness and a final consciousness is empty of a final consciousness; however, this means that an initial consciousness is empty of being an inherently existent initial consciousness and a final consciousness is empty of being an inherently existent final consciousness. It does not mean that a

consciousness is empty of itself; for example, a table is not empty of table but is empty of being an inherently existent table.

Lama Tsongkhapa's *Illumination* (Tibetan text page 224-5) says:

> The meaning of the explanation that a result arises from a previous action that has ceased is explained by means of an example [as follows].
> Chandrakirti says:
>
> > *Having seen an observed object in a dream,*
> > *Even upon awakening, the foolish generate longing.*
> > *Likewise, also from actions that have ceased and*
> > *Do not inherently exist, there exist results.* [6.40]
>
> *Having seen an observed object*, a beautiful woman, *in a dream*, then, *even upon awakening*, that is, when awake, *foolish* beings observe that she has now ceased and is non-existent, but still *generate* strong *longing* for her. *Likewise*, *also from ceased actions that do not inherently exist there* arise the *results* of those actions. This indicates that results arise from disintegrated actions.

An action does not exist inherently; once ceased, it still yields a result. In order to indicate this, the Buddha gave the example of a man who enjoys a dream woman and then, in spite of the woman not existing, still generates strong longing for her when he awakes. Similarly, a result arises even from an action that has ceased.

Lama Tsongkhapa's *Illumination* (Tibetan text page 225) says:

> As proof of that, the *Sutra of Existence and Transference* says:
>
> > [The Bhagavan said:] "Great King, it is like this. For example, in a dream while sleeping a man dreamt that he enjoyed himself together with a lovely townswoman. If he remembers the lovely townswoman upon awakening from sleep, Great King, what do you think about this? Does the man, who having dreamt of thoroughly enjoying himself together with the lovely townswoman of a dream, have a wise nature when remembering the lovely townswoman upon awakening from sleep?"
> >
> > [The king] replied: "Bhagavan, it is not so. On what account? Bhagavan, the lovely woman of a dream does not even exist and, since not observed, how could there be thorough enjoyment with her? Such a man would have a destitute and weary fortune."
>
> This citation presents the example.

Such a man would have a destitute and weary fortune in the sense that, lacking wisdom, he experiences strong suffering through longing for a lovely woman who cannot be attained. This is because no matter how much he remembers and longs for this woman, there will be no result. In order for this man to enjoy himself with her, she would have to exist.

Lama Tsongkhapa's *Illumination* (Tibetan text page 225) says:

> When [the example] is joined to the meaning [it is as follows]:
>
> > [The Bhagavan said:] "Great King, similarly, also childish ordinary beings bereft of hearing, upon seeing forms with their eyes, strongly cling to forms that bring mental happiness. Through strongly clinging to them, longing is produced. From longing, they strongly create [actions] with body, speech and mind that arise from attachment, arise from hatred, and arise from confusion. Having strongly created an action, it ceases. When ceased, it is not supported on, that is, it does not abide in, the southern direction...

through

… it does not [abide] in the intermediate directions."

'Those bereft of hearing' are those who have not realized the teachings on suchness through hearing. 'Strong adherence' is adherence to true existence. The three actions [of body, speech, and mind] that arise from longing are both virtuous and non-virtuous actions. The actions [of body, speech, and mind] that arise from hatred are non-virtuous. [The actions of body, speech, and mind] that arise from confusion are also both [virtuous and non-virtuous] actions.

When ordinary beings see forms, they generate attachment and hatred. For example, when they see an attractive form, they generate attachment for it. Due to this attachment, they create virtuous and non-virtuous actions. On the other hand, when they see an unattractive form, they generate hatred, due to which they create only non-virtuous actions, not virtuous actions. In other words, due to the generation of hatred for an unattractive form, one creates negative actions of body, speech, and mind; one does not create virtuous actions of body, speech, and mind due to hatred. When ordinary beings see forms that are neither attractive or unattractive, they generate confusion, or ignorance, due to which they create actions of body, speech, and mind that can be either virtuous or non-virtuous. In short, due to the arisal of any of the three afflictions — attachment, hatred, and confusion — in one's mental continuum, one creates actions.

Lama Tsongkhapa says: "'Those bereft of hearing' are those who have not realized the teachings on suchness through hearing." This means that they have not heard teachings on emptiness.

Lama Tsongkhapa's *Illumination* (Tibetan text page 226) says:

An action created immediately ceases conventionally. The rest [of the passage] negates that cessation is established by way of its own entity. Then, [the sutra continues]:

[The Bhagavan said:] "At some other undetermined time, when abiding close to the time of death, having already projected an action congruent with that, when the final consciousness ceases, it is like the example of [OK?] the lovely townswoman for the man who has awakened from sleep, in that the mind is thoroughly directed toward that very action."

'Congruent' [means] a similar type of aggregates. Having extinguished the actions for abiding in this life, when the final consciousness of this life ceases – like one possessing longing who, immediately upon awakening, remembers the lovely woman of a dream and directs his mind to her – at the time of death, without remembering it the mind is directed toward an action that activates the potential of an action which will ripen into a future life.

In short, according to the Prasangika Madhyamikas even though actions do not exist inherently, they yield a result. Contrarily, the lower schools say that if actions do not exist inherently they do not exist at all, due to which their results also would not exist. From the point of view of the lower schools, the Prasangika Madhyamikas have fallen into the extreme of annihilation. The Prasangika Madhyamikas respond to this accusation saying that it is the lower schools who have fallen into the extreme of permanence.

Friday morning, 29 September 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 226) says:

[The sutra continues:]

"[Great King], thus, the final consciousness ceases and the initial consciousness included in the factor of rebirth yet again [arises] among the gods...

through

> ... yet again arises as a hungry ghost."
>
> 'The final [consciousness] ceases' refers to [the consciousness] of this life. Since the statement "there arises the initial consciousness included in the factor of rebirth among the gods" does not refer to [the consciousness of] the intermediate existence of the six [classes of] migrating beings, it refers to the consciousness of the birth existence. Although there is an intermediate existence between the two, birth and death, it is not mentioned [here], but, since it appears in many [other texts], the way in which actions and results are mainly related from the point of view of birth and death is asserted to be settled.

After the final consciousness, that is, the consciousness just prior to death, ceases, a consciousness arises of any of the six classes of migrating beings, such as that of a god or a hungry ghost. Does the birth existence arise immediately after the death existence? It does not, since there is an intermediate existence between them. However, this is only from the point of view of taking rebirth in the desire realm and form realm in that when one takes rebirth in any of the four levels of the formless realm, there is no intermediate existence. In this case, when the final consciousness ceases, the consciousness of any of the four levels of the formless realm immediately arises. On the other hand, when taking rebirth in the desire and form realms, it is necessary to pass through an intermediate existence. This intermediate existence is not a birth existence.

There are four types of existence:
1. birth existence,
2. intermediate existence,
3. previous time existence, and
4. death existence.

The birth existence is the moment in which a human being, for example, is conceived in the mother's womb. The previous time existence is from the second moment subsequent to the birth existence through to just prior to death. The death existence occurs when one dies and is followed by the intermediate existence, when one passes into the intermediate state. In which of the six classes of beings is the intermediate existence included? It is not included in any of the six migrations. Is the intermediate state being a god, an anti-god, a human being, an animal, a hungry ghost, or a hell being? It is not any of these.

Thus, when the sutra says: "the initial consciousness included in the factor of rebirth yet again [arises] among the gods..." through "... yet again arises as a hungry ghost," it refers to the birth existence. The sutra does not mention the intermediate existence because the main point is to settle the relationship between actions and their results in terms of birth and death.

As a human being, we previously had an intermediate existence; both the body of the intermediate state and the body of the human being are projected by one single projecting action. Thus, there is only one projecting action that is the cause of both the body of the intermediate state and the body of the human being. Thus, the body of the intermediate existence, the body of the birth existence, and the body of the previous time existence are all thrown by the same projecting action. In addition to these bodies, there exists a fruitional body and a developing body. The developing body is the body that grows and develops due to eating food and so forth. On the other hand, the fruitional body does not change. However, these two bodies do not exist in two different locations. These two types of body are discussed extensively in Vasubandhu's *Treasury of Knowledge* and Dharmakirti's *Commentary on [Dignaga's] Compendium of Valid Cognition*.

Vasubandhu's *Treasury of Knowledge* describes the intermediate existence as having complete sense powers and the ability to travel wherever it likes without being obstructed by walls, rocks, doors, and so forth. In regard to this, there is a story about a minister in Tibet called Timonpa who became very sick. His children placed him in a room, locked the door, closed the windows, and went outside. However, they were soon surprised to see him walking along the edge of the roof. When they

asked him how he had managed to get out of the room, the father answered them as if sleep walking and was surprised to find himself on the roof. When one attains a body in the nature of mind, one will also be able to do likewise.

Lama Tsongkhapa's *Illumination* (Tibetan text page 226) says:

> Then, [the sutra continues]:
>
> "[Great King], as soon as the initial consciousness ceases, there arises a continuum of mind congruent with manifesting the fruitional [result] to be experienced."
>
> "Great King, with respect to that, no phenomenon whatsoever transfers from this world to the next world, yet death-transference and birth do manifestly exist."

When the sutra says "as soon as the initial consciousness ceases, there arises a continuum of mind congruent with manifesting the fruitional [result] to be experienced," it refers to a congruent cause (literally, an equal fortune cause). "No phenomenon whatsoever transfers from this world to the next world" means that nothing transfers from one inherently existent life to another inherently existent life yet, conventionally, death-transference and birth do exist. "Death-transference" refers to death, which is followed by transference.

Lama Tsongkhapa's *Illumination* (Tibetan text page 227) says:

> "Great King, with respect to that, the cessation of the final consciousness is called 'death-transference.' The arisal of the initial consciousness is called 'birth.'"

Thus, once again, there is no mention in the sutra of the intermediate existence. Although it is not mentioned, it should be understood to exist between the birth existence and the death existence.

Lama Tsongkhapa's *Illumination* (Tibetan text page 227) says:

> "Great King, when the final consciousness has ceased, it also does not go anywhere. When the [initial] consciousness included in the factor of rebirth arises, it also does not come from anywhere. Why is that? It is because they are devoid of inherent existence."

An inherently existent final consciousness does not go anywhere, and an inherently existent initial consciousness does not come from anywhere.

Lama Tsongkhapa's *Illumination* (Tibetan text page 227) says:

> "Great King, with respect to that, the final consciousness is empty of final consciousness. Death-transference is empty of death-transference. Actions are empty of actions. The initial consciousness is empty of initial consciousness. Birth is empty of birth. Actions are actualized without being wasted."

This does not mean that a final consciousness is empty of itself. There are two ways of being empty or devoid. The first is, for example, because the nature of a pot is not inherently existent, the pot is empty of inherent existence or, because the nature of the pot is not permanent, the pot is empty of permanence. The other type of empty is, for example, a temple that is empty of monks in the sense that there are no monks in the temple. In the second example, what is empty is not the nature of the

temple. Likewise, an empty house implies a house that is empty of furniture and so forth; it does not imply that it is empty of the nature of house.

Lama Tsongkhapa's *Illumination* (Tibetan text page 227) says:

> The results of previous actions that reconnect one to a birth existence, experienced as happiness and suffering, are produced from the initial mind of birth, the continuum of the consciousness that experiences them. While death-transference and birth exist in terms of conventions, they do not exist ultimately. For this reason, 'devoid of inherent existence' is to be affixed as a qualification to the object of negation, that is, it is to be affixed to the statements regarding the final consciousness and so forth each being empty of itself.
>
> Due to there being doubt through considering actions and results to not exist when presented like this, [Buddha] said that actions do not go to waste.

In short, actions do not go to waste.

QUESTIONS AND ANSWERS

Student: The Svatantrika Madhyamikas say that the karmic seeds and latencies are deposited on the mental consciousness and that this goes from life to life, whereas the Prasangika Madhyamikas say that they are deposited on the mere I, which is a mere imputation. How can an imputation travel from life to life if the mind that imputes it does not travel together with it?
Geshe Jampa Gyatso: Without saying "the mere I which is a mere imputation," it is said that the karmic seeds and latencies are deposited on "the mere I." Does this mean that there is no consciousness? There is a consciousness. How does it go from one life to the next? The Prasangika Madhyamikas' explanation of this is the same as that of the Svatantrika Madhyamikas. The mere I is merely imputed on the aggregates. When that mere I goes from this life to the next, it travels together with the aggregates. What are the aggregates that go from life to life? It depends on the rebirth that one will take, in that if one will take rebirth in the desire realm or form realm there will be all five aggregates, whereas if one will take rebirth in the formless realm, there will only be four aggregates. This is because someone who will be reborn in the formless realm has only four aggregates, excluding the form aggregate. The mind is not physical and travels without impediment. In brief, when one goes to another life, the mere I goes together with the mind just like when the sun is shining, the shadow of the body accompanies the body wherever it goes. Thus, the I and the consciousness are inseparable when transferring from one life to another.

Student: Does that mean that the latencies of actions can be deposited on the form aggregate?
Geshe Jampa Gyatso: They are deposited on the mere I.
Student: Therefore, they are deposited on a collection of the aggregates?
Geshe Jampa Gyatso: For this school, the collection of the aggregates is not the mere I. When one analyzes whether the collection of the aggregates is the mere I, whether the collection of consciousnesses is the mere I, whether the shape of the body is the mere I, and so forth, the mere I is not found. To illustrate this, there is the example of a chariot. A chariot is composed of many parts, but if it is asked "Is the collection of the parts the chariot?", it is not, because if all the parts of the chariot are dismantled and laid out on the ground, that collection of parts is not a chariot. This is because the collection of parts is unable to perform the function of a chariot. Thus, the Prasangika Madhyamikas say that even the mere collection of the parts of a chariot are not the chariot; if it were, then when the chariot is dismantled and its parts are laid out on the ground, the collection of parts should be able to perform the function of a chariot, whereas it cannot.

Student: If the latencies are deposited on the mere I and the mere I is imputed on a mental consciousness, what is the fault of saying that the latencies are deposited on the consciousness?
Geshe Jampa Gyatso: There is no fault in saying that the latencies of actions are deposited on the consciousness. However, the Prasangika Madhyamikas say that latencies are *occasionally* deposited on the consciousness. For example, Beth is occasionally in the temple, but if it is asked whether Beth's abode is the temple, the answer is that it is not because she only comes here occasionally. Thus, the temple is not her abode. Likewise, because the latencies of actions are only occasionally deposited on the consciousness, the consciousness is not said to be the abode of the latencies of actions.

Student: Are the latencies of actions deposited on the consciousness until they are exhausted or purified? Is this the meaning of 'occasionally deposited'?
Geshe Jampa Gyatso: It is not. If the Prasangika Madhyamikas were to posit one of the five aggregates as a basis for the infusion of the latencies of actions, they would become like the lower schools. That is, if the Prasangika Madhyamikas were to find something among the five aggregates that is a basis for the infusion of the latencies of actions, it would mean that there is an inherently existent basis.

Student: Is it because the consciousness is impermanent and changing, whereas the mere I is not?
Geshe Jampa Gyatso: The mere I is also impermanent and changing.

Student: When you absorb in emptiness and arise as the deity and your mere I arises as the deity, what are you doing?
Geshe Jampa Gyatso: The mere I in that case arises from emptiness as Manjushri thinking "I am Manjushri."

Student: Why did Chandrakirti not say that there is "no production from *inherently existent* other" [rather than just "there is no production from other"]?
Geshe Jampa Gyatso: That there is no production from other means that there is no production from inherently existent other. When there is production of a son from a mother, is the mother not other than the son? Are the mother and son one? They are other. For example, smoke arises from fire but they are not one. Does smoke arise from other? The Prasangika Madhyamikas would say that it does not. If one says that it does because it arises from fire, the Prasangika Madhyamikas would respond that smoke arising from fire does not mean that smoke arises from other; however, the fire and the smoke are not one. Even in terms of that renowned in the world, fire and smoke are not one, they are different. Yet worldly beings do not say that smoke arises from otherness, they simply say that smoke arises from fire. A Prasangika Madhyamika is one who propounds in accordance with that renowned in the world and is therefore called "a Madhyamika who accords with worldly renown."

Student: When one is reborn as a human being, where is the mere I in terms of the five aggregates and how long does one need to reconstruct it?
Geshe Jampa Gyatso: In terms of constructing a *specific* I of a new life, it takes some time, but in terms of constructing the *mere* I it is always there, like the continuous flow of a river. There are three types of I:
1. an I that comes from a past life to this life,
2. an I specific to this life, and
3. an I that goes from this life to the next life.

What is the difference between these three I's? One can read about this in the *Great Commentary on Fundamental Wisdom*. Does the I specific to this life go from this life to the next? It does not. The I specific to this life does not go to the next life because that I is, for example, the monk Losang Chogyal. Such a specific I does not go to a next life. But does one go to the next life? Yes, one does.

One goes to a next life because there is an I that pervades all three times, past, present, and future. Since there is such an I, it is said that one goes from life to life. But does the I specific to this life come from a previous life? It does not. Then, has this I specific to this life not taken previous lives? It has not, yet the I that pervades all three times has. This is a complicated subject. For example, when someone who was a god in a previous life is reborn as a human being, has the god of the previous life been reborn as a human being? Or, in the case of someone who was an elephant and then is reborn as a human being, has that elephant become a human being? The previous elephant has not become this present human being, but the mere I of the elephant life has become a human being.

Monday afternoon, 2 October 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 227) says:

3B1C-2B3E-2A1B-2B1E-2C Dispelling arguments with respect to presenting in this way

1 Dispelling the argument that [actions] would endlessly yield a fruitional [result]
2 Dispelling the argument that this would contradict the scriptures that teach the existence of a mind-basis-of-all

3B1C-2B3E-2A1B-2B1E-2C1 Dispelling the argument that [actions] would endlessly yield a fruitional [result]

Chandrakirti autocommentary (Tibetan text page 83) says:

If it is considered: If that which is not inherently produced is asserted to mature since it is inexhaustible, it is like that and, just as maturation arises because of not ceasing, similarly, although an action has already produced maturation, it would mature. And because the action there is inexhaustible, although the action has already matured, because if it would mature again, there would be the fault of endless [maturation].

That is not so, since:

Just as, although objects are similar in not being merely existent,
Those bearing cataracts perceive the aspect of falling hair,
Not the aspects of other things. Similarly,
That matured actions do not mature again, should be known. [6.41]

For example, while objects are alike in not being existent, those bearing cataracts see the entities of falling hairs and so forth that are not existent. They do not [see] the aspects of things other than that such as the horn of an ass and the son of a barren woman and so forth. Similarly, while the self-natures of actions are similar in not ceasing, there is certainty regarding maturation.

I shall explain the aforesaid:

Therefore, non-virtuous maturation is perceived to be from
Black actions; just virtuous maturation from virtue and
Having awareness that lacks virtue and non-virtue will be liberated,
So, thinking about actions and effects is refuted. [6.42]

If the two actions of virtue and non-virtue are also indeed without self-nature, even in that case, because of that very certainty to perceive falling hairs and so forth, pleasant maturation is not [arisen] from non-virtue, unpleasant maturation is not [arisen] from virtue. Due to not referring to [inherently existent] virtuous and non-virtuous actions, one becomes liberated.

Therefore, with regard to those making analysis about extreme certainty, the Bhagavan considered that ordinary beings would come to destroy the conventional through denying actions and effects. Hence, saying "The maturation of actions and effects is inconceivable," [he] acts to refute thinking dependent on actions and effects.

The lower schools say to the Prasangika Madhyamikas that if actions did not exist inherently there would be no extinguishment of actions, due to which production of their results would be endless. That is, when an action yields a result it would continue to yield that result. The Prasangika Madhyamikas respond that although actions do not inherently exist there is not the fault of their producing their results endlessly. Chandrakirti gives the example that even though there are things that are the same in terms of their not existing, such as falling hair and the horns of a donkey, those with cataracts see falling hair alone and do not see the horns of a donkey. This example indicates the

certainty that a virtuous action will give rise to a pleasant fruitional result and not an unpleasant fruitional result, whereas a non-virtuous action will give rise to an unpleasant fruitional result and not a pleasant fruitional result. Buddha, in order to dispel particular doubts regarding the relationship of actions and results, clarified the certainty of their results. Their relationship is, however, said to be inconceivable. In fact, the relationship between actions and results is so subtle that it is seen by buddhas alone; not even tenth ground bodhisattvas can see it.

Lama Tsongkhapa's *Illumination* (Tibetan text page 227) says:

> LOWER SCHOOLS: If it is asserted that a fruitional [result] arises due to an action that is not inherently produced and not inherently extinguished, similarly, an action that has already ripened would ripen again, due to which there would be the fault of [an action ripening] endlessly.

Here the lower schools debate the Prasangika Madhyamikas, saying that if actions did not exist inherently, they would not exist at all. This being the case, it would follow that due to actions not existing inherently, their results would ripen endlessly.

Lama Tsongkhapa's *Illumination* (Tibetan text page 227-8) says:

> PRASANGIKA MADHYAMIKAS: Chandrakirti says:
>
> *Just as, although similar in being non-existent objects,*
> *Those with cataracts see the aspect of falling hair,*
> *But not the aspect of other things,*
> *Likewise, understand that ripened actions do not ripen again.* [6.41]
>
> *Just as*, that is, for example, *although similar in being non-existent objects*, the eyes of *those with cataracts see the aspect of falling hair* and so forth which does not exist but do *not* see the *aspect of things* that are *other* than that, such as the aspect of the horns of a donkey, the son of a barren woman, and so forth, *likewise*, *understand* that, although actions are similar in not existing inherently, actions that have not yet ripened ripen and *actions* that have already *ripened do not ripen again*.

Lama Tsongkhapa says that it is to be understood that a [non-inherently existent] action that has already ripened does not ripen again, whereas an action that has not yet ripened will ripen.

Lama Tsongkhapa's *Illumination* (Tibetan text page 228) says:

> Chandrakirti says:
>
> *Therefore, a non-virtuous fruition is seen*
> *To be from a black action; a virtuous fruition from virtue.*
> *Those having the awareness that virtue and non-virtue do not exist will be liberated.*
> *Thinking about actions and results is also to be repudiated.* [6.42]
>
> From this example, not only are the results of actions established to be certain, it is also explained that the results of pleasantness and unpleasantness from virtuous and non-virtuous actions are individually certain, [just as] it is certain that the eyes of those with cataracts see falling hair and so forth and do not see the horns of a donkey and so forth. *Therefore*, a pleasant fruitional [result] does not arise from a non-virtuous action, while an unpleasant fruitional [result] does not [arise] from a virtuous action. A *non-virtuous fruition*, that is, the unpleasant, is from a *black action*. A *virtuous fruition*, that is, the pleasant, *is seen to be* that which arises *from virtue*. *Those having the awareness that virtuous and non-virtuous* actions *do not exist* – that is, those who realize that they are not observed to inherently exist – *will be liberated* from cyclic existence.

Although falling hair and the horns of a donkey are similar in terms of their not existing, those with cataracts see falling hair alone. Similarly, virtuous and non-virtuous actions are similar in not existing inherently but each gives rise to a certain result:

- a non-virtuous action gives rise to an unpleasant fruitional result and
- a virtuous action gives rise to a pleasant fruitional result.

A non-virtuous action is called a black action, while a virtuous action is called a white action. Lama Tsongkhapa says that those who realize that the relationship between actions and results does not exist inherently will be liberated from cyclic existence.

Lama Tsongkhapa's *Illumination* (Tibetan text page 228) says:

> Therefore, the Conqueror, [by] thinking that, finely and definitely performing analyses by means of the reasonings that establish the correct reason that this-and-that specific result arises from this-and-that specific action, ordinary beings would destroy conventionalities by deprecating actions and results, said that the fruitional results of actions are inconceivable. [Thus,] *thinking*, that is, analysis, based on *actions and results is also to be repudiated*.

The presentation of actions and results is not to be analyzed because it is not realized by means of inference through the power of the fact. The relationship of actions and results is extremely subtle and can only be realized in dependence on the words of the Buddha. 'Deprecating actions and results' occurs when the relationship of actions and results is analyzed too deeply and one comes to the conclusion that conventionalities do not exist at all.

Lama Tsongkhapa's *Illumination* (Tibetan text page 228-9) says:

> Fearing that confidence in [the law of] actions and results will diminish through the many approaches such as these in this text, it should be understood that this is a method for generating confidence in actions and results by means of many approaches. In addition to [receiving] help from the view of emptiness in making one's confidence in [actions and results] firm, from now on, having traveled to a place of jewels, put effort into not returning empty-handed.

When one reflects on actions and results one should do so in order to gain certainty in their relationship. Otherwise, it would be like someone returning empty-handed from a place of jewels. Gaining certainty in emptiness also helps to deepen one's confidence in the relationship of actions and results. While one cannot realize the relationship of actions and results by means of inference through the power of fact, one can realize emptiness in this way. Therefore, the relationship of actions and results is even more difficult to realize than emptiness. In addition, emptiness can be established in dependence on external examples and so forth, whereas the relationship of actions and results is very subtle.

In short, the relationship is that from a virtuous action comes a pleasant result and from a non-virtuous actions comes an unpleasant result. It is impossible for virtue to give rise to an unpleasant fruitional result and for non-virtue to give rise to a pleasant fruitional result. For example, when one plants a pea seed, one will definitely reap the result of peas and not wheat, whereas if one plants wheat, one will reap the result of wheat and not peas. Just as the relationship between external causes and results is definite, so too is the relationship between internal causes and results.

Lama Tsongkhapa's *Illumination* (Tibetan text page 229) says:

3B1C-2B3E-2A1B-2B1E-2C2 Dispelling the argument that this would contradict the scriptures that teach the existence of a mind-basis-of-all

A Actual meaning of the words that dispel contradiction with the scriptures [that teach the existence of a mind-basis-of-all]
B The manner of explaining and not explaining a mind-basis-of-all that is a different entity from the mental consciousness
C Presenting an example taught from the point of view of the intention [in teaching the existence of a mind-basis-of-all]

3B1C-2B3E-2A1B-2B1E-2C2A Actual meaning of the words that dispel contradiction with the scriptures [that teach the existence of a mind-basis-of-all]

Chandrakirti's autocommentary says:

> If asked: If the relation of the effect of actions is presented like that, then in the *Exalted Descent into Lanka [Sutra]* and so forth, that which is taught as the consciousness-basis-of-all, the substratum with the potential of infinite phenomena, like an ocean with respect to waves, all seeds, the cause of generating all things; does it not exist in any way?
>
> [Response:] It is not like that, since it was finely indicated so in order to indicate it as merely existing to those who are dull. For the sake of subsequent involvement with the self-nature of all things, only emptiness should be understood as indicated by the words 'consciousness-basis-of-all.'
>
> Not only is the consciousness-basis-of-all [indicated] to exist, also the person [is indicated] to exist [substantially] because beings subdued by that are cared for through indicating it as merely existing.
>
> As was taught:
>
> > Bhikshus, the five aggregates are the burden; the carrier of the burden is the person.
>
> For some [disciples], a mere aggregate was indicated. That called "mind" or "mental perceiver" or "consciousness" is explained saying:
>
> > If fully infused by [faith,] morality, and so forth for a long time and progressed higher, later one will progress to high status.
>
> All these are taught through the power of intention.

Why did the Buddha teach a mind-basis-of-all? He did so with the specific intention of subduing particular beings, or because he taught it as being a term for emptiness. The Buddha understood that it in some cases it was necessary to teach the existence of a mind-basis-of-all, just as in order to guide particular disciples he initially taught them the existence of a self of persons and later taught them the selflessness of persons. The Buddha did this because he saw that it would not be beneficial to teach the selflessness of persons right from the beginning, just as when a doctor first diagnoses jaundice he initially advises the patient to avoid fatty foods, but later on may advise the same person to eat fatty foods in order to counteract another problem. This is mentioned in the *Descent into Lanka Sutra* saying: "Just as a patient is advised by a doctor, so too are sentient beings guided by the Buddha."

In short, for these reasons the Buddha taught all phenomena to be mere mind (mind only) or the mere nature of the mind. Thus, the Buddha taught differently on different occasions in order to benefit particular disciples, such as initially saying to them that there is a mind-basis-of-all and then later on saying that it does not exist. This is the main point here. Therefore, a mind-basis-of-all was taught in the context of subduing specific disciples, just as a self of persons was taught in order to subdue others. In a similar manner, the Buddha taught: "Bhikshus, the five aggregates are the burden; the carrier of the burden is the person." In this case, the Buddha taught that the person is a different entity from the aggregates, thereby indicating the person to be self-sufficient substantially existent. On the other hand, the Buddha taught other disciples that the mind is the person, the mental perceiver is

the person, the consciousness is the person, and that the person is not substantially existent but depends on the aggregates.

Buddha said: "If fully infused by [faith,] morality, and so forth for a long time and progressed higher, later one will progress to high status." This too was taught with a particular intention and is, therefore, an interpretable meaning teaching.

Chandrakirti's autocommentary says:

> If asked: Who is intended here?
> It is expressed:
>
> *"A basis of all exists," "a mere person exists,"*
> *"Only these aggregates exist;"*
> *This demonstration is for those who would not understand*
> *The meaning of such profound phenomena.* [6.43]
>
> Since some disciples have familiarized themselves with the views of the Forders for a long time, they are unable to engage in the profound dharmata, and are afraid at only the beginning having heard about the dharmata that was taught saying:
>
> The self does not exist; it will not arise.
>
> Considering the Teacher's fine indications to be like an abyss, by backing away from them they will not achieve the great meaning.
>
> By teaching a consciousness-basis-of-all and so forth at the very beginning, having avoided the Forder system, it induces their great meaning and, later, since those unmistakenly understanding the meaning of the scriptures will abandon those by themselves, only qualities arise; faults will not.
>
> As explained by Aryadeva [in the *Four Hundred Verses*, 5.10]:[35]
>
> One should analyze beforehand this and that which someone enjoys.
> The disinclined are not vessels of the highest Dharma in any way.

It is better to initially avoid teaching the selflessness of persons to those who have familiarized for a long time with the Forder's system and so forth but instead to teach the existence of a self of persons, truly existent aggregates, and so forth. This is because if they are taught the selflessness of persons and the absence of true existence from the beginning, they will generate fear.

Lama Tsongkhapa's *Illumination* (Tibetan text page 229) says:

> QUESTION: If in that way, a relationship between actions and results can be posited even though a basis-of-all does not exist, then when the *Descent into Lanka [Sutra]* and so forth, that is, the *Sutra Unraveling the Thought* and the *Mahayana Sutra of Knowledge*, say that the so-called "mind-basis-of-all" is the special basis of the potentials for all functional phenomena, and all the seeds, like the arising of waves on the ocean, are the cause for the production of all internal and external things, is this not the setting out of a presentation of [a mind-basis-of-all] in all its aspects?

[The lower school] says it is not correct that a mind-basis-of-all does not exist because this contradicts the *Descent into Lanka [Sutra]*, the *Sutra Unraveling the Thought*, and the *Mahayana Sutra of Knowledge*, all of which set out a mind-basis-of-all. The *Sutra Unraveling the Thought*, roughly translated, says: "The appropriating consciousness is very profound and subtle and the seeds on it flow like a river. Since

[35] Unidentified by Poisson. Second line corrected to *de.yis* in accordance with the root text.

people conceive a self, I do not teach this, [selflessness,] to the childish." In this way this citation presents a mind-basis-of-all. The *Mahayana Sutra of Knowledge* also sets out a mind-basis-of-all.

Lama Tsongkhapa's *Illumination* (Tibetan text page 229) says:

> RESPONSE: It is not so because by presenting that a basis-of-all exists, as is mentioned above, it is presented as existing for the dull. Hence, since a basis-of-all is presented to be asserted in the perspective of trainees in virtue of a [particular] purpose, therefore, when it is taught in our system it has a [specific] intention. The basic intention for teaching [a basis-of-all], through intending it for some, is to be understood as the intention that only the emptiness which is an emptiness of inherent existence is indicated by the term "mind-basis-of-all." This is said to be a basis-of-all because that nature adheres in all things.
>
> Not only is a mind-basis-of-all taught to exist in virtue of a [particular] purpose, but also the person is taught to exist substantially because it is presented as existing in order to care for the beings subdued by that [teaching]. As taught [in sutra]:
>
> > Monks, the five aggregates are the burden; the carrier is the person.

The Buddha taught a mind-basis-of-all with a particular intention – that of caring for particular sentient beings. However, a mind-basis-of-all is actually equivalent to emptiness because emptiness is a basis-of-all in the sense that the emptiness of all phenomena of being established by way of their own character is the basis for establishing actions and results. The Buddha taught a mind-basis-of-all specifically in order to subdue the Chittamatrins, who say that all phenomena arise due to the activation of latencies deposited on a mind-basis-of-all. The Chittamatrins say that if there were no mind-basis-of-all, the relationship of actions and their results would not be admissible, due to which the taking of rebirth would not be possible.

Lama Tsongkhapa composed a text called the *Ocean of Eloquence: An Extensive Commentary on the Difficult Points of Mentality and the Mind-Basis-of-All*, which sets out eight reasonings establishing the existence of a mind-basis-of-all.

If someone is a Chittamatra is he pervaded by accepting a mind-basis-of-all? He is not. For example, the false aspectarian Chittamatrins.

The sutra that says that the five aggregates being the load and the person being the carrier was specifically taught to the Vatsiputrya Vaibhashikas. This school is a subdivision of the Vaibhashika school that asserts a self-sufficient substantially existent person. Thus, the Buddha taught this sutra with a particular purpose. Although some people say that the Buddha taught this sutra in order to convert non-Buddhists to Buddhism, if it is asked whether there are non-Buddhists who are trainees intent on this sutra, the answer is that there are not. However, by reading this sutra, which sets out a self-sufficient substantially existent person, they will be led to the right view.

In short, when the Buddha taught the existence of a mind-basis-of-all and a self of persons he did so with a specific intention in mind.

Tuesday morning, 3 October 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 230) says:

> In response to questions by those who hold there to be a self-sufficient substantially existent person, [Buddha] did not indicate it to be non-existent but taught that a person who is a carrier exists. Therefore, although the words are not explicitly [mentioned] the meaning is that [the person] exists substantially.

Although there are Buddhists who assert a self-sufficient substantially existent person, there are no Buddhists who assert a permanent, partless, and independent person. This is an important point to keep in mind because, as Khedrup Je says, someone who does not assert the four seals does not have the slightest trace of being a Buddhist. The four seals are:
1. all compounded phenomena are impermanent,
2. all contaminated phenomena are miserable/suffering,
3. all phenomena are empty and selfless, and
4. nirvana is peace.

In this context, 'empty' refers to the emptiness of a permanent, partless, and independent person; therefore, there are Buddhists who accept a self-sufficient substantially existent person. In the *Supplement to the 'Middle Way,'* in regard to the refutation of a self of persons, it says:

> *Some assert the person [as] substantially existent,*
> *Inexpressible [as] thatness, otherness, permanent, impermanent, etc.*
> *That is asserted as the object of the six consciousnesses and*
> *That is also asserted as the basis of I-grasping.* [6.146]

Lama Tsongkhapa says: "Therefore, although the words are not explicitly [mentioned] the meaning is that [the person] exists substantially." The Svatantrika Madhyamika system says that, although the person is not substantially existent, there is no contradiction in the illustration of the person, the mental consciousness, being substantially existent. In short, the illustrative mental consciousness is substantially existent. There are different ways of positing substantial existence. However, in general, substantial existence is an existence that does not depend on the apprehending of some other phenomenon in order to appear in the perspective of an awareness. The Svatantrika Madhyamikas posit four types of substantial existence (see Lopez, *A Study of Svatantrika*, page 95):
1. substantial existence which is established by reasoning.
2. substantial existence which is steady and unchanging,
3. substantial existence that is the ability to perform a function, and
4. substantial existence in the sense of self-sufficiency

See Khedrup Je's *Dose of Emptiness* for an explanation of this. Stable and unchanging substantial existence refers to emptiness which is a thoroughly established phenomenon. The third type of substantial existence refers to functioning things. Is that which is able to perform a function imputedly existent or substantially existent? It is substantially existent.

Lama Tsongkhapa's *Illumination* (Tibetan text page 230) says:

> Moreover, for some trainees [Buddha] presented mere aggregates which are not a substantially existent person, saying:
>
> > 'Mind, 'mentality,' and 'consciousness,' when fully infused with faith, ethics, and so forth for a long time and having progressed higher, will later progress to high status.
>
> In addition, thinking that no matter how many assertions are made those who conceive the manner of progressing to high status and emancipation to be truly existent will not refute objects due to adhering to their true existence, when [Buddha] presented mere aggregates, he implicitly presented the aggregates as being truly existent. All these [teachings] are taught by virtue of their intention.

Although the person is not explicitly said to be substantially existent, this is implied by saying that there is a consciousness that progresses to high status and emancipation. Thus, for a particular purpose the Buddha presented the aggregates to be truly existent to certain disciples. The purpose

was to cause those who hold this view to cultivate a path and thereby achieve high status and liberation. Thus, there are three factors in teaching such things:
1. the basis of intention
2. the purpose, and
3. the harm to accepting it literally.

In short, the Buddha said that the aggregates are truly existent and that the person is substantially existent with a particular purpose.

Lama Tsongkhapa's *Illumination* (Tibetan text page 230) says:

> QUESTION: For which trainees are these [teachings] intended, that is, for whom are they taught?
> RESPONSE:
>
> *"A basis-of-all exists and a person exists,*
> *While the aggregates alone are existent";*
> *These teachings are for whoever would not understand*
> *Such a very profound meaning.* [6.43]
>
> *The teachings that "A* mind-*basis-of-all exists and* a substantially existent *person exists*, *while the aggregates alone*, that is, merely them, *are* truly *existent*," *are* intended, that *is*, are taught, *for whichever* trainees *would* temporarily *not understand*, i.e., realize, *such a very profound meaning*, that is, *like that* explained before.

For those trainees who are temporarily unable to understand the profound meaning, emptiness, the Buddha said that a mind-basis-of-all exists, the person is substantially existent, and the aggregates are truly existent.

Lama Tsongkhapa's *Illumination* (Tibetan text page 230-1) says:

> Some trainees, due to having familiarized themselves with the views of the Forders for a long time, are unable to engage the profound reality (dharmata). As [Nagarjuna's] *Precious Garland* says:
>
> "Self is not existent. It will not become existent.
> Mine is not existent. It will not become existent."
> The childish fear such.
>
> When reality is initially presented, those who, out of fear, consider the Buddha's teachings to be like an abyss, by turning their backs on the teachings and not engaging in them, will not accomplish the great aim. For them a mind-basis-of-all, truly existent aggregates, and so forth are presented without, at the beginning, presenting the final point which is very profound. Thereby, that is, in dependence on that, they give up the Forders' system and are led to the great aim. Then later on those who understand the meaning of scriptures well will by themselves abandon conceiving a mind-basis-of-all and so forth to exist. Therefore, in presenting in this way there arise only excellent qualities, not faults.

If those who have familiarized themselves with the Forders' system are, from the very beginning, taught emptiness they will turn their back on this teaching, whereas if they are taught that the aggregates exist truly and that there is a substantially existent person they will engage in these teachings. Thus, the Buddha skillfully taught in this way so as to make particular trainees enter into the realization of the selflessness of persons by initially teaching them the existence of a self of persons.

Lama Tsongkhapa's *Illumination* (Tibetan text page 231) says:

> Intending that it is to be done in such stages [Aryadeva's] *Four Hundred Stanzas* (v. 5.10) says:

> Someone liking something
> Should first enjoy this and that.
> The disinclined are not at all
> Vessels of the supreme Dharma.

The Buddha, being very skilled in means, taught whatever is necessary in order to subdue trainees of different levels.

Lama Tsongkhapa's *Illumination* (Tibetan text page 231) says:

> The purpose for presenting a mind-basis-of-all which is a different entity from the collection of six [consciousnesses] is that, due to the need to negate external [objects], it is taught for those who are suitable vessels for [the teachings on] the mere suchness that is the emptiness of apprehendeds and apprehenders being different substances. On the other hand, even those who do not assert a mind-basis-of-all like that explained above will not understand the very profound meaning due to their not understanding how to posit the relationship between actions and results.

The Buddha taught a mind-basis-of-all that is a different entity from the collection of six consciousnesses for those who (i) accept that apprehendeds and apprehenders are empty of being different substances and who (ii) negate the existence of external objects. However, even those who do not accept a mind-basis-of-all, that is, the Svatantrika Madhyamikas, do not know how to posit the relationship between actions and results that are not inherently existent. Without understanding this, they are not able to understand the profound meaning, emptiness.

In short, the Svatantrika Madhyamikas do not know how to posit a relationship between actions and results that do not exist inherently and are, therefore, unable to realize the relationship between such actions and results. Although the relationship between actions and results does not exist inherently, for those who are unable to realize the absence of inherent existence the Buddha taught that it does exist inherently. Thus, because Buddha taught this by virtue of a particular intention or purpose, it is not literally acceptable. Regarding those who are suitable vessels for the teaching on emptiness, Chandrakirti's *Supplement to the 'Middle Way'* says:

> *Even while an ordinary being,*
> *On hearing about emptiness inner joy arises again and again,*
> *Tears arising from this happiness moisten the eyes,*
> *And the hairs of the body stand on end.* [6.4]

> *Such [persons] have the seed of the awareness of a perfect buddha.*
> *They are vessels for the teaching of suchness.*
> *The ultimate truth is to be taught to them.* [6.5abc]

In short, those who are suitable vessels for the teachings on emptiness should be taught emptiness. Also, Maitreya's *Ornament for Clear Realizations* says:

> *Those who did their duties with respect to the buddhas,*
> *Sowed roots of virtue in regard to them,*
> *And are under the protection of virtuous spiritual friends*
> *Are vessels for listening to this.* [4.6]

> *Due to having served the buddhas, questioned, and*
> *[Having] the conduct of generosity, ethics, and so forth,*

Vessels who keep, retain, and so forth
Are considered to be holy beings. [4.7]

These are the characteristics of a suitable vessel for the teachings on emptiness. Similarly, Lama Tsongkhapa quotes Aryadeva's *Four Hundred Verses*:

Someone liking something
Should first enjoy this and that.
The disinclined are not at all
Vessels of the supreme Dharma.

Lama Tsongkhapa's *Illumination* (Tibetan text page 231) says:

3B1C-2B3E-2A1B-2B1E-2C2B The manner of explaining and not explaining a mind-basis-of-all that is a different entity from the mental consciousness

When presenting the enumeration of consciousnesses in the many [scriptures], such as the *Hundred Thousand Stanza Perfection of Wisdom Sutra* and so forth, there are many sutras that do not explain more than the explanation of the collection of six consciousnesses. Therefore, in regard to relating the two ways of positing and not positing a mind-basis-of-all in the sutras, also Venerable Maitreya, when commenting on their meaning, presents a mind-basis-of-all in his *Discrimination of the Middle Way and the Extremes*, *Ornament for the Mahayana Sutras*, and *Discrimination of Phenomena and the Nature of Phenomena* and explains the position that there are no external [objects]. However, in his *Ornament for Clear Realizations* and *Sublime Continuum* he does not present a mind-basis-of-all and explains the position that does not refute external [objects]. The great master Asanga also does not explain the intention of *Sublime Continuum* as being the Cognition Only system but explains it to be the Madhyamika system, whereas in his *Compendium on the Mahayana* he cites the Abhidharma scriptures as proof of a mind-basis-of-all. The commentary on *Sublime Continuum* says:

> Even though in sentient beings there in fact exists that which becomes the essence constituting a tathagata's constituents, sentient beings do not know this.

There are sutras that present a mind-basis-of-all and those that do not. For example, in the definitive meaning sutras, the *Hundred Thousand, Twenty-Five Thousand,* and *Eight Thousand Stanza Perfection of Wisdom Sutras*, Buddha only mentioned six consciousness. Then, there are other sutras in which a mind-basis-of-all is taught, such as the *Sutra Unraveling the Thought* and the *Mahayana Sutra of Knowledge*; however, these are interpretable meaning sutras.

Maitreya composed five commentaries on the definitive meaning sutras of the Buddha. Of these five, he explained three – the *Ornament for the Mahayana Sutras*, *Discrimination of the Middle Way and the Extremes*, and *Discrimination of Phenomena and the Nature of Phenomena* – in terms of the Chittamatra point of view and, therefore, said that a mind-basis-of-all exists and external objects do not exist. On the other hand, in his *Ornament for Clear Realizations* and *Sublime Continuum*, Maitreya did not present a mind-basis-of-all and explains the position that does not refute external [objects].

Asanga explains the *Sublime Continuum* in accordance with the Prasangika Madhyamika system. On the other hand, in his *Compendium on the Mahayana*, Asanga establishes a mind-basis-of-all by quoting the Abhidharma scriptures.

The citation from the commentary on *Sublime Continuum* that, although sentient beings have the tathagata essence, they do not realize it, is asserted to be the scriptural source establishing the existence of a mind-basis-of-all. The true aspectarian Chittamatrins posit the tathagata essence as the seed of an uncontaminated mind existing on the mind-basis-of-all. According to the Chittamatra

system, the naturally abiding lineage has three attributes, due to which it must be a compounded phenomenon and not an emptiness. The three attributes of the naturally abiding lineage are:

1. it continues from beginningless lives,
2. it is attained by nature,
3. it is a seed of an uncontaminated mind existing on the sixth consciousness, the mental consciousness.

This is a presentation of the false aspectarian Chittamatrins who accept only six consciousness as opposed to the true aspectarian Chittamatrins who accept eight. The naturally abiding lineage must be the seed of an uncontaminated mind. The false aspectarian Chittamatrins posit it to exist on the sixth consciousness, whereas the true aspectarian Chittamatrins posit it to exist on the mind-basis-of-all. In this way there are differences between the two sub-schools of Chittamatra.

In addition, there are some who say that all sentient beings already possess the sugata essence, a body that is adorned with the major and minor marks. Although each sentient being possesses it, they do not realize it. All of these statements are interpretable meaning teachings. The definitive meaning is that each and every sentient being has a lineage that will transform into a body adorned with all the major and minor marks. Although in every sentient being there exists such a lineage having this potential, sentient beings do not realize its existence.

Lama Tsongkhapa's *Illumination* (Tibetan text page 232) says:

> As the [Abhidharma scripture] itself says:
>
> > The constituents of beginningless time
> > Are the abode of all phenomena.
> > Due to their existing, all migrations,
> > As well as nirvana, are attained.
>
> By citing the proofs for the existence of a lineage of reality in sentient beings, this master, because of agreeing with the explanation that the basic intention of a mind-basis-of-all is emptiness, asserts that a mind-basis-of-all which is a different entity from the collection of six [consciousnesses] is taught by virtue of a [particular] purpose in the perspective of some trainees.

The intention behind Buddha's teaching a mind-basis-of-all is the emptiness of true existence.

Tuesday afternoon, 3 October 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 232) says:

> QUESTION: Well then, how is the [following] statement in [Nagarjuna's] *Essay on the Mind of Enlightenment* regarding existence (rebirth) being taken by a mind-basis-of-all to be interpreted?
>
> > Due to proximity to a magnet
> > Iron quickly spins.
> > Mind does not exist in that,
> > Yet it appears as though possessing mind.
> >
> > Similarly, a mind-basis-of-all,
> > The non-true seeming to be true,
> > When moving, going and coming,
> > Takes existence.

> Just as a log in the ocean,
> Moves although mind does not exist;
> Likewise, a mind-basis-of-all
> Moves in dependence on a body.
>
> RESPONSE: The Chittamatra [system] – which having refuted external objects that are objects other than mind does not refute an inherently existent mere mind – is taught in order for every childish being to abandon fear regarding the teachings on emptiness; in reality [a mind-basis-of-all] does not exist.

The *Essay on the Mind of Enlightenment* says that when iron is placed close to a magnet it moves, whereby it appears that a mind exists in the iron, although it does not. Likewise, although a mind-basis-of-all does not exist truly, it seems to exist truly and to move from a former to a later life, thereby taking existence. Similarly, just as a log appears to have a mind when it is moved by the force of the ocean, likewise, a mind-basis-of-all appears to move when a new body is taken.

Thus, the question here is "How is the statement that a mind-basis-of-all takes existence to be interpreted?" The Chittamatrins interpret it to mean that all phenomena are the nature of mind and that external objects do not exist. However, the Buddha initially taught the existence of a mind-basis-of-all to those trainees who would have been frightened by the teachings on emptiness. Thus, the teaching that there exists a mind-basis-of-all and that external objects do not exist is to enable specific trainees to cultivate the realization of the coarse selflessness of phenomena. However, it is not a definitive meaning teaching but was taught with a particular intention.

Lama Tsongkhapa's *Illumination* (Tibetan text page 232-3) says:

> When refuting the Yogacharins assertion that the inherently existent purity of the mind that becomes a basis is established to be an object of [the exalted wisdom] of individual cognition, the response to the implied debate thinking "If the mind is not truly existent it would not be appropriate for it to migrate – coming from a former world to this one and going from this [world] to a future one" is indicated stating: "Although mind does not exist in iron and a log, they move as though it exists. Likewise, although the mind-basis-of-all is not truly existent, it appears together with the movements of going and coming as though truly existent." Therefore, a mind-basis-of-all like that explained in other texts is not asserted to be established by way of its own character.

Here the Yogacharins are clearly the Chittamatrins and not the Yogachara Svatantrika Madhyamika, because the latter do not assert the mind to be truly existent. On the contrary, the Chittamatrins accept that mind is truly existent saying that if it were not truly existent it would not exist at all, due to which there would be the extreme of annihilation. The Chittamatrins say that the very fact that the mind is truly existent enables it to migrate from a former to a later life.

The false aspectarian Chittamatra school does not assert a mind-basis-of-all, therefore, it is not asserted by them to be established by way of its own character. In addition, if according to the Svatantrika Madhyamika system it is said that a mind-basis-of-all is not established by way of its own character there is no fault.

Lama Tsongkhapa's *Illumination* (Tibetan text page 233) says:

> OBJECTION: Although not asserting a basis-of-all that is established by way of its own character, there are those who assert all the seeds of all the thoroughly afflicted and completely pure phenomena, like illusions that are different entities from the collection of six [consciousnesses].

Although not asserting a mind-basis-of-all, there are those who assert a supporting consciousness which is a basis-of-all [and a supported seed which is a basis-of-all]. There are two types of basis-of-all:
1. a supporting basis-of-all which is a mind, and
2. a supported basis-of-all which is a seed.

Therefore, the supported is the basis-of-all that is a seed and the support is the basis-of-all which is a consciousness. "All the seeds of all the thoroughly afflicted and completely pure phenomena" indicates the supported basis-of-all which is a seed. When the supported basis-of-all, a seed, encounters particular conditions it gives rise to a result, [all the thoroughly afflicted and completely pure phenomena].

Lama Tsongkhapa's *Illumination* (Tibetan text page 233) says:

> RESPONSE: When such a basis-of-all is asserted, there amounts to nothing more than appearances as forms, sounds, and so forth from the ripening of the latencies on the mind-basis-of-all. If it must be asserted that external objects do not exist, [Nagarjuna's *Essay on the Mind of Enlightenment*] says, [as follows,] that since the two, external objects of knowledge and internal consciousnesses, are similar in terms of existing and not existing, if one does not exist the other does not exist.
>
> > Consciousnesses realize objects of knowledge;
> > Without objects of knowledge there are no consciousnesses.
> > Since that is the case, do not assert
> > "Objects of cognition and cognizers do not exist."
>
> Since this [citation] is not different from the scripture that says that since the two, objects and consciousnesses, are the same in not existing ultimately and the same in existing in conventional terms, it is not justified to distinguish existence and non-existence in regard to those two in terms of either of the two truths. Therefore, it is not the assertion of this master, [Chandrakirti,] that there exist consciousnesses without external [objects].

In short, if it is asserted that there exists a basis-of-all while external objects do not exist it contradicts what is said in Nagarjuna's *Essay on the Mind of Enlightenment*. Because a consciousness, or a cognizer, cognizes an object of knowledge, without an object of knowledge a consciousness, or cognizer, does not exist. In short, there does not exist an object-possessor without an object.

Internal consciousnesses and external objects of knowledge are the same in existing and not existing; that is, they are the same in not existing ultimately and they are the same in existing in conventional terms. Because they are the same the master Chandrakirti does not assert a consciousness that is without external objects. Therefore, external objects do exist for the Prasangika Madhyamika system.

Lama Tsongkhapa's *Illumination* (Tibetan text page 233-4) says:

> For this reason, since he does not assert a basis-of-all which is a different entity from the mental consciousness, "a basis-of-all" is, in general, a mere mind that is clear and knowing which is posited as a basis-of-all, and is specifically the mental consciousness:
> - because, in terms of the response that negates an inherently existent mere general mind, a non-truly existent mind is the way in which agents and actions are suitable,
> - because the mind that takes rebirth in existence is the mental consciousness, and
> - because the mental consciousness is the basis of all the thoroughly afflicted and completely pure.

With what intention did the Buddha teach a basis-of-all? He taught it thinking of the mere mind that is clear and knowing, specifically, the mental consciousness. In the phrase "Because, in terms of the response that negates an inherently existent mere general mind, a non-truly existent mind is the way in which agents and actions are suitable," the words 'mere general mind' refer to the sixth consciousness, the mental consciousness. "Because the mind that takes rebirth in existence is the mental consciousness" indicates that it is the mental consciousness that takes birth in cyclic existence and not a sense consciousness. "Because the mental consciousness is the basis of all the thoroughly afflicted and completely pure" indicates that the sixth consciousness, the mental consciousness, is a basis for all thoroughly afflicted and completely pure phenomena. Thus, Buddha used the term "basis-of-all" to refer to that specific mind, the mental consciousness.

Lama Tsongkhapa's *Illumination* (Tibetan text page 234) says:

> Also in [Bhavaviveka's] *Heart of the Middle Way* the literal meaning of a 'basis-of-all' is refuted. In addition, Acharya Jnanagarbha asserts external [objects], therefore, he does not assert a basis-of-all. Even with respect to the Chittamatrins who negate external objects there appears to be two [kinds]: those who assert and those who do not assert a mind-basis-of-all. Also according to Acharya Kamalashila, who does not assert external objects, the awareness which is mentality alone is able to connect with other rebirths.

In his *Heart of the Middle Way* Bhavaviveka negates a mind-basis-of-all saying that there does not exist a consciousness apart from the collection of six consciousnesses. Jnanagarbha accepts the existence of external objects and, therefore, does not assert a mind-basis-of-all, as does Bhavaviveka.

Within the Chittamatra system there are those who assert a mind-basis-of-all, the true aspectarian Chittamatrins, and those who do not assert a mind-basis-of-all, the false aspectarian Chittamatrins. In addition, the true aspectarian Chittamatrins assert that there are three final vehicles, whereas the false aspectarian Chittamatrins assert only one final vehicle. True aspectarian Chittamatrins also say that when someone who has attained a nirvana with remainder passes away all his aggregates cease, whereas the false aspectarian Chittamatrins do not agree with this. This was discussed before in the context of the *Ornament for Clear Realizations*.

Kamalashila does not assert either external objects or a mind-basis-of-all but says that "the awareness which is mentality alone is able to connect with other rebirths." Therefore, according to him the sixth, the mental consciousness, connects to other rebirths. For this reason, he posits the mental consciousness as the illustration of the person.

Lama Tsongkhapa's *Illumination* (Tibetan text page 234) says:

> [Vasubandhu's *Treasury of Knowledge*] also says:
>
> > That which cuts and rejoins, is free from attachment,
> > Deteriorates, dies, and is reborn
> > Is asserted to be the mental consciousness alone.

The word "cuts" is in reference to the cutting of the roots of virtue, whereas "rejoins" is in reference to the rejoining with roots of virtue. That which cuts and rejoins to roots of virtue is the mental consciousness. According to the *Treasury of Knowledge* roots of virtue are cut by generating wrong views such as thinking that there is no law of actions and results. However, later when this person comes to think that there is a law of actions and results he once again rejoins with the roots of virtue. "Is free from attachment" refers to a foe destroyer whose mental consciousness is free from attachment. Likewise, the word "deteriorates" refers to the deterioration from their realization which

is also due to the mental consciousness. Likewise, death and rebirth are due to the mental consciousness.

Student: How can a foe destroyer's realizations deteriorate?
Geshe Jampa Gyatso: This is according to the *Treasury of Knowledge* which says that a foe destroyer's realization can deteriorate through his generating attachment. This comes from the Vaibhashikas' assertion that it is not necessary to have all three conditions in order to generate attachment. There three are:
1. not having abandoned the subtle increasers,
2. proximity to an object of attachment, and
3. improper mental attention.

On the other hand, the Sautrantikas say all three conditions are necessary. Because for the Vaibhashikas all three are not needed, they say that due to proximity to an attractive object attachment is generated in a foe destroyer whereby his realizations deteriorate. However, they also say that a foe destroyer will not die until his realization is restored. If a foe destroyer can generate attachment due to proximity to an object what need is there to mention ourselves?!

Lama Tsongkhapa's *Illumination* (Tibetan text page 234) says:

> Also the great master Shantarakshita, by quoting from the *Treasury of Knowledge*, clearly does not assert a mind-basis-of-all. Abhyakara is also similar.

Shantarakshita is considered to be the founder of the Yogachara Svatantrika Madhyamika school, while Bhavaviveka is considered to be the founder of the Sautrantika Svatantrika Madhyamika school. Shantarakshita greatly benefited the people of Tibet after having been invited there to teach. It is recounted that, while performing his many Dharma activities, he experienced many interferences from spirits and others and so invited Padmasambhava to Tibet to subdue them. The great abbot Shantarakshita, the great acharya Padmasambhava, and the Dharma King Trisong Detsen were contemporaries who together came to be commonly referred to, in brief, as "abbot-master-Dharma." In fact, images of the three of them are found in the homes of many Tibetans along with those of Lama Tsongkhapa and his spiritual sons.

Abhyakara was a master well known in the field of tantra who composed *Garland of Vajras* and other texts, such as one of the commentaries by Indian masters on the *Ornament for Clear Realizations*.

Lama Tsongkhapa's *Illumination* (Tibetan text page 234) says:

> Although "a mind-basis-of-all" is mentioned in other mahayana scriptures, except for the mere name it does not clearly appear to be identified. However, in analyzing the meaning it only appears to not be asserted to be a different entity from the collection of six [consciousnesses]. Also, since this system seems to [take] the position of asserting external [objects], it imputes such a name on the mental consciousness. Although it is in fact necessary to settle these [statements] extensively, I have not written about it through fearing too many [words].

Although there is a reference to a mind-basis-of-all in many mahayana scriptures, when it is analyzed it is found to not be a different entity from the collection of six consciousnesses and to mainly refer to the sixth consciousness, the mental consciousness. Lama Tsongkhapa says that, although there is need to explain this more extensively, he has not done so due to fearing too many words.

Wednesday morning, 4 October 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 234) says:

3B1C-2B3E-2A1B-2B1E-2C2C Presenting an example taught from the point of view of the intention [in teaching the existence of a mind-basis-of-all]

Here an example is presented from the point of view of Buddha's intention in teaching a mind-basis-of-all.

Chandrakirti's autocommentary says:

> In order to convert [disciples], not only was a consciousness-basis-of-all indicated, moreover:
>
> *Although free of the view of the transitory collection,*
> *Just as Buddha indicated I and mine,*
> *Similarly, although indeed all things do not inherently exist,*
> *"Existence" was indicated as only an interpretive meaning.* [6.44]
>
> Although grasping to I and grasping to mine were already abandoned by abandoning all views regarding the transitory collection, 'I' and 'mine' were mentioned. Because of being a means of understanding by the worldly, the Bhagavan indicated such saying 'I' and 'mine.' Similarly, although things do not inherently exist, they were finely indicated to be merely existent. Because of being a means of understanding by the worldly, [he] indicated them to be merely existent.

The Buddha gave various teachings in order to lead sentient beings into the hinayana and mahayana teachings, for example, he taught a self of persons in order to lead some trainees into the hinayana and a mind-basis-of-all in order to lead others into the mahayana. Although Buddha himself was free of the view of the transitory collection he still taught saying "I" and "mine." Similarly, although things lack inherent existence, the Buddha said that they have inherent existence; however, this is an interpretable meaning teaching.

In short, the point here is that although Buddha is free from the view of the transitory collection he still said "I" and "mine" in order to lead others to understand the conventions of the world. Also when the Buddha taught that things exist inherently, he did so in order to lead particular trainees at the beginning, but later on he taught them that things do not exist inherently.

Chandrakirti then quotes a text of the Purvashaila sect (the Eastern Mountain sect), [a subdivision of the Vaibhashika school], which says that phenomena do not have inherent existence and presents a selflessness of persons:

> As extensively taught in verses in accordance with the Purvashaila sect:
>
> If the guides of the world do not accord with the world,
> would anyone know Buddha and what is Buddha's very Dharma? No.
>
> To indicate the three realms with regard to asserting the aggregates,
> elements and entrances of one nature; this accords with the world.
>
> To openly express to sentient beings through the names of the inconceivable,
> those of phenomena that lack names; this accords with the world.
>
> To finely indicate non-things and, by remaining in the buddha nature,
> that non-things do not exist here at all; this accords with the world.
>
> To teach the best of utterances, cessation and the ultimate,
> about not perceiving objects and non-objects; this accords with the world.
>
> To indicate an eon of burning, although equal in the sphere of dharma,

with regard to non-destruction and non-production; this accords with the world.

To indicate even a character of sentient beings with regard to not observing,
a self-nature of sentient beings in the three times; this accords with the world.

When the guides of the world lead worldly beings, they do so by teaching in accordance with how worldly beings think. This is why in the *Supplement* it says that one should not forsake the conventions renowned in the world. In fact, this is characteristic of the Prasangika Madhyamikas who are known as "those who propound in accordance with the views of the world."

This text, in the translation of Lama Tsongkhapa's *Illumination*, says:

With regard to asserting the aggregates,
Constituents, and spheres to be the same nature
He taught the three realms;
This is guiding in keeping with the world.

The guides of the world teach that the five aggregates, eighteen constituents, and twelve spheres do not exist inherently, thus presenting the selflessness of phenomena. The next verse then says:

Those phenomena without names,
Since inconceivable, he expressed
By means of names to sentient beings;
This is guiding in keeping with the world.

Phenomena without inherently existent names are expressed to sentient beings by means of names. The lack of inherent existence is inexpressible and inconceivable. The subsequent verse says:

He taught non-things in detail and,
By remaining in the buddha nature,
[Taught] that non-things do not exist here at all;
This is guiding in keeping with the world.

'Non-things' in this context refers to inherent existence, which is what does not exist. It does not mean that non-existent things, such as the son of a barren woman, the horns of a donkey, and so forth, do not exist. In general, worldly beings do not discuss inherent existence but in regard to something simply say "It exists" or "It does not exist."

The next verse says:

Regarding the non-seeing of objects and non-objects
The best of proclamations is
Cessation and the supreme object;
This is guiding in keeping with the world.

'Cessation' refers to true cessation. Supreme object (*dam pa'i don*) refers to the supreme which is the exalted wisdom of meditative equipoise and its object emptiness.

The text continues:

> Although non-disintegration and non-production
> Are the same in the sphere of phenomena,
> He taught the eon of burning;
> This is guiding in keeping with the world.

'Non-disintegration' and 'non-production' refer to non-inherently existent disintegration and non-inherently existent production. In the sphere of phenomena, all phenomena are the same in lacking inherent existence, yet the eon of burning, for example, does exist. The eon of burning refers to the eon in which a world system is destroyed by fire.

The next verse is:

> The inherent existence of sentient beings
> Is not observed in the three times,
> Yet he also taught the dispositions of sentient beings;
> This is guiding in keeping with the world.

This verse presents the selflessness of person, whereas the previous verses present the selflessness of phenomena. Here it says that sentient beings are not observed to exist inherently.

In short, this text of the Purvashaila sect clearly shows that there is also a presentation of the selflessness of phenomena in the hinayana scriptures.

Lama Tsongkhapa's *Illumination* (Tibetan text page 234) says:

> Chandrakirti says:
>
> *Although free from the view of the transitory collection,*
> *The Buddha taught I and mine.*
> *Likewise, although things are indeed without inherent existence,*
> *He taught "existence" as an interpretable meaning [teaching].* [6.44]
>
> Not only is a mind-basis-of-all initially taught for the sake of involving trainees, in addition, *just as*, for example, even though he has abandoned all conceptions of I and mine due to being *free from the view of the transitory collection* together with its latencies, *the Buddha* Bhagavan *taught* saying "*I and mine*" because stating "I and mine" is the method by which the world comprehends the meaning of phenomena. *Likewise*, although *things are indeed without inherent existence*, *teaching* "inherent *existence*" *as an interpretable meaning* [*teaching*] is a method by which the world gradually comes to comprehend suchness.

Although the Buddha Bhagavan is completely free from the view of the transitory collection, he still taught saying "I" and "mine." He did so as a method to guide worldly beings in the meaning of suchness.

Lama Tsongkhapa's *Illumination* (Tibetan text page 235) says:

> In short, as in the cases of [Buddha] teaching "I" and "mine," even if it seems as though he had thoughts of this and that, definitively he had no such thoughts. Likewise, [in the case of] the teaching that phenomena are inherently existent, although this appears to be the intention of the Buddha, the definitive meaning [teaching] is that phenomena do not exist in this way.

When the Buddha taught "I" and "mine," the interpretable meaning teaching is that the Buddha conceives "I" and "mine," whereas the definitive meaning teaching is that he did not conceive "I" and

"mine." Similarly, the Buddha taught that phenomena are inherently existent with a particular intention, whereas his teaching that they do not exist inherently is a definitive meaning teaching.

The way of guiding in keeping with the world is as it is taught in the text by the Purvashaila sect. Lama Tsongkhapa's *Illumination* (Tibetan text page 235) says:

> The presentation of conventionalities is the way of guiding in keeping with the world. Also, the verses that accord with the Purvashaila sect extensively teach:
>
> If the guides of the world
> Do not guide in keeping with the world,
> One would not know what Buddha's reality is
> And also who Buddha is.
>
> With regard to asserting the aggregates,
> Constituents, and spheres to be the same nature
> He taught the three realms;
> This is guiding in keeping with the world.
>
> Those phenomena without names,
> Since inconceivable, he expressed
> By means of names to sentient beings;
> This is guiding in keeping with the world.
>
> He taught non-things in detail and,
> By remaining in the buddha nature,
> [Taught] that non-things do not exist here at all;
> This is guiding in keeping with the world.
>
> Regarding the non-seeing of objects and non-objects
> The best of proclamations is
> Cessation and the supreme object;
> This is guiding in keeping with the world.
>
> Although non-disintegration and non-production
> Are the same in the sphere of phenomena,
> He taught the eon of burning;
> This is guiding in keeping with the world.
>
> The inherent existence of sentient beings
> Is not observed in the three times,
> Yet he also taught the dispositions of sentient beings;
> This is guiding in keeping with the world.
>
> The last of these verses indicates the selflessness of persons, which is the lack of inherent existence of sentient beings, whereas the remaining [verses] indicate the selflessness of phenomena, which is the lack of inherent existence of phenomena that are things and non-things. Since the Purvashaila sect is explained in [Bhavaviveka's] *Blaze of Reasoning* to be a subdivision of the Mahasamghikas, it appears that it is very clearly taught in the hearers' sutra basket that phenomena do not inherently exist.

Bhavaviveka's *Blaze of Reasoning* sets out a detailed explanation of the eighteen subdivisions of the Vaibhashika school. Because the Purvashaila sect is one of them, Lama Tsongkhapa says: "it appears that it is very clearly taught in the hearers' sutra basket that phenomena do not inherently exist." According to the Prasangika Madhyamika system there is a presentation of the selflessness of phenomena in the uncommon sutra basket of the hearers, whereas the Svatantrika Madhyamika

system says that there is no such presentation. The Svatantrika Madhyamikas say this because they assert that those who are definite in the hearer lineage do not realize the selflessness of phenomena, whereas the Prasangika Madhyamikas say that they do realize it. The Svatantrika Madhyamikas say that if the uncommon hinayana sutra basket presents the selflessness of phenomena, then a mahayana sutra basket would be meaningless. The Prasangika Madhyamikas refute this saying that even though the uncommon hinayana sutra basket presents the selflessness of phenomena this does not render the presentation in the mahayana sutra basket meaningless because the presentation of the selflessness of phenomena in the uncommon hinayana sutra basket is very brief, whereas that in the mahayana sutra basket is very extensive in that it is set out together with many reasonings. This was discussed before in the context of the *Ornament for Clear Realizations*.

Lama Tsongkhapa's *Illumination* (Tibetan text page 236) says:

3B1C-2B3E-2A1B-2B2 Refuting the Chittamatra system in particular

A Refuting an inherently existent consciousness that is without external [objects]
B Refuting a valid cognizer that proves other-powered phenomena inherently exist
C Indicating that the term 'only' of that called Mind-Only (Chittamatra) does not refute external objects

3B1C-2B3E-2A1B-2B2A Refuting an inherently existent consciousness that is without external [objects]

1 Stating the other system
2 Refuting that system

3B1C-2B3E-2A1B-2B2A-1 Stating the other system

In this context, "the other system" refers to the Chittamatra system. A proponent of Mind-Only (a Chittamatrin) is a person who asserts that all phenomena are established to be the entity of mere mind (or mind only). More precisely, according to the presentation in *Tenets*, the definition of a proponent of Mind-Only (a Chittamatrin) is: a person who is a proponent of mahayana tenets who does not assert external objects but asserts self-cognizers.

Chandrakirti's autocommentary says:

> Therefore, the proponents of [inherently existent] consciousness cannot tolerate the Madhyamika system that was shown and in order to clarify the system explained by those positing a meaning by way of expressing a system concocted by their own imagination, it is mentioned:
>
> *Since apprehendeds do not exist, apprehenders are not perceived and*
> *Due to fully realizing the three existences as mere consciousness*
> *The bodhisattva abiding in wisdom*
> *Will realize thusness as mere consciousness.* [6.45]

The Chittamatrins do not tolerate the Madhyamikas' presentation of [a non-inherently existent] consciousness and, therefore, express a system concocted by their imagination. In this way, they refute the Madhyamikas' presentation of external objects saying:

> *Since apprehendeds do not exist, apprehenders are not perceived and*
> *Due to fully realizing the three existences as mere consciousness*
> *The bodhisattva abiding in wisdom*
> *Will realize thusness as mere consciousness.* [6.45]

'The three existences' are either (i) the existence below the ground, (ii) the existence on the ground, and (iii) the existence above the ground, or (a) the desire realm, (b) form realm, and (c) formless realm. These are the three types of environments in cyclic existence. The Chittamatrins say that within the three existences there are no inherently existent and externally existent apprehendeds. Due to this, there are no valid cognizers realizing such apprehendeds. In this way the Chittamatrins say that all three existences are the entity of mere mind, given that they all arise from latencies deposited on the mind. Because of this, a bodhisattva abiding in wisdom realizes that the three existences are the entity of mere mind. "Abiding in wisdom" can be understood to refer to a bodhisattva abiding on the sixth ground, Approaching, the ground on which the surpassing perfection of wisdom is completed. Such a bodhisattva realizes that all three existences are the entity of mere mind. However, "abiding in wisdom" can also be understood to refer to a bodhisattva abiding on the path of seeing who directly realizes emptiness.

Chandrakirti's autocommentary says:

> The term, 'abiding,' applies to residing. One who abides in wisdom, abides in wisdom since he has it. Hence, abiding in wisdom should be taken as meditating on wisdom. "The bodhisattva" means one who fully abides on [the sixth ground] Approaching.

Therefore, in this context a bodhisattva abiding in wisdom is a bodhisattva abiding on the sixth ground.

Chandrakirti's autocommentary says:

> He who realizes, perceives, and understands suchness unmistakenly and does not strongly superimpose [apprehended objects and apprehenders as different substances], realizes thusness. Hence the phrase "will realize suchness as mere consciousness" is joined. Since [external] form does not exist, in order to realize also minds and mental factors as merely dependently arisen properties, "realize thusness as mere consciousness" is stated.
>
> Further, if asked: How will he realize thusness as mere consciousness?
>
> Therefore, it was stated like this [in v. 6.45ab]: *since apprehendeds do not exist*, *apprehenders are not perceived and due to fully realizing the three existences as mere consciousness...*
>
> Because this bodhisattva, due to the reasoning that will be explained, does not see even an apprehender itself, as the mind just does not have apprehended [objects], and meditates for a long time that "these three realms are mere consciousness." Also, from having meditated upon that, he perceives with self-knowing [consciousness] a mere inexpressible property. Therefore, by these stages, he will realize suchness as mere consciousness.

The first paragraph of the above explains the line in the root text: "Will realize thusness as mere consciousness." Here "He who realizes" refers to those on the path of preparation, "perceives" refers to those on the path of seeing, and "understands" refers to those on the path of meditation. That, thusness will be realized as mere consciousness is a particular view of the Chittamatrins who assert that all phenomena are in the nature of the mind and that external objects do not exist.

Since there are many people who admire and adhere to the Chittamatra view, it is very important to understand it.

Wednesday afternoon, 4 October 2000

Chandrakirti's autocommentary says:

> If asked: If these are mere consciousness, then, without an external object, how would the mere consciousness possessing the aspect of that be produced?
>
> It was mentioned:
>
> *Just as, due to arousal by the wind,*
> *Waves emerge from the great ocean, similarly*
> *From the "basis of all," the seed of all,*
> *Due to its own potential, a mere consciousness emerges.* [6.46]
>
> Just as from the sections of the ocean water that are the support of waves being moved everywhere by the wind, due to the condition of mere wind approaching near, sleep-like waves are realized to run everywhere, like acquiring one's body by way of competition.
>
> Similarly, here too, the transmission from one consciousness to another has been engaged in since beginningless time.

How is mere consciousness produced without the existence of external objects? The Chittamatrins reply:

> *"Just as stirred by the wind*
> *Waves of water arise from an ocean,*
> *Similarly, from that called 'the basis of all the seeds of all,'*
> *Its potentials, arises mere consciousness."* [6.46]

Just as waves arise from an ocean due to the wind blowing, likewise, from the activation of a potential deposited on the mind-basis-of-all there arises mere consciousness. Just as in the case of previously dormant waves which activated by the condition of the wind arise, in the same way previously dormant latencies when activated give rise to the result of a mere consciousness. That we travel from life to life together with the consciousness is due to the activation of latencies. This particular latency is the latency of the conception that form and the valid cognizer apprehending it are different substances.

Chandrakirti's autocommentary says:

> From the maturation of the imprints of strongly settling upon apprehended [objects] and apprehenders, due to essential properties ceasing to attain existence, the distinction of whatever imprint [implanted] on the consciousness-basis-of-all becomes the cause of generating another consciousness that is related to its own aspect.
>
> Gradually, due to meeting the condition of its maturation, it attains maturation. From that, whatever mere completely impure other-powered phenomena is thoroughly produced, to that childish beings imagine the concepts of apprehended and apprehender. Yet, an apprehended object that is a different substance from consciousness does not exist at all.

Due to the activation of the latencies deposited on the mind-basis-of-all there arise different types of results, that is, rebirth in any of the six classes of migrating beings such as among human beings, animals, hungry ghosts, and so forth. The type of rebirth that is taken is further subdivided in terms of other aspects; for example, due to the activation of a latency on the mind-basis-of-all one is reborn as a human being but with a particular color and shape. For example, there are differences even between

the human beings born in the same family in that each has a different type of body and a different way of thinking. Why is that? Only a buddha can answer this specifically, but, in general, the reason is due to their particular actions (karma). Even in the continuity of a single human being there are different stages, that of an infant, child, teenager, adult, and old person, during which the body changes and gradually loses its beauty. These changes occur because of aging, the twelfth link of the twelve links of dependent-arising.

Chandrakirti's autocommentary says:

> For example, those propounding Ishvara as a [primal] cause say:
>
> > The cow is the cause of cow sounds, as is water-crystal of water and
> > as is the *balagsha* [tree]of branches. He is the cause of all the embodied.[36]
>
> – propounding Ishvara and so forth as the very creator of migrators. Similarly, also those propounding a consciousness-basis-of-all, since the consciousness-basis-of-all is the very support of the seeds of referents, of all properties, call it the seed of everything.
>
> > "Whatever is Ishvara is permanent; the consciousness-basis-of-all is impermanent."
>
> – This is the difference.

The Vaishashika, a non-Buddhist school, asserts that Ishvara is the cause of all migrating beings. They say that because everything arises from a movement of Ishvara's mind, Ishvara is the creator of the world. This is mentioned to illustrate the meaning here, which is that the latencies deposited on the mind-basis-of-all are the creator of everything. Thus, in the Chittamatra system the latencies deposited on the mind-basis-of-all are the creator of the world. However, there is an important difference between the illustration and its meaning in that the example, Ishvara, is posited as permanent by the Vaisheshikas, whereas the mind-basis-of-all and the latencies deposited on it are asserted to be impermanent by the Chittamatrins.

In short, the Chittamatrins say that external objects do not exist but that a mind-basis-of-all exists. This is the main point of this passage.

It can be said that either the mind-basis-of-all or the latencies on it are the creator of all, including consciousness itself. This is similar to what was said before in terms of there being a basis-of-all that is a support, the consciousness, and a basis-of-all that is the supported, the seeds.

Chandrakirti's autocommentary says:

> Since the presentation of the scriptures is renowned to be this:
>
> > *Therefore, whatever is the entity of other-powered phenomena*
> > *Becomes the cause of imputedly-existent things and*
> > *They emerge without external apprehended [objects], exist [inherently]*
> > *And have a nature that is not the object of any elaboration.* [6.47]
>
> This entity of other-powered phenomena should undoubtedly be accepted because it is accepted as the basis of each and every net of conception.

Other-powered phenomena in general are compounded phenomena, that is, phenomena that are produced from their respective causes and conditions, however, in this particular passage the words

[36] Compare with Poisson, p. 326.

"other-powered phenomena" refer specifically to the mind-basis-of-all. The Chittamatrins say that a mind-basis-of-all is to be accepted without doubt because it is the basis of each and every net of conception, that is, of both good and bad conceptions. In addition, the 'net of conception' can also refer to the conception of a self of persons and the conception of a self of phenomena, both of which are based on the mind-basis-of-all. In other words, in dependence on a mind-basis-of-all there arise the net of conceptions that are the conceptions of a self of persons and the conceptions of a self of phenomena. Due to this net of conceptions we create various kinds of actions and then experience their respective results, good and bad.

The two types of conceptions of a self are called 'a net' because, just like a net catches and holds fish as long as it is not removed, likewise, as long as one has these conceptions one will not be free from cyclic existence. In short, the mind-basis-of-all acts as a basis for the two conceptions, that of a self of persons and that of a self of phenomena.

Chandrakirti's autocommentary says:

> To mistake [a rope] as a snake having the reason of a rope; that is unreasonable without relying on the [rope]. To mistake as a vase having the reason of earth and so forth, [that] will not arise in the quarters of space without relying on earth and so forth. Similarly, here too, if an external object does not exist, what reason would the conception of blue and so forth have? Therefore, without doubt, the cause of conceptions – the entity of other powered phenomena – should be accepted because of being the cause of the fully deluded and the completely pure.

When a striped coiled rope is mistaken as a snake, the cause is the rope itself. However, it is not just any striped coiled rope that is mistaken to be a snake, rather it is a striped coiled rope of a particular time, for example, a striped coiled rope in dim light. Another mistake is to take that which is not a vase, for example, a lump of earth, to be a vase. Also in this case, without depending on a basis, the earth, there would be no such mistaken conception. There cannot be such a mistaken conception of a vase without a basis, the earth, in that it does not arise by gazing into the sky.

If there are no external objects, what reason would there be for a conception apprehending blue and so forth? Chandrakirti says: "Therefore, without doubt, the cause of conceptions – the entity of other powered phenomena – should be accepted because of being the cause of the fully deluded and the completely pure." Thus, the Chittamatrins say that a mind-basis-of-all, which is the creator of all, is definitely to be accepted.

Chandrakirti's autocommentary says:

> In that case, because that which does not exist on something is perfectly subsequently perceived as emptied of that; "That which is left here as a remainder, truly exists here," fully knowing perfection just as it is – this will properly uphold even emptiness through statements such as "unmistakenly engaging emptiness" and so forth.

When an object, such as a form, which is empty of being an external object, is realized to be empty of being an external object the reality of that form is realized. In other words, when the emptiness of apprehendeds and apprehenders being different substances is realized emptiness is realized. According to the Chittamatrins the emptiness of apprehendeds and apprehenders being different substances is truly existent; this is 'the perfect' or 'the just as it is.' When this emptiness is realized, reality is realized.

Chandrakirti's autocommentary says:

> That also bears a nature that is not the object of any elaboration. Hence, because full expression grasps an imputed aspect, as long as full expression exists, for that long the thing is not expressed.

Emptiness, or the lack of duality, is not an object of elaboration. Here "full expression" (actual expression) refers to one of the three types of latencies:
1. a latency of actual expression,
2. a latency of similar type, and
3. a latency of a view of a self.

These latencies are discussed by Khedrup Je in his *Dose of Emptiness*.

An eye consciousness seeing blue as blue is due to the activation of a latency of similar type. Due to the activation of a latency of actual expression, one discriminates big and small, beautiful and ugly, and so forth. In addition, the Chittamatrins say that the appearance of forms, sounds, and so forth as though existing externally is due to the activation of the latencies of the view of a self. In conclusion, according to the Chittamatrins everything arises due to the activation of one of the three types of latencies.

Chandrakirti's autocommentary says:

> Therefore, if briefly summarized, here, with regard to the entity of other-powered [phenomena], three [distinctions] are presented:
>
> 1.emerging from only their own imprints, without an [external] object of knowledge,
>
> 2.just existing [inherently], and
>
> 3.not being the object of any elaboration.
>
> Because the very cause of imputedly existent things is established through [inherent] existence itself, that is not different from the three.

The first characteristic of an other-powered phenomenon is to emerge from latencies without the existence of external objects of knowledge. The second characteristic is to exist, either conventionally or truly. According to the Chittamatrins other-powered phenomena such as the mind-basis-of-all are conventional truths and truly existent. The third characteristic is to not be the object of any elaboration.

Lama Tsongkhapa's *Illumination* (Tibetan text page 236) says:

> Due to [the proponents of] consciousness not being able to tolerate that taught in the Madhyamika system and due to it not being the intention of the Conqueror to posit the meaning in terms of expressing a system that is concocted by their own imagination, in order to clarify the system that is explained in our scriptures it is initially mentioned [as follows].
> CHITTAMATRINS:
>
> *"By not seeing apprehenders without apprehendeds and*
> *Thoroughly realizing the three existences as mere consciousness,*
> *Bodhisattvas abide in wisdom and*
> *Thereby realize suchness as mere consciousness."* [6.45]
>
> Sixth ground *bodhisattvas abiding*, that is, dwelling, *in* the surpassing perfection of *wisdom* and familiarizing themselves with it, by means of reasoning realize, see, and comprehend suchness unmistakenly and without strongly superimposing apprehendeds and apprehenders as different substances, thereby realizing it. Hence, the phrase "*realize suchness as mere consciousness*" (v.

> 6.45d) is joined [here]. Furthermore, since external forms do not exist, in order to also realize that minds and mental factors are mere things that arise without depending on external forms, it is said that [bodhisattvas] "*realize suchness as mere consciousness*."

The Chittamatrins do not accept what is asserted by the Prasangika Madhyamikas and say that their assertions are not the words of the Buddha.

The Chittamatrins say that a bodhisattva abiding on the sixth ground realizes emptiness unmistakenly. How does he realize emptiness? He realizes it without superimposing apprehendeds and apprehenders as being different substances. These bodhisattvas "realize, see, and comprehend suchness unmistakenly." Earlier I said that the word "realize" refers to the path of preparation, "see" to the path of seeing, and "comprehend" to the path of meditation, but here it clearly says that this is a bodhisattva on the sixth ground. Thus, it can be said that the sixth ground bodhisattva realizes emptiness just like a bodhisattva on the path of preparation realizes emptiness, just like a bodhisattva on the path of seeing sees emptiness, and just as a bodhisattva on the path of meditation comprehends emptiness.

This sixth ground bodhisattva realizes that things are the entity of mere consciousness and are not external objects. Lama Tsongkhapa says: "Furthermore, since external forms do not exist, in order to also realize that minds and mental factors are mere things that arise without depending on external forms, it is said that [bodhisattvas] "realize suchness as mere consciousness." Thus, forms and so forth do not exist externally. When minds and mental factors are realized, also phenomena that are dependent-arisings are realized, yet this does not mean that phenomena exist externally. Thus, things are realized to be mere consciousness or they are realized to not exist externally. In short, a sixth ground bodhisattva realizes that phenomena are merely the nature of mind and do not exist externally.

Thursday morning, 5 October 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 236-7) says:

> QUESTION: How does that bodhisattva realize suchness in that way?
> CHITTAMATRINS' RESPONSE: That bodhisattva, by means of the reasonings that will be explained regarding forms and so forth arising from the ripening of internal latencies, does *not see* the mind, which is *without apprehended* [objects] that are other than itself, as *apprehending* that which is a different object from itself, *and thoroughly realizes the three existences*, that is, realms, *as* "*mere consciousness*." By this, that is, through this, [the bodhisattva] familiarizes for a long time with the suchness that is the emptiness of duality, [that is, apprehendeds and apprehenders being different substances]. Also through familiarizing with this, the thing that is inexpressible as suchness by means of a term – the mere entity of the emptiness of duality – is directly seen by a self-cognizer. Therefore, by means of the previous stages of familiarity, the sixth grounder realizes suchness as mere consciousness.

How does the bodhisattva realize suchness? He realizes it by means of the activation of latencies deposited by previous familiarization with suchness. What emptiness does that bodhisattva realize? According to the Chittamatrins he realizes the emptiness of apprehendeds and apprehenders being different substances. The bodhisattva through the process of strong familiarization with emptiness beginning with the path of accumulation, then progressing through the path of preparation and the path of seeing, is able, when he attains the sixth ground, to realize all phenomena in the three existences as mere mind. When Lama Tsongkhapa says "directly seen by a self-cognizer," the term 'self-cognizer' does not refer to the usual self-cognizer but to a superior's exalted wisdom of meditative equipoise. In short, although in general the Chittamatrins assert the existence of a self-

cognizer, in the context of the realization of emptiness a self-cognizer is specifically a superior's exalted wisdom of meditative equipoise directly realizing emptiness.

Lama Tsongkhapa's *Illumination* (Tibetan text page 237) says:

> QUESTION: If there are mere cognizers without external [objects], here how is a mere mind having the aspect of [external objects] produced without external [objects]?
> CHITTAMATRINS' RESPONSE:
>
> > *"Just as stirred by the wind*
> > *Waves of water arise from an ocean,*
> > *Similarly, from that called 'the basis of all the seeds of all,'*
> > *Its potentials, arises mere consciousness."* [6.46]
>
> *Just as*, that is, for example, *from an ocean*, the basis of waves, *stirred*, i.e., blown, *by the wind*, *waves of water* are made to race though previously abiding without moving as though asleep – like winning one's body through a competition; *similarly*, *from that called '*the mind *basis of all the seeds of all* external and internal things,' due to attachment and so forth and faith and so forth ceasing, latencies deposited on the basis-of-all, *the potentials* appropriate to *it*, ripen, whereby there *arises that which is mere consciousness*, an impure other-powered phenomenon. Regarding that itself, the childish conceive it in a manner of apprehending apprehendeds and apprehenders to be cut off and distant external and internal [objects]. However, apprehendeds that are different substances from the consciousness do not exist in the slightest.

Here someone asks the Chittamatrins: "Given that there are no external objects, how does the aspect of the appearance of external objects arise?" They answer this question by positing the ocean as an analogy saying that just as there are no waves when the ocean is calm, but when stirred by the wind waves arise, likewise, prior to the activation of latencies there are no appearances to the mind, but when the activation of latencies occurs the aspect of external objects arises. Having committed an action motivated by either afflictions such a attachment and so forth or by faith and so froth, when that action ceases a latency is deposited on the mind-basis-of-all. Then, upon the ripening of the latencies, various appearances arise. In addition, due to the force of latencies, appearances seem to be cut off and distant, that is, apprehendeds and apprehenders appear to be separate external and internal objects.

In short, without external objects how do appearances arise? The aspect of external appearances arises due to the activation of latencies. What is it that deposits these latencies? It is the various minds and mental factors such as the six root and twenty secondary afflictions. On the other hand, there are also virtuous latencies that are deposited by faith and so forth. Later these latencies, both virtuous and non-virtuous, are activated. For example, when any of latencies of the eleven virtuous mental factors of faith and so forth ripen, one experiences happiness, whereas due to the activation of the non-virtuous latencies of attachment and so forth, one experiences suffering. How does attachment arise? When an animate or inanimate thing is seen as having an attractive aspect, due to improper mental attention the wish to not be separated from it arises. This wish to not be separated is likened to oil on paper in that when oil absorbs into paper it is difficult to separate the two, likewise it is difficult to separate the mind from attachment. Similarly, with respect to an unattractive contaminated thing, due to improper mental attention there is the wish to not abide together with the object. Due to the condition of attachment and hatred, whereby objects appear respectively as pleasant and unpleasant, we mainly accumulate non-virtuous actions. Although it is possible that due to attachment one accumulates virtuous actions, when motivated by hatred it is not possible to accumulate virtuous actions.

In short, due to the motivation of mental factors such as attachment, we engage in actions whereby latencies are deposited on the mind-basis-of-all. When they ripen in the future, we will experience the result of those actions.

Lama Tsongkhapa says: "the potentials appropriate to it, ripen, whereby there arises that which is mere consciousness, an impure other-powered phenomenon." Here 'impure other-powered phenomenon' refers to either the mind-basis-of-all or an impure other-powered phenomenon that is a later similar type to the mind-basis-of-all or the afflicted mentality, which is an eighth consciousness asserted by the Chittamatrins.

Lama Tsongkhapa says: "the childish conceive it in a manner of apprehending apprehendeds and apprehenders to be cut off and distant external and internal [objects]." 'The childish' are ordinary beings who conceive apprehendeds and apprehenders to be different substances, although they are not.

Lama Tsongkhapa's *Illumination* (Tibetan text page 237-8) says:

> For example, those propounding Ishvara and so forth as a cause propound Ishvara and so forth as the creator of migrating beings saying:
>
> > Like a cow is the cause of mooing,
> > A water-crystal [the cause] of water and
> > Like the *balagsha* tree [is the cause] of branches,
> > He is the cause of all the embodied.
>
> Similarly, the proponents of a mind-basis-of-all also propound that, since the consciousness is the basis of the infinite things that are its observed objects, it is the seed of everything. [However,] there is the difference that while Ishvara is said to be permanent, the mind-basis-of-all is said to be impermanent. Because of this, those who have familiarized themselves with the views of the Forders in many other lives are subdued by explaining a basis-of-all.

According to the Vaisheshikas the environment and the beings therein are created by arising in the mind of Ishvara. In the *Compendium of Valid Cognition* the existence of Ishvara is refuted by three reasonings.

Here, the creator of the world is compared to the way in which a cow is the cause of mooing, given that without a cow there would not be any mooing. Similarly, a water-crystal is the cause of water and a balagsha tree is the cause of its branches. In the same way, Ishvara is the cause of all the embodied.

Here Ishvara is likened to the mind-basis-of-all because the mind-basis-of-all is said to be the creator of the world since it contains the seeds from which all functioning things and non-functioning things arise. All phenomena are established by the ripening of the activation of seeds deposited on the mind-basis-of-all, therefore, the mind-basis-of-all is said to be the creator of all.

If we apply the assertion of a mind-basis-of-all to ourselves, while we are all gathered together here in the meditation hall each one of us has both common and uncommon latencies due to which we see the meditation hall. For each of us there is an uncommon appearance of the meditation hall due to the activation of an uncommon latency; such a way of appearing to one does not appear to another. This is the position of the Chittamatra system.

However, there is an important difference between Ishvara and the mind-basis-of-all: Ishvara is asserted by the Vaisheshikas to be permanent whereas the mind-basis-of-all is asserted by the Chittamatrins to be impermanent. If Ishvara is asserted to be permanent does this mean that there exists a permanent being? The Vaisheshikas do assert a permanent being. Among the non-Buddhist schools there are many that posit a permanent being in that they posit the being and the self, which are synonymous, to be permanent. Shantarakshita, in one of the beginning chapters of his *Compendium*

of Valid Cognition and Thusness, presents the tenets of the non-Buddhist schools that present a permanent self. Even now many Hindus think of this text as a non-Buddhist text. The first chapter sets out the general principal as propounded by the Samkyas, the second sets our Ishvara, and so forth. However, although this text initially explains the non-Buddhist schools in detail it later refutes them all. There is a also commentary by Kamalashila on the difficult points of this text, which explains the general principal and Ishvara in detail.

Lama Tsongkhapa says: "Because of this, those who have familiarized themselves with the views of the Forders in many other lives are subdued by explaining a basis-of-all." Non-Buddhists who are familiar with the doctrine of Ishvara as a creator of all, through being presented a mind-basis-of-all that is consistent with a creator of all, are skillfully led in the Buddhist teachings.

Lama Tsongkhapa's *Illumination* (Tibetan text page 238) says:

> QUESTION: Well then, when the assertions of the Chittamatrins are stated in the commentary:
> - it is said many times that "external [objects] do not exist,"
> - in particular, it is mentioned that "Apprehendeds that are different from consciousness do not exist in the slightest" and that "Apprehendeds that are forms and so forth do not exist ...which are different from consciousness," and
> - in the commentary on [the line] "Is conceived to be 'a physical eye sense power'" (v. 6.62d) it says "An eye sense power that is different from consciousness does not exist,"
>
> are these [statements] to be asserted in the context of Chittamatra by affixing the qualification to the object of negation as before? Or is it to be asserted that "the five, forms and so forth, and the five physical sense powers do not exist" without affixing the qualification?
> RESPONSE: Although here in the commentary there are both [cases of] affixing and not affixing the qualification, since there occur many [instances in which] the qualification is affixed to the object of negation in regard to production and cessation, also in all the cases in which it does not occur it is to be borne [in mind]. Similarly, also do the same here.

The Chittamatrins assert the non-existence of external objects, therefore, the object of negation is: form and the consciousness apprehending it being different substances. That object of negation does not exist, that is, apprehendeds and apprehenders being different substances does not exist. That which is being negated is consciousness being a different substance from form. In fact, there is no external object that is a different substance from mind. In general, it is said that external objects do not exist, but when this is qualified it means that external objects which are a different substance from the mind do not exist.

Although there are both occasions in the texts when the qualification is explicitly affixed to the object of negation and occasions when it is not affixed, even when it is not explicitly affixed one should bear in mind that it is to be affixed.

Lama Tsongkhapa's *Illumination* (Tibetan text page 238) says:

> [Asanga's] *Compendium on the Mahayana*, which states the former position, says:
>
> > QUESTION: Why is it called 'the appropriating consciousness'?
> > RESPONSE: [It is so-called] because it is the cause of all the physical sense powers and the source for appropriating all bodies, hence, for as long as it continues to operate, it takes the five physical sense powers without disintegrating.
>
> And [this text] says:
>
> > The common is whatever is a seed of the environmental world. The uncommon is whatever is a seed of one's own individual spheres. That which is common is a seed of what arises devoid of feeling.

Here 'appropriating consciousness' refers to the mind-basis-of-all. In fact, there are various names for the mind-basis-of-all, such as appropriating consciousness, fruitional consciousness, and so forth. The mind-basis-of-all is the cause of the physical sense powers. It is also the source for taking rebirth, that is, taking a body. What is the appropriator of our present body? It is the mind-basis-of-all. As long as the body remains, the physical sense powers connect with it remain. In other words, as long as the abode of the sense powers, the body, remains so too do the sense powers. On the other hand, when the abode of the sense powers ceases, so too do the sense powers cease. When the mind-basis-of-all leaves the body, the physical sense powers cease.

Asanga's text says: "The common is whatever is a seed of the environmental world." For example, buildings and so forth that are commonly seen are the result of common actions and, therefore, common latencies. For example, according to the Chittamatrins the environment of Italy would be the consequence of the ripening of common seeds created in the past.

The text then says: "The uncommon is whatever is a seed of one's own individual spheres." On the other hand, personal form spheres, such as the objects of eye consciousness that appear uncommonly to one particular person, arise due to the ripening of uncommon latencies.

Asanga says: "That which is common is a seed of what arises devoid of feeling." 'What arises devoid of feeling' refers to the environment, for example, a table, cup, and so forth. They appear commonly to us due to the activation of common latencies. According to the Chittamatrins when a hundred people look at a table, the commonly seen object is the table. However, there is also a uniquely appearing table which appears to each of the hundred people due to the ripening of individual uncommon latencies. Such an uncommon table does not appear to others. For example, when a hundred people look at Joan, they see a head which is common to all of them and also see a head that is uncommon to each of them. Therefore, does Joan have a hundred heads? This is an example of how the Prasangika Madhyamikas would debate the Chittamatrins. Another example is that in an assembly hall in which there are a hundred people, there is a common assembly hall seen by all of them and a hundred individual uncommon assembly halls seen by each individual. According to the Chittamatrins the existence of an uncommon assembly hall, due to the ripening of uncommon latencies, explains why of the hundred people some experience it as happiness and others as suffering.

Lama Tsongkhapa's *Illumination* (Tibetan text page 239) says:

> Thus, the seed of the environmental world which is on the basis-of-all is said to be the seed of things that are devoid of feelings. It is also taught similarly in [Asanga's] *Compendium of Ascertainments*.

The latencies that bring about the environment are latencies of things that are devoid of feelings.

Lama Tsongkhapa's *Illumination* (Tibetan text page 239) says:

> In the commentary on the *Sutra of Dependent Relation* there is an explanation in which (i) name – the four remaining aggregates – and (ii) the forms that are elements and the forms that are evolutes of the elements are explained to constitute 'name and form' due to the condition of the basis-of-all.

'Name' refers to the four mental aggregates, whereas 'form' refers to the four elements and the forms that are evolutes of the elements. Forms are: (1) colors and shapes, (2) pleasant and unpleasant odors, (3) pleasant and unpleasant sounds, (4) pleasant and unpleasant tastes, and (5) soft and rough tangible objects. Name and form arise due to the condition of the basis-of-all, meaning that they arise due to the activation of latencies deposited on the mind-basis-of-all

Lama Tsongkhapa's *Illumination* (Tibetan text page 239) says:

> There are also explanations that, although such, [name and form,] do not exist in the formless realm, they do exist in the two other realms and so forth.

While both name and form exist in the desire and form realms, in the formless realm there is only name.

Lama Tsongkhapa's *Illumination* (Tibetan text page 239) says:

> Thus, there appear to be infinite assertions of form in the Chittamatra system. If that were not the case, then in terms of the form aggregate in the context of Chittamatra it would seem that all designated forms, sounds, and so forth would not at all be suitable to be designated by means of a new, uncontrived, imputed convention. Seeing such conventions as unsuitable yet still saying "This tenet system is excellent" does not occur with respect to any of the Buddhists of the noble land (India).

In short, the Chittamatrins do assert the existence of forms, but do not assert forms that are a different substance from consciousness. Therefore, they say that the form aggregate is the same substance as the consciousness and arises due to the activation of latencies.

Think about the meaning of the statement: "in terms of the form aggregate in the context of Chittamatra it would seem that all designated forms, sounds, and so forth would not at all be suitable to be designated by means of a new, uncontrived, imputed convention."

Thursday afternoon, 5 October 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 239) says:

> Also the meaning of the name "proponents of objects of knowledge as inner" is that, objects of knowledge being forms, sounds, and so forth, they are so called in that they do not assert [objects of knowledge] to be external but propound them to be things which are inner consciousness.

For the Chittamatra system an object of knowledge is always posited to be established through the activation of a latency on the mind-basis-of-all and is never established to be an external object. Haribhadra's *Commentary Clarifying the Meaning* says: "Through correctly realizing objects of knowledge as inner, one will be released." The Chittamatra (Mind-Only) are so-called because they assert that all phenomena are the entity of mere mind.

Lama Tsongkhapa's *Illumination* (Tibetan text page 239) says:

> OBJECTION: When the Chittamatrins assert forms, sounds, and so forth, [but] refute them being external [objects], this becomes an argument about mere words because those very forms and so forth that appear to be external are posited as external.
> RESPONSE: [This argument] and the Madhyamikas having refuted forms and so forth to be established by way of their own character, in positing forms and so forth, since those very forms and so forth appear to be established by way of their own character, they are posited to be established by way of their own character, is like calling a non-existent argument about the existence or non-existence [of external objects for the Chittamatra and forms and so forth to be established by way of their own character for the Madhyamika] "an argument."
> Since [these arguments] appear to be the most difficult points of both tenet systems, not only is the mode of the Madhyamikas difficult but also in the Chittamatra system, when external [objects] are

> refuted, forms and so forth also become non-existent, and, when forms and so forth are posited, there is seen to be the need to also posit external [objects]. Although this is indeed difficult, I have not written about it through fearing too many [words.]

Forms, sounds, and so forth are asserted in the Chittamatra system, but they are negated to exist as external objects. The Chittamatrins say that they are not external objects but are established by the activation of latencies.

Lama Tsongkhapa says: "because those very forms and so forth appear to be established by way of their own character, they are posited to be established by way of their own character." Just as the Chittamatrins assert forms but negate externally existent forms, similarly the Prasangika Madhyamikas assert forms and so forth but negate forms that are established by way of their own character. Although they negate forms and so forth that are established by way of their own character, there do exist awarenesses to which they appear to be established by way of their own character. The Chittamatrins say that it follows that the Prasangika Madhyamikas would have to posit that the forms and so forth that appear to be established by way of their own character are forms and so forth that are, in fact, established by way of their own character. Since the Prasangika Madhyamikas say that forms and so forth appear to be established by way of their own character, they should posit them in accordance with how they appear, [just like they say that forms and so forth appear to exist externally and are therefore posited to exist externally].

The Chittamatrins debate with the Prasangika Madhyamikas saying that if forms and so forth are negated from being established by way of their own character, then forms and so forth would also have to be negated, whereby they would not exist. The Prasangika Madhyamikas say that if the Chittamatrins posit forms and so forth, they have to posit externally existent forms and so forth. In this way they turn the Chittamatrins' own logic back on them. The Chittamatra system says that even if forms and so forth are posited, there is no need to posit forms and so forth as being external objects. On the other hand, the Prasangika Madhyamikas say that if the Chittamatrins posit forms and so forth, they also have to posit external objects and if they refute external objects they also have to refute forms and so forth. The Chittamatrins do not accept this. The Chittamatrins say to Prasangika Madhyamikas that if they posit forms and so forth that appear to be established by way of their own character, then they have to posit them as being established by way of their own character. The Prasangika Madhyamikas do not accept this. The Prasangika Madhyamikas say that, although there are forms and so forth that appear to be established by way of their own character, there are no forms and so forth that are established by way of their own character. The Chittamatrins do not recognize this distinction.

Lama Tsongkhapa's *Illumination* (Tibetan text page 240) says:

> CHITTAMATRINS:
>
> *"Because of that, whatever is the entity of the other-powered*
> *Becomes the cause of imputedly existent things."* [6.47ab]
>
> Therefore, the presentation of the scriptures is renowned as being that explained before. *Because of that*, *whatever is the entity of the* inherently existent *other-powered* is to be unquestionably asserted. Given that, *imputedly existent things*, apprehendeds and apprehenders, are asserted *to become the cause*, that is, the basis, for all the net of conceptions without exception that conceive them to exist as different substances and so forth.

The Chittamatrins say that the other-powered phenomenon, [the mind-basis-of-all], has to be asserted as established by way of it own character and inherently existent because it is said so in various scriptures. This other-powered phenomenon is the basis for all the net of conceptions that conceive apprehendeds and apprehenders to be different substances and so forth. The Chittamatrins assert that

other-powered phenomena and thoroughly established phenomena are established by way of their own character.

Lama Tsongkhapa's *Illumination* (Tibetan text page 240) says:

> Mistaking a snake on account of a rope is not produced on the basis of a non-existent rope and making a mistake on account of a pot and so forth is not produced in the area of the sky which is without earth. Likewise, if external objects do not exist, in what way do the mistaken conceptions of blue and so forth as external objects have a mistaken basis as their cause? Because of that, unquestionably the cause of the mistaken conception of them as external objects is necessarily asserted to be an impure other-powered phenomenon which is the dualistic appearance of apprehendeds and apprehenders as being different substances because the very basis of appearance is the cause of both the bondage to and freedom from the thoroughly afflicted and completely pure.

In order to mistake a rope as a snake, there must exist a rope. In other words, without the presence of a striped coil of rope there could be no mistaking a snake on account of a rope. Similarly, mistaking a pot and so forth is not produced in the area of the sky which lacks earth; meaning that a pot can be mistaken on the basis of a lump of earth, but not on the basis of the sky which is free from earth. In short, there has to exist a lump of earth in order to mistake the presence of a pot. Lama Tsongkhapa says: "Likewise, if external objects do not exist, in what way do the mistaken conceptions of blue and so forth as external objects have a mistaken basis as their cause?" For example, in relation to blue there can arise the mistaken conception of it as being an external object. The main point here is that the basis of mistake, an impure other-powered phenomenon, must exist.

Lama Tsongkhapa says: "because the very basis of appearance is the cause of both the bondage to and freedom from the thoroughly afflicted and completely pure." The 'basis of appearance' is the mind-basis-of-all which acts as the cause of both bondage and freedom. This means that the latencies of familiarity with virtue that are deposited on the mind-basis-of-all act as a cause of freedom, that is, liberation, whereas the latencies of familiarity with non-virtue that are deposited on the mind-basis-of-all cause of bondage to the thoroughly afflicted, that is, to cyclic existence. Thus, in this sense the mind-basis-of-all is the basis for both bondage and freedom.

Lama Tsongkhapa's *Illumination* (Tibetan text page 240) says:

> If, in either the Madhyamika or Chittamatra systems, they appear to sentient beings like that, and the emptiness of the referent object – the basis adhered to as being truly existent just as it appears – is taught, the realization of that emptiness becomes a path. However, ordinary beings establishing another emptiness as truly existent, without it acting as a path realizing the emptiness which is a rejection of the referent object adhered to as truly existent, become tired without result due to it not becoming the antidote to either the coarse or subtle adherences to true existence which have been engaged in since beginningless time.

When one teaches that there is no referent object of the conception of a self of persons, this helps to attain the realization of selflessness or emptiness. On the other hand, if this is not taught this realization will not be attained.

In order to realize emptiness, a basis is necessary. This is because it is necessary to realize how the basis conceived by the conception of true existence does not exist. Without a basis, there will be no such realization. In other words, if the referent object of the conception of true existence is not repudiated, one will not realize emptiness. The mere word 'emptiness' is not sufficient to gain its realization. It does not harm the beginningless conception of true existence. In order to realize emptiness, one has to meditate with respect to a basis by examining whether or not it exists truly until

one comes to repudiate, with respect to that same basis, the referent object of the conception of true existence, thereby realizing emptiness.

Lama Tsongkhapa's *Illumination* (Tibetan text page 240) says:

> This being the case, a non-existent imputational factor is the referent object of the conception that an other-powered phenomenon that appears dualistically exists as it appears, that is, as if apprehendeds and apprehenders were different substances. That basis is perfectly and subsequently seen to be empty of the object of negation, whereas what remains here is the basis of emptiness and the emptiness. These are truly existent. By thoroughly knowing the perfect just as it is, this, as well as the meaning of emptiness, will also be perfectly upheld.

When one realizes that the object of the conception of duality conceiving apprehendeds and apprehenders to be different substances, that is, the imputational factor, does not exist, one will realize the perfect meaning. In order to realize emptiness it is essential to realize that the self which is to be negated does not exist.

Lama Tsongkhapa's *Illumination* (Tibetan text page 241) says:

> Here, regarding the setting out of the former position, in the commentaries on the *Bodhisattva Grounds* and the *Discrimination of the Middle Way and the Extremes* it is explained according to the meaning above of "Whatever non-existent regarding any" and so forth. In the *Sublime Continuum*, the commentary on the meaning of the statement "Whatever does not exist anywhere" and so forth [accords with] the Madhyamikas' way of commenting which is not at all the same as the previous two [texts]. However, fearing too many [words] I have not written about it.

'The former position' is that of the Chittamatrins. The two commentaries, that on the *Bodhisattva Grounds* and that on the *Discrimination of the Middle Way and the Extremes*, explain the meaning of the statement "Whatever non-existent regarding any." 'Any' refers to the basis, and 'whatever non-existent' to the object of negation. Thus, this phrase means that the duality of apprehendeds and apprehenders being different substances is non-existent regarding any basis. On the other hand, the commentary on the meaning of "Whatever does not exist anywhere" in the *Sublime Continuum* differs from that of the previous two commentaries in that it is written from the point of view of the Prasangika Madhyamikas. According to the Prasangika Madhyamikas, the meaning of the statement "Whatever does not exist anywhere" is that 'whatever does not exist' refers to the object of negation, true existence, and 'anywhere' means that such an object of negation does not exist anywhere. The word 'whatever' or 'any' (Tibetan *gang*) occurs in many contexts, however, in the Prasangika Madhyamika system it refers to an inherently existent basis, which does not exist. Lama Tsongkhapa says that he could have elaborated on this subject but chose not to.

Lama Tsongkhapa's *Illumination* (Tibetan text page 241) says:

> CHITTAMATRINS:
>
> *"They arise without existing as external apprehendeds,*
> *Exist, and have the nature of not being the object of all elaborations."* [6.47cd]
>
> Other-powered phenomena:
> 1. *arise* only from their respective latencies *without existing as external apprehendeds*,
> 2. *exist* inherently, *and*
> 3. *have the nature of not being the object of all elaborations* that superimpose the ultimate of this system

> because the actual expression of the outer and inner are held to be explicitly non-investigated aspects.
> In short, other-powered phenomena have three characteristics:
> 1. they arise without existing externally,
> 2. they exist inherently, and
> 3. they are not objects of what are elaborations as ultimate.

An indicative conception, an other-powered phenomenon, exists, although it does not exist externally, but rather arises due to the activation of latencies. It exists inherently and is not the object of elaborations that superimpose the ultimate of this system. This is because "the actual expression of the outer and inner are held to be explicitly non-investigated aspects."

In this context "other-powered phenomena" refers specifically to indicative conceptions, it does not refer to other-powered phenomena in general. Although other-powered phenomena are in particular asserted by the Chittamatrins, they are also defined by the other schools as that which is produced by its respective causes and conditions. This is the reason they are said to be *other* powered, that is, they do not arise by their own power.

Lama Tsongkhapa says that this other-powered phenomenon has three characteristics:
1. it arises without existing externally,
2. it exist inherently, and
3. it is not an object of what are elaborations as ultimate.

These three characteristics are set out in the root text saying:

> *"They arise without existing as external apprehendeds,*
> *Exist, and have the nature of not being the object of all elaborations."* [6.47cd]

They are also listed in Chandrakirti's autocommentary saying:

> Therefore, if briefly summarized, here, with regard to the entity of other-powered [phenomena], three [distinctions] are presented:
>
> 1.emerging from only their own imprints, without an [external] object of knowledge,
>
> 2.just existing [inherently], and
>
> 3.not being the object of any elaboration.

Other-powered phenomena are explained in detail by the Chittamatrins because it includes the mind-basis-of-all which exists and exists inherently, but does not exist externally. That it is not the object of any elaboration of the ultimate means that it is free being able to be expressed by either two, terms and conceptions.

Lama Tsongkhapa's *Illumination* (Tibetan text page 241) says:

> The cause of the imputedly existent, due to being included among the things that are inherently existent, is not different from the three characteristics. Stating "other-powered phenomena exist" is the characteristic of existence that is not mere existence. Acharya Sthiramati, in saying "The non-perfect is an indicative conception," accords with the statement "[The word] 'inherently' is the rest of the phrase." The ascertainment of this particular is an important point below.

The cause of the imputedly existent is included in things that are inherently existent. Therefore, it cannot be different from the three characteristics:
(1) not arising externally,
(2) existing inherently, and

(3) not being the object of elaborations of the ultimate.
Lama Tsongkhapa says: "Stating "other-powered phenomena exist" is the characteristic of existence that is not mere existence." "The non-perfect is an indicative conception" means that other-powered phenomena are not perfect. An indicative conception is a category of afflictions.

Whenever the text below says 'exist,' in accordance with the Chittamatra point of view, it should be understood to mean 'inherently exist.'

What is an other-powered phenomenon? It is that which is produced by its respective causes and conditions. Are we other-powered phenomena or self-powered phenomena? We are other-powered phenomena because we are under the influence of causes and conditions. In terms of those things that are under the power of afflictions, the majority of them are sentient beings. Although stones and tables are under the power of the afflictions, sentient beings are under their power even more. Due to being under the power of afflictions we experience much suffering, whereas, although stones and tables are under the power of afflictions, they do not experience suffering due to it.

Friday morning, 6 October 2000

An other-powered phenomenon is not a final observed object of an exalted wisdom of meditative equipoise because an other-powered phenomenon is a basis for the category of afflictions. Are other-powered phenomena pervaded by being indicative conceptions? They are not.

QUESTIONS AND ANSWERS

Geshe Jampa Gyatso: How would you posit the three times, past, present, and future, in terms of a table? What is a future table? What is a past table? What is a present table? From among the three times of the table which occurs first?
Student: The present occurs first because the present is the immediate perception of the table on the basis of which one can posit the past and future.
Geshe Jampa Gyatso: Which occurs first, the past Cristiana, present Cristiana, or future Cristiana?
Student: The past Cristiana.
Geshe Jampa Gyatso: (laughs uproariously) Then, the past Cristiana occurred without being born! Among the three, the past Cristiana, present Cristiana, and future Cristiana, which comes into existence first? If one says that it is the past Cristiana that means that the past Cristiana arose followed by the future Cristiana and then the present Cristiana. What do you think?
Student: Going back to the table, in the context of Chittamatra the present table is the present ripening of latencies, the future table is a latency that is not yet activated, the past table is a latency that has already ripened.
Geshe Jampa Gyatso: It seems that the first to occur is the future table, in that even before the table comes into existence there are the causes for its production. Then comes the present table, the table that has come into existence and not yet ceased. Then comes the past table, the table that has been produced and has ceased.
Student: How can we talk of a "future table" without there being a present table?
Geshe Jampa Gyatso: Is there not a future house, a future baby, and so forth? Are you thinking that there necessarily occurs the past table, then the present, and then the future? In the fourth chapter of *Ornament for Clear Realizations* it says that if one takes fire as the basis of argument, fire itself is not past. But what is the fire at the time of the smoke? It is past. Or we can take ourselves as an example: on the basis of ourselves our parents are past, but the parents themselves are not past. There are also explanations of this in the *Discrimination of the Middle Way and the Extremes* and Aryadeva's *Four Hundred Verses*.

Student: In Chittamatra it is not necessary to assert the existence of external objects in order to assert other-powered phenomena such as the mind-basis-of-all and dualistic appearance. The imputational factor is duality, the apprehendeds and apprehenders being different substances. What is the impure other-powered phenomenon in this context?
Geshe Jampa Gyatso: It is the latencies on the mind-basis-of-all. Why is there the appearance of apprehendeds and apprehenders being different substances? It is due to the activation of latencies. What are these latencies? They are the latencies of the view of a self. Because of the activation of these latencies there arises dualistic appearance. When the view of a self is defined it is said to be the conception of a self of persons and the conception of self of phenomena. Among these two, the conception of self of phenomena is the basis. What is this view of a self of phenomena? It is the conception of apprehendeds and apprehenders as being different substances. This is how the Chittamatrins posit the conception of a self of phenomena. Any consciousness that is polluted by that conception is an impure other-powered phenomenon. However, in general, impure other-powered phenomena are all true sufferings, anything that is produced by the force of actions and afflictions. This is one way of positing impure other-powered phenomena. There are impure other-powered phenomena and pure other-powered phenomena. What are pure other-powered phenomena? The environment and inhabitants of a pure land, such as Sukhavati. Another way of positing pure other-powered phenomenon is that it is a superior's exalted wisdom of meditative equipoise. In this case, all other other-powered phenomena are impure other-powered phenomena.

What is the cause of form appearing to be an external object? It is a latency, specifically, the latency of a view of a self. Just as form appears to be an external object due to the latency of a view of a self, likewise, apprehendeds and apprehenders appear to be different substances due to the activation of a latency of a view of a self. The basis of the infusion of these latencies, the mind-basis-of-all, is said to be the cause of bondage and freedom.

Lama Tsongkhapa says: "because the very basis of appearance is the cause of both the bondage to and the freedom from the thoroughly afflicted and completely pure." Form is the basis of appearance, which is the basis of bondage and freedom. However, if instead it is said that form is the basis of bondage and freedom this would not have much meaning. Also, it is said that the appearance of external objects is the cause of bondage and freedom this would be meaningless because the appearance of external objects is the basis of bondage but not of liberation. Think about it.

Student: What is meant by "renowned in the world"?
Geshe Jampa Gyatso: "Renowned in the world" is discussed extensively in the third chapter of the *Compendium of Valid Cognition*. There are three types of renown: (1) that which is yet to be renowned in the world, (2) that which is already renowned, and (3) that which is suitable to be renowned. In short, "renowned in the world" means whatever is commonly expressed by worldly beings, such as farmers. However, it can be asked "Is a field an object that is renowned in the world because it is commonly expressed by worldly beings?" One text says that the moon is commonly renowned in the world as "rabbit-bearer," meaning that the moon is also called "rabbit-bearer." Is there pervasion? No, because even a book is suitable to be called a rabbit-bearer just because it is an object of conception. For example, Chogyal can be called a buddha or "Omniscient One" just because he is an object of conception. Or we can call him

Production from other is not renowned to worldly beings, that is, they do not talk about production from other. They may say "There is a sprout in my field" but they do not say, "It is produced from other."
Student: If it is not renowned to worldly beings, what about it being renowned to ordinary Svatantrika Madhyamikas?
Geshe Jampa Gyatso: Common worldly people who have not learned a tenet system do not propound production from other.

Student: What about Ishvara who is renowned in the world?
Geshe Jampa Gyatso: Ishvara is renowned as existing in the world. Although there is no Ishvara that is permanent, partless, and independent, there is mere Ishvara. The point is that an Ishvara that is permanent, partless, and independent is not renowned in the world, whereas mother and father are renowned in the world.
Student: If it is renowned in the world does it have to exist?
Geshe Jampa Gyatso: If is renowned in the world there is no pervasion that it exists because worldly beings talk about things that do not exist. The *Compendium of Valid Cognition* mentions three types of renown:
(1) the renowned that is already renowned,
(2) the renowned that will be renowned, and
(3) the renowned that is suitable to be renowned.
For example, Jonathan is suitable to be renowned as a meditator or as a talker.

Are you certain that there does not exist the son of a barren woman? If someone says this is certain, we ask: "Is the barren woman a mother?" No, she is not. Has she been a mother? Yes, she has been a mother.

Student: The Svatantrika Madhyamikas posit things to conventionally and inherently exist, and that in meditative equipoise a superior realizes the lack of inherent existence. The Prasangika Madhyamikas debate them saying that, if it were so, conventional objects would be destroyed in meditative equipoise because they are not seen. How do the Svatantrika Madhyamikas respond to this?
Geshe Jampa Gyatso: Some Svatantrika Madhyamikas posit conventional objects to be an object of negation in the perspective of a superior's exalted wisdom of meditative equipoise. Therefore, both Svatantrikas and Prasangikas say that a conventional truth existing in the exalted wisdom of meditative equipoise is an object of negation.
Student: Do the Svatantrikas agree with the Prasangikas that conventional objects are destroyed by the exalted wisdom of meditative equipoise?
Geshe Jampa Gyatso: No.
Student: Then what happens to inherent existence?
Geshe Jampa Gyatso: Inherent existence does not exist for the Prasangika Madhyamikas. The Prasangika Madhyamikas say that if there were inherent existence then it follows that a superior's exalted wisdom of meditative equipoise destroys things. The Svatantrika Madhyamikas say that there is no such fault, in that although functioning things do not exist in the perspective of superior's exalted wisdom of meditative equipoise they are not destroyed by it. According to the Svatantrika Madhyamikas if something does not exist inherently it does not exist at all. For the Prasangika Madhyamika system inherent existence is not seen in meditative equipoise and in this sense it is annihilated or destroyed. The Svatantrika Madhyamikas would not agree with this.

Student: How can establishment by way of its character, which depends on an imputing cognizer, be equated with the Prasangika view of inherent existence which does not depend on anything at all? It would seem that inherent existence is not defined in the same way in the two schools.
Geshe Jampa Gyatso: When the Prasangika Madhyamikas say that "merely imputed by conception," the word "mere" negates something in particular, whereas when the Svatantrika Madhyamikas say "merely imputed by conception" the word "merely" does not negate the same thing. For the Prasangika Madhyamikas "merely imputed" means that everything is only imputed and that not the slightest atom exists from its own side; in this way, the word "mere" negates existence from its own side. In the Svatantrika Madhyamika system the word "mere" negates existence from its own uncommon mode of subsistence without being posited by the force of a non-defective awareness. Thus, the difference between these school is in terms of how they understand the word "mere." In

both cases they say it is merely imputed by conception, but the word "mere" negates something different:

- in the Prasangika Madhyamika system it negates existence from its own side and
- in the Svatantrika Madhyamika system it negates existence from its own uncommon mode of subsistence without being posited by the force of a non-defective awareness.

Student: What does "imputed" mean?
Geshe Jampa Gyatso: It means that, with respect to a particular basis, a conception thinks "This is a table," "This is a cup," and so forth. "Merely imputed by conception" means that a basis is imputed, that is, it is given a name, by conception.
Student: When an eye consciousness sees pot, in the second moment we conceive pot, call it a pot, and impute pot. Is that right?
Geshe Jampa Gyatso: Yes, first we directly see pot, then in the second moment there arises the conception "This is a pot." For example, when I look out my window and see Jonathan turning the prayer wheel, first there is contact, the meeting of my eye consciousness, eye sense power, and Jonathan's body, which is then followed by the conception "There is Jonathan."

Student: How does imputation function in babies, insects, and beings who do not think in words? Does imputation mean something other than just labeling? Imputation generally seems to imply labeling, but babies do not have words. They do not know "table," but do they impute "table" when they see table?
Geshe Jampa Gyatso: All that is imputed is not necessarily imputed by the conception [of a particular person]. When someone sees something there is not necessarily imputation by conception at that time. Imputation by conception occurs even in those who are not trained in tenets. When someone sees something and thinks about it, this is not necessarily an imputation by the conception of that person. In general everything is imputed by conception, but in the case of a particular person it is not necessarily imputed by the conception of that person. Does it seem to you that a meaning generality is an imputation? In the *Compendium of Valid Cognition* there is a difference between the appearance of a term generality and the appearance of a meaning generality. In the case that someone sees a pot for the first time and then generates a conception apprehending pot, there is the appearance of a meaning generality because that person has an awareness which is a mental image of the shape of the object that is seen. This is the appearance of a meaning generality. However, this person does not have the appearance of a term generality because this person does not know the term 'pot,' he just has the appearance of the meaning generality pot but is unable to give it the name 'pot.' For example, if Bethanne were to go outside for a walk and be seen by a stranger, that man thinks "There is a woman" and has the appearance of a meaning generality of Bethanne but does not have the appearance of term generality of Bethanne. He does not have the appearance of the term generality of Bethanne because he does not know that she is called "Bethanne." He does not have the appearance of the term generality of Bethanne because he does not have the appearance of her in dependence on the term "Bethanne."
Student: He has the meaning generality of Bethanne, but does he impute "Bethanne"?
Geshe Jampa Gyatso: No pervasion. In the *Compendium of Valid Cognition* there is a case in which there is the appearance of a meaning generality without the appearance of a term generality. There can also be the appearance of a term generality without the appearance of a meaning generality.
Student: Can there not be the appearance of a term generality but not a meaning generality, for example, when I hear a word in Tibetan is there a term generality but not a meaning generality?

Geshe Jampa Gyatso: If you do not know Tibetan, when you here the Tibetan word "bumpa" there is just the hearing of sound, it does not have any meaning for you.

END

Monday afternoon, 9 October 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 241-2) says:

3B1C-2B3E-2A1B-2B2A-2 Refuting that system

A Extensively stating the refutation [of that system]
B Brief conclusion of such a refutation

3B1C-2B3E-2A1B-2B2A-2A Extensively stating the refutation [of that system]

1 Refuting the examples of an inherently existent consciousness that does not have external objects
2 Refuting the meaning that a consciousness empty of objects is produced from the potential of latencies
3 Indicating that the two, refuting such and meditation on repulsiveness, are not contradictory

3B1C-2B3E-2A1B-2B2A-2A1 Refuting the examples of an inherently existent consciousness that does not have external objects

A Refuting the example of a dream
B Refuting the example of seeing falling hair

3B1C-2B3E-2A1B-2B2A-2A1A Refuting the example of a dream

1 The example of a dream does not establish an inherently existent consciousness
2 The example of a dream does not establish the non-existence of external objects when awake
3 The example of a dream establishes all things as false

3B1C-2B3E-2A1B-2B2A-2A1A-1 The example of a dream does not establish an inherently existent consciousness

Chandrakirti's autocommentary (Tibetan text page 89) says:

I shall explain about this:

The example of a mind without external objects – where does it exist? [6.48a]

One should correctly analyze this very statement. It is mentioned:

If said, "like a dream," … [6.48b]

By lying down and falling asleep inside a very small room, if one dreams about a herd of intoxicated elephants within the house, they would not exist in any way. Therefore, this consciousness should be accepted without doubt, without external objects existing. In order to show that this is also without essence, it is explained:

… that should be considered. [6.48b]

The Prasangika Madhyamikas ask the Chittamatrins "What is an example of a mind without external objects?" The Chittamatrins respond saying "A dream." If someone falls asleep and dreams of a herd of crazed elephants in the same room, how do those elephants exist in that room? The Chittamatrins say: "Therefore, this consciousness should be accepted without doubt, without external objects existing." The Prasangika Madhyamikas then negate that there exists an inherently existent consciousness without external objects saying "that should be considered."

Chandrakirti's autocommentary says:

Further, if it is asked: How is that? It is explained:

When for me, even in a dream, mind
Does not exist, then your example does not exist. [6.48cd]

Whatever consciousness has the aspect of a herd of intoxicated bulls, for us, that does not exist like the object, because it is not produced. Also, if consciousness does not exist, since there does not exist an example established for both, a consciousness without an external [object] does not exist.

The Prasangika Madhyamikas says that even if someone dreams of a herd of bulls/elephants, it does not exist because it is not produced. Just as the crazed elephants of a dream do not exist, likewise, objects do not inherently exist.

Chandrakirti's autocommentary says:

If it is thought: Then, if an erroneous consciousness does not exist in a dream, due to waking at that time, one would not remember the experience of the dream. This is also unsuitable. Like this:

If, through remembering a dream when awake, mentality
Exists, external objects would also be similar. [6.49ab]

In a dream, the dream consciousness perceives various objects which, upon awakening, are remembered. The Chittamatrins say that external objects do not exist and that consciousness exists inherently. They say that, for example, having dreamed of a herd of crazed elephants in the room, when one wakes one remembers them even though they do not exist. Based on this example, the Chittamatrins say that consciousness is inherently existent because if it were not inherently existent there could not be memory of the dream elephants. The Prasangika Madhyamikas respond: "This is also unsuitable" and "If, through remembering a dream when awake, mentality exists, external objects would also be similar." They say that just as there exists a mentality that remembers dream objects when awake, likewise, would external objects exist.

Chandrakirti's autocommentary says:

If asked: Why?

Just as you remember, thinking "I saw,"
It exists like that also for external objects. [6.49cd]

It should be ascertained that, "just as mental [consciousness] is just existing through remembering a dream experience, similarly, since a memory about the experience of the object also exists, the object also exists – or else consciousness would not exist either."

Just as there exists memory of the experience of dream objects, likewise, there also exists memory of external objects. The Prasangika Madhyamikas say that, therefore, the Chittamatrins should either assert the existence of external objects, or else they should assert that just as external objects do not exist, likewise, consciousnesses also do not exist. For the Prasangika Madhyamikas the position that external objects exist and the position that consciousness are without inherent existence are complementary because they negate the existence of an inherently existent consciousness and accept the existence of external objects.

Lama Tsongkhapa's *Illumination* (Tibetan text page 242) says:

PRASANGIKA MADHYAMIKAS:

Where is the example that external objects do not exist while mind does? [6.48a]

When you Chittamatrins assert that, while *external objects do not exist*, a *mind* that is established by way of its own character exists, the *example* of this stating "For example, it is like this..." should be analyzed asking, "*Where is it?*"

CHITTAMATRINS:

"It is just like a dream." [6.48b]

For example, having lain down and fallen asleep in a very small room the elephants of a dream herd of crazed elephants do not exist in that room in any way. Therefore, *just like a dream*, likewise, external objects do not exist. Similarly, inherently existent consciousness is definitely to be asserted.

In short, the Chittamatrins say:
(1) external objects do not exist and
(2) consciousness is inherently existent.

Lama Tsongkhapa's *Illumination* (Tibetan text page 242) says:

PRASANGIKA MADHYAMIKAS:

This should be thought about. [6.48b]

Furthermore, [this example] is explained because [things] are taught to be essenceless. This very example *should be thought about*, that is, analyzed, here.

CHITTAMATRINS: Moreover, what is to be analyzed?

PRASANGIKA MADHYAMIKAS:

When mind, even in a dream, does not exist for us,
Then you do not have an example. [6.48cd]

Even in a dream, a *mind* established by way of its own character having the aspect of a herd of crazed elephants *does not exist for our* system – just as the object, the elephants, does not exist – because it is not produced.

The herd of crazed elephants in a dream does not exist; if it did exist it must be produced whereas it is not.

Lama Tsongkhapa's *Illumination* (Tibetan text page 242-3) says:

If consciousness is not established by way of its own character, *then you do not have an example* that is established for both [the Prasangika Madhyamikas and the Chittamatrins]; therefore, a consciousness without external objects [also] does not exist.

Here, just as the elephants appearing in a dream do not exist, likewise, it must definitely be asserted that while an object-possessor, that is, a consciousness, is not indicated to not exist, an inherently existent consciousness is indicated to not exist.

The Prasangika Madhyamikas say that objects and object-possessors should be the same in terms of either both existing or both not existing. The Chittamatrins are unable to posit a common example that establishes for both the Prasangika Madhyamikas and Chittamatrins that external objects do not exist and that consciousness exists inherently; therefore, this is not justifiable.

The Prasangika Madhyamikas say that they do not establish the non-existence of consciousness, but establish the non-existence of an inherently existent consciousness.

Lama Tsongkhapa's *Illumination* (Tibetan text page 243) says:

> The Chittamatrins, as explained above, assert that other-powered phenomena do not exist externally because other-powered phenomena are inherently existent.
>
> The meaning of these refutations in brief [is as follows]. In the commentary on [the lines in the root text] "In brief, [understand the meaning that] 'Just as objects of knowledge do not exist, likewise, awarenesses also do not exist'" (v. 6.71cd) it is clearly said: "Understand that even an awareness that has the aspect of an object of knowledge is not produced by way of its own nature."

The Chittamatrins assert that other-powered phenomena do not exist externally, but that the mind exists inherently. In other words, there are no objects of knowledge that exist externally, but the mind exists inherently. The Prasangika Madhyamikas say that if there do not exist external objects, likewise, also object-possessors would not exist: "Just as objects of knowledge do not exist, likewise, awarenesses also do not exist" (v. 6.71cd). This means: "Understand that even an awareness that has the aspect of an object of knowledge is not produced by way of its own nature." The Prasangika Madhyamikas say that external objects exist and consciousness does not exist inherently. Thus, the Chittamatrins and Prasangika Madhyamikas make exactly opposite assertions. The debate between them can be synthesized in this main point.

Lama Tsongkhapa's *Illumination* (Tibetan text page 243) says:

> Furthermore, for those with realizations there is no basis of doubt regarding propounding consciousness to be non-existent in this school:
>
> - because in the two, the root text and commentary, when such reasonings are refuted there are many cases of affixing a qualification to the object of negation and
> - because [the root text] that says "Why, in that, did the Mahatma once again say 'Mind is produced from ignorance and actions'?" (v. 6.88cd), meaning that ignorance produces karmic formations [and] karmic formations produce consciousness, is also our system.
>
> Therefore, all equality in the existence and non-existence of objects of knowledge and consciousness should be understood in terms of the qualification of the object of negation.

The words "existence" and "non-existence" should be qualified by adding the word "inherent." In this way it is clear that the Prasangika Madhyamikas do not say that the mind does not exist, but that it does not exist inherently. It is not that consciousness does not exist because it is their system that ignorance produces karmic formations and karmic formations produce consciousness. Therefore, they do accept the existence of consciousness or mind. In the context of the twelve links the *Supplement* says: "Why, in that, did the Mahatma once again say 'Mind is produced from ignorance and actions'?" (v. 6.88Cd). This means that consciousness, or mind, arises from karmic formations and karmic formations arise from ignorance. Therefore, there are no Prasangika Madhyamikas who say that consciousness does not exist.

Objects of knowledge and consciousnesses are equal in terms of the qualification of the object of negation. When it is said that if objects exist also object-possessors exist and if object-possessors do not exist objects do not exist, this is in the context of affixing the qualification 'inherently exist.' However, in the specific context of consciousnesses and external objects the object of negation is different in that objects lack *external* existence, whereas consciousnesses lack *inherent* existence. In the Chittamatra system the existence of external objects is the object of negation, whereas in the Prasangika Madhyamika system an inherently existent consciousness is the object of negation. The basis of the debate regarding "existence and non-existence" is in terms of affixing the respective qualifications to objects of knowledge and consciousness. In general, when there is no object of

knowledge there is no consciousness because without an object of knowledge a consciousness cannot be produced. Likewise, if there is no consciousness how can there be an object of knowledge?

Lama Tsongkhapa's *Illumination* (Tibetan text page 243) says:

> CHITTAMATRINS: Supposing there are no mistaken consciousnesses in a dream, then later upon awakening one would not remember the experiences at the time of the dream.
> PRASANGIKA MADHYAMIKAS: That is an argument [of those who] think that if a consciousness does not exist by way of its own entity a consciousness does not exist at all. Such an argument is also not appropriate.

The Prasangika Madhyamikas say that the argument that if consciousness does not exist by way of its own entity it does not exist at all is incorrect. A dream [consciousness] is an example of a mistaken consciousness in that a dream is not considered to be true because the objects of a dream consciousness are non-existent.

Lama Tsongkhapa's *Illumination* (Tibetan text page 243-4) says:

> *If, due to remembering a dream at the time of waking,*
> *Mentality exists, also external objects would be just like that.*
> *Just as you remember thinking "I saw...,"*
> *Also like that the external exists.* [6.49]

> *If*, *due to remembering* the experience of *a dream at the time of waking* from sleep, a dream *mentality* inherently *exists*, *also* the elephants and so forth of a dream, *objects* that appear to be *external*, *would exist just like that* mentality. Why is that? *Just as* when *you* are awake, there exists mentality through there existing the *memory* of an object-possessor *thinking* "When dreaming *I saw...*," likewise, due to there *existing* memory *also* regarding *the external*, that is, objects, *like* the object experienced thinking "That object was seen when dreaming," one should assert either "Objects also exist" or else "Consciousness also does not exist."

The argument is: "If, due to remembering the experience of a dream at the time of waking from sleep, a dream mentality inherently exists, also the elephants and so forth of a dream, objects that appear to be external, would exist just like that mentality." That is, just as there exists a mentality dreaming of elephants, so too should its object, the elephants, exist. Do dream elephants exist in reality? They do not exist in reality. Although a dream consciousness observes elephants, those elephants do not exist in reality. However, do the dream elephants exist? If they do exist, what do they look like? Is a dream elephant like a reflection? Is it the appearance of the form of an elephant? Is the dream elephant a non-existent or an existent?
Student: A dream elephant exists.
Geshe Jampa Gyatso: Is the elephant of a dream an elephant? To what kind of consciousness does the dream elephant appear? Does it appear just to the dream consciousness?
Student: It appears just to the dream consciousness.
Geshe Jampa Gyatso: There is the appearance of elephant to a dream consciousness, however, the elephant that appears to a dream consciousness is not really an elephant. But is there the appearance of a dream elephant?
Student: There is.
Geshe Jampa Gyatso: Is the dream consciousness a sleep consciousness or something else?
Student: A dream consciousness and a sleep consciousness are two different things.
Geshe Jampa Gyatso: Therefore, a sleep consciousness does not have the appearance of elephant?
Student: Maybe.

Geshe Jampa Gyatso: What is that appearance of a dream elephant to the dream consciousness? Is it form, consciousness, or a non-associated compositional factor?
Student: It is the appearance of form.
Geshe Jampa Gyatso: Therefore, is it form?
Student: It is a form sphere.
Geshe Jampa Gyatso: Is that appearance a form sphere or a phenomena sphere?
Student: A form sphere.
Geshe Jampa Gyatso: It follows that if it is a form sphere it is an object apprehended by an eye consciousness, that is, shape or color. It follows that an eye consciousness functions while dreaming. Is it not usually said that during sleep all sense consciousnesses are unmanifest? Is the consciousness that sees elephant not a manifest consciousness? Is it an eye consciousness? It is not, it is a mental consciousness.

A dream elephant does not exist in reality, but... Think about this. A dream elephant can perhaps be defined as: a form that appears to a dream consciousness as the shape of an elephant.

Tuesday morning, 10 October 2000

A Re-illumination of the Thought Regarding the Explanation of the 'Supplement to the 'Middle Way'" (Tibetan text page 183-5) by Jedzun Sherab Wangpo, a disciple of Chogyi Gyeltshen, says:

1 Identifying form that is a phenomena sphere

Illumination says:

> In regard to that, the five forms that are phenomena spheres are not imputed by the tenets of the materialists, but are taught in sutra and are also explained like that by me.

When such is explained [it is as follows]. The definition of form that is a phenomenon sphere is: the appearance of form that appears as form to a mental consciousness, this being the principal from among the two, mental consciousness and sense consciousness. It has five types. The *Compendium of Knowledge* says:

> What is form that is a phenomenon sphere? That in relation to the five types is:
>
> 1. form arising from aggregation,
> 2. space-form,
> 3. form arising from a promise,
> 4. imaginary form,
> 5. form for one with meditative power.
>
> Individual illustrations are the following:
>
> - The appearance of subtle and coarse particles appearing to a non-conceptual mental consciousness is form that is a phenomenon sphere of aggregation.
> - The appearance that is the clear space appearing is form that is a phenomenon sphere that is space-form.
> - The form that is a vow of individual liberation and a non-vow is form that is a phenomenon sphere arising from a promise.

- The appearance of clearly appearing skeletons, although no skeletons exist, to the meditative stabilization meditating on repulsiveness is the imaginary form that is a phenomenon sphere.
- The appearance appearing as an earth totality to the meditative stabilization of a totality is form that is a phenomenon sphere for one with meditative power.

Although asserting virtuous and non-virtuous actions of body and speech, the vows of individual liberation, and so forth to be physical matter that is truly existent alone is the Vaibhashika system, in this system there is necessarily asserted to be a common basis of virtuous and non-virtuous actions, vows, and so forth and the physical because in *Fundamental Wisdom* it is taught that there is a common basis of karmic formations and form:

> Existence, moreover, the five aggregates...

Because there is a common basis of ethics and the physical the *Supplement* says:

> *Like the autumn moon, always completely pure,*
> *Peace and brilliance; he is beautified by them.* [2.2cd]

Therefore, form must be divided into two: (1) form that is a phenomena sphere and (2) form that is a form sphere. The appearance of an elephant that appears to a dream consciousness is, moreover, an external form that is a phenomena sphere because it is a form that is a direct object only of the mental consciousness that takes it as its appearing object. It is not a form that is a form sphere because there are no sense consciousnesses in a dream.

The appearance of an elephant to a dream consciousness is form because it is a form that is a phenomena sphere. This also applies to other objects that appear to a dream consciousness such as horses, houses, and so forth.

In the Prasangika Madhyamika system vows and non-vows are form. They assert that whatever refrains one from a negative action, just as a dame stops the flow of water, must be form. Further on, Lama Tsongkhapa's *Illumination* (Tibetan text page 264) says:

> In regard to that, the five forms that are phenomena spheres are not imputed by the tenets of the materialists, but are taught in sutra and are also accordingly asserted by me. Therefore, also clearly appearing non-existent skeletons are necessarily asserted to be physical, like reflections, but since they appear only to a mental consciousness they are not form spheres as are reflections. Since they are also not any of the nine remaining physical spheres, it is said "They are imaginary forms that are phenomena spheres."

The form that comes from correct assumption refers to the form that arises from taking vows or non-vows. The Vaibhashikas and Prasangika Madhyamikas assert vows and non-vows to be form. Included in the forms that are vows and non-vows are both revelatory forms and non-revelatory forms. Revelatory form, which is seen by the eye consciousness, is that which permits one to infer the motivation of a person. An example of correctly assuming a non-vow is to decide to be a soldier and to kill people or to be a butcher and to kill animals. When that decision is made, that person receives a non-vow. How are non-vows relinquished? For example, having become a soldier, one later decides to give up being a soldier and to correctly assumes a vow. The *Treasury of Knowledge* (v. 4.41ab) (page 187) says:

How is a non-vow relinquished?
It can be relinquished in three ways:
By taking a vow, dying, and the two organs."

[The commentary by Gendun Drup, the I Dalai Lama, on the *Treasury of Knowledge* says:

b) The manner of giving up a non-vow
What is the manner of giving up non-vow?
A non-vow is given up when a vow is obtained, because at that time a powerful antidote counteracting that [non-vow] is generated. It is given up at the time of death, because at that time the basis [of the non-vow] is destroyed. It is also given up by the occurrence of the two sex organs at the same time, because at that time the basis is damaged.]

Lama Tsongkhapa's *Illumination* (Tibetan text page 244) says:

QUESTION: Since the memory of the objects and object-possessors of a dream also exists in our system, how do these two exist or not exist?
PRASANGIKA MADHYAMIKAS' RESPONSE: Here in the commentary (1) the memory of the experience of a dream and (2) the memory of the dream object that is experienced are explained. Therefore, just as, for example, when the reflection of a face is seen, although the eye consciousness to which it appears does not experience a face, there is an object experienced relative to that reflection; likewise, when elephants and so forth appear during a dream, although the object experienced, crazed elephants, does not exist even while dreaming, due to the existence of the experienced object, which has the appearance of [crazed elephants,] there is also the memory of the experience of that object that says "I remember that object."

Just as both objects and object-possessors exist in a dream, likewise, are there two memories: (1) the memory of the object and (2) the memory of the object-possessor. For example, one can recall dreaming of such-and-such an object, such as a house, elephant, and so forth. In this case, what is remembered is the appearance of the respective object. On the other hand, when one recalls "I dreamt such-and-such," one is remembering the object-possessor of the dream.

When one sees the reflection of a face in a mirror, one sees only a reflection of a face and not an actual face. Does the eye consciousness of the person looking in a mirror experience an actual face? It does not, it experiences an object in dependence on that reflection. Likewise, in a dream one experiences a dream elephant and not a real elephant. But, in dependence on a dream consciousness that has the appearance of elephant, there is an experience of the appearance of elephant.

Lama Tsongkhapa's *Illumination* (Tibetan text page 244) says:

Distinguishing between the observed object and experience is, except for a few cases, not necessary in most such cases.

The ninth chapter of Shantideva's *Engaging in the Bodhisattva Deeds* says: "Like recollecting the poison of a rat." This is one case in which it is necessary to distinguish between the observed object and the experience. The example here is of a bear who, having been wakened by thunder in the spring, experiences the pain of poison deposited by a rat and remembers that in the winter, while hibernating, he was bitten by a rat. Jedzun Chogyi Gyeltshen's *General Meaning* (Tibetan text page 334) says:

For example, although the poison of the rat entered the body [of a bear] when bitten in the wintertime, at that time [the bear] experienced the bite but did not experience the poison. Later, upon hearing the sound of thunder, he generates a memory thinking, "When I was bitten before, the poison entered [my body]."

Lama Tsongkhapa's *Illumination* (Tibetan text page 244) says:

> Therefore, an established by way of its own character other-powered phenomenon that is empty of externality cannot be posited. Since there does not exist an obvious example of [such an other-powered phenomenon] – just as, for example, an obvious example is also not possible in proving the existence of past and future rebirths – and there also does not exist an example of [such an other-powered phenomenon] that proves it, for example, by means of a different way of setting out the syllogism, refuting the Chittamatrins should be understood to be extremely powerful reasoning.

The Prasangika Madhyamikas say that it is not possible to posit an example of an established by way of its own character other-powered phenomenon that does not exist externally, just as there is no example that proves the existence of past and future lives. Since there is no such direct example, what the Chittamatrins assert does not have all three modes complete because there is no forward pervasion. When there is forward pervasion, then, if it is the sign it is necessarily the predicate, but here this is not the case. However, it has to be taken into account that signs can either be in terms of 'being' or 'existing.'

In other words, the Chittamatrins are unable to posit an example concordant with the subject. This is likened to the case of future lives in which the following syllogism can be set out: "The consciousness of an old man who is about to die, as the subject, joins to a future consciousness because it is a consciousness that is together with constant attachment; for example, attachment." As in the former case, this syllogism does not explicitly prove the existence of past and future lives, given that the predicate is not "there exist past and future lives."

In brief, the Prasangika Madhyamikas say that the Chittamatrins are unable to establish an other-powered phenomenon that does not exist externally but exists inherently because they are unable to posit an example of it.

Tuesday afternoon, 10 October 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 244) says:

> 3B1C-2B3E-2A1B-2B2A-2A1A-2 The example of a dream does not establish the non-existence of external objects when awake

Chandrakirti's autocommentary (Tibetan text page 90) says:

> It is mentioned here: If the form of elephants and so forth existed in a dream, eye consciousness would also exist because it would apprehend that. Yet, that does not exist either, because confounded by sleep, the collection of the five consciousnesses is impossible. Like this:
>
> *If, since eye consciousness is impossible in sleep,*
> *[External form] does not exist – only mental consciousness exists.*
> *Settling upon the aspect of that as just external,*
> *Just as a dream, the same is accepted here. If [so]:* [6.50]

Is the elephant of a dream observed by an eye consciousness? It is not. Why is that? The elephant of a dream is not observed by an eye consciousness because, due to being confounded by sleep, there does not exist the collection of the five consciousnesses – the eye consciousness through the body consciousness. Chandrakirti's *Supplement* says: "If, since eye consciousness is impossible in sleep, [external form] does not exist – only mental consciousness exists." Hence, the consciousness that perceives an elephant in a dream is the mental consciousness alone. External form does not exist in a dream. The form of an elephant in a dream is not a form sphere because there is no eye consciousness

in a dream. Or, because there is no eye consciousness in a dream the form of an elephant in a dream cannot be a form sphere.

Chandrakirti's autocommentary says:

> If it is said: During a dream, eye consciousness does not exist in any way. Since that does not exist, the visual form of elephants and so forth, the objects to be apprehended by the eye entrance, do not exist; mental consciousness exists.

This passage indirectly indicates that in a dream there exists only form that is a phenomena sphere, in that a form that is apprehended by the mental consciousness alone is a form that is a phenomena sphere.

Chandrakirti's autocommentary says:

> Therefore, external form is only non-existent and strongly settling upon the aspect of the [mental] consciousness as just external is without reversal.

The Chittamatrins assert that external form is non-existent. However, in spite of it being non-existent the strong settling upon the existence of external form is not averted.

Chandrakirti's autocommentary says:

> Just as mere consciousness arises without an external object during a dream, similarly, it will also [arise] here.

The word 'here' probably refers to the waking state.

Chandrakirti's autocommentary says:

> It is not like that, because during a dream the arisal of mental consciousness is impossible.

According to the Prasangika Madhyamikas the arisal of an inherently existent mental consciousness is impossible. Therefore, they refute the Chittamatrins' assertion that, although there do not exist external forms, consciousness exists inherently.

Chandrakirti's autocommentary says:

> It is like this:
>
> *Just as your external object is not produced in a dream,*
> *Similarly, mentality is not produced either.* [6.51ab]

The statement "mentality is not produced either" means that an inherently existent mentality is not produced either. According to the Chittamatrins, since external objects do not exist they cannot exist inherently. The Prasangika Madhyamikas say that, just as external objects do not exist inherently, likewise, consciousness does not exist inherently and is not produced inherently. The Chittamatrins

say that these two, external objects and consciousness, are completely different, whereas the Prasangika Madhyamikas say that they are the same.

Chandrakirti's autocommentary says:

> Therefore:
>
> *The eye, eye's object, and the mind produced from that –*
> *All three are also false.* [6.51cd]

The three, the form sphere, eye sense power, and eye consciousness, do not exist inherently and are false.

Chandrakirti's autocommentary says:

> Just as the three – eye, form, and mentality – approach when seeing a form; similarly, also during a dream, when an object is fully investigated, the three are observed to collect. Just as the two, eye and visual form, do not exist in that [dream], similarly the eye consciousness does not exist either.

In order for an eye consciousness to perceive form the three need to come together: (i) the observed object condition, (ii) the empowering condition, and (iii) the immediate condition. Likewise, when an object is fully investigated, these three are observed to come together in a dream. The Prasangika Madhyamikas say that in a dream the eye sense power does not exist and the object of eye, form, does not exist, due to which eye consciousness does not exist. However, this means that eye consciousness does not inherently exist.

Chandrakirti's autocommentary says:

> Just as these three, similarly:
>
> *The remaining triads, ear and so forth, are also without production.* [6.52a]
>
> The words 'and so forth' of "ear and so forth" include from sound and ear consciousness through the mental [sense power], the dharma element (i.e., mental object), and the mental consciousness. Therefore, during a dream, all these triads are false. Therefore, the statement "mental consciousness exists in a dream" is unreasonable.

Also a sound sphere, ear sense power, and ear consciousness do not exist in a dream. Similarly, in a dream there is no odor sphere, nose sense power, and nose consciousness through to no tangible object sphere, body sense power, and body consciousness. Here it would seem that the mental consciousness is included in this list, however, it should be understood to mean that the phenomena sphere, mental sense power, and mental consciousness do not exist inherently. "Therefore, the statement 'mental consciousness exists in a dream' is unreasonable" means "Therefore, the statement 'mental consciousness *inherently* exists in a dream' is unreasonable." During a dream the collection of phenomena sphere, mental sense power, and mental consciousness does exist, but it does not exist inherently.

Chandrakirti's autocommentary says:

> Someone considers: A form included in the dharma entrance, an object to be apprehended by mental consciousness, exists in a dream. Therefore, consciousness does not exist at all without an object.
>
> That also is unreasonable because the three are not possible in any way in a dream. But when accepted like that in order to dispel the system of others' scriptures, then the example of a dream becomes just meaningless because it is impossible to show the meaning of the properties arisen from the example as just bearing a false meaning, since it bears a meaning that is not false.

The form included in the phenomena sphere (dharma entrance) exists in a dream. For example, the appearance of form appearing as an elephant to the mental consciousness in a dream is form that is a phenomena sphere. Therefore, all consciousnesses necessarily have an object.

"That also is unreasonable because the three are not possible in any way in a dream" means that an inherently existent phenomena sphere, inherently existent mental sense power, and inherently existent mental consciousness are unreasonable. Or it can be said that the three of a dream, the observed object condition, empowering condition, and immediate condition, which are inherently existent are unreasonable. Chandrakirti says: "But when accepted like that in order to dispel the system of others' scriptures, then the example of a dream becomes just meaningless because it is impossible to show the meaning of the properties arisen from the example as just bearing a false meaning, since it bears a meaning that is not false." If something is not false, it must be true; by taking an example that has a true meaning, one cannot prove something to be false.

Lama Tsongkhapa's *Illumination* (Tibetan text page 244) says:

> CHITTAMATRINS:
>
> *"When asleep an eye awareness is not possible,*
> *Therefore, they do not exist; only mental consciousness exists.*
> *There is adherence to the aspect of that as actually external.*
> *Just as in a dream, so to is it asserted here."* [6.50]
>
> If the forms of elephants and so forth exist in a dream, so also the eye consciousness that apprehends them would exist in a dream; however, that is not suitable. *Upon* falling *asleep*, due to being affected by sleep, *an eye awareness*, that is, an eye consciousness, *is not possible*, *therefore*, the forms of elephants and so forth *do not exist* as objects apprehended by an eye sphere; *only mental consciousness exists*. Because of that, external form spheres are just non-existent and strong *adherence to* the mere appearance of *the aspect of that* external [object] *as* being *actually external* arises for the mental consciousness without opposition. *Just as* mere consciousness without external [objects] arises in *a dream*, *so too is it asserted here* on the occasion of waking.

The appearance of an elephant in dream is not a form sphere because there is no eye consciousness in a dream, there is only mental consciousness. Since whatever appears in a dream cannot be a form sphere, it is the mere appearance of a form that is a phenomena sphere to an mental consciousness. The mental consciousness then adheres to this appearance as though it were an external object. In short, a mental consciousness has the appearance of a form that is a phenomena sphere and adheres to it as external object. This is what the Chittamatrins assert.

Lama Tsongkhapa's *Illumination* (Tibetan text page 245) says:

> PRASANGIKA MADHYAMIKAS: Even allowing that that does not establish the previous example, you think that the example of a dream establishes that there is consciousness that does not have external [objects] during the waking state. [Chandrakirti's autocommentary] says:

> It is not like that because it is impossible for mental consciousness to arise in a dream.

When Chandrakirti says that "it is impossible for mental consciousness to arise in a dream," he means that it is impossible for an inherently existent mental consciousness to arise in a dream.

Lama Tsongkhapa's *Illumination* (Tibetan text page 245) says:

> This means that even assuming that there do not exist form spheres in a dream, since an inherently existent mental consciousness that does not have [external objects] is not possible even in a dream, the combination of the two – non-existent external objects and inherently existent mental consciousness – is not suitable as an example.

The Chittamatrins say that (1) external objects do not exist and (2) mental consciousness exists inherently and posit the example of a dream to prove this. The Prasangika Madhyamikas respond that an example that makes use of this combination is not suitable.

Lama Tsongkhapa's *Illumination* (Tibetan text page 245) says:

> Chandrakirti says:
>
> *Just as for you external objects are not produced*
> *In a dream, likewise, also mentality is not produced.*
> *The eye, objects of the eye, and the mind produced by them,*
> *All three, are also false.* [6.51]
>
> Thus, *just as* according to *you external objects are not produced in a dream, likewise, also mental* consciousness *is not* inherently *produced*. Therefore, just as when forms are seen while awake, the three, eye, form, and mentality, come together, likewise, also in a dream when objects are perceived the three are observed by an awareness to come together. Just as in that dream, the two forms, the *eye and the objects of the eye*, do not exist, likewise, *the mind produced by those* two, an eye consciousness, also does not exist. Therefore, *all three*, the eye, forms, and mentality, of a dream *are also false*.

When awake, a form sphere, eye sense power, and eye consciousness exist. That eye consciousness is produced in dependence on an observed object condition, empowering condition, and immediate condition. Likewise, when objects are perceived in a dream the three – a phenomenon sphere which is the object of a mental consciousness, a mental sense power, and a mental consciousness – come together. This means that, during a dream, a mental consciousness is produced by the coming together of an observed object condition, empowering condition, and immediate condition. In order for a mental consciousness in a dream to realize or perceive an object, these three conditions are necessary.

Lama Tsongkhapa's *Illumination* (Tibetan text page 245) says:

> Chandrakirti says:
>
> *Also the remaining triads, the ear and so forth, are not produced.* [6.52a]
>
> Just like these three, *also the remaining triads* [other than] the triad of the eye, that is, those of *the ear and so forth, are not* inherently *produced*.

The remaining triads, those of the ear, nose, and so forth, also do not exist inherently.

Lama Tsongkhapa's *Illumination* (Tibetan text page 245-6) says:

> Just as (i) the four, from the ear sense power through the body sense power; (ii) the four, from the sound sphere through the tangible object sphere; and (iii) the four, the ear consciousness and so forth – which are mentioned in [Chandrakirti's autocommentary] saying "Here the term 'and so forth' includes from sounds and ear consciousness through mentality, the phenomena constituent, and the mental consciousness" – are explained regarding the triad of the eye above, likewise, although they do not exist in a dream, due to their appearance [as inherently existent] they are false. Although the triad of mentality exists in a dream, it does not exist inherently, but likewise, due to appearing as that, it too is a falsity.

Here Lama Tsongkhapa elaborates on the meaning of the statement in Chandrakirti's autocommentary: "Here the term 'and so forth' includes from sounds and ear consciousness through mentality, the phenomena constituent, and the mental consciousness" [by setting out the remaining four objects, sense powers, and consciousnesses]. He then says: "Although the triad of mentality exists in a dream, it does not exist inherently." While the other five triads, that of the eye, ear, nose, tongue, and body, do not exist in a dream, the triad of mentality does exist in a dream, however, it does not exist inherently. Because it appears to exist inherently, it too is a falsity.

Lama Tsongkhapa's *Illumination* (Tibetan text page 246) says:

> Therefore, taking the existence of sense consciousnesses in a dream to be the system of this master and then refuting that is an extremely rough application of intelligence, due to which you are renowned as "the rising sun that refutes without the dawning of the former position." Therefore, those who have cast that far away, that is, some arrogant Tibetan scholars [who think] they are powerful mahasattvas skilled in such tenets, not understanding even roughly the system of those who are well known, consider [Acharya Chandrakirti] to be a field for continuously accumulating non-meritorious [actions] and appear to lead many sentient beings in the non-meritorious. Therefore, they should be careful!

Lama Tsongkhapa scolds those who think that Acharya Chandrakirti says that there exist sense consciousnesses in a dream and then refute him. He says that doing so is a sign that they are of little intelligence. "The rising sun that refutes without the dawning of the former position" likens such scholars to a sun that rises before the dawn, thereby, indicating that those who hold this position should abandon it. Lama Tsongkhapa says that those who hold this position deprecate Acharya Chandrakirti, due to which they continuously create non-meritorious actions and also lead others in the non-meritorious. Therefore, those who do so should be careful.

One text says:

> *It is not existent, it is not seen by the Conqueror,*
> *It is not non-existent, it is the basis of cyclic existence and nirvana.*

Some people say that all phenomena are not existent and not non-existent. At one time, there was the flourishing of this wrong view which is known as "the view of not existing, not non-existing." This wrong view flourished due to not understanding the meaning that although something does not exist inherently it does exist conventionally, "not existing" meaning not existing inherently, and "not non-existent" meaning not non-existent conventionally. We should be careful not to fall into this wrong view.

Wednesday morning, 11 October 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 246) says:

> Here in regard to such explanations by the Chittamatrins as "If, in a dream..." and so forth, our own system posits [as follows]. [As quoted in the autocommentary,] Acharya Bhavaviveka, when giving the answer that the example is not established, says:
>
> > BHAVAVIVEKA: Forms included in the phenomena sphere are objects apprehended by a mental consciousness. Since they exist in a dream, consciousness does not exist at all without an object.
> >
> > PRASANGIKA MADHYAMAKAS: That too is not suitable because the three are not possible in all ways in a dream.

The Chittamatrins say that in a dream there are no sense consciousnesses, only mental consciousness. When Acharya Bhavaviveka is quoted as giving the answer that the example is not established, it is not clear whether he is referring to the example set out by the Chittamatrins or that set out by the Prasangika Madhyamikas. However, he says: "Forms included in the phenomena sphere are objects apprehended by a mental consciousness. Since they exist in a dream, consciousness does not exist at all without an object." According to the Prasangika Madhyamikas "That too is not suitable because the three (object, sense power, and consciousness) are not possible in all ways in a dream."

In other words, Bhavaviveka (a Sautrantika Svatantrika Madhyamika) says that in a dream a phenomenon sphere, mental sense power, and mental consciousness exist. The Prasangika Madhyamikas respond that that too is incorrect, in that the three existing in a dream is not possible. When they say that "the three are not possible in all ways in a dream," they mean that the three cannot inherently exist in a dream.

In short, the Prasangika Madhyamikas say that the three, object, sense power, and consciousness, that exist inherently are not possible in all ways even in a dream. On the other hand, according to Bhavaviveka's system, [the Sautrantika Svatantrika Madhyamika], the triad, object, sense power, and consciousness, must exist inherently because if they did not exist inherently they would not exist at all.

Lama Tsongkhapa's *Illumination* (Tibetan text page 247) says:

> > However, when asserting in that way in order to dispel others' scriptural systems, at that time the example of a dream becomes meaningless because that which has a meaning that is not false cannot present the actual meaning that arises from that example as a false meaning.
>
> The meaning of [this passage from the autocommentary is as follows]. Because the three, object, sense power, and consciousness, that exist inherently are not possible in all ways even in a dream, when explaining the statement "Forms that are phenomena spheres, objects other than consciousness, are not suitable to exist in a dream," we must also assert forms. Since it is not contradictory for [forms] to exist even in a dream, the reason that they do not exist is due to Bhavaviveka clearly asserting that forms are established by way of their own character.

Bhavaviveka asserts forms are established by way of their own character; for the Prasangika Madhyamikas such forms do not exist.

Lama Tsongkhapa's *Illumination* (Tibetan text page 247) says:

> Supposing the Chittamatra system that forms included in external spheres do not exist as different objects [from consciousness] can be eliminated by positing a dream as an example. Therefore, in

> order to eliminate that [assertion], if [Bhavaviveka] asserts that those forms are established by way of their own character it is meaningless for the Madhyamikas to set out the example of a dream in order to establish the absence of true existence.

The Chittamatrins posit a dream as an example proving that external spheres are not different from consciousness. It seems here that Lama Tsongkhapa says "When they assert that those forms are established by way of their own character, it is meaningless for the Madhyamikas to set out the example of a dream in order to establish the absence of true existence" to Bhavaviveka who asserts that forms are established by way of their own character but are not truly existent and in order to prove this sets out the example of a dream. "Meaningless" refers to the fact that it is meaningless to present the example of a dream to the Chittamatrins.

Lama Tsongkhapa's *Illumination* (Tibetan text page 247) says:

> Dreams would have a meaning that is not false due to their being established by way of their own character. Therefore, in the context of this example it is not possible to establish [dream objects] as false, the real meaning indicated by this [example]. This is because as long as inherent existence is not negated, the sign and predicate in the proof of the absence of true existence do not follow from that example. Thus, our system's response above – that all the appearances in a dream do not inherently exist – is the very best.

If an example has a true meaning, how can it represent a false meaning? The Prasangika Madhyamikas say to Bhavaviveka: "This is because as long as inherent existence is not negated, the sign and predicate in the proof of the absence of true existence do not follow from that example." According to the Prasangika Madhyamikas it is not correct to negate true existence but not to negate inherent existence because for them they are the same. In this sense, no matter what syllogism is made in the proof of the absence of true existence, the forward pervasion would not be established. In other words, one also has to negate inherent existence because if something is inherently existent it cannot lack true existence. For example, if a syllogism is set out negating true existence and the example given is that of a dream, the forward pervasion is not established. In order to take a dream as an example what sign is necessary? In general, a dream is an example of what is not true.

In conclusion, "Thus, our system's response above – that all the appearances in a dream do not inherently exist – is the very best." In short, the answer given by Bhavaviveka is not correct because he accepts that a dream is inherently existent but does not exist truly. The Prasangika Madhyamikas say so because according to them true existence and inherent existence are mutually pervasive.

Lama Tsongkhapa's *Illumination* (Tibetan text page 247) says:

> QUESTION: Well then, does or does not our own system, [the Prasangika Madhyamika,] assert the clearly appearing forms of a dream to be forms that are a phenomena sphere?
> PRASANGIKA MADHYAMIKA'S RESPONSE: Since sense consciousnesses do not exist in a dream, what appears as the five objects appears to the mental consciousness alone. Although the five, the form sphere and so forth, are not present [in a dream], just as the clearly appearing skeletons in the perspective of mere mentality are posited as phenomena spheres, so too are they [posited as] forms that are phenomena spheres. Also, from among the five forms [that are phenomena spheres], they are imaginary forms. Therefore, understand that there are many such [forms].

Any appearance of form, sound, odor, taste, and tangible object in a dream is only an object of mental consciousness. These appearances in a dream are forms that are phenomena spheres, and specifically, from among the five types of forms that are phenomena sphere, they are imaginary or imputed forms.

Likewise, the clearly appearing skeletons in the perspective of mere mentality are posited as forms that are phenomena spheres; they too are imaginary or imputed forms.

Student: Do the Chittamatrins assert the five types of forms that are phenomena spheres?
Geshe Jampa Gyatso: The Chittamatrins do not assert them because they do not accept that vows are form, rather they say that they are mind. Only the Vaibhashikas and Prasangika Madhyamikas assert vows to be form. Lama Tsongkhapa's *Ocean of Vinaya* says: "Actions of body and speech caused by the motivation of renunciation are form. The intention to abandon them is constant and they have a seed. Regarding this assertion there are two: (1) that of the lower schools and that of our own system and (2) that of the higher schools."

Student: What are the five appearances of form, sound, and so forth to a dream consciousness for the Chittamatrins?
Geshe Jampa Gyatso: They are imputed existents. However, the Chittamatrins do discuss different types of forms as set out in Lama Tsongkhapa's *Essence of Eloquence*. In short, for the Chittamatra system the five types of forms that are phenomena spheres are not forms. These five types of forms are asserted by the Prasangika Madhyamikas.

In a dream there is the appearance of sound, for example, when one dreams of a group of people singing. This sound appears only to a mental consciousness, therefore, it is not an actual sound. In a dream when there is the appearance of a good odor, like that of the perfume called 'Samantabhadra water,' it too is not an actual odor. Such an odor is the appearance of an odor to a mental consciousness alone. Likewise, when one dreams of tasting pizza or other good food, the appearance of the taste of food appears only to a mental consciousness, it is not the real taste of food.

Student: Are those appearances permanent or impermanent?
Geshe Jampa Gyatso: They are impermanent because they are form; specifically, they are imaginary forms from among the five types of forms that are phenomena spheres.
Student: Therefore, they are not a meaning generality?
Geshe Jampa Gyatso: They are not. The Svatantrika Madhyamikas assert that a meaning generality is definitely permanent, whereas the Prasangika Madhyamikas might not agree with that. On the other hand, in the Vaibhashika system, the actual sound of the name 'Jampa Gendun' is sound, it is not name. For them a name is the appearance of Jampa Gendun that arises to a mental consciousness upon hearing the sound 'Jampa Gendun.' This name is not a form but a non-associated compositional factor. The Tibetan nomads say "Thirty people have thirty minds, and thirty yaks have sixty horns," meaning that thirty people each have a particular view or opinion. In the same way, the four schools each have particular views.

The main point in this entire discussion is:
- the Chittamatrins assert that external objects do not exist and that consciousness inherently exist;
- the Prasangika Madhyamikas assert the existence of external objects and that the consciousness does not inherently exist; and
- Bhavaviveka (a Svatantrika Madhyamika) asserts that external objects exist and that objects exist inherently but do not exist truly.

Thus, the Svatantrika Madhyamikas and Prasangika Madhyamikas both assert the existence of external forms, but differ in asserting respectively that external forms are inherently existent and that external forms are not inherently existent. Chandrakirti says that his system is the best, whereas Bhavaviveka says that his system is the best. The Chittamatrins, on the other hand, would assert that

Chandrakirti has fallen into the extreme of annihilation. We should use our own intelligence to discriminate which system is the best.

Wednesday afternoon, 11 October 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 247) says:

> 3B1C-2B3E-2A1B-2B2A-2A1A-3 The example of a dream establishes all things as false

Chandrakirti's autocommentary (Tibetan text page 91) says:

> Because all three are also untrue in a dream, therefore, because the unestablished is proved by means of the fully established, even at the time of waking, all phenomena would be proved as just non-inherently existent. It is explained:
>
> *As a dream, likewise, awake also here*
> *Things are false. The mind does not exist,*
> *There are no objects of experience and also no senses.* [6.52bcd]

By understanding that the three, the object of a dream, the sense power of a dream, and the consciousness of a dream, do not exist truly, one should also understand that the three also do not exist truly when awake. To prove this Chandrakirti's *Supplement* says that just as the object, sense power, and consciousness of a dream are false, similarly, they do not exist truly or inherently when awake. "There are no objects of experience and also no senses" means that there are no inherently existent objects of experience and no inherently existent sense powers when awake.

Chandrakirti's autocommentary says:

> Just as objects, senses, and consciousnesses are false during a dream; similarly, it should be understood "they are also [false] when awake."

A dream is taken as an example, which is then to be applied to the waking state. Hence, just as objects and so forth are false in a dream so too are they false when awake in the sense that they do not exist inherently.

Chandrakirti's autocommentary says:

> Therefore, it is stated [in sutra]:
>
> Just like observing illusory sentient beings,
> So too, although appearing, they are not real in suchness.
> Illusion-like, similar to a dream –
> Such phenomena were taught by the Sugata.

When illusory sentient beings are emanated by a magician they appear to be actual beautiful women, horses, and so forth, but are falsities because they do not exist as they appear. This is similar to the case of a dream.

Chandrakirti's autocommentary says:

> Similarly, [the *King of Meditative Stabilization Sutra*] says:
>
> > The migrators of existence are dream-like –
> > Whoever is in it is not born, does not have death –
> > Nor are name and life of sentient beings found;
> > These phenomena are like bubbles and plantain trees.
>
> Such statements as these and so forth will also be excellently explained.

The Buddha taught that the migrating beings of cyclic existence are like dreams in that they are not inherently born and do not inherently die. Nor is an inherently existent name or an inherently existent life of sentient beings found to exist. Therefore, such phenomena are like water bubbles and banana trees in the sense of being essenceless. A banana tree is taken as an example of something that is essenceless because when its layers are pealed away no essence is found; similarly, when all phenomena are searched for they are not found. Likewise, although a water bubble appears to be solid, when touched it immediately disappears. This will be well explained later on.

Chandrakirti's autocommentary says:

> Therefore, having relied on waking consciousness, it is explained that also all three are not produced. Having relied on dreaming consciousness in a dream means:
>
> > *Here, just as awake, likewise, as long as*
> > *Not awake, that long the three exist for that.* [6.53ab]

Just as is the case in a dream, so too when awake are the three not inherently produced. As long as one is awake there do not exist the objects, sense powers, and consciousnesses of a dream, whereas when asleep these three do exist for the dream consciousness.

Chandrakirti's autocommentary says:

> Just as, although the sleep of unknowing exists, for someone awake due to separating from sleep that is different than that, while the sleep of ignorance has a dream, all three again exist with such a nature although not produced by their own essential nature. Similarly, also for those not arisen from a dream situation, that is, not separated from sleep, the three also exist with a nature like that.

Although awake, due to ignorance it is as if one is asleep. Due to this sleep, it appears that objects, sense powers, and consciousnesses exist inherently. When one awakes from sleep the objects, sense powers, and consciousnesses of a dream do not exist, likewise, when one awakes from the sleep of ignorance inherently existent objects, inherently existent sense powers, and inherently existent consciousnesses do not exist.

Chandrakirti's autocommentary says:

> > *As the three do not exist when one is awake,*
> > *That is similar through waking from the sleep of confusion.* [6.53cd]
>
> Just as for one who is awake due to the ceasing of sleep, the three observed in a dream do not exist; similarly, also for those who eradicated entirely the sleep of ignorance, manifesting the sphere of dharma, since the three do not exist, consciousness without an external object does not exist.

For one who has awakened from the sleep of ignorance there is no conception that objects, sense powers, and consciousness exist inherently. In short, the Prasangika Madhyamika system is that a consciousness without an external object does not exist.

Lama Tsongkhapa's *Illumination* (Tibetan text page 247), in relation to the outline "The example of a dream establishes all things as false" says:

> [Chandrakirti's autocommentary] says
>
> > The three that appear as objects, sense powers, and consciousnesses in a dream are not true. Therefore, in order to prove other phenomena that are not [yet] established to be non-truly existent through thoroughly establishing a dream to be non-truly existent, it is proved that even when awake all phenomena are just not inherently existent. This is explained [as follows]:
> >
> > *Just like dreams, likewise, also here when awake,*
> > *Things are false. The mind does not exist,*
> > *Objects do not exist, and the sense powers also do not exist.* [6.52bcd]
>
> *Just as* the objects, sense powers, and consciousnesses of *dreams* are false, *likewise, also here* on the occasion of being *awake things are false*. Therefore, *the mind does not exist* inherently. Similarly, *the objects* of the sense powers, forms and so forth, *do not exist* [inherently] *and the sense powers are also not* inherently produced.

Just as the objects, sense powers, and consciousnesses of a dream are not true, likewise, they are not true when awake in the sense that they are false because they do not exist inherently. "True" means that an object's mode of abiding and mode of appearing are concordant, whereas "false" means that its mode of abiding and mode of appearing are discordant. In the perspective of what are the mode of abiding and the mode of appearing concordant? They are concordant with respect to their main object-possessor, a superior's exalted wisdom of meditative equipoise. This being the reference point, it can be said that in the perspective of a superior's exalted wisdom of meditative equipoise the mode of abiding and the mode of appearing of ultimate truth are concordant. On the other hand, the two modes of a table are not concordant with respect to its principal object-possessor, an eye consciousness. These two modes are not concordant for an eye consciousness because the table appears to exist inherently (its appearing mode) but does not exist inherently (its mode of abiding).

Student: Why does a table appear as truly existent to an eye consciousness?
Geshe Jampa Gyatso: It just appears like that! A table appears to be truly existent to an eye consciousness due to the latencies of ignorance in our continuum. To us, the table appears to be solid and concrete, without changing from day to day and moment to moment.
Student: But the eye consciousness does not ascertain that appearance?
Geshe Jampa Gyatso: It does not ascertain it. A table appears to be truly existent to an eye consciousness, but an eye consciousness does not ascertain it to be truly existent.
Student: So the identification of the object of negation is made by the mental consciousness alone?
Geshe Jampa Gyatso: It is.
Student: Because it requires thought?
Geshe Jampa Gyatso: That is right. A sense consciousness is not able to recognize it. However, in the Prasangika Madhyamika system it is said that the object of negation appears to a sense consciousness. On the other hand, the Yogachara Svatantrika Madhyamikas say that an object of negation does not appear to a sense consciousness.

Student: Does the eye consciousness see the object as cut off and at a distance?
Geshe Jampa Gyatso: According to the Prasangika Madhyamika system, the eye consciousness sees the object as cut off and at a distance. According to the Yogachara Svatantrika Madhyamika system, the object of negation, true existence, does not appear to a sense consciousness, whereas according to the Prasangika Madhyamika system it does appear to it. My own opinion is that, when the Prasangika Madhyamikas say that true existence appears to a sense consciousness, this is the measure of the establishment of true existence. According to the Svatantrika Madhyamika system that measure of establishment of true existence also appears to a sense consciousness. The difference is that the measure of establishment of true existence is an object of negation for the Prasangika Madhyamika system but is not an object of negation for the Svatantrika Madhyamika system. This is what appears to an eye consciousness. In other words, a table appearing to exist from its own side is the object of negation for the Prasangika Madhyamikas, but not for the Svatantrika Madhyamikas. The measure of true existence that is posited by the Svatantrika Madhyamika system does not appear to the eye consciousness according to the Prasangika Madhyamikas. Why? The measure of true existence posited by the Svatantrika Madhyamikas is: that which exists by its own uncommon mode of subsistence without being posited by the force of appearing to a non-defective awareness. This does not appear to an eye consciousness according to the Prasangika Madhyamika system. This is my own thought on the matter.

When we conceive something to be truly existent, we conceive it to be independent. Sometimes there is only the appearance of true existence but no conception of it, sometimes there is both the appearance and conception of true existence. For example, in the case of the conception of true existence of a table there is both the appearance of true existence and the conception of true existence. On the other hand, an inferential valid cognizer realizing the table to be non-truly existent has the appearance of true existence of the table but does not conceive it to be truly existent, rather it conceives it to be non-truly existent.

There are different types of thoughts, for example, correct assumption, inferential cognition, and subsequent cognition. Thought that reflects on something is necessarily one of these three. The sense consciousnesses do not think and analyze; they do not conceive. The sense consciousnesses merely have appearance but do not think about and analyze it. For example, no one would say "My eye consciousness thinks such-and-such." When we say "I think" this is definitely a function of a mental consciousness.

Student: In the transcript of 3-7 July 2000, Geshe-la is quoted as saying "Ordinary beings absorbed in meditative equipoise do not have the appearance of true existence, but in subsequent attainment they have the appearance of true existence."
Geshe Jampa Gyatso: When it is said that the appearance of true existence does not appear to ordinary beings absorbed in meditative equipoise we can talk about either (i) the appearance *to the mind of the person* absorbed in meditative equipoise and (ii) the appearance *to the person* absorbed in meditative equipoise. In this case, which one is it? While an ordinary being is absorbed in the exalted wisdom of meditative equipoise on the reality of a pot, there is no appearance of pot to his exalted wisdom. However, that ordinary being's exalted wisdom of meditative equipoise on the reality of the pot is a conceptual consciousness. Since it is conceptual, it is a mistaken consciousness. With respect to what is it mistaken? It is not mistaken with respect to its object of the mode of apprehension. Is it mistaken with respect to its appearing object? Is it not a valid cognizer with respect to its appearance? In the Prasangika Madhyamika system all valid cognizers are pervaded by being a valid cognizer with respect to their appearance. If a consciousness is a valid cognizer with respect to its appearance, it cannot be mistaken with respect to its appearance. Think about this.

Since the exalted wisdom of an ordinary being is a conceptual consciousness, it has the appearance of the object of negation, true existence. Since there is the appearance of the object of

negation, there is the appearance of true existence. Therefore, it is not correct to say that there is no appearance of true existence to an ordinary being's exalted wisdom of meditative equipoise absorbed on reality. Is an exalted wisdom conceptual or non-conceptual?
Student: It is non-conceptual.
Geshe Jampa Gyatso: It would follow that an ordinary being does not have exalted wisdom. In short, the mind of an ordinary being only has a conceptual realization of reality (however, this conceptual realization is an exalted wisdom).

Thursday morning, 12 October 2000

With respect to the subject under discussion, Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B1A-6C5A-1A2B-2A2A-1A3 It proves all functional things are false

As in the dream state, even here awake
All things are false. That mind does not exist,
There are no objects, nor do the senses exist. [6.52bcd]

You should understand that those minds do not inherently exist, the objects do not inherently exist, and the senses do not inherently exist. For, as in the dream, so also in this state of wakefulness, functional things are false.

Just as for a waker here, as long
As he is not awake, the three exist,
And when he awakes, the three do not exist.
So waking from the sleep of delusion's the same. [6.53]

It is not to be admitted that external objects do not exist and consciousness exists. For just as in this world, the way the three things exist for one waking from ordinary sleep – as long as he has not awoken from ordinary sleep, for the consciousness of that person there are the three things, but if he wakes up there are not the three things – so similarly, for the person who has awoken from the sleep of delusion, and perceives absolute reality as it is, these two, object and knower, are both non-existent.

Lama Tsongkhapa's *Illumination* (Tibetan text page 248) says:

[Chandrakirti's autocommentary] says:

Therefore, sutra says:

Just like observing illusory sentient beings,
Even though they appear, in thusness they are not real.
The illusion-like and dream-like –
The Sugata taught such phenomena.

And:

The migrating beings of existence are like dreams;
One in [cyclic existence] is not born, does not die,
Nor are the name and life of sentient beings found;
These phenomena are like bubbles and plantain trees.

These statements and others will be well explained.

> That no one dies and so forth is to be affixed, like qualifying the object of negation saying "In suchness they are not real." [Chandrakirti says that] it will be well explained that the explanation in these sutras, by means of the example of a dream, that all phenomena are not established in suchness is acceptable to the Madhyamikas, but not to the Chittamatrins.

The explanation that all phenomena are not established in suchness is acceptable to the Madhyamikas but not to the Chittamatrins. In the first verse cited above from sutra, the Buddha says that phenomena are like illusions and dreams, whereas in the second he says that they are like bubbles and plantain trees, as well as like dreams. In short, these examples indicate that there is no inherently existent production. When the sutra says "Nor are the name and life of sentient beings found" it means "Nor are an inherently existent name and an inherently existent life of sentient beings found." All phenomena are essenceless like plantain trees in that when they are searched for they are not found, just as when the layers of a plantain tree are pealed away no essence is found. These examples from sutra are acceptable to the Madhyamikas, but not to the Chittamatrins.

Lama Tsongkhapa's *Illumination* (Tibetan text page 248) says:

> Chandrakirti says:
>
> > *Here, just as for the awakened, likewise, as long as*
> > *They have not awakened, until then the three exist for them.*
> > *Just as all three no longer exist when awake,*
> > *It is the same for them through waking from the sleep of ignorance.* [6.53]
>
> Therefore, although there also exists the sleep of unknowing *here* in this world, *for* the few *awakened*, who are free from the ordinary sleep which is different from that, all three exist in the perspective of that observed by those dreaming a dream due to the sleep of ignorance, even though they are not produced by their own nature. *Likewise*, also *as long as* those who have *not awakened*, that is, those who are not free from sleep, *until then for them*, that is, in their perspective, *the three*, objects, sense powers, and consciousnesses, also *exist*. *Just as all three* of a dream *no longer exist when awake*, similarly, for the buddhas *who* have actualized the sphere of phenomena *through extinguishing the sleep of ignorance*, that is, banishing it without exception, all three do not exist. Therefore, there does not exist consciousness that does not have external objects.

The Chittamatrins say that there are no external objects but that consciousness is inherently existent. On the contrary, the Prasangikas say that there exist external objects and that consciousness does not exist inherently.

For a buddha who has completely eradicated ignorance, there is no appearance of true existence. In other words, he does not have mistaken appearance. When ordinary beings sleep they dream of many things. As long as they remain asleep, the objects of a dream, the sense powers of a dream, and the consciousness of a dream exist, but when they awake these three no longer exist.

Lama Tsongkhapa's *Illumination* (Tibetan text page 249) says:

> Furthermore, in the perspective of a seer of modes there is no appearance of the three, whereas in the perspective of a seer of varieties, even though object-possessors do not appear [to a buddha] through the force of being polluted by the latencies of his own ignorance, those that appear through the force of the polluted consciousness of other persons are known by a buddha through appearing to him by way of appearing to [a seer of varieties].

A buddha does not have mistaken appearances but, because ordinary beings have mistaken appearances due to their latencies, they appear to him. This is because there is nothing that is not realized by a buddha, therefore, whatever is perceived by the minds of ordinary beings is also

perceived by a buddha. Ordinary beings have the latencies of true existence due to which phenomena appear to them as truly existent. This mistaken appearance is an existent and is therefore seen by the mind of a buddha. Thus, although a buddha himself does not have mistaken appearance, because he realizes all phenomena they do appear to him. Are there unpleasant tastes in the world? Do unpleasant tastes appear to a buddha? If it is an established base does it not necessarily appear to the eye consciousness of a buddha? If someone says all consciousnesses in a buddha's continuum are omniscient mind then it follows that a buddha's eye consciousness also perceives this unpleasant taste, as well as sounds, odors, etc. On the other hand, if someone does not accept that all consciousnesses in a buddha's continuum are omniscient mind then it follows that the sense consciousnesses of a buddha are not omniscient mind. This second position is that of Panchen Sonam Drakpa, whereas the first is that of Jedzun Chogyi Gyeltshen.

Student: Does the taste or the appearance of the taste to sentient beings appear to a buddha's mind?
Geshe Jampa Gyatso: The taste itself.

There is a story about Jangkya Rolpe Dorje, a Tibetan Buddhist master of the past, who toward the end of his life became blind and was unable to read texts with his eyes. However, he was able to read them by passing his index finger over the words. Someone asked him: "If your eye consciousness does not see, how can your finger see?" He responded saying that he had this capacity because earlier on in his life he had propounded that if it is a sense consciousness in the continuum of a buddha it is pervaded by being omniscient mind and that its fruitional result was that his body consciousness was now able to see.

Mistaken appearances are known by a buddha because they exist for ordinary beings. In the eighth chapter of the *Ornament for Clear Realizations* it says that to a buddha's tongue even a bad taste appears to be good taste. There is a story about Shakyamuni Buddha who, one day when he was begging for alms, was offered the dregs of wine by a family. Although one of his disciples, Nanda, pleaded with the Buddha to not eat it, he ate what had been offered in his alms bowl saying that it was delicious. Then, in order to prove this, he took a tiny piece from between his teeth and gave it to Nanda to try. Nanda discovered that it was completely delicious and asked for more! The reason that the Buddha has the experience of good taste from that which would usually have a bad taste is that he has completed the two collections and purified the two obstructions.

Lama Tsongkhapa's *Illumination* (Tibetan text page 249) says:

> 3B1C-2B3E-2A1B-2B2A-2A1B Refuting the example of seeing falling hair

Chandrakirti's autocommentary (Tibetan text page 92) says:

> If said: Well then, because those with cataracts observe falling hair and so forth that do not exist, consciousness exists even without external [objects]. That is not admissible either.

The Chittamatrins posit that although falling hair does not exist it is seen by some, those with cataracts. It appears that the Chittamatrins say that although falling hair does not exist there is a consciousness that sees falling hair. Taking this as an example, they say that, although there do not exist external objects, consciousness exists inherently. In other words, the Chittamatrins say that there do not exist external objects and that consciousness exists inherently just like, although falling hair does not exist, there is a consciousness to which they appear. The Prasangika Madhyamikas say: "That is not admissible either."

Chandrakirti's autocommentary says:

> If asked: Why?
>
> *Due to a sense with cataracts, whatever awareness*
> *Sees whatever hairs through the strength of the cataract,*
> *Relative to their awareness, the two are true – yet,*
> *For one seeing objects clearly, both are also false.* [6.54]
>
> They are to be viewed as only a dream. Having relied on sight of one with cataracts, the aspect of falling hairs also exists. Having relied on one without cataracts, neither are produced, because of the difficulty in ascertaining consciousness without an object.

To those with cataracts there is the appearance of falling hair; for them both falling hair and the eye consciousness to which they appear are true, due to which they affirm, "I see falling hair." For them they are true because they do see falling hair in dependence on their eyes having cataracts. On the other hand, "For one seeing objects clearly, both are also false," meaning that for those without cataracts both falling hair and the eye consciousness to which they appear are false. This eye consciousness and the form that appears to it are false for the person who sees clearly because they are conventional truths.

In short, for a person with cataracts the falling hair and the eye consciousness to which they appear are true, whereas for those without cataracts they are both false. For someone without cataracts there is no falling hair and no eye consciousness to which they appear; for this person both the object and the object-possessor are not produced. This is because an object-possessor cannot be posited without an object.

Chandrakirti's autocommentary says:

> This must be accepted without doubt, since, if not like that:
>
> *If awareness existed without an object of knowledge,*
> *Also for one without cataracts whose eyes contact that*
> *Hair's location, there would be awareness of falling hairs,*
> *[But] it is not like that. Therefore, that does not exist.* [6.55]
>
> If, for one with cataracts, a consciousness having the aspect of falling hair is produced without falling hair, awareness of falling hair like that would exist also for one without cataracts who directed the eye there to wherever place the one with cataracts saw falling hair. Therefore, the statement "consciousness is produced without an object" is illogical, because of similarity in terms of the object not existing.

If falling hair were true, it should also be true for a person without cataracts. If that were the case, then, when someone without cataracts directs his eye consciousness to the place of falling hair he should see falling hair but he does not. In other words, if falling hair exists inherently, it should be seen by those without cataracts. This is because those with cataracts and those without cataracts are similar in terms of the object not existing.

Lama Tsongkhapa's *Illumination* (Tibetan text page 249) says:

> CHITTAMATRINS: Because those with cataracts observe falling hair and so forth which do not exist, consciousness is inherently existent even though external [objects] do not exist.

PRASANGIKA MADHYAMIKAS: That too is unjustifiable. Why is that?

Any awareness of a sense power that has cataracts
Sees hair through the force of those cataracts.
Relative to that awareness both are true;
For those who clearly see objects both are false. [6.54]

When *any awareness* of an eye *sense power that has cataracts sees* falling *hair through the force of those cataracts*, *relative to* the sight of *the awareness of that* person *both* the eye consciousness and the aspect of falling hairs, that is, the object that appears as falling hair, exist, whereas relative *to those who clearly see objects*, that is, those who see with eyes that lack cataracts, *both* the appearance of falling hair and the consciousness to which they appear *are false*, that is, they are not produced. This is because it is difficult to ascertain consciousness exists without even an object that is a mere appearance. This must be unquestionably, definitely asserted in this way.

[For those without cataracts] the eye consciousness of a person with cataracts and the falling hair that appear to it are both false.

Lama Tsongkhapa's *Illumination* (Tibetan text page 249-50) says:

If there exists awareness without an object of knowledge,
Also for those without cataracts who direct their eyes
To the location of that hair there would be an awareness of falling hair.
Therefore, this not being the case, it does not exist. [6.55]

Otherwise, that is, *if* for those with cataracts *there exists* the production of an inherently existent *awareness* that has the aspect of falling hair *without* falling hair, *the object of knowledge*, *also for those without cataracts who direct their eyes to*, that is, who focus their eyes on, *the location* where falling *hair* is seen by those with cataracts, *there would be* the production of *an awareness* that sees *falling hair*, like there is for those with cataracts, because they are similar in terms of the object not existing.

If it is produced from an inherently existent other, it implies that it is produced from everything that is other. Similarly, if an inherently existent consciousness is produced, given that [those with cataracts and those without cataracts] are the same in terms of the object – falling hair – not existing, it would not be justifiable for the sight of [falling hair] to be produced in those with cataracts but for the sight of [falling hair] to not be produced in those without cataracts. This is because the consciousness would become unrelated since [an awareness of falling hair] would be able to come to the fore without depending on cataracts. *Therefore*, *it not being the case* that an awareness that has the appearance of falling hair is produced for those without cataracts, an inherently existent consciousness without external [objects] *does not exist*.

With respect to this section Gyelwa Gendun Drup's *Mirror of the Clarification of the Thought,* as translated by Martin Willson*,* says:

3B1A-6C5A-1A2B-2A2A-1B Refuting the example of seeing falling hair

If you say, "awareness of the appearance of hair falling down is an example of consciousness inherently existing without external object," then:

The mind affected by distorted sight,
And the hair which it sees, due to that fault,
Are, in relation to that mind, both true.
But for one who sees objects clearly, both are false. [6.54]

It follows it is not, for the awareness with distorted vision which [sees], and the falling hair from the effect of the distortion which [is seen] – with respect to the awareness of that seer, the eye

consciousness and the falling hair are true; while with respect to one who sees objects clearly, both those are false.

If the awareness existed without what is known,
Then, when his eye contacted the place of that hair,
Even one lacking distortion would have that awareness
Of hair, which is not so, therefore it does not exist. [6.55]

It follows that without the falling hair existing, that awareness of the appearance of hair falling down does not exist inherently. For if, without the object of knowledge, the falling hair, existing, the awareness of the appearance of hair falling existed inherently; then in one who did not have distorted sight whose eye met the object of that perceiver of falling hair, awareness of the appearance of hair falling would also arise; which is not the case.

In brief, the Chittamatrins posit the example of falling hair as proof that external objects do not exist and that consciousness exists inherently. The Prasangikas say that this is not admissible.

Thursday afternoon, 12 October 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 250) says:

3B1C-2B3E-2A1B-2B2A-2A2 Refuting the meaning that a consciousness that is empty of objects is produced from the potential of latencies

- A Refuting that a consciousness to which an object appears is produced and not produced from the ripening and non-ripening of latencies
- B Once again refuting the way of stating the existence of consciousness without external objects
- C Indicating that the refutation of the Chittamatra system is without harm from the scriptures

3B1C-2B3E-2A1B-2B2A-2A2A Refuting that a consciousness to which an object appears is produced and not produced from the ripening and non-ripening of latencies

1. Stating the other system
2. Refuting that system

3B1C-2B3E-2A1B-2B2A-2A2A-1 Stating the other system

Chandrakirti's autocommentary says:

It is mentioned: Here, if the very existence of an object is the cause of generating consciousness, it would be like that. If asked: Why? The ripening and non-ripening of previously deposited imprints of consciousness are the causes of generating and not generating consciousness. Therefore, whoever has matured imprints that were deposited by another consciousness bearing the aspect of hair, in only he will a consciousness arise that bears the aspect of that. It will not [arise] in others.

[The root text] explains that, "This is also unsuitable":

Since those who see, lack the ripened potential
Of awareness, therefore, for them awareness does not arise.
Not due to absence of an existent thing – a knowable object. [6.56abc]

If the existence of the appearance of falling hair were the cause of producing a consciousness having the appearance of falling hair, then it would follow that falling hair should also appear to someone without cataracts. Why? Chandrakirti says: "The ripening and non-ripening of previously deposited imprints of consciousness are the causes of generating and not generating consciousness." If a

previously deposited latency ripens then consciousness will be produced, whereas if one does not ripen consciousness will not be produced. Chandrakirti says: "Therefore, whoever has matured imprints that were deposited by another consciousness bearing the aspect of hair, in only he will a consciousness arise that bears the aspect of that." The Chittamatrins say that only in someone who has the latency of the aspect of falling hair will a consciousness having that aspect arise. This is because a consciousness is produced only in dependence on the ripening of a latency. For this reason a consciousness having the aspect of falling hair does not arise in everyone. Or else it can be said that to those who are free from falling hair there is no appearance of such. Regarding this Chandrakirti says: "It will not [arise] in others."

In those who do not have cataracts there is no production of an awareness having the appearance of falling hair. Those having the appearance of falling hair do not have a consciousness free of falling hair. In this context, 'knowable object' (object of knowledge) refers to falling hair. For those who are free from falling hair there is no production of a consciousness having the appearance of falling hair. This is what the Chittamatrins assert, but it will be refuted by the Prasangika Madhyamikas.

Lama Tsongkhapa's *Illumination* (Tibetan text page 250) says:

> CHITTAMATRINS:
>
> > *"Therefore, for those who see, there is no ripening of potentials for an awareness.*
> > *Because of that, for them there is no awareness;*
> > *It is not due to the absence of a thing existing as an object of knowledge."* [6.56abc]
>
> If the very existence of an object such as falling hair, which appears to be falling hair, were the cause for the production of consciousness there would be the appearance of falling hair also to those without cataracts, but there is not. Why is that? [Because] the ripening and non-ripening of previously deposited latencies that produce consciousness are the cause for the production and non-production of consciousness. Therefore, a consciousness having the aspect of falling hair arises only for a person who has the ripening of latencies deposited by another previous consciousness having the aspect of hair. *Therefore*, *for those* without cataracts, those *who see* objects, *there is no ripening of potentials*, that is, latencies, *for an awareness* to which falling hair appears. *Because of that, for those* without cataracts an *awareness* that sees falling hair *is not* produced; *it is not* that that awareness is not produced *due to the absence of a thing that exists as* falling hair, that is, as *an object of knowledge*.

The Chittamatrins say that a consciousness having the appearance of falling hair is produced only when latencies for the appearance of falling hair ripen. Therefore, if latencies for the appearance of falling hair do not ripen there is no such production of consciousness. Is the consciousness to which there is the appearance of falling hair a mistaken consciousness? It is a mistaken consciousness. Is it conceptual or non-conceptual? Does falling hair appear to the eye consciousness alone or also to a conceptual consciousness?

Student: It would seem like something, perhaps a meaning generality, appears to a conceptual consciousness, but the falling hair does not appear to it.

Geshe Jampa Gyatso: How does a meaning generality appear to a conceptual consciousness?

Student: There is the appearance of falling hair to eye consciousness and the appearance of a meaning generality of falling hair to conceptual consciousness.

Geshe Jampa Gyatso: Are you saying that actual falling hair appears to an eye consciousness and then, in dependence on that, there is a conception thinking, "I see falling hair"?

Student 2: I would agree with that.

Geshe Jampa Gyatso: Is the sense consciousness that has the appearance of falling hair a mistaken consciousness? Is it not a wrong consciousness?

Student: It is not a wrong consciousness, it is only mistaken.
Geshe Jampa Gyatso: Why is it not wrong?
Student: Because it perceives its appearing object.
Geshe Jampa Gyatso: Kor sum! It follows that if it is a sense consciousness it is pervaded by not being a wrong consciousness.
Student: I was mistaken.
Geshe Jampa Gyatso: Therefore, it is a wrong consciousness. Then, an eye consciousness having the appearance of falling hair is not mistaken with respect to its appearance but is mistaken with respect to its appearing object? Is there a difference between the object of the mode of apprehension and the appearing object of an eye consciousness having the appearance of falling hair?
Student: There is a difference.
Geshe Jampa Gyatso: What is the difference? In other words, what is the object of the mode of apprehension of an eye consciousness having the appearance of falling hair? What is the appearing object of an eye consciousness having the appearance of falling hair?
Student: For the eye consciousness there is no difference, but for the mental consciousness there is a difference.
Geshe Jampa Gyatso: Think about it. These objects are defined in *Awarenesses and Knowers*. What do you think about it?
Student: An eye consciousness having the appearance of falling hair does not have an object of engagement and, therefore, does not have object of the mode of apprehension, but it does have an appearing object.
Geshe Jampa Gyatso: What is the appearing object?
Student: The appearance of falling hair.
Geshe Jampa Gyatso: The object of the mode of apprehension should be falling hair, but the falling hair does not exist. What is the definition of a wrong consciousness?
Student: The Svatantrika Madhyamika definition of a wrong consciousness is: a knower that engages its object perversely.
Geshe Jampa Gyatso: Jedzun Chogyi Gyeltshen's *General Meaning* (Tibetan text page 236-8) says:

> The [Prasangika Madhyamika] definition of a wrong consciousness is: an awareness where there exists a valid cognizer in contradiction with its mode of apprehension.

This concludes the outline stating the Chittamatra system. Now this will be refuted.

Lama Tsongkhapa's *Illumination* (Tibetan text page 251) says:

3B1C-2B3E-2A1B-2B2A-2A2A-2 Refuting that system

- A Refuting inherently existent potentials for present [entities]
- B Refuting inherently existent potentials of future [entities]
- C Refuting inherently existent potentials for past [entities]

3B1C-2B3E-2A1B-2B2A-2A2A-2A Refuting inherently existent potentials for present [entities]

Chandrakirti's autocommentary says:

> *Since that potential does not exist, this is not proved.* [6.56d]
>
> "Absence of an existent thing – a knowable object" means "a knowable object does not exist." If 'potential' alone existed, then, in ripening and not ripening that, a consciousness would arise and not arise. Therefore, this is not proved.

"Since that potential does not exist" means "since an inherently existent potential does not exist." Since there is no potential that exists inherently, it cannot be proven that a result arises from it. Chandrakirti's *Supplement* (v. 6.56c) says: "absence of an existent thing – a knowable object." It cannot be proven that there is an inherently existent potential for a present [entity] because the present [entity] itself cannot be proven to exist inherently.

Similarly, "if 'potential' alone existed" means "If 'potential' alone existed inherently." Chandrakirti says: "then, in ripening and not ripening that, a consciousness would arise and not arise. Therefore, this is not proved." The existence of a potential that is inherently existent cannot be proved.

Chandrakirti's autocommentary says:

> Further, if asked: Why does a potential not exist? It is explained:
>
> *Potential for the produced is impossible.*
> *Nor does an unproduced entity have a potential.* [6.57ab]
>
> Here, if this potential were fully investigated, it would be supposed to have a relationship with present consciousness or to have a relationship with past or future consciousness.

Here the question is: "Why does a potential not exist inherently?" Chandrakirti says: "Potential for the produced is impossible." This means a potential for that which is inherently produced is impossible. Chandrakirti says: "Nor does an unproduced entity have a potential." This means that an entity that is not produced does not have a potential that produces it. When such a potential is investigated is it found to be related to a present consciousness, a past consciousness, or a future consciousness?

Chandrakirti's autocommentary says:

> There, a potential is not possible for a consciousness produced at present, [for], when there is the sixth [case, i.e., the genitive case] – "of a potential" – at that time, it is unsuitable to say that consciousness – being the entity of the effect – exists also as the very cause. If it did, the effect would have no cause and even if a sprout was born, the seed would not be destroyed. Therefore, potential for the consciousness produced [at present] is impossible.

According to the Chittamatrins there is an inherently existent potential for a consciousness that is produced in the present, whereas Prasangika Madhyamikas say that this is not possible, given that an inherently existent potential in the present is not possible.

An example of the genitive, or connective, case is "A potential of a consciousness." Here in the context of the present, there is no inherently existent potential that produces a consciousness. If the Chittamatrins say that there exists such a potential this would be incorrect.

Friday morning, 13 October 2000

Chandrakirti's autocommentary says:

> When there is the fifth [case, i.e., the ablative case] – "from a potential" – at that time, it is unsuitable for a produced consciousness to arise from a potential "because [the effect] exists," as was already explained before. Thus, a potential for that produced in the present is impossible.

[Inherently existent potentials for the present] are not justifiable in the context of either applying the connective, or genitive, or originative, or ablative, case. The eight cases are:
1. nominative
2. objective
3. agentive
4. purposive/beneficial
5. originative or ablative
6. genitive or connective
7. locative
8. vocative

In both Sanskrit and Tibetan grammar there are either seven or eight cases. Each of the seven cases, those excluding the vocative, are each further divided into three: the singular, dual, and plural, which are indicated by specific particles that are added to the noun. The originative case shows the origin of something, for example, crops from a field, oil from olives, and milk from a cow. Here the Prasangika Madhyamikas' argument is that in the context of the originative case inherently existent potentials in the present are not possible. The statement "potential for that produced in the present is impossible" means "an inherently existent potential for that produced in the present is impossible."

Lama Tsongkhapa's *Illumination* (Tibetan text page 251) says:

> PRASANGIKA MADHYAMIKAS:
>
> *Since potentials do not exist, they are not established.* [6.56d]
>
> If "potentials" exist inherently, then, even if it were justifiable for consciousness to arise and not arise from the ripening and non-ripening of those potentials, *since* established by way of their own entity *potentials do not exist they are not established*.

If potentials existed inherently then stating that from their ripening or non-ripening arises or does not arise a consciousness would be justifiable, but since such potentials do not exist this is not justifiable. A result does not arise from an inherently existent potential.

Lama Tsongkhapa's *Illumination* (Tibetan text page 251) says:

> Why are they not established?
>
> *A potential for that produced is impossible.*
> *There also does not exist a potential for an unproduced entity.* [6.57ab]
>
> When potentials are conceived, they are counted as either having a relationship with a present consciousness or a relationship with a past consciousness or a future consciousness. An established by way of its own entity *potential for that produced* in the time being, that is, for a present [phenomenon], *is impossible*. *There also does not exist a potential for an unproduced*, that is, a future, *entity*.

When potentials are investigated they should be found to have a relationship with a present consciousness, a relationship with a past consciousness, or a relationship with a future consciousness. Inherently existent potentials having a relationship with a present consciousness is impossible. Likewise, it is also established that there are no inherently existent potentials for past [consciousnesses] or inherently existent potentials for future [consciousnesses].

Lama Tsongkhapa's *Illumination* (Tibetan text page 251) says:

> If a potential for a present consciousness is asserted, both the consciousness and the potential would exist at the same time. When, with respect to the two, the potential and that having the potential, it is stated "Consciousness of a potential" in the sixth case, [the connective case,] then those two are not suitable to be different objects. Therefore, the consciousness of a potential is not suitable to exist as the potential itself. If it did exist [as the potential itself], a result would have a non-existent cause which is other than itself and even when a sprout is produced the seed would not be destroyed.
> [On the other hand,] when, with respect to the two, the potential and that having the potential, it is stated "Consciousness from a potential" in the fifth case, [the originative case,] then it is not suitable for the consciousness produced to arise from a simultaneous potential because [this would mean that] the result would also exist at the time of the cause. This being the case, there does not exist a potential which is a cause of a consciousness in the present.

In the context of the sixth case, "Consciousness of a potential," [the three times would mean] the past consciousness of a potential, the present consciousness of a potential, and the future consciousness of a potential. Since the potential and consciousness would exist simultaneously, there could not be a relationship of cause and result between them.

In the context of the fifth case, the originative case, it would mean that from a potential arises a consciousness. This is not justifiable because the consciousness would already exist at the time of potential and it is not possible for a consciousness to arise from a potential that exists at the same time as itself. If that were the case it would follow that a result already exists at the time of its cause. Therefore, it is not correct to posit a potential of a consciousness as a cause for a present consciousness. Lama Tsongkhapa says: "This being the case, there does not exist a potential which is a cause of a consciousness in the present."

What is a potential? Is it not a latency? A potential is a latency. A latency is of two types: (i) a latency that is able to produce an affliction and (ii) a latency that is not able to produce an affliction. If it is a latency it is not pervaded by being a seed, whereas if it is a seed it is pervaded by being a latency because it will give rise to an affliction. This discussion of latencies is peculiar to the Chittamatrins in that they assert that all phenomena arise from the activation of latencies deposited on the mind-basis-of-all. Therefore, according to them everything arises from the activation of latencies. For this reasons, the subject of latencies is very important for the Chittamatrins. When a latency is defined it is said to be a potential.

Geshe Jampa Gyatso: If it has the ability (potential) to perform a function is it pervaded by being a potential? For example, is a table a potential?
Student: No, a table is not a potential.
Geshe Jampa Gyatso: Potential also exists for the Prasangika Madhyamika system, but, it is not inherently existent. In the Prasangika Madhyamika system if it is a compounded phenomenon is it pervaded by being a potential? If it were so, the table would be a potential. The point is that a potential does not have to be latency. You as a person are a potential, but you are not a latency.
Student: If it is a potential does it not have to be a non-associated compositional factor?
Geshe Jampa Gyatso: Why?
Student: Because it is neither mind nor matter.
Geshe Jampa Gyatso: If it is a potential is it pervaded by being a compounded phenomenon that is not mind or matter? Does a table have a potential?
Student: It does.
Geshe Jampa Gyatso: A table is that which has the ability (potential) to perform a function. Is the table a potential? It would seem that consciousness is pervaded by not being a potential. In both the Chittamatra and Prasangika systems a potential is posited as a latency. However, the Prasangika Madhyamikas say that there is no need to posit a basis for the infusion of latencies because a

disintegrated action itself is a functioning thing that brings about a result. Other schools say that a disintegrated action is permanent, it is not a functioning thing.
Student: Is a disintegrated action called a latency?
Geshe Jampa Gyatso: No, it is not.
Student: In the Prasangika Madhyamika system "the latencies of actions" are discussed. If it is not a disintegrated action, what is the difference?
Geshe Jampa Gyatso: The Prasangika Madhyamikas say that there are latencies of actions, but these latencies are not disintegrated actions.
Student: Do they not say that the disintegratedness of an action is deposited on the mere I?
Geshe Jampa Gyatso: No, they do not say that. However, when they are forced to posit something upon which the latencies are deposited, they would say that the latencies of actions are deposited on the mere I. But, they say that there is no need to posit a basis for the infusion of the latencies of actions because a disintegrated action itself is a functioning thing. Because it is a functioning thing it is able to bring about a result. This is one of the eight uncommon or unique tenets of the Prasangika Madhyamika system.

Student: Lama Tsongkhapa's *Illumination* (Tibetan text page 214) says:

> Here, when establishment by way of its own character is not negated conventionally, one will not realize the very subtle selflessness, whereby it also becomes difficult to not generate the very subtle views of permanence and annihilation in one's continuum. Therefore, the abandonment of all views of permanence and annihilation without exception is the excellent quality of refuting the object of negation conventionally. If it is refuted to be conventionally existent, not only will one not fall into the views of permanence and annihilation relative to the ultimate, one will [also] not be polluted by the stains of the views of permanence and annihilation relative to the conventional. Hence, [refuting inherent production] has the excellent quality of easily abandoning the views of permanence and annihilation.

Does this mean that when inherent existence is refuted conventionally, the object of negation is more subtle than when inherent existence is refuted ultimately?
Geshe Jampa Gyatso: In general, there is conventional truth and mere conventionality. Chandrakirti's *Supplement* says:

> *Conventional truth is the means and*
> *Ultimate truth arises from means.* [6.80ab]

However, this can be inverted – that is, "conventional truth arises from the means and ultimate truth is the means" – because in order to realize subtle conventional truth it is necessary to first realize ultimate truth. However, in general, in order to realize ultimate truth it is necessary to first realize conventional truth. For example, in order to realize the selflessness of persons it is necessary to first realize the person, which is a conventional truth. In this way, the realization of the person becomes the means for realizing the selflessness of persons.

When one realizes the emptiness of true existence of a pot and thereby negates its true existence, what is left? Is there something left or is there nothing left? It is not that nothing is left because having negated the object of negation, true existence, of a table there still remains a conventional table that is able to perform the function of a table. In the place of the negation of true existence, there is a subtle conventional truth; this is what is difficult to realize.

Lama Tsongkhapa says: "Here, when establishment by way of its own character is not negated conventionally, one will not realize the very subtle selflessness." Establishment by way of its own character does not exist either conventionally or ultimately. Although it does not exist ultimately, someone may think that it exists conventionally, whereby it becomes difficult for that person to realize the very subtle selflessness. If one does not realize that establishment by way of its own character does not exist conventionally and ultimately, then it will be difficult to realize the very subtle selflessness.

However, the negation of establishment by way of its own character on any basis is itself very subtle selflessness. In other words, if one is unable to negate a table's establishment by way of its own character, one will not be able to realize the subtle selflessness of the table. If one does not generate the realization of very subtle selflessness, it will be difficult to not generate a view of the two extremes of permanence and annihilation.

Lama Tsongkhapa says: "Therefore, the abandonment of all views of permanence and annihilation without exception is the excellent quality of refuting the object of negation conventionally."

Therefore, when it is asked whether there are subtle and coarse conventionalities, the answer is that there is. Chandrakirti says:

> *Conventional truth is the means and*
> *Ultimate truth arises from means.*
> *Those who do not know the distinction of the two*
> *Have entered a bad path due to wrong conceptions.* [6.80]

In another text, perhaps Nagarjuna's *Fundamental Wisdom*, it says the opposite – conventional truth arises from the means and ultimate truth is the means. *Fundamental Wisdom* [24.10] (see Hopkins, Meditation on Emptiness, page 401) says:

> *Without relying on conventionalities*
> *The ultimate cannot be taught.*
> *Without realizing the ultimate*
> *Nirvana is not attained.*

Student: Is a potential disintegratedness?
Geshe Jampa Gyatso: Disintegratedness is a potential.

Student: Why according to the teaching on the twelve links is death the cause of ignorance?
Geshe Jampa Gyatso: The twelfth link, death, is one of the six results, whereas ignorance is one of the six causes. More specifically, ignorance is one of the three projecting causes, and death is one of the three actualized results. In short, the death and ignorance included in the twelve links have this relationship of cause and result.

Student: It was said that the life force stops at the time of death and then begins at the next life. Is it not that an intermediate state being has a life force?
Geshe Jampa Gyatso: When the life force of this life ceases, at that time there is death. When that being is reborn in the intermediate state, it has the life force of an intermediate state being. In this way, the life force of an intermediate state being is newly acquired. When the intermediate state being is then reborn, the life force of the intermediate state ceases. Therefore, it is not that there is no life force in the intermediate state. Vasubandhu's *Treasury of Knowledge* says that an intermediate state being has all sense powers complete and is able to travel without obstruction; this being is a smell-eater. Intermediate state beings are smell-eaters in the sense that they are nourished by means of odors. For this reason in some countries, such as Tibet, there are rituals performed during the 49 days after a person's death that involve the burning of various types of food in order to provided food for the dead.

Monday afternoon, 16 October 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 251) says:

3B1C-2B3E-2A1B-2B2A-2A2A-2B Refuting inherently existent potentials of future [entities]

Chandrakirti's autocommentary says:

> Nor does a consciousness with an unproduced nature have a potential, since:
>
> *Without a distinction, there is no bearer of the distinction.*
> *That would follow as existing even for the son of a barren woman.* [6.57cd]
>
> Without a distinction, that which is to be distinguished just does not exist.

Inherently existent potentials of future entities just do not exist. A consciousness which is not produced does not have a potential because an unproduced consciousness has not come into existence. "Without a distinction, there is no bearer of the distinction" means that if there is no basis of qualification (bearer of the distinction), there is no qualification (distinction). For example, if Sherab does not exist here, Sherab's hand does not exist here. If there were to exist a qualification without a basis of qualification, it would follow that even the son of a barren woman exists.

Chandrakirti's autocommentary says:

> If asked: In what way?
>
> Saying, "potential of consciousness" – consciousness is the distinction of potential [and] potential is the basis of distinction.

In the case of "potential of consciousness," the consciousness is the qualification (distinction), and the potential of the consciousness is the basis of qualification (basis of distinction).

Chandrakirti's autocommentary says:

> That which is unproduced is unable to be indicated by the entity of negation or affirmation saying "consciousness" or "not consciousness." When it is like that, then saying "This is its potential" – by what will the potential be distinguished? When thus, the distinction does not exist, then saying "This arises from it," not mentioned as the distinction, it will not indicate even a little.
>
> Further, if a potential is asserted for the unproduced, it is necessary to be asserted also for the son of a barren woman. Therefore, the unproduced does not have a potential.

It is not appropriate to say "This is the potential of consciousness" and "From such a potential there arises consciousness" because, being a future consciousness, it has yet to be produced. For example, if someone points to Joan and says that she is a mother it is because she has given birth to a child. On the other hand, if she has not given birth to a child it would not be correct to call her a mother. Likewise, a potential of consciousness is called "a potential of consciousness" on the basis of having given rise to a consciousness. Therefore, because a future consciousness has not yet been produced, it is not correct to say "a potential of consciousness."

Chandrakirti's autocommentary says:

> Suppose it is thought: Having in mind some consciousness that will be produced from a potential, a consciousness that will arise, one says "This is the potential of this consciousness" and "This [consciousness] will arise from this [potential]."

If someone, thinking of a consciousness that will be produced, says "This is the potential of this consciousness" and "This [consciousness] will arise from this [potential]," that too would be incorrect.

Chandrakirti's autocommentary says:

> The properties of distinction and basis of distinction are established like that, for, just as "Cook the boiled rice," "Weave the piece of cloth on this warp" are mentioned in the world, the *Treatise* [*Abhidharmakosha*, v. 3.17] also explains:
>
> > Three enter into the womb, the chakravartin and the two self-arisen.

In the world, thinking of rice that has yet to be boiled, people say "Cook the boiled rice." Likewise, thinking of the cloth that has yet to be made, on the basis of a ball of yarn they say "Weave this bolt of cloth." The *Treasury of Knowledge* also says: "Three enter into the womb, the chakravartin and the two self-arisen." This means that when someone [who will become a chakravartin] is conceived in a womb it is said "A chakravartin has entered the womb," and when someone [who will become one of] the two self-arisen, a solitary realizer or a buddha, is conceived it is said that a solitary realizer or a buddha has entered the womb. A chakravartin knows that he has been conceived, but does not know that he is abiding in the womb and that he will be born. A solitary realizer knows that he has been conceived and knows that he is abiding in the womb, but does not know that he will be born. A buddha knows that he has been conceived, knows that he is abiding in the womb, and knows that he will be born.

Chandrakirti's autocommentary says:

> In order to express that too as just without essence, [the root text] explains:
>
> *If asserted to describe it by that to arise,*
> *Without potential, no future arisal of it exists.* [6.58ab]
>
> If there will be something at some time, that will arise; that which is always certain not to arise, the son of a barren woman etc. and space etc., will not. Therefore, here, if [an inherently existent] potential were to exist, the future arisal of consciousness would become a fact. But when the potential is just non-existent since the future consciousness just does not exist, then, like the son of a barren woman etc., without potential, its future arisal itself will not exist. This [reasoning] explains also rice and so forth.

In dependence on a consciousness that is not yet produced, one should not say "This is the potential of that consciousness," "The potential of a future consciousness," or "The potential of an unproduced consciousness." Because the son of a barren woman does not exist, there does not exist a potential that will give rise to him. Similarly, because a future consciousness does not exist, the potential that will give rise to it also does not exist.

"This [reasoning] explains also rice and so forth" refers to the statements "Cook the boiled rice" and, on the basis of a ball of yarn, "Weave the bolt of cloth," which are not correct because the boiled rice and the bolt of cloth are yet to be produced.

Lama Tsongkhapa's *Illumination* (Tibetan text page 251) says:

> PRASANGIKA MADHYAMIKAS:
>
> *Without a qualification, that which is qualified does not exist.*
> *It follows that it exists even for the son of a barren woman.* [6.57cd]
>
> If there existed a potential for an unproduced consciousness, when 'the potential of a consciousness' is joined to it, the potential would be the basis of qualification and the consciousness would the phenomenon qualified. A future unproduced consciousness cannot be indicated to be an affirmative entity saying "consciousness," and it cannot be indicated to be an inherently existent negative entity saying "non-consciousness."

A non-existent consciousness cannot be indicated to be an inherently existent negative entity saying "non-consciousness." Can a future consciousness (literally, a consciousness that has not yet come) be indicated to be a negative? What is posited as a present consciousness? What is posited as a future consciousness? What is posited as a past consciousness?
Student: A past consciousness is a moment of consciousness that has ceased, a future consciousness is a moment of consciousness that has yet to be produced, and a present consciousness is a moment of consciousness that is abiding now.

Student: Is there a difference between future pot and future of the pot?
Geshe Jampa Gyatso: Does a future pot exist?
Student: If it is an established base it is necessarily a present phenomenon.
Geshe Jampa Gyatso: This is the assertion of the Svatantrika Madhyamikas.
Student: Past, present, and future are posited on the basis of a particular phenomenon.
Geshe Jampa Gyatso: Do you not agree with the usual definitions of past, present, and future?

- Past is that which has been produced and has ceased.
- Present is that which has been produced and has not yet ceased.
- Future is that which has the cause for its generation but has not yet been produced.

Lama Tsongkhapa's *Illumination* (Tibetan text page 252) says:

> Since a future consciousness does not exist as a consciousness in the present, in terms of stating "This potential is the potential of that consciousness" by what is the potential qualified? It is not [qualified]. If that is the case, *without the qualification* 'consciousness,' the potential *that is qualified* by it *does not exist*. If that is not the case, *it would follow that* a potential *exists even for the son of a barren woman*.
> CHITTAMATRINS:
>
> *"We wish to say that, due to what will arise."* [6.58a]
>
> Through thinking deeply that any consciousness whatsoever is produced from a potential, such statements as "This is the potential of this consciousness and this consciousness arises from that potential," are the things that are the qualification and the basis of qualification just as in the world it is said "Cook the boiled rice" and, in regard to yarn, "Weave this bolt of cloth," through thinking about the boiled rice and the woolen cloth that will arise. The *Treasury of Knowledge* (v. 3.17ab) also says:
>
> Three enter a womb:
> Universal monarchs and the two self arisen.
>
> Those who will become universal monarchs (chakravartins) enter a womb. Just as it is explained that they enter a womb, likewise, through thinking about a consciousness *that will arise*, we *wish to say* "the potential of a consciousness."

This is the assertion of the lower school.

Lama Tsongkhapa's *Illumination* (Tibetan text page 252-3) says:

> PRASANGIKA MADHYAMIKAS:
>
> *There does not exist the arisal of that without a potential.* [6.58b]
>
> Furthermore, that is without essence. If [something] will become existent at some time, that result would arise now. That which is always definite to not arise at any time, the son of a barren woman and so forth and uncompounded space and so forth, do not arise ever, now or later. Therefore, even assuming that consciousnesses would arise if inherently existent potentials were to exist, since inherently existent present and future consciousnesses do not exist at any time the potentials that produce them [also] do not exist at all. At that time, just as in the case of the son of a barren woman and so forth, *there does not exist the arisal of that* – an inherently existent consciousness – *without* a *potential* that produces an inherently existent consciousnesses.

This is a debate between the Prasangika Madhyamika school and the lower school, the Chittamatra. The lower school says that an inherently existent potential of a consciousness produces an inherently existent consciousness. Our own system says that since there are no inherently existent future or present consciousnesses, there are no inherently existent potentials. It is like the case of a barren woman who does not have the potential to produce a son and therefore a son cannot be born from her. It can be debated: Is it certain that a barren woman does not have a son? Even if she has not had a son in this life could she not have had a son in a previous life? Is it not correct to meditate on a barren woman as having been our mother countless times and having been kind to us? When one meditates on recognizing all sentient beings as having been one's mother, one should include all sentient beings. Someone could respond: "If she is a barren woman now there is no pervasion that she was always a barren woman."

Tuesday morning, 17 October 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 253) says:

> On the many occasions of their refuting an established by way of its own character production of a sprout, the main point of the Madhyamikas in flinging the absurd consequence "If a sprout is produced even though it does not exist at the time of the seed, it follows that also the horns of a rabbit and so forth will be produced" is for the reason that an established by way of its own character sprout becomes undifferentiable from a non-established base because if it does not exist on one occasion it necessarily does not exist at any time. It is not at all the refutation "In general, although a sprout does not exist at the time of the seed, if it is produced, it follows that the horns of a rabbit are also produced." This reasoning is also an explanation of the boiled rice and so forth because if inherently existent production were the case also the boiled rice and so forth that will arise must not exist at all.

The Madhyamikas fling the absurd consequence "If a sprout is produced even though it does not exist at the time of the seed, it follows that also the horns of a rabbit and so forth will be produced." This absurd consequence is flung in order to prove that there does not exist a sprout that is established by way of its own character; in fact, a sprout does not exist at the time of the seed. The Madhyamikas say that if there is one occasion when there exists a sprout that is established by way of its own character, then it should exist all the time. But, since there is no such occasion, there is no established by way of its own character sprout. Likewise, inherently existent rice cannot be boiled, in that it does not exist at all, whereas, rice, in general, can be boiled.

Chandrakirti's autocommentary says:

> Furthermore, consciousness and potential indeed rely on transformation through mutual reliance. Nevertheless, the dependent entity does not exist in fact.

The consciousness in this case is a consciousness that will arise. This consciousness will exist and is posited in dependence on a potential of consciousness the exists now. Therefore, a consciousness arises from a potential. This way of positing them in dependence on each other is not suitable, in the sense that their being posited as *inherently* depending on each other is not suitable. Chandrakirti says: "Nevertheless, the dependent entity does not exist in fact." This means that a future consciousness, a dependent entity, does not exist now because it has yet to arise. This is the similar to the example given in the scriptures of a man who thinks to build himself a particular house to which he will bring his future bride, and in which his son will be born and be given the name Chandrakirti. However, none of this actually existed at the time in that this man did not yet have a house, a wife, a son, and so forth. This story indicates that it is meaningless to talk about something that does not yet exist.

Chandrakirti's autocommentary says:

> It is like this:
>
> *Existence dependent on mutual presence,*
> *Noble ones say, "Does not exist at all."* [6.58cd]
>
> It is said that when consciousness exists there is its potential and from it there is the arisal of consciousness. Thus, they are dependent on mutual presence.

Holy beings say that there does not exist inherently existent mutual dependence.

With respect to this, Gendun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

For if you say, "I wish to call it 'the potential of the consciousness', thinking of the consciousness that will come," then the being-to-come of that consciousness does not inherently exist, for the potential which generates the consciousness does not inherently exist; and if you say, "The consciousness and the potential are posited by regard to one another," then, of course, it follows that the consciousness and the potential do not exist inherently, because of that.

> *Whatever exists in mutual dependence,*
> *The exalted ones have taught, does not exist.* [6.58cd]

This pervades, because the exalted ones have taught that what exists dependent on mutual support does not exist inherently.

Chandrakirti's autocommentary says:

> If it is said: It is like that indeed.
>
> [Noble ones] will say, "Consciousness does not inherently exist."

There is no consciousness that is inherently existent.

Chandrakirti's autocommentary says:

> For example, as when long exists there will be short; when short exists there will be long; when the other side exists there will be this side; and when this side exists there will be the other side – there is no self-nature established in those that are imputed. If it is like that, it is in exact agreement with our proposition.

Long and short are posited in dependence on one another, so too are the other side and this side. The Prasangika Madhyamikas say that since they are posited in mutual dependence they are not inherently existent. On the other hand, the Svatantrika Madhyamikas say that if short and long do not exist inherently they would not exist at all, like the horns of a rabbit. The Svatantrikas say that consciousness and its potential are established in mutual dependence and that if mutual dependence did not exist inherently, that is, if short did not exist inherently, then long could not be posited in dependence on it because short would not exist at all. The Chittamatrins posit this similarly in that they say that a consciousness is ultimately or truly existent and that if this were not the case consciousness would be non-existent, like the horns of a rabbit. The Prasangika Madhyamikas refute these assertions.

Chandrakirti says: "If it is like that, it is in exact agreement with our proposition." Chandrakirti says to the Chittamatrins that, if they assert [mutual dependence in this way], they would be in agreement with the Prasangika Madhyamikas.

Chandrakirti's autocommentary says:

> As explained in the *Four Hundred* [*Verses*, 9.8]:
>
> > Causeness does not exist in a cause without an effect.
> > Therefore, all effects will follow as just causes.

A result depends on a cause because without a cause there will be no result. Similarly, a cause is dependent on a result since a cause cannot be posited without a result. Therefore, cause and result are established to be mutually dependent.

Chandrakirti's autocommentary says:

> It is also taught in the *Treatise* [o*n the Middle Way*, 10.10]:
>
> > Whatever thing is established [through] reliance,
> > If that which is the object of reliance is established
> > Through relying also on that itself,
> > [Then] through relying on what is something established?
>
> The meaning of this [verse] is this. Whatever thing, such as consciousness and so forth, is established through relying on the distinction of a potential, if that which is the object of reliance – the functioning thing, distinction of potential – is established through relying also on that itself in order to prove an essential nature by consciousness; now, through relying on which of the two objects to be established must it be said that something is established?

(This verse (v. 10.10) as translated in *Fundamental Wisdom of the Middle Way* reads:

If that on which an entity depends
Is established on the basis
Of the entity depending on it,
What is established in dependence on what?]

Consciousness and the potential of consciousness are posited in mutual dependence. If there exists that which is relied on (the object of reliance) there exists that which relies on it.

Chandrakirti's autocommentary says:

Furthermore, it is taught [in the *Treatise on the Middle Way*, 10.11]:

Whatever is established through relying on a functioning thing,
If that does not exist, how does it rely?
If said that an existent relies,
That is illogical to rely on.

(This verse (v. 10.11) as translated in *Fundamental Wisdom of the Middle Way* reads:

What entity is established through dependence?
If it is not established, then how could it depend?
However, if it is established merely through dependence,
That dependence makes no sense.]

In short, there is no inherently existent dependence.

Chandrakirti's autocommentary says:

Also, the meaning of this [verse] is this. If consciousness is established through reliance on a potential, is that which relies on a potential existent or not existent? If it is not existent, like the horns of an ass, it will not rely on a potential. Yet, if an existent relies on [a potential], because of existing, it is unsuitable to rely.

Thus, "existence that depends on mutual function does not exist" was taught by those possessing exalted wisdom. Therefore, like that, potential does not exist also in the future.

In short, if something is established through mutual dependence or reliance it necessarily is not inherently existent.

Lama Tsongkhapa's *Illumination* (Tibetan text page 253) says:

Furthermore, in regard to positing the potential of that [consciousness] in dependence on there existing a consciousness that will arise, if a consciousness is posited in dependence on a potential saying "Consciousness arises from a potential" there would be *mutually dependent existence*.
CHITTAMATRINS: That is acceptable.
PRASANGIKA MADHYAMIKAS:

Mutually dependent existence,
The holy say, "Does not exist." [6.58cd]

> In that case, *the holy* masters of wisdom *say*, "Consciousness *does not exist* inherently." When the commentary says that [things] that exist dependently, such as long and short and over there and over here, are imputedly existent but not inherently existent, it should be understood that it does not refute existence in general but refutes inherent existence in particular. When stating such, one becomes a follower of our propositions. This being the case, potentials for future consciousnesses also do not exist.

The Prasangika Madhyamikas say that if things exist in mutual dependence then they cannot exist inherently. In fact, they say that things lack inherent existence because they are dependent-arisings. Dependent arising means existing in mutual dependence. In the term 'dependent-relation' the word 'dependent' negates the extreme of permanence, whereas 'relation' negates the extreme of annihilation. Having applied many different types of reasonings, the conclusion that is reached is that it does not exist truly because it is a dependent-arising. Thus, the reasoning of dependent-relation is known as the king of reasonings, just as in the case of a monarchy it is the king who makes the final decision.

Lama Tsongkhapa's *Illumination* (Tibetan text page 253) says:

> 3B1C-2B3E-2A1B-2B2A-2A2A-2C Refuting inherently existent potentials for past [entities]

Chandrakirti's autocommentary says:

> Now, in order to show that "a potential does not exist also for the past," it is explained:
>
> *If it transformed from the ripening of a potential of the ceased,*
> *One would arise from another's potential.* [6.59ab]

If there were arisal from a potential of the ceased, it would follow that anything can arise from any potential whatsoever.

With respect to this Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *If it comes from the ripe potential of what's created,*
> *Then other arises from an other's potential;*
> *The stream-members there are different from each other.* [6.59abc]

If you say, "A future consciousness is produced from the ripening of the potential of a consciousness which has ceased," then it follows that a result which is other would arise from a potential which is inherently-existently other, for among the successively arising members of this series, earlier and later ones exist as inherently different from each other.

> *Therefore all things will arise from everything.* [6.59d]

If you accept this, then all functional things will arise from everything, cause or not, because of that assertion.

> *If you say, "The stream-members there are different, but*
> *The stream in them is not different, therefore*
> *There is no problem," this remains to be proved,* [6.60abc]

If you say, "The members of the continuum there, arising earlier and later in succession, are different in entitiness but they do not have different inherently existent streams, they have one, therefore there is not the fault of everything being produced from everything," then you have to prove this single stream in what are different in entitiness.

For this stream which is different cannot occur. [6.60d]

Phenomena based on Maitreya and Upagupta,
Because of otherness, can't be in one stream.
Whatever are by their own nature different
Can never belong to one continuum. [6.61]

It follows it is not established, for the case of an identical stream existing in what are different in entitiness is impossible, because what are different by their own nature cannot belong to one continuum. For example, the phenomena concerning Maitreya and Upagupta, because of the otherness of the separate personalities, do not belong to one continuum: it is like this.

Chandrakirti's autocommentary says:

> If, for an effect due to a consciousness that is ceasing [after] having been produced, a distinction of potential is deposited on the consciousness-basis-of-all, giving rise to the consciousness that is to arise from that which is the ripened potential of the ceased consciousness – then, one (literally, 'another') will arise from the potential of another.

The Chittamatrins say that when a consciousness ceases it deposits a potential on the mind-basis-of-all which will give rise to a future result. When that potential deposited on the mind-basis-of-all ripens it will give rise to a consciousness.

Chandrakirti's autocommentary (Tibetan text page 96) says:

> If asked: Why?
>
> Because:
>
> *Those having continuity have mutual difference.* [6.59c]
>
> It is said: "*Tanu* is for extension."[37] Hence, since there is a succession,[38] it is a continuity.[39] If continuity, like the continuity of a river, is applied to the system of continuity and the relationship of cause and effect, due to the succession of birth and death, without an interval, it abides not interrupting the stages – the instant of formation acts to possess appropriation of the three times.

There are twenty-two particles of condition in the Sanskrit language, one of which is called "*tanu*." When translated, this word means extension in the sense of something continuing.

Tuesday afternoon, 17 October 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 253-4) says:

> PRASANGIKA MADHYAMIKAS: Now, in order to indicate that "Potentials also do not exist for the past," [Chandrakirti] explains:
>
> *If it comes from the ripening of a potential of the ceased,*

[37] In the grammar texts with regard to the stem of the word 'continuity,' Skt. *samtana*; Tib. rGyun.

[38] Tib. brGyud

[39] Tib. rGyun

> *There will arise other from a potential that is other.* [6.59ab]
>
> A consciousness that has been produced and is ceasing deposits an instance of a potential, which is a latency, for a concordant result on the mind-basis-of-all. *If* a consciousness that *will* arise *from the ripening of a potential of a ceased* consciousness arises, *there will arise other*, a resultant consciousness, *from* an inherently existent *potential that is other*. Why is that?
>
> *For you those that have continuity exist as mutually different.* [6.59c]
>
> It is because *those* moments *that have continuity* arise sequentially, but *for you*, that is, according to you [Chittamatrins], former and later [moments] *exist as mutually different* by way of their own entity.

According to the Prasangika Madhyamikas there is no arisal of an inherently existent resultant consciousness from a potential of a consciousness that has ceased. In the Chittamatra school, the potential of a consciousness that is ceasing or has ceased is deposited on a mind-basis-of-all; later, when activated, that potential will bring the result of a consciousness. According to the Prasangika Madhyamika system, moments that have continuity arise sequentially, whereas for the Chittamatrins "former and later [moments] exist as mutually different by way of their own entity."

Lama Tsongkhapa's *Illumination* (Tibetan text page 254) says:

> Furthermore, [with regard to the stem of the word 'continuum], in the [Sanskrit] *Grammar Text* it says "*Tanu* is extension...," meaning that, due to continuing through the issuing forth of conditions, it is "a continuum." When, like the continuum of a river, the relationship between causes and results operates continuously, there is uninterrupted abiding without empty gaps due to the continuum of birth and death. [A continuum] is taken to be the appropriator of the three times of the composite in that it is a possessor of parts which are parts of some moments; it is not a mere non-interruption of former and later [moments].

Sentient beings are without empty gaps between birth and death because death follows birth and birth follows death continuously without empty gaps.

Lama Tsongkhapa says: "[A continuum] is taken to be the appropriator of the three times of the composite." An appropriator is that which appropriates something; what does a continuum appropriate? It appropriates the composite, the aggregates, of all three times. "Appropriator of the three times of the composite" refers to the appropriation of the aggregates in all three times. The taking of a human rebirth implies the appropriating of human aggregates. The aggregates are a composite because they are composed of parts. That which is appropriated is the appropriated, contaminated aggregates. They are a continuum without any gaps during which the aggregates do not exist. What is the appropriator of the aggregates? The appropriator is sentient beings; sentient beings abide uninterruptedly without empty gaps due to the continuum of birth and death. Only sentient beings are the appropriator of the composite of the three times, it is not a river nor a pot.

Lama Tsongkhapa's *Illumination* (Tibetan text page) says:

> Since it has substantial moments that are parts of a continuum, the components of a continuum – that is, the substantial moments – are called "possessors of a continuum." Since the parts and components of a continuum belong to a continuum that is a possessor of parts, that continuum is called "an appropriator of [parts]," like, for example, a pot is the appropriator of the lip and neck of the pot.
>
> Former and later moments are asserted by opponents to be:
>
> 1. (i) mutually other and different as other and
> 2. (ii) an established by way of their own character otherness.

> If that were the case, that which is other would arise from a potential that is an inherently existent other.

The opponents here are the Chittamatrins who assert that former and later moments are (i) mutually other and different as other and (ii) an established by way of their own character otherness. The Prasangika Madhyamikas say: "If that were the case, that which is other would arise from a potential that is an inherently existent other."

Lama Tsongkhapa's *Illumination* (Tibetan text page 254) says:

> CHITTAMATRINS: There is no fault in asserting that.
> PRASANGIKA MADHYAMIKAS:
>
> *Because of that, everything would arise from all.* [6.59d]
>
> *Because of that*, *every* thing *would arise from all* the things that are other than itself.

If something arises from an inherently existent other, it follows that a pot would arise from everything that is other than itself. Likewise, it would follow that darkness would arise from everything that is other than itself, for example, from fire light and a butter lamp. The Prasangika Madhyamikas say that this is not the case.

Lama Tsongkhapa's *Illumination* (Tibetan text page 255) says:

> CHITTAMATRINS:
>
> *"Regarding them, those having continuity are different,*
> *Because the continuum regarding them is not different,*
> *There is no fault."* [6.60abc]
>
> In addition, former and later moments operate sequentially. *Regarding them,* substantial moments *having continuity*, being established by way of their own entity mutually *different*, in fact exist as otherness. Also, that being the case, *because* the *continuum regarding those* former and later moments *is not different*, that is, it is only one, *there is not the fault* of the consequence of everything being produced from everything. Former and later [moments] are a single continuum. This is the actual response that abandons the absurd consequences regarding production from other.

The Chittamatrins say that former and later moments do not exist as different continuum, but are a single continuum; therefore, there is no fault that everything arises from everything. On the other hand, the Prasangika Madhyamikas say that if former and later moments are established by way of their own entity then everything would arise from everything. The Chittamatrins say: "Former and later [moments] are a single continuum. This is the actual response that abandons the absurd consequences regarding production from other." The Prasangika Madhyamikas fling the consequence that, if something arises from other, then everything that is a result arises from everything that is either a cause or a non-cause. The Chittamatrins respond that their assertion does not have the fault that everything arises from everything because former and later moments are not a different continuum but are a single continuum.

Lama Tsongkhapa's *Illumination* (Tibetan text page 255) says:

> PRASANGIKA MADHYAMIKAS:
>
> *That is to be proven.* [6.60c]

> If individual former and later [moments] established by way of their own entity are established to be a single continuum, even assuming that there is no fault, since that single continuum is not established, *that* single continuum *is to be proven*.

The Prasangika Madhyamikas say "since that single continuum is not established, that single continuum is to be proven."

Lama Tsongkhapa's *Illumination* (Tibetan text page 255) says:

> CHITTAMATRINS: Why is that?
> PRASANGIKA MADHYAMIKAS:
>
> *Because they are not suitable as an occasion of a non-different continuum.* [6.60d]
>
> *Because* established by way of their own entity different former and later [moments] *are not suitable as an occasion of a non-different continuum*, that is, of a single continuum.
> Chandrakirti says:
>
> *The qualities based on Maitreya and Upagupta*
> *Are not included in a single continuum because they are otherness.*
> *It is not reasonable for whatever are individually established by way of their own character*
> *To be included in a single continuum.* [6.61]
>
> For example, [*the qualities*] *based on*, that is, included in, the continua of *Maitreya and Upagupta are not included in a single continuum because they are otherness* in that they are individual persons. Similarly, *it is not reasonable for whatever* former and later [moments] *are individually established by way of their own character to be included in a single continuum*, that is, to be just one.

The Chittamatrins respond to the absurd consequence flung by the Prasangika Madhyamikas regarding production from other by saying that former and later moments are a single continuum, therefore, there is no fault that everything arises from everything. This passage regarding everything being produced from everything also occurred earlier in the sixth chapter saying:

> *If in dependence on other there arises another,*
> *In that case even from tongues of fire there would arise thick darkness.*
> *Also from all, all would be produced. Because of that*
> *There would not be anything at all that acts to produce and they would be concordant with otherness.* [6.14]

The two absurd consequences flung by the Prasangika Madhyamikas are: (1) thick darkness would arise from tongues of fire and (2) everything would arise from everything. To this the Chittamatrins respond that there is not the fault of everything arising from everything.

Chandrakirti then gives the example of Maitreya and Upagupta who are different continua, that is, who are not one continuum. The Chittamatrins say that former and later moments are a single continuum. The Prasangika Madhyamikas say that this assertion is made on the basis of former and later moments being an established by way of its own character single continuum. They refute that his is so by giving the analogy of Maitreya and Upagupta who are not a single continuum. The Prasangika Madhyamikas say: "Similarly, it is not reasonable for whatever former and later [moments] are individually established by way of their own character to be included in a single continuum, that is, to be just one." This is in response to the Chittamatrins assertion that former and later moments are individually established by way of their own character as a single continuum.

Lama Tsongkhapa's *Illumination* (Tibetan text page 255) says:

> That being the case, in regard to dispelling the faults of flinging the absurd consequences regarding production from other, the point is that the faults cannot be dispelled by saying: "A rice seed and rice sprout are a single continuum, whereas a barley seed and a rice sprout, or a rice seed and a barley sprout, are not a single continuum, therefore, everything is not produced from everything." The opponents are shown to rely on the assertions of an established by way of its own character other, due to which, very clearly not implying a mere other, they persist in grasping at straws and so forth. Due to not understanding that "established by way of its own character other" is affixed as a qualification to the object of negation, they posit reasons for saying that glorious Chandrakirti is unable to dispel faults, and formulate conceptions that were not taught, thereby corrupting correct tenets.

The Chittamatrins say that there is not the fault of everything arising from everything because a rice sprout arises from a rice seed, whereas it is not the case that a rice sprout arises from a barley seed. Lama Tsongkhapa says: "The faults cannot be dispelled by saying: 'A rice seed and rice sprout are a single continuum, whereas a barley seed and a rice sprout, or a rice seed and a barley sprout, are not a single continuum, therefore, everything is not produced from everything.'" Although a rice seed and rice sprout are in fact a single continuum, and a barley sprout and a rice seed are not a single continuum, the faults are not dispelled because the Chittamatrins assert establishment by way of its own character. When the Prasangika Madhyamikas fling the absurd consequence that everything would be produced from everything, it is not flung with respect to production from mere other but with respect to production from an established by way of its own character other. In short, when the Prasangika Madhyamikas fling the absurd consequence "it would follow that everything is produced from everything," it is only with respect to the Chittamatrins' position that an inherently existent other is produced from other, it is not with respect to a mere other being produced from other.

Wednesday morning, 18 October 2000

Chandrakirti's autocommentary says:

> That is explained saying "The limbs of continuity possess continuity in the substantial instants," since the parts of the continuity exist in substantial instants. Those [former and later instants] are accepted by others (the Chittamatrins) as mutually other and different as other, and as an otherness [established by its own characteristic].

That which possesses components (limbs) is a continuum. The substantial instants that are the components of a continuum are factors that continue on [in time]. A continuum is the appropriator of the three times. Lama Tsongkhapa says: "the components of a continuum, that is, the substantial moments, are called 'possessors of a continuum'" and "that continuum is called "an appropriator of [parts]."

Chandrakirti says: "Those [former and later instants] are accepted by others (the Chittamatrins) as mutually other and different as other, and as an otherness [established by its own characteristic]." This can be applied to any basis; for example, a pot has different substantial former and later moments of its continuum. A pot is a possessor of parts; the parts being the eight types of particles that compose it which arise from the activation of a latency on the mind-basis-of-all. Are the eight types of particles that compose the pot and the pot itself one or other? They are other. The Chittamatrins say that the eight types of particles are inherently existent; that is, the pot is produced from other. What is a gold pot made of? It is made of gold. What is the substantial cause of the pot? It is the gold itself. In the case of a clay pot, the substantial cause is the clay from which it is made. Such

a clay pot is produced from other. This is the way in which the Chittamatrins prove that there exists a cause that is established by way of its own character from which comes a result that is established by way of its own character.

Chandrakirti's autocommentary says:

> Therefore, concerning the resultant instant – the possessor of the cause of imprints – arising at a later time, there exists an otherness from the causal instant [that] deposits the imprint. Hence, one would arise from a potential that is other.

Through the depositing of a latency, when it is activated later there arise a resultant consciousness. According to the Chittamatrins all compounded phenomena arise from the activation of latencies deposited on a mind-basis-of-all. They say that from a former instant of a latency comes a later moment, due to which there exists a continuum. When that latency ripens there arises a resultant consciousness. Thus, they posit:
(i) the consciousness that deposits a latency,
(ii) the basis on which the latency is deposited, and
(iii) the resultant consciousness that arises due to the activation of that latency.
All three of these are other.

Chandrakirti's autocommentary says:

> Suppose it is thought: Because it is [our] assertion, this is not a fault.

The Chittamatrins say "this is not a fault." [The Prasangika Madhyamikas then refute this as follows.]

Chandrakirti's autocommentary says:

> It is not like that. If asserted like that, one could say [as in 6.14c] "*everything would be produced from everything* [*else*]." It is explained:
>
> *Therefore, everything would arise from everything.* [6.59d]
>
> Since this was already explained in refuting production from others, it will not be expressed again.

This is the Prasangika Madhyamikas response to the Chittamatrins. The Prasangika Madhyamikas say that, if there is production from an inherently existent cause, it follows that a result would be produced from everything that is both a cause and a non-cause because whatever is established by way of its own character is completely independent. Thus, if there exists an independent result it can arise from anything. Since this was already explained in the context of refuting production from other (v. 6.41), Chandrakirti says that he will not explain this again.

Chandrakirti's autocommentary says:

> It is mentioned here:
>
> *If said: "In that, [those] having continuity are different, yet*
> *They do not have different continuities. Therefore,*
> *There is no fault"...* [6.60abc]

> If said, further, the substantial instants having continuity in that [progressive engagement] indeed have mutual otherness. Nevertheless, since the continuity is only one, everything will not follow as being produced from everything.

This is the Chittamatrins' response. They say that there is not the fault [that everything would be produced from everything] because they are not different continua but are a single continuum.

Chandrakirti's autocommentary says:

> In that case, then although there would be no fault, since this itself is not proved:
>
> *... This is to be proved,* [6.60c]

The Prasangika Madhyamikas say that their existing as a single continuum has yet to be proved by the Chittamatrins. That which is to be proven cannot itself be used as a proof.

Chandrakirti's autocommentary says:

> If asked: Why?
>
> *Because the occasion of an undifferentiated continuity is illogical.* [6.60d]
>
> Occasion means chance. In order to show that "one's mutually different properties are unworthy to exist as the very support of an undifferentiated continuity because of being otherness, like another continuum," it is explained:
>
> *The qualities based on Maitreya and Upagupta*
> *Are not included in one continuum because of otherness.*
> *Whatever is distinct by their own characteristic*
> *They are illogical to include in one continuum.* [6.61]

The Prasangika Madhyamikas say that the Chittamatrins have not yet proven that a continuum established by way of its own character is a single continuum. It has not been proven to be a single continuum because establishment by way of its own character has not been proved.

The Prasangika Madhyamikas give the example of Maitreya and Upagupta. These two people are not included in a single continuum because they are not the same continuum. In fact, because each is an individual continuum they are different continua.

In short, if there existed a former continuum established by way of its own character and a later continuum established by way of its own character they could not form a single continuum. Therefore, a continuum that is established by way of its own character cannot be posited. For the Prasangika Madhyamikas a continuum and that established by way of its own character are contradictory because a continuum comes from, and is therefore dependent on, a former moment, whereas that which is established by way of its own character does not exist in this way. This is because that which is established by way of its own character does not rely on anything else but is independent.

Chandrakirti's autocommentary says:

> Likewise, also here, it was taken into consideration that oneness of continuum does not possess reason.

> There, the statement that was mentioned: "Due to a ripened potential existing and not existing, there is existence and non-existence of consciousness. It is not due to the existence and non-existence of a knowable object" is dispelled in this way – by expressing potential as impossible. Therefore, "there is non-existence of consciousness due to the non-existence of a knowable object." – this statement remains.

Consciousness and object of knowledge are established in mutual dependence on each other. Thus, since there is no inherently existent object of knowledge there is no inherently existent consciousness. That things are produced from an inherently existent cause is negated; for example, that there is an inherently existent latency that brings the result of a consciousness is negated. What is mainly negated here is that an inherently existent potential produces an inherently existent resultant consciousness. The Prasangika Madhyamikas in general accept that conventionally there exists a potential that brings about a resultant consciousness. Nagarjuna's *Refutation of Objections* says that a valid cognizer is posited in dependence on an object of comprehension, and an object of comprehension is posited in dependence on a valid cognizer. Such a way of positing them is similar to that of the Chittamatrins. The other lower schools also say that, because there are two types of objects of comprehension, there are also two types of valid cognizers. The two types of objects of comprehension are: (i) hidden phenomena and (ii) manifest phenomena. Manifest phenomena are realized by a valid direct perceiver, whereas hidden phenomena are realized by an inferential valid cognizer. These phenomena and their subjects (the consciousnesses apprehending them) are posited in mutual dependence. This is so because without an object of comprehension there is no valid cognizer and without a valid cognizer there is no object of comprehension.

Lama Tsongkhapa's *Illumination* (Tibetan text page) says:

> 3B1C-2B3E-2A1B-2B2A-2A2B Once again refuting the way of stating the existence of consciousness without external objects
>
> 1 Stating the others' system
> 2 Refuting that system
>
> 3B1C-2B3E-2A1B-2B2A-2A2B-1 Stating the others' system

Chandrakirti's autocommentary (Tibetan text page 98) says:

> That statement was indicated and again the propounders of consciousness (the Chittamatrins) imagine to accomplish [their] strongly desired goal by assiduously expressing their own system and propound:
>
> *Immediately, from whatever one's potential to produce*
> *Visual awareness, it will be entirely produced.*
> *In the potential that supports its consciousness*
> *Is perceived the physical organ called the eye.* [6.62]

Although the Chittamatrins' assertions were already set out above, once again these propounders of consciousness insist on explaining their views in order to accomplish their desired aim.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> 3B1A-6C5A-1A2B-2A2A-2B1 Stating the hypothesis

You may say:

"A visual consciousness arising grows directly
And entirely from its own potential.
In this potential, the basis of its consciousness,
Is seen the physical organ, known as the eye. [6.62]

"There is no external object of different substance from the consciousness, because a visual consciousness which is born is born entirely from consciousness, directly from the ripening of some potential of its own left in the basis-of-all; and that potential which is the support of the eye's own consciousness is perceived as the physical sense organ called 'the eye,' but there is no eye of different substance from consciousness;

"Consciousness which arises from a sense,
An appearance of blue and so on, springs from its seed
With no external object. Not seeing this,
People here claim the mind grasps external objects. [6.63]

"And because in this world, not perceiving that a consciousness arising from a sense organ, an appearance of blue and so on, arises without an external object from the ripening of its own seed, people simply assert that that appearance of blue and so on in the mind is the apprehension of an external object.

"As in a dream, with no separate form-object there,
Consciousness of that aspect arises from
Its potential ripening, so here too, awake,
Mind exists, without externals," you say. [6.64]

"In the same way, just as in a dream, without a separate form-object, a consciousness which has the aspect of that form arises from the ripening of its own potential, so also in this waking state, mind[40] exists without external objects."

Chandrakirti's autocommentary says:

> If some imprint of visual consciousness is deposited on the consciousness-basis-of-all by another consciousness upon its destruction, later, from the maturation of that, consciousness will be produced that accords with its aspect, and to the consciousness produced from some uninterrupted instants of potential – the uninterrupted instants of potential that became the support – due to confusion, the world perceives the physical organ, considering it as the eye. Yet, an eye organ different from consciousness does not exist. The other faculties also should be ascertained similarly.

The Chittamatrins say that eye consciousness arises from the activation of a latency deposited on the mind-basis-of-all by a previous consciousness upon its destruction. When such a latency is activated, eye consciousness is produced. Therefore, external objects do not exist. Such a potential deposited on the mind-basis-of-all is called "eye sense power." In the Chittamatra system is an eye sense power, form?
Student: It is.
Geshe Jampa Gyatso: Chandrakirti's *Supplement* says:

The potential that is the basis of its respective consciousness,
Is perceived calling it 'a physical eye sense power.'" [6.62]

It seems that according to the Chittamatrins the potential that is the basis of a consciousness is perceived to be a physical eye sense power. Gedun Drup says: "that potential which is the support of

[40] *yid*

the eye's own consciousness is perceived as the physical sense organ called 'the eye,' but there is no eye of different substance from consciousness." Chandrakirti says: "due to confusion, the world perceives the physical organ, considering it as the eye." In brief, the potential that is the basis of eye consciousness is known in the world as the physical eye sense power. That potential is called "a physical eye sense power," although there does not exist form that is different from consciousness. The Chittamatrins do not assert matter from among the three – matter, consciousnesses, and non-associated compositional factors – but do assert form. The Chittamatrins say that matter does not exist because there does not exist form composed of external particles. However, if the Chittamatrins are asked whether form exists, they would say that it does. While the Chittamatrins do not discuss matter, consciousnesses, and non-associated compositional factors, they do discuss forms, consciousnesses, and non-associated compositional factors.

Does form exist on the buddha ground? Form does exist because a buddha has a form body. Is the form body of a buddha composed of particles? It is not. What is it composed of? It arises from the collection of merit. In conclusion, there do no exist particles on the buddha ground, because it would follow that there also exists dust. This is my own thought, based on much debate, on this subject. The Vaibhashika system posits a buddha's form body to be a true suffering and to be composed of the eight particles. This system considers an eye sense power to be clear matter. Biologists also define the eye sense power, the rods and cones, as physical matter and say that when they deteriorate the eyesight deteriorates. Do worldly people consider the eye organ and eye sense power to be different?
Student: They consider them to be one.
Geshe Jampa Gyatso: What do they consider to be the eye?
Student: The eyeball.
Student 2: If the eyeball and the eye sense power were one, one would say that someone who is blind has no eyes, whereas this is not said.
Geshe Jampa Gyatso: When the eye sense power is damaged the sight is lost. Lama Zopa Rinpoche's mother was blind for a long time but due to the power of her recitation of MANI mantras she regained her eyesight. Likewise, when cataracts are removed one regains one's eyesight. In short, the eye organ, or eyeball, and the eye sense power are different. Within the eyeball there is an eye sense power which is made of clear matter. Would the Chittamatrins accept this? Think about it.

Wednesday afternoon, 18 October 2000

Chandrakirti says: "an eye organ different from consciousness does not exist. The other faculties also should be ascertained similarly." Just as the eye sense power was explained to not be different from consciousness, the remaining sense powers should also be understood in the same way.

Chandrakirti's autocommentary says:

> Therefore, like that, having indicated an eye faculty different from consciousness as non-existent, in order to indicate also form as merely abiding undifferentiated from consciousness, [the Chittamatrins] mention:
>
> *People in this [world] hold mind as an*
> *External apprehended [object], having not realized*
> *That cognition arisen from a sense – the mere appearance*
> *Of blue and so forth – arises from its own seed.* [6.63]

The Chittamatrins say that there is no eye sense power that is different from consciousness. This means that there is nothing that exists as a different substance from consciousness. Likewise, the form

that is seen is not a different substance from the eye consciousness that apprehends it; they are a single entity. Just as form and the eye consciousness apprehending it are one entity, likewise, sound and the ear consciousness apprehending it are one substance, odor and the nose consciousness apprehending it are one substance, taste and the tongue consciousness apprehending it are one substance, and a tangible object and the body consciousness apprehending it are one substance.

Thus, the root text indicates the Chittamatrins' assertion that there are no external apprehendeds. However, worldly beings, due to not realizing that there is no blue without its seed, assert external apprehendeds.

Chandrakirti's autocommentary says:

> Just as when *bhandujivaka* and *kimshuka* [flowers] are produced having a red aspect, like jewels, they do not rely on an externally added color. Yet, the continuity of a sprout and so forth is observed to be produced in a mere special aspect through subsequent relation with the potential distinguished by its seed. Similarly, without an external form such as blue and so forth, consciousness arises appearing as blue and so forth. The world strongly settles on that which is the mere appearance of blue and so forth as the entity of an external object.

From a seed that is a potential there arises a specific result. Thus, the appearance of blue and so forth arise from a latency deposited on the mind-basis-of-all. In short, blue and so forth are not external objects. Those who do not understand this think that there are apprehendeds that exist externally. Although there are no such external apprehendeds, the Chittamatrins say that "the world strongly settles on that which is the mere appearance of blue and so forth as the entity of an external object."

Chandrakirti's autocommentary says:

> For example, within the water of a lake completely filled with very clear water, there exists the reflection of red rubies attached to the branches of a tree that grows around the shore. The appearance in the aspect of precious jewels is indeed observed as external within the water, yet that does not exist within it. It should be applied similarly also to consciousness. Hence, an external object does not exist other than consciousness.

The example given here by the Chittamatrins is the reflection of rubies hanging from a tree in a clear lake; although they appear to be real, they are not. To illustrate this there is the story about an intelligent rabbit who was able to kill a magnificent lion. On the night of the full moon the rabbit went to the lion's den and told him about a creature who was even more magnificent than him. The proud lion immediately wanted to see this creature and so the rabbit brought him to a big well and told him to look down. The lion, upon seeing his reflection, began to show off his strength but the lion in the well did the same. The lion became angry at this creature and jumped on him, his own reflection, thereby drowning in the well. This illustrates the fact that, although there existed the reflection of a lion in the well water, there is no such lion in reality. Likewise, although there is the appearance of forms as if existing externally and as if they are a different substance from the consciousness, there are no such forms.

Chandrakirti's autocommentary says:

> At one point:

If said: "In a dream, without a separate physical object,
Mind bearing the aspect of that arises from ripening
Its potential. Like [this], here also when awake,
Mentality exists without an external." [6.64]

Although different forms, people and so forth, are perceived in a dream, they do not exist. The forms and so forth seen in a dream arise from the activation of latencies. The Chittamatrins say that similarly, when awake, it seems as if there are apprehendeds that exist externally but in reality there are no such apprehendeds. Without external objects, there is only mentality. Everything is mere mind.

Lama Tsongkhapa's *Illumination* (Tibetan text page 256) says:

> PRASANGIKA MADHYAMIKAS: The above passages have been presented, yet once again, thinking to accomplish their desired aims by emphatically stating their own system, the Chittamatrins mention [as follows].
> CHITTAMATRINS:
>
> *"From whatever respective potential produces an eye awareness,*
> *It will be thoroughly produced in that very moment.*
> *The potential that is the basis of its respective consciousness,*
> *Is realized to be 'a physical eye sense power.'"* [6.62]
>
> Another consciousness, when it itself is ceasing, *in that very moment* deposits on the mind-basis-of-all *its respective potential*, that is, a latency, *producing an eye awareness*, i.e., an eye consciousness. Through its ripening, a later eye consciousness, subsequently created in the aspect of the former, *will be produced*. An uninterrupted moment of *potential* produced from an uninterrupted moment of potential becomes *the basis of its respective consciousness*, that is, an eye consciousness. Due to ignorance, the worldly *realize it* thinking, "There is *a physical eye sense power*." An eye sense power different from consciousness does not exist. This is also to be applied similarly to the remaining physical sense powers.

A latency that produces a consciousness is deposited on the mind-basis-of-all by another consciousness. When is it deposited? It is deposited by that consciousness as it is ceasing. Lama Tsongkhapa says: "Through its ripening, a later eye consciousness, subsequently created in the aspect of the former, will be produced." A result is produced from that latency in the same aspect as the previous consciousness.

"An uninterrupted moment of potential produced from an uninterrupted moment of potential becomes the basis of its respective consciousness, that is, an eye consciousness." The potential deposited on the mind-basis-of-all is a continuum of uninterrupted moments. The uninterrupted moment of potential, the basis of its respective eye consciousness, is called a physical eye sense power.

Lama Tsongkhapa's *Illumination* (Tibetan text page 256) says:

> A latency, the cause producing an eye consciousness, is the causal condition for [an eye consciousness], whereas the eye sense power is the empowering condition for eye consciousness. Here, the eye sense power that is presented as the direct cause of eye consciousness is that intended in the context of the ripening of latencies that produce eye consciousness; it is not any eye sense power.

The eye sense power that is the direct cause of eye consciousness is presented only in the context of the ripening of latencies; not all eye sense powers are the direct cause of eye consciousness. For example, when one sleeps there is an eye sense power but it does not act as a direct cause of eye consciousness. Likewise, there is a nose sense power when sleeping but it does not function as a direct

cause of a nose consciousness. Only when form is seen when awake is the eye sense power the direct cause of eye consciousness. A latency is the causal condition for eye consciousness, while the eye sense power is the empowering condition for eye consciousness.

Lama Tsongkhapa's *Illumination* (Tibetan text page 256) says:

> Furthermore, Maitreya's *Discrimination of the Middle Way and the Extremes* says:
>
> > Consciousnesses to which appear
> > Objects, sentient beings, self, and cognition,
> > Are thoroughly produced without objects.

"Objects" refers to forms, sounds, and so forth, and "sentient beings" to the five sense powers. For those who accept a mind-basis-of-all, the mind-basis-of-all can be considered to be a self since it is an illustration of the person. What is both self and cognition? It is the mind-basis-of-all. In short, self is the person, and cognition is the consciousness.

Lama Tsongkhapa's *Illumination* (Tibetan text page 256) says:

> The statement that "Consciousnesses to which appear objects, forms and so forth, and sentient beings, the five sense powers, are produced" refers to a mind-basis-of-all.

From an object, an apprehended, and a sentient being, a sense power, there arises consciousness. These consciousnesses are produced without external objects.

Lama Tsongkhapa's *Illumination* (Tibetan text page 256) says:

> Acharya Sthiramati also explains that the physical sense powers are observed objects of a mind-basis-of-all. Therefore, those Chittamatrins that assert a mind-basis-of-all assert what appears to a mind-basis-of-all as a physical sense power to be an eye sense power and so forth.

The physical sense powers, an eye sense power and so forth, appear to a mind-basis-of-all. Does an eye sense power and so forth appear to a mind-basis-of-all? What is the observed object of a mind-basis-of-all? Lama Tsongkhapa says: "Acharya Sthiramati also explains that the physical sense powers are observed objects of a mind-basis-of-all." The *Supplement* says that only the sense powers and the five objects are the observed objects of a mind-basis-of-all. Thus, the observed objects of a mental consciousness are not the observed objects of a mind-basis-of-all. In short, for the Chittamatra system what are the observed objects of a mind-basis-of-all? They are (i) the five objects – forms, sound, odors, tastes, and tangible objects – and (ii) the five sense powers – the eye, ear, nose, tongue, and body sense powers. The physical sense powers that appear to a mind-basis-of-all are the eye sense power and so forth.

Lama Tsongkhapa's *Illumination* (Tibetan text page 256) says:

> Having indicated that there does not exist an eye sense power and so forth that is different from consciousness, in order to indicate that forms also do not exist as objects other than consciousness, [the Chittamatrins] say:
>
> > *"Here, through not realizing that the cognizers that arise from the sense powers*
> > *Arise as the very appearance of blue and so forth*
> > *From their respective seeds, without external apprehendeds,*
> > *Beings assert that the mind apprehends externals."* [6.63]

With respect to the statement above that "there does not exist an eye sense power and so forth that is different from consciousness," there is debate as to whether an eye sense power and so forth are one with consciousness because they are not different from consciousness. This is because if they are not different, they must be one. Are eye sense power and eye consciousness one? "An eye sense power and so forth that is different from consciousness" means "an eye sense power and so forth that is a different substance or entity from consciousness." Both an eye sense power and an eye consciousness are compounded phenomena; when two compounded phenomena are one entity, they are also one substance. However, in general if it is one entity it is not pervaded by being one substance. For example, the exalted wisdom of meditative equipoise single-pointedly realizing the selflessness of persons and the selflessness of phenomena are one entity, but they are not the same substance because the selflessness of phenomena is permanent. Similarly, the exalted wisdom of meditative equipoise realizing non-duality and non-duality itself are one entity, but they are not one substance. So too are space and the valid cognizer apprehending it one entity but not one substance.

Lama Tsongkhapa's *Illumination* (Tibetan text page 256-6) says:

> *Here*, in this world, *through not realizing that the* five *cognizers that arise from the* five *sense powers arise as the very appearance of blue and so forth from* the ripening of *the seeds of the respective* consciousness *without external apprehendeds* such as blue and so forth, *beings assert*, that is, strongly adhere to, what appears to *the mind*, blue and so forth, to be *external apprehendeds*. Therefore, there do not exist external [objects] that are objects other than consciousness.

The Chittamatrins say that not realizing that there do not exist external objects, beings adhere to them as existing even though the appearance of blue and so forth arises due to the activation of latencies deposited on the mind-basis-of-all. Thus, Lama Tsongkhapa says: "beings assert, that is, strongly adhere to, what appears to the mind, blue and so forth, to be external apprehendeds." According to the Chittamatrins, the beings who, due to a lack of understanding, conceive blue and so forth to be external appearances are the Prasangika Madhyamikas who do not understand the appearance of blue in this way. The thesis of the Chittamatrins is set out here saying: "Therefore, there do not exist external [objects] that are objects other than consciousness."

Lama Tsongkhapa's *Illumination* (Tibetan text page 257) says:

> When this is explained in one way [it is as follows]:
>
> *"Just as in a dream, from the ripening of*
> *Their respective potentials, without forms that are other objects,*
> *There arise minds that have their aspect; likewise, here,*
> *Even when awake, there exists mentality without the external."* [6.64]
>
> *Just as in a dream, from the ripening of respective potentials* that are latencies, *without forms that are other objects there arise minds that have the aspect of* forms, sounds, and so forth; *likewise*, *here*, *even when awake, there exists mentality without external* objects.

The Chittamatrins set out the example of forms and so forth that appear in a dream but are not true. They say that their appearance arises due to the activation of latencies deposited on a mind-basis-of-all. For example, if one sees a show and then later on dreams of it, the Chittamatrins explain this as being due to the depositing of latencies on the mind-basis-of-all. Likewise, if having played with others one later dreams of it, this too arises from the activation of latencies.

Student: Is a disintegrated action a latency of an action?

Geshe Jampa Gyatso: It is not. A disintegrated action is not a latency. Why? Where is a disintegrated action? For example, if we create a virtuous action through reciting a mantra many times, when the action stops the virtue created remains. When this action stops is this a virtuous disintegrated action? Is the stopping of a verbal action the disintegrated action? That disintegrated virtuous verbal action is not the latency of a virtuous verbal action. Does that verbal action deposit a latency? It does. Where? It is temporarily deposited on the continuum of the mental consciousness; in the long term it is deposited on the mere I.

Thursday morning, 19 October 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 257) says:

3B1C-2B3E-2A1B-2B2A-2A2B-2 Refuting that system

Chandrakirti's autocommentary says:

That is not like that.

The Prasangika Madhyamikas refute the Chittamatrins assertion that there are no external objects and that consciousness exist inherently. Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, explains why as follows:

Why, as in dream, with no sight, mind consciousness
Of the appearance of blue and so on arises,
Is it not produced from its ripening seed
In a blind man here, without the sense of sight? [6.65]

Then why, just as in a dream, without sight, mind consciousness of the appearance of blue and so on arises naturally, is consciousness of the appearance of bright blue not produced in a blind man in this waking time, without sight, from the ripening of its own seeds? You should understand that it follows that it must be produced, for the blind man is equally without sight both in dream and awake.

The Chittamatrins say that when asleep those who are not blind, although lacking an eye sense power, have the clear appearance of blue and so forth to their mental consciousness. On this basis, the Prasangika Madhyamikas ask them: "Why does a blind person not have the clear appearance of blue and so forth when awake, given that he is like one who is dreaming who does not have an eye sense power?" The Prasangika Madhyamikas' point is that according to the Chittamatrins it should be possible for there to be the clear appearance of blue and so forth to the mental consciousness of a blind man in the waking state because he is similar to one who is dreaming in not having an eye sense power. The Chittamatrins say that it is not like that because the clear appearance of blue and so forth in a dream is due to the ripening of latencies. The Prasangika Madhyamikas then ask why does a blind man in the waking state not have the clear appearance of blue to his mental consciousness due to the ripening of latencies? The Prasangika Madhyamikas say that the waking state of the blind and dreaming state of the non-blind are similar in terms of the absence of an eye sense power. The eye sense power of the blind and the non-blind are similar in the sense of not functioning.

Chandrakirti's autocommentary says:

If asked: Why?

Just as without an eye, during a dream
Mental consciousness arises to which blue, etc. appear; like that,
Without an eye sense, why is it not produced here in the blind
Through the ripening of its own seeds? [6.65]

If, here, just as – being the waking state – visual consciousness arises very clearly through the eye viewing a form; similarly, also during a dream, without an eye, mere mental consciousness in accord with the aspect of a visual consciousness is produced through the ripening of its imprint – then, why does an aspect like that not arise through the ripening of its own imprint also in the blind in the waking state, due to which they would see like those who are not blind, because both are also similar in lacking eyes?

Then, if it is thought: The cause of mental consciousness with an aspect like that is not the lack of an eye. If asked: What is? It is the ripening of a potential for mental consciousness with such an aspect. Therefore, where there is the maturation of a potential, mental consciousness with such an aspect will arise there. Furthermore, it exists only in a dream due to the condition of sleep. It does not exist when awake.

The Chittamatrins say that the cause for the production of a mental consciousness having the clear appearance of blue and so forth in a dream is not the lack of an eye sense power, but is due to the ripening of latencies. The Chittamatrins say that the production of mental consciousness having the clear appearance of blue and so forth without an eye sense power only occurs during a dream due to the condition of sleep. The Prasangika Madhyamikas then say that this is not reasonable.

Gedun Drup's *Mirror of the Clarification of the Thought,* as translated by Martin Willson, says:

If, in your view, there's ripening of the potential
Of the sixth in dream, but not awake,
Then why, just as here there's no ripe sixth's potential,
Should there not be none in the time of dreaming? [6.66]

If, in your view, you maintain it is not equal, since in dream there is the ripening of the potential of the sixth, mind consciousness, but in waking there is not, then why just as in this waking time there is no ripening of the potential of the sixth, should there not likewise be none in the time of dreaming?

Chandrakirti's autocommentary says:

[Response:] That also is unreasonable.

If asked: Why?

If, for you, there exists ripened potential
Of the sixth in a dream – while awake it does not exist,
Just as a ripened potential of the sixth is non-existent here,
Like that, why is it illogical to say "It is non-existent at dream time?" [6.66]

The "sixth" means "mental consciousness."

If by only a mere mode of speech (words), the ripening of a potential for mental consciousness with an aspect like that during a dream is asserted, but is not when awake; then, also by our words, here, just as the ripening potential for a consciousness with an aspect like that does not exist when awake, similarly, it must be asserted that "it is non-existent also in a dream."

The Prasangika Madhyamikas say that the Chittamatrins' statement "In a dream there is the activation of ripening, but in the waking state there is no such activation" is just words that allow the Prasangika Madhyamikas to say: "then, also by our words, here, just as the ripening potential for a consciousness with an aspect like that does not exist when awake, similarly, it must be asserted that 'it is non-existent also in a dream.'"

Chandrakirti's autocommentary says:

> One can say:
>
> *Just as the absence of an eye is not its cause, so*
> *Also in dream, sleep is not the cause.* [6.67ab]
>
> Because dream vision – like that of the blind when awake – lacks a functioning faculty, the support of that [eye] consciousness, it is a reactivation of an aspect of the consciousness supported on the eye faculty that is named potential. It does not have a mental consciousness [that has arisen from] the transformation of the ripened potential for mental consciousness. Therefore, just as such, the absence of eyes is not a cause [for the ripening of the imprints of the appearance of objects] to this blind person who is awake, similarly, sleep is also not a cause for the ripening of the imprint of a consciousness during a dream.

The Chittamatrins say that the absence of an eye sense power is not the cause for a mental consciousness having the clear appearance of blue and so forth. Previously the Chittamatrins said that a mental consciousness having the clear appearance of blue and so forth in a dream is due to the condition of sleep. To this the Prasangika Madhyamikas now say: "If we say to you that sleep is not the cause of that mental consciousness, then what is?"

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *As lack of sight is not the cause of that,*
> *So also in dream, sleep is not the cause.* [6.67ab]

It follows there must be, for just as that lack of sight is not the cause of this production of consciousness of the appearance of the object in waking time, so also sleep is not the cause of inherently existing consciousness of the appearance of the object in dream. [For if inherently existent consciousness arises without externals, it cannot be dependent on the ripening of instincts].

> *Therefore, in dream too, that thing and the eye*
> *Are accepted as cause of a false perceiving subject.* [6.67cd]

In dream also, that functional thing, the [dreamt] form, and [dream-]sight, are to be accepted as the cause [or base] of a false perceiving subject [or consciousness], for from false imprints, false consciousness is born.

Chandrakirti's autocommentary says:

> Since it is like that:
>
> *Therefore, also during a dream, the thing, eye [and]*
> *False subject are accepted as causes of perception.* [6.67cd]
>
> Therefore, also during a dream, one should accept that kind of knower with an object of that kind and that kind of what has become the support of visual consciousness.

The physical sense powers are the main cause for a mental consciousness having the clear appearance of blue and so forth during a dream. For example, having seen a show when awake, later when asleep one dreams of the forms and so forth that were seen; this is due to having seen them before in dependence on a non-defective eye sense power. If there were no such eye sense power there would not have been the appearance of the show to eye consciousness.

When the Prasangika Madhyamikas give these rebuttals the Chittamatrins continue to debate with them.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *Since whatever answer he returns*
> *Is seen to be the same as what he'd prove,*
> *This argument is refuted.* [6.68abc]

You should understand that this argument of the Chittamatrin can be refuted; since whatever answer the Chittamatrin gives to the refutation of inherently existent dependent phenomena is seen to be similar to his thesis [i.e., merely asserts it].

The Chittamatrins continue to hold to the inherent existence of other-powered phenomena.

Chandrakirti's autocommentary says:

> Therefore, if like that:
>
> *Since their giving such and such a reply*
> *Is seen as similar to this and that thesis,*
> *Their dispute is dispelled…* [6.68abc]
>
> "This triad of the waking state is emptied by nature, because of [being] a referent; like a dream" is indicated and some opponents mention, "Waking consciousness is emptied by objects because of being consciousness; like the consciousness of a dream," and, "The referent objects in the waking state are possessors of a false nature because of being objects; like the objects of a dream," and, "Similarly all the fully deluded and the completely pure are not existent because of a non-existent support; like a cloth of turtle hair."

The triad mentioned here is: (i) the form of a dream, (ii) the eye sense power of a dream, and (iii) the eye consciousness of dream.

In response to the syllogism ""This triad of the waking state is emptied by nature because of [being] a referent; like a dream," the Chittamatrins set out three syllogisms:

1. "Waking consciousness is empty of objects because of being consciousness; like the consciousness of a dream."
2. "The referent objects in the waking state are possessors of a false nature because of being objects; like the objects of a dream."
3. "Similarly all the fully deluded and the completely pure are not existent, because of a non-existent support; like a cloth of turtle hair."

The Prasangika Madhyamikas set out the first syllogism: In the waking state the three, object, sense power, and consciousness, as the subject, are empty of inherent existence because they are observed; for example, like a dream. To this the Chittamatrins respond:

1. "The consciousness of the waking state, as the subject, is empty of external objects because it is consciousness; for example, like a dream consciousness." In this way the Chittamatrins attempt to

prove the non-existence of external objects, whereas the Prasangika Madhyamikas are proving the lack of inherent existence.

2. "The observed object of the waking state, as the subject, is a falsity because of being an object; for example, like a dream object." Therefore, the Chittamatrins says that objects seen when awake are false just as the objects of a dream are without doubt false. If it is an object it is not pervaded by being a falsity, but what is perceived by a sense consciousness, the eye consciousness and so forth, is pervaded by being a falsity.
3. "All the thoroughly afflicted and completely pure are non-existent because their basis is non-existent; for example, like a turtle hair cloth." The Chittamatrins say that if other-powered phenomena were not inherently existent the basis for the thoroughly afflicted and completely pure would not exist, due to which they would be like a cloth made from turtle hair.

Chandrakirti's autocommentary says:

> The examples of cataracts should be expressed similarly.

The example of cataracts is similar because when there are cataracts there is the production of a consciousness having the appearance of falling hair, whereas lacking cataracts no such consciousness is produced. Similarly, if there were no other-powered phenomena, the basis of the thoroughly afflicted and completely pure, there would not be the thoroughly afflicted and completely pure.

Chandrakirti's autocommentary says:

> When the wise Madhyamikas see the giving of such and such a reply by the Propounders of Consciousness by way of the likes of that and so forth, as similar to this and that thesis, this dispute – propounding as consciousness – is overcome.

The Madhyamikas say that no matter what the Chittamatrins say it does not harm them but instead becomes a condition for increasing their wisdom, just like fuel poured on dry wood does not harm the wood but instead acts to increase its ability to burn.

Thursday afternoon, 19 October 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 257) refutes the Chittamatrins assertions of (i) the non-existence of external objects and (ii) consciousness that is inherently existent saying:

> PRASANGIKA MADHYAMIKAS: That is not reasonable.
>
> *Just as without an eye there arises a mind – the mental –*
> *To which blue and so forth appear in a dream,*
> *In the same way, why is it not produced in the blind*
> *From the ripening of its respective seed without an eye sense power?* [6.65]
>
> *Just as without an eye* sense power *there arises a mind* that is *a mental* consciousness *to which blue and so forth appear in a dream*, *in the same way*, *why is* the seeing of forms and so forth also *not produced without an eye sense power in the blind* who are awake *from the ripening of a seed*, a latency, of the *respective* consciousness, just as it is in those who are not blind, since both a dream and the waking [state] are similar in being without an eye sense power?

The Prasangika Madhyamikas say that it follows that a blind person would also clearly see form. Why? Just as in a dream forms clearly appear to a mental consciousness without an eye sense power, likewise, forms should also clearly appear to a blind person when awake without an eye sense power.

Lama Tsongkhapa's *Illumination* (Tibetan text page 257) says:

> Furthermore, if an inherently existent consciousness is produced without external forms and so forth, it is due to the essential point that there is no difference between the two, a dream and the waking [state].
> CHITTAMATRINS: The cause for the non-arisal of a mental consciousness having the clear appearance of forms and so forth, like that of a dream, is not the absence of eyes in the blind who are awake. What then is [the cause]? [The cause] is the non-ripening of potentials for the arisal of such a mental consciousness. For that reason, where there exists the ripening of potentials, there is the arisal of such a mental consciousness. Furthermore, it exists only in a dream due to the condition of sleep, it does not exist when awake.

Why does a blind person not have the clear appearance of forms to his mental consciousness in the same way that a person in a dream has the clear appearance of forms to the mental consciousness? The Chittamatrins say that the reason is not the absence of eyes, but that the blind person in the waking state does not have the clear appearance of forms and so forth to his mental consciousness because there is no ripening of a potential for the arisal of the clear appearance of forms and so forth to his mental consciousness. "Clear appearance" means appearance without a meaning generality. Here the Prasangika Madhyamikas refute the existence of clear appearance to an inherently existent consciousness.

Lama Tsongkhapa's *Illumination* (Tibetan text page 257) says:

> PRASANGIKA MADHYAMIKAS: That is not reasonable.
>
> *If, according to you, there exists in a dream*
> *The ripening of potentials for the sixth, whereas it does not exist when awake,*
> *Then, just as here the ripening of potentials for the sixth does not exist,*
> *In the same way why would it be unsuitable to say 'It does not exist at the time of a dream"?*
> [6.66]
>
> *If*, *according to you, there exists in a dream the ripening of potentials for* mental consciousness, *the sixth* [consciousness], *whereas it does not exist when awake*, *then just as*, *here*, that is, when awake, there *does not exist* for the blind *the ripening of potentials for* the clear appearance of forms and so forth to the mental consciousness, *the sixth*, *in the same way why would it be unsuitable to say "It does not exist at the time of a dream"?* It would [in fact] be suitable [to say that].
> Furthermore, this is a system which is based on the object of negation.

The Chittamatrins say that in a dream, due to the condition of sleep, there is the clear appearance of forms and so forth to a mental consciousness through the ripening of potentials. The Prasangika Madhyamikas say: "If such a potential ripens only at the time of a dream and not when awake, then just as there does not exist for the blind when awake the ripening of potentials for the clear appearance of forms and so forth to the mental consciousness in the same way why would it be unsuitable to say 'It does not exist at the time of a dream'?" Just as there is no clear appearance of forms and so forth to the blind, so should it be the case for one who is dreaming; this would be suitable. The Prasangika Madhyamikas say: "Furthermore, this is a system which is based on the object of negation." That is, there are no inherently existent forms that appear to a consciousness.

Lama Tsongkhapa's *Illumination* (Tibetan text page 258) says:

> If someone speaks mere words without logic, we are permitted to say as above. Because sight in a dream, like that of the blind when awake, lacks a functioning sense power (the support of consciousness), the consciousness supported on an eye sense power which is called 'a potential' that takes the aspect [of an object] is not a mental consciousness that arises from the transformation of a ripened potential for mental consciousness.
>
> *Just as a lack of eyes is not the cause of that,*
> *Likewise, also in a dream, sleep is not the cause.* [6.67ab]
>
> Therefore, *just as a lack of eyes is not the cause of* the ripening of latencies for the appearance of objects in the blind who are awake, *likewise*, *also in a dream*, *sleep is not the cause* of the ripening of latencies for the appearance of objects because if an inherently existent consciousness without external objects were produced it would not depend on the ripening of latencies.

The support, or basis, is an eye sense power, whereas that supported on it is the eye consciousness. The supported eye consciousness takes the aspect of the specific object that is seen, for example, the aspect of blue when the object seen is blue, the aspect of long when the object seen is long, and so forth. Lama Tsongkhapa says: "[It] is not a mental consciousness that arises from the transformation of a ripened potential for mental consciousness."

The lack of an eye sense power is not the cause for the ripening of latencies for the appearance of external objects in a blind person who is awake, just as sleep is not the cause for the ripening of latencies for the appearance of objects in a dream. The Prasangika Madhyamikas say that the ripening of latencies would not be necessary in order to have the appearance of objects in a dream because dream objects are inherently existent. Since they are inherently existent, they do not need to depend on anything but can appear to anyone at anytime without depending on the ripening of latencies. In short, the Prasangika Madhyamikas say to the Chittamatrins that the ripening of latencies is not necessary for the appearance of inherently existent objects. Thus, there is no mental consciousness that arises from the transformation of a ripened potential. In other words, a consciousness does not need to depend on the transformation of a ripened potential for its existence because it is inherently existent. That which is inherently existent cannot arise from the transformation of a ripened potential, therefore, an inherently existent mental consciousness does not arise from a ripened potential.

Lama Tsongkhapa's *Illumination* (Tibetan text page 257-8) says:

> *Because of that, also in a dream, things, the eye, and*
> *False object-possessors are asserted to be the cause of perception.* [6.67cd]
>
> Therefore, *because of* the production of a false consciousness, which has the appearance of dream objects, from false latencies, *also in a dream*, just as when awake, (i) *things* that are objects, (ii) *the false* consciousness that has the appearance of forms and so forth, and (iii) *the eye* of a dream *are asserted to become the cause*, that is, the basis, *of perception*, i.e., consciousness. Here in the autocommentary it says that when an object is perceived in a dream it is observed through the coming together of the three.

"The coming together of the three" refers to coming together of a mental object, mental sense power, and mental consciousness in a dream. This is because while dreaming the sense consciousnesses are not manifest, but have ceased. However, some scholars, such as Panchen Sonam Drakpa, say that if an eye consciousness is not manifest, it is non-existent. The Tibetan nomads say: "Thirty people have thirty opinions. Thirty yaks have sixty horns." Another example of many different opinions is the thirteen ways of commenting on the *Ornament for Clear Realizations*.

END

Monday afternoon, 23 October 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 258-9) says:

> It also says that the form sphere and the eye, as well as the eye consciousness that is produced by these two, do not exist in a dream. In this way, even though the three – (i) the objects of the five, the eye consciousness and so forth, (ii) the sense powers, and (iii) the consciousnesses – do not exist in a dream, since that observed to be the three exist in the perspective of the person who is dreaming a dream, the three – (i) the eye of a dream, (ii) the eye consciousness of a dream, and (iii) the form of a dream – are presented as being asserted. However, those three are not asserted to be established to be an eye and so forth. It is like [the fact] that even though a horse and elephant that are illusions and a human being that is an illusion are asserted, they are necessarily not asserted to be a horse and elephant and a human being.

In a dream there is no form, no eye sense power, and no eye consciousness that is produced by these two. Although dream objects do exist, they are not real. Does the eye of a dream exist? It does not. Thus, there does not exist the form, eye sense power, and eye consciousness of a dream, but in the perspective of the person who is dreaming there does exist the form, eye sense power, and eye consciousness of a dream. It is like the appearance of a horse or elephant created by a magician in that, although they seem to be real, they are not.

Lama Tsongkhapa's *Illumination* (Tibetan text page 259) says:

> *Since their giving such-and-such a reply*
> *Is seen to accord with this and that thesis,*
> *This debate is eliminated.* [6.68abc]
>
> Therefore, this being the case, *since* the Chittamatrins *giving such-and-such a reply* to the Madhyamikas *is seen to accord with this and that thesis*, i.e., probandum, not being established, *this debate* – the propounding of mere cognition – *is eliminated*, that is, overcome.

The Chittamatrins debate with the Prasangika Madhyamikas giving such-and-such responses to the Prasangikas, however these responses do not harm the assertions of the Prasangikas. This is because whatever syllogism the Chittamatrins set out, the probandum is not established. Instead, when the Chittamatrins debate with the Prasangikas, they actually harm their own theses.

That the Chittamatrins' probandum is not established is due to the fact that they set out syllogisms on the basis of an inherently existent thesis, due to which it cannot be proven. Thus, whatever reason they use against the Prasangika Madhyamikas it does not harm the Prasangika's reason but instead harms their own thesis.

Lama Tsongkhapa's *Illumination* (Tibetan text page 259) says:

> If this is expressed as an example [it is as follows]. When the Madhyamikas set out the statement "At the time of waking the three – (i) objects, (ii) sense powers, and (iii) consciousnesses – are empty of inherent existence because they are observed; for example, like a dream," the Chittamatrins say:
>
> - "The consciousness of the waking [state] is empty of external objects because it is consciousness; for example, like the consciousness of a dream,"
> - "Objects that are observed when awake are false because they are objects; for example, like dream objects," and
> - "Similarly, if other-powered phenomena, the basis of the thoroughly afflicted and completely pure, do not exist, then thoroughly afflicted and completely pure phenomena would not exist

> because the basis does not exist; for example, like a turtle hair cloth." They say: "Similarly, this should also be stated in terms of the example of cataracts."

When the Prasangika Madhyamikas say "At the time of waking the three – (i) objects, (ii) sense powers, and (iii) consciousnesses – are empty of inherent existence because they are observed; for example, like a dream," the Chittamatrins respond saying: "The consciousness of the waking [state] is empty of external objects because it is consciousness; for example, like the consciousness of a dream." The Chittamatrins also say "Objects that are observed when awake are false because they are objects; for example, like dream objects," to which the Prasangikas respond that there is no pervasion because if it is an object it is not pervaded by being a falsity. If they are asked to posit such an object they posit ultimate truth because ultimate truth is an object but is not a falsity, in that it is a truth.

The Chittamatrins also say: "Similarly, if other-powered phenomena, the basis of the thoroughly afflicted and completely pure, do not exist, then thoroughly afflicted and completely pure phenomena would not exist because the basis does not exist; for example, like a turtle hair cloth." In this way, the Chittamatrins say that if their bases, other-powered phenomena, do not exist, then also the thoroughly afflicted and completely pure would not exist, just as if turtle hair, the basis, does not exist, then turtle hair cloth does not exist.

The Chittamatrins then say: "Similarly, such should also be stated in terms of the example of cataracts." Cataracts obscure the eyes, but if there were no eye, their basis, the cataracts also would not exist.

Lama Tsongkhapa's *Illumination* (Tibetan text page 259) says:

> With regard to these [three] syllogisms, in the first two, since the example is not established, the proof and that which is to be proven are similar because in a dream there exists form that is a phenomena sphere which is a different entity from mental consciousness. Due to [the Chittamatrins] wishing to prove that the basis of the thoroughly afflicted and completely pure is established by way of its own character, the third syllogism does not establish that a mere basis does not exist; whereas, thinking that [the basis of the thoroughly afflicted and completely pure] is established by way of its own character, it is indefinite.

In order to prove a thesis, that which proves it has to be definite. Here the probandum and the proof are similar because in a dream there exists form that is a phenomena sphere which is a different entity from mental consciousness. With the third syllogism, the Chittamatrins want to prove that the basis of the thoroughly afflicted and completely pure is inherently existent phenomena and to do so set out the reason "because the basis does not exist." There are correct reasons and facsimiles of reasons. Each of these are further divided into three. The three divisions of facsimiles of a reason are:

1. a reason that is indefinite,
2. a reason that is not established, and
3. a contradictory reason.

Of these three, the reason in the third syllogism is a reason that is not established. Lama Tsongkhapa says: "the third syllogism does not establish that a mere basis does not exist." Either the property of the subject is not established or the reason is not established. On the other hand, if one sets out the syllogism "thinking that [the basis of the thoroughly afflicted and completely pure] is established by way of its own character, it is indefinite." This means that the pervasion is indefinite because there is no pervasion.

The Chittamatrins say: "Similarly, if other-powered phenomena, the basis of the thoroughly afflicted and completely pure, do not exist, then thoroughly afflicted and completely pure phenomena would not exist because the basis does not exist; for example, like a turtle hair cloth." The reason "because the basis does not exist" is not established. When the Chittamatrins set out that reason, it is

held to be inherently existent; such an inherently existent reason is not established. Although the Chittamatrins wish to prove something is inherently existent, they give an unrelated reason saying "because the basis does not exist," due to which the pervasion is indefinite. For example, in the syllogism "sound, as the subject, is impermanent because it is an object of apprehension of eye consciousness," the reason is not established because sound is not an object of apprehension of an eye consciousness. On the other hand, in the syllogism "sound, as the subject, is impermanent because it is an object of comprehension," the reason is indefinite because if it is an object of comprehension it is not pervaded by being impermanent, for example, uncompounded space. What is an object of comprehension?
Student: It is mutually inclusive with existent, which is what is established by a valid cognizer.
Geshe Jampa Gyatso: According to you because object of comprehension is mutually inclusive with existent the definitions are interchangeable?! So, what is the definition of object of comprehension?
Student 2: An object realized by a valid cognizer.

Lama Tsongkhapa's *Illumination* (Tibetan text page 259) says:

3B1C-2B3E-2A1B-2B2A-2A2C Indicating that the refutation of the Chittamatra system is without harm from the scriptures

Chandrakirti's autocommentary says:

> Similarly, even the fault of damage by scripture is not possible since:
>
> *… The buddhas*
> *Never taught that "Things exist."* [6.68cd]

The Prasangika Madhyamikas say that their refutation of the Chittamatrins' assertions is not harmed by scriptural authority. This is because no buddha ever taught that "Things exist," meaning that no buddha ever taught that things exist inherently.

Chandrakirti's autocommentary says:

> As taught [in the *Descent into Lanka Sutra*]:
>
> The three existences are mere imputations, things do not exist by entitiness.
> Logicians will conceive the imputed as the entity of things.
>
> When there is no self-nature, no consciousness, no basis of all, and no things,
> the childish, bad logicians, the corpse-like, impute these.

[The MP translation of these verses says:

> The three existences are mere imputations,
> Things do not exist by way of their own entity;
> Logicians conceive
> An imputation to be the entity of the thing.
>
> When there is no nature and no cognition,
> No basis-of-all and no things,
> Still bad, childish logicians,
> The corpse-like, impute them.]

"The three existences" are either: (i) the existence below the ground, (ii) the existence on the ground, and (iii) the existence above the ground, or (a) the desire realm, (b) form realm, and (c) formless realm.

These three are mere imputations and do not exist by way of their own entity. "Logicians" are the hard-headed or stubborn people who say that if phenomena are merely imputed then suchness cannot be found. This is because they say that if phenomena are merely imputed, they do not exist inherently, and, if they do not exist inherently, how can truth be established? "Logicians conceive" means that the logicians assert this.

This text continues saying that there is no nature, no cognition, and no basis-of-all. The Chittamatrins assert a basis-of-all, whereas the Prasangika Madhyamikas negate the existence of a seventh consciousness, a mind-basis-of-all, which is a basis for the infusion of latencies, that is different from the sixth consciousness. That there are "no things" means that there are no functioning things – forms, consciousnesses, and non-associated compositional factors – that exist inherently. "Still bad, childish logicians, the corpse-like, impute them." The logicians are said to be like a corpse in terms of their inability to realize suchness just as a corpse is unable to perform activities.

Chandrakirti's autocommentary says:

> It is also illogical for the very non-existence of things to be due to the emptiness that is the absence of one [thing] in one [other], because it is set forth [in the *Descent into Lanka Sutra*]:
>
> > O Mahamati! The emptiness of the absence of one in another (literally, 'one') is the lowest of all emptinesses.

The absence of one in one is the lowest of all emptinesses. In the phrase "Absence of one in one," the first word "one" refers to the duality of apprehendeds and apprehenders, whereas "in one" refers to other-powered phenomena. Therefore, this lowest of emptinesses is the emptiness is the lack of duality of apprehendeds and apprehenders being different substances in other-powered phenomena. This is the non-existence of the imputational factor – apprehendeds and apprehenders being different substances that are cut off and at a distance – in other-powered phenomena. This emptiness that is asserted by the Chittamatrins is the lowest type of emptiness.

Tuesday morning, 24 October 2000

> To say "A cow does not exist because of not being a horse" is also illogical; one should say "because it exists by its own essential-nature"[41] and so forth.

Such statements as "A cow does not exist because of not being a horse" are not correct reasoning because one could rebut those who propound this saying: "You are not a human being because you are not a horse."

> Similarly, it is set forth [in the *Meeting of the Father and Son Sutra*]:[42]
>
> > Bhagavan, they engage in the sphere of phenomena by engaging in the faculties. There are twenty-two faculties:
> >
> > 1. eye faculty,
> > 2. ear faculty,
> > 3. nose faculty,
> > 4. tongue faculty,

[41] Lama Tzong Khapa (p. 274) quotes the translation of Nag Tshos, who translates the phrase as 'because its own essential nature exists.'

[42] Source noted by Lama Tzong Khapa, p.275, b6.

5. body faculty,
6. mental faculty,
7. female faculty,
8. male faculty,
9. life faculty,
10. faculty of pleasure,
11. faculty of suffering,
12. faculty of mental happiness,
13. faculty of mental unhappiness,
14. faculty of equanimity,
15. faculty of faith,
16. faculty of joyous effort
17. faculty of mindfulness,
18. faculty of meditative stabilization,
19. faculty of wisdom,
20. faculty that acts to know all unknowing,
21. faculty of knowing all, and
22. faculty that possesses all knowing.

These faculties, or powers, are described in detail in Vasubandhu's *Treasury of Knowledge*, which says:

> *Five exert influence over four matters;*
> *Four over two – they claim.* [2.1ab]

Vasubandhu's autocommentary says

> The *five* sense powers of the eye and so forth *exert influence over four matters* because they exert influence over
>
> 1. beautifying the body,
> 2. safeguarding the body,
> 3. generating their specific consciousnesses together with the [mental factors] bearing similarities with them and
> 4. uncommon causes.
>
> They exert influence over beautifying the body because if they are absent the body is not beautiful. They exert influence over safeguarding the body because the eye and ear safeguard through seeing unpleasant visible forms and hearing unpleasant sounds, and because the three, nose, tongue, and body, protect the body through utilizing gross food (sustenance). They exert influence over uncommon causes because the eye exercises authority over viewing visible form through the body exercises authority over knowing tangible objects.
>
> *Four* – the male, female, life, and mental faculties – each exert influence *over two* matters.
>
> The two, male and female faculties, each exert influence over two matters because they exert influence over the particulars (i.e., gender) and differences of sentient beings. This is because it is in terms of the possession of male and female faculties that the particular (genders) of sentient beings are distinguished and because it is terms of the possession of male and female faculties that the differences of sentient beings are distinguished, such as large and small breasts and facial hair, tight and loose flesh, high and low pitched voice, etc.

An eye sense power is a clear physical form that is able to produce its result, consciousness, by its own power. "Five" refers to the five physical sense powers which exert influence over four matters. The "four" are the male, female, life and mental faculties which exert influence over two matters.

Treasury of Knowledge then says:

> *The five and eight,*
> *Over the thoroughly afflicted and completely pure.* [2.1cd]

The *five* faculties of feeling exert influence *over the thoroughly afflicted* because (i) attachment develops from feelings of pleasure and mental happiness, (ii) hatred from feelings of suffering and mental unhappiness, and (iii) confusion from neutral feelings, and the thoroughly afflicted develop from them.
The final *eight* faculties exert influence *over the completely pure* because the contaminated ones suppress the manifest afflictions and the uncontaminated ones eliminate the seeds of the afflictions.

Five faculties – suffering, happiness, mental suffering, mental happiness, and equanimity – exert influence over the thoroughly afflicted. Eight faculties – faith, effort, mindfulness, meditative stabilization, wisdom, the faculty that acts to know all the unknown, the faculty knowing all, and the faculty that possesses all knowing exert influence over the completely pure.

Chandrakirti's autocommentary (Tibetan text page 102) continues to quote from sutra:

> There, the eye faculty is also not observed in the three times. That which is not observed in the three times is not the eye faculty. That which is not an eye faculty, how does one present[43] its designation? It is like this, for example: nihilistic emptiness is false, is not real and does not exist. It is limited to being imputed thus in name – ultimately, empty is not observed nor is nothingness observed. Similarly, also the eye faculty, like nihilistic emptiness, is false and does not exist, it is not real. It has a seductive quality, deceives the childish, does not exist, is not real. It is limited to being imputed thus in name – ultimately, eye and faculty are not observed.

"The eye faculty is also not observed in the three times" means that an inherently existent eye sense power is not observed to exist in the three times. Nihilistic emptiness "is not real and does not exist. It is limited to being imputed thus in name – ultimately, empty is not observed nor nothingness observed." Likewise, the eye sense power is false and does not exist inherently. It is a deceptive substratum (translated here as "seductive quality") and "deceives the childish, does not exist, is not real." That "It is limited to being imputed thus in name – ultimately, eye and faculty are not observed" means that ultimately things are not observed to exist inherently.

Chandrakirti's autocommentary continues to quote from sutra:

> The Bhagavan, having gained the exalted wisdom of omniscience, for the sake of caring for however many sentient beings abide in the mistaken, imputed "eye faculty," but it is not ultimately so. Faculty is separated from a self-nature and emptied by faculty-ness. There, an eye does not exist as eye-ness, a faculty does not exist as faculty-ness. If asked: Why? Eye is separated from a self-nature of eye. Whatever phenomenon does not have a self-nature, that is not a functioning thing. That which is not a functioning thing is not fully established. It is not produced, is not ceased. It is not to .be imputed saying "past and future."
> and so forth and:

[43] Tib. *Tshal Bar bGyi* – Huntington (p. 243) takes the phrase 'present its designation' as 'actively manifests (itself) as a conventional reality.'

The Bhagavan said "eye sense power," not inherently existent eye sense power, in order to care for however many sentient beings there are who abide in mistaken conception by leading them to correct conception. A faculty, or sense power, is free from inherent existence (translated here as self-nature). "Emptied by faculty-ness" seems to mean that a faculty is empty of itself. With respect to this it can therefore be asked: "Is an eye sense power empty of being an eye sense power?" An eye sense power is empty of being an inherently existent eye sense power; [it is not empty of being an eye sense power]. Therefore, the statement "There, an eye does not exist as eye-ness, a faculty does not exist as faculty-ness" means that an eye does not exist as an inherently existent eye and a sense power does not exist as an inherently existent sense power. Therefore, an eye is empty of being an inherently existent eye. "Whatever phenomenon does not have a self-nature, that is not a functioning thing" means that all phenomena are empty of inherent existence and that this emptiness of inherent existence is not a functioning thing (*ngo po*), although it does exist. Or this statement can be understood to mean that inherent existence is not an existent (*ngo po*). Therefore, instead of saying "That which is not a functioning thing is not fully established it can be said "That which does not exist is not fully established." This discussion comes because the Sanskrit word *bhava* (Tibetan *ngo po*) can mean either 'functioning thing' or 'existent.' The Vaibhashikas say that if it is an established base it is pervaded by being a functioning thing and if it is an existent it is pervaded by being a functioning thing. On this basis, they divide functioning things into permanent functioning things and impermanent functioning things. As examples of permanent functioning things they posit (i) analytical cessations, (ii) non-analytical cessations, and (iii) space. They say, for example, that the function of space is to allow movement. Other schools negate this saying that if space is a functioning thing it is result and therefore ask the Vaibhashikas: "Of what is space the result?" If it is a result it should be one of the five types of results (see *Middling Collected Topics*):

1. fruitional result,
2. dominant (environmental) result,
3. result similar to its cause
4. result of the activities of beings, and
5. result of separation.

Are all of these fully qualified results? They are not. Space is none of these types of results, whereas, analytical cessations and non-analytical cessations can be considered results of separation which, however, are not fully qualified results; they are only results nominally.

The sutra quoted in Chandrakirti's autocommentary continues:

> Bhagavan, it is like this, for example: in one man's dream, he laughs, is happy and plays. Waking from a long sleep, that is recalled. Although remembered, that will not be gained. If asked: Why is that? If those are not gained by him even in the dream, what need to say when awakened from sleep? There is no abidance of that. Similarly, faculties are like a dream. Similarly, also all phenomena do not come to be observed due to entitiness. Therefore, they are said to be 'inexpressible.'

The example here is that during sleep a man dreams of enjoying a beautiful object, then, upon awakening, remembers this beautiful object even though it does not actually exist since it cannot be found when sought. If it is not found in a dream there is no need to mention that it is not found when awake. The things of a dream do not exist. When awake, although remembered, the objects of a dream cannot be obtained even by way of great effort.

The sutra says: "There is no abidance of that. Similarly, faculties are like a dream. Similarly, also all phenomena do not come to be observed due to entitiness." This means that phenomena are just like dream objects in that they appear to exist inherently but do not. "Therefore, they are said to

be 'inexpressible.'" That they are inexpressible is to be understood to mean that although phenomena, the faculties, can be expressed by words they are not inherently inexpressible.

Chandrakirti's autocommentary says:

> Hence, aggregates, elements, entrances, dependent arisings, and so forth are fully explained like the faculties, thus, how could they have such a self-nature?

The five aggregates – form, feeling, discrimination, compositional factors, and consciousness aggregates – are also empty of inherent existence. So too are the twelve entrances, or twelve spheres – the six external and six internal. The six external spheres are the form sphere, sound sphere, odor sphere, taste sphere, and tangible object sphere, and phenomena sphere. The six internal are the eye sphere, ear sphere, nose sphere, tongue sphere, body sphere, and mental sphere.

The eighteen constituents are divided into three groups: six observed objects, six supporting sense powers, and six supported consciousnesses. The six observed objects are the form constituent, sound constituent, odor constituent, taste constituent, tangible object constituent, body constituent, and phenomena constituent. The six supporting sense powers are the eye constituent, ear constituent, nose constituent, tongue constituent, body constituent, and mental constituent. The six supported consciousnesses are the eye consciousness constituent, ear consciousness constituent, nose consciousness constituent, tongue consciousness constituent, body consciousness constituent, and mental consciousness constituent.

"Dependent-arisings" refers to the two sets of twelve links: (1) the set of the thoroughly afflicted and (2) the set of the completely pure. The twelve links in relation to the thoroughly afflicted side are:

1. ignorance,
2. karmic formations,
3. consciousness,
4. name and form,
5. six spheres,
6. contact,
7. feeling,
8. craving,
9. grasping,
10. existence,
11. birth, and
12. aging and death.

The twelve links in relation to the completely pure side are:

- due to the ceasing of ignorance, karmic formations cease,
- due to the ceasing of karmic formations, consciousness ceases,
- due to the ceasing of consciousness, name and form cease,
- due to the ceasing of name and form, the six spheres cease,
- due to the ceasing of the six spheres, contact ceases,
- due to the ceasing of contact, feeling ceases,
- due to the ceasing of feeling, craving ceases,
- due to the ceasing of craving, grasping ceases,
- due to the ceasing of grasping, existence ceases,
- due to the ceasing of existence, birth ceases, and
- due to the ceasing of birth, aging and death cease.

All of these links do not exist inherently but do exist conventionally.

Chandrakirti's autocommentary says:

> Therefore, formulated without the skill of wisdom due to not analyzing the intention of the scriptures of emptiness, this Propounder of Consciousness (*vijñanavadin*) is only an object to be dispelled.

According to the Prasangika Madhyamikas the Chittamatrins' assertions are only to be refuted.

Lama Tsongkhapa's *Illumination* (Tibetan text page 259) says:

> PRASANGIKA MADHYAMIKAS:
>
> *... The buddhas*
> *Never said "Things exist."* [6.68cd]
>
> Not only is the refutation of the Chittamatra system not harmed by reasonings, it [also] cannot be harmed by the scriptures because in our own system *the* perfectly complete *buddhas never said* in their scriptures "*Things exist* truly." In addition, the *Descent into Lanka Sutra* says:
>
> > The three existences are mere imputations,
> > Things do not exist by way of their own entity;
> > Logicians conceive
> > An imputation to be the entity of the thing.
> >
> > When there is no nature and no cognition,
> > No basis-of-all and no things,
> > Still bad, childish logicians,
> > The corpse-like, impute them.
>
> The first line indicates that the three existences exist as mere imputations by an awareness. The second line indicates what this means. Moreover, by indicating that things established by way of their own entity do not exist, [the sutra] says that things that are not established by way of their own entity are not non-existent from the beginning. Hence, that "The logicians who have not found the meaning of suchness assert what is merely imputed by an awareness to be a thing that is established by way of its own character" is shown by stating [the word] "imputation" twice. Non-establishment by way of its own entity is indicated in general, but [when] discerned, that is, indicated, in particular [it is as follows].
>
> The [Sanskrit term] "*rupa*" refers to both nature and form, but here that it [refers to] what possesses form is [understood] through pairing it with "cognition."

"The three existences are mere imputations" means that the three existences are merely imputed by an awareness and do not exist from their own side. "Things do not exist by way of their own entity" means that because things are merely imputed by an awareness they do not exist by way of their own entity. That they "do not exist" means that they do not exist by way of their own entity, it does not mean that they do not exist at all.

The word "imputation" occurs twice in the first verse: once in the first verse and once in the fourth line of the English translation. In short, these first four lines indicate that things do not exist inherently.

"There is no nature" refers to form which does not exist inherently, whereas "no cognition" refers to consciousness which does not exist inherently. "There is no nature" is to be understood here to mean form by pairing it with cognition. Thus, this line means that form and consciousness do not exist inherently or truly.

Tuesday afternoon, 24 October 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 260) says:

> Since the [word] 'things' of [the line] "things do not exist" was already indicated to [mean that] the things that are consciousness and those that are physical do not exist, here it is in regard to [their] entity. Moreover, in other [contexts] it [refers to] the entity that is the negation of truly existent things and to non-things. The way that [childish logicians] are like a corpse is that they do not have minds that are able to analyze suchness.

In the line from the *Descent into Lanka Sutra* which says "Things do not exist (*dngos po med*) by way of their own entity," the words "things do not exist" refer to the things that are form and consciousness which do not exist [by way of their own entity]. They are again mentioned saying: "When there is no nature and no cognition." In other contexts, "things do not exist" (*dngos po med*) refers to the entity that is the negation of truly existent things and to non-things (*dngos por med pa*). What are non-things? They are, for example, the forty isolates of the forty people here in the gompa, or generally characterized phenomena. Because the childish are unable to analyze emptiness they are likened to an unmoving corpse.

Lama Tsongkhapa's *Illumination* (Tibetan text page 260) says:

> This scripture negates the assertion that the other-powered phenomena of the three existences exist inherently.

In short, the Chittamatrins' assertion that the three existences exist inherently is negated by this scripture.

Lama Tsongkhapa's *Illumination* (Tibetan text page 260) says:

> CHITTAMATRINS: These scriptures do not harm [our assertions] since they indicate one, the other-powered, to be empty of the other one, the imputational factor – the entity of apprehendeds and apprehenders being different substances.
> PRASANGIKA MADHYAMIKAS: That is not suitable as perfect emptiness because the *Descent into Lanka Sutra* says:
>
> > Mahamati, the emptiness of one not existing as one is the lowest of all emptinesses.

The Chittamatrins say that there is no harm from such scriptures because they present one, other-powered phenomena, as empty of one, the imputational factor, the entity of apprehendeds and apprehenders being different substances. However, according to the Prasangika Madhyamikas, as it says in the *Descent into Lanka Sutra*, the emptiness of one, the other-powered, not existing as one, the imputational factor, is the lowest of all emptinesses. In fact, this is considered to be a type of emptiness by the Chittamatrins, but is not so considered by the Prasangika Madhyamikas.

Lama Tsongkhapa's *Illumination* (Tibetan text page 260-1) says:

> The autocommentary says:
>
> > Saying "An ox does not exist because it is empty of being a horse" is also not suitable; one should say "Because it is [empty of] existing by way of its own nature" and so forth.

> In regard to [the word] 'by nature,' the translation by Nagtso as 'Because it [is empty of] having its own nature' is excellent.

The autocommentary says "existing by way of its own nature," whereas Nagtso's translation says "has its own nature." "Existing by way of its own nature" means inherently existent.

Lama Tsongkhapa's *Illumination* (Tibetan text page 261) says:

> **The way in which the emptiness of one of not existing as the other is like the example expressed**
>
> The Bhagavan taught the emptiness that is devoid of inherent existence [as follows]. In order that sentient beings overcome the strong adherence conceiving things that are forms and so forth to be truly existent, he necessarily indicated that those very other-powered phenomena that appear as forms and so forth lack true existence. Without indicating that, if instead he had indicated "Other-powered phenomena, apprehendeds and apprehenders, do not truly exist as different substances" it would be like saying that the reason for the non-existence of an ox is "An ox does not exist as a horse."

This is Lama Tsongkhapa's commentary on the phrase in the autocommentary "A ox does not exist because it is empty of being a horse."

Lama Tsongkhapa's *Illumination* (Tibetan text page 261) continues:

> Hence, also for the systems of anyone who is a Madhyamika or Chittamatra there is no difference in regard to the bases of strong adherence functioning as what appears to sentient beings to be external and internal phenomena. Although they are indeed indicated to be empty in order to overcome strong adherence to those bases, the uncommon way of adhering by the Chittamatrins is that through the two, apprehendeds and apprehenders, seeming to appear as distant external and internal [objects], apprehendeds and apprehenders are adhered to as different substances. As an antidote to that, through taking appearances to be the substrata of other-powered phenomena, they refute that apprehendeds and apprehenders exist as different substances, whereby they negate that which is the basis of negation, the object of negation.

The Chittamatrins posit strong adherence to, or the conception of, a self of phenomena to be the conception that apprehendeds and apprehenders are different substances. In the Chittamatra system that which is empty of this duality is a thoroughly established phenomenon and the selflessness of phenomena. This view is incorrect according to the Prasangika Madhyamikas, who assert that apprehendeds and apprehenders are different substances.

Lama Tsongkhapa's *Illumination* (Tibetan text page 261) says:

> According to the Madhyamikas the way of adhering is that appearances are not posited by an awareness of conventions, but are adhered to as truly existent. As an antidote to that, through taking appearances to be the substrata, they negate [true existence] saying "There is no such true existence." Furthermore, the basis of negation, which is the object of negation, is negated
>
> - because when sentient beings adhere [to a basis], they do not conceive that basis to exist as a different object, the object of negation, rather they adhere to that basis as being the entity of the object of negation, and
> - because emptiness is also necessarily indicated to be empty of existing in the way in which it is adhered to.

The Madhyamikas say that appearances are existent phenomena or conventional phenomena or dependent-arisings that do not exist inherently. These appearances are adhered to as truly existent instead of being realized to be merely imputed. Lama Tsongkhapa's *Three Principal Aspects of the Path* (v. 11) says:

> As long as the two understandings of (i) appearances as infallible dependent relations and (ii) emptiness as free from assertion appear to be separate, you have not realized the thought of the Subduer.

In short, appearances are dependent-arisings. There are two modes of negating:
(1) negating something being the object of negation and
(2) negating something existing as the object of negation.
When the object of negation is negated on a pot, the pot that is truly existent is negated, not the pot existing as truly existent. For example, on an ocean at night where there is no fire, as the subject, there does not exist smoke because there does not exist fire. This is in the context of someone seeing mist on the ocean at a long distance at night and doubting that there is fire. In this case, it is easy to negate the existence of fire because if there were fire it would easily be seen at night. Another example is: on a smoky mountain pass, as the subject, there exists fire because there is smoke.

Geshe Jampa Gyatso: When it is said that there is no pot on this table what is negated?
Student: The presence of a pot on the table is negated.
Geshe Jampa Gyatso: There are two types of object of negation: being and existing. What is the difference? "There is no pot on the table" is an example of negating the object in terms of existing. "The table is not a pot" is an example of negating the object in terms of being.

Wednesday morning, 25 October 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 262) says:

> Therefore, taking the emptiness of true existence of the bases of present appearances to be a nihilistic emptiness (nothingness) and setting it aside, then taking another appearance to be the basis of emptiness and, rather than presenting it as empty of being the object of negation, presenting it as empty of existing as a thing, is not the system of any Madhyamika or Chittamatrin. In regard to the beginningless strong adherence in the continua of sentient beings, look inward and investigate whether or not you have an awareness conceiving such an object of negation. Thus, glorious Dharmakirti says:
>
> > That also was subsequently expressed,
> > Hence, it is pervaded by the darkness of evil.
>
> At the time of the flourishing [of the darkness of such evil], this is to be understood with the light of intelligence.

There are two way of negating the object of negation: (i) in terms of being and (ii) in terms of existing. The way of negating in terms of existing is not the system of any Chittamatrin or Prasangika. What is to be negated is appearances being the object of negation. Here 'beginningless strong adherence in the continua of sentient beings' refers to the conception of true existence. How does this beginningless strong adherence adhere to the object of negation? The mind conceiving existence as a thing is not an awareness adhering to the object of negation. In other words, the conception of true existence is not a conception of existing as a thing. If existence as a things were the object of negation then beginningless strong adherence should adhere to it, but it does not. Therefore, the emptiness of existing as a thing is not presented by any Chittamatrin or Prasangika.

Lama Tsongkhapa says that some take the emptiness of true existence of the bases of present appearances, dependent-arisings, to be a nihilistic emptiness. They then take the bases of present

appearances to be empty of existing as a thing rather than presenting them to be empty of the object of negation. In this eon of degeneration there are many different opinions. 'The flourishing of darkness' refers to the flourishing of the five degenerations (literally, dregs). Those with the light of intelligence should be careful about this.

Lama Tsongkhapa's *Illumination* (Tibetan text page 262) says:

> Here, the autocommentary, in regard to settling the twenty-two powers as lacking inherent existence, cites the *Meeting of Father and Son Sutra* saying:
>
> > Thus, they are limited to being verbal designations. Ultimately, the eye and the sense power are not observed.
>
> And:
>
> > Likewise, all phenomena are also not observed to exist by way of their own entity.
>
> Stating that all phenomenon do not exist ultimately nor by way of their own entity, in that they are nothing more than mere verbal designations, is to say that in affixing a qualification to the object of negation the two, [not existing ultimately and not existing by way of their own entity,] are enumerated and that all the positions positing their own presentations are to be taken to be mere verbal designations. Since [sutra] says "If the objects that bring enjoyment in a dream are not obtained by him even in a dream, what need is their to mention [that he does not obtain them] when awake?" and many [other] such statements, it is totally inadmissible to say "There is no difference between the man of a dream and the man of the waking state in terms of their being or not being a man" because it is said that those sentient beings who contribute to his enjoyment are also not found to be sentient beings at the time of a dream, whereas they are necessarily posited to be found at the time of waking. Hence, it should be understood that stating that for this system the sense consciousnesses, such as the eye consciousness and so forth, exist in a dream is a big mistake. This being the case, applying it to the Chittamatra tenets which lack skill in the wisdom realizing the final definitive meaning, they are only to be eliminated.

The *Meeting of Father and Son Sutra* lists the twenty-two powers and establishes them to be without true existence. It sets out two ways of enumerating the object of negation: (1) ultimate existence and (2) existence by way of its own entity. These are two different names but the meaning is the same. In general, in the Prasangika Madhyamika system there are six qualifications in affixing an object of negation:

1. existence by way of its own character,
2. existence from its own side,
3. inherent existence,
4. true existence,
5. ultimate existence, and
6. existence as reality.

On the other hand, for the Svatantrika Madhyamikas only the latter three are objects of negation.

The Prasangika Madhyamikas posit all phenomena as a mere verbal designation.

Student: What is the difference between "six qualifications in affixing the object of negation" and "six objects of negation"?

Geshe Jampa Gyatso: They are all objects of negation but they are also in relation to a particular basis, such as a pot. Thus, true existence, for example, is negated on the basis of pot. Thus, these qualifications have to be affixed to the pot. All 108 phenomena do not exist truly, inherently, etc. Qualifications in affixing an object of negation means that a particular object of negation is to be affixed to a basis of emptiness, for example, a pot. Affixing a qualification means to affix certain words

to the object of negation; for example, inherent existence. If one were to say "Such-and-such does not exist" it would not be correct, instead one must say "Such-and-such does not exist inherently." Object of negation by itself does not have much meaning; one has to affix that object of negation, for example, ultimate existence, to something.

One enjoys oneself in a dream, but the object of enjoyment, another person, is not found when sought in a dream. Due to this, there is no need to mention that he or she is not found when awake. If someone says that there is no difference between the man of a dream and the man of the waking state, this is incorrect "because it is said that those sentient beings who contribute to his enjoyment are also not found to be sentient beings at the time of a dream, whereas they are necessarily posited to be found at the time of waking." The man of a waking state does exist, whereas the man of a dream does not. The people who one contacts when awake actually exist, whereas the people of a dream do not. In the Prasangika Madhyamika system there do not exist eye, ear, nose, tongue, and body consciousness in a dream; therefore, saying that according to them there exist such sense consciousnesses in a dream would be incorrect. Lama Tsongkhapa says: "This being the case, applying it to the Chittamatra tenets which lack skill in the wisdom realizing the final definitive meaning, they are only to be eliminated." In short, the Chittamatrins lack skill in the wisdom realizing emptiness.

Lama Tsongkhapa's *Illumination* (Tibetan text page 263) says:

3B1C-2B3E-2A1B-2B2A-2A3 Indicating that the two, refuting such and meditation on repulsiveness, are not contradictory

Chandrakirti's autocommentary says:

> If it is mentioned here: If a knower does not exist without an object, then how is it that yogis see the ground as completely filled by skeletons through the precepts of the gurus?
>
> It is explained:
>
> *Wherever a yogi, through a guru's precept,*
> *Sees the ground filled with skeletons,*
> *There also, the three are seen as without production.* [6.69abc]
>
> [In other words:] Object, sense faculty, and consciousness.
>
> If asked: Why is that?
>
> *Because that meditative stabilization is indicated as wrong attention.* [6.69d]
>
> Because it is set forth saying "attention to what is not thus." This is to be accepted like that without doubt.

"If a knower does not exist without an object" refers to a consciousness which does not exist without an *external* object.

A guru give precepts, or instructions, to a disciple who then meditates and comes to see the ground as completely filled with skeletons. This meditation on skeletons is taught in the *Treasury of Knowledge*. One begins by visualizing that a small piece of flesh falls from the center of one's forehead revealing the bone below. Then gradually all the remaining flesh falls away leaving one's own body a mere skeleton. This skeleton body should then be expanded horizontally in all directions until the whole ground is filled with skeletons. Having done so, one then retracts all the skeletons back into oneself, only to once again expands them out in all directions. This meditation on repulsiveness is done in dependence on the precepts of a guru, due to which one attains a meditative stabilization seeing the whole ground pervaded by skeletons. Is this meditative stabilization mistaken or not? It is

mistaken in the sense that what is seen by this meditative stabilization does not actually exist. Is the whole ground pervaded by skeletons as it is seen by this meditative stabilization? It is not, therefore, such a meditative stabilization is taught to be mistaken. This meditative stabilization is a wrong attention. On the other hand, in the context of the ten totalities, when the ground is seen to be pervaded by gold this is said to be correct. Why is this?
Student: Because the ground, as well as water, contains gold and is, therefore, a suitable basis to be transformed into gold. On the other hand, the ground is not suitable to be transformed into skeletons.
Geshe Jampa Gyatso: Why cannot the ground be transformed into skeletons?
Student: Perhaps it is because gold is actually an element in the earth that is stable, whereas skeletons are an organic structure that degenerates.
Geshe Jampa Gyatso: This subject of the totalities was discussed in the eight chapter of the *Ornament for Clear Realizations* saying that inner spheres cannot be taken as an object of meditation of the meditative stabilizations of the totalities. Specifically, that which is conjoined with consciousness, as well as sound, is not an appropriate object of a meditative stabilization on the totalities. Sound is not an object of a meditative stabilization on the totalities because sound does not have a continuum of similar type. The five sense powers are not objects of a meditative stabilization on the totalities because they are included in the continuum.

Thursday afternoon, 26 October 2000

(Masters Program Correspondence Course students please note that there were no teachings the afternoon of October 25th and the morning of October 26th.)

Gedun Drup's *Mirror of the Clarification of the Thought* (Tibetan text page 40), as translated by Martin Willson, says:

3B1A-6C5A-1A2B-2A2A-3 That such refutation and meditation on foulness are not contradictory

"If there is no inherently existent consciousness without external objects," you may say, "It is contradictory to say that a yogin, on the instructions of his guru, sees the earth full of skeletons."

For the yogin too, who, on his guru's advice,
Perceives the earth as full of skeletons,
We see that none of the three things exists,
For this is taught as a "wrong" act of attention. [6.69]

It is not contradictory, since it is seen that even that yogin who, on his guru's instructions, sees the earth full of skeletons, does not have the three inherently existent things, object, organ, and consciousness; for that samadhi is taught as a "wrong" act of attention, one of conviction[44], [not absolutely real].

Wrong attention, in this context, is mere belief or conviction. When a yogi meditates on the ground filled with skeletons, the object, sense power, and consciousness do not exist inherently. Gedun Drup says: "We see that none of the three things exists." Chandrakirti's *Supplement* says: "Because that meditative stabilization is indicated as wrong attention." His autocommentary says: "Because it is set forth saying 'attention to what is not thus.' This is to be accepted like that without doubt." In short, this meditative stabilization is a wrong attention because it believes that the ground is pervaded by skeletons, whereas it is not.

Chandrakirti's autocommentary says:

[44] *mos pa*

If it were not like that:

If [the objects] of the mind of repulsion are just like
The objects of your sense awareness,
Likewise, due to another directing awareness to that place
They would perceive that; it would no more be false. [6.70]

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

If, for you, objects of the mind of foulness
Are also like those of sensory consciousness,
Then, turning his mind to that place, another would see
Likewise, and it would no more be false. [6.70]

For you Chittamatrins, just as objects of sense consciousness are perceived by one and perceived by another, so it follows also that if a yogin with consciousness of foulness sees skeletons, then when another person, not a yogin, turned his mind to that place, he would perceive the skeletons likewise. That samadhi would not be false, a convictional act of attention. This is because the samadhi clearly perceiving skeletons exists inherently.

Chandrakirti's autocommentary says:

> Just as when you view a demonstration of drama and so forth, through directing the eyes to that place, just as a visual consciousness bearing that aspect is produced in one, similarly it is also [produced] in others. Similarly, like the yogi, also in those non-yogis viewing the place of skeletons and so forth, a consciousness bearing that aspect would be produced; like a consciousness of blue and so forth. This concentration would no more be an attention to what is not thus.

Here the example of a drama, or a show, is given. When someone looks at a show an eye consciousness is produced; likewise, an eye consciousness is produced in another person who looks at that show. Then, just as when a yogi views skeletons due to the force of his meditation, so should others who are not yogis view skeletons when they look at that place. When a yogi looks at skeletons an eye consciousness is produced having the aspect of skeletons, just as when someone, even a dog, looks at blue, an eye consciousness having the aspect of blue is produced, whether or not that person is a yogi.

Chandrakirti says: "This concentration would no more be an attention to what is not thus."

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

Like the man with a distorted sense
Is the preta *on a riverbank, seeing pus.* [6.71ab]

It follows that the consciousness of a preta on a river bank, perceiving pus and blood, is also not an example of consciousness inherently existing without external objects, for it is the same as the perception of falling hair by a person with distorted sense, being false.

Falling hair does not exist as seen by a person with cataracts and, likewise, the pus and blood seen on a flowing river by a hungry ghost do not exist. When a hungry ghost, who is thirsty, approaches a flowing river it sees only pus and blood. Some hungry ghosts do not even see that, but only see a dry riverbed. This is due to actions (karma). Some hungry ghosts may see fruit trees in the distance, but

upon drawing near they see only bare limbs. Some hungry ghosts feel cold in the sunlight and hot in moonlight.

If a human being fills a cup with water, a human being sees it as water, a god sees it as nectar, and a hungry ghost sees it is pus and blood. When all of them grab for it, if the human being obtains it he drinks water, if the god obtains it he drinks nectar, and if the hungry ghost obtains it he drinks pus and blood. This is all due to karma. The substantial cause of the liquid are the particles of water, whereas the cooperative cause is the karma of each individual. Based upon the substantial cause which is the particles of water, a human being drinks water, a god drinks nectar, and a hungry ghost drinks pus and blood. For the valid cognizer of a human being it exists as water, but for the god it exists as nectar, and for the hungry ghost it exists as pus and blood.

Another example is Mount Meru: trainees intent upon the *Kalachakra Tantra* see it as round whereas trainees intent upon the *Treasury of Knowledge* see it as square. Since there are two different ways of seeing the same thing, the debate is: in its place it follows that there are two Mound Merus, one established as square by the valid cognizers of trainees intent on the *Kalachakra Tantra* and one established as round by trainees intent on the *Treasury of Knowledge*. What do you think? Should we rely on those who see the world as flat or those who see the world as round? Another example is two people seeing the same person, one of whom sees him as humble and the other who sees him as arrogant.

Chandrakirti's autocommentary says:

> Similarly, it should be known that:
>
> *The awareness of pus with a preta at a flowing river, also*
> *Is equivalent to one having a sense with cataracts.* [6.71ab]
>
> Equivalent to what was explained saying [6.54b]: *sees whatever hairs through the strength of the cataract*, one should understand also others having a type like that. You can elaborate.

Similarly, due to jaundice one sees a white conch as yellow, due to another disease one sees a white snow mountain as blue, due to a malformation of the veins of the eye one sees things unclearly, and so forth.

Lama Tsongkhapa's *Illumination* (Tibetan text page 263) says:

> CHITTAMATRINS: If there does not exist an inherently existent consciousness that has clear appearance of forms, sounds, and so forth without external objects, how is it justifiable for the yogis who meditate on repulsiveness following the instructions of a lama to see the ground filled with skeletons because, even though the skeletons do not exist, an inherently existent consciousness does exist?
> PRASANGIKA MADHAYAMIKAS:
>
> *Those yogis who, through the instructions of a lama,*
> *See the ground filled with skeletons,*
> *Also see all three as without production*
> *Because it is indicated to be a wrong mental attention.* [6.69]
>
> *Those yogis who,* meditating on repulsiveness *through the instructions of a lama, see the ground filled with skeletons, also see all three* – the object, sense power, and consciousness – *as without* inherent *production because that* meditative stabilization *is indicated*, that is, it is taught in sutra, *to be a wrong mental attention*, that is, not what actually is. If the consciousness to which skeletons appear were inherently existent, the appearance of [skeletons] would also become such, due to

> which that mental attention would become an object-possessor of what actually is. This should be unquestionably asserted in this way.

For a yogi meditating on repulsiveness through the instructions of a lama, object, sense power, and consciousness do not exist inherently. This meditative stabilization is considered wrong because it is mental attention believing in what actually is not there.

The Prasangika Madhyamikas say that if the consciousness to which skeletons appear were inherently existent then it would follow that the ground would actually be pervaded by skeletons just as they appear. If that were the case, then that mental attention would become an object-possessor of what actually is, that is, ground pervaded by skeletons. In other words, the ground would actually be filled with skeletons and there would be an object-possessor that has this as its object.

Lama Tsongkhapa's *Illumination* (Tibetan text page 264) says:

> *If, for you, just like the objects of a sense awareness*
> *So too are those of a mind of repulsiveness, then,*
> *Likewise, since others who direct their awareness to that place*
> *Would realize them, this would also not be [attention] to the false.* [6.70]

> *If* this were not the case, then *for you* – just as when looking at a theatrical show, through directing the eyes to that place, there is the production *of a sense awareness*, an eye consciousness, having the aspect of that *object* in one person, likewise, there would also be the production [of an eye consciousness] having such an aspect in others – *so too*, like the yogis who have *a mind of repulsiveness*, [also] *others*, that is, non-yogis, *who direct their awareness to the place* where yogis see skeletons, that is, those desiring to look at a place of skeletons and so forth, *would realize* skeletons, that is, would generate the seeing of skeletons; for example, like a consciousness of blue.

If a yogi creates a theatrical show such as transforming himself into a skeleton and then performing for others, those who look at him would see a skeleton and the yogi would also see himself as a skeleton. Can a yogi not do this? When the Buddha was about to become enlightened, while sitting in meditation position under the bodhi tree, the maras manifested beautiful seductive young women in order to distract him from his meditation. However, the Buddha by the power of his meditative stabilization on repulsiveness was able to transform them into ugly, old women, wrinkled and toothless. The maras then manifested soldiers who shot poisonous arrows at the Buddha but he transformed them by the power of his meditative stabilization on love into a rain of flowers as they touched his body.

There is also a story of Naropa, who when he first encountered Tilopa, saw him cooking live fish in a fire and eating them, while piling the bones up beside him. But Tilopa then threw the bones into the river and live fish swam away.

There is also a story about two people who traveled from Nepal to Tibet to meet the king, Trisong Detsen, an emanation of Avalokiteshvara, to ask him to teach the Dharma. However, upon arriving at this palace, they were shocked to see many piles of human heads and wondered how he could be an emanation of Avalokiteshvara. They then met with the king who asked them what they wanted, but, instead of requesting teachings, they told him that they planned to leave very quickly to return home. Trisong Detsen then gave them each a handful of sand and told them to keep it, offered them a meal, and invited them to sleep in the palace that night. The next morning when they awoke they were surprised to found themselves in their home and that the sand had been transformed into gold.

Lama Tsongkhapa's *Illumination* (Tibetan text page 264) says:

> Here, in accordance with the autocommentary, the translation [of the above verse from the *Supplement* (v. 6.70)] could also have been:
>
> *For you, just like those directed to the objects of a sense awareness,*
> *So too is it for those possessing a mind of repulsiveness.*
> *Likewise, through also being produced in others who direct*
> *Their awareness to that place, that too would not be false.*

Lama Tsongkhapa provides another possible translation of the same verse from the *Supplement*.

Lama Tsongkhapa's *Illumination* (Tibetan text page 264) says:

> This meditative stabilization *would also not* be mental attention *to the false*, that is, to a wrong object. Also [the assertion that] yogis and non-yogis would equally [see skeletons] is in terms of the main point that if consciousness were to exist inherently then dependence on meditating on the instructions regarding skeletons could be negated.

If consciousness were inherently existent there would be no need to depend on the instructions of a lama in that skeletons would be seen whether or not one is a yogi. That is, both yogis and non-yogis would equally have the appearance of skeletons. But, since consciousness does not exist inherently, it is necessary to rely on a lama's instructions on repulsiveness, whereby there is a difference between yogis and non-yogis.

Lama Tsongkhapa's *Illumination* (Tibetan text page 264) says:

> *Like those possessing a sense power with cataracts,*
> *So too is the mind of pus in a hungry ghost on the bank of a flowing river.* [6.71ab]
>
> Similarly, also understand the way of responding to the examples set forth, such as those of illusions, reflections, and so forth, as being *like those possessing a sense power with cataracts*. *Also* understand the production of a *mind of pus* and blood *in a hungry ghost on the bank of a flowing river* to be as above.

The example of an illusion, such as a horse or elephant, created by a magician and that of a reflection of a face in a mirror are examples that show things do not exist inherently. This is because if consciousness, such as an eye consciousness, existed inherently it would follow that spectators would not need to depend upon the magician's mantras, blowing on pebbles, and so forth in order to see illusions. Also the seeing of a reflection would arise without looking in a mirror. This, however, does not occur. The Tibetan nomads say: "There are eyes that see others' faces, but there are no eyes that see one's own face." This means that one has to rely on a mirror to see one's own face. In short, everything is a dependent-arising.

Friday morning, 27 October 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 264) says:

> In regard to that, the five forms that are phenomena spheres are not imputed by the tenets of the materialists, but are taught in sutra and are also accordingly asserted by me.

The five forms that are phenomena spheres were already discussed. They are not imputed by the tenets of the materialists but are taught in sutra and by Lama Tsongkhapa. The five forms that are phenomena spheres asserted by the Prasangika Madhyamikas are:

1. form arising from aggregation,
2. space-form,
3. form arising from a promise,
4. imaginary form, and
5. form for one with meditative power.

Lama Tsongkhapa's *Illumination* (Tibetan text page 264) says:

> Therefore, clearly appearing, though non-existent, skeletons are necessarily asserted to be physical, like reflections, but since they appear only to a mental consciousness they are not form spheres as are reflections. Since they are also not any of the nine remaining physical spheres, it is said "They are imaginary forms that are phenomena spheres."

The appearance of the ground pervaded by skeletons to a yogi is not a form sphere, nor is it any of the other nine remaining physical spheres:

1. sound sphere,
2. odor sphere,
3. taste sphere,
4. tangible object sphere,
5. eye sphere,
6. ear sphere,
7. nose sphere,
8. tongue sphere,
9. body sphere.

What is the eye sphere, the ear sphere, and so forth? Are they clear matter or the actual organ?
Student: They are the clear matter in the eye and so forth, that is, the sense power.
Geshe Jampa Gyatso: There can be debate: "Is the eye sense power which is physical, a color or shape?" In short, the eyeball and the other sense organs are included in the form sphere. The eyeball is visual form in that it is an object apprehended by an eye consciousness. The eye sphere is the eye sense power, the ear sphere is the ear sense power, and so forth. The sense consciousnesses are included in the mental sphere.

Lama Tsongkhapa's *Illumination* (Tibetan text page 265) says:

> The appearance of falling hair to an eye consciousness is a form sphere, as is a reflection. Since the appearance of a river as pus and blood to hungry ghosts appears to their eye consciousnesses, it is necessarily posited as a form sphere. Also [Asanga's] *Compendium on the Mahayana* says:
>
> > Because for each of the classes of hungry ghosts,
> > Animals, human beings, and gods,
> > One thing is different for their minds,
> > Objects are asserted to not be established.
>
> Regarding this, the *Compendium on the Mahayana* does not clearly explain the way in which they individually see the same object. The explanation composed by Bhadantopasaka of this [stanza] is:
>
> > By the force of the ripening of one's own personal actions, the thing that is a river is seen by hungry ghosts to be filled with pus. For animals, such as fish and so forth, due to their awareness [perceiving] an abode, the very [same river] functions as an abode.

> On the other hand, human beings conceive it to be water that is sweet, limpid, and cool, use it to wash, and engage in drinking it. The gods absorbed in the infinite space sphere are described as seeing it as space because they have destroyed the discrimination of form.

To hungry ghosts a river appears as pus and blood, to animals it appears as an abode, and to humans it appears as water for drinking, washing, and so forth. To the gods, in general, a river appears as nectar but here is said that the gods of infinite space see "it as space because they have destroyed the discrimination of form." One single functioning thing is, thus, perceived in different ways by different beings. When the *Compendium on the Mahayana* says "Objects are asserted to not be established," it means that external objects are not established in that this text is renowned as having been written from the point of view of the Chittamatra tenets. However, the different ways in which different beings perceive the same object is not clearly explained in this text.

Bhadantopasaka says that, due to the ripening of their respective actions, a hungry ghost, for example, sees a river as pus and blood. On the other hand, to the gods of infinite space a river appears as space due to their having destroyed the discrimination of form.

Lama Tsongkhapa's *Illumination* (Tibetan text page 265) says:

> OBJECTION: The seer of migrating beings who think "It is that" is a valid cognizer of conventions. Yet, if a single base is established by a valid cognizer to be dissimilar [things], then the two – (i) being pus and blood and (ii) not being pus and blood – would not be contradictory and even that established by a valid cognizer would not be reliable.
> RESPONSE: If through understanding the meaning of the scriptures in this way one posits similarly, then valid cognizers would [in fact] become unreliable. Moreover, since that is unsuitable, asking "How is that?" is the questioning of the intelligent. If, through considering such understanding to be the meaning of [the scriptures], [someone] were to say "Establishment by a valid cognizer is unreliable" this would be completely unacceptable since it is never posited that "By understanding such-and-such an object it is realized like that" and because it deprecates all valid cognizers. Why is that? [In response,] an example is initially explained [as follows].

In short, if valid cognizers are unreliable then there is nothing that can be posited as true.

Lama Tsongkhapa's *Illumination* (Tibetan text page 265) says:

> Those who possess knowledge mantras are not burned even though they touch an incandescent iron ball burned by fire. When they take that iron ball in their hands, although their body consciousness apprehends the tangible object which is that iron, that tangible object is not generated in the aspect of being extremely hot and burning. This is due to the condition of washing their hands and so forth with water [blessed by] the recitation of knowledge mantras. For those who lack the recitation of such knowledge mantras, the tangible object that is the iron ball is generated in the aspect of being extremely hot and burning. This being the case, both the tangible object that does not burn and the tangible object that burns are necessarily a tangible object that is a single iron ball. The tangible object that is established by one of the two valid body consciousnesses is not established by the other. Due to this, both being asserted to be valid cognizers, that established by one is not negated by the other.

Someone who possesses the power of mantras can even lick an iron ball heated by fire without being burned. In fact, there is a Sera lama, who now lives in Australia, called Kunchog Rinpoche, who recites mantra, then heats an iron rod until it is burning hot and licks it without being burned and then uses it to cure the sick. Those with knowledge mantras who touch a burning iron ball actually perceive it to be the tangible object cold. For them, there is the production of the tangible object cold

due to the substantial cause of the particles of iron and the cooperative condition which is the knowledge-mantras. In this case of such persons, their body consciousness is established to be a valid body consciousness. Therefore, upon a single basis, a burning iron ball, two types of tangible objects are produced: (i) the tangible object hot for those without knowledge-mantras and (ii) the tangible object cold for those with knowledge-mantras. Thus, on the basis of a single iron ball there are two different tangible objects.

Another example is to put some salt in a cup of tea, then when different people drink the same tea, some perceive it to be too salty, others to lack salt, and others to be just right. Why does this happen? Think about it. This was my own experience when it was my turn to shop for and prepare food in Buxa. Some people would compliment me on the food, others would say that there was too much oil, others that there as too much onion, and so forth.

QUESTIONS AND ANSWERS

Student: For the Prasangikas, even the mind, like any other phenomenon, is merely imputed by conceptuality. What subject imputes mind? On what basis of imputation is mind imputed?
Student 2: Mind is imputed by mind just as is any other phenomenon. The basis of that imputation is that which is clear and knowing.
Student 3: Mind is imputed by a conceptual valid cognizer.
Geshe Jampa Gyatso: What is your name?
Student: Maurizio.
Geshe Jampa Gyatso: According to the Prasangikas that is a mere imputation. Who imputed that name? The basis of imputation is a human being, the subject that imputed 'Maurizio' is also a human being. The imputer does not need to be oneself. For example, if someone says to you "Maurizio is very intelligent," it is another person imputing this. It is not necessary that oneself imputes these qualities to oneself, it can be done by another person.

Student: What is the difference between substantial existence and true existence?
Geshe Jampa Gyatso: In the Prasangika Madhyamika system they are the same. In the Svatantrika Madhyamika system they are different – there is no true existence but there is substantial existence. According to the Svatantrikas there is imputed existence and substantial existence, whereas according to the Prasangikas there is no substantial existence and everything is imputedly existent. If there were substantial existence then phenomena would exist from their own side.

Student: In the Chittamatra system if all other-powered phenomena arise in dependence on latencies of a similar type how can there be a consciousness newly realizing emptiness? If someone puts a pot in front of someone who has never seen a pot before, what happens?
Geshe Jampa Gyatso: At that time a latency of similar type ripens due to which there is the new realization of pot.
Student: But what if that sentient being has never realized pot before?
Geshe Jampa Gyatso: Then it is due to the ripening of a latency of actual expression (linguistic latency). However, there is no need that with respect to a latency of similar type that the mind is perceiving the same object that was perceived before. Also this person might have seen pot many eons earlier.
Student: But what about the new realization of emptiness?
Geshe Jampa Gyatso: It is not that the activation of a latency of similar type means that there was a previous realization of emptiness, it is enough that there are the latencies of having heard about and thought about emptiness. Later on due to the activation of the latencies of hearing and thinking about emptiness, there arises the direct realization of emptiness. Although emptiness is not realized while

one is hearing and thinking about it, latencies are still deposited. In order to activate these latencies it is necessary to have particular conditions. Due to the power of the infusion of latencies on the mind of hearing and thinking about emptiness, one day there will arise the realization of emptiness.

The Chittamatrins posit a naturally abiding lineage and a developmental lineage; the developmental lineage is the nourishing of the naturally abiding lineage by hearing and thinking. The naturally abiding lineage is the seed of an uncontaminated mind, according to the Chittamatrins it has three features:

1. it has come from beginningless lives,
2. it is obtained by the power of reality, and
3. it is the seed of an uncontaminated mind.

Student: Is true existence as defined in the Chittamatra school equivalent to the measure of true existence as set out by the Yogachara Svatantrika Madhyamika school?

Geshe Jampa Gyatso: Probably there is some small difference. The Yogachara Svatantrika Madhyamika say that the definition of the measure of true existence is: that which is established by its own uncommon mode of subsistence without being posited by the force of a non-defective awareness. On the other hand, the Chittamatrins say that the definition of the measure of true existence is: that which is established by way of its own uncommon objective mode of subsistence without being posited by conceptuality. The measure of the object of negation is different in these schools. In the Chittamatra system if it is established through being posited by conceptuality then its true existence is negated; thus, they say that other-powered phenomena and thoroughly established phenomena are truly existent. In the Yogachara Svatantrika Madhyamika all phenomena are merely imputed by conception. However, when it is asked what is negated by the term 'merely' in the Svatantrika Madhyamika system and what is negated by it in the Prasangika Madhyamika system the answer is different.

END

Wednesday afternoon, 1 November 2000

(Masters Program Correspondence Course participants please note that there were no teachings 30-31 October and the morning of 1 November 2000)

Lama Tsongkhapa's *Illumination* (Tibetan text page 266) says:

> Similarly, in any place where there is a basis that is a flowing river, when one part of that river is generated by the force of their previous actions as pus and blood for hungry ghosts and another part of the river, without appearing as pus and blood, is generated by the force of their previous actions as water for drinking and washing for human beings, both of them are each parts of the same river. Therefore, the two, the object established by a hungry ghost's valid eye consciousness and the object established by a human being's valid eye consciousness, are also individual things. Due to this, how can the very object that is established by one of the two [valid eye consciousnesses] be established as the opposite by the other? Likewise, [Nagarjuna's] *Letter to a Friend* also says:
>
> > For hungry ghosts, in springtime
> > Even the moon is hot; in winter even the sun is cold.
>
> For hungry ghosts, due to the force of their previous actions, in springtime the tangible object that is moonlight is generated as extremely hot, whereas in winter the tangible object that is sunlight is cold. However, it is not contradictory for the moonlight and sunlight to be produced [respectively] in the aspects of cold and warmth for human beings. The very tangible object that is measured as hot by one of the two valid cognizers is not measured as cold by the other and both posit a tangible object that is the light of the same moon or sun. Since "one thing" is also taught, when there arises coarse understanding without finely analyzing the meaning of the scriptures, do not settle upon it satisfied.

When hungry ghosts have the appearance of a flowing river as pus and blood, it is due to a substantial cause, which is part of the flowing river, and a cooperative condition, which is the actions of hungry ghosts. The eye consciousness of a hungry ghost that sees a flowing river as pus and blood is a valid cognizer. On the other hand, human beings see the same river as water for drinking and washing due to a substantial cause, which is part of the flowing river, and a cooperative condition, which is the actions of human beings. The eye consciousness of a human being that sees a flowing river as water is also a valid cognizer. Therefore, the eye consciousnesses of both the hungry ghost and the human being are valid cognizers.

In addition, Nagarjuna's *Letter to a Friend* says that in spring, moonlight, which is generally felt to be cool, feels hot to the hungry ghosts. The substantial cause for this is a part of the moonlight, whereas the cooperative condition is the actions of the hungry ghosts. Contrarily, in the winter sunlight appears as cold to hungry ghosts due to a substantial cause, which is part of the sunlight, and a cooperative condition, which is their actions. The *Compendium on the Mahayana* was previously quoted as similarly saying: "One thing is different for their minds." This means that what appears to hungry ghosts is not the same as that which appears to human beings. Here 'one thing' refers to one single basis, such as a flowing river, that is the basis for different appearances, such as water or pus and blood. Another example of one base appearing differently to different beings is sunlight and moonlight. Sunlight, which in general appears as hot, appears to hungry ghosts as cold even in winter, and moonlight, which in general appears as cool, appears as hot to hungry ghosts even in springtime. This is due to the particular actions (karma) of hungry ghosts.

Another example is that of two human beings looking at a third person, each of which has a different way of seeing that person. The appearance from the side of the object is different to these two human beings and therefore the feelings that arise in them are also different. For example, it is recounted in sutra that when Shakyamuni Buddha was alive, Lekpe Karmo, who had memorized the

three mother sutras, saw him as a deceitful monk, whereas another person saw him to be an actual supreme emanation body. This difference is due to their respective karma.

Lama Tsongkhapa's *Illumination* (Tibetan text page 266) says:

3B1C-2B3E-2A1B-2B2A-2B Brief conclusion of such a refutation

Chandrakirti's autocommentary says:

> *In brief, "Just as objects of knowledge are non-existent,*
> *Likewise awareness is also non-existent." Know this meaning.* [6.71cd]

This means that just as objects of knowledge are non-inherently existent, so too are awarenesses non-inherently existent.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B1A-6C5A-1A2B-2A2B Conclusion

> *In short, just as knowables don't exist,*
> *Neither does the mind. Understand this.* [6.71cd]

In short, this meaning should be understood: that just as objects of knowledge do not inherently exist, so too the mind does not inherently exist. For it is not admissible that objects of knowledge should not exist and the knowing exist.

In short, both objects of knowledge and the minds that know them are the same in not existing inherently.

Chandrakirti's autocommentary says:

> It should be understood that just as an object of knowledge lacks inherent existence, similarly also an awareness bearing the aspect of an object of knowledge is not produced by its own essential-nature. As was taught [in the *Praise of the Supramundane*, 10]:[45]
>
> > Not knowing, there is no object to be known.
> > Without that, consciousness is non-existent.
> > Therefore, knowers and objects to be known
> > Were taught by you as without self-nature.

If no one knows it, then it is not an object of knowledge. If there is no object of knowledge, there is no knower. Therefore, according to the Prasangika Madhyamikas objects of knowledge and knowers, or consciousness, are not inherently existent, instead they exist in mutual dependence.

Chandrakirti's autocommentary says:

> Similarly [in the *Samyuttanikaya*]:[46]

[45] Correctly attributed by Poisson in his Tibetan text but unattributed in the translation. See Lindtner, p. 132-133.

[46] Attributed by Poisson in the Tibetan text to *Samyuttanikaya*, as cited in *Madhyamakavritti*, 41.11. See also the earlier quotation in the first section, Tib. p. 22, where the Tibetan of the overlapping lines is slightly different.

> Consciousness as similar to an illusion was taught by the solar kinsman.
> Likewise, also its referents are definitely like illusory things.

Consciousnesses were taught by Shakyamuni Buddha to be like illusions, as were their observed objects. They are said to be like illusions because just as illusions are false and lack true existence, likewise, consciousnesses and observed objects are false and lack true existence.

The epithet "solar kinsman," which refers to Shakyamuni Buddha, has its source in a particular story. There was once a fully ordained monk named Gautam who was doing retreat in a sugarcane field. One day the wife of the king of the area, when out walking in the sugarcane field with her retinue of five hundred young women, came across Gautam. Upon seeing him, she generated faith in him, became his follower, and remained there in the sugarcane field with him. When she did not return to the palace, the king sent someone to find out why and the messenger returned to say that she had remained with Gautam. The king became very angry and ordered Gautam to be impaled on a wooden trident. As Gautam was dying, the gods became concerned that his lineage would be lost and sent a cool breeze which, upon touching the monk, caused him pleasure, due to which he lost a drop of semen. This drop that fell in the sugarcane field was heated by the sun and gave rise to a human being who became known as the "solar kinsmen." For this reason Shakyamuni Buddha is also known as the Sugarcane One.

Shakyamuni Buddha is also called the 'Lion of the Sakya Clan,' the word '*sakya*' meaning 'able.' The origin of this epithet comes from the story of a king who had many wives. One day some of his wives sent some of his sons and daughters away to the forest. Due to their isolation, they procreated amongst themselves; their children came to be known as '*sakya*' meaning 'able.'

Chandrakirti's autocommentary says:

> Therefore, this deprecation about external objects – held by the demon of forgetfulness who propounds consciousness as a substance – will in no way make one fall into the ravine. Having intensively subdued it by giving the excellent secret mantra of scriptures and reasoning of the holy compassionate practitioners, it should be retained.

Lama Tsongkhapa's *Illumination* (Tibetan text page 266-7) says:

> Chandrakirti says:
>
> *In brief, understand the meaning that "Just as objects of knowledge*
> *Do not exist, likewise, awarenesses also do not exist."* [6.71cd]
>
> The meaning *in brief* of the previous extensive explanation [is as follows]. By saying that one should *understand* and cherish *the meaning that* "*Just as objects of knowledge do not* inherently *exist*, *likewise*, *the awarenesses* that have the aspects of those objects of knowledge *are also not* produced by way of their own nature," [Chandrakirti] indicates that there is no difference between objects of knowledge and consciousnesses in terms of their existing or not existing inherently.

The Prasangika Madhyamikas say that external objects and consciousnesses are (i) the same in not existing inherently and (ii) the same in existing. On the other hand, the Chittamatrins say that external objects do not exist and that consciousnesses exist inherently. Nagarjuna never differentiated external objects and consciousnesses in this way.

Lama Tsongkhapa's *Illumination* (Tibetan text page 267) says:

> The statements

- "If falling hair does not exist, also the consciousness to which it appears does not exist,"
- "If the referent object of the adherence to an illusory horse and elephant does not exist, also the consciousness that apprehends them does not exist,"

and so forth are not at all the system of this master, [Chandrakirti].
[Nagarjuna's] *Praise of the Supramundane* also says:

> Without consciousness, there is no object of knowledge.
> Without that, consciousness does not exist.
> Therefore, consciousnesses and objects of knowledge
> Were taught by you to not exist inherently.

[*Samyuttanikaya*] also says:

> Consciousness being like an illusion
> Was taught by the Solar Kinsman.
> Likewise, also its observed objects are
> Definitely likened to illusory things.

If "by such a consciousness" is not posited, objects of knowledge cannot be posited. If "this knows such an object" is not posited, also consciousness cannot be posited. Therefore, without objects of knowledge, consciousnesses also do not exist. Consciousness and object of knowledge are posited in relation to one another, due to which it is taught "Both of them were indicated by you to not exist inherently."

"Both of them were indicated by you to not exist inherently" refers to external objects and consciousnesses [which are indicated by the Prasangika Madhyamikas to not exist inherently].

Lama Tsongkhapa's *Illumination* (Tibetan text page 267) says:

Therefore, the assertion of Arya [Nagarjuna] is that there is no distinction between one of the two truths and not the other existing with respect to the two.
[Nagarjuna's] *Essay on the Mind of Enlightenment* also says:

> Consciousnesses realize objects of knowledge;
> Without objects of knowledge, consciousnesses do not exist.

Since this is similar in meaning to the *Praise [of the Supramundane]* which was cited before, it is the scriptural source [for saying] that objects and consciousness are similar in terms of existing and not existing.

According to the Chittamatrins external objects do not exist, while consciousness does exist. The Prasangika Madhyamikas say that this is not correct in that these two are similar in terms of existing. The Chittamatrins say that since external objects exist there is no need to mention that they do not inherently exist. That is, because external objects do not exist, they do not exist inherently, whereas because consciousnesses exist, they exist inherently. On the other hand, the Prasangika Madhyamikas say that external objects and consciousnesses are the same in either existing inherently or not existing inherently.

Thursday morning, 2 November 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 267) says:

3B1C-2B3E-2A1B-2B2B Refuting a valid cognizer that proves other-powered phenomena inherently exist

1 Refuting self-cognizers, the proof of other-powered phenomena
2 Indicating that the Chittamatra system has deviated from both truths
3 Hence, it is suitable to be a follower only of Nagarjuna's system

4 Indicating that the two refutations of other-powered phenomena and worldly conventions are not similar

3B1C-2B3E-2A1B-2B2B-1 Refuting self-cognizers, the proof of other-powered phenomena

A Through questioning the proof of other-powered phenomena, indicating that [self-cognizers] are inadmissible
B Refuting the others' response that [self-cognizers] are admissible
C Indicating also by other reasonings that self-cognizers are inadmissible
D Indicating that inherently existent other-powered phenomena are like the son of a barren woman

3B1C-2B3E-2A1B-2B2B-1A Through questioning the proof of other-powered phenomena, indicating that [self-cognizers] are inadmissible

Chandrakirti's autocommentary (Tibetan text page 105) says:

> Therefore, having shown consciousness without external objects as impossible, in order to refute existence itself in mere things, it is explained:
>
> *If an other powered thing exists which, without an apprehended,*
> *Is separated from apprehension itself and emptied by the two,*
> *What will know the existence of this?*
> *It is unsuitable to say "It exists although not apprehended."* [6.72]
>
> If an other powered [phenomena] exists emptied by the two, "apprehended and apprehender," by what consciousness will you observe the existence of that? It is incorrect that it be apprehended by itself, because of the contradiction in its acting on itself. Like this, the very edge of a sword does not cut itself, the tip of a finger does not touch itself, even a well trained expert athlete is unable to mount on his own shoulders, fire does not burn itself, and an eye does not view itself.

In short, the Chittamatrins assert self-cognizers.

Gedun Drup's *Mirror of the Clarification of the Thought,* as translated by Martin Willson, says:

3B1A-6C5A-1A2B-2B1A Demanding and refuting proof of dependent phenomena

If without object, and separate from subject,
Empty of both, exists a dependent thing,
By what can its existence be perceived?
It's improper to say, "Although not perceived, it exists." [6.72]

If the functional thing of a dependent phenomenon exists without external object and free of a subject separate in substance, empty of both object and subject of different substance, then by what is the existence of that dependent phenomenon known? A proof must be stated, for it is improper to say, "Although it is not apprehended by valid cognition, it exists."

If you say, "It is established by self-knowing consciousness," then:

It is not established that it is perceived by itself. [6.73a]

It follows that it is not established that that consciousness is experienced by itself, self-knowing consciousness, because self-knowing consciousness is not established.

In short, the Chittamatra system asserts consciousness to be an other-powered phenomenon that is without external objects. If they are asked what consciousness knows the existence of that other-powered phenomenon, they respond that is a self-cognizer. The Prasangika Madhyamikas say that this is incorrect because the Chittamatrins' reason has yet to be established. This is because the

Chittamatrins prove that there is an inherently existent consciousness without external objects by using self-cognizer as a reason, whereas this reason has yet to be established. For this reason the coming verse of the *Supplement* says:

> *If established through remembering later,*
> *This unestablished [memory] expressed in order to prove*
> *The unestablished [self-cognition] is not a proof.* [6.73bcd]

The Prasangika Madhyamikas say that self-cognizers do not exist because an object-possessor that cognizes itself is not possible. Chandrakirti says: "It is incorrect that it be apprehended by itself, because of the contradiction in its acting on itself." To prove this Chandrakirti then sets out the following examples: "Like this, the very edge of a sword does not cut itself, the tip of a finger does not touch itself, even a well trained expert athlete is unable to mount on his own shoulders, fire does not burn itself, and an eye does not view itself." No matter how sharp a sword is, it cannot cut itself, whereas it can be used to cut another sword. Likewise, the tip of a finger cannot touch itself but can touch the tip of another finger. Similarly, an athlete, no matter how flexible he is, cannot mount on his own shoulders. Fire also does not burn itself and an eye does not see itself, no matter how clear one's sight is. These five examples are set forth by the Prasangika Madhyamikas in order to prove the non-existence of self-cognizers.

Chandrakirti's autocommentary says:

> Nor is that apprehended by another consciousness because of contradiction with one's own [Chittamatrin] tenets. This is because it is set forth [in the Chittamatrin scriptures] that "If another cognizer is the object of a cognition, it will harm mere cognition-ness." Therefore, like that, there does not exist an apprehender of that in any way. That not apprehended does not have existence-ness.
>
> If it is mentioned here: Even if apprehension of other by another does not exist, nevertheless, self-cognition exists. Therefore, because only self-cognition apprehends that, there will be existence-ness.
>
> To explain that, that also is not so:
>
> *It is not established that it is experienced by itself.* [6.73a]
>
> To say "It is apprehended by itself," this is not established.

The Prasangika Madhyamikas say that if consciousness were apprehended by another consciousness this would also contradict the Chittamatrins' tenets; therefore, there are no self-cognizers. The Chittamatrins' scriptures say that "If another cognizer is the object of a cognition, it will harm mere cognition-ness." Thus, they say that although there is no apprehension of one consciousness by another consciousness, self-cognizers do exist. To this the Prasangika Madhyamikas say: "Therefore, like that, there does not exist an apprehender of that in any way. That not apprehended does not have existence-ness."

The main point here is that the Chittamatrins say that consciousness is an other-powered phenomenon that exists inherently and is established by a self-cognizer. Thus, they say that a self-cognizer apprehends a consciousness that is an other-powered phenomenon that exists inherently. The Prasangika Madhyamikas respond: "It is not established that it is experienced by itself." In brief, according to the Prasangika Madhyamikas self-cognizers are not established.

Lama Tsongkhapa's *Illumination* (Tibetan text page 268) says:

> Hence, having indicated that consciousness without external objects is not possible, now there is [the following] explanation for the purpose of refuting inherently existent mere other-powered things not qualified by lacking external objects.

Having already refuted the existence of an inherently existent consciousness without external objects, the Prasangika Madhyamikas will now refute *mere* inherently existent other-powered things, that is, mere inherently existent consciousnesses that are not qualified by being without external objects.

Lama Tsongkhapa's *Illumination* (Tibetan text page 268) says:

> QUESTION BY MADHYAMIKA PRASANGIKAS TO THE CHITTAMATRINS:
>
> *If, without apprehendeds, there are no apprehenders and*
> *If things that are other-powered phenomena which are empty of duality exist,*
> *What will know their existence?* [6.72abc]
>
> *If*, due to there being *no* external *apprehendeds*, *there are no apprehenders* that are objects other than them, *and if things that are other-powered phenomena which are empty of duality* – apprehendeds and apprehenders being different substances – *exist*, *which* of your consciousnesses *will know the existence of those* other-powered phenomena*?* It is not admissible for a specific consciousness to apprehend that consciousness itself because it is contradictory for it to engage in its respective function with respect to itself. Similarly, the very edge of a sword does not cut itself, the tip of a finger does not touch itself, a well-known and well-trained athlete cannot mount on his own shoulders, fire cannot burn itself, and an eye does not see itself.

In short, the Chittamatrins assert self-cognizers, whereas the Prasangika Madhyamikas refute them. Dignaga's *Compendium of Valid Cognition* contains a debate in which the Chittamatrins say: "An apprehender of blue, as the subject, there exists an experiencer of it because a memory of it is subsequently produced; for example, of blue." The predicate "there exists an experiencer of it" implies a self-cognizer. What experiences blue? Blue is experienced by an eye consciousness apprehending blue. What experiences the apprehender of blue? The apprehender of blue is experienced by a self-cognizer. This what the Chittamatrins say. The Chittamatrins and Yogachara Svatantrika Madhyamikas do not accept external objects but accept self-cognizers. On the other hand, the Sautrantika Svatantrika Madhyamikas, such as Bhavaviveka, do not accept self-cognizers but accept external objects. For example, if someone sees a show and the next day remembers it, the Chittamatrins and Yogachara Svatantrika Madhyamikas would say that the memory of the show is due to a self-cognizer – the experiencer of the eye consciousness that saw the show. On the other hand, the Sautrantika Svatantrika Madhyamikas say that in order to have memory it is not necessary to have a self-cognizer. Then, how is it remembered? It is remembered just by, for example, seeing the place where the show took place. For example, when an eye consciousness sees the place where a show took place, one remembers the show thinking, "I saw a show here." Another example is if someone slips on the stairs one day, even after the pain has disappeared, he remembers the pain on seeing those stairs once again.

Thursday afternoon, 2 November 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 268) says:

> Here, the others' system that explains it is not admissible for a specific consciousness to apprehend that consciousness itself will be explained in particular.

This system will be explained later on.

Lama Tsongkhapa's *Illumination* (Tibetan text page 268) says:

> A consciousness is not apprehended even by a consciousness that is an object other than itself because this would contradict the Chittamatra tenets in that it is said in the Chittamatra scriptures: "When abiding in the result is not yet obtained, if a cognizer that is another object is the appearing object of a cognizer this would undermine propounding mere-cognition." Because of that, according to the Chittamatrins there does not exist such apprehenders in any way.

A consciousness is not experienced by a consciousness that is an object other than itself. What is consciousness experienced by? It is experienced by a self-cognizer. For example, an eye consciousness is not experienced by an eye consciousness but is experienced by a self-cognizer. For example, Chogyal's eye consciousness is not experienced by Sonam's eye consciousness. What realizes Chogyal's eye consciousness? It is realized by a self-cognizer.

What consciousness realizes or experiences consciousness? According to the Chittamatrins all consciousness are necessarily experienced by a consciousness that is one substance with itself, not by a consciousness that is a different substance from itself. The Chittamatra scriptures say: "When abiding in the result has not yet been obtained, if a cognizer that is another object is the appearing object of a cognizer this would undermine propounding mere-cognition." "Abiding in the result" refers to omniscience; as long as this is not attained if a cognizer that is another object is the appearing object of a cognizer this would undermine propounding mere-cognition. In other words, if a consciousness were an appearing object of a different consciousness this would undermine the meaning of mere-cognition.

Lama Tsongkhapa's *Illumination* (Tibetan text page 269) says:

> *It is not suitable to say "It exists even without being apprehended."* [6.72d]
>
> *It is not suitable to say "It exists even without being apprehended* by consciousness."
> CHITTAMATRINS: Moreover, even though it is not apprehended by a consciousness which is another object, there exists a self-cognizer. Therefore, because the other-powered is apprehended by a self-cognizer alone, [self-cognizers] exist.

The Chittamatrins say that a consciousness does not apprehend a consciousness that is a different substance from itself. The Prasangika Madhyamikas say: "It is not suitable to say "It exists even without being apprehended." To this, the Chittamatrins respond that even though consciousness is not apprehended by a consciousness that is a different substance from itself, it is apprehended by a self-cognizer. The Chittamatrins say: "Therefore, because other-powered phenomena are apprehended by only self-cognizers, [self-cognizers] exist." In this context, "other-powered phenomena" are specifically consciousnesses.

Lama Tsongkhapa's *Illumination* (Tibetan text page 269) says:

> MADHYAMIKAS:
>
> *It is not established that it is experienced by that itself.* [6.73a]
>
> *It is not established that it is experienced by that* consciousness *itself*.

"That consciousness itself" refers to a self-cognizer.

Lama Tsongkhapa's *Illumination* (Tibetan text page 269) says:

> Here, if the scriptural source of the above position asserted by the Chittamatrins, regarding what a self-cognizer is like, is explained a little bit [it is as follows]. [Bhavaviveka's] *Blaze of Reasoning* says:
>
> > CHITTAMATRINS: Consciousness has two appearances: (i) [a consciousness] to which itself appears and (ii) [a consciousness] to which an object appears. A consciousness to which an object appears, having become the aspect of an external object, becomes the object of a consciousness to which itself appears.

Bhavaviveka's *Blaze of Reasoning* shows how Chittamatrins assert self-cognizers. The Chittamatrins say: "Consciousness has two appearances: (i) [a consciousness] to which itself appears and (ii) [a consciousness] to which an object appears." For example, an eye consciousness apprehending form has the appearance of a form sphere, whereas a self-cognizer has the appearance of the eye consciousness having the appearance of a form sphere. Thus, the Chittamatrins say that there are two appearances:

- the appearance of a form sphere to eye consciousness and
- the appearance of an eye consciousness having the appearance of a form sphere to a self-cognizer.

What appears to a conception apprehending form? Form appears to it. What appears to the self-cognizer experiencing a conception apprehending form? The conception apprehending form appears to it.

It can also be said that there are two different appearances to a self-cognizer. For example, a self-cognizer experiencing the conception apprehending form has the appearance of:

- the conception apprehending form and
- the appearing object of the conception apprehending form.

The main point here is that a self-cognizer also realizes the appearing object of the conception. Therefore, a direct self-cognizer explicitly realizes the conception and implicitly realizes the appearing object of that conception.

Lama Tsongkhapa's *Illumination* (Tibetan text page 269) says:

> RESPONSE:
>
> It appears just like the very mind
> Which is other than that which appears as an object.
>
> By the explanation "That appearing as itself which is other than – that is, which is not – that appearing as an object is not seen," the Chittamatrins avert all dualistic appearances for inwardly-directed consciousnesses and assert such a consciousness to be a self-cognizer that cognizes itself by itself. This also being the case, they assert that in the perspective of this consciousness the object cognized and the cognizer do not appear as different.

"The Chittamatrins avert all dualistic appearances for inwardly-directed consciousnesses" refers to self-cognizers which are inwardly-directed and do not have dualistic appearance. There also exists a direct self-cognizer. What is the pervasion between a self-cognizer and a direct self-cognizer?

The definition of self-cognizer is: that which is inwardly directed and selects an apprehender (*dzin pa yan gar ba*) (see page 441 in *Unique Tenets*). The word 'selects' (*yan gar ba*) implies that it only takes a consciousness as its object of the mode of apprehension. In other words, the object of the mode of apprehension of a self-cognizer is only consciousness.

The short definition of a self-cognizer is: that which has the aspect of an apprehender. On the other hand, the definition of an other-cognizer is: that which has the aspect of an apprehended.
The definition of a direct self-cognizer is: that which is inwardly directed, selects an apprehender, is free from conceptuality, and non-mistaken.
The definition of a valid direct self-cognizer is: that which is new and incontrovertible, inwardly directed, selects an apprehender, is free from conceptuality, and non-mistaken.

The Chittamatrins say that a self-cognizer does not have dualistic appearance. This can be debated asking: "If a self-cognizer does not have dualistic appearance, do two not appear to a self-cognizer?" However, it means that to a self-cognizer there is no appearance of external objects, only consciousness appears to it.

The Chittamatrins "assert such a consciousness to be a self-cognizer that cognizes itself by itself." Does an eye consciousness cognize itself? Think about it.

Which of the four schools assert self-cognizers? This can be understood by the definitions of the propounders of these tenets:

- The definition of a Vaibhashika is: a propounder of hinayana tenets who asserts external objects to be truly existent but does not assert self-cognizers.
- The definition of a Sautrantika is: a propounder of hinayana tenets who asserts both self-cognizers and external objects.
- The definition of a Chittamatra is: a propounder of mahayana tenets who does not assert external objects but asserts self-cognizers to be truly existent.
- The definition of a Madhyamika is: a propounder of mahayana tenets who does not assert truly existent things even conventionally.

Friday morning, 3 November 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 269) says:

> Also the autocommentary on the [Jnanagarbha's] *Two Truths*, when refuting self-cognizers, says:
>
> > A consciousness arises as a cognizer – an entity devoid of dualism – and knows without that, because it would be unsuitable if it were not like that.
>
> When the Chittamatrins prove that other-powered phenomena are empty of the imputational factor, which is apprehendeds and apprehenders being different substances, they establish an other-powered phenomenon which is consciousness – a self-cognizer that arises as a cognizer in an entity devoid of dualistic appearance. Hence, that basis is to be understood in terms of apprehendeds and apprehenders not existing as different substances. In that case, if that previous basis were not established by a self-cognizer, having apprehended that basis it would not be established to be empty of the imputational factor.

Jnanagarbha, the author of the *Two Truths*, is a Sautrantika Svatantrika Madhyamika and, therefore, does not accept self-cognizers. A self-cognizer is characterized by being devoid of dualism. That the appearance of dualism has vanished for it means what appears to a self-cognizer is merely that which is clear and knowing. In other words, a self-cognizer merely experiences that which is clear and knowing; forms and so forth do not appear to a self-cognizer.

In order to understand that apprehendeds and apprehenders are empty of existing as different substances, self-cognizers must first be established. That consciousness, an other-powered phenomenon, is then taken as the basis upon which the emptiness of the imputational factor is established. Simply put, in order to ascertain that an object, this being a consciousness, and an object-possessor, this being a self-cognizer, are empty of existing as different substances, one must first

ascertain a self-cognizer. For example, before ascertaining that the object, a mental direct perceiver apprehending form, and the object-possessor, the self-cognizer experiencing it, do not exist as different substances, one must first ascertain a self-cognizer. In other words, prior to understanding that the other-powered phenomenon is empty of the imputational factor, one must first understand what that other-powered phenomenon is. For example, in order to ascertain that Chogyal is not a lay person, one must first know who Chogyal is.

The Chittamatrins assert that the other-powered phenomenon's emptiness of the imputational factor is the thoroughly established phenomenon. With respect to imputational factors in general there are two types:

1. an imputational factor that is an object of negation and
2. an imputational factor that is not an object of negation.

An imputational factor that is an object of negation is of many further types, meaning that there are subtle and coarse imputational factors that are objects of negation, these being a self of phenomena and a self of persons. The imputational factor that is an object of negation which is a self of persons is a self-sufficient substantially existent person. The imputational factor that is an object of negation which is a self of phenomena is, for example, a form and the consciousness apprehending it being different substances. Other examples are a form established by way of its own character that is an affixing basis for the term 'form' and a form established by way of its own character that is an adhering basis for the conception apprehending form.

According to the Chittamatra system the realization that apprehendeds and apprehenders are empty of being different substances is a realization of the selflessness of phenomena.

Lama Tsongkhapa's *Illumination* (Tibetan text page 270) says:

> This is explained [as follows]. According to you [Chittamatrins] the proof of other-powered phenomena is necessarily established by a self-cognizer that is free from dualistic appearance; this is what is refuted saying "It is not established." Therefore, it is the talk of the foolish that by refuting self-cognizers (*rang rig*) "Individual yogis refute the individual cognition (*rang rig*) that cognizes suchness, while the worldly refute the self-cognition (*rang rig*) that is the object of the convention 'I cognize myself.'"

For the Chittamatrins the main other-powered phenomena are consciousnesses. To prove consciousnesses they use a self-cognizer as a reason. The Prasangika Madhyamikas say this reason is not established, in that self-cognizers do not exist.

It is the talk of the foolish that by refuting self-cognizers, yogis refute the individual cognition of suchness and the worldly refute the self-cognition that thinks "I cognize myself." Here the individual cognition of suchness refers to the exalted wisdom of individual realization that realizes suchness. This, as well as the thought "I cognize myself," are refuted when one incorrectly refutes self-cognizers. Thus, saying so is the talk of the foolish.

QUESTIONS AND ANSWERS

Student: How does Chittamatra prove by reasoning that there are sentient beings who are different entities from one's own mind?

Geshe Jampa Gyatso: Other sentient beings appear to us due to the activation of latencies. The Chittamatrins say that when all of us look at Patrick, for example, each one of us has an individual appearance of Patrick. The reason for this is due to both the particles of Patrick's body and the ripening of uncommon latencies. Therefore, if fifty people look at Patrick, fifty uncommon Patricks appear. The Prasangika Madhyamikas debate this saying: "It follows that Patrick has fifty heads, a hundred ears, and so forth." However, the Chittamatrins do not accept this. They say that Patrick is only one, but due to the ripening of the uncommon latencies of fifty people there are fifty appearances

of Patrick, although, there are not fifty Patricks. There are not fifty heads, noses, and so forth because the Patrick that appears to one person does not appear to another person, only one Patrick appears to each of them.

That there are sentient beings who have continua separate from our own is something that is seen with our eyes. This does not need to be established by reasoning because it is directly seen by our eyes. If there are fifty people here, they are directly seen by each one of us to be individual.

Student: All my appearances of Sherab, Geshe-la, and others are due to the activation of latencies, so what is the proof that Sherab, Geshe-la, and others each have their own minds? What is the proof that there exist sentient beings who are different substances from my own mind?
Geshe Jampa Gyatso: Without the activation of latencies you would not see Sherab, Geshe-la, and so forth. This is a tenet of the Chittamatrins, they have eight reasons that establish a basis-of-all. They say that latencies are deposited on the mind-basis-of-all and that due to their activation one perceives various phenomena.

Student: According to Prasangika, a disintegrated action can bring about a result. However, Prasangika also seems to assert the existence of latencies that are posited on the mere I. Why is it necessary for them to posit latencies?
Geshe Jampa Gyatso: In general, Prasangika says that a disintegrated virtue is virtuous and a disintegrated non-virtue is non-virtuous. This disintegrated virtue or non-virtue remains until it ripens. Thus, there is no need to posit a basis for the infusion of latencies. Although there is no need to posit this, if the Prasangikas are pushed to assert a basis for the infusion of latencies they say that it is the mere I. Unlike disintegrated actions, the latencies are unspecified phenomena.

Student: What is the difference in function between the disintegratedness of an action and that of the latency of an action?
Geshe Jampa Gyatso: The difference is that a disintegrated virtue and a disintegrated non-virtue yield their respective fruitional results, whereas a latency of an action does not yield a fruitional result because it is an unspecified phenomenon.

Student: What is the result of the disintegratedness of a seed?
Geshe Jampa Gyatso: It is the production of a sprout. For example, if one plants a barley seed in a pot and gives it water and warmth, a sprout is produced. When the sprout is produced, the potential of the seed has disintegrated. On the other hand, if one burns a rice seed, what is the result of that disintegrated seed? A tiny bit of ashes. If a bird eats the seed, what is the result of that disintegrated seed?!

Student: Chandrakirti says:

> *Just like dreams, likewise, also here when awake,*
> *Things are false. The mind does not exist,*
> *Objects do not exist, and the sense powers also do not exist.* [6.52bcd]

> *Just as* the objects, sense powers, and consciousnesses of *dreams* are false, *likewise*, *also here* on the occasion of being *awake things are false*. Therefore, *the mind does not exist* inherently. Similarly, *the objects* of the sense powers, forms and so forth, *do not exist* [inherently] *and the sense powers are also not* inherently produced.

How does this establish that all things are false even when awake? Are they falsities because they appear to a dreaming mind to be sense consciousnesses, sense powers, and sense objects but are not? Would that qualify them as being non-inherently existent? Would that establish all things as false even in the waking state? Or are they falsities because they are produced in mutual dependence?

Geshe Jampa Gyatso: There are two explanations, one of which I already gave. However, in brief it is as follows. A dream is an example of the false. For example, one dreams of having a picnic in a pleasant park. However, all that is perceived in the dream is false. Why? Because when one awakes one does not find the pleasant park and so forth. One just finds oneself in one's bed! That the sense consciousness, sense power, and objects of a dream are false is because when one awakes they are not found. These three do not exist inherently either in a dream or when awake. However, in a dream, even though the three are deceptive, they perform a function. The objects seen in a dream do not exist. While dreaming objects are found and perceived to be true, although they are not.

Student: If they are falsities because they do not exist as they appear, in that they appear as sense consciousnesses but are mental consciousnesses and so forth that would not qualify them as false in the waking state. The only reason that establishes them as false both in a dream and in the waking state is that they do not exist inherently. So how do they not exist inherently?
Geshe Jampa Gyatso: They do not exist inherently because they are dependent-arisings.

Monday afternoon, 6 November 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 270) says:

3B1C-2B3E-2A1B-2B2B-1B Refuting the others' response that [self-cognizers] are admissible

1 Stating the others' system
2 Refuting that system

3B1C-2B3E-2A1B-2B2B-1B1 Stating the others' system

Chandrakirti's autocommentary says:

> Here, someone accepts the Sautrantika position and in order to strongly prove self-cognition says [as follows]. Just as when fire is produced, not operating dually upon itself and vases and so forth, it illuminates them together; also a term indicates itself and its meaning – similarly, also when consciousness is closely produced, not operating dually, it acts to perfectly know the individuals, itself and the object. Therefore, "self-cognition" is only existent. Even someone who did not assert it must undoubtedly accept self-cognition. Otherwise, there would not be remembrance of the object with the memory that arises at a later time thinking "[The object] was seen" and there would not be memory of the [subjective] experience of the object thinking "I saw."

Here the Chittamatrins take the position of the Sautrantikas in order to prove the existence of self-cognizers. To do so they take the example of fire which simultaneously illuminates itself and a pot. Another example is that of a term, such as "pot," which indicates itself and its meaning. In other words, the word "pot" indicates both the definiendum itself and its meaning, that is, its definition – that which is bulbous, flat bottomed, and capable of holding fluid. It indicates its meaning in that through the term "pot" there is the appearance of that which is bulbous, flat bottomed, and capable of holding fluid.

These are the examples themselves, whereas there meaning is related to self-cognizers. For example, when an apprehender of blue perceives blue, a self-cognizer simultaneously experiences the apprehender of blue. Thus, it can be said that the seeing of the object and the seeing of the object-possessor occur simultaneously. Therefore, the Chittamatrins say that there are definitely self-cognizers. They say that even those who did not accept self-cognizers in the past from now on must do so!

Therefore, the subsequent memory of an object-possessor, an apprehender of blue, and the subsequent memory of the object, blue, arise simultaneously. The Chittamatrins take this reason of subsequent memory as the reason proving self-cognizers. In brief, the Chittamatrins say: An apprehender of blue, as the subject, has an experiencer because there is a subsequent memory of it; for example, such as blue. According to the Chittamatrins this kind of syllogism is one of the best reasonings proving self-cognizers.

Chandrakirti's autocommentary says:

> If asked: Why?
>
> If memory had an experience as its object, since, [according to you who do not accept self-cognition,] the knower would not even be experienced, memory would not exist. Once self-cognition is non-existent, the experience of that [knower] by itself does not exist a little while. It is also unreasonable for another knower to experience that [knower].

Memory is an object-possessor that experiences. What does it experience? It experiences a consciousness. There is no memory that is without the experience of a consciousness, for example, the memory thinking "I saw blue." When one thinks "I saw," one is remembering the object-possessor. What did one see? "Blue was seen." When these two memories, that of the object-possessor and that of the object, are combined, one says "I saw blue." For example, when one says "I saw Aldo in the kitchen yesterday," the words "I saw" indicate that the object-possessor is remembered, whereas "Aldo was seen" indicates that the object is remembered. Therefore, the memory of the object-possessor and the memory of the object occur simultaneously. The Chittamatrins say that just as these two types of memory occur simultaneously, so do the two experiences: (i) the experience of the object and (ii) the experience of the object-possessor. They say that because there exists such subsequent memory there are self-cognizers.

According to the Chittamatrins there are two types of experiencers: (i) self-experiencer, and (ii) other-experiencer. They say to the Prasangika Madhyamikas: "You do not accept self-experiencers because you do not accept self-cognizers." They also say that other-experiencers are not admissible. Regarding this Chandrakirti says: "Once self-cognition is non-existent, the experience of that [knower] by itself does not exist a little while. It is also unreasonable for another knower to experience that [knower]."

Chandrakirti's autocommentary says:

> If asked: Why?
>
> If experienced by another knower, it will follow as endless. It is like this: if it is accepted that one knower that analyzes blue is investigated by a consciousness that arises just after that, it is necessary to have another experiencer also for that knower of the knower of blue. And, since it is necessary there be another also for that, there follows the fault of endless [regression].

The Chittamatrins debate the Prasangika Madhyamikas saying: "If a consciousness were experienced by another consciousness, it would follow that there would be endless regression." In this way, they say to the Prasangika Madhyamikas that it follows that there is no experience:

- because there is no self-experiencer of a consciousness since there is no self-cognizer and
- because there is no other-experiencer of a consciousness that is another consciousness due to the absurd consequence of endless regression.

The Chittamatrins then state their position: "There is an experiencer because we assert self-cognizers and thereby avoid the fault of the endless regression of other-experiencers."

Chandrakirti's autocommentary says:

> A knower would also not analyze another object because every movement (or continuity) of consciousness would have another knower as its object and because sentient beings are a single continuum of consciousness. Consciousness, like the piercing of a hundred *utpala* petals, seems to engage together those which arise serially [due to rapid engagement]. Therefore, in order to fully avoid the fault of endless [regression], self-cognition must undoubtedly be accepted.

According to the Chittamatrins, another absurd consequence would be that other objects would not be perceived because when a later consciousness perceives an earlier consciousness it would not perceive other objects, such as form, sound, and so forth. Another reason that other objects would not be perceived is because sentient beings are each a single continuum of consciousness. Due to this there would be the fault of a consciousness not transferring to another object. On the other hand, if there

were no such fault, it would follow that two similar types of eye consciousness that are different substances would be simultaneously produced in the continuum of a single person. If that is accepted, it would contradict the sutra that says "Sentient beings are a single, that is individual, continuum of consciousness."

The Chittamatrins say, for example, that when an arrow is shot through a hundred utpala petals, although it seems that the hundred petals are pierced simultaneously, in fact they are pierced sequentially. This topic is discussed at length in Dharmakirti's *Commentary on [Dignaga's] Compendium of Valid Cognition*. The example indicates that if one accepts self-cognizers there will not be the fault of endless regression because just as a single arrow pierces a hundred petals sequentially but appears to do so simultaneously, similarly, a self-cognizer experiences many former and later moments of consciousness. On the other hand, if it were the case that a consciousness is experienced by another consciousness there would be the fault of endless regression. Thus, a continuum of consciousness is one but is composed of many moments, all of which are experienced by a self-cognizer.

Chandrakirti's autocommentary says:

> Thereupon, also the arisal at a later time of memories that have as their objects the two thoughts "I saw" are established, since except for a self-cognizing nature of knowers, the memory having that as its object is illogical.

There are self-cognizers because subsequently there is the simultaneous memory of both the object-possessor and object; for example, the memory "Yesterday I ate food." In this case, one simultaneously remembers oneself, the object-possessor, eating, and the object, the food.

Tuesday morning, 7 November 2000

Chandrakirti's autocommentary says:

> Therefore, through generating a remembering consciousness at a later time considering "I saw," the essential-nature of the consciousness which experiences and the essential-nature of the object – from which memories that have both as their objects are produced at a later time – are inferred to be experienced and produced. Therefore, through memory at a later time, self-experience is established and when self-experience exists, also other-powered phenomena are indeed existent. Hence, this is finely indicated to whoever states "There, it will be said 'By what will this be known to exist?'"

When a self-experiencer is established through memory, then also the other-powered phenomena – consciousnesses that are established by way of their own character – exist.

Lama Tsongkhapa's *Illumination* (Tibetan text page 270) says:

> PRASANGIKA MADHYAMIKAS: Here, some, that is, the Chittamatrins, assert the position of the Sautrantikas [as follows] in order to prove self-cognizers.
> CHITTAMATRINS: Just as when fire is produced it does not operate to gradually illuminate the two, itself and a pot, but illuminates them simultaneously, and just as when [the word] "pot" is uttered the two, the observation of the term itself and the observation of the pot, its object, are produced, likewise, also when consciousness is produced it does not operate with respect to the two, itself and the object, separately and serially but cognizes them simultaneously. Therefore, self-cognizers only exist.

In short, the Chittamatrins once again assert self-cognizers. They say that self-cognizers definitely exist because there is a consciousness that simultaneously remembers both the object and object-possessor. For example, they say that when an apprehender of blue experiences blue simultaneously a self-cognizer experiences the apprehender of blue; due to this the subsequent memory simultaneously remembers not only the blue but also the eye consciousness apprehending blue.

Here in the text the example of the term "pot" is given. When the word "pot" is pronounced both the object-possessor "pot" (the term itself) and the object "pot" are observed, due to which there are two consciousness produced: (i) a consciousness observing the term itself, the object-possessor, and (ii) a consciousness observing the pot, the object. An expressive term is considered to be an object-possessor.

The definition of an object-possessor is: a thing that possesses any type of respective object. (Purbuchog's *Awarenesses and Knowers* says: a thing that possesses its respective object.) From among the two, objects and object-possessor, when object-possessors are divided there are three: (i) expressive sounds, (ii) consciousnesses, and (iii) persons.

Lama Tsongkhapa's *Illumination* (Tibetan text page 270) says:

> If they were not asserted, there would not be
> - the memory of an object later on saying "Earlier that object was seen" and
> - the memory of the object-possessor that experienced that object thinking "Earlier I saw it."
>
> Why is this? Since it is not possible to generate a memory of that which was not experienced before, if memory is the object-possessor of a previous experience, according to you, [Madhyamikas], who do not assert self-cognizers, since the consciousness that apprehended blue before was not experienced at its respective time, a later memory [of blue] is not established to exist.

An eye consciousness experiences blue and simultaneously a self-cognizer experiences the apprehender of blue; however, self-cognizers do not experience blue.

If something is not experienced previously it cannot be remembered. When someone says "This table was seen" and also says "I saw the table," the first is a memory of the object, the table, and the second is a memory of the object-possessor, I. Both object and object-possessor must have been experienced before since only in this way can there be a subsequent memory of them. In brief, if there is no previous experience of something it cannot be remembered later on. Thus, the Chittamatrins prove that self-cognizers exist by saying that when an eye consciousness apprehends blue there is necessarily a self-cognizer that perceives that apprehender of blue, otherwise there could be no subsequent memory of the apprehender of blue.

Lama Tsongkhapa's *Illumination* (Tibetan text page 271) says:

> Hence, that an experiencer of an earlier apprehender of blue exists is proven through the reason 'subsequent memory.' When proving that "a self-cognizer that is a self-experiencer of a previous apprehender of blue exists," it is not proven in that way because an example that establishes it for others is not found. When establishing that the experiencer of an apprehender of blue exists, two [types] are determined in regard to the experiencer of that [apprehender of blue]: (i) self-experiencers and (ii) other-experiencers. However, the first is not suitable to you [Madhyamikas]. When our system refutes the second, it is negated saying "If that which pervades experience is repudiated, mere experience is also not admissible." Therefore, the reasonings that prove self-cognizers are the best.

The Chittamatrins say that when proving a self-cognizer they do not assert: "An apprehender of blue, as the subject, has a self-cognizer that is an experiencer because there is subsequent memory." Instead they say: "An apprehender of blue, as the subject, has an experiencer because there is subsequent memory." This is because, if they were to say "a self-cognizer that is an experiencer," they could not posit a concordant example.

Lama Tsongkhapa says there are two possibilities regarding an experiencer of an apprehender of blue: (i) that is a self-experiencer or (ii) that it is an other-experiencer. The Madhyamikas do not accept self-experiencers, whereas the Chittamatrins negate other-experiencers. The Chittamatrins say that if other-experiencers are accepted there would be the consequence of endless regression: that is, a consciousness apprehending blue would be apprehended by another consciousness, which in turn would be apprehended by another consciousness, which in turn would be apprehended by another consciousness, and so on without end. The Chittamatrins say that if the two types of experiencers, self-experiencers and other-experiencers, are inadmissible then it would follow that there is no experience at all.

In short, when proving self-cognizers the predicate "has an experiencer," rather than "has a self-cognizer which is an experiencer," is the best reasoning.

> It is also not suitable for an apprehender of blue to be experienced by a consciousness that is an object other than itself. If that were suitable there would be two invalidations of it, the first being that it would follow that there would be endless [regression], in that if a consciousness that perceives blue is perceived by another consciousness which arises after it either:
>
> - a consciousness that is another object that comprehends it would be necessary or
> - [a consciousness that is another object that comprehends it] would not be necessary.
>
> If [such a consciousness] is not necessary, also the earlier consciousness would not be necessary. On the other hand, if [such a consciousness] is necessary, there would be the fault of endless [regression] due to the need for another [consciousness] also with respect to that. And, if there were endless regression, there would be the fault of not establishing the experience of the first apprehender of blue.

If there is a need for another consciousness to perceive an earlier consciousness, it would follow that there would be the need for endless consciousnesses that perceive each other. On the other hand, if one refutes endless regression there would not be the need for even one other consciousness to perceive the earlier consciousness. In addition, if there is the fault of endless regression it would follow that the first consciousness would not be established.

Lama Tsongkhapa's *Illumination* (Tibetan text page 271) says:

> The second [invalidation] is the absurd consequence that other objects would not be perceived. When an earlier consciousness is perceived by a later one, [that later consciousness] does not perceive other objects, such as form, sound, and so forth, and it does not transfer to them because the flow of consciousness, that is, its entire movement, is an object-possessor of another earlier consciousness.

If there is need for another consciousness to perceive an earlier consciousness, whereby there would be endless regression, then an apprehender of blue would not be able to apprehend blue. That is, if a later moment of consciousness only perceives a former moment of consciousness, it could not perceive other objects such as forms, sounds, and so forth. "It does not transfer to them" means that a later consciousness that is perceiving an earlier consciousness does not operate with respect to forms, sounds, and so forth.

Lama Tsongkhapa's *Illumination* (Tibetan text page 271) says:

> This is not an indefinite pervasion because, if each earlier consciousness is perceived by a later consciousness, the later [consciousness] is necessarily produced through taking the previous one as its apprehended object because at that time, having been cast toward a close apprehended object that is an inner component, it does not engage an external object that is at a distance.

If all former moments of consciousness are perceived by a later consciousness, it follows that consciousnesses would only be cast toward close apprehended objects that are internal, that is, consciousnesses, and would not engage objects that are distant, that is, external objects. For example, when someone is occupied at the computer he does not go out for a walk, meet other people, and so forth; similarly, if a consciousness is occupied with another consciousness it does not perceive other objects.

Lama Tsongkhapa's *Illumination* (Tibetan text page 272) says:

> OBJECTION: The two,
> (i) a later consciousness that is an apprehender of blue that perceives an earlier consciousness that is an apprehender of blue and
> (ii) a consciousness that is an apprehender of blue that perceives blue,
> are produced simultaneously. Therefore, there is no fault of not transferring to another object.
> RESPONSE: If that were the case, two similar types of eye consciousness which are different substances would be produced in the continuum of a single person at the same time. If that is accepted, it would contradict [the sutra] that says "Sentient beings are a single, that is individual, continuum of consciousness."

This objection is wrong because it is not possible for two similar types of consciousness which are different substances to be produced in the continuum of a single person. Some say that one consciousness operates with respect to one object and not with respect to different objects. In Dharmakirti's *Commentary on [Dignaga's] Compendium of Valid Cognition* it says: "One does not know two because the object of a sense [consciousness] is determined." This means that a particular sense consciousness only knows its respective objects and does not know other objects. Therefore, the two, (i) an apprehender of blue perceiving an earlier apprehender of blue and (ii) an apprehender of blue perceiving blue, cannot be produced simultaneously.

Tuesday afternoon, 7 November 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 272) says:

> Here, the autocommentary says:
>
> > Consciousnesses, like the piercing of a hundred utpala petals, arise serially but manifest as though operating simultaneously.
>
> [Jayananda's] *Explanatory Commentary* says:
>
> > QUESTION: When one enters the house of a performer, are the five consciousnesses that simultaneously apprehend the five objects, such as the face of the performer, a tune, and so forth, not consciousnesses that are simultaneously produced?
> >
> > RESPONSE: The consciousnesses that apprehend the five objects arise serially, but, due to operating quickly, manifest as though produced simultaneously.

> This explanation is completely inappropriate. The Sautrantikas and Chittamatrins who prove self-cognizers say "Sentient beings are an individual continuum of consciousness." The meaning of this accords with what is said in [Dharmakirti's] *Commentary on [Dignaga's] 'Compendium of Valid Cognition*':
>
> > They definitely can,
> > Other than those of similar type.
>
> Similar types of consciousness are asserted to not be produced simultaneously in the same person because consciousnesses of dissimilar type are not at all asserted to not be produced simultaneously.

I looked at Jamyang Shepa's commentary on the passage in the autocommentary "Consciousnesses, like the piercing of a hundred utpala petals, arise serially, but manifest as though operating simultaneously," however, the meaning is still not very clear to me. Many similar types of consciousnesses cannot arise simultaneously in one continuum, whereas many dissimilar types of consciousnesses can arise simultaneously. When Jayananda's *Explanatory Commentary* says that many dissimilar types of consciousness do not arise simultaneously, this is incorrect. Jayananda says that these consciousness operate extremely quickly and for this reason appear to arise simultaneously, although in fact they arise serially. We can take the example of entering a discotheque, whereupon one simultaneously sees many people dancing, hears music, and so forth. In this way, the eye consciousness sees people dancing, the ear consciousness hears music, and the nose consciousness smells perfumes and other odors. In addition, the tongue consciousness can simultaneously taste a candy and the body consciousness can simultaneously feel the touch of one's partner. In this way one can verify that all five sense consciousnesses can arise simultaneously. However, it seems that according to Jayananda these sense consciousnesses do not arise simultaneously but arise serially. For this reason, Lama Tsongkhapa says that the explanation that "The consciousnesses that apprehend the five objects arise serially, but, due to operating quickly, manifest as though produced simultaneously" is completely inappropriate. The Sautrantikas and Chittamatrins, who prove self-cognizers, say "Sentient beings are an individual continuum of consciousness." In a single continuum many similar types of consciousnesses cannot arise simultaneously, whereas many dissimilar types of consciousness can arise simultaneously.

Lama Tsongkhapa's *Illumination* (Tibetan text page 272-3) says:

> Many Tibetans when looking at [a piece of] brocade ask: "Are not many consciousness apprehending white, red, and so forth produced simultaneously?" Those who, in response to that, say "Although those consciousnesses arise serially, they appear to be produced simultaneously," appear:
>
> - to not have understood the intention regarding similar types of main consciousnesses, this being the meaning of saying "[Sentient beings are] an individual continuum of consciousness," and,
> - to also not realize that an eye consciousness apprehends a mottle [of colors] due to not understanding that a single eye consciousness apprehends many different colors.

The particular type of brocade mentioned here is no longer found but we can take any type of brocade as an example. Some Tibetans think that when one sees the mottle of colors of a piece of brocade there arise many eye consciousnesses apprehending the individual colors which, although they actually arise serially, appear to arise simultaneously. This idea is incorrect and occurs due to not understanding the meaning of what is said in sutra: "Sentient beings are an individual continuum of consciousness." The intention of this sutra passage is that many similar types of consciousness do not arise simultaneously, whereas many dissimilar types of consciousness do arise simultaneously; this is what has not been understood. Lama Tsongkhapa says: "[They] appear to not have understood the

intention regarding similar types of main consciousnesses, this being the meaning of saying "[Sentient beings are] an individual continuum of consciousness." They have also not understood that a single eye consciousness apprehends a mottle of colors. One can verify this oneself by looking at a piece of multi-colored cloth and then closing one's eyes, whereby there arises a mental image of the many colors. Therefore, a single eye consciousness can apprehend many colors, many faces, and so forth. This is the meaning of the example given here of brocade.

Lama Tsongkhapa's *Illumination* (Tibetan text page 273) says:

> Hence, although in response to the debate about similar types of consciousness being produced simultaneously, it appears as though necessary to explain that "Although they are produced serially, due to their operating quickly they seem to be produced simultaneously," the two [schools, the Sautrantika and Chittamatra,] which prove self-cognizers, [actually] negate – in [Dharmakirti's] *Commentary on [Dignaga's] 'Compendium of Valid Cognition'* – that their quick operation is the cause for mistaking them to be simultaneous. Since it appears difficult to posit this passage [in the autocommentary] as the system of these two [schools], the intelligent should examine whether it is likely that there is the fault of corruption in the Sanskrit text.

Here it says that in Dharmakirti's *Commentary on [Dignaga's] Compendium of Valid Cognition* the Chittamatrins and Sautrantikas negate that their quick operation is the cause for mistaking them to be simultaneous. Since this contradicts what was said before in the autocommentary it should be examined. When Lama Tsongkhapa says that there may be the fault of corruption in the Sanskrit text, he refers to the passage in the autocommentary: "Consciousnesses, like the piercing of a hundred utpala petals, arise serially but manifest as though operating simultaneously."

Lama Tsongkhapa's *Illumination* (Tibetan text page 273) says:

> Therefore, in order to dispel the faults of (i) endless [regression] and (ii) the non-analysis of another object, self-cognizers must unquestionably be asserted. For this reason, through the later production of a memory of both the object and the object-possessor, it is to be inferred that earlier, when blue was seen, there existed [both] the experience of the object and the experience of the object-possessor. That being the case, if there exists a self-cognizer that is a self-experiencer, also the existence of other-powered phenomena is established by that self-cognizer. Thus, the response to the Madhyamikas' question "What will know their existence?" is finely indicated.

The Chittamatrins say that if self-cognizers are not accepted then it follows that an earlier consciousness would be experienced by a later consciousness due to which there would be (i) the fault of endless regression and (ii) the fault that consciousness would not experience an object other than consciousness. Therefore, self-cognizers do in fact exist.

The Chittamatrins posit two types of experiencers: self-experiencers and other-experiencers. Among these two, self-experiencers are acceptable to the Chittamatrins. On the other hand, they say that if self-experiencers are not accepted, there would be other-experiencers due to which there would be (i) the fault of endless regression and (ii) the fault that consciousness could not transfer to another object. The Chittamatrins say that an experiencer of an apprehender of blue is established because there is a subsequent memory of both the object, blue, and the object-possessor, the apprehender of blue.

Therefore, due to the existence of self-cognizers, other-powered phenomena are established. In this way the Chittamatrins respond to the Madhyamikas' question "What will know their existence?" In other words, previously the Madhyamikas asked: "What knows the existence of an inherently existent consciousness that is an other-powered phenomenon?" The Chittamatrins respond: "It is known by a self-cognizer."

Next comes the Prasangika Madhyamikas refutation of the Chittamatrins' assertions.

Wednesday morning, 8 November 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 273) says:

3B1C-2B3E-2A1B-2B2B-1B2 Refuting that system

A The actual refutation of the other system
B In our own system, the way in which memory is produced in spite of self-cognizers not existing
C Dispelling arguments regarding such refutation

3B1C-2B3E-2A1B-2B2B-1B2A The actual refutation of the other system

Chandrakirti's autocommentary says:

In order to indicate that "that too is unreasonable," it is explained:

It is not established that it is experienced by itself.
If established through remembering later,
This unestablished [memory] expressed in order to prove
Unestablished [self-cognition] is not a proof. [6.73]

There, first of all, if it was mentioned in terms of being a substantial proof, then, since memory is impossible in any way because there is no production from self and other, how could an unestablished memory prove an unestablished self-cognition? Moreover, if it was in terms of worldly convention, in that case too, memory having self-cognition as its cause is just impossible.

In order to prove self-cognizers the Chittamatrins set forth the reason "because there is subsequent memory." However, in the proof of self-cognizers this is a reason that is not established. A memory that is not established cannot be set forth as a reason proving an inherently existent consciousness which is an other-powered phenomenon. Chandrakirti says: "This unestablished [memory] expressed in order to prove unestablished [self-cognition] is not a proof."

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B1A-6C5A-1A2B-2B1B-1 The substance

If it's established from later remembering,
Then to establish the unestablished, this
Unproven thing put forward is no proof. [6.73bcd]

If you say, "Self-knowing consciousness is established from the inherently existing memory at a later time," then to establish the unproven self-knowing consciousness, this inherently existent memory put forward is not a proof of self-knowing consciousness, since it is not established.

The Prasangika Madhyamikas say to the Chittamatrins that they cannot prove their probandum, "an inherently existent consciousness which is an other-powered phenomenon" by setting forth the unestablished reason "because there is inherently existent memory." Since the proof is not established, the probandum is not established. Chandrakirti says: "There, first of all, if it was mentioned in terms of being a substantial proof, then, since memory is impossible in any way because there is no production from self and other, how could an unestablished memory prove unestablished self-cognition? Moreover, if it was in terms of worldly convention, in that case too, memory having self-cognition as its cause is just impossible."

Chandrakirti's autocommentary says:

> If asked: Why?
>
> If here, like fire, self-cognition were established due to some knower [and] if, due to the existence of that, like fire due to smoke, there were certainty as to its very existence via the memory that would arise afterwards – since that self-cognition has still not been established, how could there be memory that is caused by self-cognition which does not arise without self-cognition?

Self-cognizers cannot be established in the same way that fire is established through the existence of smoke. In other words, while in the world it is conventionally said that "fire exists because there is smoke," the case of self-cognizers is not the same. The existence of fire is understood in dependence on the reason "because there is smoke." This is because, fire being the cause of smoke and smoke being the result of fire, they have a causal relationship. The Chittamatrins liken the case of self-cognizers to the example of the result, smoke, and the cause, fire, saying that a self-cognizer is the cause and subsequent memory is the result, and therefore use the existence of subsequent memory to establish the existence of self-cognizers. However, because self-cognizers, the cause, have yet to be established, the sign that is their result, "because there is memory," cannot be used to establish them. In short, a causal relationship between self-cognizers and memory has not been established.

Chandrakirti's autocommentary says:

> It is like this: from seeing merely water or from seeing merely fire, a jewel water-crystal or a jewel fire-crystal cannot [be inferred to] exist because even without those [jewels], water and fire arise from rain, etc., and from rubbing a fire-stick,[47] etc.. Similarly, here too, the way in which memory arises without self-cognition will be presented like that.

Even without the existence of a jewel water-crystal and a jewel fire-crystal, rain and fire are still seen to exist in dependence on rain and the rubbing together of kindling. In this way, the Prasangika Madhyamikas show that self-cognizers do not exist saying that, even though there are no self-cognizers, memory can still arise. In short, memory exists without the existence of self-cognizers just as water and fire exist without the existence of a jewel water-crystal and a jewel fire-crystal.

Chandrakirti's autocommentary says:

> Therefore, since memory caused by self-cognition is non-existent without it, this unestablished [thing] expressed [by] the word 'memory' in order to prove the unestablished, self-cognition, is not established as having the purpose of proof, since "like the very object to be apprehended by eye consciousness, in [the proof of] sound as impermanent" is taken into consideration.

In proving the existence of self-cognizers, the reason "because there is memory" is not a correct proof, just as the reason is not established in the syllogism "Sound is impermanent because it is the apprehended object of eye consciousness." In proving the existence of self-cognizers the actual syllogism set forth by the Chittamatrins is: An apprehender of blue, as the subject, has an experiencer because there is a inherently existent subsequent memory; for example, like blue.

[47] Skt. *arani* – a piece of wood used for kindling fire by friction.

Chandrakirti's autocommentary says:

> But, having admitted thorough analysis like that,
>
> *Suppose one relies on established self-cognition.*
> *Even so, memory's recollection is not reasonable*
> *Because other; like production in an unknowing continuum.*
> *This reasoning also destroys distinctions.* [6.74]
>
> Even if a knower were to cognize its own self and object, nonetheless, for a remembering consciousness to recollect those is unreasonable because remembering consciousness was accepted as just other than the knower that experiences the object.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *Suppose one found establishment of self-knowing:*
> *Even so, the remembering cannot remember,*
> *For it's other, as if born in someone not the experiencer.* [6.74abc]

Even if supporting establishment of self-knowing consciousness were found: nevertheless, it would follow that the remembering consciousness could not remember the object and the experiencing, since [according to you] the [earlier] experiencing and the [later] remembering are inherently other – just as, for example, experience not cognized by Upagupta cannot be remembered by a remembering consciousness produced in Upagupta's mind stream.

You may say, "It is not similar, because if they exist inherently and are earlier and later, then they exist as cause and effect."

> *This argument even eliminates distinctions.* [6.74d]

This too is unacceptable, for this argument, "Because they are inherently other," destroys every distinction of cause and effect, etc.

"This reasoning also destroys distinctions" means that inherently existent self-cognizers and inherently existent memory destroy the relationship of cause and result because they are inherently other. Chandrakirti says: "Even if a knower were to cognize its own self and object, nonetheless, for a remembering consciousness to recollect those is unreasonable because remembering consciousness was accepted as just other than the knower that experiences the object." In brief, because the subsequent memory is inherently other than the consciousness that experiences the object, this reasoning is inadmissible. This is because if the consciousness that experiences the object and the memory of it were inherently other, they would be a completely unrelated other. That is, because they are inherently other, a cause could not be inferred in dependence on a result.

Chandrakirti's autocommentary says:

> It is like this: Maitreya's self-cognition of a knower and experience of an object is not remembered by Upagupta's knower since not experienced before. Similarly, like production in a continuum (or: like knowing from a continuum) that did not know since it is other, because the knowers and objects are not experienced even by a consciousness included in one's own continuum that arises at a later time, there will be no memory.

A consciousness in Maitreya's continuum cannot remember a consciousness in Upagupta's continuum. In short, Maitreya's consciousness cannot remember Upagupta's consciousness. For example, in the case of the two nuns, Micaela and Cristiana, if Cristiana has an idea in her mind that idea cannot be remembered by Micaela. Why is that? Because they are different continua. This is the essence of what Chandrakirti says.

With respect to this, there is a story of an event that happened in Tibet. There was a mother who had a daughter, and whatever the mother said the daughter would say "I also thought that." One day the mother said to the daughter "Today, lets give the yogurt to the dog." The daughter replied, "I also thought to do that." Another time when the mother was grinding barley she said to the daughter "What do you think about dispersing this barley flour to the wind?" The daughter replied, "I also thought to do that." In fact, the daughter had no idea what her mother planned to do because they are two different continua.

Wednesday afternoon, 8 November 2000

Chandrakirti's autocommentary says:

> If it is thought that because the properties of cause and effect abide in those included in one continuum memory will exist, that also does not exist, since *this reasoning also destroys distinctions* [6.74d]. This which is the reasoning stating "because of being other" completely destroys all distinctions of inclusion in a single continuum and the properties of cause and effect and so forth.
>
> Because an instant of remembering consciousness arising later than the time of the experience is other, like the knower of another continuum, it is not included in a single continuum with the experiencing consciousness – the properties of cause and effect do not even abide. By this very reasoning that states "because of being other," [such as] the [aforementioned] statements and so forth, it is to be extensively refuted.

Lama Tsongkhapa's *Illumination* (Tibetan text page 273) says:

> PRASANGIKA MADHYAMIKAS:
>
> *If it is established from a memory of a later time,*
> *That non-established expressed in order to prove*
> *The non-established does not prove it.* [6.73bcd]
>
> From the point of view of an established by way of its own character substance, *if* a self-cognizer – an earlier consciousness of a remembered object – *is established from a memory of a later time*, *that non-established* inherently existent memory *expressed in order to prove non-established* self-cognizers to opponents *does not prove* self-cognizers; like an apprehended object of the eye with regard to proving sound to be impermanent.

The Chittamatrins prove that there exists an experiencer, a self-cognizer, by the reason of an inherently existent memory. That reason, inherently existent memory, which is used to prove not yet established self-cognizers is itself not established. It is like the syllogism: sound, as the subject, is impermanent because it is an apprehended object of eye consciousness. That sound is an apprehended object of eye consciousness is not established; therefore, the reason is not established because it is not the property of the subject.

Lama Tsongkhapa's *Illumination* (Tibetan text page 273) says:

> In addition, in terms of worldly conventions there is no memory that is a result of a self-cognizer. Why is that? Here when establishing fire, just as smoke is understood to be its result, likewise, when establishing self-cognizers, if they are established in relation to the memory that arises from them, then, if it is ascertained that there exist self-cognizers other than memory, since self-cognizers are still not established for the opponents, how can the result of a self-cognizer – the memory that does not arise without a self-cognizer – exist?

Even from the point of view of worldly conventions, it is not said that memory is the result of a self-cognizer. Therefore, self-cognizers do not exist. When fire is established, it is understood in the world that smoke is its result. If fire is not established, then smoke does not exist. Likewise, if it is accepted that self-cognizers are established, from them there should arise the result, memory, due to which they would have a causal relationship. If this relationship could be established, then self-cognizers could be established by the reason "memory." However, self-cognizers have not yet been established for "the opponents," the Prasangika Madhyamikas. Since self-cognizers are not established for the Prasangika Madhyamikas, how can there be the result, memory, from a yet to be established self-cognizer?

In order to prove that there is no causal relationship between inherently existent self-cognizers and inherently existent memory the Prasangika Madhyamikas say:

> Lacking a relationship, an example of what is not established [is as follows]. Through seeing mere water and mere fire, a water crystal-jewel and a fire crystal-jewel are not inferred because, even without these two, water and fire arise [respectively] from rain and so forth and from rubbing kindling together and so forth. Similarly, also here it will be explained how memory arises without a self-cognizer.

For example, someone thinks "There is a water crystal-jewel here because there is water" or "There is a fire crystal-jewel here because there is fire." However, this is incorrect reasoning "because, even without these two, water and fire arise [respectively] from rain and so forth and from rubbing kindling together and so forth." Without a relationship, the subject cannot be proven by the reason. A proof requires that there is a relationship between the subject and the reason.

Lama Tsongkhapa's *Illumination* (Tibetan text page 274) says:

> CHITTAMATRIN'S RESPONSE TO THAT REFUTATION: In terms of proving memory and a self-cognizer to be cause and result, like fire and smoke, it is not that due to memory a self-cognizer is inferred, rather, as was explained before, it is that due to memory the existence of an experiencer of an earlier consciousness is inferred.
>
> PRASANGIKA MADHYAMIKAS: Having distinguished two, (i) a self-experiencer and (ii) an other-experiencer, when they are refuted, although it is indeed said "Itself experiencing itself is established," the cognition by a consciousness that is posited by the Sautrantikas and Chittamatrins is not determined to be the two [types of experiencers]. Therefore, just as a lamp itself does not illuminate itself but nonetheless it illuminating it is not precluded; likewise, a consciousness itself does not experience itself, as is asserted by the former party, but mere experience in regard to it is not precluded.

The Sautrantikas and Chittamatrins say that there are two types of experiencers: self-experiencers and other-experiencers and that due to there being self-experiencers there are self-cognizers. On the other hand, the Prasangika Madhyamikas say that there do not exist these distinctions of experiencers, there is only mere experience. Although they assert two types of experiencers, the Sautrantikas and Chittamatrins negate other-experiencers saying that if an earlier consciousness is experienced by another later consciousness there would be two absurd consequences: (i) the fault of endless regression and (ii) the fault of it not transferring to other objects.

The Prasangika Madhyamikas say: "just as a lamp itself does not illuminate itself but nonetheless it illuminating it is not precluded; likewise, a consciousness itself does not experience itself, as is asserted by the former party, but mere experience in regard to it is not precluded." Therefore, although a self-cognizer is not asserted by the Prasangika Madhyamikas as it is by the former party, this does not mean that there is not mere experience. Consciousness itself is experience because it experiences objects.

Lama Tsongkhapa's *Illumination* (Tibetan text page 274) says:

> OBJECTION: A lamp itself illuminates itself.
> RESPONSE: In that case, darkness itself would obscure itself. If that were asserted, just as a pot is not seen in the dark, so too darkness would not be seen.

If it were the case that darkness itself obscures itself, it would follow that darkness would not be seen in the dark. For example, just as a pot is not seen in the dark because it is obscured by darkness, similarly, darkness would not be seen in the dark because it would obscure itself.

Lama Tsongkhapa's *Illumination* (Tibetan text page 274) says:

> Similarly, *Fundamental Wisdom* also says:
>
> If a lamp acts to illuminate
> The things that are itself and other,
> Also darkness would, doubtlessly,
> Obscure the things that are itself and other.

In short, darkness does not obscure itself.

Lama Tsongkhapa's *Illumination* (Tibetan text page 274) says:

> Chandrakirti says:
>
> *Even in dependence on establishing a self-cognizer,*
> *A memory remembering such is not reasonable*
> *Because they are otherness – like the production in a continuum of the unknown.*
> *This reasoning destroys even those instances.* [6.74]
>
> Supposing, even having given up such analysis, that *in dependence on establishing* – that is, allowing for the establishment of – a consciousness that *cognizes* the nature of *itself* and the object that is cognized, a *memory* consciousness *remembering* that object and that object-possessor *is not reasonable because* the two – the later remembering consciousness and the earlier consciousness that experiences the object – *are* asserted by you [Chittamatrins] to be an established by way of their own character *otherness*.

The Chittamatrins set forth inherently existent memory as a reason proving self-cognizers. This is negated by the Prasangika Madhyamikas who say that if memory is inherently existent it would be an other that is not related to a self-experiencer.

Lama Tsongkhapa's *Illumination* (Tibetan text page 274) says:

> Like Maitreya's self-cognizing consciousness and his experience of an object are not remembered by Upagupta's consciousness since they were not experienced [by him] before, similarly, because of being inherently existent other – *like the production in* [someone's] *continuum of the unknown*,

> that is, the not experienced before – there would be no memory because the consciousness and the object would also not be experienced by a consciousness included in one's own continuum that arises at a later time.

What one person experiences is not remembered by another person because they are two different continua. Similarly, if a self-cognizer and subsequent memory were inherently existent they would be unrelated.

Lama Tsongkhapa's *Illumination* (Tibetan text page 274) says:

> Thinking "because the things that are cause and result abide as those that are included in a single continuum, memory exists" is also not suitable [because] *that reasoning* – "Because of being an established by way of its own character other" – acts to thoroughly *destroy even those instances* of cause and result included in a single continuum. This was already extensively explained in the context of stating above "[The qualities] based on Maitreya and Upagupta" (v. 6.61).

When the reason "because of being an inherently existent other" is set forth, it destroys the relationship of cause and result. This is because if there were inherent existence, all presentations of cause and result would be inadmissible. In that case, also the presentations of one continuum and different continua would also not be admissible.

The Chittamatrins say "Although one does not remember the experiences of another continuum, one remembers the experiences of one's own continuum." They prove the existence of a self-cognizer due to the existence of a subsequent memory in the same continuum. The Prasangika Madhyamikas say that if the Chittamatrins accept inherently existent other then none of the above is acceptable.

Thursday morning, 9 November 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 275) says:

3B1C-2B3E-2A1B-2B2B-1B2B In our own system, the way in which memory is produced in spite of self-cognizers not existing

1 The system explained in this very text
2 The system explained in other texts

3B1C-2B3E-2A1B-2B2B-1B2B-1 The system explained in this very text

Chandrakirti's autocommentary says:

> If asked: How is it according to you?
>
> [The root text] expresses:
>
> *Because, for me this memory does not exist*
> *Other than that by which the object was sensed,*
> *Therefore, it is remembered thinking, "I saw."*
> *This is also the custom of worldly convention.* [6.75]
>
> How a remembering consciousness does not exist as just other (i.e., naturally other) than the consciousness by which the object was sensed (the object was experienced), has already been explained before. Because an otherness of memory does not exist, therefore since that which is sensed by experience is not unsensed by a remembering consciousness, memory arises having an object. Since that which is discerned by an experiential consciousness is not undiscerned, one can say, "I saw it."

> This is also the custom of the world and is not to be excessively analyzed because it is worldly convention as it just has a false significance [in that one cannot find the imputed object when it is sought].

The Prasangika Madhyamikas say that even without a self-cognizer, there is memory.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> 3B1A-6C5A-1A2B-2B1B-2 How memory is produced although there is no self-knowing consciousness

"If there is no self-knowing consciousness," you may ask, "Then how is memory produced?"

> *Because, for us, this memory is not separate*
> *From that by which the object is experienced,*
> *Therefore, I remember that I saw.* [6.75abc]

One remembers in the mind that he saw this object because as, for us Madhyamikas, this memory is not inherently separate from what experienced the object, that which was taken as an object by the experiencer is not unexamined by the memory.

> *This is also the way of worldly convention.* [6.75d]

This way of remembering is also the worldly conventional way, but the imputed object is not to be posited after being sought, for if the imputed object is sought it is not found, being a worldly convention.

Chandrakirti says: "How a remembering consciousness does not exist as just other (i.e., naturally other) than the consciousness by which the object was sensed (that is, by which the object was experienced), has already been explained before." This means that it has already been explained that there is no consciousness that experiences a previous consciousness, no consciousness that experiences that consciousness, and so forth. In other words, there is no experiencer of a previous experiencer, no experiencer of that experiencer, and so forth.

The statement in the autocommentary "Because an otherness of memory does not exist" means that there is no established by way of its own character memory.

Chandrakirti says: "Therefore, since that which is sensed by experience is not unsensed by a remembering consciousness, memory arises having an object." By means of a consciousness experiencing an object, there is a memory of that object. Chandrakirti says: "Since that which is discerned by an experiential consciousness is not undiscerned, one can say, 'I saw it.'" Thus, even though there is no self-cognizer, there is subsequent memory.

When one says "I saw blue before," saying "I" indicates a memory of the object-possessor and saying "blue" indicates a memory of the object. This accords with worldly conventions; it is not posited by means of thorough analysis. The Prasangika Madhyamikas are known as "those who propound in accordance with that renowned in the world." Chandrakirti says: "This is also the custom of the world and is not to be excessively analyzed because it is worldly convention as it just has a false significance [in that one cannot find the imputed object when it is sought]." When an object is sought by means of thorough analysis it is not found.

Lama Tsongkhapa's *Illumination* (Tibetan text page 275) says:

> CHITTAMATRINS: If, according to you, self-cognizers are not asserted, how is memory produced?
> PRASANGIKA MADHYAMIKAS:
>
> *Because for us there does not exist a memory other than*
> *What experienced the object,*

There is memory thinking "I saw."
This is also the way of worldly conventions. [6.75]

The way in which for this system there *does not exist* a *memory* consciousness *that is* an [established] by way of its own character *other than* the previous consciousness – the consciousness that *experienced the object* – was already explained. Since it was already explained before that ordinary worldly awarenesses do not conceive substantial causes and results, such as a seed and sprout, to be an established by way of their own character other, also innate worldly awarenesses do not conceive the cause and result that are an earlier experience of an object and a later memory of it to be an established by way of their own character other. Not only does that not exist, but when there is the later memory of an object that was previously seen by an apprehender of blue, conventionally one says: "I also saw that before." For this reason, it is clear that ordinary worldly beings do not conceive the two, experience and memory, and the two objects of those times to be conventions by way of their own character. If that were not the case, even the experiences of another continuum would produce memory in oneself.

The Chittamatrins ask the Prasangika Madhyamikas: "If there are no self-cognizers, how is memory produced?" The Prasangika Madhyamikas respond that, although there is no memory established by way of its own character and no experience established by way of its own character, there is the worldly convention "I saw that." Thus, although there are no self-cognizers, there is a subsequent memory of both the object-possessor and its object. For example, when someone says "Yesterday I saw Cristiana buying matches in Pomaia," there is a memory of both the object-possessor and the object in that "Cristiana buying matches" indicates the object and "I saw" indicates the object-possessor, the eye consciousness. This way of positing accords with worldly conventions.

The innate awareness of ordinary worldly beings does not conceive an inherently existent other; that is, it does not conceive one substance to be an inherently existent other from another substance. The innate awareness of ordinary worldly beings does not investigate and does not analyze. In fact, worldly beings do not discuss inherently existent things.

Lama Tsongkhapa says: "If that were not the case, even the experiences of another continuum would produce memory in oneself." For example, Sherab's experience of the taste of drinking tea is not remembered by Dondrub, however, if ordinary worldly beings conceived the two, experience and memory, and the two objects of those times to be conventions by way of their own character, then Dondrub should be able to remember Sherab's experience of the taste of drinking tea.

Lama Tsongkhapa's *Illumination* (Tibetan text page 275) says:

Therefore, since that experienced and perceived by an earlier consciousness which experienced the object is not not experienced and not not perceived by a later memory consciousness, *memory* is produced *thinking "I* also *saw* that before." *This also* being *the way of worldly conventions*, do not posit [memory] – not being content with mere imputed conventions – through analyzing it by means of seeking the imputed object because it is a worldly convention that has the very meaning of being a falsity that is not found when the imputed object is sought.

For example, when the taste of tea is experienced by Sherab's tongue consciousness it is also perceived, that is, realized; due to this, later on Sherab thinks 'I tasted tea before." Lama Tsongkhapa says: "memory is produced thinking 'I also saw that before.'" This is also the way of worldly conventions in that worldly beings commonly say "I saw that before," "I heard that before," "I tasted that before," and so forth. These are not posited by worldly beings by means of thorough analysis. On the other hand, if worldly beings were to seek the imputed object it would not be found. This is because objects have the meaning of being falsities; that is, they are falsities.

Lama Tsongkhapa's *Illumination* (Tibetan text page 276) says:

> The autocommentary, after refuting self-cognizers and memory which are established by way of their own character substances, says:
>
> > Moreover, even from the point of view of worldly conventions, memory having a self-cognizer for a cause is just not possible.
>
> In regard to refuting self-cognizers not only ultimately but also conventionally [the autocommentary] says:
>
> > The way in which memory occurs without a self-cognizer will be taught.
>
> Although self-cognizers do not exist, the way in which memory is produced from experience is taught in this context.

Self-cognizers do not exist either ultimately or conventionally. The way in which memory is produced without a self-cognizer will be explained later on.

Lama Tsongkhapa's *Illumination* (Tibetan text page 276) says:

> CHITTAMATRINS: The memory thinking "I saw" is the memory of an object-possessor, whereas the memory thinking "That, such as blue, was seen" is the memory of an object. In addition, the thought "I remember the very thing I saw before" is a specific way of remembering. If that arises for memory, it is clear that the object-possessor, the consciousness, that earlier saw, for example, Maitreya, itself experienced itself because memory follows experience accordingly.

It is commonly said "I saw" and "I remember seeing." We also remember sounds heard yesterday, odors smelled yesterday, tastes tasted yesterday, and so forth. Even without a self-cognizer such memories are produced.

Lama Tsongkhapa's *Illumination* (Tibetan text page 276) says:

> PRASANGIKA MADHYAMIKAS: Although our system asserts this to be the way of remembering that appears to the world, given that the way of remembering is such, it is not that it arises by the force of a previous consciousness, that experienced an object, itself cognizing itself. Rather, the memory "I also saw Maitreya before" is produced by the force of a single object, that very one perceived by an earlier experience that is also perceived by memory. Hence, the convention such as "I remember I saw" is also asserted by us. Although this is asserted, in dependence on it understand that it also differs from the self-cognizer that is refuted.

The Prasangika Madhyamikas say that memory arises from the experience of an object. We remember only those things that we experienced before, for example, we remember "Yesterday I had a bad headache" due to the suffering feeling experienced yesterday. Or we remember "Yesterday I met an old friend" due to the pleasant feeling experienced yesterday.

Thursday afternoon, 9 November 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 277) says:

> It has already been explained before in many [texts] that the other systems posit experience and memory and the two objects of those times to be an established by way of their own character other. Due to this, although they indeed assert the two, experience and memory, to have the same object, and these two to be a single continuity, they are unable to posit them as that. It is to be understood, by observing one's own awareness, that, even though one says "That Maitreya," one

> conceives mere Maitreya without the conception thinking "The Maitreya, who is qualified by the time of when that was stated and the place where he was abiding at that time, was seen earlier."

'The other systems' are the Chittamatrins and Sautrantikas who posit experience and memory and the two objects of those times to be an established by way of their own character other. These two systems say that experience and memory have the same object and are the same continuity, however, according to the Prasangika Madhyamikas they cannot posit this.

"Even though one says "That Maitreya," one conceives mere Maitreya without the conception thinking 'The Maitreya, who is qualified by the time of when that was stated and the place where he was abiding at that time, was seen earlier.'" When one remembers "I saw Maitreya," this memory is not qualified by place and time. For example, when one remembers "I saw Cesare," the memory does not need to be qualified by time and place. Also when one remembers "I drank coffee," this memory is not qualified by the place in which one drank the coffee, the time when it was drunk, and so forth.

Lama Tsongkhapa's *Illumination* (Tibetan text page 277) says:

> 3B1C-2B3E-2A1B-2B2B-1B2B-2 The system explained in other texts

This section does not have a corresponding part in the autocommentary.

> There are two great systems regarding the way in which memory is produced without a self-cognizer. Of these, the system of glorious Shantideva is as his *Engaging in the Bodhisattva Deeds* says:
>
> > If self-cognizers do not exist
> > How is consciousness remembered?
>
> The systems of the former parties, [the Sautrantika and Chittamatra], were extensively explained before.

The two great systems regarding how memory is produced without a self-cognizer are those of Chandrakirti's *Supplement to the 'Middle Way'* and Shantideva's *Engaging in the Bodhisattva Deeds*. The system of glorious Shantideva is discussed in his *Engaging in the Bodhisattva Deeds* in the context of the question: "If self-cognizers do not exist how is consciousness remembered?"

> QUESTION: Since the response to both the former parties' consequence and objection is that there is no pervasion, how is memory produced in spite of self-cognizers not existing?

The former parties say that without self-cognizers there would not be memory. The Chittamatrins set out the consequence: "It follows that there does not arise subsequent memory because there is no experiencer that is a self-cognizer." When that consequence is flung, the response of the Prasangika Madhyamikas is that there is no pervasion. The Chittamatrins objection is: "There is a self-cognizer because there is the arisal of subsequent memory." The response to this objection is also that there is no pervasion. For this reason, someone asks: "Since the response to both the former parties' consequence and objection is that there is no pervasion, how is memory produced in spite of self-cognizers not existing?"

Lama Tsongkhapa's *Illumination* (Tibetan text page 277-8) says:

> PRASANGIKA MADHYAMIKAS' RESPONSE: When an object (a thing that is an apprehended object which is other than the consciousness that is the apprehender) is experienced by an awareness, there arises the memory of the object-possessor – a consciousness other than the consciousness that experienced the object.

OBJECTION: It is not reasonable that the memory of an object-possessor is produced from the experience of another object because there would be an absurd consequence.
PRASANGIKA MADHYAMIKAS' RESPONSE: There is no fault. When the memory of an object-possessor is produced from the experience of an object, it is not that there is memory through abandoning the consciousness, instead it is because there is the memory "That form was seen before" through the relationship of – that is, in relation to – the two, the object and object-possessor. For example, when the body [of a bear] is bitten by a rat in wintertime, even though the rat's poison enters [its body], the bite is experienced but the poison is not experienced. At a later time, when [the bear is awakened by] hearing the sound of thunder, even though there is the memory "When I was bitten, poison entered [my body]," the poison was not experienced at that earlier time.

- [The bear] being bitten by the rat is like an object experienced by an apprehender of blue.
- The entering of the poison at the same time as the bite is like the experience of the object-possessor which exists at the same time as the apprehension of the object.
- The object-possessor not experiencing itself at that time is like [the bear] not experiencing the poison at the time of the bite.
- The memory of the poison later on is like the memory of the experiencer of an object.
- By remembering the experience of an object, an object-possessor, even without itself experiencing itself, is remembered, like, by the force of remembering the bite itself, even though the poison that entered [the body] earlier on was not experienced, it is remembered.

The Prasangika Madhyamikas' answer to the question in *Engaging in the Bodhisattva Deeds* "If self-cognizers do not exist how is consciousness remembered?" is given as (see *Unique Tenets* page 168):

> *Memory occurs due to the relation with the experience of other,*
> *Like [remembering] the poison of a rat.*

When a hibernating bear is bitten by a rat, at that time it experiences the bite but does not experience the poison entering its body. Later, in springtime, when the bear is wakened by thunder, the effect of the poison that entered his body begins to be felt and the bear remembers that the poison came from the rat's bite. In this way, the bear is able to remember "When I was bitten, poison entered my body."

For example, having seen blue before, there arises a subsequent memory of the object, blue. When that object, blue, is remembered, the eye consciousness to which the blue appeared is also remembered. In short, by the force of remembering the object, the object-possessor is also remembered. Thus, the Prasangika Madhyamikas say that self-cognizers are not necessary for memory because just by remembering the object, the memory of its object-possessor arises. The eye consciousness apprehending blue experienced the object, blue, but it did not experience itself.

In short, when a hibernating bear is bitten by a rat, the bite is experienced but the poison entering its body is not experienced. Only later, when awakened by thunder, does the bear remember that the poison entered its body earlier on when it was bitten by the rat. The bear remembers that poison entered its body only when it begins to experience the result of that poison, pain in its body.

Lama Tsongkhapa's *Illumination* (Tibetan text page 278) says:

> This reasoning of the production of memory without a self-cognizer set forth by the lord of scholars seeming to be outstanding accords with how it is seen by those who explain [Shantideva's] *Engaging in the Bodhisattva Deeds*. It is not at all the assertion of the great conqueror's son that:
>
> > The response to the [consequence] "In general, it follows that a memory which is a later consciousness is not admissible because an earlier consciousness does not itself experience itself" is that the pervasion is not established. Therefore, the intention of *Engaging in the Bodhisattva Deeds* is not to refute self-cognizers conventionally.

Friday morning, 10 November 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 279) says:

3B1C-2B3E-2A1B-2B2B-1B2C Dispelling arguments regarding such refutation

1 Dispelling arguments regarding other direct valid cognizers and inferential cognizers
2 Dispelling arguments that there are other mental consciousnesses

These topics are not discussed in Chandrakirti's autocommentary. The Chittamatrins set out two arguments: (i) one regarding other direct valid cognizers and inferential cognizers and (ii) one regarding other mental consciousnesses. [Both these arguments are dispelled by the Prasangika Madhyamikas.]

3B1C-2B3E-2A1B-2B2B-1B2C-1 Dispelling arguments regarding other direct valid cognizers and inferential cognizers

OBJECTION: In our own system, all the consciousnesses that are apprehenders of blue and so forth are necessarily asserted to exist. In that case, just as was said to others [as follows] there will also be that fault for us:

What will know their existence?
It is not suitable to say "It exists even without being apprehended." [6.72cd]

If an apprehender of blue itself knows its existence, then self-cognizers must be asserted because a consciousness cognized by another object is also inadmissible.

The Chittamatrins say: "You Prasangika Madhyamikas say that an apprehender of blue exists and that this apprehender of blue knows itself to exist. Therefore, you accept self-cognizers." The Chittamatrins say that consciousness cognized by another object is inadmissible; that is, other-experiencers are inadmissible.

Lama Tsongkhapa's *Illumination* (Tibetan text page 279) says:

RESPONSE: Since this is very difficult point I will explain it. If I raise, that is, explain an example of how there is memory of objects and object-possessors, it will be easily realized. With regard to this, by remembering the object, the object-possessor is also remembered, therefore, no additional memory of an object-possessor being necessary, through establishing blue (the object of an apprehender of blue), the comprehender of blue is established.

Lama Tsongkhapa says that this being a difficult point, he will explain it. In short, by remembering the object, the object-possessor is also remembered, therefore, there is no need to posit an additional consciousness that is an experiencer of the object-possessor.

Lama Tsongkhapa's *Illumination* (Tibetan text page 279) says:

A way of establishing a comprehender of blue that is other than the way of establishing blue is not necessary. In addition, that blue is established through the dawning – due to blue – of an aspect similar to itself on an apprehender of blue is also similar to [that asserted in the] other system.

The object, blue, is said to dawn on or appear to an apprehender of blue. However, there is discussion regarding the statement "through the dawning – due to blue – of an aspect similar to itself on an apprehender of blue," in that some say that it has an aspect similar to itself and others than it is not so.

Here "other system" refers to the Chittamatrins; the Prasangika Madhyamikas say that the way in which blue dawns on an apprehender of blue is similar to what the Chittamatrins say.

Lama Tsongkhapa's *Illumination* (Tibetan text page 279) says:

> However, the difference is that when [the Chittamatrins] establish an apprehender of blue, it is established by means of a self-cognizer that selectively experiences the aspect of an apprehender free from dualistic appearance. Moreover, the assertions of the other system is similar with respect to all consciousnesses.

According to the Chittamatrins an apprehender of blue must have an experiencer which is a self-cognizer. They say that it is the same for all other consciousnesses.

Lama Tsongkhapa's *Illumination* (Tibetan text page 279) says:

> However, here, as is taught in the root texts and commentaries on the *Heart of the Middle Way* and the *Two Truths*, [consciousnesses] that select the aspect of an apprehender are asserted to not be possible. Therefore, [an apprehender of blue] is not established by the self-cognizer that experiences it; instead, an apprehender of blue is established by establishing blue. For example, it is like by remembering an object, the object-possessor is remembered; it is not like the memory that arises by the force of a previous object-possessor itself experiencing itself as others assert.

The Sautrantika Svatantrika Madhyamikas' point of view , which is set forth in the *Heart of the Middle Way* and the *Two Truths*, is that consciousnesses that select the aspect of an apprehender are impossible. The *Heart of the Middle Way* is by Bhavaviveka and *Two Truths* is by Jnanagarbha (His Holiness the XIV Dalai Lama often says that the *Heart of the Middle Way* is an essential text in terms of practice, but that the lineage of the transmission of this text is not intact). These two masters say that even though self-cognizers do not exist, there is memory of an object-possessor because by establishing blue the apprehender of blue is also established.

Lama Tsongkhapa's *Illumination* (Tibetan text page 280) says:

> The purpose of saying so is clearly taught in *Clear Words*:
>
> > It is because the enumeration of valid cognizers is from the point of view of other, that is, objects of comprehension, and because the respective entity of valid cognizers that are found to have their own entity is posited through the mere taking of the aspect of an object of comprehension.

There are two types of objects of comprehension: the manifest and hidden. Just as there are two types of objects of comprehension so too are there two types of valid cognizers: direct valid cognizers and inferential valid cognizers. This is mentioned in Dharmakirti's *Commentary on [Dignaga's] Compendium of Valid Cognition* saying: "Due to there being two objects of comprehension, there are two valid cognizers. They are those having the ability to perform a function and those not having that ability." The latter phrase refers to the objects of comprehension of valid cognizers. For the Sautrantikas, things that have the ability to perform a function are ultimate truths, whereas things that lack the ability to perform a function are conventional truths. Thus, they say that ultimate truths are the objects of direct valid cognizers, whereas conventional truths are the objects of inferential valid cognizers. Another interpretation is that "those having the ability to perform a function and those not having that ability" can be taken to refer to specifically characterized phenomena and generally characterized phenomena, or they can be taken to refer to manifest phenomena and hidden phenomena.

Lama Tsongkhapa's *Illumination* (Tibetan text page 280) says:

> The meaning of these [statements] is:
> 1. because they are posited from the point of view of valid cognizers being definite as two and objects of comprehension being definite as two and
> 2. [because of] positing the existence of the respective entities of valid cognizers which are comprehenders from the point of view of an aspect of an object of comprehension dawning on a valid cognizer.
>
> Stating [in *Clear Words*] "through the mere," [indicates], according to the assertions of the Chittamatrins and Sautrantikas, that an object of comprehension is established by a valid cognizer taking an aspect just like, that is, similar to, the object of comprehension. Hence, apart from the way of establishing valid cognizers [mentioned] above, the refutation of the respective entity of a valid cognizer being established by a self-cognizer which selectively experiences the aspect of an apprehender free from dualistic appearance is the meaning of [a valid cognizer] being established by merely establishing its object of comprehension.

The Sautrantikas and Chittamatrins say that consciousness is established by a consciousness that selects the aspect of an apprehender, whereas the Madhyamikas say that a consciousness is established by merely establishing its object.

QUESTIONS AND ANSWERS

Student: In the transcript of week 23, Geshe-la said that for Chittamatra, the appearances of form and so forth to a dream consciousness are imputed existents. If those appearances are existent imputational natures (*kun btags*), what are the other-powered phenomena (*gzhan dbang*) they are imputed on?
Geshe Jampa Gyatso: In the Chittamatra system, if it is an imputational nature, or imputational factor (*kun btags*), it is pervaded by having a basis of imputation that is an other-powered phenomenon. Bases of imputation are of two kinds: a mere basis of imputation and a final basis of imputation. A mere basis of imputation is not pervaded by being an other-powered phenomenon, whereas a final basis of imputation is pervaded by being an other-powered phenomenon. Imputational factors (imputational natures) are also of two kinds: existent imputational factors and non-existent imputational factors.

Since it was said that the form and so forth that appear to a dream consciousness are imputed existents, they need to rely on something else in order to appear in the perspective of a consciousness. On what do they need to rely in order to appear? For example, if someone dreamt last night about being in a nice park, when he awakes he has the appearance of that nice park and so forth that were seen in the dream. The existence of the appearance of the nice park in a dream is posited in dependence on a consciousness of the waking state. Therefore, when the consciousness of the waking state posits the existence of the appearance in a dream it does so in dependence on a memory which is a conceptual consciousness. That conception imputes "I saw a nice park." What is the basis of imputation? It is the appearance to a sleeping consciousness, an other-powered phenomenon.

Student: Tsongkhapa states that sense consciousnesses do not exist in a dream. Then how can it be explained that one can be awakened while dreaming by sounds, smells, and so forth?
Geshe Jampa Gyatso: Lama Tsongkhapa says that sense consciousnesses are not manifest while dreaming, whereas Panchen Sonam Drakpa says that there are no sense consciousnesses when one is in deep sleep. If sense consciousnesses exist when dreaming but are not manifest, then, when there is a loud sound, the person is awakened due to the activation of a sense consciousness. There are no

sense consciousnesses in dream in the sense that they are involuntarily withdrawn. In fact, the definition of sleep is: the involuntary withdrawing of the sense consciousnesses.

Student: Chittamatra posits that there are no objects that are a different entity from the mind. However, they also assert separate mental continuums that are different entities from each other. Will Geshe-la please address this seeming contradiction? How would Chittamatra assert the existence of different mind-bases-of-all that are different entities from one's own continuum?
Geshe Jampa Gyatso: There is no contradiction because whatever appears is only due to the activation of latencies deposited on the mind-basis-of-all. When Sonam appears to Sherab and a table appears to Sherab there is no difference in terms of how they come to appear to the mind, that is, they appear due to the activation of latencies, but there is a difference in terms of the object. The Chittamatrins say that when a hundred people look at Sherab each of the hundred people have an uncommon appearance of Sherab due to the activation of uncommon latencies.

END

Monday afternoon, 13 November 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 280) says:

> This is the intention of Arya [Nagarjuna's] statement [in his *Refutation of Objections*]:
>
> > If valid cognizers are established from themselves
> > Without depending on objects of comprehension,
> > Your valid cognizer would be established.
> > Here they would be thoroughly established without depending on other.
>
> If, without it being enough that valid cognizers are established by merely establishing their object of comprehension, valid cognizers are established from themselves – that is, from valid cognizers – as others assert, then valid cognizers would be established without depending on objects of comprehension. When that is asserted, through refuting the statement "Things would be thoroughly established without depending on other, that is, causes and conditions," it is indirectly taught that valid cognizers are established by merely establishing their objects of comprehension.

This passage by Arya Nagarjuna comes from his text *Refutation of Objections*. Since valid cognizers are established by merely establishing their objects of comprehension, there is no need for a valid cognizer to establish a valid cognizer due to which there is no need for a self-cognizer. This statement also indicates that objects of comprehension are posited in dependence on valid cognizers.

Lama Tsongkhapa's *Illumination* (Tibetan text page 280-1) says:

> In that case, an apprehender of blue is not established by a self-cognizer as it is in other systems; instead, it is indicated to be established by a sense direct valid cognizer because its existence is realized through the very establishment of the object of comprehension by an apprehender of blue. Therefore, all valid cognizers whatsoever are established by establishing their objects of comprehension.

According to Acharya Bhavaviveka, the founder of the Sautrantika Svatantrika Madhyamika system, are valid cognizers established by merely establishing their objects of comprehension or are they established in another way? According to the Sautrantika Svatantrika Madhyamikas all existents are inherently existent. Is an apprehender of blue established merely by establishing blue, its object of comprehension? In the Prasangika Madhyamika system is a direct valid cognizer that is an apprehender of blue established merely by establishing blue? Does an apprehender of blue itself realize itself? According to the Prasangika Madhyamikas self-cognizers do not exist, but do they accept that consciousness itself cognizes itself? Think about it.

Lama Tsongkhapa's *Illumination* (Tibetan text page 281) says:

> 3B1C-2B3E-2A1B-2B2B-1B2C-2 Dispelling arguments that there are other mental consciousnesses

There is no corresponding discussion of this section in the autocommentary.

> OBJECTION: Well then, this system posits even reflections, echoes, and so forth, as was explained before, to be form spheres, sound spheres, and so forth. *Clear Words* also says:
>
> > Two moons and so forth are not direct [objects] in relation to consciousnesses that do not have cataracts, but are direct [objects] solely in relation to those that have cataracts and so forth.
>
> This system indicates that the term "direct" with respect to objects such as forms, sounds, and so forth is an actual name, whereas with respect to the object-possessors that are their apprehenders

> it is an imputed name. In this context, although there is a difference regarding the appearance of two moons and so forth being or not being direct objects of comprehension in relation to ordinary worldly beings, for our own system the appearance of two moons and so forth are also asserted to be manifest phenomena, direct objects of comprehension. Therefore, even though in relation to ordinary worldly beings there are [both] mistaken and unmistaken sense consciousnesses, by means of establishing their respective objects of comprehension, the object-possessors are established.

Is a reflection a form sphere, an echo a sound sphere, and so forth? "This system" refers to the Prasangika Madhyamika system which asserts that a reflection is a form sphere, an echo is a sound sphere, and so forth, as was explained before. Are the horse and elephant that appear in a dream form spheres? They are forms that are phenomena spheres because they are the appearance of form appearing to a mental consciousness from among the two, sense consciousnesses and mental consciousnesses.

"Two moons and so forth are not direct [objects] in relation to consciousnesses that do not have cataracts" means that when one moon appears as two moons it is due to the defect of cataracts. What are cataracts?

Student: The convex lens of the eye which is clear becomes opaque due to age. Due to this there is the loss of the ability to focus on an object and the eyesight becomes unclear.

Geshe Jampa Gyatso: Does one moons appear as two?

Student: It can happen that things appear as double because the changes that occur in one eye do not necessarily occur in the other.

Two moons and so forth "are direct [objects] solely in relation to those that have cataracts and so forth." The appearance of two moons is a direct object only for those who have cataracts, whereas it is not a direct object for those who do not cataracts in that they do not have this appearance. The Tibetan word "*mngon sum,*" translated here as direct, is defined as: that which directly appears. According to the lower schools *mgnon sum* necessarily refers to a consciousness, but in the Prasangika Madhyamika system it can also refer to a direct object.

The term "direct" is an actual name when applied to forms, sounds, odors and so forth, whereas it is an imputed name when applied to their apprehenders. What is an actual name and what is an imputed name? If it is an actual name affixed to that phenomenon is it pervaded by being the actual name of that phenomenon? The answer is that there is no pervasion in that if it is an actual name affixed to that phenomenon it is not pervaded by being the actual name of that phenomenon. For example, the name "thing" is affixed to a table as an actual name but it is not the actual name of the table. Why? Because by hearing the name "thing" there is no pervasion that one comes to understand table. In other words, when one hears the name "thing" the appearance of table does not arise in the mind. However, the name "thing" is affixed to the table as an actual name even though it is not its actual name. Why is that? The name "thing" is affixed to the table as an actual name because the table is "that which is able to perform a function."

If it is an actual name affixed to a phenomenon it is not pervaded by being the actual name of that phenomenon. For example, the name "definition" is the actual name of a definition but it is not affixed to it as an actual name. Why? Because a definition is not a definition. Why? Because it is a definiendum. Can you posit the definition of definition?

Student: That which fulfills the three qualities of substantial existence.

Geshe Jampa Gyatso: That is the definition of definition in the lower schools, whereas the Prasangika Madhyamikas would argue with "the three qualities of substantial existence" because they do not posit substantial existence saying that if there were substantial existence there would be true existence. There are other illustrations of the fact that if it is an actual name of that phenomena it is not pervaded by being affixed to that phenomenon as an actual name. For example, the name "Sherab"

(wisdom) is the actual name of Sherab (the translator) but it is not affixed to him as an actual name because he is not Sherab (wisdom) because he is not a consciousness, he is a person.

The term "direct" is an imputed name with respect to object-possessors; for example, an eye consciousness apprehending form, an ear consciousness apprehending sound, and so forth. Why is the term "direct" only an imputed name with respect to consciousnesses? It is because apprehenders are not directly perceived by the sense consciousnesses of an ordinary being. On the other hand, forms, sounds, and so forth are "direct" because they can be directly perceived by the sense consciousnesses of ordinary beings.

If it is an imputed name of that phenomenon is it pervaded by being affixed to that phenomenon as an imputed name? What is the definition of an imputed name? Think about it.

Lama Tsongkhapa says: "for our own system the appearance of two moons and so forth are also asserted to be manifest phenomena, direct objects of comprehension." From among manifest phenomena and hidden phenomena, the Prasangika Madhyamikas classify the appearance of two moons as a manifest phenomenon. The appearance of two moons is or is not a direct object depending on whether or not an ordinary being has cataracts or not. Lama Tsongkhapa says: "there is a difference regarding the appearance of two moons and so forth being or not being direct objects of comprehension in relation to ordinary worldly beings."

The Prasangika Madhyamikas say: "Therefore, even though in relation to ordinary worldly beings there are [both] mistaken and unmistaken sense consciousnesses, by means of establishing their respective objects of comprehension, the object-possessors are established." All consciousnesses realize or establish their respective objects of comprehension. Therefore, regardless of whether or not a consciousness is mistaken it realizes its object of comprehension; hence, by means of establishing its object of comprehension, the object-possessor is established. In other words, all consciousnesses realize their respective appearances. For this reason, in the Prasangika Madhyamika system if it is a consciousness it is pervaded by being a valid cognizer with respect to its appearance.

The objection continues in Lama Tsongkhapa's *Illumination* (Tibetan text page 281) saying:

> However, for those who do not assert self-cognizers, a mental consciousness of the time of the base that is mistaken with respect to its appearing object and referent object is not established to exist because the object-possessor is not established through comprehending its respective object of comprehension.

In this way the Chittamatrins say: "If there are no self-cognizers, how do you Prasangika Madhyamikas establish a mental consciousness of the time of the base that is mistaken with respect to its appearing object and referent object?"

Lama Tsongkhapa's *Illumination* (Tibetan text page 281) says:

> RESPONSE: The explanation of this is that, since this system does not assert a consciousness that is a different entity from the collection of six consciousnesses, there does not exist other than the two:
> 1. valid cognizers that are directly based on the physical sense powers and
> 2. valid cognizers that are based on a mere mental sense power.
>
> Moreover, valid cognizers are taught in *Clear Words* saying:
>
> > The explanation of the four – the two, direct and inferential [valid cognizers], valid cognizers of scriptural authority, and valid cognizers that fully comprehend or that comprehend through an example – is based on the root text and commentary of [Nagarjuna's] *Refutation of Objections*. The last two valid cognizers are included in inferential cognizers. The commentary on [Aryadeva's] *Four Hundred Stanzas* also

says:

> All things are not comprehended by a directly perceiving consciousness, instead they are conceived by an inferential cognizer.

The Prasangika Madhyamikas do not assert a consciousness that is a different entity from the collection of six consciousnesses. On the other hand, the Chittamatrins posit eight consciousnesses and others posit nine consciousnesses. The nine consciousnesses are the six, the eye through mental consciousness, plus the mind-basis-of-all, afflicted mentality, and a stainless consciousness. The Prasangika Madhyamikas do not posit a consciousness other than the six. The Prasangika Madhyamikas posit two types of valid cognizers:

1. valid cognizers that are directly based on a physical sense power and
2. valid cognizers that are based on a mere mental sense power.

In *Clear Words* four valid cognizers are explained based on Nagarjuna's *Refutation of Objections*. The four valid cognizers are: "the two, direct and inferential [valid cognizers], valid cognizers of scriptural authority, and valid cognizers that fully comprehend or that comprehend through an example." However, in reality there are only two types of valid cognizers: (i) direct valid cognizers and (ii) inferential valid cognizers because "valid cognizers of scriptural authority, and valid cognizers that fully comprehend or that comprehend through an example" are included in inferential valid cognizers. "Valid cognizers of scriptural authority" are inferential valid cognizers through belief. For example, the citation "from generosity, wealth," as the subject, is incontrovertible with respect to the main object taught because it is a scriptural citation certified as pure by way of the three-fold analysis. "Valid cognizers that fully comprehend or that comprehend through an example" are, for example: the black mass in front, as the subject, is an ox because it is a composite of a hump, dewlap, and so forth; for example, like a bamen. Thus, one comprehends a bamen (a type of cattle) in dependence on an ox.

In conclusion, valid cognizers are either direct valid cognizers or inferential valid cognizers. All four Buddhist schools posit these two types of valid cognizers. Inferential valid cognizers are further divided into: inference through the power of the fact, inference through belief, and inference through renown. The lower schools posit four types of direct valid cognizers, whereas the Prasangika Madhyamikas posit only three: (i) sense direct valid cognizers, (ii) mental direct valid cognizers, and (iii) yogic direct valid cognizers. When four direct valid cognizers are posited, the fourth is a self-cognizing direct valid cognizer. What is a yogic direct valid cognizer? Is the exalted wisdom directly realizing all phenomena a yogic direct valid cognizer? Think about it. In the Prasangika Madhyamika system if it is a yogic direct valid cognizer it is not pervaded by being unmistaken and free from conception.

Tuesday morning, 14 November 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 282) says:
(see Unique Tenets page 251)

> With respect to direct valid cognizers, from among the four explained in other systems direct self-cognizers are refuted, whereas mental direct perceivers are also not asserted as they are explained in [the texts on] valid cognition. [Chandrakirti's] commentary on [Aryadeva's] *Four Hundred Stanzas*, when explaining the meaning of the passage in the *Treasury of Knowledge* that the five, forms and so forth, are each known by sense and mental consciousnesses, says:
>
> > The two consciousnesses do not know the same object. The first directly perceives the aspect of an object, that is, it is what is initially produced. The second does not know it directly, but when, by the force of a sense consciousness, it conceives and is produced as such it is referred to saying "It too knows its object."

> It is said that the first, a sense consciousness, directly cognizes its object, such as a form and so forth, whereas a mental consciousness cognizes that by the force of a sense consciousness; it does not directly cognize it as does a sense consciousness. It is also said that [that mental consciousness] is memory.

In the Prasangika Madhyamika system there are only three direct valid cognizers and not four as in the other systems; this is because they refute self-cognizing direct valid cognizers. Mental direct perceivers are also not asserted by them in the same way as they are asserted by the texts on valid cognition. A mental direct valid cognizer does not cognize form in the same way that an eye consciousness does.

There are five types of mental direct perceivers: mental direct perceivers apprehending a form, mental direct perceivers apprehending a sound, mental direct perceivers apprehending an odor, mental direct perceivers apprehending a taste, and mental direct perceivers apprehending a tangible object. The lower school assert mental direct perceivers to be free from conceptuality and unmistaken. However, according to *Illumination* it seems that mental direct perceivers are also conceptual in that it says: "a mental consciousness cognizes that by the force of a sense consciousness; it does not directly cognize it as does a sense consciousness. It is also said that [that mental consciousness] is memory."

The lower schools say that there is both a sense direct valid cognizer apprehending form and a mental direct valid cognizer apprehending form. For the lower schools such a mental direct valid cognizer is necessarily free from conception. This is not necessarily the case in the Prasangika Madhyamika system. The mental consciousness that arises after a sense consciousness also remembers the object of that sense consciousness.

"The two consciousnesses do not know the same object." This can be understood to mean either that a mental direct perceiver and a sense direct perceiver do not know the same object or that two sense direct perceivers do not know the same object. If it is the first then the following consequence can be flung: "It follows that a mental direct perceiver that comes after an eye consciousness apprehending form does not apprehend form."

The commentary on Aryadeva's *Four Hundred Stanzas* says: "The first directly perceives the aspect of an object, that is, it is what is initially produced. The second does not know it directly, but when, by the force of a sense consciousness, it conceives and is produced as such it is referred to saying 'It too knows its object.'" The first is a sense consciousness, whereas the second is a mental consciousness. A mental consciousness does not know a form directly by its own force as does an eye consciousness; it only knows a form by the force of the eye consciousness that apprehended it previously. In Dharmakirti's *Commentary on [Dignaga's] Compendium of Valid Cognition* it says: "One does not know two because the objects of sense consciousnesses are determined." "One" is, for example, an eye consciousness which does not know two, "two" being, for example, a form sphere and a sound sphere.

Lama Tsongkhapa's *Illumination* (Tibetan text page 282) says:

> [Chandrakirti's] commentary on [Aryadeva's] *Four Hundred Stanzas* also says:
>
> > [Mental consciousness] is also not a type of experience as are feelings and so forth, nor is it that which perceives forms, sounds, and so forth by means of the sense powers.
>
> Therefore, two are taught with respect to direct comprehension:
> 1. the perceiving of forms and so forth by sense consciousnesses, for example, and
> 2. the perceiving of the internal, such as feelings of happiness, suffering, and so forth, by experience.

> The latter of the two must also be asserted to exist from the time of the base. Because direct valid cognizers are also not explained here to be more than four and, since self-cognizing direct perceivers are not suitable to be posited as valid cognizers, they are posited as yogic direct perceivers, sense direct perceivers, and mental direct perceivers.

When a mental consciousness comprehends a form it does not comprehend it in the way that a feeling of happiness and so forth are experienced. It also does not comprehend a form in the way that an eye consciousness perceives form. What is the definition of feeling? How does a feeling experience suffering? Are the observed object and experience of feeling the same or different?
Student: The observed object of feeling and the experience of feeling are different. The observed object of a feeling is, for example, the tangible object hot or cold, whereas the experience of feeling is unpleasantness or pleasure.
Student 2: It seems that they are different because a feeling of pleasure or suffering arises with respect to an object, whether an object of the senses or a mental image.
Geshe Jampa Gyatso: There is a lot of debate about this subject. However, Lama Tsongkhapa's *Illumination* (Tibetan text page 244) previously said: "Distinguishing between the observed object and experience is, except for a few cases, not necessary in most such cases." Thus, there are cases in which it is necessary to differentiate the observed object and experience and others where it is not necessary.

How are forms and so forth perceived by a sense consciousness? Does an eye consciousness have the appearance of form or does the eye consciousness experience form? I think that the appearance of form directly appears to an eye consciousness.

Is a feeling of happiness that which becomes the entity of happiness and a feeling of suffering that which becomes the entity of suffering? In one text on *Awarenesses and Knowers* it says: "If it is suffering or happiness it is necessarily feeling." Thus, some say that happiness and suffering are necessarily feelings. This topic is discussed in relation to the three types of suffering.

Lama Tsongkhapa says: "The latter of the two must also be asserted to exist from the time of the base." This would seem to imply that an eye consciousness perceiving forms does not exist from the time of the base. What is "the time of the base"? It is related to the three: base, path and result. However, this is a subject of debate, for example: "Does the time of the base refer to conception in the mother's womb?"

Lama Tsongkhapa says: "Because direct valid cognizers are also not explained here to be more than four and, since self-cognizing direct perceivers are not suitable to be posited as valid cognizers, they are posited as yogic direct perceivers, sense direct perceivers, and mental direct perceivers." "Here" refers to the Madhyamika scriptures in which direct valid cognizers are not explained to be more than four. It is not suitable to posit a self-cognizer direct perceiver as a valid cognizer, therefore, there are three direct perceivers: yogic direct perceivers, sense direct perceivers, and mental direct perceivers. These three can also be valid direct perceivers. For the lower schools a yogic direct perceiver can either be a valid cognizer or a non-valid cognizer, whereas for the Prasangika Madhyamikas if it is a yogic direct perceiver it is pervaded by being a yogic direct valid cognizer. This is because for the Prasangika Madhyamikas a valid cognizer is that which realizes its main object, whereas for the lower schools in order for it to be a valid cognizer it must be new.

Is a sense direct perceiver pervaded by being a sense direct valid cognizer? Is a mental direct perceiver pervaded by being mental direct valid cognizer? Is there not a sense direct perceiver that is an awarenesses to which an object appears but is not ascertained? There is because the texts on awarenesses and knowers say that when the mind is focused on an attractive form the ear consciousness does not ascertain sound but this ear consciousness is still a sense direct perceiver because it is not a wrong consciousness. Is there not a wrong eye consciousness? There is, for example,

an eye consciousness perceiving a white conch to be yellow, an eye consciousness perceiving a white snow mountain to be blue, and so forth.

Lama Tsongkhapa's *Illumination* (Tibetan text page) says:

> Even though mental direct valid cognizers do not accord with the propounders of valid cognition, [the Sautrantikas and Chittamatrins], it is not that mental direct valid cognizers are not asserted.

There are mental direct perceivers that are mental direct valid cognizers but the way in which they are asserted by the Prasangika Madhyamikas differs from how they are asserted by the propounders of valid cognition, the Sautrantikas and Chittamatrins. What is the difference between a mental direct valid cognizer posited by the Sautrantika and Chittamatra systems and that posited by the Prasangika Madhyamika system? What is the definition of a mental direct perceiver?
Student: The Sautrantikas define a mental direct perceiver as: 1) that which is generated in dependence on the mental sense power that is its own uncommon empowering condition and 2) is a consciousness that is an other-knower which is free from conceptuality and non-mistaken.

The definition of a mental direct perceiver in the Prasangika Madhyamika system is given in Jedzun Chogyi Gyeltshen's *General Meaning* (Tibetan text page 331):

> The definition of a mental direct perceiver is: that which is a direct valid cognizer and a cognizer that is directly produced in dependence on a mental sense power, its own uncommon empowering condition, and which is incontrovertible with respect to the object of comprehension that becomes its respective object of the mode of apprehension.
> When divided there are two:
>
> 1. a conceptual mental direct perceiver and
>
> 2. a non-conceptual mental direct perceiver.
>
> Illustrations of the first, [a conceptual mental direct perceiver], are:
>
> - the three, happiness, suffering, and equanimity feelings, that arise in the retinue of a conception that is a mental consciousness in the continuum of a person who has not realized either coarse or subtle selflessness
>
> - and ascertaining consciousness that ascertains a common object, blue, which is produced after a sense direct perceiver apprehending blue.
>
> An illustration of the second is:
>
> - the clairvoyance knowing others' minds.

In the lower schools a mental direct perceiver is necessarily free from conceptuality. In fact, the definition of a mental direct perceiver according to the lower schools is: 1) that which is generated in dependence on the mental sense power that is its own uncommon empowering condition and 2) is a consciousness that is free from conceptuality and non-mistaken. A mental direct valid cognizer is defined as: 1) that which is generated in dependence on the mental sense power that is its own uncommon empowering condition and 2) is a consciousness that is free from conceptuality and a new and incontrovertible knower.

Thus, when the *Illumination* says "Even though mental direct valid cognizers do not accord with the propounders of valid cognition," this indicates that the way in which the Prasangika Madhyamikas posit mental direct valid cognizers differs from the way in which they are posited by the lower schools.

Lama Tsongkhapa's *Illumination* (Tibetan text page 283) says:

> Hence, since "feeling" is a word that is related to agent, activity, and object, there are three: "Feelings due to the person, feelings due to activity, and what is felt." The second of these is a valid cognizer, that is, it is the mental factor feeling. The third is an object of comprehension, that is, happiness, suffering, and equanimity. Moreover, this is from the point of view of a mental consciousness. The three feelings of the sense consciousnesses perceive forms, sounds, and so forth. The way in which they are established is as was explained before.

Feeling is related to "agent, activity, and object." The second, feeling related to activity, is the valid cognizer which is the mental factor feeling. The third, the object, is an object of comprehension: happiness, suffering, and equanimity. There are feelings that arise in the retinue of a sense consciousness and those that arise in the retinue of a mental consciousness. The feelings that arise in the retinue of a mental consciousness have happiness, suffering, and equanimity as their objects of comprehension, whereas the feelings that arise in the retinue of a sense consciousness have forms, sounds, and so forth as their objects of comprehension. Lama Tsongkhapa says: "The three feelings of the sense consciousnesses perceive forms, sounds, and so forth." The objects of comprehension of the feelings that arise in the retinue of a sense consciousness are forms, sounds, and so forth. More specifically the feelings that arise in the retinue of an eye consciousness perceive a form sphere, the feelings that arise in the retinue of an ear consciousness perceive a sound sphere, and so forth.

Lama Tsongkhapa says: "The way in which they are established is as was explained before." It can be asked: "When was this established before?" Perhaps it refers to the previous passage in *Illumination*:

> [Chandrakirti's] commentary on [Aryadeva's] *Four Hundred Stanzas*, when explaining the meaning of the passage in the *Treasury of Knowledge* that the five, forms and so forth, are each known by sense and mental consciousnesses, says:
>
> > The two consciousnesses do not know the same object. The first directly perceives the aspect of an object, that is, it is what is initially produced. The second does not know it directly, but when, by the force of a sense consciousness, it conceives and is produced as such it is referred to saying "It too knows its object."

What is perceived by, or what appears to, a feeling that arises in the retinue of an eye consciousness apprehending a form? A form sphere appears to that feeling. Why is that? That form sphere appears to its principal object-possessor, an eye consciousness. Since it appears to its main object-possessor, it also appears to the feeling that bears five similarities with that main object-possessor. Thus, whatever appears to an eye consciousness also appears to the five omnipresent mental factors in its retinue. The five similarities are base, observed object, aspect, substance, and time.

Tuesday afternoon, 14 November 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 283) says:

> QUESTION: When the feelings that are mental consciousness perceive manifest phenomena, such as happiness, suffering, and so forth, do they not become self-cognizers?

RESPONSE: There is not this fault:

- because the self-cognizers that are refuted are all inwardly-directed consciousnesses that select the aspect of an apprehender for which the appearance of what is cognized and what cognizes as different has vanished, and
- because here 'a particular experience' is taught in sutra to be the definition of feeling; whereas also among worldly conventions it is said, "[I] experience happiness and suffering."

Because what is experienced and what experiences appear as different, they are not the same as the self-cognizer of the previous party, [the Chittamatrins]. Therefore, through establishing experience, happiness and so forth, feelings are established.

The question here is based on the thought that when feelings perceive happiness, suffering, and so forth they are self-cognizers. The Prasangika Madhyamikas say that there is not this fault for the two reasons given above. Do feelings experience themselves? Do feelings perceive themselves? If someone were to say that they do perceive themselves, then we would say: "Do those two feelings not exist as what cognizes and what is cognized?" If feeling experiences feeling does it follow that the experiencer and what is experienced are one? In sutra the definition of feeling is given as 'experience.' When feeling experiences happiness is that the feeling of happiness? For example, if you are pricked with a needle and experience pain is that experience of pain a feeling? When one drinks good tea is that experience a feeling? There would be a pleasant feeling. When there is that pleasant feeling what is the object being experienced, the tea or something else? In the case of being pricked with a needle is the needle the object experienced and the feeling the experiencer? When one is pricked with a needle there is suffering. It is clear that the needle itself is not the pain. Then, what is it? Is it the pricking itself? For example, when one goes on a picnic there is a pleasant feeling. The object experienced is different from the pleasant feeling.

According to the Chittamatrins, what is cognized and what cognizes do not appear as different to a self-cognizer. On the other hand, in the case of feeling, what is experienced and what experiences do appear as different.

Lama Tsongkhapa's *Illumination* (Tibetan text page 283) says:

> When there is the appearance of form that is a phenomenon sphere, such as the clear appearance of skeletons in the perspective of a mental consciousness, through the dawning of the aspect of those [skeletons] on the mental consciousness, those [skeletons] are established by that [mental consciousness]. When [that happens], the establishment of the consciousness that is their apprehender is as above. Those objects are a different entity from the mental consciousness.

The mental consciousness to which there is the clear appearance of skeletons and the object, the skeletons, are different entities. When there is the clear appearance of skeletons to the mental consciousness, the mental consciousness apprehends the skeletons. Lama Tsongkhapa says: "the establishment of the consciousness that is their apprehender is as above." When debating this subject, someone can cite the passage "through the dawning of the aspect of those [skeletons] on the mental consciousness, those [skeletons] are established by that [mental consciousness]. When [that happens], the establishment of the consciousness that is their apprehender is as above" and then ask what "as above" refers to. Perhaps it refers to the previous verse in the *Supplement* that says:

> *Those yogis who, through the instructions of a lama,*
> *See the ground filled with skeletons,*
> *Also see all three as without production*
> *Because it is indicated to be wrong mental attention.* [6.69]

Lama Tsongkhapa's *Illumination* (Tibetan text page 283) says:

> The way of establishing consciousnesses that are mental consciousnesses such as the two conceptions of a self is to be understood from [the following] passage in *Clear Words*:
>
> > If either the basis that characterizes, the specifically characterized, or the generally characterized exist in the world, all of them would be that which is directly observed (*mngon sum du dmigs par bya ba*); therefore, they would not be hidden [phenomena]. Therefore, they, along with the consciousnesses that are their object-possessors, are presented to be direct (*mngon sum*).

How are the two conceptions of a self, the self of persons and the self of phenomena, established? They are established because of being that which is directly observed. What are the basis that characterizes, the specifically characterized, and the generally characterized? On the basis 'pot' what is asserted to be a specifically characterized phenomenon and what is asserted to be a generally characterized phenomenon? The specifically characterized and the generally characterized can be understood in the context of the four close placement of mindfulness to be the specific characteristics of form and the general characteristics of form. The specific characteristics of form are posited to be those that are uncommon or exclusive attributes of form, whereas the general characteristics of form are posited to be those attributes that are common to other phenomena. Another possibility is to understand specifically characterized phenomenon and generally characterized phenomenon as do the lower schools who say that all phenomena are included in these two.

Clear Words says: "If either the basis that characterizes, the specifically characterized, or the generally characterized exist in the world, all of them would be that which is directly observed (*mngon sum du dmigs par bya ba*); therefore, they would not be hidden [phenomena]." That which is directly observed is a manifest phenomenon and not a hidden phenomenon. If everything that exists in the world is that which is directly observed, it follows that there are no hidden phenomena and that all phenomena are manifest phenomena. If there are no hidden phenomena it follows that there is nothing to be realized in dependence on a sign or reason, whereby it would follow that there are no inferential valid cognizers and that there are only direct valid cognizers. If only one type of valid cognizer is posited this would be similar to the Charvaka system in that one text says: "If you accept valid cognizers as being only one, direct valid cognizers, you would enter the Charvaka system." This system only accepts that which is directly observed.

Once in Sarnath there was a meeting of Indian philosophers, some of whom belonged to the Charvaka system, some to the Samkhya, some to the Vaishashika, some to the Nigranthas, and so forth, who debated amongst themselves in Sanskrit. The Charvakas said that they accept only that which is directly observed. To this, someone else said: "Then you do not accept the hairs on the back of your head!" The Charvaka said: "I accept them because I can touch them with my hand." The other said: "Do you accept your own heart?" The Charvaka responded that he did, and the other asked: "How can you accept it if you cannot see or touch it?!"

Lama Tsongkhapa's *Illumination* (Tibetan text page 284) says:

> In regard to this, since the two – (i) the basis that characterizes, or illustration (*mtshan gzhi*), and (ii) what is characterized, or definiendum (*mtshon bya*) – are equivalent terms [in Sanskrit], some translators translate it as 'basis that characterizes' and some as 'what is characterized.' Then, [this text] says:
>
> > The explanation that

1. all definitions that act to characterize and
2. the bases of characterization of what are characterized

> are that which is directly observed is in the context of identifying direct valid cognizers when valid cognizers are taken to be four [in number]. Because of that, they are not indicated as that which is directly observed by the omniscient. Following from that, an object-possessor of a hidden phenomenon – a consciousness produced from a reason that is unmistaken with respect to the probandum – is an inferential cognizer.

> By saying this it is also not taught that all specifically and generally [characterized phenomena] are manifest phenomena and not hidden phenomena. Hence, there arises the appearance of these two – [specifically and generally characterized phenomena] – also to the consciousnesses that observe either of the two, specifically or generally [characterized phenomena]. That appearance itself is the direct object of that consciousness. In positing both that [appearance] and the consciousnesses which is its object-possessor as direct (*mngon sum*), it is asserted that the term 'direct' is actually applied to the object and imputedly applied to the object-possessor.

In short, the term 'direct' is an actual name with respect to objects, forms and so forth, and an imputed name with respect to object-possessors.

Lama Tsongkhapa says: "the two – (i) the basis that characterizes, or illustration (*mtshan gzhi*), and (ii) what is characterized, or definiendum (*mtshon bya*) – are equivalent terms [in Sanskrit]." This means that in Sanskrit there is a single world, this being *lakshya*, for the two Tibetan terms *mtshan gzhi* and *mtshon bya*. What is the definition of the basis that characterizes, or illustration (*mtshan gzhi*)?
Student: The *Middling Collected Topics* says that the definition of the basis that characterizes is: that which is a basis that characterizes the definiendum in the context of a definition.

The basis that characterizes is the basis upon which one understands the definition prior to establishing its definiendum. For example, a table is a basis that characterizes functioning thing. Why? Because a table is that which is able to perform a function. Table, as the subject, is a functioning thing because it that which is able to perform a function. Table, as the subject, is impermanent because it disintegrates momentarily, or because it is momentary. Through understanding a definition in terms of a base, one subsequently establishes the definiendum on that base. For example, table, as the subject, is a form sphere because it is an object to be apprehended by eye consciousness. In this case, the table is the basis that characterizes (the illustration), the definiendum is the form sphere, and the definition is "an object to be apprehended by eye consciousness."

The text says: "The explanation that (1) all definitions that act to characterize and (2) the bases of characterization of what are characterized are that which is directly observed is in the context of identifying direct valid cognizers when valid cognizers are taken to be four [in number]. Because of that, they are not indicated as that which is directly observed by the omniscient." This last phrase is related to the previous passage in *Clear Words*: "all of them would be that which is directly observed (*mngon sum du dmigs par bya ba*), therefore, they would not be hidden [phenomena]." Therefore, it means that "that which is directly observed" is not explained in terms of being directly observed by the omniscient.

Lama Tsongkhapa says: "By saying this it is also not taught that all specifically and generally [characterized phenomena] are manifest phenomena and not hidden phenomena." Thus, the previous passage does not teach that all specifically and generally characterized phenomena are manifest phenomena and not hidden phenomena.

Lama Tsongkhapa says: "Hence, there arises the appearance of these two – [specifically and generally characterized phenomena] – also to the consciousnesses that observe either of the two, specifically or generally [characterized phenomena]. That appearance itself is the direct object of that consciousness. In positing both that [appearance] and the consciousnesses which is its object-

possessor as direct (*mngon sum*), it is asserted that the term 'direct' is actually applied to the object and imputedly applied to the object-possessor." The consciousness to which specifically and generally characterized phenomena appear is also posited as direct (in the sense of direct perceiver). When the term 'direct' is applied to an object it is an actual name, whereas when it is applied to an object-possessor it is an imputed name. This seems to say that all specifically characterized phenomena or generally characterized phenomena that appear are actually direct [objects], whereas their object-possessors are not actually direct [perceivers].

Lama Tsongkhapa's *Illumination* (Tibetan text page 284) says:

> If all the appearances that appear in any way to any consciousness are the direct objects of that consciousness, those appearances are manifest phenomena for that consciousness. Moreover, if they are incontrovertible consciousnesses with respect to those [appearances], since incontrovertible consciousnesses are renowned in the world to be valid cognizers, they are valid cognizers. Then, when the appearance of an object of comprehension is what establishes that consciousness, the establishment of the object-possessor is as above.

In the Prasangika Madhyamika system if a consciousness is incontrovertible with respect to its appearance it is a valid cognizer. Thus, in this system all consciousnesses are pervaded by being valid cognizers with respect to their appearance, although they are not all valid cognizers in general. Lama Tsongkhapa says: "when the appearance of an object of comprehension is what establishes that consciousness, the establishment of the object-possessor is as above." This means that when an object is established, its object-possessor is established.

Lama Tsongkhapa's *Illumination* (Tibetan text page 284) says:

> For this reason, there also arises the direct appearance of the two selves to [mental consciousnesses] such as the two conceptions of a self. At that time, the appearance of an object of comprehension, a manifest phenomenon, is established by the object-possessor and so forth as [was explained] above. That [object-possessor], moreover, is to be understood as being mistaken with respect to its referent object.

The two conceptions of a self are valid cognizers with respect to their appearing objects, while being mistaken with respect to their referent objects. What is the appearing object and referent object of the conception of a self of persons?
Student: Its appearing object is a meaning generality of a truly existent I and its referent object is a truly existent I.
Geshe Jampa Gyatso: Is the appearing object the meaning generality of a self of persons or the meaning generality of a truly existent I? Think about it.

Wednesday morning, 15 November 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 284-5) says:

> In that case, consciousnesses are likewise established as manifest appearing objects that appear as objects. Since they have the great difference of becoming and not becoming valid cognizers with respect to
> 1. the two selves and the two selflessnesses, and
> 2. permanent and impermanent forms and so forth,
>
> it is also established that with respect to awarenesses there is a presentation of valid cognizers and non-valid cognizers. The mental consciousnesses that were explained to be valid cognizers with

> respect to their appearing objects are also mental direct valid cognizers with respect to manifest objects because other options have been repudiated. They are not self-cognizing direct valid cognizers because they have dualistic appearance regarding their objects.

Lama Tsongkhapa says: "The mental consciousnesses that were explained to be valid cognizers with respect to their appearing objects..." This is the position of the Prasangika Madhyamikas who say that all consciousnesses are pervaded by being valid cognizers with respect to their appearances.

Lama Tsongkhapa says: "Since they have the great difference of becoming and not becoming valid cognizers with respect to (1) the two selves and the two selflessnesses, and (2) permanent and impermanent forms and so forth, it is also established that with respect to awarenesses there is a presentation of valid cognizers and non-valid cognizers." This means that consciousnesses are not valid cognizers with respect to the two selves, but are valid cognizers with respect to the two selflessnesses. Similarly, consciousness are not valid cognizers with respect to permanent form, but are valid cognizers with respect to impermanent form. Consciousnesses are not valid cognizers with respect to the two selves because they do not exist and are, therefore, not objects of a valid cognizer. Therefore, there are no consciousness that become valid cognizers with respect to the two selves. Similarly, consciousnesses do not become valid cognizers with respect to permanent form. On the other hand, they do become valid cognizers with respect to impermanent form. For this reason, there is a presentation of two types of awarenesses: (i) valid cognizers and (ii) non-valid cognizers. In *Awarenesses and Knowers* there is a presentation of seven types of awarenesses. Is there a similar presentation in the Prasangika Madhyamika system? Think about it.

Lama Tsongkhapa says: "[They] are also mental direct valid cognizers with respect to manifest objects because other options have been repudiated. They are not self-cognizing direct valid cognizers because they have dualistic appearance regarding their objects." What are the other options that have been repudiated? Think about it.

Lama Tsongkhapa's *Illumination* (Tibetan text page 285) says:

> Even though dualistic appearance has vanished for an uncontaminated consciousness of meditative equipoise, the two – reality and [that uncontaminated consciousness of meditative equipoise] – become what is cognized and what cognizes. Although all inwardly-directed consciousnesses avoid dualistic appearance, they become what is cognized and what cognizes. However, the two, [uncontaminated consciousness of meditative equipoise and all inwardly-directed consciousnesses], are not the same in all ways. This is because:
>
> - with respect to the latter, excluding the mere objects and object-possessors imputed by tenets, there does not arise the two appearances of what is cognized and what cognizes by means of conception no matter how much one focuses the mind,
> - whereas with respect to the former, in dependence on focusing the mind, the aspects of the object-possessor, consciousness, and the object, reality, definitely arise as different.

What is the dualistic appearance that has vanished for an uncontaminated consciousness of meditative equipoise? Lama Tsongkhapa says: "the two – reality and [that uncontaminated consciousness of meditative equipoise] – are what is cognized and what cognizes." A superior's uncontaminated exalted wisdom engages its object, emptiness, free from the appearance of duality. What is the duality that has vanished? The *Ornament for Clear Realizations* says that there are three types of duality:

1. the appearance of object and object-possessor as different,
2. the appearance of conventionalities to meditative equipoise, and
3. the appearance of an object of negation, whether the self of persons or the self of phenomena.

In this context, what is meant by dualistic appearance? Here there is no appearance of conventionalities to a superior's exalted wisdom of meditative equipoise, no appearance of a self that is an object of negation, and no appearance of object-possessor and object as different. Therefore, the exalted wisdom of meditative equipoise engages its object, emptiness, without dualistic appearance, like water poured into water.

"The two" are what is cognized and what cognizes. When a second mind focuses on a first mind it is similar to the case of a self-cognizer in that when a cognizer looks at a cognizer there is only the appearance of the factor of clarity and knowing. In other words, when a consciousness focuses on a consciousness, the consciousness that observes is a factor of clarity and knowing and the consciousness that is observed is also a factor of clarity and knowing; therefore, the two do not appear as different. This is like when the object experienced by a self-cognizer and the experiencer, the self-cognizer itself, are sought, all that is found is a mere factor of clarity and knowing; an object experienced and an experiencer that are different are not found.

Lama Tsongkhapa says: "with respect to the former, in dependence on focusing the mind, the aspects of the object-possessor, consciousness, and the object, reality, definitely arise as different." 'Focusing the mind' could refer to the mind of subsequent attainment that focuses on the exalted wisdom of meditative equipoise and its object. To this mind these two do not appear as one, but appear as different.

Lama Tsongkhapa says: "with respect to the latter, excluding the mere objects and object-possessors imputed by tenets, there does not arise the two appearances of what is cognized and what cognizes by means of conception no matter how much one focuses the mind." Self-cognizers are only imputations by tenets, however, if one were to focus on the experiencer, the self-cognizer, and that which is experienced, one would not find two different things.

Lama Tsongkhapa's *Illumination* (Tibetan text page 285) says:

> When the non-conceptual exalted wisdom of meditative equipoise establishes reality, its object of comprehension, the exalted wisdom which is the object-possessor is established by the force of that. The distinction of the dissimilarity between
>
> - the dualistic appearance that is the separate appearance of what is cognized and what cognizes that has been averted [for the non-conceptual exalted wisdom of meditative equipoise] and
> - all inwardly-directed consciousnesses that select the aspect of an apprehender for which dualistic appearance has been averted that are asserted by other systems
>
> will be explained in the context of the resultant ground.

The non-conceptual exalted wisdom of meditative equipoise is established by the force of establishing its object of comprehension. For this non-conceptual exalted wisdom of meditative equipoise, it and its object do not appear as distinct, due to which dualistic appearance has been averted for it. The vanishing of dualistic appearance with respect to all inwardly-directed consciousnesses and the vanishing of dualistic appearance with respect to a non-conceptual exalted wisdom of meditative equipoise are different. This difference will be explained later in the context of the resultant ground. For the Prasangika Madhyamika system the vanishing of dualistic appearance with respect to all inwardly-directed consciousnesses that select the aspect of an apprehender does not exist at all because self-cognizers do not exist. Only the lower schools assert self-cognizers that are inwardly-directed consciousnesses that select the aspect of an apprehender.

Lama Tsongkhapa's *Illumination* (Tibetan text page 285-6) says:

> When the harm expressed to others by our stating 'What will know their existence?' (v. 6.72c) and so forth is turned against us, such a subtle presentation as this is not necessary for those who do

> not understand the subtle presentations of the individual systems of the great [masters] and those who do not understand how to interpret the subtle meaning of the definitive meaning scriptures of our own system and the subtle methods of reasoning that are extremely difficult to realize – those hopeful ones who make mere denials saying "Since we do not have that assertion in our position, there is no fault."

For the Prasangika Madhyamikas object-possessors are established by establishing their objects. If a self-cognizer exists, how does it exist? No matter how much one examines a self-cognizer and its object, consciousness, they do not appear as having different aspects. However, when the exalted wisdom of meditative equipoise and its object, emptiness, are examined they do appear as having different aspects.

Chandrakirti in his *Supplement* asks "What will know their existence?" meaning that if there are self-cognizers, what is it that knows their existence. How is this question, which is a refutation of self-cognizers, turned back against the Prasangika Madhyamikas?

"Those hopeful ones who make mere denials" are (i) those who do not understand the subtle presentations of the individual systems of the great masters and (ii) those who do not understand how to interpret the subtle meaning of the definitive meaning scriptures of their own system, the Prasangika Madhyamika, and the subtle methods of reasoning that are extremely difficult to realize. When their own refutations are turned back asked themselves, such people say "I do not have that fault because I do not have that thesis." "Those hopeful ones who make mere denials" are those who say whatever comes to their mind. In other words, when they are asked a precise question, they respond to it by saying whatever comes to their mind. Thus, when confronted with contradiction in their assertions, such people respond by denying that they even have that thesis.

Lama Tsongkhapa's *Illumination* (Tibetan text page 286) says:

> However, thinking of the welfare of wise scholars and the extremely intelligent, those who do not believe without seeing the path that distinguishes faults and qualities by means of subtle points of reasoning, I have presented a mere portion of this supreme system, the position that is posited as being without mistakes.

"I have presented a mere portion of this supreme system" refers to this particular section of Lama Tsongkhapa's text.

Lama Tsongkhapa's *Illumination* (Tibetan text page 286) says:

> QUESTION: The I who remembers "I saw blue" is the person. Since the two – the consciousness that is the apprehender of blue and [the person] – are contradictory, in this case how does that memory remember the apprehender of blue?
> RESPONSE: Although the two – the eye consciousness that is the apprehender of blue and the person who is the seer of blue – are contradictory, it is not contradictory to posit "I saw" in dependence on that consciousness seeing blue. So why would it be contradictory that by remembering the person thinking "I saw blue before" in dependence on remembering the consciousness that is an apprehender of blue seeing blue, for there also to be a memory of the consciousness that is the apprehender of blue?

The one who remembers (that is, the person) and the apprehender of blue (that is, the consciousness) are contradictory, so how does that memory remember the apprehender of blue? The response is that, although it is true that the one who remembers blue, the person, and the apprehender of blue, the consciousness, are contradictory, this does not contradict positing "I saw" in dependence on a consciousness seeing blue. On the basis of the person's eye consciousness apprehending blue, one

says "I saw blue." Therefore, due to an eye consciousness seeing blue, one can say "I saw blue" and remember seeing blue.

Lama Tsongkhapa's *Illumination* (Tibetan text page 286) says:

3B1C-2B3E-2A1B-2B2B-1C Indicating that self-cognizers are inadmissible also by other reasonings

Chandrakirti's autocommentary (Tibetan text page 108) says:

Because it is like that:

Therefore, if self-cognition does not exist,
What will apprehend your other-powered phenomena?
Since agent, acted upon, and action are not one,
It is not reasonable for that itself to apprehend that. [6.76]

In saying "to cognize the self," oneself who is cognizing becomes a property of that acted upon. Then, the very object to be cognized is also the agent and since the action is also undifferentiable, the agent, that acted upon, and the action will follow as one. Yet these are not seen as oneness.

Like this: the cutter, the tree, and the action of cutting are not one. Also, through this, since self-cognition does not exist, that is not apprehended by itself.

It is also taught in the *Exalted Descent into Lanka* [*Sutra*]:

Just as a sword does not cut its own edge, like a finger
does not touch itself – self-cognizing mind is the same.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B1A-6C5A-1A2B-2B1C Refuting self-knowing consciousness by other logic

Therefore, if there's no self-knowing consciousness,
By what is your dependent phenomenon perceived? [6.76ab]

By what is the dependent phenomenon of you Chittamatrins apprehended? It follows that it is not, for if that exists, it needs apprehension by self-knowing consciousness, whereas self-knowing consciousness does not exist, and that does not exist –

As the agent, object, and action are not one,
That cannot be apprehended by itself. [6.76cd]

It follows that it is impossible that that knowing should be apprehended by itself, self-knowing consciousness, since agent, object, and action are not one.

The Prasangika Madhyamikas say that if there were self-cognizers it would follow that agent, object, and action would be one, whereas they are not. The Chittamatrins posit an other-powered phenomenon, that is, consciousness, based on its apprehension by a self-cognizer, but self-cognizers themselves do not exist.

Wednesday afternoon, 15 November 2000

The argument here is that if there were self-cognizers, it would follow that agent, action, and object would be one. Since they are not one, this is another way of refuting self-cognizers. Another way of refuting self-cognizers is through examples such as that of a sword not being able to cut its own edge,

a finger not being able to touch its own tip, and so forth. Although a sword can cut the edge of a sword it cannot cut its own edge, and, likewise, a finger can touch the tip of another finger but it cannot touch its own tip. Therefore, it is important to specify "itself" saying it cannot cut itself, it cannot touch itself, and so forth.

Lama Tsongkhapa's *Illumination* (Tibetan text page 286) says:

> Chandrakirti says:
>
> > *Therefore, if self-cognizers do not exist,*
> > *What apprehends your other-powered phenomenon?*
> > *Since agent, object of the action, and action are not one,*
> > *It is not reasonable for that itself to apprehend it.* [6.76]
>
> Because of that, it is so. *Therefore, if self-cognizers do not exist, what apprehends your*, Chittamatra, *other-powered phenomenon* – consciousness*? Since* (i) *the agent* that cuts wood, (ii) the *object of the action* of cutting, that is, the wood, and (iii) *the action* of cutting wood *are not one, it is not reasonable for that* consciousness *itself to apprehend it*.

What is the agent that cuts wood? There are two types of agents: a main agent and a common, or ordinary, agent. In regard to cutting wood, the main agent is the person, whereas the common agent is an ax, saw, knife, and so forth. The action is that of cutting and the object of the cutting is the wood. These three – agent, action, and object – are not one. For example, when one cuts an apple, oneself is the cutter, the object of the cutting is the apple, and the action is that of cutting. These three are not one.

The Prasangika Madhyamikas say that because these three are not one there cannot be self-cognizers. To this the Chittamatrins respond saying that these three factors are different with respect to other-powered phenomena. In this case, (i) the agent is the positor of other-powered phenomena, (ii) the action is that of positing other-powered phenomenon, and (iii) the object is other-powered phenomena, i.e., consciousnesses. Hence, the agent is a self-cognizer, the action is itself perceiving itself, and the object is the consciousness it perceives.

Lama Tsongkhapa's *Illumination* (Tibetan text page 286) says:

> The way of settling their invalidation is clearly stated in [Jnanagarbha's] autocommentary on the *Two Truths*:
>
> > Extremely subtle particles and the entity of things without duality do not appear to the nature of consciousness. In not appearing, it does not exist conventionally.

Extremely subtle particles and the entity of things without duality do not appear to the nature of consciousness. What is "the entity of things without duality"? Perhaps 'duality" refers to (i) the apprehended, the object, and (ii) the apprehender, the object-possessor; therefore, "without duality" would mean that object and object-possessor do not exist as two entities. Apprehendeds and apprehenders not existing as two entities it what does not exist conventionally, hence, they do exist as two entities. Jnanagarbha accepts external objects but does not accept self-cognizers, this being similar to what the Prasangika Madhyamikas say.

What are "extremely subtle particles"? Are these the most subtle particles that cannot be divided further or are they partless particles? The most subtle particles do not appear in isolation to the sense consciousness of an ordinary being. They do not appear even under a microscope! Are there partless particles? According to Jnanagarbha there are no partless particles because if it is an established base it is pervaded by having parts. Earlier it was said that:

1. having parts and being partless are direct contradictions,
2. the partless does not exist among objects of knowledge, and
3. if it is an established base it is pervaded by having parts.

Lama Tsongkhapa's *Illumination* (Tibetan text page 286) says:

> With respect to positing
> 1. the object cognized which is itself, an inwardly-directed consciousness that is a mere experiencer without dualistic appearance as was explained before, and
> 2. the cognizer of that itself,
>
> no matter how much one focuses on them, what is cognized and what cognizes do not appear as two even to conception. When positing the function of what is cognized and what cognizes there occurs the absurd consequence that agent, object of the action, and action would, moreover, be one.

When another consciousness focuses on a self-cognizer and its object, a consciousness, they do not appear as two but appear as the mere factor of clarity and knowing. When a conception focuses on the experiencer, a self-cognizer, and the object experienced, the consciousness, do they appear as two or as one? According to this presentation, what is cognized and what is cognized do not appear as different to the conception that focuses on them. When a conception focuses on the horns of a rabbit does it not have two meaning generalities? When someone analyzes whether or not rabbits have horns, the meaning generality of a rabbit's head appears. But does the meaning generality of the horns of a rabbit appear? Is there a meaning generality of the horns of a rabbit? There is a meaning generality of the horns of a rabbit because there is a conception apprehending the horns of a rabbit. If it is one of the two, existent and non-existent, is it pervaded by having a conception apprehending it? For example, a self of phenomena does not exist yet there is a conception apprehending it. Such a conception of a self is a valid cognizer with respect to the self that is its appearing object.

Lama Tsongkhapa's *Illumination* (Tibetan text page 287) says:

> Hence, the great acharya Jnanagarbha asserts that the two – the self-cognizers of the Chittamatrins and the partless particles of the hearer sect – are similar in terms of how they exist and do not exist. Also in regard to partless particles, they must have a locus, whereas, when their aspect dawns, there is no arisal that is not together with directional parts. Thus, (i) what is cognized and what cognizes and (ii) the directionally partless of those two, [the Chittamatrins and the hearer sect,] are only imputed tenets.

This is an explanation of the previous passage in that it refutes both the Chittamatrin's assertion of self-cognizers and the lower schools' assertions of directionally partless particles. Jnanagarbha refutes the lower schools' assertions of directionally partless particles saying that, when subtle particles appear, they appear together with directional parts. For this reason, all subtle particles have directional parts. Therefore, what is cognized and what cognizes in the context of self-cognizers and the existence of directionally partless particles are only a superimposition of tenets.

The definition of a partless particle is: a particle lacking directional parts which are their own entity. Based on this, one can debate about whether there are particles that have directional parts but do not have directional parts which are their own entity. The lower schools accept partless particles, whereas the higher schools from the Chittamatra through the Prasangika Madhyamika refute them. This was discussed in the *Essence of Eloquence*. Vasubandhu's *Twenty Stanzas Refuting External Objects* presents the reasoning that refutes partless particles.

Lama Tsongkhapa's *Illumination* (Tibetan text page 287) says:

> Then, these two appearing, but not being ascertained, is also refuted in [Jnanagarbha's] autocommentary on the *Two Truths* which says:
>
> > OBJECTION: Even though they appear, they are not ascertained.
> > RESPONSE: Such [things] do not exist conventionally. Stating "they appear" is to say "It is necessary to drink pledge-water because of lacking belief," in that the proof with regard to their appearing is also nothing more than a pledge.

The lower schools say that there are partless particles and the Chittamatrins say that there are self-cognizers.

Lama Tsongkhapa's *Illumination* (Tibetan text page 287) says:

> Also by means of stating the reasonings taught in the *Descent into Lanka Sutra* self-cognizers are not suitable:
>
> > Just as a sword does not cut
> > Its own edge, like a finger
> > Does not touch itself,
> > So too is a self-cognizing mind.

Lama Tsongkhapa's *Illumination* (Tibetan text page 287) says:

> 3B1C-2B3E-2A1B-2B2B-1D Indicating that inherently existent other-powered phenomena are like the son of a barren woman

Chandrakirti's autocommentary says:

> Therefore, like that, because self-cognition is non-existent:
>
> *If, unproduced and having an unknown self,*
> *A property of the entity of other-powered phenomena exists,*
> *Due to what is this not reasonable to exist?*
> *What harm did a barren woman's son bring to the others?* [6.77]
>
> Other-powered [phenomena] were demonstrated as not generating from self and others in general above and just now were demonstrated as also having a self-nature that is unknown [by self-cognition].
>
> Therefore, like that, if it is accepted that "an entity of other-powered [phenomena] exists, unproduced and having a self-nature unknown [by valid cognition]" – from what [reasoning] would this [son of a barren woman], also already the subject of similarity with other-powered [phenomena], not be asserted as indeed existing – what harm did the son of a barren woman do to you? It too should be asserted as indeed existing saying: "A so-called "son of a barren woman" exists – passed beyond all elaborations and the object of experience of the aryas' exalted wisdom, having an inexpressible nature."

Gedun Drup's *Mirror of the Clarification of the Thought,* as translated by Martin Willson, says:

> 3B1A-6C5A-1A2B-2B1D An inherently existent dependent phenomenon is like a barren woman's son
>
> *If without birth, with nature undiscerned,*
> *A dependent phenomenon exists as a natural thing,*

What harm, for which he may not exist,
Has a barren woman's son done to the other? [6.77]

What harm has a barren woman's son done to [you] other, Chittamatrin, through which he is not permitted to exist? It follows you must admit that too, since you say a dependent phenomenon, which is without [inherent] birth and has a nature not understood [by valid cognition], is an inherently existent thing. [You ought to assert similarly that a "barren woman's son" exists with indescribable nature transcending all elaborations, an object of the wisdom-knowledge of the aryas.]

Functioning things that are other-powered phenomena do not exist inherently. Production from self and production from other have already been explained and refuted, therefore, inherently existent other-powered phenomena do not exist. If there were inherently existent other-powered phenomena, it would be necessary to say that the son of a barren woman has gone beyond elaboration, is the object of a superior's exalted wisdom, and is inexpressible. However, since there does not exist the son of a barren woman, how can he inflict harm? Inherently existent other-powered phenomena are likened to the son of a barren woman.

With respect to the son of a barren woman there is the following debate. Does there not exist a barren woman? Is a barren woman not a sentient being? Can she not be called 'mother'? Can one not meditate on her as having been one's mother? Is this mind of meditation a wrong consciousness? It must be because a barren woman is not a mother. She is not a mother because she does not have a son. The conclusion is that, although she is not a mother in this life, she has been a mother in other lives. When cultivating the mind of enlightenment, one first meditates on recognizing sentient beings as having been one's mother. While meditating on this, do you think that the meditator can be considered to be the son of a barren women since he meditates on the barren woman having been one's mother?

Lama Tsongkhapa's *Illumination* (Tibetan text page 287) says:

PRASANGIKA MADHYAMIKAS:

If things by way of their own entity – other-powered phenomena
That are not produced and have the nature of not being known – exist,
Due to what would they be unsuitable to exist?
What harm is inflicted on the others by the son of a barren woman? [6.77]

It was already indicated before that other-powered phenomena are not produced from self and other, but now I will indicate that the self-cognizers that comprehend them also do not exist. Therefore, *if things* that are established by way of their own *entity – other-powered phenomena* that are *not* inherently *produced* and *have the nature of not being known* by a valid cognizer – *exist*, for *what* reason *would they be unsuitable to exist? What harm is inflicted on the others*, that is, you Chittamatrins, *by the son of a barren woman?* Then, what is not asserted to exist must be asserted to exist. In that case, [the son of a barren woman] should also be asserted to exist stating "The so-called 'son of a barren woman,' having passed beyond all elaboration and become the object of a superior's exalted wisdom, has an inexpressible nature."

The son of a barren woman has passed beyond all elaboration but is not the object of a superior's exalted wisdom. Does the son of a barren woman have an inexpressible nature? Can the son of a barren woman be expressed, that is, described? In short, the Chittamatrins would have to assert the existence of the son of a barren woman and would have to assert that he has passed beyond all elaboration, has become the object of a superior's exalted wisdom, and has an inexpressible nature. However, the son of a barren woman is not the object of a superior's exalted wisdom. Is he inexpressible or not? The conclusion is that there does not exist the son of a barren woman.

Thursday morning, 16 November 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 288) says:

3B1C-2B3E-2A1B-2B2B-2 Indicating that the Chittamatra system has deviated from both truths

Chandrakirti's autocommentary says:

If also that which was mentioned [in 6.47b]: *becomes the cause of imputedly existent things and...* – that is, other-powered [phenomena] – were to exist indeed, if one reasons,

When, if even a little other-powered does not exist,
What would be the cause of the deceptive? [6.78ab]

One will think: "The deceptive do not have even a little cause." Therefore, for this [Chittamatrin], since that which is the cause of worldly designation does not exist by itself, O! Alas!

By adhering to substance like the others,
Even all presentations of worldly renown break down. [6.78cd]

Due to lack of wisdom, having poured the water-like [inappropriate analysis] in the unfired vase of other-powered [phenomena], by way of adhering to a mere substantial knower, because of one's bad mode of intelligence, the worldly presentation established among only the worldly, such as saying "stay," "go," "do," "cook," and so forth and similarly those which are form and feeling and so forth – whatever there is – all those are realized as destroyed. Therefore, only deterioration will be possible for him – not sublime status.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, (Tibetan text page 43) says:

3B1A-6C5A-1A2B-2B2 The Mind-only school is wrong on the two levels of truth

If dependent phenomena do not exist at all,
What is the cause of a conventional thing? [6.78ab]

When a dependent phenomenon inherently exists, what will be the cause of a conventional thing[48]? It follows there will be none, since it does not exist at all.

On the other's view, attachment to a substance
Will destroy every distinction known in the world. [6.78cd]

On the view of the opponent, the Chittamatrin, it follows that every distinction known in the world is destroyed by his attachment to true existence for the substance of a dependent phenomenon.

The Chittamatrins say that if other-powered phenomena do not exist inherently they would not exist at all, whereby they would not be causes and so forth. The Prasangika Madhyamikas say that inherently existent other-powered phenomena that are causes and so forth do not exist at all. They say: "Therefore, for this [Chittamatrin], since that which is the cause of worldly designation does not exist by itself, O! Alas!" The Prasangika Madhyamikas set out the example of an unfired vase which, when water is poured into it, is destroyed, and liken this to the Chittamatrins assertion that other-powered phenomena are inherently existent. Just as an unfired vase is demolished by pouring water into it, also the assertion of inherently existent other-powered phenomena demolishes that which is renowned in the world. 'That renowned in the world' is what is posited without thorough

[48] *kun.rdzob.pa*

investigation and analysis. All of these conventionalities would be destroyed by the Chittamatrin's assertion of inherently existent other-powered phenomena. This is the meaning of: "By adhering to substance like the others, even all presentations of worldly renown break down" (v. 6.78cd). Thus, the aggregates, forms, and so forth would be destroyed. Chandrakirti says: "the worldly presentation established among only the worldly, such as saying "stay," "go," "do," "cook," and so forth and similarly those which are form and feeling and so forth – whatever there is – all those are realized as destroyed. Therefore, only deterioration will be possible for him – not sublime status." It would be impossible for the Chittamatrins to attain sublime status. For this reason, the Prasangika Madhyamikas say that the Chittamatrins have deviated from the two truths.

Lama Tsongkhapa's *Illumination* (Tibetan text page 288) says:

> [The Chittamatrins] say: "[Because of that, whatever is the entity of the other-powered] becomes the cause of imputedly existent things" (6.47ab). Moreover, if other-powered phenomena exist inherently, the reasoning [would be as follows].
> Chandrakirti says:
>
> > *When other-powered phenomena do not exist in the slightest,*
> > *How can they be the cause of conventionalities?*
> > *In the case of others, due to attachment to a substance,*
> > *All the presentations renowned in the world are also demolished.* [6.78]
>
> *When* inherently existent *other-powered phenomena do not exist* even *in the slightest, how can they be the cause* – that is, the substantially established basis – *of* the mistaken which are *conventionalities*, that is, conventions*?* They are not that [cause] in the slightest. Hence, those who assert other-powered phenomena to be ultimately established are taught to have deviated from the ultimate. Because of that, for the Chittamatrins whatever is the cause of worldly conventions would not exist by way of its own entity. Therefore, alas, *in the case of others*, the Chittamatrins, due to their lacking the energy of the wisdom distinguishing the final definitive meaning, *through attachment*, which is adherence *to* mere consciousness – *a substance* that is an other-powered phenomenon – as truly existent, they pour their water-like improper analysis into the unfired pot of other-powered phenomena. Then, because of, that is, for the reason of, the inferior viewpoint of their own intelligence, *all the presentations renowned in the world* – that established only among the worldly such as saying "Stay," 'Go," "Do," and so forth and, likewise, external forms, the feelings that are produced from observing external [objects], and so forth – *are also demolished*, that is, destroyed. Therefore, only decline becomes possible for the Chittamatrins, not the attainment of the high, that is, the sublime, state.
>
> When external objects are refuted, for the reason that "Go" and so forth also become non-existent, ["Go" and so forth] are related to external objects. Hence, [the Chittamatrins] are taught to have deviated from conventional truths.

According to the Prasangika Madhyamikas the Chittamatrins have deviated from the two truths. They have deviated from the ultimate truth through asserting inherently existent other-powered phenomena. This is because according to the Prasangika Madhyamika system the emptiness of true existence of other-powered phenomena is ultimate truth, whereas the Chittamatrins assert other-powered phenomena to be truly existent. Through asserting other-powered phenomena to be inherently existent, the presentation of all conventionalities is destroyed. In other words, based on this assertion the worldly presentations of "Stay," 'Go," and "Do" are destroyed. Likewise, external forms, the feelings that are produced from observing external objects, and so forth are destroyed. They are destroyed because if a form, for example, were truly existent then a feeling could not arise in dependence on it. In short, the Prasangika Madhyamikas say that the Chittamatrins do not know how to posit the presentation of the two truths. By their positing phenomena to be truly existent, the Chittamatrins deviate from both conventional and ultimate truths.

On the other hand, in the Chittamatra system other-powered phenomena are inherently existent, for if they were not inherently existent they would not exist at all. Thus, the Chittamatrins would say that they do not have the fault of deviating from the two truths but that they in fact take the position of the middle way.

The Prasangika Madhyamikas say to the Chittamatrins that the inferior viewpoint of their intelligence, like pouring water into an unfired pot, destroys the presentation of that renowned in the world.

Lama Tsongkhapa's *Illumination* (Tibetan text page 288) says:

3B1C-2B3E-2A1B-2B2B-3 Hence, it is suitable to be a follower only of Nagarjuna's system

Chandrakirti's autocommentary (Tibetan text page 110) says:

> Therefore, through mistaken masters like that, they entered only a path system concocted by their own conceptions.
>
> *Those outside the path of the venerable*
> *Acharya Nagarjuna do not have the means of peace.* [6.79ab]

Those who remain outside Acharya Nagarjuna's path will not attain the peace of nirvana.

Chandrakirti's autocommentary says:

> If asked: Why?
> Like this:
>
> *They deviate from the deceptive and suchness truths.*
> *Due to deviating from these, achievement of liberation does not exist.* [6.79cd]
>
> Again, if asked: Why is liberation not attained due to fully deviating from the two truths?
>
> It is explained:
>
> *Conventional truth is the means and*
> *Ultimate truth arises from means.*
> *Those who do not know the distinction of the two*
> *Have entered a bad path due to wrong conceptions.* [6.80]

Gedun Drup's *Mirror of the Clarification of the Thought* (Tibetan text page 43), as translated by Martin Willson, says:

3B1A-6C5A-1A2B-2B3 Therefore one must follow Nagarjuna

> *Those outside the path of the holy Master*
> *Nagarjuna lack the means of peace.*
> *They fail in the truths of convention and reality,*
> *And by failing there, do not reach liberation.* [6.79]

For those outside the path of the holy Master Nagarjuna, the chief means of attaining tranquillity, or nirvana, is lacking; because they fail in conventional truth and in the truth of ultimate reality, and by failing in these two truths, there is no attainment of liberation while they do not reject that.

> *The conventional level of truth becomes the means,*
> *And ultimate truth is what comes from the means.*

Who does not understand the distinction of these two,
By this misconception enters an evil path. [6.80]

This is because perceiving conventional truth is the means, and perceiving ultimate truth is what comes from the means – whoever does not understand the distinction of these two, by that wrong conception enters an evil path.

If one does not understand the two truths as they are presented by Acharya Nagarjuna, one will not be able to attain liberation even though one exerts effort for a long time. Conventional truths include external objects such as forms, sounds, and so forth and inner objects such as the form aggregate and so forth. Based on understanding such conventionalities, one comes to realize the emptiness of these bases. In other words, one first realizes conventional truths and then realizes the ultimate truth in terms of them. However, the opposite can also be said, that is, ultimate truth is the means and conventional truth is what arises from the means. This is in the sense that one first realizes ultimate truth, the emptiness of true existence of all phenomena, and then on this basis comes to realize subtle conventionalities, the feasibility of cause and result.

Therefore, to understand conventional truth as the means is to first understand the 108 phenomena, forms through the exalted knower of all aspects, and then on this basis to come to understand their emptiness of true existence or ultimate existence, that is, ultimate truth. In the case of the ultimate truth being the means, having first realized the emptiness of all phenomena of true existence, one then asks: "If it does not exist truly is it non-existent?" They are not in that through negating true existence phenomena do not become non-existent because there remains a subtle conventionality. This subtle conventionality is the feasibility of the presentation of conventionalities that are causes and results.

Chandrakirti's autocommentary says:

> As was taught in the *Exalted Meditative Stabilization Definitely Indicating Thusness* [*Sutra*]:
>
> Not listening to others, the Knower of the World
> Indicated these two truths by himself.
> The deceptive [and], likewise, the ultimate –
> A third truth does not exist at all.

There is no presentation of a third truth, that is, there is only conventional truth and ultimate truth. Therefore, the truths are definite as two in number. Therefore, all truths must be included in these two. It can be asked: "If there is no third truth, why did the Buddha teach four truths?" However, that is a different subject and, in addition, one cannot indicate four truths that are not included in the two truths. This is because in the Prasangika Madhyamika system true cessations are included in ultimate truth and the remaining three truths are included in conventional truths. On the other hand, in the Svatantrika Madhyamika system all four truths are included in conventional truths. Also according to the Vaibhashika, Sautrantika, Chittamatra systems there is no phenomenon that is not included in the two truths. Thus, does there exist a school in which the four truths are not included in the two truths? There does not, even though the two truths are presented differently in each of these schools.

Chandrakirti's autocommentary says:

> Due to which, migrators will produce faith
> In the Sugata for the sake of happiness;
> The Conqueror taught the deceptive for the welfare of migrators,

In order to benefit the world.

Migrating beings strive to attain the state of a sugata and for this reason generate faith. This is not the faith that follows from mere words, but is the faith of conviction in the teaching on the two truths. The Sanskrit word 'Sugata,' which can be translated literally as 'Gone to Bliss,' indicates that through following the path to bliss one will attain the resultant state of bliss. However, there are different interpretations of what gone to bliss, or sugata, means. According to the second chapter of Dharmakirti's *Commentary on [Dignaga's] Compendium of Valid Cognition* there are two types of gone to bliss: gone to bliss in terms of abandonment and gone to bliss in terms of realization. Each of these possesses three attributes.

Dignaga's *Compendium of Valid Cognition* similarly says:

To the one who has promised to benefit others and is valid,
The Teacher, Sugata, Refuge, I prostrate.

Here the word 'Teacher' has the meaning of the wisdom directly realizing selflessness. "One who has promised to benefit others" refers to compassion. On the basis of this wisdom and compassion, one becomes a sugata, one gone to bliss. Having gone to bliss, one becomes a refuge. The expression of worship in Dharmakirti's *Commentary on [Dignaga's] Compendium of Valid Cognition* says:

To the one who has dispelled the net of conceptions,
Who possesses a body profound and extensive,
Having Samantabhadra rays of light
Constantly radiating, I prostrate.

This expression of worship is recited in monasteries following the recitation of the expression of worship in Nagarjuna's *Fundamental Wisdom* and that in Maitreya's *Ornament for Clear Realizations*. The expression of worship in Nagarjuna's *Fundamental Wisdom* (see *Fundamental Wisdom of the Middle Way*) is:

I prostrate to the perfect buddha,
The best of teachers, who taught that
Whatever is dependently arisen is
Unceasing, unborn,
Unannihilated, not permanent,
Not coming, not going,
Without distinction, without identity,
And free from conceptual construction.

The expression of worship in Maitreya's *Ornament for Clear Realizations* is:

By the knower of all, hearers seeking pacification are led to peace;
By the knower of paths, those benefiting migrating beings accomplish the welfare of the world;
By the perfect possession of it, the subduers teach the varieties possessing all aspects;
To these mothers of the buddhas, together with the host of hearers and bodhisattvas – homage.

Thursday afternoon, 16 November 2000

Chandrakirti's autocommentary says:

> Whichever of the six migrations of the multitude of sentient beings
> Was indicated – sentient beings of hell, animals, hungry ghosts,
> Demigod status, men, and the gods –
> The Lion of Men designated as the deceptive.

The Lion of Men, Shakyamuni Buddha, taught the two truths in order to benefit the six classes of sentient beings: hells beings, animals, hungry ghosts, animals, anti-gods, and gods. What is the definition of each to them? If it is a sentient being is it necessarily one of the six classes of migrating beings?
Student: No, for example, an arya bodhisattva in a pure land.
Geshe Jampa Gyatso: Why is he not one of the six? Is that bodhisattva not a human being? Is he not a god?
Student: I'm not sure whether he is a god or not.
Geshe Jampa Gyatso: If he were, there must be two types of gods, those who are not born in a pure land and those who are born in a pure land. It would be the same for human beings. Can you posit a human being who is pure?
Student: An arya bodhisattva who takes rebirth as a human being.
Geshe Jampa Gyatso: Is an arya bodhisattva who takes rebirth in a pure land not a migrating being?
Student: He is not because he does not take rebirth under the power of afflictions and karma.
Geshe Jampa Gyatso: If it crawls on all fours is it pervaded by being an animal? The Tibetan word for animal literally means "walking with the head down," whereas the Tibetan word for a hungry ghost means "one who constantly thinks of food and drink due to hunger and thirst." The Sanskrit word for human being '*manusha*' means "one possessing ability," in the sense of having the ability to talk and understand meanings. If it is a god it is not pervaded by being a god of the desire realm, form realm, or formless realm because there are gods who have passed beyond the three realms. What is the difference between god and anti-god? Think about this.

When the six realms are described in terms of their respective sufferings, it is said that hell beings experience the suffering of hot and cold, hungry ghosts the suffering of hunger and thirst, animals the suffering of being stupid and mute, anti-gods the suffering of jealousy and fighting, and gods the suffering of the signs of impending death. The sufferings of human beings are something we know based on our own experience.

Chandrakirti's autocommentary says:

> Inferior lineages as well as high lineages,
> Rich families and poor families,
> Groups of slaves and, likewise, groups of servants,
> The host of women, men, and eunuchs –
>
> However many distinctions of migrators are suitable,
> You, the Matchless One showed the world.
>
> Having borne in mind due to skill in deceptive truth,
> The Knower of the World indicated that to humanity.
>
> Migrators who take joy in it will engage in
> The eight dharmas of migrators in samsara:
> Finding and not finding, fame and infamy,
> Praise and blame, and happiness and suffering.

Migrating beings engage in the eight worldly concerns: finding and not finding, fame and infamy, praise and blame, and happiness and suffering. "Finding" is to gain material things, such as money, due to which one to become happy, whereas due to not finding them one becomes unhappy. People also become happy when they have fame and unhappy when they have a bad reputation. Similarly, when they are praised they become happy, and when they are blamed they become unhappy. Likewise, people are happy when they have happiness and are unhappy when they have suffering. We should avoid coming under the influence of these eight worldly concerns.

Chandrakirti's autocommentary says:

> When found, attachment to that is produced.
> When not found, that too will disturb [them].
> The others not indicated should be known in this manner.
> The eight diseases will harm their continuities.

The result of gaining material things is to generate attachment, whereas to not gain material things disturbs the mind. The remaining six worldly concerns should be understand in the same way. "The eight diseases" are the eight worldly concerns; they are so-called because they bring us mental pain and thereby harm our continua in that they distract us and prevent us from practicing the Dharma and thereby subduing our mind. The way in which the eight worldly concerns prevent us from practicing Dharma is that when we have happiness we do not think to practice Dharma and when we have suffering we are also unable to think of practicing Dharma. Thus, the eight worldly concerns prevent the practice of Dharma and thereby prevent the increase of realizations.

Chandrakirti's autocommentary says:

> Those propounding the deceptive as the ultimate,
> Should be known as having erring intellects.

Those who propound the conventional truth to be the ultimate have a mistaken understanding.

Chandrakirti's autocommentary says:

> To propound the repulsive as attractive, suffering as happiness,
> The selfless nature as a self and
>
> To propound impermanent phenomena as "permanent" and
> Pleased like that, whoever abides in signs,
> When they hear the teaching of the Tathagata,
> Afraid and not understanding appropriately, they will reject it.

These lines indicate the four mistaken conceptions related to the four attributes of true sufferings:

1. conceiving what is impermanent to be permanent,
2. conceiving what is suffering to be happiness,
3. conceiving what is impure to be pure, and
4. conceiving what is selfless to be a self.

For example, the words "propound the repulsive as attractive" refers to the mistaken conception thinking that the aggregates are pure although they are impure. "Suffering as happiness" refers to the mistaken conception thinking that the contaminated body is happiness although it is suffering in

nature. "The selfless nature as a self" refers to the mistaken conception thinking what is selfless is a self. "Propound impermanent phenomena as "permanent" refers to the mistaken conception thinking that what is impermanent is permanent. Those who have the four mistaken conceptions reject the Buddha's teachings.

> Having rejected the Sugata's teaching,
> They will experience unbearable suffering as hell sentient beings.
> Although they seek happiness, [due to] inappropriate [means],
> The childish will find hundreds of sufferings.

This verse describes the result of rejecting the Buddha's teachings saying: "They will experience unbearable suffering as hell sentient beings." "Hundreds of sufferings" refers to the several sets of a hundred sufferings listed in Asanga's *Bodhisattva Grounds*. Even in one day we experience many sufferings.

Chandrakirti's autocommentary says:

> When someone fully realizes with unmistaken awareness,
> The doctrine that benefits the world,
> Completely abandoning like an old snake skin,
> Having passed beyond all becoming, there will be peace.

When someone properly understands the Buddha's teachings, he will attain nirvana. "There will be peace" refers to both liberation and enlightenment; one leaves behind the ocean of sufferings of cyclic existence and attains peace.

Chandrakirti's autocommentary says:

> "All these phenomena are isolated by nature –
> Empty, signless – the ultimate."
> Whoever will produce joy having heard [this],
> They will attain peerless enlightenment.

This refers to the three doors of liberation: emptiness, signlessness, and wishlessness. Whoever produces joy upon hearing these teachings will attain peerless enlightenment.

Chandrakirti's autocommentary says:

> You the Conqueror see the aggregates as isolated;
> Also the elements and entrances and, likewise,
> The city of the senses are isolated from signs.
> All are also seen by you the Sage as they are.

The Buddha has seen the purity of the aggregates, elements, entrances (spheres), and so forth. The aggregates are the five, the form aggregate and so forth. The elements are the six, the earth element and so forth. The entrances (spheres) are the six, the form sphere and so forth. Are all phenomena included in the five aggregates? They are not. Posit! Uncontaminated space. If it is a phenomena is it pervaded by being included in the eighteen constituents? It is. Then, which constituent is

uncontaminated space? It is included in the phenomena constituent. Are all phenomena pervaded by being included in the twelve spheres? They are. In which is emptiness included? It is included in the phenomena sphere. The *Treasury of Knowledge* says: "Those named 'constituent' are included in the constituents, those named 'sphere' are included in the spheres, those named 'aggregates' are included in the aggregates." For example, in the *Sutra of the Three Heaps* (literally, three aggregates) what are the three heaps?
Student: They are the heaps of confession, rejoicing, and dedication.

Then, the verse from sutra says: "city of the senses are isolated from signs." The word translated here as "city" could actually be translated as village. Here "city of the senses" refers to the location of the sense powers, that is, the sense organs. The Tibetan words could also be translated as "city of Indra," but in either case they are devoid of the signs of true existence or inherent existence. "Signs" could also refer to the ten signs which were described in the *Ornament for Clear Realizations*.

Chandrakirti's autocommentary says:

> Therefore, like that, for those isolated from the deceptive and ultimate truths, how could liberation exist? Therefore, those propounding consciousness, due to wrong conceptions, have only entered a deviant path. The conventional truth indicated here is the method.

When someone is devoid of the two truths, he cannot attain liberation. Here the Prasangika Madhyamikas say to the Chittamatrins: "You who propound consciousness have entered a deviant path." The Chittamatrins propound consciousness in the sense that they say that all phenomena are the nature of mind. The presentation of conventional truth is the means or method by which one comes to understand the ultimate truth.

Chandrakirti's autocommentary says:

> As was taught [in the *King of Meditative Stabilizations Sutra*]:
>
> Whatever is heard and whatever is indicated
> About phenomena that are without letters,
> By superimposing on the unalterable,
> There is hearing and indication nonetheless.

The Sanskrit world for "letter" also means changing, therefore, "without letters" can mean unchanging. Does this mean letters are permanent? They are not. So in what sense are they unchanging? The definition of a letter in *Awarenesses and Knowers* is: the tone of a language that is the basis for composing words and phrases. Here unchanging (unalterable) means the intonation of a language by which one understands meanings.

Chandrakirti's autocommentary says:

> Abiding in only the conventional truth is to indicate the ultimate. Also, from bearing in mind the indication of the ultimate, the ultimate will be attained.

The conventional truth is the basis in dependence on which one generates an understanding of ultimate truth, and the ultimate truth is the basis in dependence on which one attains nirvana. "Bear in mind" means to hear teachings on emptiness and then reflect on them, thereby generating a

wisdom arisen from thinking, and then, through meditating on them, to develop a wisdom arisen from meditation, whereby one attains nirvana.

> As taught in the *Treatise* [*on the Middle Way*, (v. 24.10)]:
>
> Not depending on the conventional,
> The ultimate will not be indicated.
> Not realizing the ultimate,
> Nirvana will not be attained.
>
> There, indication of the ultimate occurs through the method and is the effect; this [is the] meaning of "arisen from the method," "effect," "that to be attained" and "that to be realized."

The realization of conventional truth is the basis or cause from which there arises the realization of ultimate truth; from the realization of ultimate truth there is the attainment of nirvana.

Friday morning, 17 November 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 288) says:

> Chandrakirti says:
>
> *Those outside the path of Venerable Acharya Nagarjuna*
> *Lack the method for attaining peace.*
> *They have deviated from the truths that are conventional and thusness.*
> *Due to having deviated from them, there is no attainment of liberation.* [6.79]
>
> Therefore, through mistaken masters who explain the interpretable meaning [teachings] to be definitive meaning [teachings], they enter a path, a system concocted by their own conceptions, that fails to become the Buddha's intention. *Those outside the path* founded by *Venerable Acharya* Arya *Nagarjuna lack the* main *method for attaining peace*, nirvana. Why is that? [The reason is] that *those* outsiders *have* definitely *deviated from the conventional* truth and *thusness*, ultimate *truth,*. *Due to having deviated from* the two truths, as long as they do not relinquish this, *there is no attainment of liberation*.

Those who are outside Acharya Nagarjuna's teachings have deviated from the two truths because they follow Chittamatra masters who teach that there are no external objects and that there are self-cognizers. Such a path is not a method for attaining peace, nirvana.

Lama Tsongkhapa's *Illumination* (Tibetan text page 289) says:

> QUESTION: Why is liberation not attained by those who have deviated from the two truths?
> RESPONSE:
>
> *Conventional truth is the method,*
> *Ultimate truth arises from the method.*
> *Whoever does not know the distinctions of these two*
> *Enters an inferior path due to mistaken conceptions.* [6.80]
>
> An unmistaken presentation of *conventional truth is the method* for realizing ultimate truth just as it is. The realization of *ultimate truth* as it is, *arises from the method* explained before. *Whoever does not know the distinctions of these two* truths *enters an inferior path due to mistaken conceptions*.

An unmistaken understanding or realization of conventional truth is the method for achieving an unmistaken understanding or realization of ultimate truth. Those who do not know the distinction of these two truths enter an inferior path due to their mistaken conceptions.

Lama Tsongkhapa's *Illumination* (Tibetan text page 289) says:

> Hence, it is taught that without the occurrence of a faultless presentation of the conventional there is no realization of ultimate truth just as it is. Therefore, one should only be a follower of the system founded by Nagarjuna.

How is conventional truth realized? An understanding of conventional truth implies knowing the definition of conventional truth. The definition of conventional truth in the Prasangika Madhyamika system is: an object found by a valid cognizer analyzing conventionalities with respect to which a valid cognizer analyzing conventionalities becomes a valid cognizer analyzing conventionalities. The definition of an ultimate truth is: an object found by a valid cognizer analyzing the ultimate with respect to which a valid cognizer analyzing the ultimate becomes a valid cognizer analyzing the ultimate. If it is an object found by a valid cognizer analyzing conventionalities, is it pervaded by being a conventional truth? It is not. Posit! That which is an object found by a valid cognizer analyzing conventionalities but not a conventional truth is, for example, the emptiness of true existence of a sprout. This is an object found by a valid cognizer analyzing conventionalities because it is an object found by an omniscient mind realizing varieties.

Jedzun Chogyi Gyeltshen's *General Meaning* (Tibetan text page 282) gives the definition of conventional truth as: an object found by a valid cognizer of conventions with respect to which it becomes a valid cognizer of conventions.

Lama Tsongkhapa says: "Therefore, one should only be a follower of the system founded by Nagarjuna."

Lama Tsongkhapa's *Illumination* (Tibetan text page 289) says:

> In regard to establishing this very system by sutra, the *[Sutra of] the Meditative Stabilization Definitively Indicating Thusness* says:
>
> > The Exalted Knower of the World, without listening to others,
> > Himself indicated the two truths.
> > There is the conventional, likewise, the ultimate;
> > There is no third truth whatsoever.
>
> This means that Buddha indicated two truths under his own power and indicated that all objects of knowledge are definite in number as the two truths.

All objects of knowledge are definite in number as the two truths.

- The definition of conventional truth is: an object found by a valid cognizer analyzing conventionalities with respect to which a valid cognizer analyzing conventionalities becomes a valid cognizer analyzing conventionalities.
- The definition of an ultimate truth is: an object found by a valid cognizer analyzing the ultimate with respect to which a valid cognizer analyzing the ultimate becomes a valid cognizer analyzing the ultimate.

There is no third truth other than these two.

Lama Tsongkhapa's *Illumination* (Tibetan text page 289) says:

Then, [this sutra] says:

> For this reason, migrating beings will generate faith
> In the Sugata for the sake of happiness.
> The Conqueror, for the welfare of migrating beings,
> In order to benefit the world, taught the conventional.

This [verse] indicates [the Buddha's] purpose in teaching the conventional.

The Buddha's purpose in teaching the conventional is to generate faith in the continua of sentient beings in the incontrovertible law of actions and results, on the basis of which they put this into practice and eventually attain enlightenment.

Lama Tsongkhapa's *Illumination* (Tibetan text page 289-90) says:

> Whichever of the six migrating beings, the host of sentient beings, was indicated –
> Hell sentient beings, animals, and hungry ghosts,
> The state of anti-gods, as well as human beings and gods –
> The Lion of Men designated them as conventionalities.
>
> Inferior lineages as well as high lineages,
> Rich families and poor families,
> Assemblies of slaves and, likewise, assemblies of servants,
> The host of women, men, and hermaphrodites;
>
> However many distinctions of migrators are appropriate,
> You, the Matchless One indicated the world.
> Having borne this in mind due to skill in conventional truth,
> The Knower of the World indicated it to humanity.

This [verse] states the way in which [the Buddha] indicated the conventional.

These three verses show how the Buddha indicated conventional truth to different kinds of sentient beings.

Lama Tsongkhapa's *Illumination* (Tibetan text page 290) says:

> Migrating beings who enjoy them will engage in
> The eight concerns of migrating beings in cyclic existence:
> Gain and non-gain, fame and disgrace,
> Praise and criticism, happiness and suffering.
>
> When gain is found, attachment to it is produced.
> When there is no gain, that too is disturbing.
> The others that are not indicated should be known in this way.
> These eight diseases will harm their continua.

Enjoying conventionalities through adhering to them as truly existent, one engages in the eight worldly concerns. This says that one circles in cyclic existence through being tormented by them and that by indicating the first two of the eight concerns one should understand the remaining ones which are not indicated.

Due to adhering to phenomena as truly existent, one engages in the eight worldly concerns whereby one is continually tormented by sufferings. For this reason, one should strive to become free from the

eight worldly concerns. The remaining six worldly concerns are to be understood through the explanation of the first two.

Are gain and non-gain themselves worldly concerns? In other words, are simple gain and non-gain worldly concerns or is it the happiness that arises from gain and the suffering that arises from not gaining that are worldly concerns? Think about it.

Lama Tsongkhapa's *Illumination* (Tibetan text page 290) says:

> Those propounding the conventional as the ultimate,
> Should be understood as having erroneous intelligence.
>
> By saying that those who propound "Conventionalities, the six migrating beings and so forth, are ultimately, that is, truly, existent" should be understood as having mistaken intelligence, it is taught that the our own [Buddhist] schools, those who assert this, are mistaken tenets.

Which Buddhist schools propound that conventionalities are ultimately or truly existent? They are the Vaibhashika, Sautrantika, and Chittamatra schools.

Lama Tsongkhapa's *Illumination* (Tibetan text page 290) says:

> Those who propound the unattractive as attractive, suffering as happiness,
> The nature that is selfless as a self,
>
> Those who propound impermanent phenomena saying "permanent," and
> Anyone who enjoys that, that is, anyone who abides in signs,
> Upon hearing the teachings of the Tathagata,
> Frightened and not realizing them correctly, they abandon them.
>
> Having abandoned the Sugata's teachings,
> They experience unbearable suffering as hell sentient beings.
> Although seeking happiness, due to the improper
> The childish will experience hundreds of sufferings.
>
> [These verses] indicate that those outsiders who have familiarized themselves with the four mistaken [conceptions] and are polluted by tenets that accept them, upon hearing the teachings of the Buddha abandon them and by the force of that become hell sentient beings. Although seeking the happiness of liberation, due to an improper method, not only will they not find that, they will be tormented by many sufferings.

The four mistaken conceptions are: (i) conceiving the impermanent to be permanent, (ii) conceiving the suffering to be happiness, (iii) conceiving the impure to be pure, and (iv) conceiving the selfless to be a self. These are related to the four attributes of true sufferings – impermanent, suffering, empty, and selfless – in the following way:

1. The mistaken conception conceiving the impermanent to be permanent is related to the attribute of impermanence.
2. The mistaken conception conceiving the suffering to be happiness is related to the attribute of suffering, or misery.
3. The mistaken conception conceiving the contaminated aggregates, which are empty of being permanent, partless, and independent, that are impure to be pure is related to the attribute of empty.

4. The mistaken conception conceiving the selfless to be a self – the conception that although there is no self-sufficient substantially existent self, there is such a self – is related to the attribute of selfless.

Lama Tsongkhapa's *Illumination* (Tibetan text page 290) says:

> When someone fully realizes with an unmistaken awareness
> The teachings that benefit the world,
> Through complete abandonment like an old snakeskin,
> Having passed beyond all existences, there will be peace.
>
> "All these phenomena are devoid by nature,
> Ultimately empty and signless";
> Those who generate joy on hearing this
> Will attain unsurpassed enlightenment.
>
> You, the Conqueror, see the aggregates as devoid,
> Likewise, also are the elements and spheres.
> The city of the senses is devoid of signs.
> Everything is also seen by you, the Sage, as it is.
>
> [These verses] indicate that when the meaning of the profound teachings is unmistakenly realized, one will be liberated from cyclic existence. Then, with regard to the thought "How is this realized?," it is taught that through rejoicing upon hearing the advice that "All these phenomena are devoid by nature" and so forth, when the meaning of this is realized one will attain enlightenment. Through indicating the conventional before, the ultimate is indicated.

This is a presentation of ultimate truth saying that all phenomena, the aggregates, elements, and spheres, are empty of inherent existence. By realizing the ultimate truth, one will attain nirvana.

Lama Tsongkhapa's *Illumination* (Tibetan text page 291) says:

> "The elements" are the earth element and so forth. The "spheres" are forms, sounds, and so forth.

The elements are the six, the earth element and so forth. The spheres are the six external spheres, forms, sounds, and so forth. Is there a difference between earth and the earth element, fire and the fire element, and so forth? Is there a difference between an earth particle and the earth element?
Student: Earth and earth element are not the same.
Geshe Jampa Gyatso: What is the difference?
Student: Earth is that which contains the earth element, water element, fire element, etc., although the earth element is predominant. The earth element is that which is hard and solid.
Geshe Jampa Gyatso: The definition of earth is that which is solid. It would follow that earth is pervaded by being the earth element!

Lama Tsongkhapa's *Illumination* (Tibetan text page 291) says:

> How can there be liberation for those who are devoid of the knowledge that conventionalities are mere imputations and that ultimate truth is the lack of inherent existence? Therefore, those who propound mere consciousness have only entered an erroneous path. The conventional truth indicated here is the method.

This refers to the Chittamatrins who propound mere consciousness (consciousness only).

QUESTIONS AND ANSWERS

Student: Could Geshe-la please explain why for Prasangikas it is not necessary to accumulate infinite merit in order to abandon the conception of a self of phenomenon which is an affliction?
Geshe Jampa Gyatso: The conception of a self of phenomena is an afflictive obstruction, therefore, in order to abandon it is necessary to accumulate merit. However, if by infinite merit you mean three countless great eons, then that is not necessary. According to the Prasangika Madhyamika system one can abandon the afflictive obstructions even in a single human lifetime without the need to accumulate merit over three countless great eons. The *Ornament for Clear Realizations*, which is written from the viewpoint of the Svatantrika Madhyamikas, says that hearers need to accumulate merit for three lifetimes, solitary realizers for a hundred eons, and bodhisattvas for three countless great eons. According to the Svatantrika Madhyamikas the conception of true existence is a knowledge obstruction, whereas according to the Prasangika Madhyamikas it is an afflictive obstruction. That the conception of a self of phenomena is an afflictive obstruction and that hearers and solitary realizers have the realization of the selflessness of phenomena are proved by the Prasangika Madhyamika system based on seven scriptural authorities and three reasonings.

Student: According to Chittamatra, the eye sense power is a latency. In the Chittamatra system, is this eye sense power a form, a non-associated compositional factor, or a consciousness? In *Mind in Tibetan Buddhism* by Lati Rinpoche (page 70), it says that the eye sense power in Chittamatra is a "potency… and is a 'form'." Would Geshe-la agree with this? If it is form, is this contradictory because latencies are non-associated compositional factors?
Geshe Jampa Gyatso: The word 'potency' (*nus pa*) can be interpreted in different ways. When it is taken to mean a latency, it is not form, whereas when it is taken to mean that which has the potential (the ability) to perform a function, a potency can be a form, for example, an eye sense power. Chandrakirti's *Supplement* says:

> *The potential that is the basis of its respective consciousness,*
> *Is conceived calling it 'a physical eye sense power.'"* [6.62]

In the Chittamatra system a potency is neither form nor consciousness; it is a non-associated compositional factor.

Student: Regarding the causal condition, the empowering condition, the observed object condition, and the immediately preceding condition of an eye consciousness, are they all posited as latencies in Chittamatra? If so, are they all the same latency?
Geshe Jampa Gyatso: They are not all posited as latencies because an immediately preceding condition is not a latency or a potency because it is a consciousness. According to the Chittamatrins there are two types of observed object conditions: an appearing observed object condition and an observed object condition that is a potency. The appearing observed object condition of an eye consciousness apprehending blue is blue. The observed object condition that is a potency of an eye consciousness apprehending blue is a potency that is able to bring about the appearance of blue to an eye consciousness. This is explained in Khedrup Je's *Dose of Emptiness*.

Student: Within the context of the two types of emptiness, emptiness in term of 'being' and emptiness in terms of 'existing' – is the emptiness in terms of 'being' a self-emptiness and the emptiness in terms of 'existing' an other-emptiness?

Geshe Jampa Gyatso: The Prasangika Madhyamikas say that if it is an emptiness it is pervaded by being a self-emptiness, whereas in the Great Completion school (Dzog Chen) it is said that other-emptiness is the highest view. One can refer to the teachings of His Holiness the Dalai Lama on this subject or those of Khenpo Tsultrim Gyatso who calls the view of other-emptiness the Great Middle Way.

Student: According to Prasangika, which of the selflessnesses asserted by the lower schools is self-emptiness and emptiness in terms of 'being'?
Geshe Jampa Gyatso: The emptinesses asserted by the lower schools are not the same as the emptiness asserted by the Prasangika Madhyamikas, yet they can be considered self-emptiness. Other-emptiness is illustrated by a Dharma center that is empty of an assembly of Dharma practitioners or a hand that is empty of money.

Student: Within the context of presenting the two modes of negating, Lama Tsongkhapa (*Illumination*, Tibetan text page 262) states that "taking the emptiness of true existence of the bases of present appearances to be a nihilistic emptiness (nothingness) and setting it aside, then taking another appearance to be the basis of emptiness and, rather than presenting it as empty of being the object of negation, presenting it as empty of existing as a thing, is not the system of any Madhyamika or Chittamatrin." Does this 'thing' refer to an object being empty of itself?
Geshe Jampa Gyatso: I have to think about this. There was some problem with this passage in that in Chandrakirti's autocommentary there seems to be a spelling mistake in the Tibetan in that this text says 'empty fist' rather than 'nihilistic emptiness.'

END

Monday afternoon, 20 November 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 291-2) says:

> The *King of Meditative Stabilizations Sutra* says:
>
> Whatever is heard and whatever is taught
> About phenomena that are without letters,
> By superimposing on the immutable,
> Nonetheless there is hearing and teaching.
>
> The first two lines indicate that [phenomena] do not exist ultimately. Having superimposed on, that is, having imputed by conception to, that which is ultimately without letters, one hears and explains. Although the equivalent [Sanskrit] term for "letter," "*akshara,*" means both "without letters" and "immutable," if it is translated here as "without letters" that is fine. Although it is indeed explained in many [texts] that superimposition is, for example, to think "The non-existent exists and that which is not is," it is not only that, it is also that which is posited through imputation by conception in general.

There are no phenomena, including letters and so forth, that exist ultimately or truly, likewise, hearing and teaching do not exist ultimately. "Superimposing" refers to superimposing by conception; by superimposing ultimate or true existence one then hears and teaches. The Sanskrit word "*akshara,*" refers to both "without letters" and "immutable." A letter is posited as the tone of a language, whereas "without letters" refers to without inherent existence and true existence.

Superimposition is a conception that imputes existence to the non-existent and being to that which is not. On the other hand, deprecation is to impute non-existence to the existent and not being to that which is. However, superimposition in this context is not as it is usually understood, rather it is "that which is posited through imputation by conception in general."

Lama Tsongkhapa's *Illumination* (Tibetan text page 292) says:

> Through abiding in the conventional truth alone the ultimate is taught. In addition, one attains the ultimate, nirvana, through comprehending the ultimate. *Fundamental Wisdom* says:
>
> Without depending on the conventional
> The ultimate cannot be taught.
> Without realizing the ultimate,
> Nirvana will not be attained.

The understanding of the ultimate depends on the understanding of the conventional. Having realized the basis, a conventional truth, one realizes the ultimate. Having realized the ultimate, one attains peace, nirvana.

Lama Tsongkhapa's *Illumination* (Tibetan text page 292) says:

> 3B1C-2B3E-2A1B-2B2B-4 Indicating that the two refutations of other-powered phenomena and worldly conventions are not similar

Chandrakirti's autocommentary says:

> [The Chittamatrins] mention here: As you [Madhyamikas] mention that without much consideration for us, now we will not be patient toward you! If the [naturally existing] entity of other-powered [phenomena] is excluded to show oneself off as skilled in the mere rebuttal of another's position and because it is unreasonable due to the acceptability [of reasoning] – well then, now, because it is unreasonable due only to the acceptability [of refuting production from self and others, etc.] that was mentioned, the deceptive [truth] renown to you will be excluded.

"Now we will not be patient toward you" means that now the Chittamatrins will respond to the Prasangika Madhyamikas' refutation of the inherently existent other-powered phenomena asserted by the Chittamatrins. Their response is that, if the Prasangika Madhyamikas refute inherently existent other-powered phenomena, they also refute worldly conventions. The Prasangika Madhyamikas respond saying that the refutation of inherently existent other-powered phenomena and the refutation of worldly conventions are different.

Chandrakirti's autocommentary says:

> [The Madhyamikas reply:] If you, having given poisoned food – by posing as a dear friend – to one who stole the collection of wealth accumulated through hundreds of hardships from beginningless time, were to rejoice by giving harm in return while stealing it back, how could it be? We will prosper and become virtuous.

This is the Prasangika Madhyamikas reply to the Chittamatrins' accusation.

Chandrakirti's autocommentary says:

> Like this:
>
> *The way you assert other-powered things,*
> *I do not accept even the conventional.*
> *For an effect, although non-existent, I mention*
> *These "exist" in compliance with the world.* [6.81]
>
> Just as you, through independent abidance, mention in your own scriptural system an entity of other-powered phenomena that is to be borne in mind by an arya's exalted wisdom; I do not [accept] the deceptive like that.

The way in which the Chittamatrins assert other-powered phenomena, that is, as inherently existent, is not the way in which the Prasangika Madhyamikas assert the conventional. This is because the Prasangika Madhyamikas do not assert worldly conventionalities to be inherently existent.

Gedun Drup's *Mirror of the Clarification of the Thought* (Tibetan text page 44), as translated by Martin Willson, says:

> 3B1A-6C5A-1A2B-2B4 Refutation of dependent phenomena and worldly convention are not the same

You may say, "If you refute inherently existent dependent phenomena, that is the same as refuting worldly convention."

> *The way you maintain dependent things to be*
> *I do not accept conventional things are, even.*
> *For the result's sake, though these don't exist,*
> *With regard to the world I say they do exist.* [6.81]

It is not the same, since I do not accept that even the conventional is as you Chittamatrins assert the functional thing of a dependent phenomenon to be, inherently existent, but in order to attain the result of realizing absolute reality, although this form and other [sense objects] do not exist inherently, speaking with regard to the world I say that they do exist.

The Prasangika Madhyamikas say that they do not assert worldly conventions in the same way that the Chittamatrins assert other-powered phenomena, that is, as inherently existent. The Prasangika Madhyamikas assert that which is renowned in the world to exist as existing and do not assert that which is renowned in the world to not exist as existing. The Prasangika Madhyamikas say that when they refute inherently existent other-powered phenomena this does not imply that they refute worldly conventions. These refutations are not the same because the Chittamatrins assert other-powered phenomena to exist inherently, whereas the Prasangika Madhyamikas do not assert worldly conventions to exist inherently. According to the Chittamatrins other-powered phenomena exist inherently because if they were not inherently existent they would not exist at all. For the Prasangika Madhyamika system worldly conventions do not exist inherently but do exist. Therefore, in the Prasangika Madhyamika system 'not existing inherently' and 'existing' are not contradictory.

Similarly, although worldly beings say that such-and-such exists, they do not say that it exists inherently. The Prasangika Madhyamikas propound things to exist in the same way in which the worldly propound them to exist. For this reason, the Prasangikas are also called "those who propound in accordance with that renowned in the world."

The Prasangika Madhyamikas then tell the Chittamatrins to debate with the world in order to understand what the worldly say. However, in reality the Chittamatrins would not be able to debate with the worldly because the worldly would not understand their assertions about phenomena being the nature of the mind and mind being inherently existent.

Chandrakirti's autocommentary says:

> If asked: Well then, how?
>
> Although not existent, due to being renowned to only the world, "exist" is expressed on only the world's side, because subsequently expressing that is the method for overcoming that.
>
> As was taught [in *Indicating the Three Vows*]:[49]
>
> > The Bhagavan [said]: The world disputes together with me, yet I do not dispute with the world since whatever the world accepts as existent, I also accept that as existent; whatever the world accepts as non-existent, I also accept that as non-existent.

The Bhagavan proclaims in accordance with the world. Although things do not exist inherently, he proclaims them to exist because they are renowned to the worldly to exist. This way of proclaiming is "the method for overcoming" the bad tenets of the world, then, having overcome them, the Bhagavan explains the way to attain the realization of reality.

Chandrakirti's autocommentary says:

> Moreover, this deceptive [truth]:
>
> *Just as there is no existence for arhats*
> *Engaged in peace through abandoning the aggregates, like that,*
> *If non-existent even for the world, similarly*
> *Also through the world, I would not say this "exists."* [6.82]
>
> Just as the deceptive does not exist in any form for arhats – those engaged in the sphere of the peace of nirvana without remainder of the aggregates – similarly, if it did not exist even for the world, like the aggregates and so forth of the arhat, also in dependence on the world, I would not

[49] Attributed by LTK, p. 308. Sanskrit uncertain.

say these "exist." Therefore, I accept the deceptive by way of reliance on others – not independently.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

If, as for the arhats who have abandoned
Their aggregates and entered peace, they don't exist,
They did not even for the world, accordingly
Even for the world, I would not say they existed. [6.82]

Without regard of the world, I do not accept the conventional; for if, just as form and the other [sense objects] do not exist with respect to the perception of arhats who have abandoned the aggregates and entered the sphere of tranquillity, they likewise did not exist even for the world, then I would not say they did exist even for the world as for those without remainder.

A foe destroyer who has a nirvana without remainder is absorbed in meditative equipoise and has no appearance of forms and so forth. Forms and so forth do not appear to such a foe destroyer due to the vanishing of the appearance of conventionalities. What is a foe destroyer abiding in a nirvana without remainder?
Student: For the Prasangika Madhyamikas a nirvana without remainder is when a foe destroyer is in meditative equipoise and there is no appearance of true existence, whereas a nirvana with remainder is when a foe destroyer is in subsequent attainment and has the appearance of true existence.
Geshe Jampa Gyatso: That is right according to the Prasangika Madhyamikas. For them 'the remainder' is the appearance of true existence; therefore, one who does not have this appearance is 'without remainder." On the other hand, for the other schools 'with remainder' means to have suffering aggregates.

Whatever the worldly say exists is also propounded by the Prasangika Madhyamikas to exist. "The remainder" in this context refers to the remainder of the aggregates. 'The aggregates' are asserted differently according to the various schools, for the Prasangika Madhyamikas they are the appearance of true existence, whereas for the other schools they are the aggregates that are together with suffering. In the Prasangika Madhyamika system a nirvana without remainder exists only for those in meditative equipoise, whereas a nirvana with remainder exists for those in subsequent attainment. How are 'with remainder' and 'without remainder' defined by the Svatantrika Madhyamikas? For the Prasangika Madhyamikas one without remainder is pervaded by being in meditative equipoise, is it the same for the Svatantrika Madhyamikas?
Student: No.
Geshe Jampa Gyatso: Therefore, there is someone in subsequent attainment who is without remainder?
Student: Yes. The schools lower than the Prasangika Madhyamika interpret 'remainder' as the contaminated aggregates, therefore, for them foe destroyers, whether in meditative equipoise or not, are still with remainder.
Geshe Jampa Gyatso: Is there a difference between the False Aspectarian and True Aspectarian Chittamatrins?
Student: There is a difference, this being that True Aspectarian Chittamatrins say that when a nirvana without remainder is attained the continuum ceases, whereas for the False Aspectarian Chittamatrins when a nirvana without remainder is attained the continuum does not cease.
Geshe Jampa Gyatso: That is right. This is because True Aspectarian Chittamatrins say that there are three final vehicles, not just one. The True Aspectarian Chittamatrins say that when a nirvana without

remainder is attained the continuum ceases and all that remains is the sphere of phenomena. This can be understood to mean either that the aggregates completely cease to exist or that such a person is completely absorbed in meditative equipoise. In the True Aspectarian Chittamatra school when a foe destroyer with remainder becomes a foe destroyer without remainder has he abandoned the two obstructions? He has not abandoned them by means of the force of antidotes, but has abandoned them in the sense that the basis of the obstructions, the aggregates, has become non-existent. The aggregates have absorbed into the sphere of phenomena and therefore no longer exist. Because the aggregates are eliminated, the obstructions that are based on them are also eliminated. For example, when the sun shines in the morning, the darkness that was previously there is eliminated. What are darkness and light? In *Collected Topics* they are said to be two of the eight branches of color, therefore, they are color. Darkness and light are mutually opposite. Likewise, the wisdom realizing reality and the ignorance that is the conception of true existence are mutually opposite.

Tuesday morning, 21 November 2000

Chandrakirti's autocommentary says:

> It is accepted by only the world. Therefore, it is worthy to be excluded if excluded in dependence on only those who accept it; it is not in dependence on others (the Prasangikas). To explain the statement:
>
> *If you are not harmed by the world,*
> *Refute this with respect to the world itself!*
> *You and the world should debate about this and*
> *Afterwards I shall rely on the strong.* [6.83]
>
> We would abide in extremely great difficulty in order to overcome the deceptive of the world, whereas you dispel the deceptive of the world. If you are not harmed by the world, I shall also assist you! But, since there is harm from the world, I shall rely upon indifference. "You and the world should debate about this and," there, if you win, therefore, we shall rely on you by being in agreement with this. But, if you are defeated by the world, then we shall rely on the very strong world.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *If the world does you no damage, then*
> *With respect to this same world, refute these!*
> *Let you and the world debate about this,*
> *And afterwards we shall rely upon the stronger.* [6.83]

It follows that you Chittamatrins cannot refute the external objects well known in the world. For if the world does not harm you, just you refute these external objects with regard to this same world! You and the world should debate about this, and afterwards we shall rely on whoever is the stronger. And the way of the world is the stronger.

If the Chittamatrins debate with the worldly and win, the Prasangika Madhyamikas say that they will rely on and assist them. However, since the Chittamatrins' position is invalidated by the worldly, the Prasangika Madhyamikas will abide in equanimity prior to the debate without supporting either the Chittamatrins or the worldly. After the debate the Prasangika Madhyamikas will rely on whomever is the winner.

Lama Tsongkhapa's *Illumination* (Tibetan text page 292) says:

> CHITTAMATRINS: As you [Prasangika Madhyamikas] said the above without much regard for us, now we too will not be patient with you! If you eliminate the entity of inherently existent other-powered [phenomena] in order to show yourselves to be skilled in the mere rebuttal of others' position and because it is unreasonable by logical reasoning, then now, because it is unreasonable only by the logic that refutes production from self and others, the conventionalities renowned to you are eliminated.

The Chittamatrins say that when the Prasangika Madhyamikas refute inherently existent other-powered phenomena, they also refute the conventionalities renowned in the world.

Lama Tsongkhapa's *Illumination* (Tibetan text page 292) says:

> PRASANGIKA MADHYAMIKAS: That would be as if you, having given poisoned food, by posing as a friend, to the one who stole a collection of wealth amassed through hundreds of hardships from beginningless time, were to rejoice in stealing it back again. Similarly, if we benefit you by stealing the object that is the conception of other-powered phenomena to be truly existent, if in return you delight and rejoice due to the harm inflicted upon us, in dependence upon that we will become of high status and virtuous.

This is similar to Chandrakirti's autocommentary. Who is the thief who steals the collection of wealth and what is that collection of wealth? The wealth is the collection of merit amassed through hundreds of hardships, whereas the thief is the conception of true existence. The Prasangika Madhyamikas say: "The conception of true existence has been stealing the collection of merit. The Chittamatrins assist the conception of true existence by saying that other-powered phenomena are truly existent. Although you Chittamatrins have been under the control of the conception of true existence since beginningless time, you still assist the conception of true existence which is like someone who poses as a friend and gives poisoned food to you. That conception of true existence has stolen the collection of merit before and is still stealing it even now." The example given here is of someone who has many material things that have been amassed over a long time, but then another person, posing as a friend, steals them away. The Prasangika Madhyamikas say that if you Chittamatrins were to help that thief is would not be beneficial because they would be causing him to create more negativities.

This passage, taken from the autocommentary, is not further explained by Lama Tsongkhapa. Then Lama Tsongkhapa says: "Similarly, if we benefit you by stealing an object that is conceived to be a truly existent other-powered phenomenon, if in return you delight and rejoice due to the harm inflicted upon us, in dependence upon that change we will become of high status and virtuous." The Prasangika Madhyamikas say: "Since there is no true existence, I steal the conception of true existence away from you and thereby benefit you."

Lama Tsongkhapa's *Illumination* (Tibetan text page 293) says:

> Chandrakirti says:
>
> *The way in which you assert other-powered things,*
> *We do not assert even conventionalities.*
> *For the sake of the result, even though they do not exist,*
> *Taking the perspective of the world, we proclaim "They exist."* [6.81]
>
> In that case, *the way in which you* Chittamatrins *assert other-powered things*, that is, as established by way of their own entity, is to say "They exist for our system" through taking that which is comprehended by a superior's exalted wisdom to be independent (self-powered) in accordance with what is said in *Thirty Verses*: "Without seeing that is not seen." However, *we do not assert even*

> *conventionalities* to be inherently existent. Why? *Even though they*, the aggregates and so forth, *do not* inherently *exist*, since they are renowned only in the world, we *take* only *the perspective of the world* and then *proclaim "They exist*."

The Prasangika Madhyamikas do not assert conventionalities to be inherently existent because phenomena, such as the aggregates, are without inherent existence. However, the aggregates and so forth exist because they are renowned to exist in the world. In this way, the Prasangika Madhyamikas proclaim in accordance with the worldly who say that the aggregates exist, but do not say that the aggregates exist truly or inherently.

Lama Tsongkhapa's *Illumination* (Tibetan text page 293) says:

> Here, there are two ways of positing the aggregates and so forth that are conventionalities in the perspective of worldly conventions. We Madhyamikas, positing them as conventionalities, assert them in the perspective of a valid cognizer of conventions; we do not posit them in the perspective of [a consciousness of an ultimate] type. The aggregates and so forth are posited as inherently existent in some cases from the point of view of a [particular] purpose; however, they are not asserted [to be inherently existent] in our system.

There are two ways of positing the aggregates and so forth in the perspective of worldly conventions. The first way is the way in which the Prasangika Madhyamikas posit them: they posit the aggregates and so forth in the perspective of a valid cognizer of conventions and not in the perspective of [a consciousness of an ultimate] type. In other words, for them conventionalities exist only in the perspective of a valid cognizer of conventions. The Prasangika Madhyamikas do not posit conventionalities in the perspective of a consciousness of an [ultimate] type because the aggregates and so forth do not exist in the perspective of a consciousness of the ultimate; they exist only in the perspective of a valid cognizer of conventionalities. This means that conventionalities, the aggregates and so forth, do not exist in the perspective of an exalted wisdom of meditative equipoise observing emptiness. However, for a particular purpose the aggregates and so forth are posited as inherently existent, even though they are not so asserted in the Prasangika Madhyamika system. The positing of the aggregates as inherently existent is asserted by other schools.

Lama Tsongkhapa's *Illumination* (Tibetan text page 293) says:

> Since this is asserted only in the perspective of others, the refutation of the two is not the same. [Inherently existent aggregates and so forth] are asserted in the perspective of others *for the sake of the result*, that is, a [particular] purpose. This is because, moreover, trainees are turned away from other bad tenets and because it is a method [for them] to gradually realize suchness.

The aggregates and so forth are posited on occasion as existing inherently for the purpose of turning trainees away from bad tenets and as a method for them to gradually realize suchness. For example, in the first wheel of Dharma the Buddha said that phenomena from form through the thirty-seven harmonies with enlightenment exist inherently, whereas in the second wheel of Dharma he said that phenomena from form through the exalted knower of all aspects do not exist inherently. These two presentations would seem to be directly contradictory but they were taught for a particular purpose. Buddha taught that phenomena exist inherently in order to turn trainees away from non-Buddhist tenets and to lead them into the Buddhist teachings, thereby gradually leading them to a realization of suchness. If, instead of doing so, Buddha had said right from the start that phenomena do not exist inherently those who were followers of the Vaibhashika and Sautrantika tenets would have turned away from the Buddha's teachings. Saying "turned away from other bad tenets" refers to the tenets of non-Buddhist schools and not to the tenets of the Buddhist schools.

Lama Tsongkhapa's *Illumination* (Tibetan text page 293) says:

> Hence, it is to be understood, through citing the scriptures that make this known, that this does not at all mean that all the presentations by these passages are (i) made in the perspective of others and (ii) not made in the perspective of our own system. The scripture, *Indicating the Three Vows*, says:
>
> > The worldly argue with me; however, I do not argue with the world. Whatever is asserted to exist in the world, I too assert it to exist. Whatever is asserted to not exist in the world, I too assert it to not exist.

This refers to the three verses in the root text:

> *The way in which you assert other-powered things,*
> *We do not assert even conventionalities.*
> *For the sake of the result, even though they do not exist,*
> *Taking the perspective of the world, we proclaim "They exist."* [6.81]
>
> *Just as they do not exist for foe destroyers*
> *Who, having abandoned the aggregates, have entered peace,*
> *Similarly if they do not exist even for the world,*
> *We would not proclaim "They exist" also for the world.* [6.82]
>
> *If you are not invalidated by the world,*
> *You should refute them in relation to the world itself.*
> *You and worldly beings should debate about this;*
> *Afterward we will rely on the stronger.* [6.83]

Lama Tsongkhapa says: "this does not at all mean that all the presentations by these passages are (i) made in the perspective of others and (ii) not made in the perspective of our own system." In order to prove this Lama Tsongkhapa cites the scripture *Indicating the Three Vows*.

Lama Tsongkhapa's *Illumination* (Tibetan text page 293) says:

> [Nagarjuna's] *Seventy Stanzas on Emptiness* says:
> > Abidance, production, and degeneration,
> > Existing and not existing, the inferior, equal, and special,
> > Were taught by the Buddha from the point of view of what is said in the world;
> > Therefore, not from the point of view of the perfect.
>
> This means that everything that is posited as existing, not existing, and so forth is posited from the point of view of the way in which conventions are renowned in the world.

That which is taught by the Buddha is not always from the point of view of the perfect, he also taught from the point of view of that renowned in the world. "From the point of view of the perfect" means from the point of view of their true existence; therefore, Buddha taught abidance, production, degeneration, and so forth in accordance with worldly awareness, not from the point of view of their existing truly or not. In other words, the Buddha taught abidance, production, and degeneration, existing and not existing, and so forth from the point of view of conventions, not from the point of view of whether they are truly existent or not.

Lama Tsongkhapa's *Illumination* (Tibetan text page 294) says:

Chandrakirti says:

Just as they do not exist for foe destroyers
Who, having abandoned the aggregates, have entered peace,
Similarly if they were to not exist even for the world,
We would not proclaim "They exist" also for the world. [6.82]

How do conventionalities exist? *Just as* all conventionalities *do not exist for foe destroyers who, having abandoned the aggregates, have entered* the sphere of *peace* without remainder, *similarly if* those conventionalities *were to not exist even for the world*, as is the case for those without remainder, *we would not proclaim* those conventionalities saying "*They exist*" *also* in relation to the perspective of *world*ly conventions. Therefore, we assert conventionalities in terms of their very dependence on other, that is, worldly conventions; we do not assert them as independent, without relation to worldly conventions.

According to the True Aspectarian Chittamatrins when a foe destroyer who has a nirvana with remainder attains a nirvana without remainder, all conventionalities cease. That is, they assert that his continuum, which is a compounded phenomenon, ceases and that all that remains is abidance in the sphere of phenomena.

The Prasangika Madhyamikas say: "We do not posit conventionalities relative to a foe destroyer abiding in a nirvana without remainder but posit them relative to what exists for the world." Thus, the Prasangika Madhyamikas posit phenomena to exist relative to worldly conventions and not independent of them.

Lama Tsongkhapa's *Illumination* (Tibetan text page 294) says:

We who say "Initially [conventionalities] are asserted by the world alone, therefore, since anyone's assertions can be eliminated in relation to that alone, it is fitting to dispel them; they are not [fitting to be dispelled] in relation to the other Madhyamikas," abide in meditation on the path [bearing] extremely great difficulty in order to overcome the mistaken appearances of conventionalities in our own continua.

The Prasangika Madhyamikas say that one has to meditate on a path bearing extremely great difficulty in order to overcome the mistaken appearances of conventionalities in one's own continuum. "The mistaken appearances of conventionalities" refers to the conception of true existence. All mistaken appearances are conventionalities; there are no mistaken appearances that are ultimates. The word 'conventional' (kun rdzob) of conventional truth is taken to mean mistaken or deceptive.

In short, the Buddha taught in accordance with the awarenesses of sentient beings and not from the point of view of the reality of objects.

Lama Tsongkhapa's *Illumination* (Tibetan text page 294) says:

Chandrakirti says:

If you are not invalidated by the world,
You should refute them in relation to the world itself.
You and worldly beings should debate about this;
Afterward we will rely on the stronger. [6.83]

If you are not invalidated by the world, *you should refute those* conventionalities *in relation to the world itself*. If you are able to refute [the world] by means of your reasonings, we too will ally ourselves with you, that is, we will assist you. However, since you are invalidated by the world, we, without assisting you, will abide in equanimity. The two, *you and worldly beings*, *should debate about this*; *after* the debate *we will rely on* whomever is *the stronger*. If you are victorious over them, we will rely on you by accepting that.

The Prasangika Madhyamikas say: "We do not debate with the world, whereas you Chittamatrins should debate with the world. If you win the debate, we will support you. However, you Chittamatrins are unable to invalidate the world, therefore, we will abide in equanimity prior to the debate and afterward will support whoever wins the debate."

Lama Tsongkhapa's *Illumination* (Tibetan text page 295) says:

> On the other hand, if you are defeated by the world, you should rely on the world which is very strong. In that way, since the non-existence of external objects is invalidated by a valid cognizer of conventions, external objects cannot be established to not exist.

That there are no external objects is invalidated by a valid cognizer of conventions, therefore, the Chittamatrins cannot establish external objects to not exist.

Lama Tsongkhapa's *Illumination* (Tibetan text page 295) says:

> OBJECTION: Since there do not exist partless particles, the Chittamatrins, by means of the reasoning that refutes external objects composed of them, do not repudiate external objects that are directionally partless.
> RESPONSE: It is not said that they are not repudiated by a valid cognizer. Although they are repudiated, it is not necessary for external objects to not exist. Hence, although partless moments of consciousness and the continuum that justifies them are repudiated, it should be understood that consciousness is not repudiated.

Chittamatrins negate a composite of partless particles, as do the Prasangika Madhyamikas. However, although there are no external objects that are a composite of partless particles, according to the Prasangika Madhyamikas external objects still exist.

Tuesday afternoon, 21 November 2000

The Chittamatrins do not assert objects composed of partless particles and refute others' assertions regarding external objects composed of partless particles. Someone thinks: "Since there do not exist partless particles, the Chittamatrins, by means of the reasoning that refutes external objects composed of them, do not repudiate external objects that are directionally partless." The response is "It is not said that they are not repudiated by a valid cognizer." Although external objects that are directionally partless are refuted, external objects are not repudiated. Jedzun Chogyi Gyeltshen's *General Meaning* (Tibetan text page 110) says:

> Although in this system partless consciousness is impossible, one should analyze the refutation and positing of the existence and non-existence of partless moments of consciousness. That there are many is to be understood from speech.

In the Chittamatra system there are no directionally partless particles. This is the same in the Prasangika Madhyamika system, but, as it says in this text, it should be analyzed.

Lama Tsongkhapa says: "Hence, although partless moments of consciousness and the continuum that justifies them are repudiated, it should be understood that consciousness is not repudiated." Are there partless moments of consciousness? There are not. Since they do not exist, a continuum composed of them cannot exist. The Vaibhashika school asserts directionally partless particles and partless moments of consciousness which are ultimate truths. This is because this school defines an ultimate truth as: a phenomenon that is such that, if it were broken or mentally separated into parts, the mind apprehending that object would not cease. They define a conventional truth as: a

phenomenon that is such that, if it were broken or mentally separated into parts, the mind apprehending that object would cease.

Lama Tsongkhapa's *Illumination* (Tibetan text page 295) says:

> OPINION: When the other system repudiates partless external objects, the unmistaken sense consciousnesses to which they appear are repudiated. Since a mistaken sense consciousness cannot posit an object, external objects are repudiated.

Someone says that if partless external objects are repudiated, then the unmistaken sense consciousnesses to which they appear are also repudiated. On the other hand, according to the Prasangika Madhyamika system a mistaken sense consciousness can posit an external object. For example, a mistaken sense consciousness that takes a form as its object posits that form. Because the object of negation, true existence, appears to a sense consciousness, this sense consciousness is mistaken with respect to its appearance which is true existence, the object of negation.

Lama Tsongkhapa's *Illumination* (Tibetan text page) says:

> OPINION: Although here a mistaken sense consciousness cannot posit a true object of comprehension, it assists in positing a false object of comprehension.

Someone else says that a mistaken sense consciousness cannot posit a true object of comprehension but that it assists in positing a false object of comprehension. For example, an eye consciousness of an ordinary being apprehending a form posits that form. To that eye consciousness, the form appears to be exist truly. Therefore, to that eye consciousness of an ordinary being form appears to exist from its own side. Does it exist as it appears? It does not because it appears to exist from its own side but does not exist from its own side.

Lama Tsongkhapa's *Illumination* (Tibetan text page 295) says:

> Aryadeva also asserts that in his *Four Hundred Stanzas* saying:
>
> "One exists, one does not exist."
> It is not in suchness; it is also not for worldly beings.
>
> This is because it is taught that distinguishing objects and consciousnesses as existing and not existing is not the presentation of either of the two truths. Therefore, distinguishing them in this way is also not the assertion of Venerable Nagarjuna.

What does "One exists, one does not exist" mean? "One exists" means that external objects exist, whereas "one does not exist" means that self-cognizers and inherently existent consciousnesses do not exist. "Objects and consciousnesses" refers to external objects and self-cognizers. Lama Tsongkhapa says: "distinguishing objects and consciousnesses as existing and not existing is not the presentation of either of the two truths." This is also not Nagarjuna's assertion because distinguishing objects and consciousnesses as existing and not existing is not the meaning of distinguishing the two truths.

"It is not in suchness; it is also not for worldly beings." Perhaps this means that self-cognizers do not exist in reality and do not exist in worldly conventions.

Lama Tsongkhapa's *Illumination* (Tibetan text page 295) says:

> 3B1C-2B3E-2A1B-2B2C Indicating that the term 'only' of that called Mind-Only (Chittamatra) does not refute external objects

1 Explaining the intention of teaching mind-only in the *Sutra on the Ten Grounds*
2 Indicating that the two, external objects and inner mind, are similar in existing and not existing
3 Explaining the intention of teaching mind-only in the *Descent into Lanka Sutra*

3B1C-2B3E-2A1B-2B2C-1 Explaining the intention of teaching mind-only in the *Sutra on the Ten Grounds*

A Proving, by means of the scripture of the *Ten Grounds*, that the term 'only' does not negate external objects
B Proving that very meaning also by other sutras
C The term 'only' proves that the mind is foremost

3B1C-2B3E-2A1B-2B2C-1A Proving, by means of the scripture of the *Ten Grounds*, that the term 'only' does not negate external objects

Chandrakirti's autocommentary says:

> [The Chittamatrins] mention here: If, although devoid of acceptable [analysis], you accept the deceptive out of fear of the world's harm, you should also accept mere mind due to fearing scripture's harm. As was taught [in the *Sutra of the Ten Grounds*]:
>
> > He considers it like this: These three realms are mere mind.

The Chittamatrins say to the Prasangika Madhyamikas: "Although you lack acceptable reasons, out of fear of the world's harm you accept conventionalities. This being the case, out of fear of scripture's harm you should also accept that all phenomena are only mind." They say "out of fear of scripture's harm" based on the statement "The three realms are only mind" in the *Sutra on the Ten Grounds*. While the Prasangika Madhyamikas say that the term 'only' or 'mere' in this statement does not negate external objects, the Chittamatrins say that it does negate external objects. The Prasangika Madhyamikas do not accept this interpretation of the Chittamatrins.

Chandrakirti's autocommentary says:

> [The Madhyamikas reply:] I shall expound. On the mosaic pavement of the Sutra Pitaka arranged from the *indranil* jewel (blue sapphire) of the Sugata's speech, having not grasped the distinction of its self-nature, you mistake it as actually being in the aspect of the water of propounding consciousness as a functioning thing. You, due to wishing to scoop a little bit of the water of propounding consciousness as a functioning thing, cleanse and immerse the unfired earthen jug of your intellect. When it breaks up into a hundred kinds of pieces, you will become the very object of laughter of those knowing its nature. The intention of this sutra is not as it appears to your awareness.

In brief, the Prasangika Madhyamikas say: "You Chittamatrins do not understand the essence of the Sugata's speech. Not having grasped the qualification of true existence, you propound that all things are the nature of the mind and assert functioning things to be truly existent. Like immersing an unfired earthen jug in water, whereby it breaks into a hundred pieces, your assertions that phenomena are truly existent and the nature of mind are harmed by our reasonings. When someone who knows the nature of phenomena sees your jug fall apart, you Chittamatrins will become the object of his laughter." In other words, asserting that other-powered phenomena are truly existent and that the three realms are only the nature of the mind is an object of laughter, just as is someone who scoops up water with an unfired earthen jug. Just as an unfired jug is destroyed by immersing it in water, similarly, the Chittamatrins' reasonings are destroyed when analyzed by the Prasangika Madhyamika system.

Chandrakirti's autocommentary says:

> Further, if asked: What is the meaning of the sutra here?
>
> Therefore, [the root text] explains:
>
> *That the Manifest, the approaching bodhisattva,*
> *Realizes the three existences as mere consciousness,*
> *Refuted a permanent-self creator, for the sake of realization,*
> *He realizes the creator as mind only.* [6.84]

Based on the citation from the *Sutra on the Ten Grounds*: "The three realms are only mind," this verse negates a permanent self being the creator of the world.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B1A-6C5A-1A2B-2C1A The text of the *Sutra on the Ten Stages* establishes that the word 'only' is not denying external objects

You may say, "If you accept external objects from fear of refutation by the world then you should also accept, from fear of refutation by scripture, that external objects do not exist, since in the *Sutra on the Ten Stages* it is taught that these three realms are only mind."

> *That the bodhisattva of Become or Growing Manifest*
> *Perceives the three realms are only consciousness*
> *Is to know the creator's not a permanent self.*
> *He realizes the creator is only mind.* [6.84]

Then you should understand that it follows that the word 'only' in "these three realms are only mind," does not refute external objects; for this teaching, that the bodhisattva dwelling in the sixth stage, Become Manifest, perceives the three realms as only consciousness, is so that a denial that the creator is a permanent self may be understood, and teaches that he perceives that only mind is the creator.

Who is the creator of the world? It is only mind. Stating this refutes a permanent self being the creator of the world. On the other hand, some say that the creator of the world is God, some that it is the general principal, some that it is Ishvara, and so forth. The Buddhist schools say that only mind is the creator of the world because, for example, the mind first creates a plan for a new building, the one designs it on paper, and then one actually constructs it. In this way all comes from a mental plan. There is a story about a man who mentally planned to build a big house in a particular way, then to get married, to have a son, to name him Chandrakirti, and so forth. Likewise, we too plan to study here and then later teach this subject and benefit others and so forth. Thus, the creator of the world is only mind.

Student: What about the mountains, rivers, and so on? Who plans them?

Geshe Jampa Gyatso: Even mountains, oceans, and so forth come from mind in the sense that, due to the minds of sentient beings in previous lives, actions were collected through which there arose the appearance of empty space, then wind blew, clouds gathered, water condensed, the water was stirred, mountains were formed, and so forth. This formation of the world is similar to the way in which butter is formed from churning milk.

Chandrakirti's autocommentary says:

Since it was extensively taught in the that very *Sutra* [*of the Ten Grounds*]:[50]

> [Thus, the bodhisattva] fully reflects upon dependent-arising in the aspect of the order of arisal… "Thus, the aggregate of suffering, the tree of suffering, lacking agent and feeler, this alone will be manifestly established."
>
> He considers this: "Due to strongly settling upon the agent, actions come into existence.[51] Where the agent is non-existent, there the action is also not ultimately observed."
>
> He considers this: "Like this, these three realms are mere mind; all the twelve links of existence that the Tathagata differentiated and spoke of are also dependent on solely the mind."

The bodhisattva reflects upon the twelve links of dependent-arising in the forward order thinking:

- Due to the condition of ignorance, karmic formations arise.
- In dependence on karmic formations, consciousness arises.
- In dependence on consciousness, name and form arise.
- In dependence on name and form, the six spheres arise.
- In dependence on the six spheres, contact arises (the mere coming together of object, sense power, and consciousness).
- In dependence on contact, feeling arises.
- In dependence on feeling, craving arises.
- In dependence on craving, grasping arises.
- In dependence on grasping, existence arises.
- In dependence on existence, birth arises.
- In dependence on birth, aging and death arises.

Sutra then says that due to aging and death there is lamentation and so forth. Where does it meet back to? It meets back to the root, ignorance.

The *Sutra on the Ten Grounds* says: "He considers this: 'Due to strongly settling upon the agent, actions come into existence. Where the agent is non-existent, there the action is also not ultimately observed.'" "Where the agent is non-existent" means when the agent does not exist inherently or ultimately, there action is also not ultimately observed.

The *Sutra on the Ten Grounds* says: "He considers this: 'Like this, these three realms are mere mind; all the twelve links of existence that the Tathagata differentiated and spoke of are also dependent on solely the mind.'"

Chandrakirti's autocommentary says:

> Therefore, having thus refuted a permanent-self creator, conventionally only a mere-mind creator is seen and the three realms are realized as mere consciousness.

According to Chittamatrins the term 'only' or 'mere' in the *Sutra on the Ten Grounds* negates external objects, whereas according to the Prasangika Madhyamikas it does not negate external objects, rather it negates that a permanent self is the creator.

Chandrakirti's autocommentary says:

[50] See Rahder's translation, end of section D, section E and beginning of section F, page 189.

[51] Rahder, reading the Sanskrit, has 'action is conventionally designated.'

> Bodhi (enlightenment) is the exalted wisdom of omniscience.

Here Chandrakirti gives the definition of enlightenment. The fifth chapter of *Ornament for Clear Realizations* says:

> *The exalted wisdom of the extinction and*
> *Non-production of stains is called "enlightenment."*

Wednesday morning, 22 November 2000

Chandrakirti's autocommentary says:

> One is a bodhisattva either due to having the intention – thought and consideration – for [enlightenment], or one is a bodhisattva due to having the existence – the possession – of the certainty for enlightenment, or the person – the sentient being – certain for enlightenment is the bodhisattva. The unmanifest words – the intervening words – were condensed.
>
> "Realizes" means "understands." "Approaching" is approaching the sphere of dharma. "Manifest" means "the sixth-grounder." Thus, these are the meanings of the branches.

The meaning of the word 'bodhisattva' is one who wishes to attain enlightenment for the sake of sentient beings or one thinking of enlightenment.

The word "realizes" in the root text means to comprehend or understand that the creator is only mind having negated the existence of a permanent self that is a creator. Chandrakirti says: "'Approaching' is approaching the sphere of dharma. 'Manifest' means 'the sixth-grounder.'" The word 'approaching' refers to a bodhisattva on the sixth ground, as does the name 'the Manifest.'

Lama Tsongkhapa's *Illumination* (Tibetan text page 296) says:

> CHITTAMATRINS: If, although lacking the justifiability of analysis regarding suchness, that is, establishment by [a consciousness of an ultimate] type, you assert conventionalities through fearing the invalidation of worldly beings, you should also assert mind-only through fearing the invalidation of the scriptures. For example, the *Sutra on the Ten Grounds* says:
>
> > He thinks this: "Similarly, the three realms are only mind."
>
> PRASANGIKA MADHYAMIKAS: We will explain this. The even ground of sutra composed of the sapphire jewels of the Conqueror's speech, you, without knowing they are sapphires, mistakenly transform them into the aspect of the water of propounding consciousness to be a thing. Wishing to scoop a bit of the water of propounding consciousness to be a thing, you cleanse and immerse the unfired pot of your intellect in it, then, when it breaks into a hundred pieces, you become the object of the laughter of those knowing its nature.

The Chittamatrins assert that external objects do not exist and that the functioning things that are other-powered phenomena exist inherently. The Prasangika Madhyamikas say that such a thesis is not firm but can be easily destroyed, just like an unfired pot used to scoop up water.

Lama Tsongkhapa's *Illumination* (Tibetan text page 296) says:

> The intention of this sutra is not as it appears to your awareness.

The Prasangika Madhyamikas say that the intention of this sutra is not as it appears to your, Chittamatra, awareness. According to the Chittamatrins the statement in the *Sutra on the Ten Grounds* "Similarly, the three realms are only mind" means that all phenomena are the nature of mind and that external objects do not exist. According to the Prasangika Madhyamikas this interpretation is incorrect.

Lama Tsongkhapa's *Illumination* (Tibetan text page 296) says:

> Here, moreover, what is the meaning of this sutra? Therefore, there is the [following] explanation. Chandrakirti says:
>
> *The Manifest, the bodhisattva who is approaching,*
> *Realizes that the three existences are mere consciousness.*
> *Having refuted a permanent self being the creator, in order to realize that,*
> *He realizes that the creator is mere mind.* [6.84]
>
> *The bodhisattva*, a sixth grounder, that is, *the Manifest*, his thought [directed] toward the exalted wisdom of an omniscient being, that is, enlightenment, who is *approaching* the sphere of phenomena, is said to *realize that the three existences*, i.e., realms, *are mere consciousness*, that is, mind. Therefore, *having refuted a permanent self being the creator*, *in order to realize* that a conventionality – mere mind – alone is the creator, *he*, the bodhisattva, *realizes that the creator* of the world *is mere mind*.

What is this bodhisattva on the sixth ground approaching? He is approaching the qualities of complete buddhahood. The sixth grounder is called the Manifest because the bodhisattva has attained the surpassing practice of wisdom and is able to meditate on the coarse and subtle aspects of the forward and reverse orders of the twelve links of dependent-arising.

The three higher trainings are the higher training in morality, the higher training of the mind (also called the higher training of meditative stabilization or concentration), and the higher training in wisdom. On the second ground, the bodhisattva attains the surpassing practice of morality, the higher training in morality. On the third ground, he attains the surpassing practice of patience, which is called the higher training of the mind because the mind, due to being well trained, is very stable and remains undisturbed. On the fourth, fifth, and sixth grounds the bodhisattva cultivates the surpassing practice of wisdom and on these grounds respectively gains the wisdom skilled in the coarse and subtle aspects of the thirty-seven harmonies with enlightenment, the wisdom skilled in the coarse and subtle aspects of the four noble truths, and the wisdom skilled in the coarse and subtle aspects of the forward and reverse orders of the twelve links of dependent-arising. On the sixth ground the bodhisattva attains the surpassing practice of wisdom.

Lama Tsongkhapa's *Illumination* (Tibetan text page 296-7) says:

> The *Sutra on the Ten Grounds* extensively says:
>
> > [Thus, the bodhisattva] fully reflects upon dependent and related arising in the aspect of their forward order. He thinks: "In that case, the aggregate of suffering, the tree of suffering, only that which is not a creator and a feeler is manifestly established." He thinks this: "Due to strong adherence to a creator, actions come into existence. Wherever a creator does not exist, also actions are not observed to be ultimate." He thinks this: "Similarly, the three realms are only mind. All twelve links of existence revealed, that is, taught, by the Tathagata are also dependent on only mind."

In order to understand how everything comes from the mind the *Sutra on the Ten Grounds* explains the twelve links, the first of which is ignorance. When it is said that the creator of the world is the mind,

we can understand this based on our own experience in that whatever we create it originates from the mind.

The sutra says: "Wherever a creator does not exist, also actions are not observed to be ultimate." This means that since a creator does not exist ultimately, actions also do not exist ultimately.

The statement "[Thus, the bodhisattva] fully reflects upon dependent and related arising in the aspect of their forward order" was explained in the *Ornament for Clear Realizations*. In this text is was said that the meditation on the twelve links in their forward and reverse orders is the main meditation practice of solitary realizers. Meditation on the forward and reverse orders of the twelve links is further divided into meditation on the thoroughly afflicted and meditation on the completely pure:

1. Meditation on the forward order in terms of the thoroughly afflicted is to think: "Due to the condition of ignorance, karmic formations arise; due to the condition of karmic formations, consciousness arises," and so forth.
2. Meditation on the reverse order in terms of the thoroughly afflicted is to think: "Due to what does aging and death arise? It arises from birth. Due to what does birth arise? It arises due to existence" and so forth.
3. Meditation on the forward order in terms of the completely pure is to think: "Due to the cessation of ignorance, karmic formations cease. Due to the cessation of karmic formations, consciousness ceases" and so forth.
4. Meditation on the reverse order in terms of the completely pure is to think: "Due to the cessation of what do aging and death cease? They cease due to the cessation of birth. Due to the cessation of what does birth cease? It ceases due the cessation of existence?" and so forth.

Thus, one should meditate on the twelve links in the forward and reverse orders in relation to both the thoroughly afflicted and the completely pure. There is a story in the teachings on the Stages of the Path about a man who, having become very old, was disrespectfully treated and insulted by his relatives. Due to this bad treatment, he went to a monastery to become a monk but there he was told that he was too old and lacked the roots of virtue necessary to attain liberation and could therefore not be ordained. Upon leaving the monastery sad and discouraged, Shakyamuni Buddha appeared before him and asked him what had happened. The old man explained that he had wanted to take ordination but had not been allowed to do so. However, the Buddha took him back to the monastery and told Maudgalyputra to ordain him. The old man took ordination but once again found himself insulted, this time by the younger monks. One day, when Maudgalyputra was absent from the monastery, the old man became very depressed thinking, "If I live at home I will be insulted by my relatives and if I live in the monastery I will be insulted by the younger monks, it is better if I were to die." He went to the bank of the Ganges and hung up his Dharma robe on a tree but suddenly Maudgalyputra arrived and asked him what he was doing. When the old man said that he wanted to die, Maudgalyputra ordered him to put his robes back on and to catch hold of the corner of his own robes. Maudgalyputra then flew over the ocean with the old man holding on to his robes. In the center of the ocean they landed on a mound that the old man discovered was a pile of bones. Maudgalyputra told the old man that the bones had been his own in previous lives and told him to meditate on the twelve links of dependent-arising. They sat there in meditation and the old man came to realize the forward and reverse orders of the twelve links and the coarse and subtle aspects of the four noble truths. Having gained these realizations, the old man was able to return flying by his own power. Thus, even the old should not be discouraged as it is still possible to gain high realizations.

Lama Tsongkhapa's *Illumination* (Tibetan text page 297) says:

> This sutra says that only that which is not a creator and a feeler is established and that when the meaning of mind-only is explained it is that the twelve links depend on only mind. Therefore, the term "only" in this sutra does not refute objects; instead it refutes a creator that is other than mind.
>
> The former position [is as follows]. [Asanga's] *Compendium on the Mahayana* says:
>
> > In regard to this, the scriptural authority [is as follows]. The Bhagavan in the *Sutra on the Ten Grounds* said:
> >
> > > "Similarly, the three realms are only mind."
>
> With respect to inferring mere cognition, the scriptural authority mentioned in the pair, scriptural authority and reasoning, refers to that, [the *Sutra on the Ten Grounds*]. Also [Vasubandhu's] autocommentary on the *Twenty Stanzas* cites that scriptural authority and says "mind" with the intention of that having concomitance, whereas saying "only" is explained to negate objects.
>
> The refutation like that [presented] above was first made by Bhavaviveka, then it was also made by Chandrakirti.

The *Sutra on the Ten Grounds* says that a creator, a feeler, and so forth do not exist inherently and that there is no creator other than the mind. The Prasangika Madhyamikas say that in the statement "Similarly, the three realms are only mind" the word 'only' does not refute external objects, it just refutes there being a creator that is other than mind.

"The former position" is the Chittamatra position which asserts that the word 'only' means that the three realms are only mind. On this basis, they say that external objects do not exist and that all phenomena are the nature of mind. This is stated similarly in Vasubandhu's autocommentary on the *Twenty Stanzas* which negates external objects.

"The refutation like that [presented] above" refers to the refutation of a creator other than mind; this was first refuted by Bhavaviveka and then later on by Chandrakirti, in that Bhavaviveka lived prior to Chandrakirti.

Lama Tsongkhapa's *Illumination* (Tibetan text page 297) says:

> 3B1C-2B3E-2A1B-2B2C-1B Proving that very meaning also by other sutras

Chandrakirti's autocommentary says:

> Therefore, having thus explained the meaning of the *Sutra* [*of the Ten Grounds*], because other sutras also indicate this very meaning, it is explained:
>
> > *Therefore, in order to increase the awareness of the intelligent,*
> > *In the* Descent into Lanka Sutra, *the omniscient one*
> > *Spoke this nature of vajra speech, destroying the high mountain peaks*
> > *Of the Forders, in order to discern the intention.* [6.85]
>
> To set forth the verse indicated by this "this [nature of vajra speech...]":
>
> > The person, continuum, aggregates, likewise, conditions, particles,
> > the principal, and Ishvara – these creators I explain as mind-only.
>
> This verse is set forth in the *Exalted Descent into Lanka* [*Sutra*, 2].[52]

The refutation of a creator that is other than mind is not only set out in the *Sutra on the Ten Grounds* but is also set out in the *Descent into Lanka Sutra*.

[52] Suzuki, page 70.

Gedun Drup's *Mirror of the Clarification of the Thought* (Tibetan text page 45), as translated by Martin Willson, says:

3B1A-6C5A-1A2B-2C1B Other sutras establish the same thing

Therefore, to develop the minds of the intelligent,
The All-Knowing taught in the Descent into Lanka Sutra
This speech-nature vajra, destroying the high mountain peaks
Of the non-Buddhists, in order to sharpen the meaning. [6.85]

Seeing that, as in their own treatises
The non-Buddhists speak of the person and so on,
These things are not the creators, the Conqueror
Said only mind's the creator of the world. [6.86]

Seeing that these things, the personality and so on, were not the creator, as the Extremists[53] spoke of them in this or that treatise of theirs, the Victorious One taught that the creator of the world is only mind in order to develop the minds of the intelligent, and because in that *Descent into Lanka Sutra* the All-Knowing taught this thunderbolt[54] of the nature of speech which destroys the high mountain peak of the Extremists' evil views:

"The stream of personality,
Aggregates, conditions, and atoms too,
The originator and the lord –
Creators I say are only mind."

in order to sharpen the meaning of the teaching in the *Sutra on the Ten Stages* that there is only mind.

Chandrakirti says: "in order to increase the awareness of the intelligent." The intelligent are the bodhisattvas; the Omniscient One taught this sutra in order to destroy the bad views of the Forders. The various types of Forders posit the creator differently in accordance with their respective tenets. They respectively say it is the "person, continuum, aggregates, likewise, conditions, particles, the principal, and Ishvara." On the other hand, the Buddha taught that the creator of the world is only mind.

Chandrakirti's autocommentary says:

In order to unravel the meaning of this, it is explained:

Just like, in this and that of their treatises,
Those persons and so forth are propounded by the Forders –
Having not seen those as the creator,
The Conqueror taught mind only as the world's creator. [6.86]

Saying, "by the Forders," indicates predominance, that is, persons and so forth are also only imputed [as the creator] by [some] followers of this doctrine. Yet, in one way, they are also not followers of this doctrine because, like the Forders, they do not unmistakenly understand the meaning of the teachings. Therefore, this limited statement only pervades to all.

Among "the person, continuum, aggregates, likewise, conditions, particles, the principal, and Ishvara" some of the lower Buddhist schools also posit them as the creator. For example, one Buddhist school

[53] *mu.stegs*, non-Buddhists

[54] *rdo rje, vajra*

posits the continuum of the person as the creator. But it can be asked: "Which Buddhist school propounds conditions to be the creator of the world? Which one propounds particles and so forth to be the creator of the world?" One needs to study the tenets of the various schools in order to understand this.

The Samkhyas propound the general principal to be the creator of the world, whereas the Vaisheshikas propound Ishvara to be the creator of the world. The Vaisheshikas say that everything arises from the movement of Ishvara's mind. The second chapter of Dharmakirti's *Commentary on [Dignaga's] Compendium of Valid Cognition* explains this in the context of the three reasons that prove Ishvara to be the creator of the world.

Chandrakirti says: "Saying, 'by the Forders,' indicates predominance, that is, persons and so forth are only imputed [as the creator] also by [some] followers of this doctrine." 'Some followers of this doctrine' refers to those Buddhists who say that the person is the creator of the world or that the continuum of the person is the creator of the world. A discussion of this subject is found in Kunkyen Jamyang Shepa' *Great Tenets*.

Wednesday afternoon, 22 November 2000

Those who proclaim this doctrine, that the person and so forth are the creator, are like the Forders. There are Buddhists who are Buddhists in terms of their conduct but not Buddhists in terms of their view. Those who proclaim this doctrine are like the Forders in that they do not correctly understand the meaning of selflessness. For example, the Vatsiputriya Vaibhashikas are Buddhist in terms of their conduct but not in terms of their view because they do not assert the selflessness of persons to be the lack of a self-sufficient substantially existent person. This will be discussed later on in the context of refuting the selflessness of persons.

Chandrakirti says: "Therefore, this limited statement only pervades to all." This is an explanation of the meaning of "the Forders" in this context.

Chandrakirti's autocommentary says:

> As was taught [in the *Precious Garland*, verses 61-62]:
>
> > Ask the worldly ones, the Samkhyas, the Owl Followers along with the Nirgranthas, who propound the person and aggregates, if they propound what has passed beyond existence and non-existence.
> >
> > Therefore, the teaching of the buddhas, explained as "deathless, passed beyond existence and non-existence, profound, an exclusive doctrine," should be known.

The Samkhyas and others propound a self of persons. The Samkhyas (the Enumerators) are so-called because they propound that all objects of knowledge are definite in number as twenty-five. The Owl Followers assert that all objects of knowledge are included in nine categories, whereas the Vaisheshikas assert that all objects of knowledge are included in six categories. The Nigranthas hold some views similar to those of the Buddhist schools. "They propound what has passed beyond existence and non-existence" refers to the extremes of permanence and annihilation.

The Buddha's teachings are "deathless, passed beyond existence and non-existence, profound, an exclusive doctrine." All the non-Buddhist schools assert a self of persons. There are several ways of categorizing these schools, for example, as five or six or eleven groups of logicians propounding a self of persons. All of them assert a permanent and substantially existent person.

Chandrakirti's autocommentary says:

> Those strongly settling upon the aggregates and so forth are to be cognized as outsiders. "Just as [in this and that of] their [treatises]" means in their own tenets. Therefore, the Forders who assert even the aggregates and so forth as the very creator are finely identified.

Those who, in asserting a permanent self, conceive the aggregates and the self to be different entities are to be known as outsiders. "Just as in this and that of their treatises" (v. 6.86) refers to the tenets of these schools which are set out in their respective treatises. The Forders say that the aggregates and so forth are the creator of the world. They also assert particles to be the creator of the world.

Chandrakirti's autocommentary says:

> Since this samsara is beginningless, what conception did not arise in it and what will not arise? Like this, even at the very present, among the White Abandoners and so forth, the aggregates and so forth indeed appear to be indicated.

Since cyclic existence is beginningless, we have had many bad conceptions in the past, have many of them now, and will have many of them in the future. "White Abandoners" are a Buddhist sect who say that the aggregates are substantially existent and the creator of the world.

In conclusion, Chandrakirti's autocommentary says:

> "The Bhagavan, not seeing these – the person and so forth – as the very creator, indicated no more than mind as the creator of the world." is the meaning of the sutra.

The Buddha did not see the person, the aggregates, conditions, particles, the general principal, and Ishvara to be the creator of the world; instead he saw it to be only mind. This is the meaning of the statement in the *Sutra on the Ten Grounds* that the three realms are only mind; it does not mean that all phenomena are the nature of only mind. The Chittamatrins interpret the sutra in this way because according to them all phenomena arise due to the activation of latencies deposited on a mind-basis-of-all.

Lama Tsongkhapa's *Illumination* (Tibetan text page 297) says:

> Having explained that the meaning of the *Sutra on the Ten Grounds* is that the term 'only' of mind-only (*chittamatra*) refutes other creators, there is [the following] explanation because that very meaning is also indicated by other sutras.
> Chandrakirti says:
>
> *Therefore, in order to develop the awareness of the intelligent,*
> *The Exalted Knower of All in the* Descent into Lanka Sutra
> *Taught this vajra – the nature of speech that destroys the lofty mountains*
> *Of the Forders – in order to discern the intention.* [6.85]
>
> That the term 'only' refutes other creators is the meaning of the *Sutra on the Ten Grounds*. *Therefore*, *in order to develop the awareness of the intelligent* who are able to realize suchness, *the Exalted Knower of All in the* Descent into Lanka Sutra *taught this vajra* mentioned below – *the nature of speech that destroys the lofty mountains* of the inferior views in the continua of *the Forders* who assert a self, a general principal, and so forth to be the creator of the world – by teaching it *in order to discern the intention* of stating "mind-only" in other sutras. This vajra [speech] is taught in the *Descent into Lanka Sutra* saying:

> The person, continuum, and aggregates,
> Likewise, conditions and particles,
> The principal and Ishvara – these creators
> I explain as only mind.
>
> This means that "The creator of those who propound from the person through Ishvara to be creators is not [any of] them, whereas I propound only mind to be the creator."

Once again it is stated that the term 'only' refutes the creator of the world being other than mind.

Lama Tsongkhapa says: "the nature of speech that destroys the lofty mountains of the inferior views in the continua of the Forders." This is similar to what is said in the *Ornament for Clear Realizations* regarding the twenty wrong views of the transitory collection and so forth. Wrong views, such as the view of the transitory collection, prevent one from leaving cyclic existence like high surrounding mountains that prevent one from climbing upward due to obscuring the light and being very steep and shear preventing one from holding on to anything. If these mountains at least allowed light to pass one could possibly climb them but they are not. In addition, these mountains are covered in dense trees.

"To discern the intention of stating 'mind-only' in other sutras" means "to realize the intention of stating 'mind-only' in other sutras." The vajra speech in the *Descent into Lanka Sutra* sets out the various types of creators, whereas the actual intention of this sutra is that Buddha explains mind only to be the creator.

Lama Tsongkhapa's *Illumination* (Tibetan text page 298) says:

> In order to unravel the meaning of this sutra [there is the following] explanation.
> Chandrakirti says:
>
> *In accordance with this and that in their own treatises,*
> *The Forders propound them, the person and so forth.*
> *Not seeing them to be a creator,*
> *The Conqueror taught only mind as being the creator of the world.* [6.86]
>
> *In accordance with*, that is, just like, *in this and that* tenet of *their own treatises*, *the Forders propound the person and so forth* – that is, the continuum, the aggregates, and so forth – to be a creator. *Not seeing them to be a creator, the Conqueror taught only mind as being the creator of the world*. Saying "the Forders" in the root text is with the thought that it is mostly them, in that Dharma practitioners, Buddhists, also impute the person, the continuum, and so forth, to alone be creators.

The non-Buddhists make various assertions based on the tenets in their own treatises. "The Forders" refers to various Indian schools that existed prior to the Buddha. Some of these schools, such as the Samkhya, Nigrantha, and Charvaka, are still extant in India even now.

Lama Tsongkhapa's *Illumination* (Tibetan text page 298) says:

> On the other hand, those who conceive the person and so forth to be creators are also not Dharma practitioners, Buddhists, in that, like the Forders, they do not unmistakenly realize the meaning of Buddha's teachings. Therefore, "the Forders" is a word that pervades them.

"Dharma practitioners, Buddhists" are Buddhists who are Buddhist in conduct but not in view. This is explained in Kunkyen Jamyang Shepa's *Great Tenets*. There are four great seals of the view and four great seals of conduct. The four great seals of the view are:

1. all compounded phenomena are impermanent,
2. all contaminated phenomena are misery,
3. all phenomena are empty and selfless,

4. nirvana is peace.

What do Buddhists consider to be the creator of the world? In general, it is said that actions (karma) are the creator. But what creates actions? The mind creates actions, therefore, the mind is said to be the creator of all. However, among Buddhists there are also those who posit the person, the continuum, the aggregates, and so forth to be the creator of the world.

Lama Tsongkhapa's *Illumination* (Tibetan text page 298) says:

> Also [Nagarjuna's] *Precious Garland* (v. 61-62) says:
>
> Ask the worldly who propound the person and aggregates,
> The Samkhyas, the Owl Followers, as well as the Nigranthas,
> Whether they propound
> Having passed beyond existence and non-existence.
>
> Therefore, understand that the ambrosia
> Of the buddhas' teachings,
> Having passed beyond existence and non-existence,
> Is the "profound" teaching, the exclusive Dharma.
>
> Ask those who propound the person and aggregates to be substantially existent and so forth whether they propound free from the two extremes of existence and non-existence; they would not have anything to say about the meaning of that. Therefore, the meaning of the teaching free from the two extremes of existence and non-existence is to be understood as the supreme, exclusive Dharma – that is, as the special Dharma that does not exist in other [systems].

When those who propound the person and aggregates to be substantially existent and so forth are asked whether they propound free from the two extremes of existence and non-existence, they are unable to respond. Being free from the two extremes of existence and non-existence is a special quality of the Dharma that refers to being free from the extreme of permanence and the extreme of annihilation. The extreme of permanence is to think that if phenomena exist they must exist truly, whereas the extreme of annihilation is to think that if phenomena do not exist truly they do not exist at all. The Buddha's teachings are free from these two extremes. Someone who is free from these two extremes and is still able to posit the feasibility of actions and results is a propounder of the middle way.

Lama Tsongkhapa's *Illumination* (Tibetan text page 299) says:

> Since cyclic existence is beginningless, what wrong conceptions have not arisen in it in the past? Also in the future what will not arise? Like this, even in the present it seems that the White Abandoners and so forth teach that substantially existent aggregates and so forth are creators. In regard to this, also in some texts it says "White Abandoners and so forth" and in the translation of [Jayananda's] *Explanatory Commentary* it says "the fully-ordained monk Kye Sing and so forth," whereas the meaning of this is that they are explained to be Jain monks. 'Abandoner' is a name for a meditator on the concentrations, therefore, they are the Buddhist school called "White Concentration Meditators" who propound substantially existent aggregates to be a creator.

"Abandoner" means a meditator in that it conveys the sense of having abandoned bad conduct of body and speech. Lama Tsongkhapa says: "they are the Buddhist school called "White Concentration Meditators" who propound substantially existent aggregates to be a creator." Thus, "Abandoners" refers to Buddhists who propound substantially existent aggregates. But, who are they? Think about it.

Lama Tsongkhapa's *Illumination* (Tibetan text page 299) says:

3B1C-2B3E-2A1B-2B2C-1C The term 'only' proves that the mind is foremost

Chandrakirti's autocommentary says:

> Thereby, since other creators were refuted just now, in order to finish constructing the meaning, having expressed the term "only" as unable to refute [external] knowable objects, in order to indicate the impossibility to refute external objects also through explaining in another way, it is explained:
>
> *Buddha is ascribed to development in thusness.*
> *Exactly likewise, for mind only being foremost, the world,*
> *Was taught in the Sutra saying "mere mind." Form here*
> *Being refuted, such is not the meaning of the sutra.* [6.87]
>
> Just as one says "buddha" for development in suchness,[55] although the former phrase has been elided, there exists the complete explanation; likewise, one should know "the three realms are mere mind" also regarding mere mind being foremost, having refuted the other being foremost.

That the creator of the world is other than mind is refuted. Thus, the term 'only' does not refute external objects. The rejection of external objects is asserted by the Chittamatrins but refuted by the Prasangika Madhyamikas.

A buddha (literally, 'awakened-developed' according to the etymology of the Tibetan word *sangs rgyas*) is called 'developed' because his mind is developed with respect to thusness. The syllable *sangs*, awakened, means to have awakened from the sleep of the two obstructions, whereas *rgyas* means to have developed one's mind in thusness. On the other hand, the Sanskrit syllable '*bud*' of the word 'buddha' means 'intellect' or 'intelligence.' The word 'buddha' can also mean 'to comprehend' or 'to hold in mind.' This is an analogy that is set forth in the root text to explain the meaning of mind only.

The refutation of form is not the meaning of the *Sutra on the Ten Grounds*; what is refuted here is that there is a creator of the world that is other than mind.

Thursday morning, 23 November 2000

Chandrakirti's autocommentary says:

> Therefore, forms and so forth are indicated by this [passage] as excluded from being the foremost; their existence itself is not refuted saying "no more than a mind only exists, [external] form is non-existent." The meaning of this sutra is undoubtedly to be accepted according to how we explained it.

The meaning of the sutra is to be accepted as it is explained by the Prasangika Madhyamikas, that is, that the sutra does not refute external objects but only refutes there being a creator that is other than the mind.

---

[55] For 'buddha' we have Skt: *buddha* and Tib: *sangs.rgyas* – for 'developed in suchness' we have Skt: *tathata buddha* or *tathata vibuddha* (hypothetically) and Tib: *de.kho.na.nyi rgyas.pa*.

LTK commentary (page 314): Just as the development of intelligence concerning suchness is explained saying 'awakened-deve1oped,' having elided, i.e., not manifest, the former phrase, 'awakened,' yet the ascription saying 'awakened-developed' exists – exactly likewise, with regard to a mere mind being foremost from among the two, form and mind, having elided the later phrase, being foremost, it should be understood that the world, i.e., the three realms, was taught in the *sutra* saying 'mere mind.'

Chandrakirti's autocommentary says:

> According to your system:
>
> *If, having known these as mind only,*
> *He refuted form itself in that [sutra],*
> *Again in that, why did the Mahatma teach*
> *Mind as produced from confusion and actions?* [6.88]

The Prasangika Madhyamikas ask the Chittamatrins: "If phenomena are only mind and external forms are refuted, why did the Mahatma say that mind is produced from confusion and actions?"

Gedun Drup's *Mirror of the Clarification of the Thought,* as translated by Martin Willson, says:

> 3B1A-6C5A-1A2B-2C1C The word 'only' establishes that mind is most important
>
> *As in "develops reality," "Buddha" is implied,*
> *So the Sutra, "In the world, only mind"*
> *Teaches only mind's important. To deny*
> *Forms here, such is not the* Sutra's *meaning.* [6.87]

In this teaching "mind only" in the sutras, the meaning of the Sutra is not like a denial of external forms, for just as in "develops awareness of absolute reality" the preceding word "Buddha" is implied and not expressed, so it is taught in the Sutra "In the world, only mind" without expressing the following word "is important" in "Out of form and mind, only mind is important."[56]

> *If he knows that these are only mind,*
> *And is denying form-objects in that,*
> *Then why does the Magnanimous say there again*
> *That the mind is born from* karma *and delusion?* [6.88]

If the Magnanimous One, the Buddha, knowing that these three realms are only inherently existing mind, was denying external form in that *Sutra on the Ten Stages*, then why, again in that *Sutra on the Ten Stages*, would he have taught that mind is produced from delusion[57] and karma? He could not have taught that, for if it existed inherently, that would contradict its being produced from a cause.

The Chittamatrins say that mind is inherently existent and that forms do not exist externally. The Prasangika Madhyamikas say that if this is so why did the Buddha say that mind is produced from ignorance and actions, given that if mind is inherently existent it cannot be produced from causes and conditions.

Chandrakirti's autocommentary says:

> In that same *Exalted* [*Sutra of the*] *Ten Grounds,* consciousness is taught as having ignorance and [karmic] formations as its causes, it is not [taught as] inherently existent.

[56] Lama Tsongkhapa interprets the first line in terms of an explanation of the Tibetan word for buddha, which does not work in Sanskrit. It is not clear what Chandrakirti was referring to.

[57] *gti.mug*

The third link, consciousness, has ignorance and karmic formations as its causes, whereas if consciousness were inherently existent it could not have these as its causes.

Chandrakirti's autocommentary says:

> "If consciousness were existent by its own self-nature, that [consciousness] might not rely on ignorance or formation, but it does rely on them. Therefore, consciousness is just not naturally existent in any way, because, like falling hair and so forth observed by the possessor of cataracts, it exists when the condition of error is present, and, because, like only that, it does not exist when the condition of error is absent."

Falling hair only appears when there is the condition of cataracts; therefore, without this condition falling hair does not appear.

Chandrakirti's autocommentary says:

> [Such] was considered. As was taught [in the *Sutra on the Ten Grounds*]:[58]
>
> Thus, the bodhisattva fully reflects upon dependent arising in the aspect of the order of arisal. He considers this:
>
> 1. Not knowing the truths is ignorance with respect to the ultimate.

Ignorance is not knowing the correct meaning.

> 2. The maturations of actions produced by ignorance are [karmic] formations.

Due to ignorance, one creates actions.

> 3. The initial mind dependent on formation is consciousness.

Once an action has been created it is deposited on the consciousness, the third link. This particular consciousness is the consciousness at the time of the cause.

> 4. The four aggregates that take rebirth along with consciousness are name and form.

"Along with consciousness" refers to the consciousness at the time of the result. In the link of name and form, 'name' is the last four aggregates (the feeling aggregate, discrimination aggregate, compositional factors aggregate, and consciousness aggregate), whereas 'form' is the first of the five aggregates, the form aggregate.

> 5. The full development of name and form is the six entrances.

On the basis of establishing the locations of the sense powers, the organs, there arise the six entrances, or six spheres.

[58] See Rahder's translation, first passage from the end of section C through section D, pages 188-189; and the second passage, section G.

> 6. The contamination due to the meeting of the three – sense faculty, object, and consciousness – is contact.
> 7. Produced along with contact is feeling.
> 8. Clinging to feeling is craving.

Due to clinging to feeling, craving arises.

> 9. Full development of craving is grasping.
> 10. The contaminated action arisen from grasping is becoming.
> 11. The action's [effect] of similar cause is birth, the arisal of the aggregates.

Taking rebirth means to appropriate the aggregates of the next life.

> 12. The full maturation of the aggregates is aging. The destruction of the aged aggregates is death.

The full maturation of the aggregates does not necessarily imply *old* age. Aging is the changing of the fully ripened aggregates; thus, the term 'aging' does not refer to the aging renowned in the world, but implies the changing of the aggregates even in the mother's womb.

Chandrakirti's autocommentary (Tibetan text page 118) says:

> At the time of death and separation, due to being demented and together with clinging, the tormented mind is sorrowful. Delirious expression arisen from sorrow is the tittering of lamentation. The falling into decay of the five faculties is suffering. The falling into decay of mental views is mental unhappiness. Much suffering and mental unhappiness arising is panic. Thus, the aggregate of suffering, the tree of suffering, lacking agent and feeler, this [alone] will be manifestly established.
>
> [He considers this: "Due to strongly settling upon the agent, actions come into existence. Where the agent is non-existent, there the action is also not ultimately observed."
>
> He considers this: "Like this, these three realms are mere mind; all the twelve links of existence that the Tathagata differentiated and spoke of are also dependent on solely the mind."][59]

In sutra it is said that at the time of death there is mental unhappiness, lamentation, sorrow, wailing, and so forth; in short, there is a great heap of suffering at this time.

Chandrakirti's autocommentary says:

> There,
> 1) Ignorance is a participant[60] in two actions – fully confusing sentient beings regarding observed objects and also providing the cause that actualizes formation.
> 2) Formations are also participants in two actions – producing the future maturation and also providing the cause that actualizes consciousness.

[59] Partially quoted earlier after verse 6.84.

[60] Skt: *pratyupasthana*. Tib: *nye.bar gbas.ba*

> 3) Consciousness is also a participant in two actions – producing the joining of boundaries of existence (i.e., producing rebirth) and also providing the cause that actualizes name and form.
> 4) Name and form are also participants in two actions – producing mutual support and also providing the cause that actualizes the six entrances.
> 5) The six entrances are also participants in two actions – showing to differentiate their own object and also providing the cause that actualizes contact.
> 6) Contact is also a participant in two actions – producing contact with the observed object and also providing the cause that actualizes feeling.
> 7) Feeling is also a participant in two actions – experiencing the attractive, unattractive, and what is freed from both and also providing the cause that actualizes craving.
> 8) Craving is also a participant in two actions – always producing desire for things that are desirable and also providing the cause that actualizes grasping.
> 9) Grasping is also a participant in two actions – as above [producing bondage due to the fully deluded] and also providing the cause that actualizes becoming.
> 10) Becoming is also a participant in two actions – producing the presence of another continuity of becoming and also providing the cause that actualizes rebirth.
> 11) Birth is also a participant in two actions – as above[61] and also providing the cause that actualizes old age.
> 12) Old age is also a participant in two actions – producing complete transformation of the senses and also providing the cause that actualizes the meeting with death.
> As long as there is death, it also is a participant in two actions – producing annihilation of formation and also providing the cause of not cutting the continuity of not fully knowing.

Each of the twelve links participates or abides in two actions. What is posited as the ignorance that is the first link? Is the ignorance that is the first of the twelve links the ignorance that is a conception of a self of persons or the ignorance that is a conception of a self of phenomena? Ignorance, in general, is of two types:
(i) ignorance which is an obscuration with respect to causes and results and
(ii) ignorance which is an obscuration with respect to suchness.
Is the ignorance that is the first link, the ignorance which is an obscuration with respect to causes and results or the ignorance which is an obscuration with respect to suchness?
Student: It is the ignorance which is an obscuration with respect to suchness.
Geshe Jampa Gyatso: Why is it not the ignorance which is an obscuration with respect to causes and results?
Student: Because that ignorance is not the root of cyclic existence, it is responsible for rebirth in the lower realms.
Geshe Jampa Gyatso: Is the ignorance which is an obscuration with respect to causes and results non-virtuous? The ignorance that is the root of cyclic existence is necessarily unspecified. Is the ignorance which is an obscuration with respect to causes and results just an unknowing? If it is interpreted as unknowing, then there are many such ignorances since beginningless time. Here 'unknowing' means to not know the result of virtuous actions and the result of non-virtuous actions. This ignorance is obscured with respect to happiness arising from virtue and suffering arising from non-virtue.

In short, it is correct that the ignorance which is an obscuration with respect to causes and results is the cause of rebirth in the lower realms.

According to the lower schools the first of the twelve links, ignorance, is the ignorance that is a conception of a self of persons. According to the Prasangika Madhyamikas this discussion is more

[61] Rahder, reading the Sanskrit, has 'It makes rising up (emergence) of aggregates,' i.e., 'producing emergence of the aggregates.'

complicated. The Svatantrika Madhyamikas say that the first link, ignorance, is the conception of a self of persons. They say that the conception of a self of phenomena is not the first link because it is not beginningless ignorance, the root of cyclic existence. This is because are some who have left cyclic existence but still have a conception of a self of phenomena, for example, the foe destroyers of the hearer and solitary realizer vehicles. Thus, the ignorance that is the root of cyclic existence can only be the ignorance that is the conception of a self of persons. However, there is much debate about this. Is the conception of the true existence of the person ignorance? If someone says that it is one asks: "Is it a mental factor?" If someone says that it is not, one says: "It must be a mental factor because it is one of the six root afflictions included in the fifty-one mental factors."

According to the Prasangika Madhyamikas it would seem that a conception of true existence is not pervaded by being a mental factor. Since ignorance is the opposite of the knowledge that is the exalted wisdom knowing reality, they are a contradictory pair.

Karmic formations are projecting actions. A karmic formation is defined as: the mental factor intention that belongs to its respective cycle and functions to project a future rebirth.

Is the third link, consciousness, the consciousness upon which the latencies have just been deposited and that belongs to that same cycle? If someone says that it is, one says: "Is it necessary to posit a consciousness upon which karmic formations are posited?"

Thursday afternoon, 23 November 2000

Chandrakirti's autocommentary says:

> By such statements and so forth up to the aforesaid, consciousness is indicated as having ignorance and formation as its cause. Thus, since the condition of error exists to some extent, it is indeed made clear that consciousness exists, yet if it is asked how that [consciousness] also becomes non-existent due to that [cause] being non-existent, it is extensively taught [in the *Sutra on the Ten Grounds*]:[62]
>
> > "Due to ceasing ignorance, formations are ceased" [means] due to the non-existence of the condition – ignorance – formations are thoroughly pacified and without support. "Due to ceasing formation, consciousness ceases" [means] due to the non-existence of the condition – formation – consciousness is thoroughly pacified and without support...

When the previous link ceases, the later link ceases up to when birth ceases, aging and death ceases. How does the link of ignorance cease? It is ceased by meditating on selflessness. [Aryadeva's] *Four Hundred Stanzas* say: "The beginning of cyclic existence has no limit, but the end has a limit." In other words, cyclic existence is without beginning but has an end. On the other hand, cyclic existence in general is said to be without a beginning and without an end, however, in the case of a particular individual, although cyclic existence is without a beginning, it does have an end because it is brought to an end through realizing selflessness. Such a person extinguishes the root of cyclic existence. Thus, when ignorance is abandoned the root of cyclic existence is eradicated.

Chandrakirti's autocommentary says:

> Having said that, it is extensively taught [in the *Sutra on the Ten Grounds*]:[63]

[62] See Rahder's translation, section H, page 190, last paragraph.

[63] See Rahder's translation, section O, page 193, line 2.

> He considers this: "Through gathering, the compounded arises. Through separation, the compounded does not arise. Through collection, the compounded arises. Through non-collection, it does not arise. Hence, I, having understood that this is so, that the compounded bring about the fault of many shortcomings, shall cut the continuity of this gathering and this collection and, in order to bring sentient beings to fruition, yet shall not attain utter pacification of formations."
>
> O children of the Conqueror, when he thus individually investigates what is subject to formation as bringing about the fault of many shortcomings and as without entitiness, unproduced and unceased, …

Due to karmic formations many shortcomings arise. On the other hand, through realizing that karmic formations are without the entity of being inherently existent, are not produced inherently, and do not cease inherently, these shortcomings are overcome.

Chandrakirti's autocommentary says:

> Therefore, having thus seen the passage taught in that very [*Sutra on the Ten Grounds*], who with a mind would conceive consciousness to be substantially existent? That which is fully conceived of will be merely produced by view.

When the meaning of the *Sutra on the Ten Grounds* is realized, one does not conceive consciousness to be substantially existent. On the other hand, when the consciousness is conceived to be truly existent this is due to view.

Chandrakirti's autocommentary says:

> Therefore, teaching [the three realms] as mere mind is in order to fully clarify the fact that no more than a mere mind is foremost. This passage clarifies the fact that form does not exist [as foremost], not [that it is non-existent] in all ways.

When the *Sutra on the Ten Grounds* says 'only mind' it is in terms of mind being foremost, it is not in order to negate the existence of external objects. In this way the Prasangika Madhyamikas say to the Chittamatrins that external objects do exist.

Chandrakirti's autocommentary says:

> In order to indicate that foremost nature of mind, [the root text] explains:
>
> *By mind itself, the world of sentient beings and*
> *The extreme variety of the vessel world are formed.*
> *Migrators without exception are taught as produced from actions.*
> *Having rejected mind, action also does not exist.* [6.89]

The world of sentient beings and the world of the environment arise from the mind. How do they arise from mind? They arise from mind in the sense that due to mind sentient beings create actions, from which they and the environmental world arise.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

The mind itself has created all the variety
Of the world of beings and the vessel world.
It is said every sentient being is born from karma.
If mind is rejected, karma *too cannot exist.* [6.89]

It should be understood that, for the creator of the world, mind is the most important; for just mind built up and produced all the variety of the world of sentient beings and the vessel world, and it is taught that every samsaric being was born from karma; and when mind is rejected, karma too does not exist.

Form may exist, but if it does, it has
No creator which is like the mind.
Therefore, a creator other than the mind
Is refuted; forms are not denied. [6.90]

The teaching that these three realms are only mind refutes a creator other than the mind, but does not deny external forms; for if there is form, still there is no creator like the mind.

The contents of the vessel are sentient beings, whereas the vessel world is the environment. If it has a mind it is not pervaded by being a sentient being because there are two types of possessors of mind: ordinary beings and buddhas. A sentient being is defined as: a person who is polluted by the faults of afflictions and actions. One who is free from such pollution is a buddha.

Chandrakirti's autocommentary says:

> There, the world of sentient beings is the acquisition of one's own properties due to the sentient being's own karma and delusion. The vessel world is produced from the common karma of only those sentient beings – [from] the wind mandala and so forth [until] the finality of the celestial mansion of Akanishta.

Mountains, valleys, buildings, and so forth are constructed upon the formation of the wind mandala. In fact, the wind mandala is the basis of the world system up to the seventeenth level of the form realm, Akanishta. It is not the basis of the formless realm since this realm is without forms such as tables, houses, clothes, and so forth.

Chandrakirti's autocommentary says::

> There, that which is varied – such as the eyes of a peacock's feathers and so forth – are produced from the uncommon karma of only the peacock and so forth.

A peacock, due to its own uncommon actions in the past, has feathers of a particular color. Chandrakirti gives the example of a peacock because the Charvakas, in order to establish that there are phenomena that arise without a cause, give the example of the colors of a peacock's feathers. According to the Charvakas there is production without causes, this being illustrated by the colors of a peacock's feathers, the sharpness of thorns, and so forth. They say that because there is no one who paints the colors of a peacock's feathers, no one who sharpens thorns, and so forth, they arise without causes.

Chandrakirti's autocommentary says:

> Varieties such as the lotus and so forth are produced from the common karma of all sentient beings. Others also should be understood similarly.

The blossoming of flowers is due to the collective or common karma of sentient beings.

Chandrakirti's autocommentary says:

> As taught:[64]
>
> > By the power of sentient being's karma, the black
> > mountain is produced at the proper time. For example:
> > like hell beings [and] high status; in the world,
> > weapons and the precious tree.

Due to the power of sentient beings' karma, there arise weapons and so forth in the hell realm and precious trees and so forth in the god realms. The *Treasury of Knowledge* explains that in the northern direction above Bodhgaya there are nine mountain ranges, the last of which is a range of black mountains. In front of these mountain there is a lake, below which are located the hell realms. Due to karma, hell beings are tormented by weapons and so forth. In the world of high status, that of gods and human beings, the experience is different in that here there are precious objects and so forth. Also in the human realm there are rich people who have large houses, expensive jewelry, and so forth. All this is due to the respective actions created by each individual in the past. These uncommon actions ripen only upon the particular individual who created them, not upon anyone else.

Chandrakirti's autocommentary says:

> Hence, thereby sentient beings without exception are produced from karma; and karma also is dependent on mind because karma is collected only together with mind, because when mind is non-existent, karma is non-existent.

Vasubandhu's *Treasury of Knowledge* sets out two types of actions: intended actions (*sam pa'i las*) and actions of intention (*sems pa'i las*). Intended actions are actions created by body and speech motivated by the action of intention. Intention is one of the five omnipresent mental factors; it itself is mental action. When intention, the mental factor, moves toward an object, the result is actions of body and speech. What is the entity of intention? It is that which directs the mind to an object. When the mind is directed to an object, there follow actions of body, such as beating someone, and of speech. These two types of actions are taught in sutra.

Chandrakirti's autocommentary says::

> Therefore, since mind itself is the principal cause for thorough engagement in migration – something else is not – a mere mind is posited as principal in the sutra, form is not.

Only the mind is posited as the main cause, form is not the main cause.

[64] Source not identified.

Chandrakirti's autocommentary says:

> If asked: Why?
>
> *Even though form exists, in that,*
> *A creator like the mind does not exist.* [6.90ab]
>
> It is considered that "form is matter."
>
> *Hence, a creator other than mind*
> *Is averted; form is not refuted.* [6.90cd]

The existence of a creator that is other than mind is refuted, whereas forms that are external objects are not refuted.

Chandrakirti's autocommentary says::

> In this matter, some (the Samkhyas, etc.) assert the principal[65] and so forth as the very creator, some (the Buddhists) assert the mind, yet, it is indisputable that form is not the very creator.

This means that although there is debate as to whether the general principal or the mind is the creator of the world, there is no debate about form not being the creator of the world. However, with respect to this one can ask: "What about those who say that particles are the creator of the world?" This question is based on the previous citation from the *Descent into Lanka Sutra* which says that particles are asserted to be the creator.

Those who assert the general principal to be the creator of the world are the Samkhyas. What is the general principal? It is an unclear cause on the occasion of an equilibrium of the three qualities: activity, lightness, and darkness. What are these three qualities? Some say that activity is attachment, lightness is hatred, and darkness is ignorance. It is said that if a Samkhya gives up his views and enters the Buddhist path, he will immediately become a Prasangika Madhyamika due to the similarity of their tenets.

Chandrakirti's autocommentary says:

> Therefore, in order to exclude only the principal and so forth, imagined[66] [by some] as the very creator [but] without its characteristics, a mere mind that is seen as capable of being the very creator is expressed as the creator. Then, having excluded the principal and so forth to be the very creator, it is proper to say that the object that is the source of the dispute is suppressed. It is as if, having expelled one rival from among two kings who wish to rule a single country, one's country is acquired and the ordinary beings are not harmed because they are indispensable for both. Likewise, here too, form is not permanently harmed because it is indispensable to both. Hence, it should definitely be said that "Form is only existent."

The example given here is of two kings who wish to rule a single country. This, in present day terms, is like George Bush and Al Gore who both wish to be the president of the USA! In the end, one will win and one will lose. When such rivals argue they cannot harm the ordinary beings, otherwise they will definitely lose. Ordinary beings are indispensable to both rivals in that the king needs the support

[65] Skt: *pradhana*; Tib: *gtso.bo*.

[66] Tib: dogs.par.byas

of his subjects. Similarly, form is not harmed in that it is necessary for both the Chittamatrins and the Prasangika Madhyamikas. For example, the Chittamatrins are not formless, but have an aggregate of form. Therefore, form is necessary for both schools. In short, external forms exist, they are not to be refuted.

Lama Tsongkhapa's *Illumination* (Tibetan text page 299) says:

> In that case, since a creator other than the mind has been refuted for the time being, having said that the term 'only' is unable to refute external objects of knowledge, in order to complete the meaning of the term 'only' there is [the following] explanation for the purpose of showing that, other than the explanation that mind is foremost, other types [of explanation] that differ from that way of explaining cannot refute external objects.
> Chandrakirti says:
>
> *Just as 'awakened-developed' is said regarding one developed with respect to thusness,*
> *Likewise, only mind being foremost,*
> *The world is taught in sutra saying "mind only."*
> *That here forms are refuted is not the meaning of the sutra.* [6.87]
>
> *Just as* when 'awakened-developed' (Tibetan, *sangs rgyas*; Sanskrit, buddha) is expressed *regarding* one whose awareness is *developed* (*rgyas*) *with respect to thusness*, '*awakened-developed*' (*sangs rgyas*) *is said* without evidencing the first word 'awakened' (*sangs*); *likewise*, it should be understood that *in sutra the world* – that is, the three realms – *is taught saying "mind only"* in terms of *only mind* (*sems tsam*) *being foremost* amongst the two, form and mind, without evidencing the latter word 'foremost.' Therefore, saying 'mind only' *here* eliminates forms and so forth as being foremost in establishing the three realms. The explanation that mind-only alone is inherently existent, whereas *forms are refuted* saying "They are non-existent," *is not the meaning of the sutra*. The meaning of sutra is to be unquestionably asserted as explained by us above.

This discussion is based on the statement in the *Sutra on the Ten Grounds* "The three realms are only mind." Although the world 'foremost' is not evidenced here, the meaning is that only mind is foremost. In other words, in establishing the three realms the foremost is only mind; form is not the foremost. This is the meaning of this statement in the *Sutra on the Ten Grounds*; it does not mean that mind is inherently existent and that external forms do not exist. The latter is how the Chittamatrins explain this statement in the sutra, whereas the Prasangika Madhyamikas say that this is not a correct interpretation of the sutra. The Prasangika Madhyamikas say: "The meaning of sutra is to be unquestionably asserted as explained by us above." Their explanation is that:

- mind is the foremost in terms of being the creator of the three realms and
- form is not refuted to be externally existent.

Lama Tsongkhapa's *Illumination* (Tibetan text page 300) says:

> Chandrakirti says:
>
> *If having understood them to be "only mind,"*
> *He refuted forms in that,*
> *Why would the Great Being once again say in that*
> *That mind is produced from confusion and actions?* [6.88]
>
> According to your system, *if having understood them* – the three realms – *to be "only* inherently existent *mind*," *he refuted* external *forms in that* Sutra on the Ten Grounds, *how would* it have been suitable for *the Great Being*, the Buddha, *to once again say in that* Sutra on the Ten Grounds *that mind*, consciousness, *is produced from* the two – *confusion* (i.e., ignorance) and *actions* (i.e., karmic formations) – saying "Due to the condition of ignorance, karmic formations; due to the condition of karmic formations, consciousness"? It would not have been suitable.

The Prasangika Madhyamikas say that way in which the Chittamatrins explain the *Sutra on the Ten Grounds*, that the three realms are inherently existent mind, contradicts the Buddha's teaching on the twelve links which says that "Due to the condition of ignorance, karmic formations; due to the condition of karmic formations, consciousness."

Lama Tsongkhapa's *Illumination* (Tibetan text page 300) says:

> In that very *Sutra on the Ten Grounds* it says that consciousness is the result of ignorance and karmic formations, it does not say that it is established by way of its own character.

The twelve links meet back to the root, ignorance.

Lama Tsongkhapa's *Illumination* (Tibetan text page 300) says:

> In addition to saying that it is a dependent-arising, if it were also said to be established by way of its own character that would be nothing more than mistaken talk. Since in our system it cannot be asserted to be both [a dependent-arising and established by way of its own character], this should be understood to have been asserted [by Buddha] in the perspective of others in order to guide other trainees.

For the purpose of guiding particular trainees, the Buddha taught that phenomena exist inherently. This is why Lama Tsongkhapa says "this should be understood to have been asserted [by Buddha] in the perspective of others in order to guide other trainees." These trainees are the lower schools, the Vaibhashika, Sautrantika, and Chittamatra.

Friday morning, 24 November 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 300) says:

> Since being both [a dependent-arising and established by way of its own character] is not acceptable in our system, if consciousness were established by way of its own nature that consciousness would not depend on confusion or karmic formations. On the other hand, since it does depend [on them], it is not established by way of its own nature. For that reason, in all ways consciousness is just not inherently existent. One should think: "This is because [consciousness] is like the falling hair and so forth observed by those with cataracts which exists when the conditions for error exist, whereas, because it is like that, it does not exist when the conditions for error do not exist."

Being both a dependent-arising and established by way of its own character is not acceptable; it can only be one or the other. However, consciousness that is established by way of its own character is not acceptable because it arises in dependence on ignorance and karmic formations. Because consciousness is dependent on other, inherently existent consciousness is impossible in all ways. To illustrate this there is the example of falling hair which appears when there is the condition of cataracts and does not appear when there are no cataracts. Thus, the appearance of falling hair appears due to the condition of cataracts, it does not appear from its own side. For example, none of us see a white conch as yellow because we do not have the condition of jaundice. Another example is when we are in a moving car we see objects outside as if it were them that was moving, but when we stop the car we not longer have the appearance of houses, trees, and so forth as moving because the condition for that appearance ceases. Due to the moving car there is the mistaken appearance of moving houses and so forth. What is the condition for this mistaken appearance? This is taught in *Awarenesses and Knowers* in the context of the seven facsimiles of direct perceivers.

Lama Tsongkhapa's *Illumination* (Tibetan text page 300-1) says:

> "When the condition for error, ignorance, exists, consciousness exists" is indicated by the forward order of dependent-relation, whereas "When ignorance does not exist, consciousness is averted" is indicated by the reverse order.

"When the condition for error, ignorance, exists, consciousness exists" shows the forward order of the twelve links of dependent-arising. This is that when there is ignorance, karmic formations exist; when karmic formations exist, consciousness exists, and so forth. "When ignorance does not exist, consciousness is averted" is said to indicate the reverse order of the twelve links, but, in general, the presentation of the reverse order is somewhat different. Saying "When ignorance does not exist, consciousness is averted" is actually a type of forward order that is set out in terms of if the former does not exist the later does not exist. Perhaps this could more accurately be said to be the opposite side rather than the reverse order.

Lama Tsongkhapa's *Illumination* (Tibetan text page 301) says:

> At the end [of indicating this, the *Sutra on the Ten Grounds*] extensively says:
>
> > [Children of the Conqueror,] when he thus individually investigates what is subject to formation as bringing about the fault of many shortcomings and as without entitiness, unproduced, and unceased...

Due to the creation of karmic formations there are many shortcomings. However, these karmic formations are without entity, unproduced, and unceased. In fact, all twelve links lack an inherently existent entity, are not produced inherently, and do not cease inherently. This is also mentioned in the Perfection of Wisdom sutras saying: "All phenomena are unproduced, unceasing, quiescent from the start, and naturally thoroughly passed beyond sorrow."

Lama Tsongkhapa's *Illumination* (Tibetan text page 301) says:

> Therefore, having thus seen the passages taught in that very [*Sutra on the Ten Grounds*], who possessing a mind would conceive consciousness as substantially existent? It would not be [conceived as such], but, in the case that it were, it is [conceived as such] by tenets that conceive the true existence of inner [things].

Based on these passages in the *Sutra on the Ten Grounds* who would conceive a substantially existent consciousness? In short, consciousness is not substantially existent. However, if someone says that it is substantially existent, this would be due to tenets. In the autocommentary Chandrakirti says that this would be due to view, whereas Lama Tsongkhapa says that "it is [conceived as such] by tenets that conceive the true existence of inner [things]."

QUESTIONS AND ANSWERS

Student: According to a transcript (#26), the self-cognizer experiencing the conception apprehending form has two different appearances: 1) the conception apprehending form and 2) the appearing object of the conception apprehending form. Is this correct?
Geshe Jampa Gyatso: There is a passage regarding this in Gyeltsab Je's *Illuminating the Path to Liberation*. In this text it says that a self-cognizer experiencing the conception apprehending form has these two appearances. This self-cognizer has the appearance of the conception apprehending form

and also realizes the appearing object of that conception. Gyeltsab Je's *Illuminating the Path to Liberation* (Tibetan text page 107) says:

> One who asserts that this scripture teaches that in our system the apprehended object of an ascertaining consciousness is distinguished by being an ascertained object has not understood this presentation because that the apprehended object of conception is the object of comprehension of a direct self-cognizer is repeatedly taught by logicians.

Student: Does this apply equally to non-conceptual consciousnesses?
Geshe Jampa Gyatso: It does not. The apprehended object of an eye consciousness apprehending form is form. *Awarenesses and Knowers*, which is according to the Sautrantika system, says that the apprehended object and appearing object of a direct perceiver are mutually inclusive. Also the apprehended object of conception, the appearing object of conception, and permanent phenomena are mutually inclusive. The object of the mode of apprehension and the referent object of a conception are also mutually inclusive. These two objects are different from the appearing object. On the other hand, for a direct perceiver the appearing object and object of the mode of apprehension are mutually inclusive. If it appears to a direct perceiver it is not pervaded by being an appearing object; for example, an eye consciousness apprehending form has the appearance of product, impermanence, and the specific characteristics of form. According to the Prasangika Madhyamika system a direct perceiver can be a mistaken consciousness, whereas according to the lower schools this is not possible.
Student: Does the self-cognizer experiencing the eye consciousness apprehending form have two appearances?
Geshe Jampa Gyatso: It does not because the appearing object of an the eye consciousness apprehending form is form, whereas that form does not appear to a self-cognizer experiencing the eye consciousness apprehending form.

Student: According to Chittamatra, is the self-cognizer apprehending an eye consciousness the eye consciousness itself, a mental consciousness, or neither?
Geshe Jampa Gyatso: It is neither. A self-cognizer is not an eye consciousness. Is it a sense consciousness or a mental consciousness? This is not clearly stated in any text but perhaps in response we can say that it is a mental consciousness, although there is debate about this. On the other hand, if we say that it is neither a sense consciousness or mental consciousness there is no further debate.

Student: A self-cognizer is said to experience that which is clear and knowing. How is that statement to be interpreted? Is it the self-cognizer that is clear and knowing or is it the consciousness that it observes which is clear and knowing?
Geshe Jampa Gyatso: For a self-cognizer there is no dualistic appearance because dualistic appearance has vanished for it. The only function of a self-cognizer is that of an experiencer. However, this explanation is only valid for those who accept self-cognizers. A self-cognizer experiencing an eye consciousness apprehending blue does not have the appearance of blue, it has the appearance of that which is clear and knowing. In the Chittamatra school the self-cognizer, the experiencer, and the object experienced, the consciousness, are inseparable due to merely being the factor of experience. According to those who assert self-cognizers, consciousness alone is the object experienced by a self-cognizer; forms and so forth do not appear to it. However, when this is debated it is said: "Is there a phenomenon that is no realized by a self-cognizer? If there is, what is it? Is there a phenomenon that is not realized by a direct valid cognizer? Is there a self-cognizer that experiences omniscient mind? If someone says there is no such self-cognizer, one asks: "Is there not a direct valid self-cognizer in the continuum of a buddha superior?" If someone says that if it is a consciousness in the continuum of a buddha superior it is necessarily omniscient mind, then it follows that a direct valid self-cognizer is omniscient mind. If someone says that a consciousness in the continuum of a buddha superior it is not necessarily omniscient mind, then there would be more discussion. One text says that there is no

direct self-cognizer that is a sense consciousness, but that there is a direct self-cognizer that is a mental consciousness. I do not remember where I read this, but I thought that it was a strange statement.

Student: With regard to the river that is the substantial cause of a hungry ghost seeing pus and blood and a human being seeing water – is that river water, water element, both, or neither? Are water and the water element the same?
Geshe Jampa Gyatso: If water is poured into a cup in front of three beings, a hungry ghost sees it as pus and blood, a god as nectar, and a human being as water. The hungry ghost sees it as pus and blood because there is a particle in the water that functions as the substantial cause for a hungry ghost to see it as pus and blood and because the hungry ghost has the karma which is the cooperative condition to see it as pus and blood.

There is a difference between water and water element. If it is water element it is not pervaded by being water, for example, no one would say that there is water in fire yet there is the water element in fire.
Student: Is that particle that acts as a substantial cause water or the water element?
Geshe Jampa Gyatso: Perhaps we can say that it is the water element.

Student: Would Geshe-la please discuss introspection with regard to the following:
a. Introspection is sometimes described as a "corner" of the mind observing the rest of the mind. Is introspection the same entity as the mental consciousness meditating on an object? If it is, is it in the retinue of that main mind even though its observed object is not the same as that of the main mind?
Geshe Jampa Gyatso: Introspection is not included in the eleven virtuous mental factors. Perhaps it can be said that it is a part of the wisdom that is one of the five omnipresent mental factors. In the *Compendium of Knowledge* fifty-one mental factors are listed, whereas in the *Treasury of Knowledge* there are forty-six: the ten many levels of mind, the ten many levels of virtue, and so forth. Asanga's Compendiums included among his Five Treatises on the Levels say that there are seven mental factors, of which introspection is one. In another text, twenty-two mental factors are mentioned. When these are added together there are more than seventy mental factors.

Introspection is defined as that which guards the mind. Whatever introspection is in the retinue of a main mind shares the five similarities with it. Therefore, the main mind and the introspection in its retinue should have a common observed object. If a mental factor observes a particular object, is that object also observed by the main mind? This would seem to be the main point of the question here in that when introspection observes the mind it would seem that the mind is the observed object of that introspection. The main mind and the mental factor introspection in its retinue have the same observed object. They also have the same aspect, the same substance, the same base (the main mind and the mental factor have the same sense power which is their empowering condition), and the same time. They have the same observed object but if the mental factor in its retinue observes an object, it is not necessary that the main mind also observes it. For example, when one meditates on calm abiding taking oneself in the aspect of Chenrezig as the object, one focuses single-pointedly on this object. What does the main mind observe? It observes oneself in the aspect of the deity Chenrezig. What does the introspection in its retinue observe? It should also observe oneself in the aspect of the deity Chenrezig. This introspection functions to examine whether or not the mind remains on the aspect of the deity Chenrezig, therefore, it does share the same object. If the mind wanders, it has to be brought back to its object once again. It is said that it can happen that when someone meditates instead of having the appearance of the guru-deity he has the appearance of his beloved! This is because the mind has moved from its observed object.
Student: Does the introspection observe the mind having the aspect of the deity Chenrezig?

Geshe Jampa Gyatso: The main mind has the appearance of the aspect of Chenrezig, as does the introspection in its retinue. But, in addition, the introspection examines whether or not the mind remains on that object.
Student: Therefore, introspection observes the mind having the aspect of the deity Chenrezig?
Geshe Jampa Gyatso: One can say that.

b. Does introspection observe the main mind simultaneously or does it necessarily observe a previous moment of consciousness?
Geshe Jampa Gyatso: The main mind and the introspection in its retinue observe an object simultaneously. There is a discussion about whether introspection is always necessary because for someone who has attained calm abiding it is not necessary. If one has calm abiding, the mind remains on the object, therefore, introspection is not necessary. The use of introspection is necessary only when the mind is not stable.

Gyeltsab Je's *Illuminating the Path to Liberation* (Tibetan text page 28) says:

> Since the meaning of the sutra that says "I and those like me are the judge of the person; the person is not the judge of the person in that he would degenerate," means that, not seeing reasons, one should not in the least say "This person has those faults and does not have even the slightest good quality" and "It does not exist other than this and that." Not knowing who is a holy being and criticizing holy beings, one creates the perfect cause of the unbearable lower realms. Since this is thoroughly taught in sutra and tantra, like a firepit covered with dust, in this place the intelligent should be extremely careful.

This means that in daily life we should be careful to avoid criticizing others.

END

Monday afternoon, 27 November 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 301) says:

> [Nagarjuna's] *Sixty Stanzas of Reasoning* also says:
>
> That the world has ignorance as its condition
> Was taught by the complete buddha.
> Therefore, why is it not admissible to say
> "This world is conception"?
>
> When ignorance ceases
> What ceases?
> When it is superimposed through unknowing,
> How would it not become clear?.
>
> This means that if there were establishment by way of its own entity, it would be established as the mode of abidance. Then, when averting errors this should become clear; it would not be the opposite.

The Buddha taught that the world, cyclic existence, arises from the condition that is ignorance. Ignorance is, specifically, the causal condition for cyclic existence. From among the twelve links, the first, ignorance, is the root of cyclic existence in that due to ignorance one wanders in cyclic existence. Cyclic existence is the joining of one birth to another birth under the control of actions and afflictions. The world, literally, the perishable base (*'jigs rten*), refers in particular to the aggregates that are produced by actions and afflictions. In short, we are a base that is perishing momentarily.

Nagarjuna then says: "Therefore, why is it not admissible to say 'This world is conception'?" The world, the perishable base, is fabricated by conception. When ignorance ceases, what ceases? One who understands the twelve links would be able to respond saying "When ignorance ceases, karmic formations which are projecting actions cease." Due to ignorance there is unknowing, due to which there is superimposition. On the other hand, if there were establishment by way of its own character, it would be established as the mode of abidance. Then, when errors are averted, this should become clear, but it does not.

Lama Tsongkhapa's *Illumination* (Tibetan text page 301) says:

> The explanation in order to indicate that mind is foremost is [as follows].
> Chandrakirti says:
>
> *The mind itself creates the world of sentient beings and*
> *The extremely varied world of the environment.*
> *Migrating beings without exception are said to be produced from actions.*
> *Having given up mind, actions also do not exist.* [6.89]
>
> *The world of sentient beings* is to acquire one's own existence (*dngos po*) by means of:
> 1. actions that are accumulated by their own minds and
> 2. afflictions.
>
> On the other hand, *the extremely varied world of the environment* (literally, the vessel) – from the wind mandala to the limits of the environment of Akanishta – *is created*, that is, produced, by common actions accumulated *by the very minds* of just those sentient beings. The varieties, such as the eye of a peacock's feather and so forth, are produced by the uncommon actions of just those sentient beings. The petals and various colors of a lotus and so forth are produced by the common actions of sentient beings. Other [things] should be understood similarly.

"Mind is foremost" means that the mind is the main creator in the sense that it creates both the environmental world and the inhabitants, sentient beings. Here the world *dngos po*, usually translated

as 'things' and sometimes translated as 'property,' means that the inhabitants, sentient beings themselves, acquire their own existence by the actions they created in the past.

"The extremely varied world of the environment" is produced by common actions of sentient beings. This refers to the houses, villages, the places we share with other people, and so forth that are all due to common actions created in the past. The environmental world consists of the wind mandala, the basis of the entire world system, up through Akanishta, the highest level of the form realm. The entire world system through the form realm arises from common actions, whereas in the formless realm, because there is no form, there is no environmental world.

On the other hand, the colors of the eyes of a peacock's feathers come from uncommon actions of individual sentient beings. "And so forth" includes the spots on a leopard's coat and so forth. For example, each one of the fifty people here has a particular complexion and shape, particular eyes, ears, and so forth. Although eyes, ears, and so forth are common to each, their specifics are different. All that is specific to a particular individual is due to his or her respective actions in the past.

Lama Tsongkhapa says: "The petals and various colors of a lotus and so forth are produced by the common actions of sentient beings." Such things are environmental results.

Thus, there are two kinds of results:

1. the results of common actions that are experienced by many beings and
2. the results of uncommon actions that are experienced by a specific individual.

Lama Tsongkhapa's *Illumination* (Tibetan text page 301-2) says:

> [Sutra] says:
>
> By the power of sentient being's actions,
> The black mountains are produced at that time; for example,
> The weapons and precious trees
> In the worlds of hell sentient beings and high status.

Gendun Drup's commentary on Vasubandhu's *Treasury of Knowledge* (translated by David Patt) says:

> At the center of Jambudvipa is the vajra-throne in India. Going north from there beyond the nine black mountains, are the glorious Snow Mountains. North of that is the Mountain of Intoxicating Fragrance. Just this side of ten yojanas from there is the lake where the naga King Anavatapta lives, called Lake Anavatapta, full of water possessing the eight qualities, covered with blue utpalas, lotus, and red kumuda flowers, and so forth. The lake is square and the width is 50 yojanas on each side, or 200 around the edge.

In short, to the northern direction of the stupa of Bodhgaya there are nine mountains, the last of which are the black mountains. In front of them is a lake, below which are the hells. In the hell realm there are weapons that cut and kill, whereas in the worlds of high status there are precious trees. The precious tree, a wish-fulfilling tree, is the most precious object found in Jambudvipa (our world).

The main hells are the eight hot and eight cold hells, but there are also neighboring hells which surround the hot hells. In addition, there are occasional hells which exist even in the human realm. There are also different types of hungry ghosts, animals, and human beings. Among the human beings born in the southern continent, Jambudvipa, there are many different situations, different types of bodies, different levels of wealth, and so forth. For example, there are human being who experience great suffering due to lacking things, due to being killed, tortured, and so forth. According to the Buddha's teachings these are all due to actions (karma). On the other hand, because Hindus believe in both a creator of the world and karma, their explanation would be different. Christians would say that the suffering of human beings is due to not respecting the commandments given by God, in the same way that there is suffering due to not respecting the laws of a country. Hence, their explanation is

somewhat similar to the Buddhist explanation of karma because, even though they do not have the same concept of cause and result, they do say that particular sufferings are due to the actions of human beings.

Lama Tsongkhapa's *Illumination* (Tibetan text page 302) says:

> Since the two worlds produced by the two actions – the common and not [common] – are also explained in the Chittamatra scriptures, also for the Chittamatra system it is not that the world of the environment does not exist. Hence, *migrating beings without exception are taught to be produced from actions*. *Having given up mind, actions also do not exist*, that is, because only those who possess a mind accumulate actions, actions are also dependent on mind.

The Chittamatrins say that the two worlds are produced by common and uncommon actions. "The two worlds" refers to the environmental world (the vessel) and the inhabitants (the contents). In this way, the Chittamatrins say that the environmental world arises due to common actions, while the world of beings arises from uncommon actions. Lama Tsongkhapa says: "Hence, migrating beings without exception are taught to be produced from actions." This is accepted by both the Chittamatrins and the Prasangika Madhyamikas.

"Having given up mind, actions also do not exist, that is, because only those who possess a mind accumulate actions, actions are also dependent on mind." This is also accepted by both the Chittamatrins and the Prasangika Madhyamikas in that they both say that minds are the creators of actions and that matter is not the creator of actions.

Lama Tsongkhapa's *Illumination* (Tibetan text page 302) says:

> Hence, based on the teaching in the *Sutra on the Ten Grounds* "that which is not a creator and a feeler," the term 'only' is indicated to refute other creators. On the other hand, in dependence on the teaching that all twelve links [of dependent-arising] are also based on mind alone, the term 'only' indicates mind as being foremost. The former explanation is in terms of negation and the latter is in terms of affirmation.

"The former explanation is in terms of negation" refers to the explanation in the *Sutra on the Ten Grounds* that "the term 'only' is indicated to refute other creators." "The latter is in terms of affirmation" refers to the explanation in this sutra that the twelve links of dependent-arising are all based on mind alone due to which "the term 'only' indicates mind as being foremost."

Lama Tsongkhapa's *Illumination* (Tibetan text page 302) says:

> Because of that, mind itself is the main cause for the thorough engagement in migrating; that which is other than mind is not the main cause. For this reason, mind only is posited in sutra as being foremost; form is not.

Sentient beings continuously migrate due to contaminated actions created by their minds. Due to virtuous contaminated actions they are reborn in the upper realms and due to non-virtuous actions they are reborn in the lower realms. The aggregate of form is not the main cause of migrating, whereas mind is the main cause.

Lama Tsongkhapa's *Illumination* (Tibetan text page 302) says:

> Chandrakirti says:
> *Even though form exists,*

> *It, as does mind, does not exist as the very creator.*
> *Hence, a creator that is other than mind*
> *Is rejected; form is not refuted.* [6.90]
>
> *Even though form* is posited to *exist*, *that* form, *as does mind, does not exist as the very creator* of migrating beings. *Hence, a creator that is other than mind is rejected*, that is, refuted; external *form is not refuted*.

"External form is not refuted" means that external form exists. Although beings who migrate to the upper and lower realms have a physical form, it is not the main cause for their migrating. Is there a form that is the cause of migrating beings? Is the main cause of a house the mind or the bricks? Is the main cause for building a house the bricks, wood, and so forth or is the main cause the mind of the person who originally designed the house? Think about it.

Lama Tsongkhapa says: "Hence, a creator that is other than mind is rejected, that is, refuted; external form is not refuted." According to the Prasangika Madhyamikas the statement in the *Sutra on the Ten Grounds* "The three realms are only mind" negates a creator that is other than the mind; it does not negate the existence of external form. On the other hand, according to the Chittamatrins this same passage negates external form.

Lama Tsongkhapa's *Illumination* (Tibetan text page 302) says:

> Some, such as the Samkhyas, assert a [general] principal and so forth to be the creator and some Buddhists assert the mind to be the creator, but there is no argument regarding form not being the creator.

No one asserts form to be the creator of the world. This is also stated in Chandrakirti's autocommentary but without specifying that they are the Samkhyas and Buddhists.

Lama Tsongkhapa's *Illumination* (Tibetan text page 302) says:

> Therefore, having questioned, that is, investigated, the creators [propounded] by others, the [general] principal and so forth, that which is eliminated is just a [general] principal and so forth that lack the characteristics of a creator. Therefore, when, due to seeing that it has the capacity to be a creator in conventional terms, mind only is said to be the creator, the [general] principal and so forth are eliminated as being the creator. Then, it is suitable to say "The object of the source of the argument which is the object expelled, the [general] principal and so forth, is suppressed" because it is like, having expelled one rival from among two kings wishing to rule a single country, the expeller wins his own country and the ordinary beings are not harmed because they are indispensable to both. Similarly, also here, since form is not harmed because of being indispensable to both, it should definitely be said that "Form only exists."

Here it says "that lack the characteristics of a creator," what are the characteristics of a creator? Think about it.

Tuesday morning, 28 November 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 303) says:

> 3B1C-2B3E-2A1B-2B2C-2 Indicating that the two, external objects and inner mind, are similar in existing and not existing

Chandrakirti's autocommentary says:

Therefore, by the manner that was thus indicated:

For those abiding with the reality of the worldly,
The aggregates renowned to the world – all five exist.
When the rising of exalted wisdom of reality is accepted,
To the yogi those five will not arise. [6.91]

All five aggregates exist in the presentation of the world, whereas they do not exist in the perspective of a superior's exalted wisdom of meditative equipoise. This is because to a superior's exalted wisdom of meditative equipoise observing emptiness there is no appearance of conventionalities. The appearance of conventionalities to a superior's exalted wisdom of meditative equipoise is an object of negation. This is because there are two types of objects of negation:

(i) an object of negation with respect to the perspective of a superior's exalted wisdom of meditative equipoise and
(ii) an object of negation in general.

This means that, even though in general conventional truths are not an object of negation, they would be an object of negation if they appeared to a superior's exalted wisdom of meditative equipoise.

Chandrakirti's autocommentary says:

Since like that, therefore:

If form does not exist, do not hold that mind exists.
Also, if mind just exists, do not hold that form does not exist. [6.92ab]

Whenever, due to the acceptability [of searching for the imputed object], [external] form were realized as non-existent, then, because the existence of both is separated from acceptability, mind too would have to be realized as non-existent. Also, whenever mind was realized as just existent, then form too would have to be realized, because both are also renowned to the world.

Gedun Drup's *Mirror of the Clarification of the Thought* (Tibetan text page 46), as translated by Martin Willson, says:

3B1A-6C5A-1A2B-2C2 Both object and mind are equally existent or non-existent

For one who dwells in the worldly people's reality,
All five aggregates known in the world exist.
To the yogin, striving that knowledge of reality
May arise, these five do not appear. [6.91]

If there's no form, don't hold that mind exists;
But if mind exists, don't hold that form does not! [6.92ab]

You should understand that you should know, "If there is no external form, do not hold that the mind exists! And if the mind exists, do not hold that external form does not exist!" For to one who dwells in the reality of the distinctions of worldly people, all five of the aggregates known in the world exist; but if the yogin is striving for the transcendent knowledge of absolute reality to arise, those five do not appear to him.

The Prasangika Madhyamikas say to the Chittamatrins: "If external form does not exist, you have to say that inner consciousness does not exist! If inner consciousness exists, you also have to say that external form exists!"

Chandrakirti's autocommentary says:

> It is to be realized like that also through scripture, like this:
>
> *They were equally rejected by Buddha in the*
> *Sutra of the mode of wisdom and taught in the Abhidharma.* [6.92cd]
>
> All five of those aggregates of form and so forth were equally taught in *Abhidharma* by way of thorough divisions of specific and general characteristics. All five were also equally refuted in the wisdom gone beyond because it is taught [there] from "Subhuti, form is inherently empty" through "consciousness is [inherently empty]."

Gedun Drup's *Mirror of the Clarification of the Thought,* as translated by Martin Willson, says:

> *In the* Sutras *on wisdom, the Buddha rejected them all*
> *Equally, but taught them in the* Abhidharma. [6.92cd]
>
> Those five aggregates are equally existent or non-existent, for in the sutras about the perfection of wisdom, the Buddha rejects their inherent existence equally, and in the *Abhidharma*, he teaches [all five] in terms of special and general characteristics.

The Prasangika Madhyamikas say that mind and forms are the same in being renowned to exist in the world. In the Perfection of Wisdom Sutras the Buddha equally negated that the five aggregates exist inherently. In the Abhidharma he equally explained the five aggregates in terms of their specific and general characteristics.

Chandrakirti's autocommentary says:

> Therefore:
>
> *Even having destroyed these levels of the two truths.* [6.93a]
>
> – established by scripture and reasoning like that,
>
> *Your substance, since refuted, would not be established.* [6.93b]
>
> Due to asserting a mere consciousness, without form, the levels of the deceptive and the ultimate that were mentioned would be destroyed. But having destroyed those levels of the truths like that, your substance would not be established.

Gedun Drup's *Mirror of the Clarification of the Thought,* as translated by Martin Willson, says:

> *Though you've destroyed this order of the two truths,*
> *Your substance, being refuted, is not proved.* [6.93ab]
>
> Although you have destroyed this order of the two truths, not existing ultimately and existing conventionally, it follows that the substance of the inherently existing dependent phenomena of you Chittamatrins is not established; since it is refuted by logic.

In short, external form and mind are the same in existing and not existing because they are equal in being devoid of inherent existence and equal in existing conventionally. Therefore, the Prasangika Madhyamikas say that the Chittamatrins cannot assert other-powered phenomena to be substantially

existent because by doing so they destroy the levels of the two truths, whereby the presentation of the two truths is lost.

Chandrakirti's autocommentary says:

> If asked: Why?
>
> Since substance was previously refuted, therefore, your fatigue will be just useless!
>
> *Therefore, due to the levels like that, from the beginning, things*
> *Are to be known as not really produced, [yet] produced [for] the world.* [6.93cd]

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *Know therefore that by that order, from the beginning,*
> *Things are unborn in reality, born for the world.* [6.93cd]
>
> You should know that functional things, by the order like that explained above, have from the beginning been unborn ultimately and born in worldly convention, for what does not fail in the two truths must be admitted to not exist ultimately and to exist conventionally.

According to the Prasangika Madhyamikas substantial existence is not acceptable, instead all phenomena are pervaded by being imputedly existent in that they are imputed by a mind over there; they do not exist from their own side. On the other hand, the Chittamatrins say that mind exists inherently, whereas forms do not exist inherently because they do not exist at all. If it is not established by way of its own character is it pervaded by not being existent for the Chittamatrins system?
Student: For the Chittamatra system if it is not established by way of its own character it does not exist at all.
Geshe Jampa Gyatso: Kor sum! It follows that the imputational factor, generally characterized phenomena, and space, as the subject, are not existent because they are not established by way of their own character. In the Chittamatra system establishment by way of its own character and inherent existence are different. In the Svatantrika Madhyamika system and the Prasangika Madhyamika system they are the same, but in the Prasangika Madhyamika system both do not exist, whereas in the Svatantrika Madhyamika system both exist. In the Chittamatra system they are different because there are some natures that are not established by way of their own character and some that are established by way of their own character in that:

- the other-powered and the thoroughly established are established by way of their own character and
- imputational factors are not established by way of their own character.

Lama Tsongkhapa's *Illumination* (Tibetan text page 303) says:

> Chandrakirti says:
>
> *For those abiding in that reality of worldly beings*
> *The aggregates renowned in the world, that is, all five, exist.*
> *When wishing to manifest the exalted wisdom of suchness,*
> *Those five do not arise for yogis.* [6.91]
>
> Therefore, in that case, by means of the presentation mentioned above, *for those abiding in that reality* – that is, that presentation – *of worldly beings, those aggregates* that are external forms and so forth *renowned in the world*, *that is, all five* aggregates, *exist*. On the other hand, *when wishing to*

> *manifest the exalted wisdom* directly realizing *suchness, those five* aggregates *do not arise for yogis*, that is, they do not arise in the perspective of their meditative equipoise.
> Chandrakirti says:
>
> *If forms do not exist, do not conceive minds to exist;*
> *Also if minds exist, do not conceive forms to not exist.* [6.92ab]
>
> It being so, therefore, *if* external *forms* are asserted to *not exist, do not conceive minds to exist; also if* inner *minds* are asserted to *exist*, *do not conceive* external *forms to not exist*. At that time, when analyzing in terms of the acceptability of searching for the imputed object, if external forms are conceived to not exist, then, because the existence of both the external and inner is separated from acceptability, inner minds must also be realized to not exist. Also, at that time, if minds are conceived to exist, then also forms must be realized because both are renowned in the world.

(Note: Lama Tsongkhapa's *Illumination* (Tibetan text page 303) says *'thad pas las 'grub pa dang bral wa'i phyir,* however, *"las 'grub pa"* is to be omitted.)

In the reality of the world, that is, within worldly conventionalities, all five aggregates exist. On the other hand, they do not exist in the perspective of a superior's exalted wisdom of meditative equipoise. The Prasangika Madhyamikas say that if the Chittamatrins assert that external forms do not exist they should not assert that mind exists, whereas if they accept that inner mind exists they should not assert that external form does not exist.

Lama Tsongkhapa's *Illumination* (Tibetan text page 303-4) says:

> Here 'form does not exist' – which is explained by the Chittamatrins with regard to asserting the difference of the two, forms and minds, existing and not existing – is 'external form does not exist.' [Chandrakirti's *Supplement* previously] said:
>
> *Arise as the very appearance of blue and so forth*
> *From their respective seeds, without external apprehendeds...* [6.63bc]
>
> [Chandrakirti's] autocommentary on that also said:
>
> ... without external apprehendeds such as blue and so forth...
>
> The qualification 'external' is mentioned in regard to the object of negation 'form does not exist.' In addition, [Chandrakirti's] autocommentary [previously] said:
>
> ... having said that the term 'only' is unable to refute external objects of knowledge, [in order to complete the meaning of the term 'only'] there is [the following] explanation for the purpose of showing that, other than the explanation [that mind is foremost], other types [of explanation that differ from that way of explaining] cannot refute external objects.

The Chittamatrins qualify "form does not exist" by saying that it means "external form does not exist." They say that, although external forms do not exist, the appearance of external forms does exist. This appearance arises from the activation of latencies. There are three types of latencies:

1. latencies of actual expression,
2. latencies of a view of the self, and
3. latencies of similar type.

Due to the activation of which type of latency is there the appearance of blue? Think about it in the context of what is said in the autocommentary: "without external apprehendeds such as blue and so forth..."

The root text says "form does not exist" (v. 6.92a), whereas in the autocommentary the qualification 'external' is added, whereby it becomes "external form does not exist."

According to the Chittamatrins the term 'only' does not negate objects of knowledge and, while it does not negate form, it does negate external form.

Lama Tsongkhapa's *Illumination* (Tibetan text page 304) says:

> This is because the refutation of forms – in the teaching that the refutation of forms is not the meaning of the sutra – is explained to be the refutation of external [forms]. If this were not the case, when taken to be nothing more than the mere words, through saying "Having said that the term 'only' is unable to refute objects of knowledge" it should also be said that "The Chittamatrins assert that the term 'only' refutes objects of knowledge that are mind."

Saying that the term 'only' negates objects of knowledge that are mind is not correct.

Lama Tsongkhapa's *Illumination* (Tibetan text page 304) says:

> If the Chittamatrins do not assert that possessing form, when they present the reasonings that prove a basis-of-all [the following] statements in [Asanga's] *Compendium on the Mahayana* would be solely contradictory:
> - "It is inadmissible that there does not exist a fruitional consciousness other than that also apprehending the sense powers possessing form, those already connected at the time of joining" and
> - "Consciousness and name and form, like a tripod, are what are engaged in a manner of one depending on the other. Moreover, if a fruitional consciousness does not exist, this would not be suitable."
>
> This is because if they assert phenomena that possess form, it is asserted that they must assert external [objects].

If someone were to say that the Chittamatrins do not assert 'that possessing form,' it would contradict the reasonings proving a mind-basis-of-all presented in Asanga's *Compendium on the Mahayana*. In order to prove a basis-of-all the Chittamatra system sets out various reasonings of which one of the main reasonings is: "If there were no mind-basis-of-all then joining with a next life would not be possible." When this joining happens, the sense powers possessing form come into existence. They must have an agent that apprehends them that is a consciousness. What is that consciousness? The apprehender that takes the sense powers possessing form as an object must be a fruitional consciousness. What is this fruitional consciousness? It can only be a mind-basis-of-all since mind-basis-of-all and fruitional consciousness are synonyms. This passage thus proves that as the object of a mind-basis-of-all there are sense powers possessing form. This implies that the Chittamatrins accept form, therefore, they do not negate form. However, although they do not negate form, they do negate external form.

Lama Tsongkhapa says: "Consciousness and name and form, like a tripod, are engaged in a manner of one depending on the other." For example, when one binds three sticks together to form a tripod, they stand upright only in dependence on each other. Consciousness is the third link of the twelve links, whereas name and form are the fourth link. 'Name' refers to the last four aggregates, whereas 'form' is the first of the five aggregates. Consciousness and name and form depend on each other. Since Asanga's *Compendium on the Mahayana* sets out the twelve links, the Chittamatrins accept that consciousness and name and form depend on each other, Thus, Asanga's *Compendium on the Mahayana* shows that the Chittamatrins accept form and, therefore, do not negate it.

Asanga's *Compendium on the Mahayana* also says: "Moreover, if a fruitional consciousness does not exist, this would not be suitable." Fruitional consciousness, appropriating consciousness, and mind-basis-of-all are synonyms used on occasions that differ in regard to time. Lama Tsongkhapa in his text *Ocean of Eloquence: An Extensive Commentary on the Difficult Points of Mentality and the Basis-of-all* says: "Those beyond [the eighth ground] and foe destroyers do not have a mind-basis-of-all

because they do not have the two depositors." Since they do not have a mind-basis-of-all, what is that consciousness called on the eighth ground and above? It is called 'fruitional consciousness' and 'appropriating consciousness.' In the case of a buddha superior what is that consciousness called? It is called 'a mirror-like exalted wisdom.' This is what is asserted by the Chittamatrins.

Bodhisattvas on the eighth ground and above and foe destroyers do not have afflictions. Therefore, they do not have a mind-basis-of-all which is defined as: the observed object of afflicted mentality, the eighth consciousness. Thus, the afflictions of bodhisattvas on the eighth ground and above and foe destroyers do not increase by observing a mind-basis-of-all. This afflicted mentality is one of the two depositors. Having abandoned afflictions, there is no need for a basis for the infusion of the latencies of actions. Or it can be said, bodhisattvas on the eighth ground and above and foe destroyers do not take rebirth under the control of afflictions and actions.

There are eight reasonings proving the existence of a mind-basis-of-all.

For the Chittamatrins a fruitional consciousness is the consciousness that experiences the result of actions, therefore, it is the person. The Chittamatrins posit the appropriating consciousness as the illustration of the person. In the *Sutra Unraveling the Thought* it says:

> "The appropriating consciousness, profound and subtle,
> [Having] all the seeds, like the cascading flow of a river,
> When conceived as a self is not proper."
> I do not teach this to the childish.

A fruitional consciousness is the consciousness that experiences the fruitional result of actions. According to the Chittamatrins when the person is sought by thorough analysis it is found. They say that what is found is the illustration of the person: the appropriating consciousness, the fruitional consciousness, and the mind-basis-of-all.

The main points of debate between the Prasangika Madhyamikas and the Chittamatrins are:

1. the Chittamatrins negate external form, whereas the Prasangika Madhyamikas assert that external form exists, and
2. the Chittamatrins assert that other-powered phenomena are inherently existent, whereas the Prasangika Madhyamikas assert that they are not inherently existent.

You should debate this amongst yourselves by assuming their respective positions. With respect to this, there is a story about Aryadeva and Nagarjuna. Aryadeva received an invitation, which was carried to him on the Glorious Mountain by Mahakala in the form of a crow, to come to Nalanda to debate with the non-Buddhist, Ashvagosha. Aryadeva asked his master, Nagarjuna, what he should do, and Nagarjuna replied that before going to Nalanda they should practice the debate by means of Nagarjuna taking the position of the non-Buddhists. However, Nagarjuna held this position so convincingly that Aryadeva thought that he had come to really agree with it. Thus, he took off his shoes and circled them around Nagarjuna's head saying "Kor sum." Nagarjuna then predicted that Aryadeva would win the debate with Ashvagosha but due to this negative action would experience some obstacles. In fact, on the way to Nalanda, Aryadeva met an old man missing one eye who asked Aryadeva for one of his own eyes and Aryadeva, being a bodhisattva, was unable to refuse and gave him one of his eyes. Aryadeva then continued on to Nalanda where he debated with Ashvagosha. We too should debate like Nagarjuna and Aryadeva with great enthusiasm.

Tuesday afternoon, 28 November 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 304) says:

> Hence, even though they assert that "Due to the condition of consciousness, name and form are produced" and so forth, they assert that it is not necessary to assert external [form]. Do no propound the opposite to this [because], when presenting this uncommon presentation of Chittamatra, there are many such explanations. It should similarly be realized that also in this scripture the existence and non-existence of external objects and inner consciousnesses are the same.
> Chandrakirti says:
>
> *In the sutras on the mode of wisdom, the Buddha*
> *Equally rejected them and in the* Abhidharma *he taught them.* [6.92cd]
>
> Hence, *in the sutras on the mode* of the perfection of *wisdom the Buddha equally rejected*, that is, refuted, the inherent existence of all five aggregates, form and so forth, saying "Subhuti, form is empty of inherent existence" through "Consciousness is empty of inherent existence."

According to the Prasangika Madhyamika system, if that possessing form is asserted then external form is also to be asserted. Since the Chittamatrins also assert that "Due to the condition of consciousness, name and form are produced," they do assert form. However, even though they assert production of name and form from consciousness, they do not assert external form. On the other hand, the Prasangika Madhyamikas that if one asserts form, one should assert external form.

Since there are many presentations regarding the production of form in the uncommon presentations of the Chittamatrins, although they do not assert external form, they do not negate form. Therefore, the Chittamatra system differentiates between form and external form. In the Chittamatra system form is asserted because they say that form is produced due to the activation of latencies in one's continuum. Such form is asserted to be one substance with inner mind, that is, the valid cognizer apprehending that form. External form is not asserted in this school because they say that

- there is no form that is a different substance from inner consciousness and
- there is no form composed of particles that does not depend on the activation of latencies in one's own continuum.

In this way, they differentiate between form and external form. However, according to the Prasangika Madhyamikas external form and inner consciousness are not one substance, thus, form and the valid cognizer apprehending it are different substances. Therefore, the Prasangika Madhyamikas say that form is composed of external particles and is not produced by the activation of inner latencies.

Lama Tsongkhapa says: "It should similarly be realized that also in this scripture the existence and non-existence of external objects and inner consciousnesses are the same. Hence, in the sutras on the mode of the perfection of wisdom the Buddha equally rejected, that is, refuted, the inherent existence of all five aggregates, form and so forth, saying "Subhuti, form is empty of inherent existence" through "Consciousness is empty of inherent existence."" That external objects and inner consciousnesses are the same in not existing means that they are the same in being empty of inherent existence as is taught in the Perfection of Wisdom Sutras.

Lama Tsongkhapa's *Illumination* (Tibetan text page 305) says:

> *In the Abhidharma*, he also equally *taught* all five [aggregates] in terms of their specific and general characteristics and so forth.

The *Supplement* says: "in the *Abhidharma* he taught them." This means that in the Abhidharma the Buddha taught all five aggregates in terms of their specific and general characteristics and so forth. The Buddha said that all five aggregates are equal in terms of having specific and general characteristics. For example, the specific characteristic or specific definition of form is: that which is suitable to be form. The specific characteristic or specific definition of feeling is: experience. The specific characteristic or specific definition of discrimination is: that apprehending signs. The specific

characteristic or specific definition of a compositional factor is: that which strongly composes, or that which is other than the four aggregates. The specific characteristic or specific definition of consciousness is: that which fully cognizes.

Specific characteristic can refer to either something's individual definition or to something's specific characteristics. For example, the specific characteristics of form are, for example, light, heavy, beautiful, ugly, and so forth. Later on the *Supplement* says:

> *Form has the definition: suitable as form.*
> *Feeling has the nature of experience.*
> *Discrimination apprehends signs.*
> *Compositional factors strongly compose.* [6.202]
>
> *Individually cognizing objects*
> *Is the specific definition of consciousness.*
> *The specific definition of the aggregates is suffering.*
> *The nature of the elements is asserted as poisonous snakes.* [6.203]

These lines set out the specific definitions of the five aggregates. Vasubandhu's *Treasury of Knowledge* also gives the definitions of the second four aggregates, which are the same except for that of compositional factors. This text says:

> *Feeling is experience;*
> *Discrimination is the nature of apprehending signs.* [1.11cd]
>
> *Compositional factors are that other than the four.* [1.12a]
>
> *Consciousness is an individual cognizer.* [1.13a]

In addition, each of the aggregates has individual characteristics which can also be considered to be their specific characteristics.

The general characteristics of the five aggregates are their common characteristics: impermanent, suffering, empty, selfless. These characteristics are shared by all five aggregates. This is the meaning of the specific and general characteristics in this context; it does not refer to the specifically characterized phenomena and generally characterized phenomena asserted by the lower schools.

Lama Tsongkhapa's *Illumination* (Tibetan text page 305) says:

> Chandrakirti says:
>
> *Even having destroyed the levels of the two truths,*
> *Your substance, due to being refuted, is not established.*
> *Therefore, by such stages understand that things are primordially*
> *Not produced in suchness and are produced in the world.* [6.93]
>
> Therefore, according to the opponents' previous explanation, *the levels of the two truths* that are established by scripture and reasoning – the two, external objects and mind, being equal in not existing ultimately and equal in existing conventionally – would be destroyed.

"The opponents" are the Chittamatrins who destroy the two levels of the truths by saying that external objects do not exist ultimately and conventionally, whereas consciousness exists ultimately.

Lama Tsongkhapa's *Illumination* (Tibetan text page 305) says:

> *Even having destroyed them* in that way, *your*, Chittamatra, *substantially* existent other-powered phenomena *are not established*.

The Chittamatrins cannot establish substantially existent other-powered phenomena no matter how much they try.

Lama Tsongkhapa's *Illumination* (Tibetan text page 305) says:

> Why is that? Because substantially existent other-powered phenomena *were refuted* many times before, your fatigue becomes meaningless.

Since substantially existent other-powered phenomena have already been refuted many times before they cannot be established even if the Chittamatrins put much effort into doing so.

Lama Tsongkhapa's *Illumination* (Tibetan text page 305) says:

> In order to not destroy the levels of the two truths, it is necessary to assert that [things] do not exist ultimately and do exist conventionally.

In short, external form and inner consciousness are the same in not existing ultimately and in existing conventionally.

Lama Tsongkhapa's *Illumination* (Tibetan text page 305) says:

> *Therefore*, [Chandrakirti] says that *by such* stages – those explained before – *understand that things are primordially not produced in suchness* and *are produced in world*ly conventions. Hence, through indicating that things are asserted to not be produced ultimately and to be produced conventionally, one should definitely affix this qualification to the object of negation.

Things are primordially not produced in suchness, that is, they are not produced ultimately. However, they are produced in worldly conventions. Not produced and produced are to be qualified by saying "not produced ultimately" and "produced conventionally."

Lama Tsongkhapa's *Illumination* (Tibetan text page 305) says:

3B1C-2B3E-2A1B-2B2C-3 Explaining the intention of teaching mind-only in the *Descent into Lanka Sutra*

- A Indicating that the teaching on only mind without external objects is an interpretable meaning [teaching]
- B Indicating the method for realizing the interpretable and definitive meanings of the sutras

3B1C-2B3E-2A1B-2B2C-3A Indicating that the teaching on only mind without external objects is an interpretable meaning [teaching]

1. Indicating it to be an interpretable meaning [teaching] by means of scriptures
2. Indicating it [to be an interpretable meaning teaching] by means of reasonings

3B1C-2B3E-2A1B-2B2C-3A1 Indicating it to be an interpretable meaning [teaching] by means of scriptures

- A Actual meaning
- B Indicating other such sutras as also being interpretable meaning [teachings]

3B1C-2B3E-2A1B-2B2C-3A1A Actual meaning

What are interpretable meaning and definitive meaning teachings? How are they defined in the Chittamatra system? What is an interpretable meaning sutra? What is a definitive meaning sutra? The Chittamatrins define them respectively as:

- An interpretable meaning sutra is: a sutra whose indicated meaning is not suitable to be accepted literally.
- A definitive meaning sutra is: a sutra whose indicated meaning is suitable to be accepted literally.

On the other hand, the Prasangika Madhyamikas define them respectively as:

- An interpretable meaning sutra is: a sutra that takes conventionalities as its main indicated subject matter.
- A definitive meaning sutra is: a sutra that takes the ultimate as its main indicated subject matter.

For example, when sutra says "All compounded phenomena are impermanent" the Chittamatrins say that this is a definitive meaning sutra because it is literally acceptable just as it is said. However, according to the Prasangika Madhyamikas, even thought it is literally acceptable, it is not a definitive meaning sutra because it does not present emptiness. Thus, for the Prasangika Madhyamikas 'interpretable meaning' refers to conventional truth and 'definitive meaning' to ultimate truth.

Here Chandrakirti first discusses "Indicating by means of scripture that the teaching on only mind without external objects is an interpretable meaning [teaching]."

Chandrakirti's autocommentary says:

> If it is mentioned here: "Although one may explain the meaning of the sutra like that, yet even if it were like that, mind-only is ascertained as just existing from other scriptures. As was taught [in the *Descent into Lanka Sutra*, 3.33]:[67]
>
> > Although the external appears, it is non-existent;
> > The mind appears as the variations.
> > The likeness of body, enjoyments, and abode,
> > I explain as mere mind.[68]

There are two types of sutras:

1. sutras that explain as being interpretable meaning and
2. sutras that are to be explained as being interpretable meaning.

In the *Descent into Lanka Sutra* the Buddha taught that all phenomena are mere mind, or mind only. Such a teaching is not a definitive meaning teaching but is an interpretable meaning teaching. In order for it to be an interpretable meaning teaching it must have certain attributes:

1. a basis of intention,
2. a purpose, and
3. harm or damage to its literal meaning.

The *Descent into Lanka Sutra* is an interpretable meaning teaching because it has these three attributes.

1. What is the basis of intention? When Buddha said that external objects do not exist, he said so thinking that there are no external objects from the point of view of there being no inherently existent external objects. Thus, he said "There are no external objects" thinking "There are no inherently existent external objects."
2. What is Buddha's purpose? Buddha said this in order to overcome some trainee's strong attachment and so forth to form.

[67] See Suzuki, page 133.

[68] See Hopkin's translation with bracketed commentary, page 613, and Cabezon, page 328, and note 1022 on page 507.

3. What is the harm? Saying that external objects do not exist receives harm from scripture, reasonings, and worldly conventions. There is harm from worldly conventions because no one says "External form does not exist," whereas the worldly do say "External form does exist."

Chandrakirti's autocommentary says:

> There, 'the body' is the entrances of the eye and so forth. 'Enjoyments' are the objects of form and so forth. The 'abode' is the vessel world. Because externality apart from the mind does not exist, if only a mere consciousness produces in appearance as body, enjoyments and abode, the body, and so forth, abiding in the category of objects, are manifest as though external, different from consciousness. Therefore, the three realms are mere mind."

"The body" is the eye, ear, nose, tongue, and body spheres, or entrances. The 'enjoyments' are the form sphere, sound sphere, odor sphere, taste sphere, and tangible object sphere which are enjoyed by the five spheres, the eye sphere and so forth. The 'abode' is the vessel world or the environmental world which includes the houses we live in, villages, and so forth. There are no external objects apart from mind. There is only mind yet there is the appearance of bodies, enjoyments, and abodes. Mind manifests in this way because the three existences are only mind. This is the explanation of this verse in the *Descent into Lanka Sutra* according to the Chittamatrins. However, for the Prasangika Madhyamikas this verse in the *Descent into Lanka Sutra* is one that is to be explained as interpretable meaning:

> Although the external appears, it is non-existent;
> The mind appears as the variations.
> The likeness of body, enjoyments, and abode,
> I explain as mere mind.

How is it explained to be interpretable meaning? Think about it.

Wednesday morning, 29 November 2000

Chandrakirti's autocommentary says:

> In order to express also this sutra as bearing an intention, it is explained:
>
> *The sutra set in which "The external appears, it does not exist,*
> *The mind appears as the variations" is taught –* [6.94ab]

That this sutra bears an intention means that it is an interpretable meaning sutra. What is an interpretable meaning sutra? Saying that a sutra has an intention or that it is an interpretable meaning sutra mean the same.

Chandrakirti's autocommentary says:

> Its intention is this:
>
> *Opposes form for those who are strongly attached*
> *To form – it too is of interpretative meaning.* [6.94cd]

Here Chandrakirti, by quoting the first two lines, explains that the following verse in the *Descent into Lanka Sutra* is an interpretable meaning teaching:

> Although the external appears, it is non-existent;
> The mind appears as the variations.
> The likeness of body, enjoyments, and abode,
> I explain as mere mind.

What is Buddha's intention in teaching this sutra? His intention was to help those with strong attachment and so forth to form to overcome these afflictions. In short, this sutra was taught with the intention of overcoming their afflictions; thus, it is an interpretable meaning sutra.

Chandrakirti's autocommentary says:

> This is the interpretative meaning concerning that which is to be known: "Those who have over expectations in form will be made to uncontrollably engage it with subsequent attachment, anger, pride, and so forth that have that [over expectation] as their condition and to strongly settle upon it. Hence, they will be joined with great negativity and will degenerate from accumulating the collections of merit and wisdom. For them, the Bhagavan, in order to overcome the afflictions that have form as their condition – like the skeletons that destroy attachment to external objects in those having attachment – will teach as just mere mind as indeed like that, although not being like that."

Due to over expectation regarding form there is the production of strong attachment and so forth to it. Then, due to this attachment and so forth, one engages in actions without control. The Buddha taught this sutra in order to help such people overcome these afflictions. The purpose of teaching this sutra is thus to overcome strong afflictions and to avoid the consequent engagement in negativities. This way of teaching is similar to that on meditating on skeletons in order to overcome attachment. Attachment is mainly produced in relation to the five sense objects, forms, sounds, odors, tastes, and tangible objects. Due to attachment to forms and so forth anger also arises. For example, recently there was a story in the news about a young man who killed his ex-wife because she was going out with another man. Due to his strong attachment to this woman and jealousy toward the other man, he killed her and then cut his own throat. All such negativities are due to strong attachment and so forth.

Previously, in the context of the perfection of patience, Chandrakirti's *Supplement* said:

> *One moment of hating a conqueror child destroys*
> *The virtues arising from giving and ethics'*
> *Accumulated for a hundred eons.*
> *Thus there can be no [worse] sin than impatience.* [3.6]
>
> *It creates an ugly form, leads to the unholy,*
> *And robs discrimination that knows right and wrong.*
> *Through impatience one is quickly cast into a bad migration.*
> *Patience creates qualities opposite to those* [3.7]
>
> *Explained above. Through patience comes beauty, dearness*
> *To the holy, skill in discriminating between*
> *The right and wrong, birth afterwards as a human*
> *Or god, and the extinguishment of non-virtues.* [3.8]

In short, we should beware of strong attachment and so forth. Therefore, to enable those with strong attachment and so forth to overcome these afflictions the Buddha taught mind only without external form.

Chandrakirti's autocommentary says:

> If asked: But where can such statements as "This scriptural citation is of interpretative meaning, it is not of definitive meaning" be ascertained?

How is it ascertained that the verse from the *Descent into Lanka Sutra* has an intention and is therefore an interpretable meaning sutra?

Chandrakirti's autocommentary says:

> [It can be ascertained] from scripture and reasoning. Demonstrating just that is the statement:
>
> *The teacher taught that this is indeed interpretative meaning, and*
> *It is acceptable as just of interpretative meaning by reasoning.* [6.95ab]

Gedun Drup's *Mirror of the Clarification of the Thought* (Tibetan text page 47), as translated by Martin Willson, says:

> 3B1A-6C5A-1A2B-2C3A-1A The substance
>
> You may say, "Indeed, it is not established from the *Sutra on the Ten Stages* that there are no external objects, but by the teaching in the *Descent into Lanka Sutra* external objects do not exist":
>
> 'What appears external does not exist,
> Mind appears as the various things.
> I say that it is mind alone
> That's like the body, enjoyments, and place.'
>
> *The Sutra which says the external appears without*
> *Existing, and mind appears as the various things,*
> *Turns aside from forms those strongly attached*
> *To forms, and its meaning requires interpretation.* [6.94]
>
> *The Master taught its meaning was interpretive;*
> *By logic, its meaning's admitted to be interpretive.* [6.95ab]
>
> It follows that by depending on the teaching in the *Descent into Lanka Sutra*, which is that the external appears and does not exist, and mind appears as the various things, one cannot prove that external objects do not exist; because that [teaching] is turning away from the defilements based on form those who are very attached to form, and is also of interpretive meaning. For the Master said it was of interpretive meaning, and by reasoning it is admitted to be of interpretive meaning.

Lama Tsongkhapa's *Illumination* (Tibetan text page 305-6) says:

> OBJECTION: The meaning of the *Sutra on the Ten Grounds* has indeed been explained in that way, however, even if it were so, another scripture, the *Descent into Lanka Sutra*, says:

> The external appear but do not exist.
> Mind appears as the varieties.
> The likeness of bodies, enjoyments, and abodes,
> I explain them as mind only.
>
> In regard to that, 'bodies' are the physical spheres, those of the eye and so forth. "Enjoyments' are the five objects, forms, sounds, and so forth. 'Abodes' are the environmental world. Because external objects do not exist apart from mind, when the appearance of bodies, enjoyments, and abodes are produced for the consciousness alone, one's own body and so forth – those abiding among things that are objects – manifest as if they were external objects different from consciousness. Therefore, the three realms are only mind.
> RESPONSE: There is [the following] explanation in order to express that this sutra also has a [particular] intention.
> Chandrakirti says:
>
> > *Any sutra that teaches "The external appear but do not exist.*
> > *Mind appears as the varieties"*
> > *Opposes form for those who have strong attachment to form.*
> > *Moreover, this is interpretable meaning.* [6.94]
>
> The intention of *any sutra that teaches "The external appear but do not exist. Mind appears as the varieties"* is to be understood as follows. Whoever has attachment, anger, pride, and so forth subsequent to possessing the condition of *strong attachment to form* will involve themselves in it uncontrollably and, due to strong adherence to it, will be connected to great negativities while their accumulation of the collections of merit and exalted wisdom will decline. *For them*, the Bhagavan, in order *to oppose* the afflictions that have the condition of *form*, taught mind only as being like that, even though it is not so, just as he taught skeletons, which destroy attachment to external objects, to those who have attachment.

This is similar to what is said in Chandrakirti's autocommentary. 'Bodies' are the physical spheres, 'enjoyments' are the five objects, and 'abodes' are the environmental world. Are the eye sphere and the eye sense power the same or different? Are the physical spheres the eye organ or the clear eye sense power?
Several students: Both.
Other students: The clear eye sense power.
Geshe Jampa Gyatso: Since there are different views you should debate about it amongst yourselves!

What are the objects of eye consciousness? They are the form spheres, which include shapes and colors. Due to the appearance of shapes and colors we then either become attached to them or generate anger toward them. Buddha said that everything is mind only in order to overcome such strong afflictions. In this context there is debate as to the hell realms being only mind. Shantideva's *Engaging in the Bodhisattva Deeds* says:

> Who created the red-hot iron base?
> From where did the assembly of women come? [5.7cd]
>
> Buddha said that
> They arise from negative minds. [5.8ab]

Kunu Lama Rinpoche says that although the Tibetan version of this text usually says "mass of fire" this is a corruption in the spelling and that based on the original Sanskrit text it should read "the assembly of women." There are four neighboring hells in one of which one finds oneself at the base of a tree with razor-sharp leaves. One then hears the voice of someone dear calling one to climb up but as one climbs up one is cut to pieces by the sharp leaves. Then, when one reaches the top, one again hears the voice calling one to come down and once again climbs down experiencing great suffering.

Those who call are "the assembly of women." Shantideva says that this assembly of women, as well as the burning iron ground and so forth, are only appearances to the mind due to karma.

The meditation on skeletons is advice given by the Buddha as a method for reducing attachment to attractive forms. One visualizes the whole universe filled with skeletons, whereby one's attachment diminishes.

In conclusion, the Buddha's purpose in teaching this verse in the *Descent into Lanka Sutra* is to diminish attachment to beautiful forms and so forth.

Lama Tsongkhapa's *Illumination* (Tibetan text page 306-7) says:

> QUESTION: It is stated: "*Moreover*, *this* scripture *is* an *interpretable meaning* [teaching] and not a definitive meaning [teaching]." From what is that ascertained?
> RESPONSE:
> *It was taught by the Teacher to be interpretable meaning and*
> *It is acceptable to be interpretable meaning by reasoning.* [6.95ab]
>
> Since the teaching "Mind only without external objects" *was taught by the Teacher to be an interpretable meaning* [teaching], it is established through scripture to be an interpretable meaning [teaching]; however, *this* sutra *is* also *acceptable*, that is, established, *to be interpretable meaning by reasoning*.

In brief, the verse in the *Descent into Lanka Sutra* is proved to be interpretable meaning by both scripture and reasoning.

Lama Tsongkhapa's *Illumination* (Tibetan text page 307) says:

> This is not explained by this master saying: "The term 'only,' which indicates [external objects] are mind only, in the lines 'The external appear but do not exist...' [in the *Descent into Lanka Sutra*] does not refute external objects but refutes other creators as is explained in the *Sutra on the Ten Grounds*." Instead, he comments on this saying "Although the term 'only' refutes external objects, this sutra is an interpretable meaning [teaching]."

The term 'only' in the verse in the *Descent into Lanka Sutra* is not explained by this master to not refute external objects but to refute other creators as is explained in terms of the *Sutra on the Ten Grounds*. Instead, this master comments on this verse saying that the term 'only' refutes external objects but is an interpretable meaning sutra because it has an intention – that of reducing the strong attachment of those beings with strong attachment and so forth. 'This master' is perhaps Chandrakirti.

Lama Tsongkhapa's *Illumination* (Tibetan text page 307) says:

> The great master Bhavaviveka explains that also [according to] this sutra that the likenesses of minds, bodies, enjoyments, and abodes, that is, their aspects, change like shadows and explains that, since "The external does not exist" is also asserted to refute awarenesses seeing the aspectless, the term 'only' does not refute external objects.

Bhavaviveka says that the line in the *Descent into Lanka Sutra* "I explain them as mind only" does not refute external objects, but refutes awarenesses seeing the aspectless. What does 'the aspectless' mean? There are two types of aspects:

1. the aspect of an object-possessor (subjective aspect) and
2. the aspect of an object (objective aspect).

Is there someone who asserts an awareness without an aspect? In general, it is said that the Vaibhashikas assert an awareness without an aspect. What do they mean by this? They mean that

there does not exist an aspect of an object. In other words, while other schools posit both the aspect of an object-possessor (subjective aspect) and the aspect of an object (objective aspect), the Vaibhashikas do not posit these two. They say that an awareness does not have the aspect of the object or that for an awareness objects are aspectless. This is because they equate awareness with wisdom. This assertion of the Vaibhashikas is extensively negated by the Svatantrika Madhyamikas in Shantarakshita's *Ornament for the Middle Way* in the section on the reasoning of one and many. Here there is a verse that says: "Functioning things that are asserted by others, the non-Buddhists, and by us, the lower Buddhist schools, do not exist truly because they are free from being an inherently existent one or an inherently existent many, like a reflection."

Bhavaviveka says: "the likenesses of minds, bodies, enjoyments, and abodes, that is, their aspects, change like shadows." This means that when an object is seen it is seen by means of its aspect. "Change like shadows" refers to the fact that when the sun shines the shadow of a body is formed that resembles the body itself.

There is a story about two kings, a king of a central country and a king of a border land. King Udayana of the border country sent a present of weapons made of precious things to the other king, Bimbisara. Bimbisara asked his ministers what gift he could send to the other king in gratitude and they suggested that he make an image of the most precious thing in their own land, the Buddha. However, as the artist tried to draw the Buddha's crown protrusion he could not do so as it grew higher and higher. To solve this problem, the Buddha told them to bring him a large piece of white cloth and spread it on the floor. The Buddha stood on this and the artist traced his shadow on the cloth. In this way an image of the Buddha was made and King Bimbisara gave it to King Udayana. Upon receiving this image, the king generated strong faith in the Buddha, gave up his kingdom to his son, became a monk, and went to meditate in Sravasti. There, he meditated, entered the path, and became a foe destroyer. However, in the meantime his son ruled the kingdom by oppressing the subjects. As a consequence one of the Dharma ministers requested Udayana to return to rule the kingdom. Udayana asked the Buddha what to do and the Buddha replied, "Seize your own karma." As Udayana was traveling back to his country, the non-Dharma ministers told the king's son that his father had not succeeded in his Dharma practice and was returning to take back his kingdom. The son, plotting to kill his father, awaited the returning king but rain began to fall and continued to fall for a whole week, followed by a rain of stones, sand, and so forth. At the end, the ground opened up and the son and his ministers disappeared into it.

Wednesday afternoon, 29 November 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 307) says:

3B1C-2B3E-2A1B-2B2C-3A1B Indicating other such sutras as also being interpretable meaning [teachings]

Chandrakirti's autocommentary says:

> Not only is this sutra of interpretive meaning, so too are others:
>
> *This passage clarifies also other sutra sets of that type*
> *As just of interpretive meaning.* [6.95cd]
>
> If asked: What are the sutra sets of that type?
>
> As was said in the *Sutra Definitely Unraveling the Intention* in the presentation of the three natures called "the imaginary, the other-powered, and the fully-established," [the statement that] "The imaginary is just non-existent and the other-powered is just existent" and similarly [in the *Sutra Definitely Unraveling the Intention*, 5]:
>
> "The consciousness taking [rebirth] – deep and subtle –

> [Having] all the seeds [and] descending like the continuum of a river
> Is unsuitable if conceived as the self" –
> I did not teach that to children.
>
> – and so forth.

Not only is the *Descent into Lanka Sutra* an interpretable meaning sutra, so too are other sutras.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> 3B1A-6C5A-1A2B-2C3A-1B Other sutras like that are also of interpretive meaning
>
> *Other sutras of that kind also,*
> *This text makes clear, require interpretation.* [6.95cd]
>
> Other sutras like the kind explained above, maintained by the Chittamatrins to be of definitive meaning, are also of interpretive meaning; for this scripture,
>
> "Just as to one or another patient
> A doctor gives a medicine,
> Likewise, to sentient beings the Buddha
> Even teaches 'only mind',"
>
> says clearly that they are of interpretive meaning.

A doctor gives medicine to a particular patient in dependence on diagnosing the particular illness. Similarly, the Buddha gives teachings to sentient beings in accordance with their needs in order to dispel the illness of the mental afflictions.

Other sutra sets of that kind are:

1. the sutra that presents the three natures along with their characteristics

The *Sutra Unraveling the Thought* says that other-powered phenomena are established by way of their own character, whereas imputational factors are not established by way of their own character. According to the Prasangika Madhyamikas:

- in the first wheel of Dharma the Buddha taught all phenomena from form through the thirty-seven harmonies with enlightenment as established by way of their own character and
- in the second wheel he taught that all phenomena from form through the exalted knower of all aspects as not established by way of their own character.

These teachings would seem to be contradictory but the Chittamatra explain this saying that this is clarified in third wheel of Dharma. They say that:

- in the first wheel the Buddha taught all other-powered phenomena from form through the thirty-seven harmonies with enlightenment as established by way of their own character, whereas
- in the second wheel he taught all phenomenon that are imputational factors as not established by way of their own character, and
- in the third wheel he clarified this saying that all phenomena included in other-powered phenomena and thoroughly established phenomena are established by way of their own character, whereas phenomena included in imputational factors are not established by way of their own character.

For the Prasangika Madhyamikas the third wheel is interpretable meaning.

2. the sutra that presents a mind-basis-of-all

The *Sutra Unraveling the Thought* which says 'The consciousness taking rebirth..." and so forth is also an interpretable meaning teaching. The consciousness taking rebirth, or the appropriating consciousness, is the mind-basis-of-all. Because the mind-basis-of-all is the basis on which the

latencies of actions are continually deposited it is said to be "descending like the continuum of a river." It is not suitable to conceive the mind-basis-of-all to be the self which is an object of negation.

These two sutras are sutras that are to be explained as interpretable meaning, whereas the sutra that explains them to be interpretable meaning is the *Descent into Lanka Sutra*.

Chandrakirti's autocommentary says:

> [The *Descent into Lanka Sutra*: 2][69] says:
>
> Just as for diseases of the ill,
> The doctor gives medicines; so,
> The Buddha similarly, thoroughly teaches
> Also as mere mind to sentient beings.
>
> This passage [from the *Descent into Lanka Sutra*] clarifies these [passages from the sutra *Definitely Unraveling the Intention*] as merely of interpretative meaning.

Just as a doctor gives different medicines to different patients with different illnesses, likewise, the Buddha gave different teachings to different sentient beings. For example, to the Chittamatrins the Buddha taught (i) the three natures along with their characteristics and (ii) a mind-basis-of-all. However, these two sutra sets are interpretable meaning sutras.

Another sutra that is to be explained as an interpretable meaning sutra is the sutra which teaches that a permanent, stable, and enduring tathagata essence exists as a buddha body complete with all the signs in each sentient being. However, since such a tathagata essence does not exist, the sutra that says it does exist is an interpretable meaning sutra. Therefore, saying that there is such a buddha body unmanifest in all sentient beings is unsuitable. But then why did the Buddha say this? In other words, what was his intention in saying this?

Chandrakirti's autocommentary says:

> Similarly, [the *Descent into Lanka Sutra*, 2]:[70] says:
>
> [Mahamati said:] The tathagata essence taught in the sutras expressed by the Bhagavan is expressed by the Bhagavan as just completely pure from the beginning since clear light by nature [and] completely pure; [and as] existing, possessing the thirty-two signs, within the bodies of all sentient beings.
>
> If, like a gem of great value fully wrapped in a dirty cloth, the Bhagavan expresses that [tathagata essence] as being fully wrapped in the cloth of the aggregates, elements, and sources, overwhelmed by attachment, hatred, and confusion and] being dirtied by the stains of fully conceptualizing – as permanent, stable, and enduring – Bhagavan, how is this propounded as a tathagata essence by the Tathagata, unlike propounding as the self of the Forders? Bhagavan, the Forders also propound and teach as a self saying "permanent, not an agent, without qualities, pervasive, and not perishing."

[69] Suzuki, page 44.

[70] See Suzuki, page 68; Hopkin's partial translation of this passage, pages 615-616; Thurman's partial translation of Tzong Khapa's paraphrase, pages 347-348 and Cabezon's translation, pages 329-330.

Here it seems to say that a buddha body complete with the thirty-two signs exists in all sentient beings but is wrapped in the dirty rags of the aggregates, constituents, and spheres. It is likened to wrapping a precious object in dirty rags in order to protect it. In fact, when I was living in Sarnath a man named Loden told me that he went from Delhi to Bombay to buy a large number of a particular type of watch. Having bought them, in order to not have trouble he but them in an old and very dirty sack and put them under his train seat. No one said anything about that sack or even looked at it, whereby he arrived back in Delhi without any problems.

Similarly, Buddha said that within us there is a buddha body wrapped in the dirty cloth of attachment, hatred, and ignorance. However, such a buddha body does not exist. It exists only if it is understood in the sense of the buddha lineage, a naturally abiding lineage, existing within each one of us. Such a naturally abiding lineage is explained in Maitreya's *Sublime Continuum*, in the context of the nine similes and nine meanings, to be covered by nine types of stains. There are nine similes of how the naturally abiding lineage is covered by stains and nine meanings that explain these similes. For example, one simile is an ugly lotus that has not yet blossomed that contains a buddha thus preventing the buddha from being seen until it blossoms. The meaning of this simile is that attachment covers the naturally abiding lineage found within all sentient beings but when that attachment is eliminated the tathagata essence will be directly perceived.

In the *Descent into Lanka Sutra* Mahamati asks the Buddha: "Bhagavan, how is this propounded as a tathagata essence by the Tathagata, unlike the self propounded by the Forders? Bhagavan, the Forders also propound and teach a self saying 'permanent, not an agent, without qualities, pervasive, and not perishing.'" This is in reference to the Samkhyas assertion of a self that is an eater, permanent, not a creator, without qualities, and does not possess actions. Likewise, the Vaisheshikas also assert a self with particular qualities.

Chandrakirti's autocommentary says:

> The Bhagavan said, "Mahamati, my teaching the tathagata essence is not similar with the propounding as a self that the Forders have. Mahamati, the tathagata foe destroyers, the perfectly completed buddhas, having indicated the tathagata essence with the meaning of the words emptiness, the limit of complete purity, nirvana, not produced, signless, wishless, and so forth; so that children might completely relinquish a state of fear due to the selfless, teach the non-conceptual state, the sphere without appearance.

Although the Buddha Bhagavan said that there is a tathagata essence, he did so thinking of "emptiness, the limit of complete purity, nirvana, not produced, signless, wishless, and so forth." In other words, the Buddha taught a tathagata essence intending that sentient beings achieve the three doors of liberation – emptiness, signlessness, and wishlessness. Thus, when the Buddha said that all sentient beings have a buddha body complete with the thirty-two signs within them, he meant that they have a naturally abiding lineage. Therefore, the Buddha said this thinking that, because sentient beings are suitable to be transformed into the body of a buddha, a tathagata essence exists within them. The Buddha taught this so "that children might completely relinquish a state of fear due to the selfless." For this reason, the Buddha "teaches the non-conceptual state, the sphere without appearance." In short, when the Buddha said that all sentient beings have an essence that is permanent, stable, and enduring, a buddha body complete with the thirty-two signs, it was in order that sentient beings not be frightened. On the other hand, if he had taught them emptiness directly they would have been frightened.

Chandrakirti's autocommentary says:

> Mahamati, the future and present bodhisattva mahasattvas should not strongly settle on a self. Mahamati, for example, a potter makes various kinds of vessels from a single mass of clay particles with his hands, manual skill, implements, water, thread, and [mental] dexterity. Mahamati, similarly, also whether that very selflessness in phenomena completely reversing all characteristics of conceptualization is taught by the tathagatas – with various means having wisdom and skill in means – as the tathagata essence or taught as selflessness, it is suitable. Like the potter, they teach with various formats of words and letters.

Just as a potter produces various kinds of vessels from a single lump of clay, the Buddha Bhagavan taught sentient beings either selflessness or the tathagata essence with skillful means. In other words, to those sentient beings ready to receive teachings on selflessness he taught selflessness, and to those ready to receive teachings on tathagata essence he taught a tathagata essence. Likewise, he also taught other suitable teachings to those who were not ready for either of these teachings.

The sutra says: "Like the potter, they teach with various formats of words and letters." This means that just as a potter makes different kinds of vessels from the same clay the buddhas teach in various ways.

Chandrakirti's autocommentary says:

> Thus, therefore Mahamati, the teaching on the tathagata essence is not the same as the Forders' teaching propounding a self. Mahamati, therefore, the tatagatas, in order to lead the Forders who strongly adhere to their propounding of a self, teach the tathagata essence, therefore, a tathagata essence is taught.

The teaching on the tathagata essence is not the same as the Forders' teaching propounding a self. However, the Buddha's purpose in teaching a tathagata essence was to lead the Forders who strongly adhere to a self. Due to this strong adherence to a self, the Buddha taught them that there exists a tathagata essence that is permanent, stable, and enduring.

Chandrakirti's autocommentary says:

> How will those with a thought falling into the view conceiving as a real self possess the thought of abiding in the sphere of the three complete liberations and how will they quickly become a manifest, complete buddha in peerless complete enlightenment?"
>
> And it is indicated in that very [sutra, 2]:[71]
>
> Mahamati, the characteristics of emptiness, no birth, no duality, and no self-nature inserted within the sutra sets of all buddhas...

In short, the Buddha taught the three doors of liberation by means of teaching a tathagata essence.

Chandrakirti's autocommentary says:

> Therefore, thus having made abundantly clear by this scriptural passage that the sutra sets of that type – all asserted by the propounders of consciousness as just definitive in meaning – as being just interpretative in meaning;

[71] See Suzuki, page 68, (77); Thurman's translation and Tzong Khapa's comments, pages 351-352, and Cabezon's translation, pages 322-323.

The sutra set that teaches a permanent, stable, and enduring essence was taught for the purpose of leading the Forders into the Buddha's teachings.

In summary, Chandrakirti sets out three sutra sets that are to be explained as interpretable meaning sutras:

1. the sutra that presents the three natures along with their characteristics,
2. the sutra that presents a mind-basis-of-all, that is, an appropriating consciousness, and
3. the sutra that presents a tathagata essence that is a buddha body, complete with the thirty-two marks, existing in each sentient being.

These are sutras that are to be explained to be interpretable meaning, whereas the sutras that explain them to be interpretable meaning are:

1. the passage in the *Descent into Lanka Sutra* that says:

   Just as for diseases of the ill,
   The doctor gives medicines; so,
   The Buddha similarly, thoroughly teaches
   Also as mere mind to sentient beings.

2. the passage in the *Descent into Lanka Sutra* that presents the three doors of liberation.

(Masters Program Correspondence Course participants: Please note that there were no teachings Thursday, 30 November 2000, as we celebrated Geshe Jampa Gyatso's 20th anniversary of teaching in Italy with a long life puja.)

Friday morning, 1 December 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 307) says:

> Chandrakirti says:
>
> *Also other sutra sets of this kind are*
> *Clarified by these passages as just being interpretable meaning.* [6.95cd]
>
> Not only [the passages] that indicate only mind exists without external objects such as "The external appear but do not exist" [in the *Descent into Lanka Sutra*] are interpretable meaning [teachings], *also other sutras sets of the kind* explained before – among those asserted by the Chittamatrins to be definitive meaning [teachings] – *are clarified by these passages*, which will be explained, *as just being interpretable meaning*.

Not only is the verse in the *Descent into Lanka Sutra* an interpretable meaning sutra, there are also other sutra sets that are interpretable meaning. One of these other sutras is the *Sutra Unraveling the Thought* which teaches

- a mind-basis-of-all and
- the three natures along with their characteristics

which are asserted by the Chittamatrins to be definitive meaning teachings but are asserted by the Prasangika Madhyamikas to be interpretable meaning teachings.

Lama Tsongkhapa's *Illumination* (Tibetan text page 307) says:

> QUESTION: Moreover, what are the sutras of this kind?
> RESPONSE: The *Sutra Unraveling the Thought*, in presenting the three natures, says:
>
> Imputational factors do not exist,
> The other-powered exist.

> Similarly, the autocommentary [cites this sutra] saying:
>
> "The appropriating consciousness, profound and subtle,
> [Having] all the seeds, like the cascading flow of a river,
> When conceived as a self is not proper."
> I do not teach this to the childish.
>
> and so forth.
>
> This sutra distinguishes the existing and not existing which are
> 1. imputational factors not existing by way of their own character and
> 2. other-powered phenomena existing by way of their own character.
>
> Although established by way of their own character imputational factors such as those in regard to the two selves and imputational [factors] in regard to the entities and attributes of phenomena are not possible as objects of knowledge for this system, many imputational factors that are imputed as entities and attributes are established bases.

Lama Tsongkhapa clarifies the verse in the *Sutra Unraveling the Thought* as meaning that imputational factors are not established by way of their own character, whereas other-powered phenomena are established by way of their own character. The two selves, a self of persons and a self of phenomena, are imputational factors. The imputational factor that is a self of persons is

- a self-sufficient substantially existent person.

The imputational factor that is a self of phenomena is either:

- apprehendeds and apprehenders existing as different substances, or
- form established by way of its own character as a basis for affixing the term 'form,' or
- form established by way of its own character as an affixing basis for the conception apprehending form.

There are also imputational factors in regard to entities and imputational factors in regard to attributes. The imputational factor in regard to the entity of form is, for example, the conception 'This is form,' whereas the imputational factor in regard to an attribute of form is, for example, the conception 'This is the production of form' or 'This is the impermanence of form is impermanent.' These entities and attributes that are established by way of their own character are the object of negation. However, the basis of the conception 'form' and the basis of the conception 'the production of form' exist.

Student: Then the affixing basis does not exist?

Geshe Jampa Gyatso: The basis of adhering is related to the conception and the basis of affixing is related to the term.

Lama Tsongkhapa's *Illumination* (Tibetan text page 308) says:

> Although in the *Sutra [Unraveling the Thought]* both the other-powered and the thoroughly established are taught to be established by way of their own character, the autocommentary does not mention other than the mere other-powered because the main basis of the argument between the Madhyamikas and Chittamatrins about true existence and the lack of true existence is the other-powered because
>
> - the basis of imputing the imputational factor is also the other-powered and
> - the thoroughly established must also be posited in dependence on the other-powered.
>
> Distinguishing them in this way is also explained by this system to be an interpretable meaning [teaching].

In brief, the passage in the *Sutra Unraveling the Thought* that says that other-powered phenomena and thoroughly established phenomena are established by way of their own character and that imputational factors are not established by way of their own character is an interpretable meaning

teaching. This is extensively explained by Lama Tsongkhapa in his *Essence of Eloquence* in the context of the three established meanings.

Lama Tsongkhapa says that the autocommentary only mentions other-powered phenomena because they are the basis of imputing the imputational factor and that basis's emptiness of the imputational factor is the thoroughly established.

Lama Tsongkhapa's *Illumination* (Tibetan text page 308) says:

> In addition, in this sutra, teaching a mind-basis-of-all that is a different entity from the six operational consciousnesses – which is taught in regard to a collection of eight consciousnesses stating "The appropriating consciousness" and so forth – is also explained to be an interpretable meaning [teaching]. If a mind-basis-of-all does not exist, also an afflicted mentality does not exist as posited.
>
> Since the words "and so forth" [in the autocommentary, mentioned after the verse "The appropriating consciousness..." from the *Sutra Unraveling the Thought*,] include the two,
>
> - the refutation of external objects in this sutra and
> - the explanation that there are three final vehicles,
>
> here there are four [points] that need to be explained as interpretable meaning [teachings]. Having seen that if one lacks a decisive understanding regarding these [points], one will not understand the difference between the Madhyamikas and Chittamatrins in general and the uncommon points of this system in particular, I have finely explained this in my *[Treatise] Differentiating the Interpretable and Definitive*.

The verse in the *Sutra Unraveling the Thought* that says:

> "The appropriating consciousness, profound and subtle,
> [Having] all the seeds, like the cascading flow of a river,
> When conceived as a self is not proper."
> I do not teach this to the childish.

is an interpretable meaning [teaching]. The words "and so forth" in the autocommentary include the refutation of external objects in this sutra and the explanation that there are three final vehicles.

Lama Tsongkhapa says that if there are is no mind-basis-of-all there is no afflicted mentality. This is because the afflicted mentality is defined as: that which takes the mind-basis-of-all as its observed object and has the aspect of a self-sufficient substantially existent I and mine. Therefore, since the afflicted mentality observes a mind-basis-of-all, if a mind-basis-of-all does not exist also an afflicted mentality does not exist.

The eye consciousness through the mental consciousness are called the six operational consciousnesses. According to the Chittamatrins these consciousnesses are unstable and therefore cannot serve as a basis for the depositing of the latencies of actions, whereas because the mind-basis-of-all is stable it can serve as the basis for depositing the latencies of actions.

Here, the third of the four points mentioned is the refutation of external objects which was explained before. The fourth point is the explanation of three final vehicles which has already been discussed in the past. Thus, the four points are:

1. The distinction between what is established by way of its own character and what is not
2. the existence of a mind-basis-of-all
3. the refutation of external objects and
4. the explanation of three final vehicles.

Which passages in the *Sutra Unraveling the Thought* set out the refutation of external objects? Lama Tsongkhapa's *Illumination* (Tibetan text page 308) says:

> The phrases in the *Sutra Unraveling the Thought* that indicate that external objects do not exist are the [following passages] and so forth cited in [Asanga's] *Compendium on the Mahayana*:
>
> > [Maitreya asked:] "Bhagavan, are the reflections that are the objects of meditative stabilization different from mind or are they not different?"
> >
> > The Bhagavan responded: "Maitreya, they are not different. Why is that? Because I explained this saying 'Consciousness is distinguished by the mere cognition of an observed object.'"
>
> This system explains all four points explained above as interpretable meaning [teachings]; it is not that from among them some are explained as interpretable meaning and some as definitive meaning.

For the Chittamatrins the statement "Consciousness is distinguished by the mere cognition of an observed object" means that apprehendeds are not posited as being different from their apprehenders but are posited as being the mere entity of their apprehenders. Thereby, form is presented as not existing externally but as being only the nature of mind. The statement "the reflections that are the objects of meditative stabilization" also indicates that apprehendeds are only the nature of mind.

In general it is said that the *Sutra Unraveling the Thought* only mentions two of the four points but here Lama Tsongkhapa says that three are mentioned:

1. the presentation of a mind-basis-of-all,
2. the presentation of the three natures along with their characteristics, and
3. the refutation of external objects

This sutra does not present the explanation of the three final vehicles.

Lama Tsongkhapa's *Illumination* (Tibetan text page 309) says:

> Moreover, the explanation that there are three final vehicles is not mentioned in the *Explanation of the 'Supplement to the "Middle Way"'* through intending that it can be understood from the establishment of one final vehicle in Arya [Nagarjuna's] *Compendium of Sutra*.

The autocommentary mentions three of these points; it does not mention the explanation of the three final vehicles.

QUESTIONS AND ANSWERS

Student: Will Geshe-la please explain the two types of negating: negating in terms of 'being' and negating in terms of 'existing'?

Geshe Jampa Gyatso: An example of negating in terms of existing is that on the floor in front of me there does not exist blue, therefore, this space is empty of the existence of blue. Another example is a monk or nun empty of vows, whereby, the vows do not exist in that monk or nun. However, the usual example of negating in terms of existing is a temple empty of monks.

An example of negating in terms of being is blue being empty of not being a form. Another example is an impermanent pot empty of being permanent and Tashi empty of not being a human.

Student: If true existence is negated in terms of 'being,' would this be a self-emptiness? If true existence is negated in terms of 'existing,' would this be an other-emptiness?

Geshe Jampa Gyatso: That other-emptiness does exist will be explained later on. Other-emptiness is not emptiness and is not ultimate truth. Other-emptiness is not what is negated in terms of being. The emptiness of a temple of monks, which is negating in terms of existing, does exist.

Student: Is it correct to say that according to the Chittamatra system "imputational factors do not exist by way of their own character but do exist inherently?"
Geshe Jampa Gyatso: That is right.
Student: If this is correct, then what is the difference between 'existing by way of its own character' and 'existing inherently' in Chittamatra?
Geshe Jampa Gyatso: This is mentioned in the *Essence of Eloquence* which says that although certain bases are not apprehended to be the former they are apprehended to be the latter. This means the Chittamatra system distinguishes between establishment by way of its own character and inherently existent. For the Chittamatrins inherent existence means that when the object is sought it is found. Therefore, when one seeks, for example, space, it is found. One can say "There it is"; it being the mere emptiness in front of oneself. Therefore, if it is established by way of its own character it must also exist inherently. Therefore, it must exist by way of its own uncommon mode of subsistence without being merely imputed by conception. Imputational factors are not established by way of their own character because they are not that which exists by way of its own uncommon mode of subsistence without being merely imputed by conception. This is because an imputational factor is merely imputed by the conception apprehending it.

Student: What is the observed object of an eye consciousness seeing falling hair?
Geshe Jampa Gyatso: For the Prasangika Madhyamikas the observed object is falling hair, which does not exist.

Student: In the case of a self-cognizer cognizing a conceptual consciousness, why is there an appearance of the appearing object, whereas when cognizing a sense consciousness there is not an appearance of the appearing object?
Geshe Jampa Gyatso: Perhaps this question is related to what is said in Gyeltshap Je's *Clarifying the Path to Liberation*. The appearing object of an eye consciousness is form, but form does not appear to its self-cognizer. Does the self-cognizer realize form? It does not realize it. The apprehended object of a sense consciousness is not realized by a self-cognizer, whereas the apprehended object of a conception is realized by a self-cognizer. However, I have to think about this a bit more.

END

Monday afternoon, 4 December 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 309) says:

> Of the remaining three [points], the teaching that there is an inherently existent mind-only without external objects is clarified as being an interpretable meaning [teaching] by the passage in the *Descent into Lanka Sutra* which says:
>
> Just as to patients who are ill
> A doctor gives medicines;
> The Buddha, similarly, also thoroughly taught
> Mind-only to sentient beings.
>
> Just as the giving of medicines to individual patients is not under the control of the doctor himself but necessarily accords with the type of illness of the patient, similarly, the teaching on mind-only is also not by the force of the Teacher's own system but is by the force of the minds of trainees. By this teaching, the above passage is understood to be an interpretable meaning [teaching].

There are four points that are interpretable meaning teachings. The first of these, the explanation of three final vehicles, is explained to be an interpretable meaning teaching in Nagarjuna's *Compendium of Sutra*. The second, the explanation of mind only without external objects, is here clarified to be an interpretable meaning teaching by this verse from the *Descent into Lanka Sutra*. This verse says that, just as a doctor gives medicine based on the particular illnesses of his patients, so too the Buddha gave teachings based on the need of sentient beings. Therefore, the Buddha taught mind only in order to care for the Chittamatrins. Thus, this teaching is not to be taken literally and is an interpretable meaning teaching.

Lama Tsongkhapa's *Illumination* (Tibetan text page 309) says:

> The passages cited in the autocommentary from the *Descent into Lanka Sutra*, from
> Similarly,
>
> [Mahamati said: "The tathagata essence taught] in the sutras expressed by the Bhagavan...
>
> through to
>
> ...[how will they] become manifest, complete buddhas [in peerless, complete enlightenment?]
>
> after [the verse] "Just as to patients and so forth," are passages that present the basis-of-all – asserted by the propounders of cognition to be a definitive meaning [teaching] – as being an interpretable meaning [teaching].

Also the third point, the teaching on a mind-basis-of-all, which for the Chittamatrins is a definitive meaning teaching, is shown by these passages from the *Descent into Lanka Sutra* to be an interpretable meaning teaching for the Prasangika Madhyamika system. The Prasangika Madhyamikas say that a mind-basis-of-all does not exist and was taught by the Buddha in order to guide the Chittamatrins. This teaching is not to be taken literally and is an interpretable meaning teaching. A mind-basis-of-all is mainly asserted by the true aspectarian Chittamatrins who say that without a mind-basis-of-all there would be no basis for the infusion of positive and negative latencies. They say this is because latencies cannot be deposited on the sixth consciousness, the mental consciousness, because it is not stable, whereas the basis for the infusion of the latencies must be stable, due to which they assert a mind-basis-of-all. However, for the Prasangika Madhyamikas this is an interpretable meaning teaching because there is no need to posit any basis for the depositing of latencies.

In short, the Prasangika Madhyamikas say that

- it not necessary to posit a consciousness as the basis for the depositing of latencies or
- it is not necessary to posit latencies.

However, when they are pushed to posit a basis for the infusion of latencies they say that it can be posited as the mere I.

Lama Tsongkhapa's *Illumination* (Tibetan text page 309) says:

> Here [Jayananda's] *Explanatory Commentary* says:
>
> > Stating "similarly" [in the autocommentary means that] just as the teaching on an essence that is permanent and stable is an interpretable meaning [teaching], so too is the teaching on mind-only taught to be an interpretable meaning [teaching].
>
> This is wrongly stated because in the autocommentary it is clearly explained that the meaning of stating "similarly" is that the teaching on mind-only is an interpretable meaning [teaching]. Hence, just as the statement "Just as to patients" and so forth explains the propounding of mind-only to be an interpretable meaning [teaching], likewise, also the teaching that an essence that is permanent and stable is an interpretable meaning [teaching] establishes the teachings on a mind-basis-of-all in the *Sutra Unraveling the Thought* and so forth to not be literal.

Just as the teaching on mind only is an interpretable meaning teaching so too are other teachings. The passage in the *Descent into Lanka Sutra* "Just as to patients" and so forth establishes that the teaching on a mind only without external objects as being an interpretable meaning teaching. Just as the verse in the *Descent into Lanka Sutra* "The external appear but do not exist..." is explained to be interpretable meaning teaching, so too the passage presenting a tathagata essence that is permanent, stable, and enduring is explained to be an interpretable meaning teaching.

The passages in the *Descent into Lanka Sutra* "[Mahamati said: 'The tathagata essence taught] in the sutras expressed by the Bhagavan...'" through to "'...how will they] become a manifest, complete buddha in peerless, complete enlightenment?'" mainly explain the passages teaching a tathagata essence which is permanent, stable, and enduring and which is a buddha body adorned with the thirty-two major marks within each sentient being as being an interpretable meaning teaching. In addition, these passages from the *Descent into Lanka Sutra* also indicate that a mind-basis-of-all is not literal.

Lama Tsongkhapa's *Illumination* (Tibetan text page 309-10) says:

> In regard to that, the teaching that there is an essence right from the beginning must be understood as not being literal. Therefore, the teaching in the *Descent into Lanka Sutra* says:
>
> > [Buddha] said: "Sutras that teach in conformity with the thoughts of sentient beings have a mistaken meaning; they are not discourse on thusness. For example, just as a deer that adheres to a mirage as water is deceived due to the water being non-existent, so too the Dharma that is taught [in conformity with the thoughts of sentient beings] pleases the childish, but is not discourse that pleases a superior's exalted wisdom. Therefore, you should follow the meaning and not be enamored of the expression."

Lama Tsongkhapa says: "the teaching that there is an essence right from the beginning must be understood as not being literal." Here it is important to make the distinction that

- the statement "Right now there exists in each sentient beings' continuum a tathagata essence which is a buddha body adorned with the thirty-two major marks" is an interpretable meaning teaching,
- whereas the statement "Right now there exists in each sentient being a tathagata essence" can be taken literally.

If these two are not differentiated this would contradict Maitreya's *Sublime Continuum* which says: "Due to the completely enlightened beings radiating rays of light, the thusness being inseparable, and due to sentient beings having lineage, sentient beings always have a sugata essence." Thus, the essence that is interpretable meaning teaching is the essence existing in each sentient being right now which is a buddha body having the thirty-two major marks.

"Sutras that teach in conformity with the thoughts of sentient beings have a mistaken meaning" means that what is taught in these sutras does not conform with reality. Thus, whatever the Buddha said that is in accordance with the minds of sentient beings does not actually conform with reality or, in other words, it is not true. This is because such teachings are not discourse on reality which are what please the superiors. The *Descent into Lanka Sutra* says: "Just as a deer that adheres to a mirage as water is deceived due to the water being non-existent, so too the Dharma that is taught [in conformity with the thoughts of sentient beings] pleases the childish, but is not discourse that pleases a superior's exalted wisdom." The Buddha gives the example here of thirsty deer who mistake a mirage to be actual water and going there to drink are killed by hunters; similarly, discourse that pleases the childish does not please the superiors.

"Therefore, you should follow the meaning and not be enamored of the expression" means that one should understand the meaning and not be attached to the mere words. One should keep the four reliances in mind:

1. one should not rely on the words but on the meaning,
2. one should not rely on the interpretable meaning but on the definitive meaning,
3. one should not rely on a mistaken consciousness but on an unmistaken mental consciousness, and
4. one should not rely on the person but on the Dharma.

One should not rely on someone just because he or she is famous but instead analyze his or her words. For example, Lobsang Rabjampa in his well-known book *The Third Eye* talks about lamas who open the third eye by cutting a hole in their foreheads! In short, we should rely on the meaning and not on pleasant words just as, for example, if someone were to put honey on the sharp edge of a sword and then taste it, although it may taste good there is the danger of cutting one's tongue.

Lama Tsongkhapa's *Illumination* (Tibetan text page 310) says:

> In that sutra Mahamati says:
>
> > "The tathagata essence taught [in the sutras expressed by the Bhagavan] is said [by the Bhagavan] to be clear light in nature, completely pure from the beginning, and to exist, possessing the thirty-two signs, in the bodies of all sentient beings. If, like a precious gem wrapped in a dirty cloth, [the Bhagavan] expressed that wrapped in and dirtied by the cloth of the aggregates, constituents, and spheres as permanent, stable, and enduring, how is this propounded as an essence different from the Forders' propounding of a self?"

Here Mahamati questions the Buddha as to how the teaching on a tathagata essence which is permanent, stable, and enduring and possessing the thirty-two signs differs from the Forder's assertion of a self having five characteristics such as being permanent and so forth.

Lama Tsongkhapa's *Illumination* (Tibetan text page 310) says:

> In response to that, since such teachings are not literal, the explanation of "It is different from the self of the Forders" [is as follows].
>
> - The *basis of intention* of this teaching intended for whomever is emptiness, signlessness, and wishlessness – the selflessness of phenomena.

- The *purpose* of this intended teaching is that by teaching that there exists a permanent, stable, and enduring essence (i) in order for the childish to abandon fear of selflessness and (ii) in order to gradually lead to suchness the Forders who strongly adhere to propounding a self and those who have familiarized themselves with such views in the past, [the Bhagavan] said that the present and future bodhisattvas should not adhere to a self. On the other hand, if this were taken literally it would be similar to the Forder's adherence to a self, therefore, it literally means 'do not adhere.'

The basis of intention of teaching a tathagata essence that is clear light and so forth is emptiness, signlessness, and wishlessness. The purpose of this teaching is:
(i) in order for the childish to abandon fear of selflessness and to be led into selflessness and
(ii) in order to gradually lead to suchness the Forders who strongly adhere to propounding a self and those who have familiarized themselves with such views in the past.

The three doors of liberation are:
1. emptiness – the entity of phenomena, non-inherent existence,
2. signlessness – all phenomena included in causes are pacified of signs of true existence, and
3. wishlessness – all phenomena included in results are not wished for as truly existent results.

They are explained in the *Questions of Dritarakshta Sutra* saying: "Sentient beings, due to not comprehending these three, wander continuously in cyclic existence." In brief, when the Buddha taught such a tathagata essence he did so thinking about the three doors of liberation, whereas the purpose was to lead the childish to the realization of suchness.

Lama Tsongkhapa's *Illumination* (Tibetan text page 310) says:

- The *damage* to it being actually literal is that, if it is asserted to be literal, there would be no difference between it and the self of the Forders.

If one were to take this teaching to be literal it would be similar to the Forders' assertion regarding a self.

In short, here Lama Tsongkhapa sets out the three attributes of an interpretable meaning teaching. In order to define a text as interpretable meaning it must have three attributes:
1. a basis of intention,
2. a purpose, and
3. damage to it being actually literal.

Lama Tsongkhapa's *Illumination* (Tibetan text page 311) says:

> Since the meaning of these [statements] has already been extensively explained elsewhere, I will not elaborate upon it here.

There is debate as to where the meaning of these statements has already been extensively explained. However, it is explained a little bit in Lama Tsongkhapa's *Treatise Differentiating the Interpretable and Definitive* and this could also refer to the sections in Lama Tsongkhapa's *Golden Rosary* that explain the lineage mentioned in Haribhadra's *Commentary Clarifying the Meaning* in which it is said that there are sutras having a basis of intention which are of four types and those which have a deceptive motive which are also of four types.

Tuesday morning, 5 December 2000

The autocommentary says:

Also that very [sutra] indicates:

> Mahamati, the characteristics of emptiness, unproduced, non-dual, and lacking inherent existence are inserted in the sutra sets of all the buddhas...

After this citation [the autocommentary] says:

> Therefore, in this way, it has been made utterly clear by these passages that the sutras of this kind – all those asserted by the propounders of consciousness to be definitive meaning – are interpretable meaning.

This is Chandrakirti's commentary on the following lines from the root text:

> *Also other sutra sets of this kind are*
> *Clarified by these passages as just being interpretable meaning.* [6.95cd]

In short, all the sutras asserted by the Chittamatrins to be definitive meaning are, according to the Prasangika Madhyamikas, interpretable meaning.

Lama Tsongkhapa's *Illumination* (Tibetan text page 311) says:

> Sutras of this kind are not the two sections of the *Descent into Lanka Sutra* that were just cited because both of them are not asserted by the propounders of cognition to be definitive meaning and because they were clearly explained before in the autocommentary in regard to the *Sutra Unraveling the Thought*.

"Sutras of this kind are not the two sections of the *Descent into Lanka Sutra*" refers to the two sections extensively quoted in the autocommentary and briefly quoted in the *Illumination* saying:

1)

> [Mahamati said: "The tathagata essence taught] in the sutras expressed by the Bhagavan...

through to

> ...[how will they] become a manifest, complete buddha [in peerless, complete enlightenment?]

and

2)

> Mahamati, the characteristics of emptiness, unproduced, non-dual, and lacking inherent existence are inserted in the sutra sets of all the buddhas...

These two sections are not 'sutras of that kind' – those that are to be explained as interpretable meaning – but are those that explain the sutras which are interpretable meaning to be interpretable meaning. The root text says:

> *Also other sutra sets of this kind are*
> *Clarified by these passages as just being interpretable meaning.* [6.95cd]

"Clarified by these passages" refers to these two sections in the *Sutra Unraveling the Thought*.

Lama Tsongkhapa's *Illumination* (Tibetan text page 311) says:

> The explanation in [Jayananda's] *Explanatory Commentary* that the statement "these passages" refutes a creator when investigating dependent-relation in the *Sutra on the Ten Grounds* is completely unsuitable in that the refutation of other creators is taught:
> - to make it understood that the term 'only' of 'mind only' mentioned in the *Sutra on the Ten Grounds* does not refute external objects;
> - not to make it understood that the refutation of external objects is taught to be an interpretable meaning [teaching].

Jayananda's explanation in his *Explanatory Commentary* that when the *Sutra on the Ten Grounds* explains the twelve links it refutes a creator is incorrect. The passage "The three realms are only mind" in the *Sutra on the Ten Grounds*, having negated other creators, establishes only mind to be the creator. Thus, the *Sutra on the Ten Grounds* does not negate a creator but instead establishes that mind only is the creator.

Lama Tsongkhapa says: "the refutation of other creators is taught to make it understood that the term 'only' of 'mind only' mentioned in the *Sutra on the Ten Grounds* does not refute external objects; it is not to make it understood that the refutation of external objects is taught to be an interpretable meaning [teaching]." In short, when the *Sutra on the Ten Grounds* says "The three realms are only mind," the term 'only' does not refute external objects. It also does not explain the refutation of external objects to be an interpretable meaning teaching.

Lama Tsongkhapa's *Illumination* (Tibetan text page 311) says:

> Hence, in regard to the passage in the root text "Clarified by these passages as just being interpretable meaning" (v. 6.95d), there are three [points]:

The three points are the three passages that are explained to be interpretable meaning.

Lama Tsongkhapa's *Illumination* (Tibetan text page 311) says:

> 1. That which teaches that a mind-only which negates external objects is an interpretable meaning [teaching] is the four [lines] "Just as to patients..."

The four lines that teach that mind-only is an interpretable meaning teaching are found in the *Descent into Lanka Sutra*.

Lama Tsongkhapa's *Illumination* (Tibetan text page 311) says:

> 2. That which teaches that a basis-of-all is an interpretable meaning [teaching] is the passage that teaches that a permanent and stable essence is an interpretable meaning [teaching].

The sutras that are explained to be interpretable meaning teachings are
- the teaching on the non-existence of external objects and
- the teaching on a mind-basis-of-all.

The *Sutra Unraveling the Thought* presents a mind-basis-of-all saying:

> "The appropriating consciousness, profound and subtle,
> [Having] all the seeds, like the cascading flow of a river,
> When conceived as a self is not proper."
> I do not teach this to the childish.

The sutra that presents an essence that is permanent, stable, and enduring explains that the sutra setting out a mind-basis-of-all is an interpretable meaning.

Lama Tsongkhapa's *Illumination* (Tibetan text page 311) says:

> QUESTION: By teaching that the existence of a permanent and stable essence is an interpretable meaning [teaching], how is a basis-of-all established to be an interpretable meaning [teaching]?
> RESPONSE: The *Sutra on the Heavily Adorned* says:
>
> Grounds are the bases of all varieties,
> So too is the virtuous sugata essence.
> The Tathagata teaches that essence
> By the term 'basis-of-all.'
> Although the essence is proclaimed to be a basis-of-all,
> Those other awarenesses do not understand.
>
> The *Descent into Lanka Sutra* also says:
>
> The tathagata essence proclaimed as the mind-basis-of-all is together with the seven consciousnesses...

The *Sutra on the Heavily Adorned* says that an essence was taught using the term 'basis-of-all.' The *Descent into Lanka Sutra* also says: "The tathagata essence proclaimed as the mind-basis-of-all." "The essence is proclaimed to be a basis-of-all" means that the mind's emptiness of true existence is called a basis-of-all.

"The seven consciousnesses" are the six operational consciousnesses and the afflicted mentality. When the mind-basis-of-all is added to these seven there are a total of eight consciousnesses. The mind-basis-of-all is the basis, together with it are the other seven consciousnesses. Since the mind-basis-of-all is the illustration of the person, it can be said that the person possesses seven consciousnesses, the six operational consciousnesses and afflicted mentality.

Lama Tsongkhapa's *Illumination* (Tibetan text page 312) says:

> These two – [a basis-of-all and a tathagata essence] – are taught many times to be synonyms. Moreover, since, [among] these two, one is explained as permanent and one as impermanent the literal meaning of the two is not taught to be the same. However, since a mind-basis-of-all is taught through thinking about the very meaning of the essence that was taught through thinking about whomever [it was meant for], they mean the same since they are synonyms in terms of the intended meaning.

One can ask "If the basis-of-all is impermanent, whereas the tathagata essence are permanent, how can they be synonyms?" The response is that "the literal meaning of the two is not taught to be the same." On the other hand, since the basis of intention of teaching a basis-of-all and that of teaching a tathagata essence are the same they are synonyms in terms of the intended meaning.

Lama Tsongkhapa's *Illumination* (Tibetan text page 312) says:

> Hence, the very teaching that the former is an interpretable meaning [teaching] also establishes the latter to be an interpretable meaning [teaching].

"The former" refers to the teaching on a tathagata essence that is permanent, stable, and enduring, whereas "the latter" refers to the teaching on a mind-basis-of-all.

Lama Tsongkhapa's *Illumination* (Tibetan text page 312) says:

> The autocommentary says:

> Because of permeating the nature of all things, understand that emptiness alone is indicated by the term 'mind-basis-of-all.'
>
> Having excellently matched the two teachings that [a mind-basis-of-all] and a permanent and stable essence are interpretable meaning [teachings], by means of these passages one should realize that a basis-of-all is taught to be an interpretable meaning [teaching].

By means of the passage regarding an essence that is permanent, stable, and enduring, the passage setting out a mind-basis-of-all is established to be an interpretable meaning teaching.

Lama Tsongkhapa's *Illumination* (Tibetan text page 312) says:

> 3. After saying "Mahamati, the characteristics of emptiness, unproduced, non-dual, and lacking inherent existence are inserted in the sutras of all the buddhas," the *[Descent into Lanka] Sutra* says:
>
> Whatever the sutra, this is suitable. This very meaning is to be comprehended in them.
>
> This is the passage that teaches that [the *Sutra Unraveling the Thought*] which distinguishes the first two natures as existing and not existing by way of their own character is an interpretable meaning [teaching].

The passage in the *Descent into Lanka Sutra* "Mahamati, the characteristics of emptiness, unproduced, non-dual, and lacking inherent existence are inserted in the sutra sets of all the buddhas..." explains the sutra that sets out the first two of the three natures to be an interpretable meaning teaching. In other words, the sutra that says that other-powered phenomena are established by way of their own character and that imputational factors are not established by way of their own character is an interpretable meaning teaching. According to the Chittamatrins the passage in the *Sutra Unraveling the Thought* that says that imputational factors are not established by way of their own character and other-powered phenomena and that thoroughly established phenomena are established by way of their own character is a definitive meaning teaching, whereas according to the Prasangika Madhyamikas it is an interpretable meaning teaching that was intended only for the Chittamatrins. Although the Prasangika Madhyamikas accept the three natures in general, they posit them differently.

In the Prasangika Madhyamika system if it is an established base it is pervaded by being imputed by conception; therefore, it is merely imputed by conception. Therefore, if someone were to say that that which is merely imputed by conception is the imputational factor this would not be correct because then it would have to be said that other-powered phenomena and thoroughly established phenomena are imputational factors because they are merely imputed by conception. Therefore, how do the Prasangika Madhyamikas define the imputational factor?

Student: They define it as the two selves, a self of persons and a self of phenomena.

Geshe Jampa Gyatso: Are there not two types of imputational factors, one that exists and one that does not exist?

Student 2: Existing imputational factors are permanent phenomena not produced by causes.

Geshe Jampa Gyatso: According to Prasangika Madhyamika what is the definition of imputational factor?

Student: Phenomena that come into existence in dependence on an established base.

Geshe Jampa Gyatso: It follows that the person is an imputational factor because it comes into existence in dependence on an established base!

Student: An imputational factor is that which is superimposed by the conception apprehending it.

Geshe Jampa Gyatso: That would be the same as the Chittamatra way of positing the imputational factor. Think about it. Other-powered phenomena and the thoroughly established phenomena are defined by the Prasangika Madhyamikas just as they are defined by the Chittamatrins:

- an other-powered phenomenon is that which is produced by causes and conditions, and
- a thoroughly established phenomenon is the final observed object of a pure path

The Chittamatrins say that the first nature, the imputational factor, is not established by way of its own character whereas the other two natures are established by way of their own character. How is this explained to be an interpretable meaning teaching? What is the basis of intention for the Buddha to have taught this, the purpose, and the damage to the actual literal meaning? Think about it.

Lama Tsongkhapa's *Illumination* (Tibetan text page 312) says:

3B1C-2B3E-2A1B-2B2C-3A2 Indicating it [to be an interpretable meaning teaching] by means of reasonings

Chandrakirti's autocommentary says:

In order to clarify as just interpretative in meaning through reasoning:

The buddhas taught "When knowable objects do not exist,
The elimination of knowers is easy to acquire."
Since refutation of knowers is proved if knowable objects do not exist,
Initially, objects of knowledge are refuted. [6.96]

The buddha bhagavans lead those to be subdued to non-inherent existence gradually. For that, because those producing merits easily engage in reality (dharmata), just as they initially compose discourses on giving and so forth, similarly because refuting knowable objects is also a method of comprehending selflessness, the Bhagavan taught only refutation of knowable objects beforehand – because those understanding the selflessness of knowable objects easily engage in the selflessness of knowers.

As those understanding knowable objects as non-inherently existent will realize knowers (i.e., consciousnesses) as non-inherently existent somewhat by only themselves [and] will [realize it] somewhat by merely a little intensive teaching [by others], the mere refutation of knowable objects is taught beforehand.

The Buddha first taught that objects of knowledge do not exist externally, then later taught that consciousness does not exist inherently. The Buddha taught that objects of knowledge do not exist externally and that they do not exist inherently in order to gradually lead beings to the understanding that consciousness does not exist inherently.

Gedun Drup's *Mirror of the Clarification of the Thought* (Tibetan text page 48), as translated by Martin Willson, says:

3B1A-6C5A-1A2B-2C3A-2 Showing by logic

The buddhas have taught that when knowables don't exist,
Removal of consciousness is easily obtained.
Since one achieves refutation of consciousness if
There's no knowables, first of all they deny the knowables. [6.96]

It should be understood that there is a reason that the Buddha first denies external knowable phenomena: it is because if there are no external knowable phenomena, refutation that consciousness ultimately exists is easily achieved. For the buddhas have taught that if external knowable phenomena do not exist, then elimination of a truly existent consciousness is easily obtained.

There is some discrepancy regarding the spelling in the various texts in that there appears both the Tibetan word *gsal* which means 'clarification' and the word *bsal* which means 'elimination.' This word can be understood in terms of clarification in the sense that when one understands that there is no external objects, it will be clear that there is no inherently existent mind. However, Lama Tsongkhapa's *Illumination* explains the word *gsal* or *bsal* in terms of refutation or elimination in the sense that when it is understood that there do not exist external objects of knowledge, consciousness will be eliminated as being inherently existent

Lama Tsongkhapa's *Illumination* (Tibetan text page 312) says:

> Now, in order to clarify by means of reasonings that the Chittamatra teachings are interpretable meaning, there is [the following] explanation.
> Chandrakirti says:
>
> *The buddhas say "If objects of knowledge do not exist,*
> *The elimination of consciousness is easily acquired."*
> *Since if objects of knowledge do not exist, the refutation of consciousness is established*
> *Initially there is the refutation of objects of knowledge.* [6.96]
>
> Regarding that, just as they initially apply discourse on generosity and so forth as a means for those who have accumulated merit to easily engage in reality, likewise, the buddhas gradually guide those trainees – who are initially unable to realize the complete, profound meaning – to the realization of the lack of inherent existence.

The Buddha first teaches discourse on generosity and so forth to trainees in order to increase their accumulation of merit. He then teaches emptiness to them in order for them to increase their collection of wisdom. Thus, the Buddha first skillfully teaches generosity and only later teaches emptiness. Similarly, the Buddha first teaches that external objects do not exist and then later explains that consciousness does not exist inherently.

Lama Tsongkhapa's *Illumination* (Tibetan text page 312-3) says:

> To such [trainees], *the buddhas say* "*If* first it is taught that external *objects of knowledge do not exist*, afterward *the elimination of consciousness* as inherently existent *is easily acquired*."

Note that although here the Tibetan text says *gsal* which means 'clarification' – whereby this sentence would read "afterward the clarification of consciousness as inherently existent is easily acquired" – this is not correct. Therefore, the Tibetan should be corrected to read *bsal* which means 'elimination.'

Lama Tsongkhapa's *Illumination* (Tibetan text page 312) says:

> Hence, because the absence of objects of knowledge – that is, the initial refutation of external objects – is also a method to completely realize selflessness, the buddhas *initially* teach just *the refutation of* external *objects of knowledge* because, *if objects of knowledge do not exist*, those who understand the selflessness of external objects *refute consciousness* – that is, they easily *establish* its selflessness.

"They easily establish its selflessness" means that they easily establish consciousness to lack inherent existence.

Lama Tsongkhapa's *Illumination* (Tibetan text page 312) says:

> Those who understand that external objects do not exist inherently

- sometimes realize by themselves alone that consciousness does not exist inherently and
- sometimes realize it by means of a small amount of mere teachings from others.

When one understands that external objects do not exist inherently, one will then be able to realize that consciousness does not exist inherently either by means of thinking about this oneself or by means of receiving a small amount of teachings from others.

Lama Tsongkhapa's *Illumination* (Tibetan text page 312) says:

> That 'External objects do not exist and consciousness is inherently existent' is an interpretable meaning [teaching] is clearly taught in [Nagarjuna's] *Essay on the Mind of Enlightenment* which says:
>
> The Subduer taught
> "All these are only mind"
> So that the childish would abandon fear.
> That is not thusness.
>
> Also Aryadeva clearly taught this in his *Compendium of the Heart of Exalted Wisdom*.

When the Buddha taught 'External objects do not exist and consciousness is inherently existent,' he did so in order for the childish to abandon fear, listen to his teachings, and then gradually come to realize that consciousness is not inherently existent. Nagarjuna's *Essay on the Mind of Enlightenment* is a commentary on tantra, as is, perhaps, Aryadeva's *Compendium of the Heart of Exalted Wisdom*.

In summary, the four points to be explained as interpretable meaning teachings according to Prasangika Madhyamika are:
1. the third Dharma wheel, which according to Chittamatra is a definitive meaning teaching, that clarifies the three natures along with their characteristics,
2. the sutra set that explains a mind-basis-of-all,
3. the sutra set that explains three final vehicles, and
4. the sutra set that explains mind only without external objects.

Three of these are mentioned by Chandrakirti in his autocommentary. He does not mention the fourth, the explanation of three final vehicles, because he says that this is easily understood by consulting Nagarjuna's *Compendium of Sutras*.

Tuesday afternoon, 5 December 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 313) says:

> 3B1C-2B3E-2A1B-2B2C-3B Indicating the method for realizing the interpretable and definitive meanings of the sutras

Chandrakirti's autocommentary says:

> To explain that "those with wisdom should also similarly investigate others":
>
> *Thus, one has understood the account of the scriptures –*
> *Whatever sutra concerns explaining what is not thusness,*
> *Teaches interpretative meaning but is to be interpreted through realization and*
> *[Whatever] concerns emptiness, the definitive meaning – should be known.*[72] [6.97]

[72] See Hopkins' translation, pages 617-618.

"Those with wisdom should also similarly investigate others" means that they should also similarly explain other sutras. A buddha, without explicitly teaching emptiness, knows how to teach it indirectly and thereby gradually leads others to its realization.

"One has understood the account of the scriptures" means that one should understand the account of what are interpretable meaning and what are definitive meaning teachings as in this way one will know how to interpret a particular passage as being either interpretable or definitive. Having understood that, one should assert that a sutra that does not explain emptiness but explains conventionalities is an interpretable meaning sutra. "[Whatever] concerns emptiness, the definitive meaning" means that if it is a sutra that mainly teaches emptiness it is a definitive meaning sutra.

Gedun Drup's *Mirror of the Clarification of the Thought* (Tibetan text page 48), as translated by Martin Willson, says:

3B1A-6C5A-1A2B-2C3B The method of understanding the interpretive and direct meaning of sutras

Having understood like that the account of these scriptures,
You should realize the sutras whose subject is not reality
Are taught with interpretive meaning, and interpret them;
And know those whose subject is voidness are definitive. [6.97]

Having understood the account of the scriptures like that, you should know the interpretive and definitive. For sutras whose subject is mainly not absolute reality, but the conventional, are taught to be of interpretive meaning, and you should understand [this] and interpret [them], and those whose subject is voidness should be understood as of definitive meaning.

Chandrakirti's autocommentary says:

> Just as those sutra sets that do not explicitly clarify dependent-arising – distinguished by non-production and so forth – become causes of engaging in non-inherent existence, they are to be explained like that.

Any sutra set that does not explicitly present emptiness or that does not set out the special reasoning of dependent-arising that establishes the lack of inherent existence is to be understood as a cause for engaging in the lack of inherent existence. These sutras are a method to gradually lead beings to the realization of reality.

Chandrakirti's autocommentary says:

> With regard to what was taught [in the *Praise of the Supramundane*,.5]:[73]
>
> "If the eye does not apprehend the elements,
> How can the eye apprehend that arising [from them]?"
> When you taught that about form,
> You overcame grasping to form.

This verse is from Nagarjuna's *Praise of the Supramundane*. Nagarjuna composed three collections: a collection of reasonings, a collection of discourses, and a collection of praises.

[73] See Lindtner's translation and note, page 130 with the Sanskrit and a different Tibetan version.

Are the elements apprehended objects of the eyes? They are not. What are they apprehended by? They are apprehended by the body consciousness because the four elements are tangible objects. Are the forms which are evolutes – "that arising from them" – apprehended objects of the eye? They are.

Nagarjuna says: "When you taught that about form, you overcame grasping to form." Form in this context is not just form in general, it is the form sphere in particular because form in general is not necessarily an apprehended object of eye consciousness.

Chandrakirti's autocommentary says:

> It is also taught in sutra:
>
> > The topic of impermanence means non-existence.

In the fourth chapter of the *Ornament for Clear Realizations*, in the context of the twenty-seven aspects of a knower of bases, it says:

> *From the aspect of non-existence through*
> *The aspect of unshakeability,*
> *They are explained as four with respect to each truth*
> *And as fifteen with respect to paths.* [4.2]

"The aspect of non-existence" refers to the attribute of impermanence of true sufferings. Similarly, also here in the sutra the word 'non-existence' is related to true sufferings which do not exist permanently. The citation "The topic of impermanence means non-existence" is from the Perfection of Wisdom Sutras.

Chandrakirti's autocommentary says:

> [Whatever] concerns emptiness should also be known as definitive in meaning as was said [in the *King of Meditative Stabilizations Sutra*, 7.5]:
>
> > Know the feature of definitive meaning sutra sets
> > As the Sugata explained the empty.
> > [Those] in which sentient being, person, and being are indicated,
> > Know all those doctrines as interpretative meanings.[74]

The sutras that explain the sentient being, person, and being are interpretable meaning teachings. Thus, the interpretable meaning is conventional truth and the definitive meaning is ultimate truth.

Chandrakirti's autocommentary says:

> Similarly, it is taught [in the *King of Meditative Stabilizations Sutra*]:
>
> > Whatever sutras I taught in a thousand world systems,
> > different words [yet] same in meaning – those incapable of the fully proclaimed.
> >
> > If contemplation is done on one thing, one will meditate on all those, hence
> > all buddhas thoroughly taught however many doctrines.

[74] See translations by Hopkins, page 600: by Thurman, quoted by Tzong Khapa, page 254, and by Cabezon, page 77.

> A self of all phenomena is non-existent. If some men skilled in the meaning were to train in this point, buddha-dharmas would not be difficult to find.

The first verse indicates that the Buddha gave different teachings in countless worlds. The second verse says that when one thinks about one phenomenon's emptiness of inherent existence, one also meditates on the lack of inherent existence of all phenomena. With respect to "one will meditate," among the two types of meditation, analytical meditation and stabilizing meditation, here it refers to analytical meditation because by contemplating and analyzing the emptiness of one thing one meditates on the emptiness of all phenomena. In other words, when one is able to meditate on the lack of inherent existence of one phenomenon, one is also able to meditate on the lack of inherent existence of all phenomena.

"Hence, all buddhas thoroughly taught however many doctrines, a self of all phenomena is non-existent" means that however many teachings the buddhas give they are all taught in order for sentient beings to realize selflessness. "If some men skilled in the meaning were to train in this point, buddha-dharmas would not be difficult to find" means that when someone is skilled in the meaning and trains in it the state of a buddha becomes easy to attain.

Chandrakirti's autocommentary says:

> Similarly, that it is also taught extensively in the sutra sets such as the *Exalted* [*Teachings of*] *Akshayamati* [*Sutra*] and so forth should be realized.

The subject of the interpretable meaning and definitive meaning is discussed in Lama Tsongkhapa's *Treatise on the Interpretable and Definitive*. Here it says that Asanga bases his understanding on the *Sutra Unraveling the Thought* while Nagarjuna bases his understanding on the *Teachings of Akshayamati Sutra*. Thus, in the Chittamatra system the distinguishment of the interpretable meaning and definitive meaning is based on the *Sutra Unraveling the Thought*, whereas in the Prasangika Madhyamika system the distinguishment of the interpretable meaning and definitive meaning is based upon the *Teachings of Akshayamati Sutra*.

Chandrakirti's autocommentary says:

> I shall express a little bit [about our own system's presentation].[75] For example, a snake is imagined (imputed) on a coiled rope – a dependent-arising – because that [snake] does not exist on that [rope]. The [snake] is fully established on an actual snake because it is not imagined.

The Prasangika Madhyamika sets out the example of a coiled rope in order to establish the lack of inherent existence, whereas the Svatantrika Madhyamika sets out the examples of a reflection, a magic show, and so forth in order to establish the lack of true existence. However, it is said that the example of a coiled rope is the best because its meaning is easier to understand. This example is of a coiled rope in a dim corner which someone mistakes for a snake. Having imagined or imputed the rope to be a snake, that person becomes frightened. Although there is no rope from its own side, it is imputed to be a snake. Chandrakirti says: "For example, a snake is imagined (imputed) on a coiled rope – a dependent-arising – because that [snake] does not exist on that [rope]."

"The [snake] is fully established on an actual snake because it is not imagined" means that on a real or actual snake 'snake' is thoroughly established. Thus, if there were a real snake in the dark

[75] See translation by Hopkins, pages 618-619.

corner it would not be imagined. Just as a snake is imputed on a coiled rope, all phenomena do not exist from their own side but are merely imputed by thought and term.

Chandrakirti's autocommentary says:

> Similarly, a [final] nature is totally imagined in other-powered [phenomena] having production since [final] entitiness does not have production as it is set forth [in the *Treatise on the Middle Way*, 15.2cd]:
>
> > Natures are not fabricated and are without dependence on others.[76]

Here Nagarjuna's *Fundamental Wisdom* says that natures are not fabricated by causes and conditions and do not depend on others. However, if "natures" are taken to be emptinesses, this would not concord with saying that they do not depend on others. Therefore, perhaps this phrase has to be understood as meaning that natures are not fabricated by causes and conditions and do not depend on other causes and conditions, whereby the word "natures" would concord with meaning emptinesses. If it is not taken in this way, one could debate asking: "Is emptiness not a dependent-arising?"

"Since [final] entitiness does not have production" means that entitiness is not produced by causes and conditions.

Chandrakirti's autocommentary says:

> That [final nature] that is imagined in presently apprehended reflection-like dependent-arisings having production is actual in the sphere of a buddha because it is not totally imagined. For, without contacting functioning things having production, he manifests (i.e., directly perceives) solely the [final] nature. Hence, because of comprehending thusness, he is called "buddha."

All phenomena that are reflection-like dependent-arisings are the direct sphere of activity (object) of buddhas. For a buddha there is no imputation by conception, things are always directly perceived or realized because a buddha has no conceptualization. Therefore, whatever he perceives is always directly perceived and not conceived. With respect to the statement "For, without contacting functioning things having production, he manifests (i.e., directly perceives) solely the [final] nature" it can be asked what does 'without contacting functioning things' mean? Does a buddha not realize all phenomena directly? Therefore, why say "without contacting functioning things having production, he manifests solely the [final] nature"? This means that in the perspective of a buddha's seer of suchness functioning things do not exist. Thus, for a buddha's seer of suchness there are no functioning things just as in the perspective of a superior's exalted wisdom of meditative equipoise there are no conventionalities. If there were conventionalities in its perspective what would follow? It would follow that they would be an object of negation. There are two types of objects of negation: (i) an object of negation in the perspective of a consciousness of an ultimate type (a superior's exalted wisdom of meditative equipoise) and (ii) the object of negation that is true existence.

Chandrakirti's autocommentary says:

[76] See the translation of these two lines in the context of Nagarjuna's verses, and the *Autocommentary*, in Napper, page 127-129 and the notes on 713-716.

> Therefore, having thus realized the presentation of the three entities called "the imagined, the other-powered, and the fully-established," the intention of the sutra should be thoroughly explained.

Having identified the three natures along with their specific characteristics, one should thoroughly explain the sutra.

Chandrakirti's autocommentary says:

> Because the two, apprehendeds and apprehenders, are other-powered and apart from them there are no things, it should be considered whether the two are indeed imagined in other-powered phenomena.
>
> Enough through elaboration, I shall explain the main [subject].

From the point of view of the Prasangika Madhyamikas all phenomena are pervaded by being included in either apprehendeds or apprehenders. Apprehendeds are external objects which exist and apprehenders are the consciousnesses that apprehend them. Both apprehendeds and apprehenders are other-powered phenomena. Thus, there are no functioning things that are not included in other-powered phenomena.

Wednesday morning, 6 December 2000

Lama Tsongkhapa's *Illumination* (Tibetan text page 313) says:

> The explanation of "Those possessing wisdom should also similarly investigate[77] other interpretable meaning sutras that do not completely and explicitly indicate thusness" [is as follows].
> Chandrakirti says:
>
> *Having understood the account of such passages,*
> *One should also realize that any sutra whose meaning does not explain suchness*
> *Is an interpretable meaning teaching and then interpret it.*
> *Understand that those whose meaning is emptiness are definitive meaning.* [6.97]
>
> *Having understood the account* – that is, the presentation – of the interpretability and definitiveness *of such passages* as were explained previously, *one should also realize that any sutra* set *whose meaning*, that is, whose subject matter, *does not explain* the meaning of *suchness is* an interpretable meaning [sutra] – that is, *an interpretable meaning teaching* that does not explicitly clarify dependent-arisings qualified by being unproduced and so forth – and *then interpret it*. Similarly, those [passages] that become a cause for engaging in the realization of the lack of inherent existence are to be explained in that way.

If it is a sutra that does not present emptiness explicitly it is an interpretable meaning sutra. Such sutras, although not presenting emptiness explicitly, are a method to realize emptiness. Thus, all the teachings given by the Buddha are either explicit teachings on emptiness or indirect teachings that are a method for realizing it.

Lama Tsongkhapa's *Illumination* (Tibetan text page 314) says:

> [Nagarjuna's] *Praise of the Supramundane* says:

[77] Chandrakirti's autocommentary (Tibetan text page 126) says *brtag par bya* (investigate), whereas Lama Tsongkhapa's *Illumination* (Tibetan text page 313) says *bstan par bya* (teach). The first seems more appropriate.

> "If the eye does not apprehend[78] the elements,
> How does the eye apprehend their evolutes?"
> When you taught that about form,
> You overcame the apprehension of form.
>
> Sutra also says:
> The meaning of impermanence is the meaning of not existing.

The elements are not apprehended objects of the eye consciousness, whereas their evolutes, that which derives from them, are apprehended objects of the eye consciousness.

The sutra citation says that impermanence means not existing as permanent.

Lama Tsongkhapa's *Illumination* (Tibetan text page 314) says:

> The way in which the first passage becomes a means to make it known [that these are interpretable meaning teachings is as follows]. In Abhidharma the Bhagavan taught:
> The four elements are tangible objects which are not objects of the eye, whereas the form spheres that are evolutes which arise from them are apprehended objects of the eye.

The four elements are not apprehended objects of the eye, whereas form spheres, which are either colors or shapes, are apprehended objects of the eye. Instead the four elements are tangible objects that are apprehended objects of the body consciousness as is taught in the Abhidharma by the Bhagavan and in *Collected Topics* by Purbuchog. Thus, they are not apprehended objects of the eye consciousness, ear consciousness, nose consciousness, and tongue consciousness. The five sense consciousnesses have their respective determined objects. Dharmakirti's *Commentary on [Dignaga's] Compendium of Valid Cognition* says: "One does not know two because the objects of the sense powers are determined."

On the other hand, the evolutes, that which derives from the four elements, are the apprehended objects of eye consciousness. The evolutes are, for example, form spheres.

Lama Tsongkhapa's *Illumination* (Tibetan text page 314) says:

> It being necessary to assert both, if, when teaching their suchness, they are established by way of their own entity, it must be asserted either:
> - that the elements are apprehended objects of the eye or
> - that objects, forms, are not apprehended objects of the eye.

If they are inherently existent, it must be asserted either that the elements are apprehended objects of the eye or that form spheres are not apprehended objects of the eye. In other words, if the four elements existed inherently they could be apprehended by an eye consciousness because they would arise independently from their own side. It also follows that if the four elements were inherently existent, then the forms that arise from them would not be apprehended objects of the eye.

If the four elements exist inherently why would it follow that they are apprehended objects of the eye? If the forms arising from them exist inherently why would it follow that they are not apprehended objects of the eye? Think about it. Since inherent existence means to exist independently from its own side, then forms and so forth could appear to any consciousness, for example, the form spheres that arise from the four elements would appear not just to the eye consciousness but also to

[78] Tibetan should read gsungs rather than gsugs.

the body consciousness or else they would not be perceived by any consciousness at all. Saying this is a way of pushing things to extremes.

Lama Tsongkhapa's *Illumination* (Tibetan text page 314) says:

> When this is understood, one understands that the first way of explaining does not teach their suchness. Having understood this, one newly realizes suchness and understands that the first way of explaining is taught as a method for engaging [suchness].

In brief, although a sutra does not explicitly present emptiness it is a means to lead others to engage in emptiness and to achieve its realization newly. Then one "understands that the first way of explaining is taught as a method for engaging [suchness]." This first way of explaining refers to that set out previously in Nagarjuna's *Praise of Supramundane Qualities*.

Lama Tsongkhapa's *Illumination* (Tibetan text page 314) says:

> The meaning of the second passage is that, as in the first, it is to be understood that teaching things as being produced and disintegrating is on account of their lacking inherent existence.

"It is to be understood that teaching things as being produced and disintegrating is on account of their lacking inherent existence" means that, when the sutra says "The meaning of impermanence is the meaning of non-existence" it indicates that functioning things are produced having the nature of disintegration. "Teaching things as being produced and disintegrating" means that phenomena that are produced and disintegrate are empty of inherent existence. In short, impermanent things lack inherent existence.

Lama Tsongkhapa's *Illumination* (Tibetan text page 314) says:

> *Understand* that any sutra *whose meaning*, that is, whose explicit subject matter, *is* the *emptiness* of inherent existence of persons and phenomena *is* a *definitive meaning* [sutra].

Any sutra that explicitly presents the emptiness of inherent existence of persons and phenomena is a definitive meaning sutra.

Lama Tsongkhapa's *Illumination* (Tibetan text page 314) says:

> Hence, the *King of Meditative Stabilizations Sutra* also says:
>
> Understand empty, as explained by the Sugata,
> To be the particularity of the definitive meaning sutra sets.
> Understand those that teach the sentient being, the person, the being,
> All these phenomena, to be interpretable meaning.
>
> The particularity of the definitive meaning sutra sets is the feature that is different from the interpretable meaning sutra sets. Indicating the person [in the sutra above] is just to illustrate, that is, to indicate, that the agent, object of the action, and activity exist. This is the scriptural source for the way of positing the sutra sets as the two – the interpretable and the definitive.

The *King of Meditative Stabilizations Sutra* explains the way of positing a sutra as either interpretable meaning or definitive meaning. In brief, any sutra set that presents emptiness is definitive meaning, while any sutra set that teaches the sentient being, person, and being, or agent, object, and activity, are interpretable meaning.

Lama Tsongkhapa says: "Indicating the person [in the sutra above] is just to illustrate, that is, to indicate, that the agent, object of the action, and activity exist." The subject matter of interpretable meaning sutras can also be anything other than the person; the person is just mentioned here as an illustration. Thus, while the sutra only explicitly mentions agent, it also implies objects and actions.

Lama Tsongkhapa's *Illumination* (Tibetan text page 315) says:

> This very [sutra] also says:
>
> In a thousand world systems,
> Whatever Dharmas I teach,
> Different in words, same in meaning,
> Cannot be fully proclaimed.
>
> When one thing is thought about,
> One will familiarize with them all.
> Hence, all the buddhas thoroughly teach,
> However many Dharmas there are,
>
> A self of all phenomena does not exist.
> When those humans skilled in the meaning
> Train in this point,
> It is not difficult to find the Dharma of the Buddha.
>
> The four lines 'In a thousand world systems...' mean that however many sutra sets [the Buddha] taught, those that explicitly clarify the ultimate are those that explicitly lead to thusness. However, since even the interpretable meaning [sutra sets], which do not teach that, indirectly lead to thusness, the meaning is the same as leading to the ultimate.

If a sutra set explicitly presents emptiness, it explicitly leads to emptiness. However, also the sutras that do not present emptiness explicitly, indirectly lead to thusness.

Lama Tsongkhapa's *Illumination* (Tibetan text page 315) says:

> Therefore, it is said "Since those who are beginners at training in the path are unable to seek out every sutra set that exists in the world systems, they should seek the meaning of thusness in one [text] that is a sutra set" because also those [sutras] that do not explicitly teach thusness are to be understood through citing them as a means to make it known that they must be explained as a cause for engaging [thusness].
>
> The two [lines] 'When thinking about one thing...' mean that, having understood well the thusness of one substratum, when one familiarizes oneself with it, it becomes familiarization with the thusness of all substrata, whereby it is not necessary to meditate individually on the reality of each and every substratum.

When one meditates on emptiness based upon one substratum, one also meditates on the emptiness of all other substrata, therefore, it is not necessary to meditate on the emptiness of each and every substratum.

Lama Tsongkhapa's *Illumination* (Tibetan text page 315) says:

> The presentation of what it is that 'when one has familiarized with one thing, one has familiarized with all' is indicated by the three lines 'Hence, all buddhas thoroughly teach...' Teaching in this way, stating 'A self of phenomena does not exist,' is not to say that one substratum is enough for those on the conduct side of the vast [path].

On the conduct side of the vast path there are many things to be practiced. Hence, the three lines "Hence, all buddhas thoroughly teach, however many Dharmas there are, a self of all phenomena does not exist" do not mean that it is enough for those on the conduct side of the vast path to meditate on one thing and not meditate on others. These lines specifically mean that by meditating on the emptiness of one substratum, one meditates on the emptiness of all other substrata.

Lama Tsongkhapa's *Illumination* (Tibetan text page 315-6) says:

> It is taught:
>
> > Just as the *Moon Lamp Sutra* teaches the way of positing [the kinds of sutra sets] as being definite in number, similarly, that this is extensively taught in the sutra set of the *Teachings of Akshayamati Sutra* and so forth should also be realized.
>
> I have already explained the conclusive analysis regarding these [statements] in the *[Treatise] Differentiating the Interpretable and Definitive*.

Lama Tsongkhapa explains the interpretable meaning and definitive meaning in his *Treatise Differentiating the Interpretable and Definitive* in the discussion of the Chittamatra system and in relation to the *Teachings of Akshayamati Sutra*.

Lama Tsongkhapa's *Illumination* (Tibetan text page 316) says:

> [Chandrakirti's statement in his autocommentary] "I will explain this a little bit" [means that], when the explanation of the three natures in the *Sutra Unraveling the Thought* is explained to be of interpretable meaning, thinking "How are those three posited by our own system?", I will teach that a bit. For example, snake is wrongly imputed on a dependent-arising that is a coiled rope because that snake does not exist on that rope. [Snake] is thoroughly established in regard to an actual snake because it is not imputed while not existing. Similarly, a natural mode of being *(rang bzhin gshis lugs*) is also imputed on compounded other-powered phenomena while not existing on them. This is because the entity of the mode of being does not have production since *Fundamental Wisdom* (v. 15.2cd) says:
>
> > Natures are not fabricated and
> > Do not exist in reliance upon other.

The three natures are:
(i) other-powered phenomena, the base upon which the imputational factor is imputed,
(ii) imputational factors,
(iii) thoroughly established phenomena, an other-powered phenomenon's emptiness of the imputational factor.

The base is an other-powered phenomenon which can be either (i) the person or (ii) any phenomena other than the person. One imputes a self of persons on the other-powered phenomenon that is a person and imputes a self of phenomena on the other-powered phenomena that are other than the person; these two selves are the imputational factors. The thoroughly established phenomenon is the base's emptiness of its respective object of negation:
(i) the person's emptiness of the object of negation is the thoroughly established phenomenon in relation to the base which is the person and
(ii) a phenomenon's emptiness of the object of negation is the thoroughly established phenomenon in relation to the base which is phenomenon.

The way in which we impute a self on a base is like the way in which a snake is imputed on a coiled rope in a dim place. Snake imputed on the dependent-arising that is a coiled rope is the way in which the imputational factor exists. On the other hand, snake imputed on an actual snake it is not an

imputational factor because an actual snake exists. Similarly, when we impute inherent existence, which is not there, on an other-powered phenomenon that is the imputational factor on the base of an other-powered phenomenon.

Nagarjuna's *Fundamental Wisdom* says: "Natures are not fabricated and do not exist in reliance upon other."

The three natures are perhaps:

1. the nature itself,
2. non-fabricated, and
3. non-reliance on other.

These will be discussed later on. Lama Tsongkhapa's *Great Exposition of the Stages of the Path* says that there are two types of object of negation which are to be negated: one that is too extensive (over-pervasive) and one that is too limited (under-pervasive). This text says: "When the object of negation is posited to have the three qualifications it is under-pervasive."

"The mode of being" is emptiness, it is not produced.

Lama Tsongkhapa's *Illumination* (Tibetan text page 316) says:

> That nature imputed as the mode of being on reflection-like dependent-arisings that are being apprehended, that is, are being perceived, that have production – the sphere of activity of a buddha's seer of modes – is the actual mode of being because it is not imputed while not existing on them. Because of comprehending thusness by directly perceiving the nature alone without contacting the things that have production by causes and conditions with his exalted wisdom, he is called 'buddha.' The conclusive analysis regarding ignorance will be explained [below].

The mode of being is emptiness. When a buddha's seer of modes observes dependent-arisings, functioning things, it sees their mode of being. In other words, when a buddha observes the mode of being he does so without contacting conventionalities. In short, in the perspective of a buddha's seer of modes there is no appearance of conventionalities. Why? Because in the perspective of that seer of modes conventionalities do not exist.

"The conclusive analysis regarding ignorance will be explained [below]" means that ignorance will be explained later on.

Lama Tsongkhapa's *Illumination* (Tibetan text page) says:

> [The autocommentary says] "Therefore, like that, having realized the presentation of the three natures, I will explain the intention of the sutra." By means of this way of explaining, the intention of explaining the three characters in the "Questions of Maitreya Chapter" is also made known. Through that, the intention of explaining the three natures in the *Sutra Unraveling the Thought* as being an interpretable meaning [teaching] is also to be understood.

The way in which the three natures are explained in the "Questions of Maitreya Chapter" and the way in which they are explained in the *Sutra Unraveling the Thought* are different. There are ten chapters in the *Sutra Unraveling the Thought*; the three natures are mainly discussed in the "Questions of Paramarthasamudgata Chapter." In short, the way in which the three natures are presented in the "Questions of Maitreya Chapter" and the way in which they are presented in the "Questions of Paramarthasamudgata Chapter" are different. This is discussed in the context of the presentation of the Chittamatra system in Lama Tsongkhapa's *Treatise Differentiating the Interpretable and Definitive*.

Lama Tsongkhapa's *Illumination* (Tibetan text page 317) says:

> The Chittamatrins' imputing – in regard to the basis of imputation, other-powered phenomena – apprehendeds and apprehenders being two different entities as the imputational factor requires thought and investigation because the two, apprehendeds and apprehenders, are other-powered phenomena, whereas the other-powered phenomena that are not them are non-existent things.
>
> I have already explained the conclusive analysis regarding the presentation of the three natures which are explained in the "Questions of Maitreya Chapter" and the three natures in the *Sutra Unraveling the Thought* in the *Treatise Differentiating the Interpretable and Definitive*.

When it is said that the *Sutra Unraveling the Thought* presents the three natures it specifically means that the "Questions of Paramarthasamudgata Chapter" presents them. Thinking that the entire *Sutra Unraveling the Thought* presents the three natures is incorrect. There are ten chapters in this text which are questions put forth by ten different bodhisattvas.

The three natures or three characters are set forth in particular by the Chittamatrins but are also presented by the Prasangika Madhyamikas and the Svatantrika Madhyamikas, whereas they are not presented by the lower schools. However, they are presented differently by the Madhyamikas; for example, they present the imputational factor which to be negated differently. Jedzun Chogyi Gyeltshen's *Ocean of Sport*, in relation to the third chapter of the *Ornament for Clear Realizations*, defines the three natures. The *Ornament for Clear Realizations* says:

> *Forms and so forth, their impermanence and so forth,*
> *The incomplete and thoroughly complete,*
> *The application that stops the action*
> *With respect to non-attachment itself to that,* [*3.8]*
>
> *Not changing, the very non-existence of agents,*
> *The applications of the three types of difficult actions,*
> *Because of attaining a result according to one's fortune*
> *It is asserted there is a result,* [*3.9]*
>
> *Not relying upon others, and*
> *Appearances are to be understood as seven types.* [*3.10ab]*

When the Svatantrika Madhyamikas comment on the first of these stanzas, they say that other-powered phenomena and imputational factors are incomplete as a base for excellent qualities, whereas the thoroughly established alone are a thoroughly complete base for excellent qualities. Thus, stating "The incomplete" in the *Ornament* refers to other-powered phenomena and imputational factors, whereas 'thoroughly complete' refers to thoroughly established phenomena.

This concludes the refutation of the production from other. The next topics of discussion are the refutations of production from both and causeless production, which conclude the discussion of the self of phenomena. After that there is a discussion of the self of persons. Yogis refute a self of persons by taking the conventionally existent self of persons and then refuting the self of persons that does not exist. In general, we too should search for the "I" and "mine."

Wednesday afternoon, 6 December 2000

What is the main topic in the chapter on the sixth mind generation? The sixth chapter mainly explains the refutation of the four types of production:

1. production from self,
2. production from other,
3. production from both, and

4. causeless production.
This subject is discussed in relation to the verse in Nagarjuna's *Fundamental Wisdom*:

> Not from self, not from other,
> Not from both, not causelessly;
> Production of any thing anywhere
> Does not exist ever.

'Any thing' refers to any phenomena, 'anywhere' to any place or time. For example, there are some flowers that grow in some places but not in others and some flowers that grow in some times, or some seasons, but not in others. Contrarily, there is no exception regarding production by the four extremes in that it does not occur in regard to any thing, any place, or any time.

The main reasoning refuting production from self is that if there were production from self it would follow that production would be meaningless and endless. There is a refutation of production from other in general in regard to the lower schools and in particular with respect to the Chittamatra system. If there were production from other it would follow that darkness would be produced from tongues of fire, meaning that things would be produced from both causes and non-causes or that everything would be produced from everything. With respect to this Chandrakirti says:

> *If in dependence on other there arises another,*
> *In that case even from tongues of fire there would arise thick darkness.*
> *Also from all, all would be produced. Because of that*
> *There would not be anything at all that acts to produce and they would be concordant with otherness.* [6.14]

This verse sets out the general structure of the refutation of production from other. Although it is said that there is no production from other, it can be asked "Is a son not produced from his mother?" and "Are not crops produced from a field?" It can also be asked "Are mother and son not other?" and "Are crops and a field not other?" It would be quite a surprise if someone were to say that a son is not produced from his mother!

QUESTIONS AND ANSWERS

Student: Are the following two equivalent:
i) the appearance to the conception of a self of persons and
ii) the appearing object of this conception?
Geshe Jampa Gyatso: They are different because if it appears to a conception of a self of persons it is not necessarily the appearing object of that conception. Posit! A self of persons which appears to a conception of a self of persons but is not the appearing object of the conception of a self of persons. For example, when the shape of a table appears to eye consciousness what is the appearing object? It is the shape of the table. However, when the shape of the table appears, also product, impermanence, the ability to perform a function, and so forth appear. Thus, the impermanence of table appears to the eye consciousness but that impermanence is not the appearing object of the eye consciousness apprehending table. With respect to this, the first chapter of Dharmakirti's *Commentary on [Dignaga's] Compendium of Valid Cognition* says: "Therefore, by seeing a phenomenon, all its attributes also appear."

Student: Does the eye consciousness apprehending blue have two objects of comprehension – blue and the appearance of blue?

Geshe Jampa Gyatso: Blue is the object of comprehension of an eye consciousness apprehending blue because blue is the object of the mode of apprehension of the eye consciousness apprehending blue. The appearance of blue is not the object of comprehension of the eye consciousness apprehending blue. When debated it is said: "If it is an established base, an eye consciousness apprehending blue is pervaded by blue appearing to it." Although blue appears to an eye consciousness apprehending blue there is no pervasion that it appears to that eye consciousness apprehending blue. Posit! The color white. The color white, as the subject, does blue appear to an eye consciousness apprehending blue? It does.

Student: According to Prasangika is the object of comprehension (*gzhal bya*) of a consciousness the same as the appearing object of the consciousness or is it the object of engagement of the consciousness?
Geshe Jampa Gyatso: In the Prasangika Madhyamika system the object of comprehension of a consciousness and the appearing object of that consciousness are the same. In other schools if it is the object of comprehension of a consciousness is it not necessarily the appearing object of that consciousness. In general, if it is the object of comprehension of a consciousness is not necessarily the object of engagement of that consciousness. For example, with respect to the conception apprehending blue the meaning generality of blue is the object of comprehension of the conception apprehending blue but it is not the object of engagement of that conception apprehending blue. This is because the object of the mode of apprehension or the object of engagement is blue alone, whereas the meaning generality of blue is the object of comprehension of the conception apprehending blue. Therefore, there is this difference.

Student: According to Prasangika is the object of comprehension of a consciousness necessarily an existent?
Geshe Jampa Gyatso: In general it is not. Posit! A self of persons is the object of comprehension of the conception of a self, but it is not an existent. If it is the object of comprehension of the conception of a self is it pervaded by being an object of comprehension of a consciousness? There is no pervasion. Posit! The self of persons which is the object of comprehension of a conception of a self but is not an object of comprehension of a consciousness. The definition of an object of knowledge is: that which is suitable to be the object of an awareness. For example, the horns of a rabbit are the object of comprehension of the consciousness apprehending the horns of a rabbit but they are not the object of comprehension of an awareness.

Student: What are the objects of comprehension of an eye consciousness to which a snow mountain appears as blue?
Geshe Jampa Gyatso: An eye consciousness to which a snow mountain appears as blue necessarily has an object. Since it must have an object, it must have an object of comprehension. Posit! The object of comprehension is the appearance because in the Prasangika Madhyamika system all consciousnesses are pervaded by being valid cognizers with respect to their appearances, therefore, they have an appearance. Does that eye consciousness to which a snow mountain appears as blue have an object of the mode of apprehension? It does not because blue snow mountains do not exist.

Student: Is the mental direct perceiver that is induced by a sense direct perceiver necessarily conceptual according to Prasangika?
Geshe Jampa Gyatso: It is not necessarily conceptual. When we see a cat outside there is an eye consciousness perceiving cat, then when we come inside there is a memory of that cat. In this case the conception remembering cat is induced by the eye consciousness that previously saw the cat.

According to Kunkyen Jamyang Shepa's *Great Commentary on the Middle Way* if it is a remembering consciousness it is necessarily conceptual.

However, in general a mental direct perceiver that is induced by a sense direct perceiver is not necessarily conceptual. Posit! For example, an eye consciousness apprehending blue that is immediately followed by a non-conceptual mental consciousness which is a mental direct perceiver. This mental direct perceiver is not conceptual but it is of very short duration, just 1/65th of a fingersnap. After this mental direct perceiver there arises a conceptual mental consciousness. This is said in Dharmakirti's *Commentary on [Dignaga's] Compendium of Valid Cognition* and I think that Prasangika also accepts this. In the Prasangika Madhyamika system a valid direct perceiver is not pervaded by being non-conceptual, whereas in all the lower schools a valid direct perceiver is pervaded by being non-conceptual and non-mistaken. Thus, for the Prasangika Madhyamikas even a conception can be a valid direct perceiver; for example, the subsequent moment of a valid direct perceiver apprehending blue. Then it needs to be examined as to whether or not the Prasangika's accept subsequent cognizers.

In short, if it is a mental direct perceiver induced by an eye direct perceiver it is not necessarily conceptual; for example, the 1/65th moment of a mental consciousness that comes after an eye direct perceiver apprehending blue. In Prasangika there exist all seven types of knowers: direct perceivers, inferential cognizers, subsequent cognizers, wrong consciousnesses, correct assumptions, awarenesses to which an object appears but is not ascertained, and doubt. What is the 1/65th moment of a mental consciousness that comes after an eye direct perceiver apprehending blue? It is an awareness to which an object appears but is not ascertained.

Student: In Prasangika is a direct perceiver necessarily a valid cognizer?
Geshe Jampa Gyatso: An awareness to which an object appears but is not ascertained is a direct perceiver but is not a valid cognizer; for example, an eye consciousness apprehending blue while the mental consciousness is attracted to a pleasant sound. While the mental consciousness is attracted to a pleasant sound, one still sees people passing in front of oneself but this eye consciousness is an awareness to which an object appears but is not ascertained. This eye consciousness does not ascertain its object of engagement. Such an eye consciousness is a direct perceiver but it is not a valid cognizer because it is an awareness to which an object appears but is not ascertained.

Student: Regarding the mental consciousness that experiences feeling, what is the object of that feeling? Is it form, consciousness, non-associated compositional factor, or none of these?
Geshe Jampa Gyatso: What kind of feeling? If we take it to be the feeling of happiness, then what is its cause? Feeling arises due to one of the six operational consciousnesses, for example, when one watches a pleasant movie, hears nice music, tastes good food, and so forth, the feeling of happiness arises. Feeling is experience. In the *Illumination* (Tibetan text page 244) it says" Distinguishing between the observed object and experience is, except for a few cases, not necessary in most such cases." Thus, there are cases in which they do have to be distinguished. This explanation of observed object and experience is in terms of feeling. When a consciousness experiences feeling, what is the object of feeling? In the case of a mental consciousness experiencing, for example, the feeling of happiness that arises from conceiving a form that previously appeared to an eye consciousness, the mental consciousness experiences the feeling of happiness, whereas the object of this feeling is the beautiful form seen before. The conception and the feeling in its retinue have the same observed object. What is that observed object? It is the beautiful form. Likewise, when mental happiness is induced by an ear consciousness, the observed object would be a pleasant sound. On the other hand, a feeling of unhappiness arises from thinking about an unpleasant form seen previously; for example, seeing someone stabbing another person.

There are also feelings that are neither happiness or suffering.

Monday afternoon, 15 January 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 317) says:

3B1C-2B3E-2A1B-3 Refuting production from both

Chandrakirti's autocommentary says:

> Therefore, having thus also excluded production from others, now, with the wish to exclude production from both, it is explained:
>
> *Production from two is also not a reasonable entity,*
> *Because those faults that were already explained will accrue.* [6.98ab]
>
> There, those (the Nirgranthas or Jainas) who propound phrases in two possibilities,[79] consider production from both since production occurs from self and also occurs from others. There, if a vase is asserted to arise from a mass of clay, stick, string, water, potter and so forth, because the vase is produced solely existing as the nature of clay – since the two, the clay and the vase, are not states of otherness – it, therefore, is produced from self. Because the action of the potter and so forth – those which are other – will bring about its production, it, therefore, is produced from others. Thinking thus, they consider production from self and others. Just as for those externals, likewise there will be [production] from self and others also for internals.
>
> There, [the Jainas], having made a presentation of the meaning of the words, saying "the nine meanings of the words, life-force, not living, merit (dharma), negativity (non-dharma), contamination, restraint, and so forth (i.e., happiness, suffering, and the strength of formative actions that are produced from consciousness and that are the causes of consciousness),[80] are realities," say [the following]:
>
> Maitreya, who only existed as the nature of the life-force even in other lifetimes, takes this rebirth. Therefore, there is production from self because the two, Maitreya and the life-force, are not states of otherness. Because the life-force possesses migration, others assert it as even traveling to the migrations of the gods and so forth. Because he is produced from father, mother, dharma, non-dharma, contamination, and so forth – those which are other – therefore, there is also production from others. And, therefore, this statement, "there is no production from self and there is also no production from others," will not harm us because of not accepting production from only self and because of not accepting production from only others.

The Nirgranthas say that there is production from both self and other, but do not say that there is production from self alone or that there is production from other alone. Our own system refutes production from both saying that it is not feasible because the faults related to production from self and production from other would also apply here.

In short, although production from self alone and production from other alone were refuted, according to the Nirgranthas there does exist production from both. They say that there is production from self because, for example, a pot is produced from clay which is one nature with itself. On the other hand, the pot is also produced from other because it is produced from the activity of the potter, who is other, as well as from a stick, a string, water, and so forth, which are also other. They say that just as there is production of external objects from self and other so too is there production of internal things from both self and other; for example, the person is produced from both self and other. For

[79] Skt: *syadvada*; Tib: *gal nyi.su smra.ba* – 'those who propound two possibilities.' The phrase 'it might be,' or 'in the case that,' is especially used in Jain works.

[80] LTK, page 333.

example, because Maitreya is the nature of the life-force, Maitreya and the life-force are not other. Therefore, when someone dies in a past life and the life-force migrates and is reborn, Maitreya is said to be produced from self. Maitreya is also produced from other in that the person and the life-force are other; for example, the person who was a god died and is reborn as Maitreya, a human being, from the life-force of that god. Maitreya is also produced from other because he is produced from parents and so forth who are other.

The Nigranthas propound nine meanings of the words: (1) life-force, (2) not living, (3) merit (dharma), (4) negativity (non-dharma), (5) contamination, (6) restraint, and so forth, that is, (7) happiness, (8) suffering, and (9) strength. The life-force is the self. Non-life is the eye sense power and so forth. Merit is the cause of high status and definite goodness. A negativity is an action opposite to Dharma that causes rebirth in the lower realms. The contaminations are the afflictions. A restraint or a vow is what restrains one from bad conduct. Happiness is the experience of happiness. Suffering is the experience of suffering. Strength is the strength of formative actions (karmic formations) that are produced from consciousness and become the cause of consciousness. These nine are explained in greater detail in Kunkyen Jamyang Shepa's *Tenets* in the context of the assertions of the non-Buddhist schools.

These assertions of the Nigranthas are then refuted by the Prasangika Madhyamikas.

In the fourth chapter of the *Ornament for Clear Realizations* fourteen unspecified views are mentioned:
(1-4) the views that the self and the world have an end, do not have an end, have both, and have neither,
(5-8) the views that the self and the world are permanent, impermanent, both, and neither,
(9-12) the views that a tathagata arises after dying, does not arise, both, and neither,
(13-14) the views that the body and the life force are one and that they are other.
The Nigranthas are those who hold the views of 'both':

- the view that the self and the world both have an end and do not have an end,
- the view that the self and the world are both permanent and impermanent, and
- the view that a tathagata both arises after dying and does not arise.

Chandrakirti's autocommentary (Tibetan text page 128-9) says:

> To explain this dispute as also just unreasonable, [6.98a]:
>
> *Production from two is also not a reasonable entity.*
>
> If asked: Why? [6.98b]:
>
> *Because those faults which were already explained will accrue.*
>
> Because those faults which were indicated about both positions will descend also on this position of both, production from the two is also not possible. Because the vase exists as the nature of the clay, it would therefore not be produced because of [already] existing. As was explained [6.8cd]:
>
> *If it arises from that, there is not even any quality,*
> *Also there is just no reason for the produced to be produced again.*
>
> and so forth. Likewise, it should be understood that "because of abiding as solely the nature of the life-force, production does not exist also for Maitreya."
>
> Since the vase does not completely abide as the nature of the water, string, wheel, and so forth, therefore, it is not produced from them. As was already explained [6.14]:

> *If another would arise in dependence on others,*
> *Then dense darkness would arise even from a flame and*
> *Everything would be produced also from everything, since*
> *All that not producing production is also similar in otherness.*

and so forth. Also, Maitreya being produced from father, mother, and so forth – those which are other – should be expressed similarly.

There, just as production from self and other was indicated above saying "unreasonable" as the world's deceptive [truth] and also as the ultimate, likewise, also to propound the phrases in two possibilities was indicated above saying "impossible" for as many reasons as were explained. For a final summary, it is mentioned:

> *This is not asserted in the world nor as thusness* [6.98c]

Also regarding the position of both, not only is production from both unreasonable through the sole reasoning previously explained, in order to indicate that "It is not [reasonable] also due to the explanation here," it is explained:

> *Since production from the individuals is not established.* [6.98d]

For example, since one sesame seed is able to give forth oil, many will also. Sand [in which] the ability is not seen does not. Like that, if there could be production by the individuals, also many bearing such a nature could. Therefore, also production from two is not reasonable.

Production from both self and other is not feasible because there is no production from self and no production from other, as was explained previously by means of many reasonings. For example, if there were production from self it would follow that it would already be produced, therefore, why would it need to be produced again? This is the reasoning that refutes production from self. In other words, since its nature has already been produced there is no need for it to be produced again, therefore, there is no production from self.

On the other hand, if there were production from other it would follow that everything would arise from everything; for example, dense darkness would arise from a flame.

The Nigranthas say that a person, such as Maitreya, is produced from other because he is produced from a father and mother. However, if it were the case that Maitreya is produced from other it would follow that Maitreya could be produced from both a father and a non-father, from both a mother and non-mother, and from any male or female because he is independently produced from other. If there were independent production then Maitreya could arise from anything, both causes and non-causes. The Prasangika Madhyamikas say that this is so because if it is produced from other it is independently produced because it is inherently produced. Their conclusion is that because there is no production from self and no production from other there is no production from both.

Chandrakirti gives the example of a sesame seed from which, when squeezed, a drop of oil is produced, whereas when sand is squeezed oil is not produced. However, if there were independent production of oil, then oil should also be produced from sand. In short, production from both is inadmissible.

Lama Tsongkhapa's *Illumination* (Tibetan text page 317) says:

> NIRGRANTHAS, those who propound the two important phrases of production from self and other: If a pot arises from a lump of clay, a stick, a wheel, string, water, the potter, and so forth:
> - it is produced from self because the clay pot is produced having just the nature of clay, and
> - it is produced from other because the activity of the potter and so forth, that which is other, are producers of the clay pot.

> As for external objects, likewise, there is also production from both self and other for the inner.

We can take the example of this cup. The Nigranthas say that it is produced from self because it is produced from clay which is the same nature as the cup. In addition, they say that it is also produced from other because it is produced from the effort of the potter who made the cup, water, a string, a wheel, and so forth. In this way, the cup is produced from both self and other. However, the Nirgranthas specify that the cup is not produced from self alone and is not produced from other alone and, for this reason, claim that the faults of production from self and the faults of production from other do not apply to them.

Lama Tsongkhapa's *Illumination* (Tibetan text page 317) says:

> In regard to that, we present nine categories of words:
> 1. the life force that cherishes the person and the I,
> 2. the lifeless, the sense powers and so forth,
> 3. the Dharma of high status and definite goodness,
> 4. the non-dharma that is their opposite,
> 5. the contaminations that are the afflictions, and
> 6. the vows that counteract immorality.
>
> [Stating] "and so forth" [in the autocommentary includes]
> 7. happiness,
> 8. suffering, and
> 9. the strength of the karmic formations that are produced from consciousness and become the cause of consciousness.
>
> Because of taking this present rebirth due just to the nature of his life force existing also in other lifetimes, Maitreya is produced from self because the two – Maitreya and his life force – are not other. Because the life force possesses migration from one rebirth to another, others assert that it also travels to the migrations of the gods and so forth. Also, because Maitreya is produced from that which is other – his father and mother, Dharma and non-dharma, contaminations, and so forth – he is also produced from other. Therefore, since we do not assert production from just self or other singly, the refutation of production from self and other singly does not harm us.

Maitreya, for example, is asserted to be produced from both self and other. The Nirgranthas say: "Because of taking this present rebirth due to just the nature of his life force existing also in other lifetimes, Maitreya is produced from self because the two – Maitreya and his life force – are not other." On the other hand, he is also produced for other "Because the life force migrates from one rebirth to another." Thus, the Nirgranthas say that the person is produced from both self and other. However, our own schools say that it is not so because all the faults of production from self and production from other also apply in this case.

Maitreya and the life-force are not other because whenever Maitreya dies the life-force migrates. Thus, because Maitreya has the nature of the life-force, he is said to be produced from self. Maitreya is produced from other because having been born as a god previously he is then reborn as a human being, due to which the present human being is produced from a previous god who was other. In this way, Maitreya is said to be produced from other.

Lama Tsongkhapa says: "Also, because Maitreya is produced from that which is other – his father and mother, Dharma and non-dharma, contaminations, and so forth – he is also produced from other." Maitreya is produced from his parents. He is also produced from merit, that is, Dharma, and from non-Dharma, due to which he experiences suffering. He is produced from contaminations, that is, the afflictions, and actions. Therefore, he is, in short, produced from other.

The Nirgranthas conclude saying: "Therefore, since we do not assert production from just self or other singly, the refutation of production from self and other singly does not harm us."

Lama Tsongkhapa's *Illumination* (Tibetan text page 318) says:

> PRASANGIKA MADHYAMIKAS:
>
> *Production from the two is not a suitable entity. Why?*
> *Because the faults that were already explained also befall it.* [6.98ab]
>
> Not only is production from them singly not suitable, also *production from* a collection of *both* self and other *is not a suitable entity. Why? Because the faults that were already explained* before in regard to them singly *also befall* the position of production from both because:
>
> - when, based on the life force, Maitreya is asserted to be produced from self, this is refuted by the meaningless production and so forth that were explained before, whereas
> - when, based on his parents and so forth, he is asserted to be produced from other, this is refuted by the absurd consequence and so forth.

The Prasangika Madhyamikas say that if there were production from both self and other then the individual faults of production from self and of production from other singly would occur. If Maitreya is asserted to be produced from self there would be the faults of the meaningless production and so forth that were explained before. Lama Tsongkhapa says: "when he is asserted to be produced from other based on his parents and so forth, this is refuted by the absurd consequence and so forth."

Lama Tsongkhapa's *Illumination* (Tibetan text page 318) says:

> Just as was taught above "Production from self and other is not suitable either in worldly conventionalities or ultimately," similarly, also here, in order to come to the conclusion that "Production from others is impossible," there is [the following] explanation.
>
> *That does not in the world; it is also not asserted in thusness,*
> *Because production from them singly is not established.* [6.98cd]
>
> *That* – i.e., production from both self and other – also *does not* exist *in the world*; *it is also not asserted in thusness*, that is, ultimately, *because*, since *production from* self or other *singly is not established*, production from both is also not suitable.

The worldly who are not trained in scriptures do not assert production from self and production from other either conventionally or ultimately. Therefore, the worldly do not say that production from self and production from other exist conventionally but do not exist ultimately, nor do they say that they exist ultimately but not conventionally. Thus, they do not propound production from self, production from other, and production from both. The Prasangika Madhyamikas say that because production from self and production from other do not exist for worldly beings, what need is there to mention that production from both does not exist?

Tuesday morning, 16 January 2001

Nagarjuna's *Fundamental Wisdom,* in the context of the presentation of the actual body of the text, sets forth both a brief and extensive presentation. The brief presentation (v. 1.1) says:

> Not from self, not from other,
> Not from both, not causelessly;
> Production of any thing anywhere
> Does not exist ever.

This verse sets out the four extremes of production. Up to this point in Chandrakirti's *Supplement* and Lama Tsongkhapa's *Illumination*, production from self, production from other, and production from both have been refuted. Next causeless production, the thesis of the Charvakas (Hedonists) or the Ayatas (Gone Afar), is refuted. They are called Gone Afar (*rgyan phan pa*) because they assert that only what is perceivable exists and do not accept that what is not perceived exists. They are also so-called because they do not accept past and future lives, that is, distant phenomena.

Lama Tsongkhapa's *Illumination* (Tibetan text page 318) says:

> 3B1C-2B3E-2A1B-4 Refuting causeless production

Chandrakirti's autocommentary says:

> Here, [the Charvakas] propounding [arisal from] the entity itself mention: When there is production from cause, if there are those shortcomings due to the effect's becoming that which is self, that which is other, and that which is both, since I do not accept [production from] cause, there is no chance of the shortcomings that were explained. Therefore, the production of all things is solely arisen from their very entities. It is like this. The stems of the lotus, and the toughness and smoothness of its petals are not seen as endeavored – produced – by anyone. Also the various colors and shapes of its leaves, anthers, and center are not seen to be produced. Similarly, are the varieties of breadfruit, pomegranate, and so forth. Just as it is for externals, likewise also for the peacock, partridge, and crane – those having an inner nature – the color, shape, and so forth are just not observed as formed by anyone through carrying on with exertion. Therefore, the production of functioning things only arises from the entity itself.

The Charvakas say that they do not accrue the faults that were mentioned previously because they do not accept production from self, production from other, and production from both. Instead, they say that phenomena are produced without causes; for example, the color and shape of a flower, its leaves, anthers, and so forth arise without causes. Likewise, the varieties of fruits also have a specific shape and so forth which arise naturally without being created by anyone who is a cause. Similarly, the colors of the eyes of a peacock's feathers also do not arise from causes, that is, they are not designed by anyone. Thus, the thesis of the Charvakas is that such things arise without causes, that is, they are produced adventitiously. To this the Prasangika Madhyamikas respond as follows.

Chandrakirti's autocommentary (Tibetan text page 130) says:

> I shall explain this:
>
> *If there were such production solely without cause,*
> *Then, all would always be produced from everything and,*
> *For the arisal of effects, the world would also not gather*
> *Seeds and so forth by means of hundreds [of hardships].* [6.99]
>
> If the production of functioning things were adventitious, just as the *panasa*[81] tree would not be the cause of its fruit, likewise, since all functioning things such as the *nimba*,[82] mango, and so forth are also not its cause, it would be produced from them because of their similarity in just not being causes. Also, just as the *panasa* fruit would be produced from what is not its cause, likewise, it would also [be produced] from the three realms. Also, whatever birth is produced from the ripening

[81] MMW: the breadfruit or Jaka tree, *Artocarpus integrifolia*.

[82] MMW: the Neemb tree, *Azadirachta indica*.

> of mango, *lakucha*,[83] and so forth, relying on the seasons and manifesting occasionally, that too would exist only perpetually due to them because of not relying on the relationship of seasons.
>
> Likewise, since the peacock would not be the cause of the collection of the peacock's tail feathers, the collection of tail feathers would also exist on the crow, and parrot feathers would exist on the peacock at all times – even in the period of the womb. Thus, if all us migrators are perpetually produced, it is unreasonable to propound [arisal from] their own entity since it does not even exist.

The Prasangika Madhyamikas say that if there were causeless production then everything would be produced from everything because everything would be the same in not being a cause. In this case, the hardships of gathering crops and so forth in particular seasons would be meaningless because crops would arise at all times. On the other hand, the Prasangika Madhyamikas say that it is seen that hardships are born in order to reap a harvest.

Chandrakirti mentions the panasa fruit but we can talk about an apple. If an apple tree were not the cause of apples, then apples could be produced from anything whatsoever. In that case, apples would be produced also from nimbu trees, mango trees, and so forth. This is because results would arise from non-causes – those things that are not their causes. It would also follow that the ripening of fruit would not be related to a season because everything is produced without any relationship. Thus, according to the Charvakas fruit would ripen at all times without any relation to the seasons. This is the consequence that the Prasangika Madhyamikas fling at the Charvakas. They also say that if this were the case it would follow that there would be no time when fruit is not produced because fruit would arise naturally without depending on its causes, the season, and so forth.

Likewise, the particular colors of a peacock's tail feathers would also exist on a crow and a parrot's feathers would exist on a peacock even at the time of the womb. However, that such production occurs at all times is not feasible. Chandrakirti says: "Thus, if all us migrators are perpetually produced, it is unreasonable to propound [arisal from] own entity since it does not even exist."

Chandrakirti's autocommentary says:

> Having thus expressed contradiction with reasoning, in order to express contradiction with perception (seeing), it was explained [6.99cd]:
>
> *For the arisal of effects, the world would not also gather*
> *Seeds and so forth by means of hundreds [of hardships].*
>
> Yet they do. Therefore, production does not arise from the entities themselves. Moreover:
>
> *If migrators were devoid of causes, just like the scent and*
> *Color of a sky utpala, they would just not exist as apprehendeds,*
> *Yet, there is apprehension of the world of extreme diversity. Therefore,*
> *Like one's mind, one should know the world as [produced] from causes.* [6.100]
>
> If migrators were devoid of causes, like the scent and color of the sky utpala, they would not be paths of apprehension – yet, they are. Therefore, one should understand that "like one's awareness, all migrators are produced from only causes."

"To express contradiction with perception (seeing)" means that it is seen that worldly beings endure hardships to gather a harvest. Therefore, the Prasangika Madhyamikas ask the Charvakas: "If crops

[83] MMW: a type of breadfruit tree, *Artocarpus lacucha*.

are produced without causes why would hardships have to be endured?" In this way, the Charvakas contradict what is seen to exist in the world.

The Prasangika Madhyamikas say that if migrating beings were without causes they would be like a sky utpala, that which cannot be apprehended because it does not exist. If migrating beings were like a sky utpala then they and other objects would be non-existent, due to which they could not be apprehended, could not move, and so forth. Just as the Charvakas know an awareness to be produced from a cause, so too should they know that external things are produced from causes.

The Charvakas engage in much study and accept that by means of this study there will be development over a long period of time. Just as they accept such development, so too should they accept that other phenomena arise from their causes. Therefore, the Charvakas should understand that migrating beings are produced from causes.

Chandrakirti's autocommentary says:

> According to you [Charvakas], an awareness having a blue aspect does not occur having removed the blue object; an awareness having a blue aspect is [produced] from only blue. Since [awareness] is not [produced] from the entity itself, it is unreasonable to propound [production from] the entity itself.

The apprehension of blue arises due to the existence of blue; without blue it does not arise. Because the apprehension of the aspect of blue arises in dependence on blue, it is not produced from its own entity. This is the Prasangika Madhyamikas' refutation of causeless production.

Lama Tsongkhapa's *Illumination* (Tibetan text page 318) says:

> CHARVAKAS (Hedonists, but literally, the Ayatas or Gone-Afar), who propound arisal from own entity: If there is production from causes, there would be errors due to there being production as self, other, and both in relation to the result. However, since we do not assert production from causes, we do not have the faults that were explained in regard to those three positions. Hence, the stems of lotuses and the toughness and smoothness of their petals are not seen to be created by anyone, nor are the various colors and shapes of their petals, anthers, and corolla seen to be created. Similarly, so too are the varieties of breadfruit (*panasa*), pomegranates (*bal lo se'u*), and so forth. Like external objects, similarly, also the color, shape, and so forth of those [things] having the nature of being inner, such as peacocks, partridges, cranes, and so forth, are not observed to be formed by anyone through striving in them with exertion. Therefore, the production of things arises just from their own entity.

The Charvakas say that if they were to accept production from self, production from other, and production from other they would in fact accrue the faults mentioned previously, however, because they do not accept these three types of production they do not have their faults. They say that a lotus is produced without causes because "the stems of lotuses and the toughness and smoothness of their petals are not seen to be created by anyone, nor are the various colors and shapes of their petals, anthers, and corolla seen to be created." In short, there is no being who creates the particular attributes of a lotus. Also various types of fruit, such as breadfruit, pomegranates, and so forth, which have a particular color, shape, taste, and so forth are not created by anyone. Our own system says that although they are not created by anyone they arise from various causes and conditions.

Just as external things, such as the various types of fruit, are produced without causes, so too are internal things like peacocks, partridges, cranes, and so forth. This is the thesis of the Charvakas who say: "Therefore, the production of things arises just from their own entity."

Lama Tsongkhapa's *Illumination* (Tibetan text page 319) says:

> PRASANGIKA MADHYAMIKAS: This is explained [as follows]:
>
> *If it were the case that they are produced entirely without causes,*
> *Then all would also be produced from everything always.* [6.99ab]
>
> *If it were the case that* things are *produced entirely without causes*, *then all* things *would also be produced from everything* – that is, from things that are not their respective causes – because everything would be similar in also not being their cause.

In brief, if there were causeless production then everything would be produced from everything "because everything would be similar in also not being their cause."

Lama Tsongkhapa's *Illumination* (Tibetan text page 319) says:

> Also, whatever ripening of mangoes and so forth depends on the season and is visible at times, that too would just exist *always* because it would not depend on the season.

If what the Charvakas assert is true then the ripening of fruit should exist at all times because it would not depend on the season in that it is produced without causes. In this case, because it does not depend on the season, there would be the ripening of mangoes and so forth at all times. However, this is not seen.

Lama Tsongkhapa's *Illumination* (Tibetan text page 319) says:

> Similarly, crows would also have the eyes of a peacocks' feathers and peacocks would also have parrots' feathers even during the period in the womb because they would not depend on causes.

Crows would have peacocks' feathers and peacocks would also have parrots' feathers even during the period in the womb. Although a peacock in the womb does not have feathers, given that it is just an egg, if things were produced independently of causes then "peacocks would also have parrots' feathers even during the period in the womb." For this reason, the Prasangika Madhyamikas say that the Charvakas contradict both reasoning and perception.

Lama Tsongkhapa's *Illumination* (Tibetan text page 319) says:

> Thus, having explained the contradiction with reasoning, the contradiction with perception is explained [as follows].
>
> *For the sake of the arisal of a result, worldly beings would also*
> *Not have to gather seeds and so forth through hundreds [of hardships].* [6.99cd]
>
> *For the sake of the arisal of a result*, such as crops and so forth, *worldly beings would also not have to gather*, that is, amass, *seeds and so forth through hundreds* of hardships, whereas, because this is also done, there is no production from own entity.

That in order to harvest crops it is necessary to undergo hardships is seen by everyone. First the ground has to be plowed, then seeds have to be planted, then the field has to be fertilized with manure and watered in order for crops to arise. These hardships are engaged in for the sake of reaping a harvest as a result. On the other hand, according to the Charvakas such hardships would be useless because crops arise without causes. However, that this happens is harmed by direct perception.

In Varanasi some years ago there was a meeting during which an old wise man, a Charvaka, propounded that things that are not perceived do not exist. Another person, also propounding non-Buddhist tenets, asked him: "Do you not accept the hair on the back of your head because you do not see it? Do you not accept your intestines, lungs, and so forth because you cannot see them?" To this the Charvaka replied that this was not the case. However, one can in fact argue with the Charvakas about whether their children who are at home do not exist because they are not seen presently. To this a Charvaka would reply that although they are not seen now they are seen at times, therefore, they do exist. Someone else could say: "If things are seen at times, do they exist?" The Charvakas would say that they do, however, if they are never seen they do not exist. "Then what about your intestines, kidneys, and so forth which you have never seen? They too should not exist because you have not seen them. Even your own texts should arise without effort because things arise without causes." The Charvakas are unable to respond to such questions.

At the meeting, there was another old Indian man holding a staff in his hand who, in the context of discussing Dignaga's *Compendium of Valid Cognition*, was asked where he lived. Although it turned out that he was from a backward village and was very simply dressed, he was very well versed in the subject of valid cognition and was able to cite many scriptural references and could not be defeated in debate.

Therefore, even nowadays there are those in India who uphold non-Buddhist tenets, the majority of them being Vaisheshikas and Nirgranthas. Although at the meeting in Varanasi the followers of these schools presented themselves wearing jackets and ties, they were however, defeated by an old man wearing a dhoti!

Lama Tsongkhapa's *Illumination* (Tibetan text page 319) says:

> There are also other faults.
>
> *If migrating beings were empty of causes, like the fragrance and color*
> *Of sky-utpalas, they would be without apprehension,*
> *But, because there is also apprehension of the world that is extremely variegated,*
> *Just like one's own mind, likewise, the world should be understood as being from causes.*
>
> [6.100]
>
> *If migrating beings were empty of causes* – that is, if they were to arise without causes – those migrating beings, *like the fragrance and color of sky-utpalas*, *would be without apprehension*, *but, because there is also apprehension of the world that is extremely variegated*, *just like one's own mind* having the aspect of blue is produced from blue, *likewise*, *the* entire *world should be understood as* produced *from* just its respective *causes*.

Our own system says that there is nothing that is produced without causes, due to which everything is produced from causes. To the Charvakas, the Prasangika Madhyamikas say that just as they understand that an awareness of blue arises from blue, so too should they understand that everything arises from causes.

Chandrakirti's autocommentary says:

> Those [who say[84]] that mind transforms from the elements cannot deny observing causes because they are seen and because the faults that were explained would follow. [Thus], the property of cause and effect renowned to the world – this just exists.
>
> [The Charvakas] imagine [as follows]: Only the four elementary properties (*tattvas*), called earth, water, fire, and wind, are the causes of all the various migrators. From the differences of their

[84] JA, page 219B-1.

> thorough maturations, the varieties of lotuses, pomegranates, and so forth and peacocks, cranes, and so forth are acceptable just as they are presently seen. Not only that, also the awarenesses discerning the various natures (*tathata*) of things are produced from only that.

The Prasangika Madhyamikas say that since it is seen that sentient beings arise from the four elements, the Charvakas should not act like crazy people by denying this reality. In other words, phenomena that are causes and results are renowned and seen in the world, therefore, they should not be denied. However, here in fact it seems that the Charvakas do assert that beings arise from the transformation of the four elementary properties or thatnesses. They say that the various migrations exist due to the movement of wind and so forth and that due to the transformation of the four elements there arise sentient beings and the varieties of lotuses, peacocks' feathers, and so forth. They also say: "Not only that, also the awarenesses discerning the various natures (*tathata*) of things are produced from only that." "From only that" refers to the four elements – earth, water, fire, and wind.

In short, because the Charvakas are harmed by reasoning and perception, they gradually let go of their position and come to admit that sentient beings are produced from the four elements.

Tuesday afternoon, 16 January 2001

Chandrakirti's autocommentary says:

> There, just as the cause of the inebriation and intoxication of living beings, the capacity of bringing about inebriation, is produced in beers from the differences of the processes of the meeting of the particular elements (i.e., from the differences of fermentation processes), likewise, awarenesses are produced from thoroughly maturing the distinctive great elements of the initial embryo[85] and so forth and through to also discerning all things. Therefore, external and internal things are solely arisen from causes of this world. The maturation of an action done somewhere[86] [arising] here or the maturation of what was done here arising in another world – the very existence of further worlds (i.e., lifetimes) – is not so.

Living beings become inebriated upon drinking alcohol due to the potential of the alcohol. This is seen to occur in the world. Awarenesses are produced from the thorough ripening of the distinctive great elements of the initial embryo (literally, the oblong state), after which these awarenesses thoroughly discern things. Therefore, here the Charvakas come to say that both external and internal things arise solely from the causes of this world, whereas the production of results occurs only in the present. In this way, the Charvakas have partially lost their original thesis which was that things are produced from their own entity without causes. They say that an action done in a past life cannot ripen in this life nor can an action done in this life ripen in a future life. Thus, they are called the Gone Afar in that they have gone afar from asserting past and future lives.

Chandrakirti's autocommentary says:

> [The sage, Lokachakshu[87]] propounded:
>
> The pleasant is to be well enjoyed and eaten;

[85] Skt: *kalala*, Tib: *nur.nur.po.*

[86] JN. page 439, explains "somehow" –

[87] Skt: *rishi lokachakshu*; Tib: *drang.srong 'jig.rten.mig* – who composed the Charvaka text called *One Hundred Thousand Texts* – Tib: *gzhung (lugs) 'bum.phrag.gcig*. See *Thu'u.bkvan*, page 5, and Cabezon, page 291.

> Beautiful one, that which has passed will not occur for you.
> This body is a merely collected one,
> Fearful girl, what is gone will not return.
>
> This was mentioned out of desire to copulate with his daughter and out of desire that the daughter understand a world beyond as non-existent.

This verse is probably taken from the scriptures of the Charvakas. Out of desire to copulate with his daughter, this sage said that past and future lives do not exist. Also the so-called *Treatise on Taking One's Own Mother as a Bride*, which says that because mothers are very kind their kindness should be repaid and that the best way to repay it is to marry her and give her the pleasure of sexual intercourse, denies the existence of past and future lives.

Then this verse says "This body is a merely collected one" which means that this body is a mere gathering together. "Fearful girl, what is gone will not return" means that upon disintegrating one will not return. The purpose of this verse was to trick his daughter into having intercourse with him.

Chandrakirti's autocommentary says:

> I shall speak about this. Due to what is this certainty of yours that "a world beyond does not exist?"
>
> If it is said: Because of the state of not being directly perceived.
>
> What is your state of a world beyond not being directly perceived – is it deemed a direct perception or not a direct perception?
>
> If it is said: It is a direct perception.

The Prasangika Madhyamikas ask: "Why are you sure that a world beyond does not exist?" The Charvakas say that it is because it is not directly perceived. The Prasangika Madhyamikas then ask: "Is its direct non-perception directly perceived or not directly perceived?" The Charvakas respond that it is directly perceived.

Chandrakirti's autocommentary says:

> [In that case], since the non-state [the opposite] of directly perceiving a world beyond would be a direct perception, a non-thing would also be a state directly perceived. Therefore, a non-thing would also be a thing for you because of being directly perceived – like a thing.

The Prasangika Madhyamikas say that because [the lack of a direct perception of a world beyond] is directly perceived it would be a thing.

Chandrakirti's autocommentary says:

> Therefore, since a so-called "non-thing" would not exist at all, a thing would also be non-existent because the opposite-counterpart would not exist. If thing and non-thing did not exist, the [assertion about the] state of existence of the elements and the state of non-existence of a world beyond would also degenerate.

The Charvakas' theses regarding the non-existence of future worlds and the existence of production from the four elements would degenerate [as a consequence of their assertion that the non-direct perception of a world beyond is directly perceived] because it would follow that neither things or non-things exist.

Chandrakirti's autocommentary says:

> In the case that [the non-existence of a world beyond] is not directly perceived, because a property (*tattva*) that is not directly perceived to some extent is not directly perceived (i.e., it is not manifest), it would not be apprehended [by a valid cognition]. Hence, how would a world beyond be inferred as non-existent by way of that non-apprehension?

How is a world beyond known to not exist? According to the Charvaka school there are only valid direct perceivers, that is, there are no valid inferential cognizers. This is mentioned in Dharmakirti's *Commentary on [Dignaga's] Compendium of Valid Cognition* saying: "That valid cognizers are only one, direct valid cognizers, is established in the Charvakas' scriptures." Thus, the Charvakas' thesis is that there is nothing that is inferred to exist in dependence on a reason or sign, in other words, what exists is only what is directly perceived. Here, however, the Charvakas' thesis is weakened in that it is shown that there is something (the non-existence of a world beyond) that is known by an inferential cognizer. An inferential cognizer is an awareness that infers something in dependence on a reason.

Chandrakirti's autocommentary says:

> In case it is said: [The non-existence of a world beyond] is apprehended by inference.
>
> If the aims [of beings] are established also by thorough establishment through inference – this [verse refuting inference] is also accepted by you:
>
> As much as the sphere of the senses,
> The being is limited to only that much.
> Dear, what the highly learned propound,
> That is like the wolf-print.[88]

The first two lines mean that the existence of things is limited to what is directly perceived by the senses. In the next two lines the father says to his daughter that what the learned propound does not exist, but is deceptive like a wolf-print.

Chandrakirti's autocommentary says:

> Therefore, if here [you] deprecate anything, I shall express refutation to everything following the path already explained refuting the existence of mind being [produced] from the elements.

[88] Jayananda explains the context of the last line as follows (page 411): "That which some highly learned ones propound, "a further world exists," is like the wolf-print," means "it is deceptive." An astrologer came to a land of fools and declared in front of many people "tonight a wolf will come and eat all of you." They then became afraid and terrified and at dark, leaving their houses, went to the mountains. The astrologer made many wolf prints in the road, went into their houses and took their wealth, thereby deceiving the many people. Likewise, it is said, "even the words of the highly learned are deceptive.

Jayananda says (441-442): The term etc. (missing in the Tibetan) includes [the verse]:

Dear, live happily until death; having died, there is no sphere of it.
How will the body, having become ash-like, be born again?

[See Hopkins, page 329, for another translation of this verse and see Thurman, page 15, for comparison with Epicurus.]

> Furthermore, just as the vision of one with cataracts apprehends that the entities of two moons and so forth that do not exist as "existent," also other such aspects to an imperfect subject, falling hairs, bees, and so forth, are only untrue.

The Prasangika Madhyamikas say that the Charvakas deprecate everything. Although they have already refuted the Charvakas' assertion that an awareness is produced from the elements, here they continue their refutation. They say that those with cataracts have the appearance of two moons, falling hair, bees flying back and forth, and so forth which do not exist, therefore, it is possible for an object-possessor to have such appearances even though they are untrue. They are untrue because there do not exist two moons, falling hair, bees in a bowl, and so forth. Similarly, the Charvakas say that there is no world beyond, although this is not correct. In other words, the Charvakas' assertion of the non-existence of a world beyond is erroneous. The Prasangika Madhyamikas next prove this saying:

> Likewise, in order to indicate that your consciousness of a world beyond being non-existent, moreover, is just erroneous by way of erroneously conceiving visible things, it is explained:
>
> *If those elements do not have that essential nature,*
> *The essential nature by which they become objects of your mind,*
> *How could he who has this state of dense mental darkness*
> *Correctly realize a world beyond?* [6.101]
>
> Those four elementary properties that were mentioned, earth and so forth, do not exist as that essential nature such as to be the very object of your consciousness. When this very world is thus erroneously perceived, then how could the extremely subtle world beyond, that is the sphere of the divine eye consciousness, be realized? It is just impossible.

Here the Prasangika Madhyamikas set forth their argument on the basis of the Charvakas' assertion that there exist the four elements from which an awareness analyzing objects is produced. The Prasangika Madhyamikas say that those with dense mental darkness cannot realize a world beyond and, since the Charvakas do not know even the present world, they cannot know what is extremely subtle such as a world beyond. In other words, if the Charvakas cannot perceive the coarse things of this life they definitely cannot perceive subtle things such as past and future lives.

Lama Tsongkhapa's *Illumination* (Tibetan text page 320) says:

> CHARVAKAS: The four essences (literally, thatnesses) – earth, water, fire, and wind – are the causes of all the varieties of migrations. From the differences of their thorough ripening, not only are the varieties of lotuses, pomegranates, and so forth, as well as peacocks, cranes, and so forth, admissible just as they are perceived, but also awarenesses perceiving the various suchnesses of things are produced from them alone. Just as the cause of the inebriation and fainting of living beings – the capacity to bring about inebriation – is produced in beer through the peculiarity of transformation upon the meeting of particular elements, likewise, awarenesses are produced from the special, thorough ripening of the great elements of the initial embryo (Tib. *nur nur po*, literally, oblong state) and so forth, and also function through to perceiving all things. Therefore, external and inner things arise solely from the causes of this world, whereas the ripening of actions done somewhere occurring here or the ripening of those done here occurring in another world – the very existence of a world beyond – is not so.

The Charvakas say that the varieties of migrations are produced from the four elements. From the differences of their ripening there arise different results such as the varieties of lotuses and so forth and the colors of the feathers of peacocks, cranes, and so forth. "Also awarenesses perceiving the various suchnesses of things are produced from them alone" means that awarenesses are also

produced from the four elements. Thus, the Charvakas assert that the four elements are able to produce results just as beer produces inebriation due to its special potential or capacity to bring about inebriation and fainting.

That "Awarenesses are produced from the special, thorough ripening of the great elements of the initial embryo (Tib. *nur nur po*, literally, oblong state)" means that due to the combination of semen and blood (sperm and ovum) there arise the various states of an embryo in which awarenesses are then produced.

There are five stages of development in the womb. When the semen and the blood first meet, the combination is not solid, but then slowly becomes more solid and gradually takes on a form, after which there slowly grow lumps that become the head, arms, and legs, until, in the fifth state, there is a fully developed fetus. The *Sutra on Entering into the Womb Joyfully* says that there are thirty-eight or thirty-nine weeks of gestation in the womb. During the first two weeks, due to karma a wind arises bringing about growth. Slowly the embryo becomes more solid and the bones, arteries, and so forth are formed. In the thirty-sixth or thirty-seventh week the body of fetus is completely developed and feelings begin to arise of not wanting to be in the womb due to the tight dark space, bad smell, and so forth. Due to this the baby's position changes coming to face downward and then its birth takes place. This is what is said in sutra and is also probably accepted by the Charvakas who assert the formation of an embryo is produced from the four elements.

"Therefore, external and inner things arise solely from the causes of this world." Here "this world" refers to what is directly perceived. The Charvakas do not assert that an action done in the past ripens in this life and that an action done in this life ripens in a future life; instead, they deny past and future lives.

Lama Tsongkhapa's *Illumination* (Tibetan text page 320-1) says:

> [The sage, Lokachakshu] said:
>
> Beautiful girl, by enjoying well and eating,
> A supreme body passed away will not arise for you.
> This body is a mere gathering together.
> Fearful girl, what is gone will not return.
>
> PRASANGIKA MADHYAMIKAS: This was said through desiring to have actual intercourse with his daughter and desiring that his daughter realize that there does not exist a world beyond. Nagtso translates this as: "Fear of passing away will not arise." This is explained [as follows]. For what reason are you certain that "A world beyond does not exist"?
> CHARVAKAS: It is because a world beyond is not directly seen in the present.
> PRASANGIKA MADHYAMIKAS: Is that direct non-seeing of a world beyond deemed to be directly perceived or not directly perceived?

The Prasangika Madhyamikas ask the Charvakas: "Is that direct non-seeing of a world beyond directly perceived or not directly perceived?" In other words, is the non-existence of a world beyond directly perceived or not? The Charvakas answer as follows, Lama Tsongkhapa's *Illumination* (Tibetan text page 320-1):

> CHARVAKAS: It is directly perceived.
> PRASANGIKA MADHYAMIKAS: If non-direct seeing is asserted to be direct perceiving, there would be no contradiction in directly perceiving even non-existent things. Therefore, for you even non-existent things would be things because they would be the direct object of comprehension of an actual direct perceiver not directly seeing lives beyond; like, for example, things.

The Prasangika Madhyamikas say to the Charvakas: "If you assert non-direct seeing to be direct perceiving, then there would be no contradiction in directly perceiving even non-existent things." In

other words, if not seeing directly is direct perceiving, then non-things would be directly perceived, due to which it would follow that non-things would also be things [in that they are directly perceived]. Chandrakirti says: "[In that case], since the non-state [the opposite] of directly perceiving a world beyond would be a direct perception, a non-thing would also be a state directly perceived."

In other words, if non-direct seeing is direct perceiving, it would follow that non-things would be things "because they would be the direct object of comprehension of an actual direct perceiver not directly seeing lives beyond; like, for example, things." For example, past and future lives are not seen directly, but if what is not seen directly is an object of comprehension of a direct perceiver it would have to be directly perceived in which case it would be a thing.

Wednesday morning, 17 January 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 321) says:

> Hence, since "non-things" do not exist at all, also things would become non-existent because their counterpart does not exist. If these two do not exist, also the theses regarding (i) the existence of the four elements[89] and (ii) the non-existence of a world beyond would decline. If [the non-existence of a world beyond] is not directly perceived, because it is not manifest at times it is not apprehended by a valid cognizer. Therefore, how is a world beyond inferred to not exist by means of that non-apprehension?
> CHARVAKAS: [The non-existence of a world beyond] is apprehended by an inferential cognizer.
> PRASANGIKA MADHYAMIKAS: In general, there are not only direct perceivers. However, if the objects of beings are established also by thoroughly establishing them through inferential cognizers, you do not assert inferential cognizers because you propound, [saying the following,] that valid cognizers that are the realization of objects by beings are not more than the direct perceivers seeing however many objects of the sense powers, the eye and so forth, there are:
>
> However many objects of the sense powers there are
> Beings are limited to only that many.
> Noble girl, what the learned propound,
> That is like the footprint of a wolf.

The Charvakas only accept that the things directly perceived by an eye consciousness and so forth exist. The Prasangika Madhyamikas systematically refute this position until the Charvakas come to say that there are things that are known by inferential cognizers, whereby they come to implicitly accept the existence of objects that are not directly perceived or manifest. Thus, the Prasangika Madhyamikas' reasonings repudiate the position of the Charvakas by pointing out the faults of their various assertions. For example, one assertion of the Charvakas is that only direct perceivers exist, that is, there are no other kinds of valid cognizers. However, when the Charvakas maintain this position that objects are only known by direct perceivers, the Prasangika Madhyamikas ask them: "Are non-directly perceived objects (or non-manifest objects) known?" The Charvakas say that non-directly perceived objects, [such as a world beyond,] are known, then the Prasangika Madhyamikas ask "By what are they known?" If the Charvakas say that they are known by an inferential cognizer, the Prasangika Madhyamikas remind them that they do not assert inferential cognizers.

In other words, the Prasangika Madhyamikas ask the Charvakas: "Are the objects realized by sentient beings known by inferential cognizers?" The Charvakas say that they are not because the "valid cognizers that are the realization of objects by beings are not more than the direct perceivers seeing however many objects of the sense powers, the eye and so forth, there are." In this way, when

[89] Chandrakirti's autocommentary (Tibetan text page 132, line 2) says 'existence' (*yod pa*), whereas Lama Tsongkhapa's *Illumination* (Tibetan text page 321) says 'non-existence' (*med pa*). The version in the autocommentary appears to be more in keeping with the previous assertions.

the Charvakas are forced to respond to the various reasonings of the Prasangika Madhyamikas, they are left without anything to say.

Lama Tsongkhapa's *Illumination* (Tibetan text page 321) says:

> Chandrakirti says:
>
> *If those elements do not have the nature of that –*
> *The nature by which they become an object of your awareness,*
> *Since there is thick mental darkness regarding them,*
> *How can they correctly realize a world beyond?* [6.101]
>
> *If the* four *elements*, earth and so forth, *do not have a nature* like *that – the nature* explained in your scriptures *by which they become an object of your awareness*, *since there is thick mental darkness regarding* extremely coarse objects, *how can they correctly realize* whether or not *a world beyond*, which is very subtle, exists*?* They cannot realize it.

The Prasangika Madhyamikas ask: "If the Charvakas do not realize coarse objects, how can they realize such subtle objects as a world beyond?" 'A world beyond' refers to both past and future lives. The original thesis of the Charvakas was that only objects that are known by direct perceivers exist, here this position has been invalidated by the Prasangika Madhyamikas.

Gedun Drup's *Mirror of the Clarification of the Thought* (Tibetan text page 49), as translated by Martin Willson, says:

> 3B1A-6C5A-1A2D Production from no cause

The Materialists (Lokayatas) say, "Since functioning things are born from no cause, the above disadvantages do not exist." –

If there were any production simply without a cause,
Then all would always be produced from everything,
And those of this world would not gather seeds and so on
In hundreds of ways, in order to make results arise. [6.99]

You should understand that it follows that all things would always be produced from everything, cause or not, and in order for the result, the harvest, to arise, this world would also not collect seeds and so on, by way of hundreds of difficulties, because, by assertion, there is some birth of things simply without cause.

If sentient beings were empty of causes, then, just like
A sky-lotus' color and scent, they could not be cognized.
But as the world, so very vivid, is perceived,
So know that, just like mind, the world depends on causes. [6.100]

That Materialists should understand that just as mind perceiving blue is produced from blue, so all the world is produced from causes. For if samsaric beings were empty of causes, then just like the smell and color of a blue lotus of space they would not exist as objects of cognition, but the world is perceived in all its vividness.

If those elements do not have that essence, the essence
By which they become objects of your mind,
Then how could anyone who has dense mental darkness
Even for these perceive correctly the world beyond? [6.101]

How could that Materialist perceive correctly the world beyond? It follows he could not, for if those [four] elements which he speaks of do not possess that essence, the essence by which, according to him, they become objects of his mind, then he has thick mental darkness even for these coarse objects.

When he dismisses the world beyond, he should understand

That he himself is perceiving the nature of knowables wrongly,
Since he has a body the same as the basis of that sort of view;
As when he accepts the elements' natural existence. [6.102]

He must understand that when he dismisses the world beyond, he himself is perceiving the nature of knowable phenomena wrongly; since he has indeed a body that is the same as the basis[90] of that view denying the world beyond as when he accepts the true existence of the nature of the material elements.

How those elements do not exist has already been explained:
Because above, production from self, from other, and from both
And absence of cause have already been refuted in general,
So these elements not explained do indeed not exist. [6.103]

These elements, which we have not explained above, do indeed not exist truly because how those elements cannot be truly existent has already been explained. If you ask why, it is because production from self, other, and both, and absence of a cause have already been refuted in general above.

This commentary by Gedun Drup covers the entire section on Charvakas' assertion of causeless production.

Chandrakirti's autocommentary says:

Furthermore:

It should be realized that at the time of refuting a world beyond,
Oneself erroneously views the nature of knowables
Because of indeed having the body, the similar support of that type of view,
As when accepting the very existence of the essential nature of the elements. [6.102]

'Similar' means "equivalent, or alike"; 'support,' the cause of abidance; 'body,' the trunk; 'that type of view,' the type of view denying a world beyond; "it is the support since it is also the similar," the qualifying compound.

What kind of body do the Charvakas have? The Charvakas have a body that is a basis for wrong views such as thinking that there is no world beyond, that is, that there are no past and future lives, and that there is no ripening of actions. This is the meaning of "Because of indeed having the body, the similar support of that type of view" (v. 6.102c). The Charvakas deprecate the existence of such things, that is, they assert the non-existence of what does exist. On the other hand, superimposition means to assert what does not exist to exist.

The Charvakas say that the four elements exist and that they are the cause of everything. Thus, awareness is produced from the four elements. This awareness is what analyzes objects. This is the basic thesis of the Charvakas. The Prasangika Madhyamikas ask the Charvakas "Do you know that a world beyond does not exist?" The Charvakas say that they know this. The Prasangika Madhyamikas ask "What awareness knows it? If you say that it is known by a direct perceiver then it follows that a non-existent world beyond is directly perceived. Since such a non-existent world beyond is directly perceived it would be a thing, whereby it follows that non-things are things. What awareness knows non-things?" The Charvakas say "It is known by a direct perceiver." The Prasangika Madhyamikas say: "If it is known by a direct perceiver then it follows that a non-thing is directly perceived. If it is directly perceived then a non-thing would be a thing. You would have to accept this." This is the brief explanation of the statement in the autocommentary "even non-things would be things." Due to this

[90] *rten*

reasoning, the Charvakas begin to drop their thesis saying that it is not known by a direct perceiver but is known by an inferential cognizer, in this way their position that things are known only by direct perceivers declines. In other words, their thesis that valid cognizers are only direct perceivers is lost. In short, whereas previously the Charvakas said that there exist only direct perceivers, now they also assert the existence of inferential cognizers.

The Charvakas say that the support, or the basis, is the cause of abidance. What is the support? Is it the body?

Chandrakirti's autocommentary says:

> Since the body is indeed similar to the support, the phrase "the body that is similar to the support of that type of view" is added. Since it possesses that, the affix of *matup*[91] [is used]. The property of that is the reasoning: *because of indeed having the body, the similar support of that type of view.*

Here it would seem that the support is definitely the body. Thus, perhaps it means that the body, the support, is the basis of views. In this case, when the body disintegrates also the views supported on it disappear.

"The affix of *matup*" refers to a particular Sanskrit grammatical particle. Chandrakirti says: "Since it possesses that." This explanation is still in reference to the line in the root text: "Because of indeed having the body, the similar support of that type of view" (v. 6.102c). The affix *matup* is translated here into English as "indeed having." In the case of one who has a body, a Charvaka, the body is the subject that possesses or has the view of the non-existence of a world beyond. Thus, the body is the support of the view that deprecates the existence of a world beyond. Thus, "that type of view" is the view that deprecates the existence of a world beyond.

Chandrakirti then says: "The property of that is the reasoning: because of indeed having the body, the similar support of that type of view." If this is the reason, what is the predicate? The reason is: because of indeed having the body, the similar support of that type of view (v. 6.102c). The predicate is: "Oneself erroneously views the nature of knowables" (v. 6.102b).

Chandrakirti's autocommentary (Tibetan text page 133) says:

> As long as that support of [those for whom] the mind being [produced] from the elements does not become the very support that views or doubts a world beyond as indeed existent, that long it will be just the same as the support of the wrong view denying a world beyond. Hence, the Lokayatas[92] (Charvakas) do have the very possession of the same body as the support of that type of view also when they realize the essential nature of the elements as indeed existing. Thus, there are two such occasions: one is the occasion of comprehending a nature of the elements, the other is the occasion of denying other worlds.

The Charvakas have a wrong awareness because not seeing a world beyond and not doubting this at all they clearly state: "There is no world beyond." This is the thesis of the Charvakas. The Charvakas, thus, have a view deprecating the existence of a world beyond. The theses of the Charvakas has two occasions: the occasion of saying "We comprehend the nature of the elements" and the occasion of

[91] Refers to a grammatical affix [Tib: *rkyen*; Skt: *pratyaya*], called "*matup*" in Sanskrit, that is used to indicate the possessive case in a particular grammatical situation.

[92] Skt: *lokayata*; Tib: *'jig.rten rgyang.phan.pa* – or Materialists, is another name of the Charvakas. While they are called Gone-Afar, Skt: *ayata*; Tib: rgyang.phan.pa, because they have gone away from the right view, the etymology of *lokayata* is less clear. Perhaps it means those for whom the world, *loka*, has an end, *ayata* – i.e., no past or future lives.

deprecating the existence of a world beyond. Thus, on one hand, they say the four elements exist and are a cause producing the varieties of things and, on the other hand, they say that a world beyond does not exist. If this is analyzed, one discovers that their original thesis "things are produced without causes" is lost because they say that the four elements are causes producing the result of awareness. Thus, they contradict themselves here because initially they said that everything is produced from its own entity or produced naturally without depending on causes. Note that "produced naturally" does not imply they are produced from self. Thus, the thesis of the Charvakas has declined. If the Charvakas were to come to say that there is a world beyond they would clearly lose their position and even if they come to doubt the existence of a world beyond they would also lose the view of its non-existence. In this way, their thesis regarding the non-existence of a world beyond is lost.

Chandrakirti's autocommentary says:

> There, because if one is merely taken as the position the other is indicated as the example, [the root text] mentions, *as when accepting the very existence of the essential nature of the elements.* The very possession of the same body as the support of that type of view and erroneously viewing a nature of the elements also exist on that occasion.

The Charvakas accept the nature of the elements. In the statement "because if one is merely taken as the position the other is indicated as the example" the words 'one is merely taken as the position' refers to the predicate. In general 'position' refers to a thesis. In one text it says: "The collection is the thesis itself, the others are referred to as an imputation." In the syllogism "Sound, as the subject, is impermanent because of being a product," 'is impermanent' is the predicate and 'because it is a product' is the reason. 'The collection' refers to the combination of the subject and the predicate, in this case 'sound' and 'is impermanent.' In the case of the collection of the subject and predicate the term 'position' is an actual name, whereas in the case of the subject and the reason individually the term 'position' is only an imputed name. Dignaga's *Compendium of Valid Cognition* says: "Due to the reason of the property of the subject there is pervasion. That very reason is fulfills the three modes. If it does not, it is definitely not [a correct reason]. A facsimile of a reason is anything other than that."

In brief, the Charvakas' deprecation of the existence of a world beyond is a mistaken view because there do exist past and future lives.

Wednesday afternoon, 17 January 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 322) says:

> There are also other faults.
>
> *It should be realized that when refuting a world beyond,*
> *One mistakenly views the nature of objects of knowledge*
> *Because of possessing a body similar to the basis of that type of view;*
> *Like when asserting the nature of the elements to exist.* [6.102]
>
> *It should be realized that when refuting a world beyond, one*, that is, a Charvaka, *mistakenly views the nature of objects of knowledge because of possessing* the trunk of *a body* which is *similar to*, that is, like, *the basis of that type of view* deprecating a world beyond – that is, the cause for the abiding of that; for example, *like when asserting the nature of the elements to* be truly *existent*.

The view of the non-existence of a world beyond is a wrong view and a view that deprecates. On the other hand, the Charvakas say that the four elements are truly existent.

Chandrakirti's autocommentary says:

> In case it is considered: The example is just devoid of the thesis[93] because I perceive unerroneously also on the occasion of realizing an essential nature of the elements to indeed exist.
>
> That is also not so because the fact of viewing erroneously is established since [that view] understands the elements that have the nature of not [truly] existing since they are not produced [in the four ways] as indeed produced and existent.

Lama Tsongkhapa's *Illumination* (Tibetan text page 322) says:

> CHARVAKAS: Also when the elements are realized to be truly existent, the example that is seen by an unmistaken conception is empty of the predicate.

This means that the thesis does not have a correct concordant example. Here 'the elements are realized to be truly existent' means 'the elements are asserted to be truly existent' because if the elements were realized to be truly existent they would in actuality be truly existent, whereas they are not.

Lama Tsongkhapa's *Illumination* (Tibetan text page 322) says:

> PRASANGIKA MADHYAMIKAS: That too is not so because elements that are not produced inherently and do not exist inherently are realized to exist inherently and to be produced inherently, whereby this is established to be a mistaken view.

The Charvakas' do not have an unmistaken realization of the four elements "because elements that are not produced inherently and do not exist inherently are realized to exist inherently and to be produced inherently whereby this is established to be a mistaken view." Here too 'are realized to exist inherently' means 'are asserted to exist inherently.' If the four elements were realized to exist inherently and to be produced inherently this would not be mistaken whereas it is mistaken and is therefore a mistaken view. Therefore, this is to be understood in the sense that 'the four elements are asserted to exist inherently and to be produced inherently'; this is what is a mistaken view.

Lama Tsongkhapa's *Illumination* (Tibetan text page 322) says:

> Thus, taking that as an example in regard to applying the respective correct reason, it is indicated to necessarily not be empty of the predicate. That it is also similar in regard to taking it as a reason was explained earlier in terms of proving sound to be impermanent by setting out '[because] it is an apprehended object of the eye' as a reason that is not established, thereby, indicating that the three modes are necessary in order to prove a thesis by a reason.

When a correct reason is set out, the reason should not be empty of the predicate. Likewise, the example should also not be empty of the predicate. For example, previously the syllogism "Sound, as the subject, is impermanent because it is an appearing object of the eye" was set out. When a thesis is established, the reason must fulfill the three modes. If a thesis is realized only on the basis of fulfilling the three modes is it not possible to realize something by way of a consequence alone? This question is related to etymology of the name 'Consequentialist' (Prasangika) which is 'one who asserts that the former party is able to realize the thesis by means of a mere consequence.' The three modes are:

1. the property of the subject or the position,
2. the forward pervasion, and

[93] In the Tibetan phrase, *dpe bsgrub.byas stong.pa.nyi yin – bsgrub* is future tense and *byas* is past tense. LTK page 338, takes it as *dpe bsgrub.bya' chos.kyis stong.pa yin*, "is devoid of (by) the predicate of the probandum."

3. the reverse pervasion.

Chandrakirti's autocommentary says:

> If it is said: It is necessary to establish that the elements are indeed not produced.
>
> It is not because it was already established.

Chandrakirti says that since he already explained the way in which the four elements do not exist inherently there is no need to repeat it here.

Chandrakirti's autocommentary says:

> It is explained:
>
> *How those elements do not exist was thus already explained –*
> *Because above, production from self, other, both, and*
> *Without cause were already refuted in common, therefore,*
> *These unexplained elements do not exist at all.* [6.103]
>
> When refuting the production of things in common from self, other, both, and without cause, I only refuted production of the elements in general. Hence, because [inherent] production is non-existent, the example is established since the elements do not have a self-nature.

Since nothing is produced from the four extremes, things, including the four elements, are refuted to be produced from the four extremes. In this way, the four elements existing inherently was implicitly refuted.

Chandrakirti's autocommentary says:

> Likewise, to those denying omniscience, propounding things as indeed existent, propounding things as indeed non-existent, propounding Ishvara, time, particles, fundamental nature (*prakriti*), and entitiness, and also to others than those, one should add the erroneous state of understanding when propounding how their [tenets] are. It [6.102] should be composed like this:
>
> *It should be realized that at the time of refuting complete buddhahood,*
> *Oneself erroneously views the nature of knowables*
> *Because of indeed possessing the same body, the support of that type of view,*
> *As when accepting the very existence of the essential nature of the elements.*
>
> – and so forth, because of accepting to refute all views about states of being existent and non-existent.

Some tenets deny omniscience, while others propound things to be existent and others propound things to be non-existent. Some also propound Ishvara, time, particles, the fundamental nature, and entitiness to be the creators of the world. All of these are mistaken views. Chandrakirti says that one should refute these views by changing the words of verse 6.102 appropriately; for example, by changing "at the time of refuting a world beyond" to "at the time of refuting complete buddhahood." This change is made in order to "refute all views about states of being existent and non-existent."

Chandrakirti's autocommentary says:

> For us, there is never an occasion of acquiring undesired [consequences]. Therefore, with [the words of] this very verse skillfully changed, one should make certain that the former positions imagined by others are totally excluded because it is highly desirable to establish the exalted wisdom of the ultimate by totally refuting the nets of conceptions.

In order to eliminate the assertions of others the Prasangika Madhyamikas change the words of the root text to suit the context. In the statement "Because it is highly desirable to establish the exalted wisdom of the ultimate by totally refuting the nets of conceptions" 'the nets of conceptions' refers to the two conceptions of a self, a self of persons and a self of phenomena, these being the main nets of conceptions from which other afflictions arise.

Chandrakirti's autocommentary says:

> In case it is considered: This much also follows for you similarly.

The Charvakas say to the Prasangika Madhyamikas: "It would similarly follow for you." This is refuted by the Prasangika Madhyamikas saying:

> That is also not so because an example does not exist to establish us as in error.

In other words, the Charvakas are unable to find an example that establishes the Prasangika Madhyamikas to be mistaken.

Chandrakirti's autocommentary says:

> That, at the time of realizing inclusion of other worlds just exists,
> One views the ultimate object, the nature of knowables, should be realized,
> Because of just possessing the body similar to the support of one's type of view,
> Like the time when accepting the selfless to be realized.
>
> – is also able to be expressed [like 6.102].

Here the words of verse 6.102 have been changed.

Chandrakirti's autocommentary says:

> Similarly:
>
> Here, that at the time of realizing the exalted knower of all exists,
> One views the ultimate object, the nature of knowables, should be realized.
>
> [Since] reason and example are only the two, similarly, it should also be added to "knowing all things."

The same words can be affixed to "knowing all things." In this way, these words of the root text can be affixed to either the position that negates the existence of a self or to the position that affirms the realization of selflessness as appropriate.

Chandrakirti's autocommentary says:

> Therefore, in this way, it was mentioned [in verse 6.8ab]:
>
> *That itself does not arise from that, how could it from others?*
> *It also does not from both, how could it exist without cause?*
>
> Thus, whatever the thesis is, it is thoroughly established.

In short, the four theses set out in verse 6.8ab have been thoroughly explained; that is, production from self, production from other, production from both, and causeless production have been refuted. This concludes the section on the refutation of causeless production.

Lama Tsongkhapa's *Illumination* (Tibetan text page 322) says:

> CHARVAKAS: The elements must be proved to not be inherently produced.
> PRASANGIKA MADHYAMIKAS:
>
> *The way in which those elements do not exist was already explained.*
> *How? Above, production from self, other, and both and*
> *The causeless were already refuted. Therefore,*
> *None of those unexplained elements exist.* [6.103]
>
> *The way in which those elements do not exist* inherently *was already explained* before. *How? Above*, when refuting *production from self*, *other*, *and both and causeless* production, I also *already refuted* inherently produced elements *in common*, that is, in general. *Therefore*, since *none of those*, that is, any, *elements* – those *not explained* by refuting in a general manner before – *exist*, the example is established. Similarly, also when refuting the tenets of those who deprecate the omniscient ones and who propound inherently existent things that are other than that, one should affix this mistaken realization [to the words of verse 6.102 of the *Supplement*]. For example, one should join [the following words] and so forth through wishing to refute all views of existence and non-existence:
>
> It should be realized that when refuting complete buddhahood,
> One mistakenly views the nature of objects of knowledge
> Because of possessing a body similar to the basis of that type of view;
> Like when asserting the nature of the elements to exist.

When production from self, other, both, and without causes is refuted, so too are inherently existent elements. The Charvakas say that the four elements are the cause of everything and are truly existent; this was refuted previously by the Prasangika Madhyamikas in general.

Who deprecates omniscient beings? Mainly the Charvakas deprecate them by asserting that things are only known by sense consciousnesses.

"One should affix this mistaken realization" means that when refuting the tenets of the Materialists, or proponents of inherent existence, one should affix "They are mistaken realizations or assertions" to all those who deny omniscient beings, who propound things to be existent, propound things to be non-existent and so forth.

"Refuting complete buddhahood" means that the Charvakas do not accept complete buddhahood. Due to this they "mistakenly view the nature of objects of knowledge." The Charvakas have this mistaken assertion because of having a body that is the support of this mistaken view. "Like when asserting the nature of the elements to exist" refers to the fact that the Charvakas assert that the elements exist truly and ultimately; in other words, they say that the true existence of the elements is their suchness. Such a view is a mistaken view.

Lama Tsongkhapa's *Illumination* (Tibetan text page 323) says:

OBJECTION: Also for you there would be a similar consequence.

The Charvakas say that they are correct and that the Prasangika Madhyamikas are wrong. To this the Prasangika Madhyamikas say:

PRASANGIKA MADHYAMIKAS: Furthermore, that is not so because there does not exist an example that proves us to be mistaken. This can also be expressed saying:

It should be realized that, when it is realized that belonging to other worlds exists,
One views the nature of objects of knowledge, the ultimate object,
Because of possessing a body similar to the basis of that type of view of mine;
Like when asserting the realization of selflessness.

Here the words of verse 6.102 are changed to: "when it is realized that belonging to other worlds exists, one views the nature of objects of knowledge, the ultimate object." When one realizes selflessness, one unmistakenly realizes the nature of objects of knowledge.

Lama Tsongkhapa's *Illumination* (Tibetan text page 323) says:

Similarly, given that the reason and example are only two:

Then, it should be realized that when it is realized that "Omniscient ones exist"
One views the nature of objects of knowledge, the ultimate object,...

When it is realized that omniscient beings exist one correctly realizes objects of knowledge.

What does "given that the reason and example are only two"? Think about it.

Lama Tsongkhapa's *Illumination* (Tibetan text page 323) says:

This should, similarly, also be joined to "all things."

What is to be joined to "all things"? The words of verse 6.102 should be joined by changing them appropriately, perhaps as follows:

It should be realized that, when it is realized that all things exists,
One views the nature of objects of knowledge, the ultimate object...
Because of possessing a body similar to the basis of that type of view of mine;
Like when asserting the realization of selflessness.

"All things" refers to the three – forms, consciousnesses, and non-associated compositional factors – which include all things. "All things" are also all the phenomena included in the five aggregates.

Lama Tsongkhapa's *Illumination* (Tibetan text page 323) says:

For this reason, in this way it is stated "The [following] four theses [set out in verse 6.8] are thoroughly proven":

That itself does not arise from that. How can it from other?
Neither does it from both. How can it causelessly? [6.8ab]

Therefore, one should not say "Others' systems have been refuted, but our own system has not been proven."

When others' systems are refuted, one proves one's own system. What is mainly refuted here is inherent production. Others' systems say that there is inherent production either because there is:
1. production from self,
2. production from other,
3. production from both, or
4. causeless production.

On the other hand, our own system refutes these four extremes of production and thereby establishes that there is no inherent production. Thus, by refuting inherent production, the lack of inherent production is established. Therefore, one should not say "Our own system has not been proven." Rather it has been proven by establishing the lack of inherent existence.

Thursday morning, 18 January 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 324) says:

> 3B1C-2B3E-2A1C The meaning established by refuting production from the four extremes

This means the same as saying "The conclusion regarding the refutation of production from the four extremes."

Chandrakirti's autocommentary says:

> It is mentioned here: If things are not produced from self, other, both, and without cause, well then, how are they produced?
>
> I shall explain. If things had any self-nature they would, without doubt, be produced or observed from self or other or both or without cause because another conception of production is impossible. Even according to those who strongly assert things as being produced from Ishvara and so forth, they, Ishvara and so forth, are selves or are others or are both. Hence, even those propounding Ishvara and so forth do not pass beyond the faults already explained. Therefore, there does not exist another, a fifth, conception of the cause that produces production. Therefore, because another is non-existent and because production by the four conceptions was refuted, inherent production of things does not exist. In order to indicate that, [the root text] mentions:
>
> *Since there does not exist production from self, other, both, and*
> *Independent of causes, things are devoid of self-nature.* [6.104ab]

Nothing is produced from the four extremes. Since there is no fifth conception of the cause of production, there is no need to refute a fifth mode of production. Although there are those who say that Ishvara is the creator of the world, this is included in production from other in that Ishvara is other. How does Ishvara create the world? The proponents of Ishvara say that whatever he thinks of comes into existence. This can be debated asking: "If Ishvara thinks of an Italian pizza does it immediately appear on a table in front of him? If Ishvara would like everyone to be rich why are they not?"

Others propound a general principal as creator, the refutation of this is included in the refutation of production from self.

Those who assert production from self are the Samkhyas. Those who assert production from other are the lower Buddhist schools, that is, the Svatantrika Madhyamika and below. Those who assert production from both are the Nirgranthas. Those who assert causeless production are the Charvakas. The main theses of all these schools is that there exists inherent production. In order to

prove this, they set out various reasonings such as "because things are produced from self" and so forth. The Prasangika Madhyamikas say that in refuting their proofs, their theses are refuted.

There are also other schools that assert time, particles, and so forth to be the creator; these types of production are also included in the four types of production, therefore, there is no fifth type of production.

Lama Tsongkhapa's *Illumination* (Tibetan text page 324) says:

> QUESTION: If things are not produced from self, other, both, or causelessly, well then, how are they produced?
> RESPONSE: This is explained [as follows]. If things had some inherent existence, they would unquestionably be produced from self or other or both or causelessly and would be observed [to be so] given that other conceptions of production are impossible. Even according to those who strongly assert that things are produced from Ishvara and so forth, they, that is, Ishvara and so forth, are either a self or other or both. Hence, also those propounding Ishvara and so forth to be the cause do not pass beyond the faults already explained, due to which there does not exist another – a fifth – conception regarding the cause of production. Therefore, because another [conception] does not exist and because that imagined by the four conceptions to be production is refuted, inherent production of things does not exist. In order to indicate this, it is mentioned:
>
> *Because production from self, other, both, and without depending on a cause*
> *Does not exist, things are free from inherent existence.* [6.104ab]
>
> For the reason that *production from self*, *other*, and *both and* production *without depending on a cause do not exist*, *things are free from inherent existence*. Through this, even though production from the four extremes is refuted by means of consequences, at the end the manner of producing an inferential cognizer in dependence on a reason is indicated. Moreover, "not produced from the four extremes" is the reason, "things" is the subject, and "free from inherent existence" is the thesis.

In the presentations of the refutations of production from the four extremes, various consequences were flung by the Prasangika Madhyamikas such as:

> Things, as the subject, it follows that their production is endless and meaningless because they are produced from self.
>
> A sprout, as the subject, it follows that everything is produced from everything because they are produced from other.

and so forth.

These consequences also apply to production from both. The consequence of causeless production is:

> A farmer's hardships in planting crops, watering them, and so forth, it follows that they would be meaningless because there is production without causes.

The concluding syllogism is:

> Things, as the subject, are free from inherent existence because they are not produced from self, other, both, and without causes.

Lama Tsongkhapa's *Illumination* (Tibetan text page 325) says:

3B1C-2B3E-2A2 Dispelling arguments regarding those refutations

Here others present their arguments that the Prasangika Madhyamikas' refutations are not valid.

A Actual meaning
B Presenting a summary of that

3B1C-2B3E-2A2A Actual meaning

Chandrakirti's autocommentary says:

It is mentioned here: If inherent production of things is just non-existent, then, how are the unproduced, blue and so forth, apprehended?

I shall explain. The self-natures of blue and so forth do not in any way become the very objects of anyone, hence, the self-natures of blue and so forth are not apprehended.

If it is said: If that is the case, then, what is that which is seen to appear in front again and again as the very entity of the object suitable to be?

I shall explain. It is not self-nature since it is an erroneous state of being because only those together with ignorance observe that essential nature, because those separated from ignorance do not observe it. In order to indicate [the aforesaid], it is explained:

Since the worldly have dense bewilderment, similar to a mass of clouds,
Hence, objects erroneously appear. [6.104cd]

A mass of clouds [means] a mass of rain clouds. Because thick bewilderment like a mass of clouds remains, having covered the perception of the nature of blue and so forth, therefore, the childish do not have perception of the nature of blue and so forth. This erroneous self-entity, the source of strong settling, appears to the childish strongly settling upon truth.

Those possessing the dense darkness of the afflictions cannot see the real nature of objects such as blue. Although nature can refer either to the conventional nature or the ultimate nature, what is being discussed here is the ultimate nature; this is what is not seen by those with dense darkness.

The conventional nature is subdivided into coarse conventional nature and subtle conventional nature. The coarse conventional nature of blue is the coarse aspect of the color blue that is perceived by ordinary beings. This is evidenced by the fact that ordinary beings point to blue saying 'That is blue.' The subtle conventional nature of blue is that the blue, which is empty of inherent and ultimate existence, is merely imputed by conception. Such a subtle nature of blue is not perceived by ordinary beings who have the thick ignorance which is like a mass of rain clouds or thick fog obscuring one from seeing what is in front of oneself. In addition, this thick ignorance obscures one from seeing the ultimate nature of phenomena. Therefore, we need to eliminate ignorance. How is it eliminated? It is eliminated by hearing teachings on the emptiness of inherent existence, thinking about emptiness, and then meditating on it. This is the way in which to eliminate the mass of thick clouds of ignorance within us. Just as rain clouds are eliminated by a strong wind, so too can the strong wind of our effort in hearing, thinking, and meditation remove the clouds of ignorance.

Lama Tsongkhapa's *Illumination* (Tibetan text page 325) says:

OBJECTION: If things are not produced inherently, well then, how are the unproduced, such as blue and so forth, apprehended?
RESPONSE: No matter what the nature of blue and so forth is, it is just not an object that appears to someone polluted by ignorance. Therefore, the eye consciousness and so forth of such [persons] does not apprehend the nature of blue and so forth.
QUESTION: Well then, what is it that is fitting to be seen to appear again and again before oneself as the very entity of the object?
RESPONSE: Since it appears by the force of a mistaken [awareness], it is not the nature because of observing that essence through just the force of being polluted by ignorance. In order to indicate that, it is explained:

Because of that, the worldly have thick confusion like a mass of clouds,
Due to which objects appear mistakenly. [6.104cd]

Because of that, for that reason, *the worldly* – that is, sentient beings – have *thick*, or dense, *confusion, like a mass of* black rain *clouds* which abides obscuring them from seeing the nature of

> blue and so forth. *Due to this*, the non-seeing in the childish of the nature of blue and so forth is the source of the *mistaken* strong adherence to an own entity in *objects*, this being what *appears* to the childish who adhere to true existence.

Due to what are ordinary beings unable to see the nature of phenomena? It is due to their strong adherence to true existence. In other words, due to being obscured by thick ignorance ordinary beings are unable to see the nature of phenomena.

What is the blue that is seen again and again? The Prasangika Madhyamikas say that the nature of blue is not apprehended by the eye consciousness and so forth. However, the lower schools say that the nature of blue should be apprehended by the eye consciousness because blue appears again and again to it. In other words, they ask the Prasangika Madhyamikas: "Since we see blue again and again, why do we not see its nature?" The response is that while blue appears to a mistaken awareness, an eye consciousness, the nature of blue does not appear to an eye consciousness. Lama Tsongkhapa says: "It is not the nature because of observing that essence through just the force of being polluted by ignorance." Due to ignorance, we see blue but not the nature of blue.

In this context 'the nature of blue' can refer to either (i) the ultimate nature of blue or (ii) the subtle conventional nature of blue. Ordinary beings are unable to know the subtle conventional nature of blue and the ultimate nature of blue because of being polluted by ignorance. The eye consciousness is unable to apprehend the subtle conventional nature of blue and so forth and the ultimate nature of blue and so forth; it only apprehends mere coarse blue. On the contrary, the lower schools say that the eye consciousness, in apprehending coarse blue, apprehends the nature of blue.

Chandrakirti's autocommentary says:

> It is mentioned here: If asked – "If inevitably[94] not perceiving thusness in any way because concealed by bewilderment, due to what is it erroneously perceived?"
>
> "Not being such, they appear as such an essential nature by the power of ignorance." In order to indicate this fact by way of an external example, it is mentioned:
>
> *Just as some, due to the strength of cataracts, wrongly perceive falling hairs,*
> *Two moons, peacock tail feathers, bees, and so forth,* [6.105ab]
>
> Just as one with cataracts is made to apprehend falling hairs and so forth as factual things due to the strength of cataracts, although they have already [been shown] to be of an unproduced nature,
>
> *Similarly, due to the power of the fault of bewilderment, the unskillful*
> *Intellectually understand some of the varieties of compounded things.* [6.105cd]

The childish, instead of seeing the reality of objects, see them in a mistaken way. Why is that? To explain this an analogy is set forth as follows. Just as those with cataracts see falling hair and so forth because their eye sense powers are impaired; similarly, due to being obscured by ignorance, phenomena are perceived to have inherent existence, although they do not exist inherently.

Other analogies are also set forth in the text such as that of two moons. Why is their the appearance of two moons? It is due to a superficial cause of error. Other analogies are seeing the eyes of peacock tail feathers in the space before oneself, bees in one's cup, and so forth due to an impairment of the eye sense power. Such things are seen although they do not exist. Similarly, due to

[94] LTK, p. 341, takes the phrase *mi.'gyur la rag.na*, "if inevitably" (literally "if relying on not changing") as *chug.kyang*, "although constrained to."

ignorance, phenomena appear to be truly existent and are conceived to be truly existent even though they do not have the nature of true existence.

Chandrakirti's autocommentary says::

> These statements were spoken by the Bhagavan:[95]
>
> > "Through the condition of ignorance, [there is karmic] formation…"
>
> and, similarly,
>
> > "This person who is subsequently connected with ignorance, actually formulates the meritorious to be actually formulated, the non-meritorious to be actually formulated, and also the immovable to be actually formulated..."
>
> and, similarly,
>
> > "Through ceasing ignorance, [karmic] formation is ceased."

The Buddha said that due to the condition of ignorance, karmic formations are accumulated. "This person who is subsequently connected with ignorance" means "This person who has ignorance." A person who possesses the beginningless ignorance that is the first link of dependent-arising creates meritorious, demeritorious, and immovable actions. Specifically, a person with ignorance creates meritorious actions that lead to rebirth in the human or god realms, demeritorious actions that lead to rebirth in the lower realms, and immovable actions that lead to rebirth as a god in the form and formless realms.

Similarly, the Buddha said that by ceasing ignorance, karmic formations are ceased. Therefore, when ignorance ceases, karmic formations cease; when karmic formations cease, consciousness ceases, and so forth through to the twelfth link of aging and death.

Chandrakirti's autocommentary says:

> Therefore, in this manner:
>
> > *"Action arises in dependence on bewilderment – without bewilderment,*
> > *It does not arise," was said undoubtedly to be known solely by the unwise.*
> > *The sun of fine intellect completely dispels dense darkness –*
> > *The wise comprehend emptiness and will be liberated.* [6.106]
>
> When the wise perceive that "Through the condition of ignorance, [there are karmic] formations," they not only comprehend formations as without self-nature; through realizing that, they abandon ignorance and also do not appropriate [karmic] formation because of abandoning the cause of appropriating it. Therefore, they will be completely liberated from *samsara*.

Due to ignorance there arises cyclic existence and the various types of suffering. This is because from ignorance come actions (karmic formations) and from actions come suffering. That karmic formations depend upon ignorance is in the case of the unwise who possess ignorance. That "action arises in dependence on bewilderment" (v. 6.106a) exists only in the case of the unwise. The root verse continues "without bewilderment, it does not arise." This is the case of the wise – those who know

[95] Possib1y in the *Sutra of Dependent Arising*.

how karmic formations are produced in dependence on the condition of ignorance and are thereby able to abandon ignorance.

In the line "The sun of fine intellect completely dispels dense darkness," 'fine intellect' refers to the wisdom realizing the lack of inherent existence of phenomena that dispels ignorance like the sun dispels darkness. "The wise comprehend emptiness and will be liberated" refers to superiors who realize emptiness and thereby will attain liberation.

When those possessing wisdom see that karmic formations arise due to the condition of ignorance, not only do they realize that karmic formations do not exist inherently, but, in addition, they also abandon ignorance and thereby do not appropriate or create new actions due to having abandoned their cause.

Lama Tsongkhapa's *Illumination* (Tibetan text page 325-6) says:

> OBJECTION: Even though it is granted that suchness is not seen because of being veiled by confusion, due to what [are things] seen mistakenly?
> RESPONSE: While not being established by way of their own entity, they appear to be so by the force of confusion. In order to indicate this by means of an external example [Chandrakirti says]:
>
> *Just as by the strength of cataracts some mistakenly apprehend*
> *Falling hair, two moons, the eyes of peacock feathers, bees, and so forth,*
> *Similarly, by the force of the fault of confusion, the unwise*
> *Realize the varieties, like compounded phenomena, with their intellect.* [6.105]
>
> *Just as by the strength of* a sense power impaired by *cataracts*, *some* [people] with cataracts *apprehend*, or see, *mistakenly* – that is, they apprehend what does not exist as though it exists – *falling hair, two moons, the eyes of peacock feathers, bees, and so forth*, *similarly, by the force of the fault of confusion, the unwise* – that is, ordinary beings – *realize*, or see, *the varieties, like* the *compounded phenomena* that are blue and so forth, *with their intellect*, that is, with their consciousness. The Bhagavan taught this in the *Sutra of Dependent Relation* stating:
>
> Due to the condition of ignorance, karmic formations...
>
> And:
>
> Likewise, a person who is subsequently connected with ignorance fabricates the meritorious which is what is fabricated, the non-meritorious which is what is fabricated, and the immovable which is what is fabricated.
>
> And:
>
> Similarly, due to ceasing ignorance, karmic formations cease...

Why do we not see the lack of inherent existence of phenomena? It is because our intellect or awareness is obscured by dense ignorance. Due to this ignorance, phenomena appear to be inherently existent although they are not. The external analogy set out by Chandrakirti to explain this is that of eyes impaired by cataracts due to which there is the appearance of falling hair, two moons, and so forth which do not actually exist. Another analogy is that of sitting in a moving car or train due to which houses, trees, and so forth appear to be moving although they are not. Just as these external things appear to move although they do not, similarly phenomena appear to exist inherently although they do not.

Buddha said: "Due to the condition of ignorance, karmic formations arise." It is our own experience that every day we create many actions due to ignorance, therefore, unless we are careful, we continually engage in creating actions that are the cause for cyclic existence. At times we create meritorious actions and at other times demeritorious actions, however, we do not create immovable actions. Because we continually create actions, we should try to create only meritorious actions and avoid demeritorious actions whether we are standing, walking, sitting, or lying down. Therefore, we have to make sure that we constantly possess mindfulness and introspection. In our daily life, we

have the habit of looking at the faults of others with our eyes, thinking of the faults of others with our mind, and criticizing the faults of others with our speech due to having done so also in previous lives. Because we have such habits, we should try to eliminate them. Our mind is as uncontrolled as a drunken crazed elephant. Just as we would tame a wild elephant, so too should we tame our uncontrolled mind. In order to tame an elephant one hooks their ear with an iron hook and beats them with an iron chain; the hook and the chain are analogies for mindfulness and introspection, the means to subdue or tame our uncontrolled mind.

Lama Tsongkhapa's *Illumination* (Tibetan text page 326) says:

> [Chandrakirti's *Supplement*] says:
>
> *The statement "Actions arise in dependence on confusion,*
> *They do not arise without ignorance" is certainly realized by only the unwise.*
> *The wise, whose sun of fine intelligence thoroughly dispels the thick darkness,*
> *Comprehend emptiness and will be liberated.* [6.106]
>
> Therefore, in this way, the *statement* that "*Actions*, which are karmic formations, *arise in dependence on confusion*, or ignorance, whereas actions *do not arise without ignorance*" *is certainly realized by* – that is, it is from the point of view of – *only the unwise*. When *the wise* see the teaching "Due to the condition of ignorance, karmic formations...," not only do they *comprehend* the *emptiness* that is the lack of inherent existence of compounded phenomena, also *the sun of* their *fine intelligence* realizing the suchness of dependent-arisings *thoroughly dispels*, or abandons, the ignorance that is like *thick darkness*. They also do not appropriate karmic formations because they have abandoned ignorance, the cause of appropriating those actions. Therefore, they *will* definitely *be liberated* from cyclic existence.

Those possessing the exalted wisdom realizing the non-existence of the referent object of the conception of true existence no longer appropriate or create karmic formations and, therefore, will cease to take rebirth. It is said: "One who sees the truth has no more projecting [actions]. One who is free from existence has no more rebirths."

Friday morning, 19 January 2001

Chandrakirti's autocommentary says:

> It is mentioned here: If thus, there does not exist any self-nature ultimately in forms and so forth, then, because of not existing ultimately, like the son of a barren woman, their self-nature would not exist even deceptively. Yet, the self-nature of forms and so forth do exist deceptively. Therefore, their very existence only exists also ultimately.
>
> *If things did not exist in reality,*
> *Also conventionally, just like a barren woman's son,*
> *They will be just non-existent. Therefore,*
> *They just exist inherently.* [6.107]

The lower schools say that if forms and so forth do not have an ultimate nature then, like the son of a barren women, they would also not exist conventionally. They say that because forms and so forth exist conventionally they must exist ultimately. The lower schools say that if things do not exist ultimately they would not exist at all, meaning that they would not exist conventionally. For this reason, they say that if forms and so forth exist conventionally they should also exist ultimately. The analogy given here in support of this is that of the son of a barren woman which neither exists conventionally or ultimately.

I shall speak about this:

Since those falling hairs and so forth that are objects
Of those with cataracts and so forth are not produced,
One should dispute with just them at first,
Later with those afflicted with the cataract of ignorance. [6.108]

At the beginning you should debate with only those whose eyes are impaired by cataracts and so forth, saying, "Why do you see falling hairs and so forth – objects that do not exist – yet not the son of a barren woman?" Later, you must dispute and investigate with those whose eyes of awareness are covered by the cataract of ignorance, saying, "Why do you see forms and so forth – having unproduced self-nature – yet not the son of a barren woman?"

When the lower schools argue with the Prasangika Madhyamikas, the Prasangikas respond saying that the lower schools should first debate with those who have cataracts and only later with us. Those with cataracts see falling hair and so forth even though they do not actually exist. In brief, just as there is a mistaken consciousness perceiving falling hair which does not exist, so too is there the mistaken perception of phenomena as existing inherently even though they do not exist inherently. In other words, although forms and so forth appear to us as though inherently existent, they are neither inherently existent nor inherently produced.

Chandrakirti's autocommentary says:

Do not dispute and investigate this with us for we engage in explaining things as without self-nature exactly according to scripture from the viewpoint of the comprehension by a yogi's exalted wisdom saying, "The yogis see things like this and also those others who wish to attain a yogi's exalted wisdom should strongly appreciate the self-nature of phenomena that was explained." It is not [that we explain things as without self-nature] through relying on our own knowledge because we are those whose eyes of awareness are covered by the cataract of ignorance.

Phenomena do not exist inherently but seem to exist inherently; this lack of inherent existence is seen by a yogi's exalted wisdom.

Lama Tsongkhapa's *Illumination* (Tibetan text page 326) says:

The *Compendium* says:

Any bodhisattva who knows, by means of that wisdom,
That dependent and related arisings are unproduced and inexhaustible
Destroys the shadows of ignorance and attains the self-arisen,
Like a cloudless sun dispels darkness by radiating rays of light.

Bodhisattvas, with the wisdom knowing dependent-arisings, destroy the shadows of ignorance and attain the state of the self-arisen, the state of a foe destroyer, just like a cloudless sun dispels darkness by radiating light. "Wisdom" is the wisdom realizing dependent-arisings, in dependence on this wisdom bodhisattvas realize phenomena are empty of inherent existence and, therefore, are without inherent production and inherent cessation and thereby destroy the shadows of ignorance.

Lama Tsongkhapa's *Illumination* (Tibetan text page 327) says:

OBJECTION:

"If things do not exist in suchness,
Also in conventional terms, like the son of a barren woman,
They would not exist. Therefore,
They are just inherently existent." [6.107]

If – that is, if it were the case that – *things*, such as forms and so forth, *do not* at all have a nature *in suchness*, that is, ultimately, then *also in conventional terms, like the son of a barren woman*, their nature – that is, the entities of blue and so forth – *would not exist*. However, the entities of forms and so forth also exist conventionally. *Therefore*, their existence *is just*, that is, only, *inherent*, or ultimate, *existence*.

The lower schools say that if phenomena do not exist ultimately they would also not exist conventionally, like the son of a barren woman. Therefore, they say that forms and so forth exist ultimately because they exist conventionally.

Lama Tsongkhapa's *Illumination* (Tibetan text page 327) says:

RESPONSE: This is explained [as follows]:

Since falling hair and so forth,
The objects of those with cataracts, are not produced,
For a while you should debate with just them,
Then later with those who are afflicted with the cataract of ignorance. [6.108]

Since falling hair and so forth – the objects of the awarenesses *of those with cataracts – are not produced*, they are similar to the unborn son of a barren woman, so *for a while*, initially, *you should debate with just those* whose eyes are impaired by cataracts and so forth saying "Why do you see objects that do not exist, falling hair and so forth, but do not see the son of a barren woman?" *Then later*, that is, subsequently, you should dispute and investigate *with those who are afflicted with the cataract of ignorance* – those whose awareness eye is obscured by ignorance – saying "Why do you see forms and so forth which are the same in not being produced inherently, but do not see the son of a barren woman?" This is not to be disputed and investigated with us because in our case we engage in explaining things as lacking inherent existence in terms of what is comprehended by a yogi's exalted wisdom in accordance with the passage "Yogis who see things like this and also others who wish to attain a yogi's exalted wisdom should have strong conviction in the nature of phenomena explained above." We do not do so based on our own knowledge because our awareness eye is obscured by the cataract of ignorance.

The Prasangika Madhyamikas say that in the perspective of those with cataracts there is the appearance of falling hair and so forth, however, they do not exist and are not inherently produced, like the son of a barren woman. They say that since the lower schools accept that the falling hair does not exist although it appears to those with cataracts, why do those with cataracts see falling hair and so forth but do not see the son of a barren woman? The Prasangika Madhyamikas say that the lower schools should dispute first with those who have cataracts and not with us because there is the appearance of falling hair, even though it does not exist, to those with cataracts. If one says to those with cataracts that falling hair does not exist, what would they respond? One can ask them why do they not see the son of a barren woman? One can also continue the debate asking: "Is a barren woman not a mother since all sentient beings are mothers? To be a mother is it necessary to give birth to a child? Do we not meditate on all sentient beings as having been our mothers, on the need to repay their kindness, and so forth? If there does not exist the son of a barren woman is there not a son who is a result of a barren woman?" If someone says there is not, one asks: "Is there not a son who is subsequently born to a barren woman? Is the definition of a result not that which arises later and the definition of a cause that which arises previously? Does a barren woman not assist sentient beings? Does she not assist sons and daughters?" If someone says that she does assist sons and daughters, one

says that since there are sons and daughters who are assisted and who will be assisted, the barren woman is a cause and the sons and daughters are the result since the definition of a cause is "that which assists" and the definition of a result is "that which is assisted." These definitions are also related to our daily life in regard to someone who adopts a child and then assists him or her.

To those with cataracts there is the appearance of falling hair, although the falling hair is unproduced. In a similar way, forms and so forth are seen to exist inherently although they do not. Why are forms and so forth seen to exist inherently? It is due to being afflicted with ignorance. The Prasangika Madhyamikas say that the lower schools should first debate with those with cataracts and then later on with those who have ignorance.

Yogis comprehend that phenomena lack inherent existence and the Prasangika Madhyamikas explain in accordance with this comprehension. Chandrakirti reduces his own pride by saying: "We engage in explaining things as lacking inherent existence in terms of what is comprehended by a yogi's exalted wisdom... We do not do so based on our own knowledge because our awareness eye is obscured by the cataract of ignorance." What ground has Chandrakirti reached? In some texts it says that Chandrakirti was on the path of accumulation at the time he composed this text.

QUESTIONS AND ANSWERS

Student: Is there any difference between conventional truth (*kun rdzob den pa*) and nominal truth (*tha snyad den pa*) or conventional existence (*kun rdzob yod pa*) and nominal existence (*tha snyad yod pa*)?
Geshe Jampa Gyatso: If something exists conventionally it is not necessarily a conventional truth, and if something exists nominally it is not necessarily a nominal truth, for example, a true cessation. Nominal truth and conventional truth are the same as are conventional existence and nominal existence. A true cessation exists nominally and exists conventionally, but is it a conventional truth? It is not. If it exists nominally it exists conventionally and vice versa but if it exists conventionally it is not necessarily a conventional truth, this having a particular etymology. Some say, however, that if it exists conventionally it is a conventional truth. To this, one says: "It follows that a true cessation does not exist because it does not exist nominally." A true cessation does not exist as an object concordant with conventionalities. Therefore, what is a nominality? Reasoning in this way, nominality come to mean the same as conventionality. Usually, the etymology of the word 'conventional' (*kun rdzob*) is said to be "that which acts to obscure." Nominalities (*tha snyad*) are of two types: (i) nominalities expressed by a term and (ii) nominalities labeled by conceptuality.

Student: In one of the transcripts (week 29), it is mentioned that in Buddhism there are four great seals of conduct and four great seals of view. What are the four great seals of conduct?
Geshe Jampa Gyatso: They are explained in Khedrup Je's *Cleansing the Subduer's Doctrine* and in the Gomang text books. One of the four is to offer ablution to Dzambala, the deity of wealth, another is to give handprint tormas to the five hundred types of hungry ghosts. I do not remember the other two.

Student: For Prasangika, what valid cognizer establishes external phenomena?
Geshe Jampa Gyatso: Both direct valid cognizers and inferential valid cognizers establish external phenomena. The Prasangika Madhyamika system sets out four types of inferential valid cognizers including an inferential valid cognizer realizing by means of an example. Although external objects are established by direct valid cognizers, for the Prasangika Madhyamikas a direct valid cognizer is not necessarily non-conceptual, it can also be conceptual. The Prasangika Madhyamikas also say that yogic direct valid cognizers exist in ordinary beings. Therefore, in brief, external phenomena are established by direct valid cognizers as well as by inferential valid cognizers.

Student: One of the transcripts (week 29) says: "According to the true aspectarian Chittamatrins when a foe destroyer who has a nirvana with remainder attains a nirvana without remainder, all conventionalities cease. That is, they assert that his continuum, which is a compounded phenomenon, ceases and *that all that remains is abidance in the sphere of phenomena*." Will Geshe-la please explain the latter part of this statement, that all that remains is abidance in the sphere of phenomena? Is this in accordance with the views of the true aspectarian Chittamatrins?
Geshe Jampa Gyatso: It does accord with the views of the true aspectarian Chittamatrins who assert three final vehicles. Thus, they say that when a hearer attains the nirvana of his vehicle he has attained a final vehicle. For them the term "without remainder" means that when a hearer foe destroyer dies all signs of compounded phenomena vanish because the base, the body, ceases. In fact, one text says: "Due to there no longer being a basis for the obstructions, the two obstructions are naturally eliminated." This is discussed in the sixth chapter of the *Supplement* in the context of a self of persons saying:

> *At the time of nirvana the self would definitely be annihilated.*
> *In the moments prior to nirvana, it would be produced and disintegrate.*
> *Since the agent does not exist, its results would not exist.*
> *That accumulated by another would be consumed by someone else.* [6.128d]

The Prasangika Madhyamikas say that when there is what is attained (nirvana) there is no attainer (the foe destroyer) and when there is the attainer there is no object attained because when a nirvana without remainder is attained the aggregates cease. The Prasangika Madhyamikas ask the Chittamatrins: "Does a Mahayanist attain a nirvana without remainder?" Perhaps the Chittamatrins would say that he does not because a Mahayanist's nirvana is not a nirvana without remainder because a buddha superior abides as an enjoyment body until cyclic existence is emptied. Thus, a nirvana without remainder is only asserted by the Chittamatrins in the context of a hinayana nirvana and not in the context of the mahayana. Therefore, the terms 'with remainder' and 'without remainder' do not apply to the mahayana but only apply to the hinayana.

On the other hand, the Prasangika Madhyamikas define a nirvana with remainder and nirvana without remainder quite differently. According to the lower schools "the remainder" is the suffering aggregates, whereas for the Prasangika Madhyamikas "the remainder" is the appearance of true existence. Thus, in the Prasangika Madhyamika system a nirvana with remainder is the state of having attained a nirvana in which there is still the appearance of true existence, whereas a nirvana without remainder is the state of having attained a nirvana that no longer has the appearance of true existence. In brief, this means that the two types of nirvana correspond respectively to the period of meditative equipoise and to the period of subsequent attainment.

According to the true aspectarian Chittamatrins, when a buddha superior shows the aspect of passing away do the signs of compounded phenomena cease? Is the buddha who is a person severed completely and is the continuity of his aggregates severed? Think about this.

Student: According to Chittamatra, which consciousnesses – sense, mental, yogic, or self-cognizing – can be valid cognizers?
Geshe Jampa Gyatso: All four can be valid cognizers. In fact, sense consciousnesses, mental consciousnesses, yogic consciousnesses, and self-cognizers can be either valid or not valid. Among the four, some can also be subsequent cognizers. In general, for the lower schools such as the Chittamatrins a subsequent cognizer cannot be a valid cognizer because it is not a new incontrovertible knower with respect to its object. This is because a subsequent cognizer realizes an object that has already been realized.

Student: Both the Charvakas and Western science believe that only direct perception or observation is valid. According to Western science, the mind is produced by physical processes (i.e., activities of the brain) due to which there is no need to posit a previous life as a cause of the mind of the present life. How would Buddhism prove that the mind is not physical? How would Buddhism prove that the mind must have a cause that is not physical?
Geshe Jampa Gyatso: Western science explains the physical to be that composed of atoms. According to science there are various functions of the brain that produce memory and so forth. However, although science does not talk about the mind directly they do refer to it in terms of intelligence, wisdom, and so forth. Therefore, I think that they do not say that the entity of intelligence is physical.
Student: Science says that there is nothing other than nerves, chemicals, etc. which explain all the functions of the mind.
Geshe Jampa Gyatso: The Buddhist teachings say that mind is not form and thus cannot be pointed to. Although mind is not form, it does have the capacity to perceive. Mind or consciousness is a complex subject that is extensively presented in the scriptures. However, it is true that when the brain is damaged it does have an effect on the person's ability to think and function. Based on this it would appear that the brain is fundamental, however, we need to examine the relationship of the mind and the brain. When the nervous system of the brain is damaged, the movement of the subtle winds does not flow properly. Due to this the minds mounted on these winds do not function normally. This corresponds with the explanation in tantra which says that when the mount is damaged the mind mounted on it no longer functions well. We can take the example of electricity; the electrical wire is like the winds and the electric current is like the mind. When the wire is cut the electricity is also cut off because the mount, the wire, of the electricity is damaged. Similarly, the mind does not function well when its mount, the subtle winds, are damaged. This is from the point of view of tantra.

From the point of view of sutra it is said that a sense consciousness, such as an eye consciousness, stops functioning well when the eye sense power is damaged. Likewise, if the ear consciousness does not function it is because the ear sense power which is clear matter is damaged. I cannot say more than this.

END

Monday afternoon, 22 January 2001

Chandrakirti's autocommentary says:

> As was taught [in *Sutra*[96]]:
>
> That the aggregates are isolated from self-nature and just empty,
> Enlightenment is empty of self-nature and just isolated [and][97]
> Those who practice are also empty of self-nature,
> Is known by those possessing exalted wisdom, not by the childish.
>
> Exalted wisdom will be cognized as empty of self-nature.
> Having cognized the self-nature of knowables as empty,
> When realized to be like knowers
> They are said to be practicing the enlightenment-path.
>
> Therefore, this is not disputed and investigated with yogis, for they do not see self-nature of any phenomena, either deceptively or ultimately.

"The aggregates are isolated from nature and just empty" means that they do not exist inherently. Enlightenment is also empty of inherent existence. 'Those who practice' refers to those who see the nature of phenomena, the aggregates and so forth, to be like that. Those who have exalted wisdom know the nature of phenomena, whereas the childish do not. Exalted wisdom and objects of knowledge are also empty of inherent existence. Similarly, knowers are empty of inherent existence. This is the practice of the path to enlightenment.

Chandrakirti says that the nature of phenomena is not to be disputed and investigated with yogis since they know the nature of phenomena, that is, that they lack inherent existence both conventionally and ultimately.

Chandrakirti's autocommentary says:

> "Give up[98] the view to dispute and investigate with those having cataracts. At first, this is to be greatly disputed and investigated with yourself." [The root text] explains:
>
> *If dreams along with the city of gandharvas,*
> *Water of a mirage, magical illusions, reflections, and so forth,*
> *The unproduced, are perceived although similarly not existent,*
> *How does that happen for you? It is unreasonable.* [6.109]
>
> For example, although that observed in a dream and the son of a barren woman are alike in just not existing, the dream will be perceived, the son of a barren woman will not. Likewise, regarding also the city of the *gandharvas* (smell-eaters). "Water of a mirage" means "water in a mirage." Likewise, also regarding magical illusions. The phrase "and so forth" of "reflections and so forth" includes echoes, emanations, and so forth. For example, although being empty of self-nature, they are seen; the son of a barren woman is not. Therefore, first dispute and investigate with oneself, and then later dispute and investigate with me.

[96] Source unknown.

[97] This line is missing in Poussin, p. 219.

[98] LTK, p. 344, 5, has *zhog* (give up) for '*dug*.

'Those having cataracts' refers to those who have the cataracts of ignorance. Chandrakirti says that, having given up disputing with them, you should first dispute and investigate the nature of phenomena with yourselves.

Although dreams, mirages, magical illusions, reflections, and so forth are seen, they are unproduced in that they do not exist inherently. Thus, although they do not exist, it is admissible that they be seen.

Why is the son of a barren woman not taken as an analogy for the lack of inherent existence? It is because the son of a barren woman does not exist and is not seen. On the other hand, you accept that a dream is seen. Why do you make a distinction between a dream and the son of a barren woman? Likewise, you say that a city of gandharvas exists, as does the water of a mirage and magical illusions, and that they are the same in not existing inherently. Therefore, all of them can be taken as analogies for the lack of inherent existence. "The phrase 'and so forth' of 'reflections and so forth' includes echoes, emanations, and so forth." Echoes are sounds that subsequently resonate in an empty house or cave. Emanations means the creation of emanations, whereas magical illusions are due to mantras, a substance, and so forth.

"For example, although being empty of self-nature, they are seen, the son of a barren woman is not." Dreams and so forth, although empty of inherent existence, are seen, whereas the son of a barren woman is not seen. Why is that? Chandrakirti says that having disputed and investigated with yourselves, that is, having thought this over well, you should then dispute and investigate it with others.

Chandrakirti's autocommentary says:

> *Although these are thus without production in thusness*,
> *Since they are not like the son of a barren woman – not being*
> *The object of the perception of the world –*
> *Therefore*, *this statement is indefinite.*[99] [6.110]
>
> – is also able to be expressed.

The lower schools argue that if forms and so forth do not inherently exist, they would be completely non-existent, like the son of a barren woman. They say that the son of a barren woman is not seen in the world because it is not inherently existent, therefore, if forms and so forth were not inherently existent they would also not be seen in the world, whereas they are seen. When the lower schools fling the consequence "Forms and so forth, as the subject, it follows that they would not be seen in the world because they do not exist inherently, like the son of a barren woman," the Prasangika Madhyamikas respond saying "This statement is indefinite," meaning that the reason does not pervade the predicate because if it does not exist inherently it is not pervaded by not being seen. In order to prove this they set out the analogies of dreams and so forth.

Chandrakirti's autocommentary says:

> In the scriptural passage taught by the Bhagavan saying:[100]
>
> Migrators are explained as dreamlike,

[99] I.e., the statement that "if something is non-existent ultimately, like the son of a barren woman, it will not be seen even conventionally," is an indefinite reason. LTK, p. 344, 15-16.

[100] The source of this quotation has not been found. The being being talked to, Druma (Tib: *ljon.pa*), is a king of the *kinnaras* (Tib: *mi.'am ci*) – spirits who appear to be human – and a frequent personage at the Buddha's teachings.

They are not presented as reality.
Things do not exist in any dream,
[Yet] they are strongly settled upon [by those] with wrong awareness.

Just as, although the gandharvas' city appears,
The city does not exist in the ten directions nor elsewhere,
The city is thoroughly posited by a mere name –
The Sugata sees migrating beings similarly.

Although seen by those having discrimination of water,
Water in a mirage is non-existent.
Similarly, disturbed by total imagination,
What is not attractive is conceived as attractive.

In an extremely clear mirror,
Just as a reflection without self-nature
Appears, similarly,
Druma, all phenomena are to be known.

– while forms and so forth are not inherently produced, they are indeed objects of the world's perception. Since the son of a barren woman is not [an object of the world's perception], this [statement of yours] is indefinite for you on its own.

This just does not exist as a dispute for us, for we do not accept forms and so forth as inherently produced conventionally and then refute them ultimately.

Although migrating beings appear to exist inherently, they do not exist inherently, for example, like a dream. In brief, things do not necessarily exist the way they appear. For example, in a dream we see horses, elephants, a mansion and so forth but they do not exist. Even though we experience pleasure in a dream due to various objects they do not exist in reality. This indicates that whatever appears does not necessarily exist. Although forms and so forth appear to exist inherently, they do not necessarily exist in that way.

"They are not presented as reality" means that what is seen in a dream is not indicated to be reality or to be true. "Things do not exist in any dream" means that the objects which are seen in a dream do not exist. If someone were to think that they exist, this would be a wrong awareness. The meaning of this verse is that forms and so forth do not exist inherently and if they are conceived to exist inherently this is a wrong awareness.

"Just as, although the gandharvas' city appears, the city does not exist in the ten directions nor elsewhere" means that, although it appears, it is not found to exist. Where are these cities? It is generally said that if one cleans an offering bowl well and places it empty and right side up on a table, the gandharvas (smell-eaters) immediately form a city inside the bowl because of being attracted by the light shining from the bowl. If one then pours water into that bowl one will destroy their city and thereby create a negative action. I heard this when I was very young, but, in fact, when offerings are made it is taught that one should always begin by pouring a small bit of water into the bowl before placing it on the altar.

"The city is thoroughly posited by a mere name – the Sugata sees migrating beings similarly." The buddhas see migrating beings similarly.

"Although seen by those having discrimination of water, water in a mirage is non-existent. Similarly, disturbed by total imagination, what is not attractive is conceived as attractive. In an extremely clear mirror, just as a reflection without self-nature appears, similarly, Druma, all phenomena are to be known." Just as the reflection of things appears very clearly in a clean mirror,

likewise, the lack of true existence appears very clearly to those who have the exalted wisdom realizing the lack of true existence.

There is a sutra called the *Sutra Requested by Horse-Headed Druma*, Druma being a king of the gandharvas. In this sutra it says: "The father is skill in means and the mother is the perfection of wisdom." Also in the *Ornament for Clear Realizations* it says: that mother-like faith is to be generated first, then all excellent qualities are to be increased by protecting it. First a mother gives birth to a child and then protects and nourishes him, likewise, faith gives birth to excellent qualities which it then protects and cultivates.

"While forms and so forth are not inherently produced, they are indeed objects of the world's perception" means that, although forms and so forth do not exist inherently, they are perceived by the worldly. "Since the son of a barren woman is not [an object of the world's perception], this [statement of yours] is indefinite for you on its own." That it is indefinite means that from among the three, an indefinite reason, a non-established reason, and a contradictory reason, it is an indefinite reason.

"This just does not exist as a dispute for us, for we do not accept forms and so forth as inherently produced conventionally and then refute them ultimately." The Prasangika Madhyamikas do not say that forms and so forth are inherently produced conventionally and are not inherently produced ultimately. In brief, according to the Prasangika Madhyamikas forms and so forth are not inherently produced either conventionally or ultimately.

Lama Tsongkhapa's *Illumination* (Tibetan text page 327-8) says:

> As sutra says:
>
> > The aggregates are devoid of nature and just empty,
> > Enlightenment is empty of nature and just devoid,
> > Also who practices is empty of nature;
> > Those with exalted wisdom know this, the childish do not.
> >
> > Exalted wisdom is to be cognized as empty of nature
> > Because it is said "Having cognized the nature of objects of knowledge
> > As empty, when they are realized to be like the knowers,
> > That is the practice of the path to enlightenment."
>
> Therefore, this is not to be disputed and investigated with yogis for they do not see any nature of establishment by way of its own entity in any phenomena even conventionally, nor do they see it whatsoever even ultimately.

All the phenomena ranging from forms through an exalted knower of all aspects are empty of inherent existence. These total 108 phenomena of which 53 are thoroughly afflicted phenomena and 55 are completely pure phenomena. There is nothing that is not included in these two groups. Also the person who sees the reality of these 108 phenomena is empty of inherent existence. Who is this person? It is one who possesses the uncontaminated exalted wisdom directly realizing emptiness. On the other hand, the nature of phenomena is not seen by the childish. The childish are ordinary beings. A child compared to an adult has little knowledge, similarly, ordinary beings have little knowledge compared to superiors. The exalted wisdom knowing that phenomena lack inherent existence is that which enables one to attain enlightenment.

"This is not to be disputed and investigated with yogis" means this is not to disputed and investigated with superiors who have realized that phenomena do not exist inherently either conventionally or ultimately.

Lama Tsongkhapa's *Illumination* (Tibetan text page 328) says:

The explanation of the statement "Setting aside disputing and investigating with those who have cataracts, for a while dispute and investigate this with yourselves" is:

When you see the unproduced – dreams along with the cities of smell-eaters,
The water of a mirage, magical illusions, reflections, and so forth –
Although they are the same in just not existing,
Why for you is there that? That is unreasonable. [6.109]

[At first] you should dispute and investigate with yourselves stating "*When* you *see the unproduced*, that is, the non-existent – the houses of *dreams along with the cities of smell-eaters* – and see the men and women and so forth emanated by *magical illusion*ists, *the water in a mirage*, a face in a *reflection and so forth*, that is, and see echoes, emanations, and so forth, *although they are the same in just not existing, why for you are* they seen but the son of a barren woman is not seen*? That is unreasonable.*" Then, later, you should dispute and investigate this with me.

The houses of dreams are seen but do not exist. Similarly, if, on the basis of this pen, I were to create a magical emanation by way of performing a particular ritual involving mantras and so forth you would then see a beautiful young woman or a handsome young man and, even though he or she does not exist, you would then become attached to him or her. I have already told a similar story from sutra about a father and his son who went to see a magical show during which the magician emanated a beautiful woman with whom the son fell in love.

Another analogy is the reflection of a face in a mirror which appears to be an actual face but is not. Likewise, also echoes, emanations, and so forth do not exist in the way that they appear.

Lama Tsongkhapa says: "Although they are the same in just not existing, why for you are they seen but the son of a barren woman is not seen?" therefore, one should first dispute and investigate this with oneself, and then only later on with us.

Lama Tsongkhapa's *Illumination* (Tibetan text page 328) says:

Although they are similarly not produced in suchness,
Because it is not that they are not objects of worldly sight,
As is the son of a barren woman,
That statement is indefinite. [6.110]

Therefore, *although they*, forms and so forth, *are similarly* also *not produced in suchness, because it is not that they are not objects of worldly sight, as is the son of a barren woman, the statement* "If they do not exist ultimately, conventionally they are also not seen like the son of a barren woman" *is* an *indefinite* reason, that is, it is mistaken.

The Prasangika Madhyamikas say that the reason given by the lower schools is an indefinite reason. The reason is: forms and so forth would not be seen by the worldly because they do not exist inherently, like the son of a barren woman.

Lama Tsongkhapa's *Illumination* (Tibetan text page 328) says:

The Bhagavan also said [in the *Meeting of Father and Son Sutra*]:

I explain migrating beings to be like dreams,
I do not present them as suchness.
Those with wrong awarenesses strongly adhere to
Things that do not exist even in a dream

Just as though a city of smell-eaters appears,
The city does not exist in the ten directions nor elsewhere,
But is thoroughly posited by the mere name 'city';
Similarly, does the Sugata see migrating beings.

Even though it is seen by those discriminating water,
The water in a mirage does not exist.
Similarly, disturbed by thorough conceptualization,
What is not attractive is conceived to be attractive.

Just as in a very perfectly pure mirror,
Reflections which lack
Inherent existence appear, likewise,
Druma, understand phenomena.

These passages say that forms and so forth, while not being inherently produced, are apprehended objects of the world. Since the son of a barren woman is not [an apprehended object of the world], that [reason] is indefinite for you yourselves. This does not exist as an argument for us because we do not refute forms and so forth ultimately through asserting them to be inherently produced conventionally.

Tuesday morning, 23 January 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 329) says:

3B1C-2B3E-2A2B Presenting a summary of that

Chandrakirti's autocommentary (Tibetan text page 140) says:

If asked: Why?

Just as:

The son of a barren woman has no production
By its own self-nature[101] *in thusness and in the world.*
Likewise, all these things are unproduced
Intrinsically in the world [and in] thusness. [6.111]

Because it is like this:

Therefore, the Teacher spoke thus: "All phenomena are
Primordially pacified and free of production,
Naturally completely passed beyond sorrow."
Therefore, production never exists. [6.112]

Because there are such scriptural citations, therefore, production never exists.

The son of a barren woman does not exist either nominally or ultimately. Forms and so forth exist conventionally in the world but do not exist ultimately. For this reason the Teacher taught that phenomena are pacified from the start, free from inherent production, and naturally completely passed beyond sorrow. Lama Tsongkhapa's *Treatise Differentiating the Interpretable and Definitive* says that all phenomena are entitiless, unproduced, unceasing, quiescent from the start, and are, therefore, naturally thoroughly passed beyond sorrow.

There are four types of nirvana (passed beyond sorrow):
1. nirvana with remainder,
2. nirvana without remainder,
3. natural nirvana, and
4. non-abiding nirvana.

[101] Tib: *rang.gi bdag.nyid kyis.*

Here "naturally completely passed beyond sorrow" refers to natural nirvana which is a nirvana only from an etymological point of view. The Buddha said that because phenomena are pacified from the start and free from production, they are naturally thoroughly passed beyond sorrow.

Chandrakirti's autocommentary says:

> To express [such a] citation, [the *Cloud of Jewels Sutra*] says:
>
> > When the Dharma wheel was turned, you Protector, indicated phenomena that are
> > Primordially pacified and unproduced, naturally passed beyond sorrow.
>
> That is, because of being objects of pacified exalted wisdom, all phenomena are pacified.
>
> If asked further: Why are [they] objects of pacified exalted wisdom?
>
> [The text] mentions "unproduced," meaning "because unproduced." Because not [inherently] produced, they are, therefore, objects of pacified exalted wisdom.

"Unproduced" means "not inherently produced."

Chandrakirti's autocommentary says:

> If asked further: Why [are they] unproduced?
>
> Because [the text] mentions that they are "naturally passed beyond sorrow." If something had self-nature, entity, and, if that were produced, that self-nature would also exist. Since it does not, what will be produced? Due to this, [phenomena] are indicated to be unproduced at any time; they will not arise later from what was not arisen before and what has arisen will not transform again later.

"Passed beyond sorrow" refers to the object of negation, inherent existence, that is, because phenomena are passed beyond inherent existence, they are naturally thoroughly passed beyond sorrow. On the other hand, if things had inherent existence, they would be inherently produced. But, because phenomena are not inherently existent, they are not inherently produced.

Phenomena, forms and so forth are indicated to not be inherently produced at all times. "They will not arise later from what was not arisen before and what has arisen will not transform again later" because they do not exist inherently.

Chandrakirti's autocommentary says:

> If asked: Then, what is the case?
>
> [They are] naturally completely passed beyond sorrow. By mentioning "primordially" it is not that they are unproduced on only the occasion of the yogi's exalted wisdom.
>
> If asked: Then, what?
>
> It indicates that "before that, also on the occasion of worldly convention, those *phenomena* are not produced by their own self-nature[102]." The term "primordial," a synonym of first, should be understood as "expressing the occasion of worldly convention."

[102] Tib: *rang.gi bdag.nyid kyis.*

"By mentioning 'primordially' it is not that they are unproduced on only the occasion of the yogi's exalted wisdom" means that phenomena do not exist inherently right from the beginning or primordially. Therefore, forms and so forth never exist inherently or by way of their own entity.

Chandrakirti's autocommentary says:

> Thus, saying "At the time of turning the Dharma wheel, you indicated phenomena…," the arya bodhisattva Sarvamvaranavishkambini praised the Bhagavan by way of expressing the perfection of qualities.

Lama Tsongkhapa's *Illumination* (Tibetan text page 329) says:

> QUESTION: In your system, why do you not refute forms and so forth ultimately through observing them to be inherently produced conventionally?
> RESPONSE:
>
> *Just as the son of a barren woman is without production*
> *By its own nature in suchness and does not exist even in the world,*
> *Likewise, all things are not produced*
> *By their own entity in the world and in suchness.* [6.111]
>
> Just as *the son of a barren woman is without production by its own nature in suchness* and *does not exist even in* the conventions of *the world*, *likewise, all things*, forms and so forth, *are not produced by their own entity in* both the conventions of *the world and in suchness*. By stating this, with respect to things that exist in the perspective of the mistaken [awareness] that apprehends them to be produced by way of their own entity, the Prasangikas do not at all assert that they exist conventionally. However, it is to be remembered that "production by way of its own entity" is also clearly to be affixed as a qualification to the object of negation.
>
> *Therefore, in this way the Teacher taught "All phenomena*
> *Are quiescent from the start, free from production, and*
> *Naturally thoroughly passed beyond sorrow."*
> *Therefore, production is always non-existent.* [6.112]
>
> For that reason, this being the case, *therefore, in this way the Teacher* Bhagavan *taught "All phenomena are quiescent from the start, free from* inherent *production, and naturally thoroughly passed beyond sorrow*." *Therefore*, inherent *production is always non-existent*.

The son of a barren woman does not exist in worldly conventions and does not exist ultimately. Likewise, phenomena do not exist inherently either conventionally or ultimately. Forms and so forth are not produced by way of their own entity. Hence, conceiving forms and so forth to be produced by way of their entity is a mistaken awareness. That phenomena exist by way of their own entity is never accepted by the Prasangika Madhyamikas. One should keep in mind at all times that the object of negation is qualified by "production by way of its own entity." Thus, whenever the text says "production" it should be understood to be qualified by the words "by way of its own entity."

The Buddha taught that all phenomena are quiescent from the start and free from inherent production. For this reason, forms and so forth are naturally thoroughly passed beyond sorrow. Therefore, Lama Tsongkhapa says: "inherent production is always non-existent." "Always" is mentioned here because there are some things that exist in the world at times and do not exist at other times; for example, some flowers blossom only in the spring and never blossom in the winter. There are many such things, the production of which depends on the season. On the other hand, inherent production does not exist at all times, that is, it never exists.

Lama Tsongkhapa's *Illumination* (Tibetan text page 330) says:

The way in which this is taught is that the *Cloud of Jewels Sutra* says:

> When you turned the wheel of Dharma,
> You, Protector, indicated phenomena that are
> Quiescent from the start and unproduced,
> Naturally passed beyond sorrow.

The suchness of phenomena is quiescent because of being the object of quiescent exalted wisdom. The reason for this is that [phenomena] are not inherently produced. Also the reason for this is that if something were established by way of its own nature, or by way of their own entity, it would be produced, but, since that nature also does not exist, what is produced? Because of that, [phenomena] have passed beyond sorrow, that is, they are completely pure.

If something were inherently existent it would be produced without depending on anything. Therefore, if it is inherently produced, it must have been produced from the start, however, phenomena such as this are known to not exist.

Lama Tsongkhapa's *Illumination* (Tibetan text page 330) says:

Stating "from the start" [indicates] it is not that phenomena are unproduced only on the occasion of a yogi's exalted wisdom. Why is that? Stating "Before that, even on the occasion of the conventions of worldly beings, phenomena are not produced by way of their own nature" indicates this. The term "start" is a synonym of the term "first."

The fact that phenomena are not produced inherently and do not exist inherently is not fabricated by a yogi's exalted wisdom, rather they are so from the start. Thus, when it is said in the world "There is a pot" or "There is pillar," the existence of the pot and the pillar depends on worldly conventions; they are not inherently existent from the start. Because of this, they are produced in dependence on worldly conventions and are established in dependence on the hardships borne in making them and so forth.

Chandrakirti's autocommentary says:

This is just not debated by our own sects.

If asked: Why?

Because they accept that:

> *Just as these vases and so forth do not exist in reality*
> *And exist in the renown of the world,*
> *Since it is likewise for all things, they*
> *Do not follow as similar to the son of a barren woman.* [6.113]

Pots and so forth are asserted by the lower schools to not exist in suchness or truly, but to exist only in the renown of the world. Because pots and so forth exist conventionally, they are not like the son of a barren woman.

Chandrakirti's autocommentary says:

Suppose [the following] is considered: If the supports of imputation, earth, water, fire, wind, visual form, smell, taste, tactility, and so forth, exist, it is therefore reasonable to say that "imputation as a base has a cause." Yet for those according to whom all phenomena are only mere

> imputations (i.e., the Madhyamika school)[103] for whom the substantial supports of imputation do not exist at all, the logical consequence [that phenomena are] like the son of a barren woman is just irreversible.

Pots and so forth are composed of eight particles: particles of earth, water, fire, wind, visual form, odor, taste, and tangibility. These are the basis of imputation of 'pot.' Pots, as well as all other gross forms, are an aggregation of these eight particles. Thus, these eight particles are the cause for the pot or the basis of imputation of pot.

Since in the Prasangika Madhyamika system all phenomena are only merely imputed and do not exist substantially, nothing exists substantially. They say that if something were substantially existent it would also be truly existent because it would be established without depending on name and conceptuality, whereas all phenomena depend on name and conceptuality. That phenomena are merely posited by terms and conceptuality is the dependent-relation set forth by the Prasangika Madhyamikas. Thus, the dependent-relation of the Prasangika Madhyamikas is very subtle compared to the dependent-relation of the lower schools who say that dependent-relation means either that phenomena depend on causes and conditions or that they depend on their parts.

Therefore, the Prasangika Madhyamikas say that all phenomena are merely imputed and are, therefore, imputedly existent. For this reason, they say that a basis of imputation cannot be substantially existent, whereas the lower schools say that a basis of imputation must be substantially existent. For the lower schools a basis of imputation is substantially existent, while its imputed qualities are imputedly existent.

According to Bhavaviveka, the person is not substantially existent but is imputedly existent, while the basis of imputation of the person – the illustrative mental consciousness – is substantially existent. Thus, Bhavaviveka says that although the person in general does not exist substantially, its basis of imputation, the example of the person the illustrative mental consciousness, is substantially existent. For this reason, it is important to understand the difference between substantial existence and imputed existence. For the Prasangika Madhyamikas if it is substantially existent it would exist from the start, whereas for the lower schools this is not the case. In the lower tenet systems a substantial existent is defined as: a phenomenon that, in order to appear to an awareness, does not need to depend on the appearance of another phenomenon.

Chandrakirti's autocommentary says:

> That too is unreasonable because one is unable to establish a substantial support of imputation. As was said [in the *Four Hundred Verses*: 14.15]:[104]
>
> > Just as vase does not exist apart from form and so forth,
> > Similarly, form also does not exist apart from wind and so forth.

Gross objects such as pots necessarily depend on their basis of imputation, a substance or particles. Without this pots and so forth would not exist. For this reason, Aryadeva says "form also does not exist apart from wind and so forth."

Chandrakirti's autocommentary says:

> Similarly, it is taught [in the *Precious Garland*: verses 84-85]:[105]

[103] LTK, p. 347.

[104] Poisson incorrectly attributes this as verse 14, p. 275.

> Earth, water, fire, and wind, each are not existent in entitiness.
> Without any three, each is non-existent; without one, also three are non-existent.
>
> If without three, one is non-existent; without one, also three are non-existent,
> An individual itself does not exist; how will the composite be produced?

Jeffrey Hopkins' translation in *Buddhist Advice for Living and Liberation* says:

> Earth, water, fire and wind
> Individually also do not inherently exist.
> When any three are absent, an individual one does not exist.
> When one is absent, the three also do not exist.
>
> If when three are absent, an individual one does not exist
> And if when one is absent, the three also do not exist,
> Then each itself does not exist.
> How could a composite be produced?

Earth, water, fire, and wind are not established by way of their own entity. When the basis of imputation of pot, an earth particle, exists, it is always accompanied by the other three particles. There cannot exist one without the other three, and without one the other three also do not exist. In conclusion, a pot is not produced from an inherently existent aggregation of particles.

Tuesday afternoon, 23 January 2001

Chandrakirti's autocommentary says:

> Just as the impermanent is not asserted to be produced from the permanent, similarly, it is also unreasonable for the non-substantially existent to be produced from the substantially existent.

The Prasangika Madhyamikas say that a permanent cause does not produce what is impermanent and a substantially existent cause does not produce what is not substantially existent. On the other hand, the lower schools accept this because they assert that from a substantially existent cause there arises what is imputedly existent. The Prasangika Madhyamikas do not agree with this. "It is also unreasonable for the non-substantially existent to be produced from the substantially existent" can also be read "A non-inherently existent or imputedly existent result cannot arise from an inherently existent or substantially existent cause."

Chandrakirti's autocommentary says:

> As said [in the *Four Hundred Verses*: 9.11]:[106]
>
> How could a thing arisen from what is permanent be impermanent?
> Discordant characters of cause and effect are never perceived.

---

[105] Poussin does not attribute this citation in either the Tibetan or his translation.

[106] The Tibetan translations of this quotation in the *Autocommentary* and the *400 Stanzas* differ slightly. In the *400 Stanzas*: *dngos po rtag pa las skyes pa, ,ci lta bur na mi rtag 'gyur, ,nam yang rgyu dang 'bras bu gnyis, ,mtsan nyid mi mthun mthong ma yin* – hence the slightly different translations in Lang, p. 91, and Sonam, p. 208. Poisson does not attribute the stanza to the *400 Stanzas* but mentions a similar stanza in *Abhisamayalamkaraloka*.

It cannot be that a cause is permanent while its result is impermanent. In short, a result does not arise from a discordant cause. The lower schools also refute production from discordant causes and production without causes.

Chandrakirti's autocommentary says:

> Therefore, in that way, for example, a mere imputed reflection is observed in a mirror in dependence on the collection of an imputedly existent face and so forth; a house is imputed in dependence on imputedly existent pillars and so forth and, similarly, a forest is imputed having the support of trees. Just as in a dream, a sprout having an unproduced nature is observed to be produced from a seed having an unproduced nature, similarly, it is reasonable for the imputation of any imputedly existent thing also to have the support of imputedly existent things.

Here Chandrakirti explains the meaning of imputedly existent by setting out some examples. The reflection of a face arises in dependence on the collection of an imputedly existent face and so forth. Similarly, a home is imputed in dependence on imputedly existent pillars and so forth. "Similarly, a forest is imputed having the support of trees" means that many trees grouped together are called a forest.

Chandrakirti's autocommentary says:

> As was said [in the *Treatise on the Middle Way*: 17, verses 31-33]:[107]
>
> Just as when the Teacher emanated [emanations] through perfection of magic
> And those emanations also emanated again other emanations,
>
> Similarly, also whatever action is done [by] an agent is like a type of emanation,
> Like, for example, an emanation emanating another emanation.
>
> Delusions, actions, bodies, agents, and effects are
> Like the city of the gandharvas, a mirage, and a dream.
>
> – therefore, it is not to be debated.

What are the emanations emanated by the Teacher? There are very many since he can emanate whatever is necessary in order to fulfill the welfare of sentient beings, for example, emanating a ship for those who need a ship, a house for those who need a house, and so forth. These are skillful means for subduing sentient beings.

We already discussed the city of gandharvas earlier. A mirage is the appearance of water which arises from a hot sun shining on pale sand. A dream is something that is familiar to all of us.

Chandrakirti concludes: "Therefore, it is not to be debated."

Lama Tsongkhapa's *Illumination* (Tibetan text page 330) says:

> Our own schools do not dispute saying "If it does not exist ultimately, it also does not exist conventionally." Why is that?
>
> *Just as pots and so forth do not exist in suchness and*

[107] Poussin does not attribute this citation in either the Tibetan or his translation.

> *Do exist for the thorough renown of the world,*
> *Likewise, so too do all phenomena.*
> *Therefore, they do not follow as being similar to the son of a barren woman.* [6.113]
>
> Because they assert that, *just as pots and so forth do not exist in suchness*, that is, ultimately, *and do exist for the thorough renown*, that is, in the conventions, of *the world*, *likewise, so too do all phenomena. Therefore*, when they do not exist ultimately, *they do not follow as being similar to the son of a barren woman*.

The lower schools, that is, the Chittamatra and below, say that if it does not exist inherently it does not exist at all. If one were to debate this with the Chittamatrins, one could ask: "If it does not exist ultimately does it also not exist conventionally?" If they say accept this, one says: "Kor sum! Space, as the subject, it follows that it does not exist conventionally because it does not exist ultimately, because it is an imputational factor." Space is an imputational factor. If it is an imputational factor is it necessarily imputedly existent? What about the person? Is it an imputational factor? The person, as the subject, it follows that it does not exist ultimately because it exists imputedly.

Lama Tsongkhapa's *Illumination* (Tibetan text page 330) says:

> As is explained in [Vasubandhu's] *Treasury of Knowledge*:
> Whatever is such that the awareness of it no longer operates
> When it is destroyed or mentally dissected into other –
> Such as a pot and water – is conventionally existent.
> The rest are ultimately existent. [6.4]
>
> The commentary on the *Treasury of Knowledge* explains:
> That which by breaking it into parts the awareness of it no longer operates is conventionally existent; for example, a pot. When that is broken into bits the awareness of pot no longer operates. Also that which when mentally dissected into other phenomena the awareness of it no longer operates is conventionally existent; for example, water. When that is mentally dissected into other phenomena, form and so forth, the awareness of water no longer operates. That which, although destroyed, the awareness of it still operates and that which, although mentally dissected into other phenomena, the awareness of it still operates is ultimately existent; for example, form. Even though that is suitable to be finely broken into subtle particles [and] even though it is suitable to be mentally dissected into other phenomena, taste and so forth, an awareness of the nature of form still operates. Feelings and so forth should also be regarded similarly.

The *Treasury of Knowledge* mainly sets forth the tenets of the Vaibhashikas. Their definition of conventional truth is: a phenomenon that is such that, if it were broken or mentally separated into parts, the mind apprehending that object would cease. Their definition of ultimate truth is: a phenomenon that is such that, if it were broken or mentally separated into parts, the mind apprehending that object would not cease. Thus, a pot is a conventional truth because an awareness of pot no longer operates when it is broken into bits by hitting it with a hammer. Likewise, if a cup is broken the awareness of cup no longer operates. Ultimate truth is that which even when broken or mentally dissected, the awareness of it still operates.

The commentary on the *Treasury of Knowledge* sets out the example of water, this being the water that is contained in a pot. When the pot is broken, the water in it also dissipates due to which the awareness apprehending water no longer operates. Also if the water is dissected mentally, the awareness apprehending water no longer operates.

On the other hand, when form is mentally dissected, an awareness apprehending form still operates because the nature of form is still apprehended. The same is true of feelings and so forth.

This is because when feelings are dissected into various kinds of feelings, such as pleasant, painful, and neutral, the apprehension of the nature of feeling still remains.

Lama Tsongkhapa's *Illumination* (Tibetan text page) says:

> This means it is not appropriate to say "These schools [say] that, in general, if it does not exist ultimately, it does not exist conventionally." It does not present the two – (i) the way of existing as the two truths that is posited by them and (ii) what is posited by us – as being similar because what is posited by them as conventional existence is simply conceived to be the ultimate existence that is explained by the Madhyamikas.

According to the lower schools, in general if it does not exist ultimately it is not correct to say that it does not exist conventionally because there are examples of what does not exist ultimately but does exist conventionally, for example, in the Sautrantika system uncompounded space does not exist ultimately but does exist conventionally. According to this school, uncompounded space does not exist ultimately because it is not ultimately able to perform a function. This is because in the Sautrantika system the definition of ultimate truth is: a phenomenon that is able to perform a function ultimately. The definition of a conventional truth is: phenomenon that is unable to perform a function ultimately.

The way in which the lower schools explain conventional existence is similar to the way in which the Prasangika Madhyamikas explain ultimate existence. According to the lower schools what exists conventionally necessarily exists inherently because if it does not exist inherently it does not exist at all. Therefore, the lower schools posit both conventional truth and ultimate truth on the basis of their existing inherently, whereas for the Prasangika Madhyamikas inherent existence is ultimate existence.

Lama Tsongkhapa's *Illumination* (Tibetan text page 331) says:

> DOUBT: If it is suitable for that imputed as pot and so forth to have a cause or basis because (i) the four elements, the basis of imputing pot and so forth, (ii) the four evolutes, and so forth are substantially existent, then according to the Madhyamikas – for whom all phenomena are just mere imputations – the consequence that there is nothing that is a substantially existent basis of imputation, like the son of a barren woman, is not averted.

According to the lower schools the basis of imputation of a pot is the collection of the four elements and the four evolutes. The four elements are earth, water, fire, and wind, and the four evolutes are form, odor, taste, and tangibility. The lower schools say that the collection of these eight particles is substantially existent. However, this is not correct according to the Prasangika Madhyamikas because they say that the eight particles are also imputedly existent.

Someone says: "according to the Madhyamikas – for whom all phenomena are just mere imputations – the consequence that there is nothing that is a substantially existent basis of imputation, like the son of a barren woman, is not averted." For the Madhyamika school the basis of imputing pot cannot be substantially existent because it is merely imputed.

Student: Do the Vaibhashikas mention an imputed pot?
Geshe Jampa Gyatso: In order for pot to appear, something else must appear to the mind. That something else is "a bulbous-bellied, flat-bottomed water container."
Student: Then, would everything not be imputedly existent? For example, in order for the water element to appear it would be necessary for wet and moistening to appear.
Geshe Jampa Gyatso: That is different because that is the nature of water.

Student: What about "a bulbous-bellied, flat-bottomed water container"?
Geshe Jampa Gyatso: If it is bulbous-bellied, it is not necessarily a pot. If it is just bulbous-bellied and flat-bottomed it is not necessarily a pot, for example, a pot with the bottom broken due to which it does not hold water. It would follow that my own stomach is a pot because I am bulbous-bellied! In short, a pot is imputedly existent because it is imputed in dependence on other.

It would seem that a pot is defined here to be a gross aggregation of the eight particles. This gross aggregation of the eight particles is the cause or the basis of imputation. Perhaps it can be called a cause because due to it a pot arises.

According to the Prasangika Madhyamikas all phenomena are merely imputed. They say that there is no basis of imputation which is substantially existent. The lower schools say that if the basis of imputation of the pot does not exist substantially the pot would be like the son of a barren woman. The Prasangika Madhyamikas would not assert this.

Lama Tsongkhapa's *Illumination* (Tibetan text page 332) says:

> RESPONSE: That too is unreasonable because a basis of imputation cannot be proven to be substantially existent. For example, in dependence on the coming together of an imputedly existent face and so forth, a merely imputed reflection is observed. In dependence on imputedly existent pillars and so forth, a home is imputed. Similarly, that which has the basis of trees is imputed to be a forest. Just as in a dream the production of a sprout, which is the nature of being unproduced, from a seed, which has the nature of being unproduced, is observed; likewise, it is also suitable for the basis of imputation of all imputedly existent things to be imputedly existent things themselves.

The Prasangika Madhyamikas say: "a basis of imputation cannot be proven to be substantially existent." A reflection is a mere imputation that depends on the coming together of an imputedly existent face and so forth. "In dependence on imputedly existent pillars and so forth, a home is imputed." A pillar is imputed on that which is able to hold up a beam. In addition to pillars, a house is imputed on the basis of its walls and so forth.

"Similarly, that which has the basis of trees is imputed to be a forest." An area in which there are many trees is called a forest.

"Just as in a dream the production of a sprout, which is the nature of being unproduced, from a seed, which has the nature of being unproduced, is observed" means that from a non-inherently existent seed there arises a non-inherently existent sprout. Lama Tsongkhapa says: "likewise, it is also suitable for the basis of imputation of all imputedly existent things to be imputedly existent things themselves." According to the Prasangika Madhyamika system both the basis of imputation and the phenomena that is imputed are imputedly existent.

Student: According to Chittamatra is the imputedly existent pot inherently existent?
Geshe Jampa Gyatso: For the Chittamatrins it exists inherently, otherwise it would not exist at all. This is mentioned at the beginning of Lama Tsongkhapa's *Treatise Differentiating the Interpretable and Definitive*. The Chittamatra make a distinction between inherently existent and establishment by way of its own character. For example, imputational factors are inherently existent but are not established by way of their own character.

Wednesday morning, 24 January 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 332) says:

3B1C-2B3E-2A3 How to cease wrong conceptions that hold to an extreme by means of the very production that is dependent-arising

Chandrakirti's autocommentary says:

> It is mentioned here: If you refute production from self, other, both, and without cause also in both cases (i.e., the conventional and the ultimate), how can one ascertain consciousness, sprout, and so forth deceptively produced from ignorance, formations, seeds, and so forth?

Production from the four extremes has been refuted both in terms of the ultimate and in terms of the conventional. Thus, production from self, production from other, production from both, and causeless production do not exist either conventionally or ultimately. However, motivated by ignorance, conventionally karmic formations arise, from karmic formations a resultant consciousness arises, and so forth, and similarly, from the planting of a seeds a sprout arises, and so forth.

Chandrakirti's autocommentary says:

> I shall expound that:
>
> *Because things are not produced without cause,*
> *From the causes of Ishvara and so forth,*
> *Self, other, and both – therefore,*
> *There is thorough production in dependence.* [6.114]
>
> Because, in the manner that was explained, the production of things does not arise from the entities themselves; nor is there [production] from Ishvara, time, particles, self-nature, beings, Narayana (i.e., Vishnu) and so forth; nor is there production from self, other, and both – therefore, in dependence on this, that arises. Depend on merely that much in order to not eliminate the conventions of the world.

Although things are not produced without causes nor are they produced from self, other, or both, nor from Ishvara and so forth, conventionally sprouts are seen to arise from particular conditions and so forth. "Ishvara" is similar to the God of Christianity in that according to those who propound Ishvara to be the creator everything arises from a movement of his mind, and likewise, Christians propound that things arise from God's wishes. The Tibetan nomads talk about someone called Old Man of Worldly Existence who thinks "How nice it would be if so-and-so were here. How nice it would if I had such-and-such." One day this old man modeled a small human being out of butter then blew into its nostrils and called out "Human being," however, nothing happened. After that, he modeled a human being out of mud mixed with his own blood and blew into its nostrils and called out "Human being" to which the human being responded "Ah?" This said to be the way in which human beings came into existence. In fact, it is said that human beings are precious because they are made by the hands of Old Man of Worldly Existence. This Tibetan story is similar to that of God being the creator of human beings.

In short, things do not arise from entitiness, Ishvara, time, particles, nature, beings, Narayana, and so forth, these being what are propound by the various schools as the creator. For example, the Vaisheshikas propound particles to be the creator. Here "nature" refers to the general principal, while "beings" refers to the Old Man of Worldly Existence.

"Therefore, in dependence on this, that arises" means that because there is this, that arises; for example, due to ignorance karmic formations arise or due to a seed a sprout arises.

Chandrakirti's autocommentary says:

As the Bhagavan said [in the *Sutra of Ultimate Emptiness*]:[108]

> There, this is the designation of phenomena – thus, when this exists, that arises; due to this being produced, that is produced; due to the condition of ignorance about this, some formations...

– and so forth.

Chandrakirti quotes from sutra in order to establish his thesis that "in dependence on this, that arises." This quotation might be from the *Sutra of Dependent-Arising* (rather than the *Sutra of Ultimate Emptiness*).

Chandrakirti's autocommentary says:

Similarly, it is said [in the *Precious Garland*: 48]:[109]

> Since this exists, that arises, as short, for example, when long exists.
> Since this was produced, that is produced, as light, for example, by the arisal of a lamp.

Because long is posited in dependence on short – without which long could not be posited – long does not exist inherently. Likewise, due to a lamp, light is produced.

Chandrakirti's autocommentary says:

Also, in the *Treatise [on the Middle Way*, 8, verses 12-13]:[110]

> The agent arises dependent on that acted upon, and that acted upon, too, in dependence
> On that very agent. Except for that, a cause of establishment is not perceived.
>
> Appropriation should be known likewise because action and that acted upon are excluded.[111]
> The remaining things should be known by [analyzing] the agent and that acted upon.[112]

Only this much was taught, [production from the four extremes was not taught].[113]

Also the three – agent, that acted upon, and action – are posited in dependence on each other. Thus, there is no agent without the object acted upon and the action, no object without the agent and the action, and so forth.

Nagarjuna says: "Appropriation should be known likewise because that acted upon and agent are excluded." The spelling of the Tibetan word translated here as "excluded" (*bsal*) appears in the *Illumination* as "clarified" (*gsal*). If this is taken to be spelled incorrectly in Chandrakirti's text and therefore to read "Appropriation should be known likewise because that acted upon and agent are

---

[108] Poisson notes this extract cited in *Bodhicharyavatara-pañjika*.

[109] Poisson only notes this stanza as attributed to the *Acharya* in Jayananda',s commentarv.

[110] Stanza 12 quoted in Hopkins, p. 168.

[111] The Tibetan in *Illumination* reads *gsal* (clarified) rather than *bsal* (excluded or eliminated); this line can be interpreted in either way.

[112] Parenthetical material from *rtza.she tik.chen*, p. 202.

[113] LTK, p. 349.

clarified," this means that, just like that acted upon and the agent, also the appropriator, the object to be appropriated, and the action of appropriation exist as mutual support and supported. However, if taken to be spelled correctly as "excluded" or "eliminated" (*bsal*), this line means that when someone understands that agent and that acted upon are mutually dependent wrong conceptions regarding them are eliminated. That is, through knowing that agents and the objects acted upon are mutually dependent, wrong conceptions of production from self, production from other, and so forth are abandoned.

"The remaining things should be known by [analyzing] the agent and that acted upon" means that all other things should be understood to be similar to agents and the objects of actions. "Remaining things" are, for example, an eater, the object to be eaten, and the action of eating which also exist in dependence on each other. Other example are a writer, the object of writing, and the writing; the one who dresses, the object of dressing, that is, clothes, and the action of dressing, and so forth. In short, whatever we do there is an agent, the acted upon (object of the action), and the action.

Chandrakirti's autocommentary says:

> Thus, when explaining the dependent arising of merely the state of having this as a condition (*idampratyayata-matra*),[114] not only are these conceptions of causeless production and so forth impossible, but also other conceptions – eternalism and nihilism, permanence and impermanence, both thing and non-thing and so forth – are just impossible.

The reasoning of dependent-arising cuts all the nets of bad views. "Bad views" are, for example, the view of permanence which is that phenomena exist inherently or truly and the view of annihilation which is that if phenomena do not exist inherently they do not exist at all. "Permanence and impermanence" refers the view of the self and the world as permanent and the view of the self and the world as impermanent.

Chandrakirti's autocommentary says:

> In order to indicate [the aforesaid], it is explained:
>
> *Because these conceptions cannot withstand investigation*
> *Since things thoroughly arise in dependence,*
> *Therefore, this reasoning of dependent arising*
> *Acts to cut all the nets of bad views.* [6.115]
>
> Because one finds the existence of the personal properties of conventional things by merely this much reasoning – "in dependence on this, that arises" – not in another way, therefore, this reasoning of dependent arising, the mere state of having this as a condition, cuts all the nets of bad views that were explained. Thus, those [Madhyamikas] who present a mere state of having this as a condition (*idampratyayata-matra*) as the meaning of dependent arising never accept self-nature in things.

A syllogism can be set out:

> External and internal things, as the subject, do not exist inherently because they are dependent-arisings.

This reasoning of dependent-arising cuts all the nets of bad conceptions. "The nets of bad views" include many types of bad views that can be condensed into the view of permanence and the view of annihilation since there are no bad views that are not included in these two. The term "dependent-

[114] Tib: *rkyen.nyid 'di.pa.tzam* – see Poisson, p. 278, and Nagao, p. 176.

relation" eliminates the two extremes of permanence and annihilation because "dependent" eliminates the view of permanence and "relation" eliminated the view of annihilation. Thus, what is able to simultaneously eliminate the views of the two extremes? It is the reasoning of dependent-arising.

Those who understand the meaning of dependent-arising well do not assert that phenomena exist inherently.

Chandrakirti's autocommentary says:

> As was said [in the *Sixty Verses of Reasoning*: 19]:[115]
>
> > That which arises dependent on this and that, is not produced as its entity.
> > How can that which is not produced as its entity be called "produced?"

Phenomena are not produced by way of their own entity but are produced because they are produced in dependence on their respective conditions.

Chandrakirti's autocommentary says:

> Similarly, it is taught [in the *Treatise on the Middle Way*: 24.18]:
>
> > Whatever is a dependent arising, that is explained as just empty.
> > That is imputed causally[116] and just that is the middle path.

Because it is a dependent-arising it is explained to be empty, and because it is empty it is free from the two extremes of permanence and annihilation, due to which it is the middle way.

Chandrakirti's autocommentary says:

> Also, as taught in [the *Questions of the King of Nagas, Anavatapta,] Sutra*:[117]
>
> > That which produced from conditions was not produced;
> > It does not have a self-nature of production.
> > That which relies on conditions is explained as empty;
> > He who knows emptiness is conscientious.

"That which produced from conditions was not produced" means that what is produced from conditions is not inherently produced. Therefore, things do not have inherent production. "That which relies on conditions is explained as empty" means that because of depending on conditions it is a dependent-arising due to which it is empty of inherent existence. "He who knows emptiness is conscientious" means one who has an understanding of emptiness is conscientious. On the other hand, if one is not on a correct path, one may think that one understands emptiness but in reality has fallen into the extreme of annihilation, in that thinking "things are empty of inherent existence" one may come to the conclusion that nothing exists.

---

[115] See Poisson, p. 278, and Lindtner, p. 108, for Sanskrit fragments.

[116] The version of the verse here is different than other sources, see Poisson, p. 278, n. 3. In the root text of Fundamental Wisdom, the phrase "causally" (*rgyur.bcas* in Tibetan, *sahetu* in Sanskrit) is replaced by "dependently" (*brten.nas* in Tibetan, *upadaya* in Sanskrit).

[117] Quoted in Hopkins, p. 161 and first line mentioned in *rtza.she tik.chen*, p. 401.

Chandrakirti's autocommentary says:

> When thus self-nature is not accepted, then in which of those [ways] that were explained could a non-self-nature arise? If any self-nature were to exist, its production could arise from entitiness or from self, other, both, Ishvara, and so forth and conceptions could possibly occur [such as] eternalism – due to the abidance of what has been produced – and nihilism – due to disintegration – and so forth.

In short, inherent production is not admissible because production from the four extremes does not exist. If phenomena were inherently existent they would be unrelatedly established, whereas everything is dependently established.

Chandrakirti says that the abidance of what has been produced is the conception of permanence or eternalism, and the disintegration of what has been produced is the conception of annihilation or nihilism.

Chandrakirti's autocommentary says:

> In order to indicate that [conceptions are] not [possible] in the other case, it is explained:
>
> *Conceptions will occur if things [are grasped to inherently] exist.*
> *Yet, as things were fully analyzed as non-existent,*
> *Without [grasping to] things, these [conceptions] will not arise,*
> *For example, as fire does not exist without fuel.* [6.116]

The view of permanence or eternalism is the view that what has been produced abides or remains, and the view of annihilation is that what has been produced has disintegrated. "Conceptions will occur" refers to the conceptions holding to an extreme.

In short, that things are inherently existent is incorrect because of what was already thoroughly analyzed before.

Gedun Drup's *Mirror of the Clarification of the Thought* (Tibetan text page 52), as translated by Martin Willson, says:

> 3B1A-6C5A-1C How dependent origination stops grasping at the extremes
>
> *Since things are not produced without a cause,*
> *Nor from the cause of Ishvara and so on,*
> *Nor from self, from other, or from both,*
> *Therefore they are produced entirely dependently.* [6.114]

All functioning things are completely produced dependent on causes and conditions. For they are produced, but they are not produced without cause, from the cause of Ishvara and so on, or from self, other, or both.

> *Because, with things arising entirely dependently,*
> *These misconceptions cannot be conceived,*
> *This argument of dependent origination*
> *Cuts through all the nets of evil views.* [6.115]

You should understand that this reasoning of dependent arising cuts all the nets of evil views, because by realizing that functioning things arise entirely dependently, one cannot conceive them with[118] these wrong conceptions[119] grasping at the extremes.

> *The misconceptions arise if things exist.*
> *We've already analyzed how things don't exist.*
> *When things don't exist, these don't arise, just as*
> *For example, without the fuel, there's no fire.* [6.116]

When there is no grasping functional things as truly existent, these conceptions grasping at the extremes do not arise. For the conceptions grasping at extremes will arise if there is grasping of functional things as truly existent, but how functioning things do not exist truly has already been fully analyzed. It is, for example, as when there is no fuel, there is no fire.

Wednesday afternoon, 24 January 2001

"Things were fully analyzed as non-existent" (v. 6.116b) can be interpreted in various ways. One way of understanding this is that "things" refers to external and internal things; these are what were thoroughly analyzed previously as to their lack of inherent existence in terms of their not being produced from self, other, both, and causelessly.

"Without things, these will not arise" means that without a thing such as a seed there is no arisal of a sprout. "For example, as fire does not exist without fuel" refers to the fact that fire needs fuel, such as firewood, in order to exist.

Chandrakirti's autocommentary says:

> Because, as a result of the reasoning that was explained, there is no possibility of [an inherently existent] thing in any way, therefore, those yogis manifesting the arya path by perceiving thusness through the mode of not perceiving [elaborations of appearance] do not observe even a mere atom of [an inherently existent] thing in any phenomena and the formations of conceptions of form, feeling, virtue, non-virtue, thing, non-thing, and so forth familiarized with from beginningless time will also be reversed in them. As for example, due to the application of eye medicine, the very reversal of conceptions about falling hair and so forth will result in those with cataracts – it is not that falling hair and so forth transform into objects of another nature.

By means of the reasonings explained before, one comes to the conclusion that there are no inherently existent things at all. That "there is no possibility of [an inherently existent] thing in any way" means that things do not exist inherently whatever the place, time, and circumstance.

"Those yogis manifesting the arya path by perceiving thusness through the mode of not perceiving [elaborations of appearance] do not observe even a mere atom of [an inherently existent] thing" means that when the exalted wisdom of meditative equipoise perceives suchness it does so in a manner of lacking the appearance of conventionalities, the basis of that suchness. Thus, it does not observe even a mere atom of inherent existence. Or it can be understood to mean that in the perspective of that seer not even the slightest atom exists. This is because if a conventionality were to appear to the exalted wisdom of meditative equipoise it would be an object of negation.

[118] *Gedun Drub* appears to be alone in interpreting "these" as an instrumental.

[119] *rtog.pa*

"The formations of conceptions of form, feeling, virtue, non-virtue, thing, non-thing, and so forth familiarized with from beginningless time will also be reversed in them" means that when the exalted wisdom of meditative equipoise sees that there does not exist even an atom of inherent existence, the conception of inherent existence is eliminated. Due to this realization, all conceptions of forms as truly existent, feelings as truly existent, and so forth, which have been familiarized with since beginningless time, are eliminated or abandoned. Chandrakirti says: "As for example, due to the application of eye medicine, the very reversal of conceptions about falling hair and so forth will result in those with cataracts – it is not that falling hair and so forth transform into objects of another nature." This means that when one with cataracts, who sees falling hair, applies the appropriate medicine and thereby eliminates the cataracts, that person no longer has the appearance of falling hair. Thus, that appearance of falling hair merely disappears, it is not that they are transformed into something else.

Lama Tsongkhapa's *Illumination* (Tibetan text page 332) says:

> QUESTION: If you refute production from self, other, both, and without causes also in regard to both sides of the two truths, how can it be ascertained that karmic formations, consciousnesses, and so forth are conventionally produced from ignorance and that sprouts and so forth are conventionally produced from seeds and so forth?
> RESPONSE: This is explained [as follows]:
>
> *Because things are not produced without causes*,
> *From a cause which is Ishvara and so forth, and*
> *From self, other, and both,*
> *They are thoroughly produced in dependence.* [6.114]
>
> *Because*, by the way in which it was explained above,
> - the production of *things* does not arise from their own entity *without causes*,
> - they are also not produced from *a cause which is Ishvara and so forth*, that is, time, particles, nature, beings, Narayana (Son of Cravingless), and so forth, and
> - *they are not produced from self, other, and both*,
>
> results *are thoroughly produced in dependence* on causes and conditions.

Production from the four extremes has been refuted both conventionally and ultimately. For example, the Svatantrika Madhyamikas say "External and internal phenomena, as the subject, are not produced *ultimately* because they are not produced *ultimately* from self, other, both, or causelessly." In their case it is necessary to affix the qualification 'ultimately' because they accept production from other. Because they accept production from other they need to qualify this by saying 'Things are not produced *ultimately* from other." The Svatantrika Madhyamikas say that there is production from other because smoke is produced from fire, a son is produced from a mother, a sprout is produced from a seed, and so forth. Thus, they say that cause and result are other. On the other hand, according to the Prasangika Madhyamika system there is no production from other without any need to affix the qualification 'ultimately' to the predicate and the reason.

Someone asks: "How can it be ascertained that karmic formations, consciousnesses, and so forth are conventionally produced from ignorance and that sprouts and so forth are conventionally produced from seeds and so forth?" Here the relationship between cause and result is explained saying that the ignorance which is the first of the twelve links motivates karmic formations due to which latencies are deposited on the consciousness and so forth. Similarly, conventionally a sprout arises from a seed. Thus, there is a relationship between cause and result both externally, for example, a sprout and as seed, and internally, for example, ignorance and karmic formations.

The root text says: "Because things are not produced without causes, from a cause which is Ishvara and so forth." 'And so forth' refers to various things such as time, particles, nature, beings,

Narayana (Son of Cravingless), and so forth. According to some, Ishvara is the creator of the world. One school says that particles are the creator, another that time is the creator, and so forth. This has already been discussed in detail. In conclusion, production from the four extremes has been refuted, therefore, "results are thoroughly produced in dependence on causes and conditions."

Lama Tsongkhapa's *Illumination* (Tibetan text page 332) says:

> Therefore, we rely upon the mere abandonment of production from the four extremes in order to not eliminate the worldly conventions of cause and result. The Bhagavan taught:
>
> > In regard to that, the designation of phenomena is that. It is like this: when this exists, that arises; due to the production of this, that is produced; due to the condition of ignorance, karmic formations...

Illumination (Tibetan text page 332) says rely (*rten*), whereas the *Supplement* (Tibetan text page 142-3) says supported (*brten*); think about it.

"When this exists, that arises" means that when ignorance exists, karmic formations arise, and so forth. "Due to the production of this, that is produced" means that due to the production of a seed, a sprout is produced, and so forth.

Lama Tsongkhapa's *Illumination* (Tibetan text page 332-3) says:

> [Nagarjuna's] *Precious Garland* (v. 48) says:
>
> When this exists, that arises;
> Like when long exists there is short.
> Due to the production of this, that is produced;
> Like light due to the arisal of a flame.

This was already explained earlier.

Lama Tsongkhapa's *Illumination* (Tibetan text page 333) says:

> [Nagarjuna's] *Fundamental Wisdom* (v. 8.12-13) says:
>
> Agent depends upon that acted upon and
> That acted upon also arises in dependence on
> The agent itself. Excluding that,
> A cause of establishment is not perceived.
>
> Understand appropriation to be similar
> Because that acted upon and agent are clarified.[120]
> By means of that acted upon and the agent,
> The remaining things should be understood.

By understanding the relationship between agent and that acted upon, one will understand the relation between the appropriator and the appropriated, this being the meaning of "Understand appropriation to be similar." In other words, the three – the appropriator, the appropriated, and the action of appropriating – are clarified through understanding that agent, that acted upon (the object), and action exist in mutual dependence. Having understood the relationship between the agent and that acted upon, one is able to understand all remaining things; for example, one who possesses excellent qualities and the excellent qualities that are possessed. There are many more examples of

[120] The *Supplement* says bsal, eliminated, whereas here it says gsal, clarified.

what can be understood in dependence on understanding agents and that acted upon, such as definition, definiendum, and illustration which also mutually related. Another example is a cook, food, and the action of cooking which are established in mutual dependence. This is also the case of a meditator, the object of meditation, and the action of meditating, as well as a listener, what is heard, and the action of hearing, a thinker, a thought, and the action of thinking. All of these are established in dependence.

Lama Tsongkhapa's *Illumination* (Tibetan text page 333) says:

> [Nagarjuna] taught only that much, he did not teach production from the four extremes. Therefore, just as the Conqueror taught production that is mere conditionality, so too did Arya [Nagarjuna] teach in this way. In particular, by asserting the dependent relationship that is arisal in dependence – that agent depends on that acted upon and so forth, he distinguishes production in our own and other systems stating "Excluding that" (*Fundamental Wisdom*, v. 8.12c) and teaches that that is to be affixed to whatever things exist.
>
> Acharya [Chandrakirti] necessarily posits production in general and proves it with much exertion stating "Because they are not produced from the four extremes, they are produced in dependence." In regard to that, it should be understood that those who propound, through mistakenly opposing these systems, stating "If there is no production from the four extremes, there is no production at all" pollute well, with the dense stains of their bad conceptions, the unsurpassed system in which the meaning of profound dependent-arising – the unsurpassed reason for the realization of emptiness – arises as the meaning of emptiness.

Production in general exists, whereas production from the four extremes is refuted with much exertion by Acharya Chandrakirti who distinguishes production in the two systems, our own and others. In the context of production from the four extremes, 'other systems' includes the lower Buddhist schools and the non-Buddhist schools. The main school asserting production from self is the Samkhya. Production from other is asserted by non-Buddhists and the Buddhist schools below the Prasangika Madhyamika. Those asserting production from both are the Nirgranthas, whereas those asserting causeless production are the Charvakas. Their various assertions are refuted here.

Because it is a dependent-arising, it is not produced from the four extremes; this is to be similarly affixed to all things. Chandrakirti says: "Because they are not produced from the four extremes, they are produced in dependence." However, there are those who debate this due to not understanding that the meaning of emptiness is the meaning of dependent-arising. Through understanding dependent-arising, one realizes emptiness. Due to the dense stains of their bad conceptions, those who assert otherwise pollute the meaning of dependent-arising.

Lama Tsongkhapa's *Illumination* (Tibetan text page 333) says:

> Hence, when the dependent-relation that is mere conditionality is explained, in order to indicate that not only the four – production without causes and so forth – are impossible, but that also other imputed objects:
>
> 1. the view of permanence which superimposes inherent existence,
> 2. the view of annihilation which does not allow for agents and actions,
> 3. the conception of permanence which is that the very [thing] that existed at a past time also exists at later times,
> 4. [the conception of] the impermanence of inherently existent individual former and later moments, and
> 5. the conception of the two, things and non-things, as established by way of their own entity,
>
> and so forth are impossible, it is explained:
>
> *Since things thoroughly arise in dependence,*
> *These conceptions cannot be investigated;*

Therefore, the reasoning of dependent arising
Cuts all the nets of bad views. [6.115]

Not only is production from the four extremes negated, also the objects of other mistaken views are negated.

Lama Tsongkhapa's *Illumination* (Tibetan text page 333-4) says:

> By means of just this much reasoning stating "*In dependence on* this cause, that result *thoroughly arises*," the existence of a self of conventional *things* is found. Since it is not [found] in another [way], *the conceptions* of production from self, other, and so forth *cannot be investigated, therefore, the reasoning of dependent* and related *arising*, mere conditionality, *cuts all the nets of bad views* – the views of production from self, other, and so forth explained above.

The nets of bad views are severed by the reasoning of dependent-arising. Chandrakirti says: "Therefore, the reasoning of dependent arising cuts all the nets of bad views."

"The conceptions of production from self, other, and so forth cannot be investigated" means that they cannot bear investigation in the sense that because they are wrong they cannot bear investigation.

Lama Tsongkhapa's *Illumination* (Tibetan text page 334) says:

> Hence, the Madhyamikas who posit mere conditionality as the meaning of dependent-relation do not assert inherent existence in regard to any thing. [Nagarjuna's] *Sixty Stanzas of Reasoning* (v. 19) says:
>
> Whatever arises dependent on this and that,
> Is not produced in its own entity.
> How can what is not produced
> In its own entity be said to be "produced?"
>
> That produced in dependence is not produced by way of its own entity. That being the case, how can it be said that sprouts and so forth are produced by way of their own entity?

Things are not produced by way of their own entity, that is, inherently. Therefore, if someone says that a sprout is inherently produced, one asks "How can it be said that an inherently existent sprout is produced from an inherently existent seed?" It cannot be said.

Lama Tsongkhapa's *Illumination* (Tibetan text page 334) says:

> [Nagarjuna's] *Fundamental Wisdom* (v. 24.18) also says:
>
> Whatever is a dependent and related arising,
> That is explained as emptiness.
> That imputed by being what is caused,
> That is the middle way.
>
> This says that due to being a dependent-arising, it is empty of inherent existence.[121]
> Also the *[Questions of the King of Nagas, Anavatapta,] Sutra* says:
>
> What is produced from conditions is unproduced;
> It does not have the nature of production.
> Whatever depends on conditions is explained to be empty.
> Whoever knows emptiness is conscientious.

[121] *Illumination* mistakenly reads *stod par* rather than *stong par*.

This verse from sutra sets out a syllogism: "what is produced from conditions is unproduced" is the reason or sign, whereas "It does not have the nature of production" is the predicate.

Thursday morning, 25 January 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 334-5) says:

> "Produced from conditions" is the reason. The meaning of the predicate, "unproduced," is indicated by the second line; it means "not produced inherently," it is not that that is not affixed as a qualification to the object of negation because the Buddha himself asserted his intention in the *Descent into Lanka Sutra*, as quoted in *Clear Words*, saying:
>
> > Mahamati, through intending that they are not produced inherently, I said, "All phenomena are unproduced."

That the qualification "not produced inherently" is implicitly affixed to the object of negation in the *Questions of the King of Nagas, Anavatapta, Sutra* is explained by the Bhagavan in the *Descent into Lanka Sutra* in which he specifies that he said 'All phenomena are unproduced' with the intention that "All phenomena are not inherently produced."

Lama Tsongkhapa's *Illumination* (Tibetan text page 335) says:

> Therefore, since the king of reasonings is the reasoning of dependent-arising itself, the very refutation of inherent production was taught by the Bhagavan. Therefore, having captivated his mind, Arya [Nagarjuna] in many of his texts, such as *Fundamental Wisdom* and *Sixty Stanzas of Reasoning*, composed praises to the Bhagavan from the point of view of this very teaching of dependent-arising. Those possessing wisdom should not propound like those who are emanations of darkness who state "Due to being produced in dependence, they are unproduced."

The Buddha taught the reasoning of dependent-arising to be the king of reasonings refuting inherent production. Nagarjuna, captivated by the teaching of dependent-arising, praised the Buddha from the point of view of this teaching in many of his texts such as *Fundamental Wisdom* and *Sixty Stanzas of Reasoning*. For example, the homage at the beginning of Nagarjuna's *Fundamental Wisdom* (from *Fundamental Wisdom of the Middle Way*) says:

> I prostrate to the perfect buddha,
> The best of teachers, who taught that
> Whatever is dependently arise is
> Unceasing, unborn,
>
> Unannihilated, not permanent,
> Not coming, not going,
> Without distinction, without identity,
> And free from conceptual construction.

Student: Who would say "Due to being produced in dependence, they are unproduced"?
Geshe Jampa Gyatso: It is hard to find someone who would say that! However, it means that one should not say "Due to being produced in dependence, they are unproduced" as this would be incorrect, like an emanation of darkness. On the other hand, saying "Due to being produced in dependence, they are not inherently produced" would be completely correct.

Lama Tsongkhapa's *Illumination* (Tibetan text page 335) says:

> When things are not asserted to exist inherently, then that which lacks inherent existence arises as what is produced from self or other and so forth. If [things] exist inherently, at that time
> - they would be produced from their own entity or produced from self, other, Ishvara, and so forth and
> - conceptions of (i) permanence, since what is already produced abides without disintegrating, (ii) of annihilation, since it disintegrates, and so forth could arise. In order to indicate "There are no other [conceptions] than these" it is explained [as follows]:
>
> *Conceptions arise when things exist,*
> *However, how things do not exist has already been thoroughly analyzed.*
> *Without things, they do not arise; for example,*
> *Like fire does not exist without fuel.* [6.116]
>
> *Conceptions* holding to an extreme *arise when things exist*, that is, when they are conceived to exist inherently. *However*, *how things do not exist* inherently *has* also *already been thoroughly analyzed* by means of the reasonings explained above. *Without* conceiving *things* to exist inherently *those* conceptions holding to an extreme *do not arise; for example*, *like* the result, *fire, does not exist without* its cause, *fuel*.

Due to the reasoning of dependent-arising, conceptions holding to an extreme do not arise. If, on the other hand, phenomena were inherently produced they would be produced by way of their own entity or produced from self, other, and so forth. However, this is impossible.

"Has also already been thoroughly analyzed by means of the reasonings explained above" refers to the refutations of production from the four extremes which were explained before. When production from the four extremes is refuted, inherent production is also refuted. This is because the lower schools set out the following reasons in order to prove inherent production:

1. because they are produced from self,
2. because they are produced from other,
3. because they are produced from both, and
4. because they are produced without causes.

When these reasons or signs are refuted, so too is the thesis "Things are inherently produced."

Lama Tsongkhapa's *Illumination* (Tibetan text page 335-6) says:

> Hence, through the familiarization that settles the meaning of suchness, the meditative equipoise actualizing the path of yogis, or superiors, sees suchness in a manner of not seeing the elaborations of appearances and also averts the conceptions, familiarized with since beginningless time, that strongly adhere to any phenomenon whatsoever as truly existent. For example, by the application of eye medicine there is the result that the appearances of falling hair and so forth are eliminated in those who have cataracts; it is not that falling hair and so forth, having become another nature, become the objects of [those who have cataracts].

Through familiarization settling the meaning of suchness, one comes to realize the suchness of phenomena. In this way one averts the conceptions of a self. This is likened to the fact that, due to the application of eye medicine, one with cataracts no longer has the appearance of falling hair and so forth, but it is not that the falling hair and so forth transform into another object. The eye medicine is likened to suchness, whereas the eye to which it is applied is likened to the wisdom realizing suchness. Due to this wisdom, the strong adherence to a self is eliminated.

Lama Tsongkhapa's *Illumination* (Tibetan text page 336) says:

> 3B1C-2B3E-2A4 Identifying the result of reasoned analysis

This refers the result of the analysis by Arya Nagarjuna and Acharya Chandrakirti that refutes production from the four extremes.

Chandrakirti's autocommentary says:

> Therefore:
>
> *Ordinary beings are bound by conceptions;*
> *Since non-conceptualizing yogis will be liberated,*
> *That which will reverse conceptions*
> *Was taught by the wise as the effect of complete analysis.* [6.117]
>
> Since ordinary beings – those not thus knowing this reality – are bound by only conceptions, therefore, when this thusness is thus comprehended, the aryas will be completely liberated. Therefore, Acharya [Nagarjuna] presented mere ceasing of conceptions without exception as the effect of the complete analysis explained in the *Treatise on the Middle Way*.

Chandrakirti says that ordinary beings are bound by conceptions of true existence, that is, the conception of a self. "Bound" indicates that because the conception of an inherently existent self is extremely strong it binds one in or causes one to remain in cyclic existence, without achieving liberation. On the other hand, yogis who do not conceive emptiness to exist inherently are liberated.

Chandrakirti says: "That which will reverse conceptions was taught by the wise as the effect of complete analysis" (6.117cd). Here, the word "conceptions" refers to bad views, such as the views holding to an extreme, which are averted as a result of thorough analysis.

Gedun Drup's *Mirror of the Clarification of the Thought* (Tibetan text page 53), as translated by Martin Willson, says:

> 3B1A-6C5A-1D Knowing the result of the logical analysis
>
> *Ordinary beings are bound by misconceptions.*
> *The non-conceptualizing yogin becomes*
> *Freed. So this reversal of conceptions*
> *Is the result of analysis, sages have said.* [6.117]
>
> *The treatise did not analyze for love of wrangling,*
> *But showed reality to liberate.* [6.118ab]

That analysis of absolute reality in the treatise was not done for the sake of attachment to debating, but explained absolute reality for the sake of perfect liberation. For ordinary beings are bound by the conceptions grasping at extremes, but the yogin who does not conceptualize[122] incorrectly is then liberated. Therefore the reversal of the conceptions grasping at extremes, the learned say, is the result of the analysis of absolute reality in the treatise.

> *If, in explaining reality fully, others'*
> *Treatises are destroyed, there is no fault.* [6.118cd]

If, in fully explaining absolute reality, what is conceived in others' texts has been destroyed, it is no fault of the Madhyamikas; for at that time the opponents' positions destroyed themselves, by their own weakness.

> *Attachment to one's own views, and combativeness*
> *To the views of others, is a misconception.*
> *Therefore, one who eliminates desire and aversion*
> *And analyses will quickly achieve liberation.* [6.119]

[122] *rnam.par.mi.rtog.pa*

You should understand that one who completely eliminates attachment and aversion and analyses logically will quickly be liberated, for attachment to one's own view and likewise combativeness towards others' views is a conception which binds one.

This clearly shows the result of thorough analysis: through familiarizing with suchness, one comes to realize it, whereby bad conceptions, such as the conception holding to an extreme and so forth, are gradually eliminated.

Ordinary beings are called "Those who are bound by all" because they are bound by all the afflictions, not just by some of them. Nagarjuna and other masters taught for the purpose of liberating those who are bound by all the afflictions; they did not teach for the sake of argument or wrangling.

Chandrakirti's autocommentary says:

> As was taught [in the *Four Hundred Verses*, 16.23]:
>
> > If things existed inherently, what quality would exist in perceiving the empty?
> > Perception due to conception is bondage; just that is refuted here.

If things existed inherently, the perception of the emptiness of inherent existence would be meaningless because if they do not exist inherently then there would be no perceiving them to not exist inherently. Although things are empty, they appear as though inherently existent. "Perception due to conception" refers to the conception of a self due to which there is the appearance of inherent existence. "Just that is refuted here" means that the conception of a self is refuted here.

Chandrakirti's autocommentary says:

> Therefore:
>
> > *Analysis was not made in the treatise because of liking*
> > *Disputation. Thusness was indicated for complete liberation.* [6.118ab]
>
> Therefore, it should be known that the very many complete analyses that Acharya [Nagarjuna] made in the *Treatise on the Middle Way* were not made due to liking disputation, desiring to outshine others. When complete analysis was made in the *Treatise on the Middle Way* to indicate thusness, it was in order to completely liberate beings [thinking], "How wonderful it would be if sentient beings, having unmistakenly realized thusness like this, were to attain liberation."

Nagarjuna did not compose his *Treatise on the Middle Way* out of a liking for disputation, instead he did so for the purpose of liberating those who are bound. In other words, he did not compose this text in order to win debates. This implies that there are people who compose texts in order to win arguments, however, this is not Nagarjuna's case. Instead, he composed this text thinking: "How wonderful it would be if sentient beings, having unmistakenly realized thusness like this, were to attain liberation."

Chandrakirti's autocommentary says:

> If asked: Did you not set forth entirely how to investigate the debates and were they not refuted in the *Treatise?* Therefore, since the employment of the *Treatise* is for the purpose of dispute, how can only a mere reversal of conceptions be presented as the effect?

> I say, indeed, this complete analysis was not made for the purpose of dispute. Nevertheless, when suchness is precisely indicated, the scriptural traditions of others – since inherently weak – do not establish themselves and like darkness when illumination approaches, will themselves be destroyed. Hence, we have no defect.

Although Nagarjuna did not compose his *Treatise on the Middle Way* for the purpose of dispute, as a result of his complete analysis others are not able to maintain their position regarding reality. For example, like placing a large piece of ice in the hot sunshine due to which the ice slowly melts even though the sun does not exist for the purpose of melting ice, similarly, incidentally Nagarjuna's text gradually causes others to lose their theses in that they are not able to maintain them in the light of his thorough analysis. Although this happens there is no fault; it is just like darkness is naturally dispelled when illumination approaches.

Chandrakirti's autocommentary says:

> It is explained:
>
> *If, when thusness is completely examined,*
> *Other texts are destroyed, it is faultless.* [6.118cd]
>
> As taught [in the *Four Hundred Verses*, 12.15]:
>
> This doctrine is not taught
> By the tathagatas for the sake of disputation.
> Nonetheless, it burns counter arguments
> Like fuel by fire.

Just as fire burns fuel without any bad intention, so too do Nagarjuna's explanations, without any bad intention, cause others to naturally give up their positions.

Chandrakirti's autocommentary says:

> If, unlike that, the doctrine were taught in detail for the purpose of dispute, at that time, without doubt, there would be aversion for the defective position of others and subsequent attachment for one's own reasoned position. Hence, the mere reversal of conceptions is impossible.

If Nagarjuna had composed his text for the sake of dispute this would have brought about negative consequences such as attachment to one's own position and aversion to others' positions. In this case, it would not be possible for this text to overcome bad conceptions, however, this is not the case.

Chandrakirti's autocommentary says:

> If asked: Why? It is like this:
>
> *What is attached to one's own view and likewise*
> *Upset with the view of others, is mere conception.* [6.119ab]
>
> Therefore, by not reversing conception, there will be bondage itself – not liberation.

If the *Treatise* had been composed for the sake of dispute, it would serve to increase attachment to one's own views and aversion for others' views, due to which conceptions would not be eliminated. However, this is not the case.

Chandrakirti's autocommentary says:

> When this doctrine is not indicated for the purpose of dispute, then:
>
> *Therefore, having completely dispelled attachment and anger,*
> *If completely analyzed, one will be quickly liberated.* [6.119cd]

Attachment and anger are the main factors binding us in cyclic existence. In our own life, we have many different relationships with others, such as that of friendship, that of disciple-teacher, and so forth. At times such relationships become disharmonious, the cause of this is attachment and anger. Since these two afflictions are the main causes of disharmony and so forth, the purpose of Nagarjuna's composing his *Treatise on the Middle Way* was to help sentient beings become liberated from cyclic through eliminating the conception of a self which is the cause of attachment and anger. Thus, Nagarjuna composed his text in order to free sentient beings from ignorance – the conception of true existence and the conception of a self. In fact, the conception of true existence is also called "the door of degeneration."

Chandrakirti's autocommentary says:

> As said [in the *Sixty Verses of Reasoning*, 50]:[123]
>
> Those with great character have no dispute, they have no position.
> How could another's position exist for those who have no position?

Great beings are free from thinking "This is my position" and "This is others' position." Nagarjuna did not compose his text for the purpose of creating opposing positions. In other words, he did not do so out of partiality for one particular position.

Chandrakirti's autocommentary says:

> Similarly, it is taught [in the *Four Hundred Verses*, 8.10]:
>
> If there is attachment for one's own position and you dislike the position of others,
> One will not progress beyond sorrow. The two behaviors will not exist in peace.

If one has attachment for one's own position and dislike for others' positions, one will not attain nirvana. In other words, if we behave like this, we will not attain peace. We have the tendency to talk about the need for peace but in reality we often create the cause for disharmony. We can see this in regard to the present situation between the Palestinians and Israelis who talk about peace on one hand, but continue to fight amongst themselves on the other hand. With such attachment and aversion one will not pass beyond sorrow.

[123] One can also translate theTibetan: *gzhan.phyogs*; Sanskrit: parapaksha, as "opposing position/thesis" as Lintner does, p. 114-115 [How can there be an opposing thesis to those who have no thesis?], or as "hostile party/enemy" – "How could those who have no position have enemies?"

Thursday afternoon, 25 January 2001

Chandrakirti's autocommentary says:

> It is also taught in [the *King of Meditative Stabilizations*] *Sutra*:
>
> Whoever gets attached upon hearing this doctrine
> And gets angry upon hearing the non-doctrine,
> The proud turn back, destroyed by haughtiness,
> Later experiencing suffering by the power of pride.

"This doctrine" refers to the virtuous or holy Dharma, whereas "the non-doctrine" is any teaching opposite to it. Or it can be understood to mean that there are people who become happy when the subject of a teaching is what they want to hear and who become angry when the subject of a teaching is what they do not want to hear.

There are many types of pride; three, seven, and nine types are set out in Vasubandhu's *Treasury of Knowledge*. There are excessive pride, pride of inferiority, pride thinking I, and so forth. The view of the transitory collection resembles the pride thinking I. What is pride and what is haughtiness?

Student: Pride is a puffing up of the mind, whereas haughtiness is more specific, for example, walking around with one's nose in the air thinking that one is very beautiful.

Geshe Jampa Gyatso: Pride is one of the six root afflictions, whereas haughtiness, in the context of the fifty-one mental factors, is one of the secondary afflictions. The exposition of the afflictions in Vasubandhu's *Treasury of Knowledge* is slightly different. The second chapter of *Treasury of Knowledge* (v. 2.33D) says:

> Pride is inflated, haughtiness is the mind attached to one's own qualities.

The sutra says: "The proud turn back, destroyed by haughtiness, later experiencing suffering by the power of pride." We know from our own experience that, if one is proud, one will definitely suffer due to others not thinking that one is quite so beautiful and so forth as oneself thinks. The view of the transitory collection, which is similar to pride, is the source of all suffering. This will be discussed later on in the context of the conception of a self of persons.

Lama Tsongkhapa's *Illumination* (Tibetan text page 336) says:

> *Ordinary beings are bound by conceptions;*
> *Not conceiving it, yogis are liberated.*
> *Therefore, the wise teach that*
> *Whenever conceptions are eliminated it is the result of thorough analysis.* [6.117]
>
> *Ordinary beings*, who do not understand reality as it was explained before, *are* mainly *bound by conceptions* holding to an extreme. Because of that, when that reality is *not conceived* mistakenly through comprehending it as it is, *yogis*, that is, superiors, *are liberated*. *Therefore*, due to refuting the object of the mode of apprehension without exception of the *conceptions* holding to an extreme, *the wise teach that whenever* conceptions *are eliminated* "This is presented to be *the result of* the *thorough analysis* that is explained in Arya [Nagarjuna's] *Treatise on the Middle Way*."

When one understands the meaning of emptiness well, one will become free from mistaken conceptions, in other words, the object of the mode of apprehension of mistaken conceptions is negated. This is because the realization of emptiness means to realize that the object of the conception

of a self does not exist. Through this realization, one will be liberated from cyclic existence, just like the yogis who do not conceive suchness to exist inherently and thereby achieve liberation from cyclic existence. On the contrary, ordinary beings conceive true existence and are bound by it in cyclic existence. What is it that cuts that which binds us in cyclic existence? It is the realization of suchness. In fact, Aryadeva's *Four Hundred Stanzas* says that while ordinary beings usually do not think about emptiness, if they do develop even a doubt regarding it, that doubt shakes the very foundation of cyclic existence.

In short, in order to abandon the conception holding to an extreme, it is necessary to develop a mind that has a mode of apprehension that is opposite to the mode of apprehension of that conception.

Lama Tsongkhapa's *Illumination* (Tibetan text page 336) says:

> [Aryadeva's] *Four Hundred Stanzas* also says:
>
> If things existed inherently,
> [When] seen to be empty, what excellent qualities would they have?
> Seeing by way of conception is bondage;
> Just that is refuted here.
>
> If phenomena existed inherently, since this itself would be their mode of being, seeing that would be beautiful, whereas seeing them as empty of inherent existence would lack excellent qualities. Therefore, 'seeing by way of conception' is bondage due to conceiving them to be inherently existent. Therefore, the referent object of that [conception] is the object of negation in the *Treatise on the Middle Way*.

If phenomena existed inherently there would not exist the excellent qualities that arise from seeing that they are empty of inherent existence, given that they are not empty of inherent existence. "Seeing by way of conception" means to conceive phenomena to be inherently existent; this is the bondage that binds us in cyclic existence. Lama Tsongkhapa says: "The referent object of that [conception] is the object of negation in the *Treatise on the Middle Way*." In this context, one needs to understand:

1. the referent object of the conception of true existence,
2. the object of the mode of apprehension of the conception of true existence,
3. the object of engagement of the conception of true existence, and
4. the appearing object of the conception of true existence.

The first three – the referent object, object of the mode of apprehension, and object of engagement – are the same, whereas the appearing object is different. This is because the referent object, the object of the mode of apprehension, and the object of engagement of the conception of true existence are the object of negation itself, whereas the appearing object of the conception of true existence is not the object of negation. This is because according to the Prasangika Madhyamika system the conception of true existence is a valid cognizer with respect to its appearance.

Lama Tsongkhapa's *Illumination* (Tibetan text page 336) says:

> The commentary on [Aryadeva's *Four Hundred Stanzas*] also says:
>
> Conception superimposes the meaning of inherent existence, which is not reality...
>
> Since this explains that [conception] superimposes existing in reality on what does not exist in reality, do not consider this to refer to all conceptions; instead consider it to refer to conceptions holding to true existence and conceptions holding to an extreme.

The conception discussed in Aryadeva's text saying "Seeing by way of conception is bondage" is not just any conception but is specifically the conception of true existence or the conception holding to an

extreme; this is because there also exist conceptions that accord with reality. For example, the conventional mind of enlightenment is a conception but it accords with a correct meaning.

Lama Tsongkhapa's *Illumination* (Tibetan text page 337) says:

> Also in regard to conceptions holding to an extreme, even though the term 'extreme' has many meanings, the extreme of "freedom from extremes" is as is taught in [Kamalashila's] *Illumination of the Middle Way*:
>
> > If, for Madhyamika, things which are the nature of the own entity of the mind were to exist as the ultimate, at that time, due to existing as that, how would there be the extremes strongly adhering to them as "permanent" or "impermanent"? Having subsequently become the suchness of things just as they are and having paid proper mental attention to it, it would not be suitable to be called "the abode of downfalls."
>
> Moreover, here an object which exists just as it is apprehended is not an extreme. Since the awareness is also a proper mental attention, it is not a conception of an extreme. Hence, an extreme of this context is an abode of downfalls because – just as in the world an abyss is an extreme and one who has fallen into it is said "to have fallen into an extreme" – an apprehender ruined by conceiving either is said "to have fallen into an extreme."

To fall into an extreme is to either fall into the extreme of permanence or the extreme of annihilation. To fall into the extreme of permanence is to strongly hold to the thesis that things exist truly. For a person to fall into the extreme of permanence he must:
1. mentally accept that phenomena exist truly and
2. verbally assert that phenomena exist truly.

Therefore, if someone merely has the conception of true existence it does not mean that he has fallen into the extreme of permanence. On the other hand, the measure of falling into the extreme of annihilation is – on the basis of an analysis that arrives at the conclusion that because phenomena do not exist inherently they do not exist at all – to mentally accept and verbally assert that phenomena do not exist. We should strive to avoid falling into the extremes of permanence and annihilation but instead find the middle way – the realization that although phenomena do not exist inherently the presentation of agents, actions, and objects is admissible, that is, that the presentations of inherent existence and conventional existence are not contradictory.

Lama Tsongkhapa's *Illumination* (Tibetan text page 337) says:

> In regard to this, stating "Since that which perfectly exists cannot also exist nominally, that which does not perfectly exist exists nominally, therefore, it does not exist ultimately" is the conception of the extreme of non-existence. Although the refutation stating "It is not like that" does not refute the extreme of non-existence, if one conceives "The non-existence which is the negation of the object of negation perfectly exists," one falls into the extreme of the non-existence of things, whereby refuting that also refutes the extreme of non-existence.

"Perfectly existing" is a synonym of truly existing. Since perfectly existing is not possible, "not existing perfectly" or "not existing truly" is to exist conventionally. Negating that actions and results do not exist ultimately does not negate the extreme of non-existence.

Lama Tsongkhapa says: "If one conceives 'The non-existence which is the negation of the object of negation exists in reality,' one falls into the extreme of the non-existence of things." This means that conceiving the non-affirming negative which is the negation of the object of negation – that is, emptiness – to exist ultimately or perfectly is to fall into the extreme of the non-existence of things. Therefore, refuting that also refutes the extreme of non-existence. In other words, if one holds

emptiness to exist truly one falls into the extreme of non-existence; this is a wrong view that is to be refuted.

Lama Tsongkhapa's *Illumination* (Tibetan text page 337-8) says:

> The fact that phenomena such as actions, results, and so forth exist conventionally also cannot be harmed by any valid cognizer. Their non-existence, or objects and object-possessors conceived to not exist, are an extreme of non-existence and a conception of an extreme of [non-existence], however, they are not an extreme of non-existence and a conception of an extreme of [non-existence] in regard to the buddhas being called, for example, "faultless." This is an extreme of non-existence which is a deprecation, whereas the former is an extreme of non-existence which is a superimposition.

There are two types of extremes of non-existence:
1. an extreme of non-existence that is a deprecation and
2. an extreme of non-existence that is a superimposition.

For example, thinking that there is no law of actions and their results is a conception holding to an extreme of non-existence, an object-possessor, whereas the non-existence of actions and results, the object, is the extreme of non-existence. In other words, the non-existence of actions and results is the extreme of non-existence, and the conception holding to the non-existence of actions and results is the conception of the extreme of non-existence. On the other hand, conceiving the buddhas to not have any faults is not a conception holding to an extreme of non-existence.

A conception of the extreme of non-existence which is a superimposition is the mind thinking that the non-affirming negative which is the negation of the object of negation is truly existent. A conception of the extreme of non-existence that is a deprecation is the mind thinking that actions and results do not exist. The first is a superimposition because one superimposes existence on what is not existent, that is, one thinks that the non-affirming negative which is the negation of the object of negation exists ultimately or truly.

Thus, there is an extreme of non-existence which is a deprecation and an extreme of non-existence which is a superimposition. The objects of the mode of apprehension of both these conceptions do not exist even conventionally; these objects are themselves an extreme of non-existence. The extreme of existence, the extreme of superimposition, and the extreme of permanence are synonyms, whereas the extreme of non-existence, the extreme of deprecation, and the extreme of annihilation are synonyms. When this is analyzed in depth, one text comes to the conclusion that if it is a deprecation it is also necessarily a superimposition.

Lama Tsongkhapa's *Illumination* (Tibetan text page 338) says:

> Therefore, phenomena excluded from the refutation explained above – objects and object-possessors that are conceived to exist ultimately or by way of their own character – are an extreme of existence and a conception of an extreme of [existence], whereas statements such as "The buddhas have knowledge and mercy" are not an extreme of existence and a conception of an extreme of [existence]. In some contexts in this text there is also the explanation that everything existing ultimately is the extreme of existence.

What is the conception holding to the extreme of existence? It is the conception that phenomena exist by way of their own character or ultimately. The object – the extreme of existence – is phenomena existing ultimately or phenomena existing by way of their own character. The object-possessor – the conception of an extreme of existence – is the conception that phenomena exist ultimately or that phenomena are established by way of their own character. "The buddhas have knowledge and

mercy" is not an extreme of existence, and conceiving this is not a conception of an extreme of existence because buddhas do have the qualities of knowledge and mercy.

Lama Tsongkhapa's *Illumination* (Tibetan text page 337) says:

> [Chandrakirti's *Supplement* says:]
> *He did not compose the analyses in his* Treatise *out of attachment*
> *To argument. He presented suchness in order to liberate.* [6.118ab]
>
> Because of just that, one should understand the statement by Arya [Nagarjuna] in his *Treatise on the Middle Way* that says "That I *composed* many thorough *analyses* of reasonings *is not out of attachment to argument*, that is, the wish to outshine others." This means that when [Arya Nagarjuna] composed these thorough analyses of reasonings, *he presented suchness* in his *Treatise on the Middle Way*, composing it *in order to liberate* beings thinking "How wonderful it would be if sentient beings, having unmistakenly realized the suchness that is like that, were to attain liberation."

Nagarjuna composed many texts such as the Six Collections of Reasoning, the Six Collections of Praises, and so forth. However, he did not do so out of attachment to argument and a wish to outshine others, instead he did so thinking "How wonderful it would be if sentient beings, having unmistakenly realized the suchness that is like that, were to attain liberation." This is the conclusion of the preceding analysis.

Lama Tsongkhapa's *Illumination* (Tibetan text page 337) says:

> QUESTION: Did you [Nagarjuna] not set forth in its entirety how to investigate the disputes of the materialists and did you not refute them in your *Treatise*? Therefore, since you engaged in the *Treatise* for the sake of argument, how can you present only the mere elimination of conceptions as the result?
> RESPONSE: Indeed I did not compose these thorough analyses for the sake of argument. Nevertheless, when suchness is precisely indicated, since others' positions are by nature weak, their scriptural systems do not convince themselves and instead destroy themselves, like darkness when illumination approaches. Hence, we have no fault.

Nagarjuna had perfect understanding of the lack of inherent existence of phenomena and taught this again and again in his many texts. For example, the main purpose of all twenty-seven chapters of *Fundamental Wisdom* is to present the lack of inherent existence of compounded phenomena. However, in the meantime he also established the lack of inherent existence of uncompounded phenomena.

Friday morning, 26 January 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 338) says:

> This is explained [as follows]:
> *If, when suchness is thoroughly explained,*
> *Others' scriptures are destroyed there is no fault.* [6.118cd]
>
> *If, when suchness is thoroughly explained*, that imputed by *others' scriptures is destroyed* we are *faultless*.

Having established the emptiness of phenomena through many reasonings, the opponents gradually come to lose their own positions because what is imputed by their scriptures is not able to withstand the refutations while we ourselves remain faultless, like darkness eliminated by illumination. For

example, it is like if we speak honestly to someone who is lying, gradually it becomes clear that the other person is lying while we ourselves remain faultless.

Lama Tsongkhapa's *Illumination* (Tibetan text page 338) says:

> [Aryadeva's] *Four Hundred Stanzas* says:
>
> This Dharma is not taught
> By the tathagatas for the sake of argument.
> Nonetheless, it burns counter-dispute
> Like fuel is burned by fire.
>
> Fire is ignited for the sake of boiling beverages; it is not for the sake of [making] ashes and coals; however, those too are taught by the example to arise incidentally.

Nagarjuna and other masters composed their treatises in order to benefit sentient beings, however, incidentally, they also cause the opponents to lose their theses. This is like the fact that although fire is lit for the purpose of cooking food, boiling tea, and so forth, and not for the purpose of making ashes and coals, these still arise incidentally. For example, although we drink tea and eat food for the purpose of nourishing the body, incidentally other products are created, although they are not the purpose of eating and drinking!

Lama Tsongkhapa's *Illumination* (Tibetan text page 339) says:

> If the Dharma were presented out of attachment to argument, at that time, without doubt, there would be hatred for the faulty position of others and subsequent attachment for one's own position, due to which conceptions of anger and attachment would not be eliminated. Why is that?
>
> *Any attachment to one's own views and, likewise,*
> *Disturbance regarding the views of others are just conceptions.*
> *Therefore, having completely dispelled attachment and anger,*
> *Those who completely analyze will quickly be liberated.* [6.119]
>
> In that case, *any attachment to one's own views and, likewise, a disturbed* continuum *regarding the views of others'* positions *are just conceptions* that are bondage. Thereby, one will be bound by increasing conceptions of anger and attachment without turning them away; this is not liberation.

If the masters of the past had composed texts out of attachment to argument, this would have resulted in anger toward the faulty position of others and attachment for one's own position, due to thinking that what one says is correct. If this were the case, instead of their texts having the result of eliminating attachment and hatred, they would act to increase them. However, that attachment and hatred are bondage is discussed in detail in the *Treasury of Knowledge*. Ordinary beings are bound in cyclic existence by the conceptions of attachment and anger; for example, we have attachment for those who share the same views as ourselves and hatred for those who have different views. However, we should not be like this because it just increases our attachment and hatred more and more, rather than eliminating them. As long as we have attachment and hatred we will remain bound in cyclic existence.

Lama Tsongkhapa's *Illumination* (Tibetan text page 339) says:

> At that time, this Dharma is not presented for the sake of argument. *Therefore, having completely dispelled attachment* for one's own position *and anger* for others' positions, those who *completely analyze* by means of reasonings *will quickly be liberated*. [Nagarjuna's] *Sixty Stanzas of Reasoning* (v. 50) also says:

> Great beings lacking argument,
> They have no position.
> For those who have no position
> How could others' positions exist?

Great beings, lacking argument, do not think "This is my position and this is others' position."

Lama Tsongkhapa's *Illumination* (Tibetan text page 339) says:

> [Aryadeva's] *Four Hundred Stanzas* (v. 8.10) also says:
> If you have attachment for your own position and
> Dislike for others' positions,
> You will not go to nirvana.
> These two behaviors do not exist in peace.

As long as one continues to takes sides, one will not achieve liberation. In other words, if one has attachment for one's own position and anger toward others' positions it will not be possible to attain peace.

Lama Tsongkhapa's *Illumination* (Tibetan text page 339) says:

> The *King of Meditative Stabilizations Sutra* also says:
> Whoever develops attachment upon hearing this Dharma and
> Develops anger upon hearing the non-Dharma,
> These proud ones, overcome by haughtiness, turn away;
> Later, due to the force of pride, they experience suffering.

"Hearing this Dharma" can mean to hear or listen to Dharma that pleases us, whereas "Hearing the non-Dharma" is to hear or listen to Dharma that we do not like. Or it can be understood to mean that we become happy upon hearing teachings on what to practice in order to achieve liberation, while we become upset upon hearing teachings on what it is we need to abandon.

Haughtiness (see *Meditation on Emptiness*) is a puffing up of the mind through taking joy and comfort in observing one's own good health, youth, beauty, power, signs of long life, prosperity, and so forth. Haughtiness is one of the secondary afflictions, these being related to, or close to, the six root afflictions, ignorance, anger, attachment, pride, and so forth. For example, which of the secondary afflictions are close to anger? They are belligerence, resentment, spite, jealousy, and so forth. Haughtiness is close to pride. Pride in the context of this verse is the pride that is an affliction, not the pride of tantric practice.

Lama Tsongkhapa's *Illumination* (Tibetan text page 339) says:

> It should be understood that the very teaching "If, having given up taking the side of attachment for and anger toward one's own and others' positions, one does not analyze with an honest mind, one will be tightly bound to cyclic existence in dependence on the analytical meditations of tenets" is special advice given to us by the merciful one.

If one does an analytical meditation that concludes one's own position is the best while others' positions are only faulty, this will cause one to become even more tightly bound to cyclic existence. When analyzing the various tenet systems, one should not develop anger toward others' tenets. If

while analyzing them one finds mistakes in others' tenets, one should not develop anger but, instead, should develop compassion for those who have such tenets. This is special advice given for our sake.

Lama Tsongkhapa's *Illumination* (Tibetan text page 340) says:

> The refutation of production from self up to here is taught as presenting the selflessness of phenomena. The selflessness of phenomena that are things is frequently presented, however, there is also the intention to present the selflessness of phenomena that are non-things from time to time.

Up to here in the text, the self of phenomena has been presented. Although the presentation of the selflessness of phenomena is mainly based on the emptiness of compounded phenomena, from time to time it is based on the emptiness of uncompounded phenomena.

QUESTIONS AND ANSWERS

Student: With regard to the following statements which were included in the Exam 3, are they true or false?

1. The eye consciousness apprehending an inherently existent pot is mistaken with respect to the pot's inherent existence but not with respect to pot. *(exam question #12)*
2. The eye consciousness that apprehended blue and the subsequent memory of blue engage the same object. *(exam question #46)*
3. Manifest phenomena and hidden phenomena are mutually exclusive. *(exam question #50)*

The first is false. There is a difference between "apprehending an inherently existent pot" and "apprehending a pot to exist inherently." According to the Prasangika Madhyamikas there does not exist an eye consciousness apprehending an inherently existent pot because there does not exist an inherently existent pot. In other words, can an eye consciousness apprehend an inherently existent pot? It cannot because an inherently existent pot does not exist. On the other hand, there is an eye consciousness that apprehends a non-inherently existing pot, whereas there is no eye consciousness that apprehends a pot as not existing inherently. If one apprehends a pot, one necessarily apprehends a non-inherently exist pot, but if one apprehends a pot one does not necessarily apprehend the pot as not existing inherently.

The second is true.

The third is true because there is no common locus of the two, manifest phenomena and hidden phenomena. However, there can be discussion about this in regard to the definitions of the various tenet systems. A manifest phenomenon is: a phenomenon that can be realized by the force of experience without depending on a reason. A hidden phenomenon is: a phenomenon that cannot be realized by the force of experience but is realized by depending on a reason. In Sautrantika, a manifest phenomenon is that which is realized by the respective conception apprehending it in a manner of being manifest. On the other hand, a hidden phenomenon is that which is realized by the respective conception apprehending it in a manner of being hidden. *Collected Topics* says that a manifest phenomenon is: that which is realized explicitly by a direct valid cognizer. In this text, a hidden phenomenon is: an object realized in a hidden manner by a thought consciousness apprehending it.

Student: With regard to stating "phenomena are *merely imputed*" and "phenomena are *mere imputations,*" are these two statements equivalent?
Geshe Jampa Gyatso: They are equivalent, it is only a question of how they are expressed.
Student: Is it correct to say "phenomena are mere names"?

Geshe Jampa Gyatso: It is correct.
Student: Some say that names and sounds are form and that if it is a name it is a sound.
Geshe Jampa Gyatso: If, instead of saying that "Phenomena are mere names," we say "Phenomenon are merely imputed by name," then it is very clear. "Merely posited by conception" and "merely imputed by name" are the same, however, in regard to stating "Phenomena are mere names" their could be debate because according to some tenets if it is a name it is form. That is, for some schools a name or a mere name is form. On the other hand, according to the *Treasury of Knowledge* a name is not form because it is a non-associated compositional factor. In this tenet system, name is not sound but is what brings about understanding of the object, for example, stating "Sixte" brings about the understanding of the person called "Sixte." Are phenomena mere names? We would have to say that they are not due to the various tenet systems. What is the definition of "name"? According to the Sautrantika system it is: an object of hearing that makes one understand the subject matter by the force of a term. There are actual names and imputed names.

Student: For Prasangika, sutras of interpretable meaning are those that take conventionalities as their main indicated subject matter. Yet it seems that some sutras that were intended for Chittamatrins teach the ultimate (such as the sutra passage from the *Descent Into Lanka Sutra* that says all phenomena are mere mind) and yet are of interpretable meaning for Prasangika. Please explain this.
Geshe Jampa Gyatso: When the Buddha taught the Chittamatrins in accordance with their desires saying "Phenomena are empty of being external objects" this is not a teaching on the ultimate for the Prasangika Madhyamikas. That a form is empty of being an external object and is the mere nature of mind is not the case for the Prasangika Madhyamikas. However, it can be asked: "Do these words of Buddha take conventionalities as their main subject matter?" If someone says that they do, it can be argued: "Then, what are the conventionalities spoken of here?" When the Buddha said forms are empty of being external objects, what was his intention? The basis of intention is not defined, whereas the purpose is to take care of the Chittamatrins.
Student: Does that statement teach the ultimate?
Geshe Jampa Gyatso: From the Prasangika Madhyamikas point of view it does not, whereas from the Chittamatra point of view it does. This is because in the Prasangika Madhyamika system the emptiness of external objects is not ultimate truth, whereas in the Chittamatra system it is ultimate truth. The Buddha said that form is empty of being an external object. What was his basis of intention?
Student: It was to for Buddha to lead those with strong attachment through enabling them to diminish their attachment.
Geshe Jampa Gyatso: That is the *purpose* of his teaching that form is empty of being an external object. Interpretable meaning teachings have a basis of intention, a purpose, and harm to taking them literally. So what is the basis of intention? Think about it.

Student: When the Prasangika Madhyamika debates with Chittamatra, they say it is an interpretable meaning sutra, not a definitive meaning. Does this mean that they do not use their own definition of interpretable meaning to do so, but instead use the definition of the Chittamatrins?
Geshe Jampa Gyatso: The Buddha said "Form is empty of being an external object." The Prasangika Madhyamikas say that this is an interpretable meaning sutra because it cannot be accepted literally. The Chittamatrins assert that there are no objects that do not depend on inner consciousness. When the Prasangika Madhyamikas insist that this is an interpretable meaning teaching, the Chittamatrins respond saying that this is true. Therefore, the Prasangika Madhyamikas use the Chittamatrins' own definition of an interpretable meaning sutra, a sutra that cannot be accepted literally. Although the Prasangika Madhyamikas use this definition in their refutation, the Chittamatrins continue to say that this teaching is literally acceptable, however, slowly they are led to change their position. On the other

hand, if the Prasangika Madhyamikas were to use their own definition of interpretable meaning as a reason saying "It is an interpretable meaning sutra because it does not take the ultimate as its main subject matter," the Chittamatrins would say that this is not so because it does take the ultimate as its main subject matter because for them the emptiness of external objects is the ultimate. Therefore, whatever definition the Prasangika Madhyamikas use, the Chittamatra are not convinced, that is, they do not come to accept the thesis of the Prasangika Madhyamikas.

Student: Geshe-la previously taught that the latency of an action and the disintegratedness of an action have different functions in that the disintegratedness of an action yields a fruitional result, whereas the latency of an action does not yield a fruitional result because it is an unspecified phenomenon. Would Geshe-la please explain the unique function of a latency of action according to Prasangika?

Geshe Jampa Gyatso: In general, in the Prasangika Madhyamika system there is no need to posit latencies. In this system, the disintegratedness of an action itself is sufficient to bring about a fruitional result without the need to posit latencies. If pushed, they say that if an action were to deposit a latency, it would deposit it on the mere I. However, there is no need for an action to deposit a latency because the disintegrated action itself is able to remain until it yields its result.

Because the latency of an action is a compounded phenomena, it should have a function. In one text it does say that the latency of an action does have particular attributes.

END

Monday afternoon, 29 January 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 340) says:

3B1C-2B3E-2B Establishing the selflessness of persons through reasoning

1 Indicating that those desiring liberation should initially refute an inherently existent self
2 How to refute the two – an inherently existent self and mine
3 Indicating the analysis of a self and a chariot to be applicable also to other things

3B1C-2B3E-2B1 Indicating that those desiring liberation should initially refute an inherently existent self

Chandrakirti's autocommentary says:

> Therefore, having thus demonstrated the selflessness of phenomena through scripture and reasoning, after that, in order to demonstrate a self of persons as non-existent, it is explained:
>
> *With intelligence, having seen afflictions and defects without exception*
> *As arisen from the view of the transitory collection and*
> *Having realized the self as its object,*
> *The yogi acts to refute the self.* [6.120]

The phrase "Having thus demonstrated the selflessness of phenomena through scripture and reasoning, after that, in order to demonstrate a self of persons as non-existent" makes a connection between the previous subject, the selflessness of phenomena, and the coming subject, the selflessness of persons. In order to present the selflessness of persons Chandrakirti sets out verse 6.120. All the afflictions, such as attachment, anger, pride, and so forth, and all defects, such as birth, aging, sickness, death, and so forth, without exception, have as their root the view of the transitory collection. This is what is to be understood by the intelligent.

"Having realized the self as its object" (v. 6.120c) refers to the nominally existent self or mere I which is the observed object of the view of the transitory collection. On the other hand, "the yogi acts to refute the self" refers to the self which is the object of negation – a self-sufficient substantially existent self, an inherently existent self, or an established by way of its own character self. In short, the yogi realizes that the mere I, the observed object, is not a self-sufficient substantially existent self and is not an established by way of its own character self.

Chandrakirti's autocommentary says:

> There, the view of the transitory collection is an afflicted wisdom engaged in such a way to consider I and mine. Since arisen from that, they are arisen from the view of the transitory collection.

The view of the transitory collection is an afflicted wisdom that takes as its object the I or mine included in one's own continuum and considers it to be self-sufficient substantially existent or established by way of its own character. However, according to the Prasangika Madhyamikas, the afflicted wisdom observing the self in one's own continuum and conceiving it to be self-sufficient substantially existent is not the actual view of the transitory collection, but is the view of the transitory collection imputed by the lower schools. This is because the actual view of the transitory collection is an afflicted wisdom conceiving the self included in one's own continuum to be inherently existent or established by way of its own character.

Since they arise from that afflicted wisdom, they arise from the view of the transitory collection. Chandrakirti's autocommentary says:

> If asked: But what are they?
>
> Afflictions and defects[124]. There, the afflictions are attachment and so forth. The defects are birth, aging, sickness, death, misery, and so forth.

The afflictions are attachment, anger, pride, and all the secondary mental afflictions. An affliction (*nyon mongs*) is defined as: a mental factor that acts to render one's continuum unpacified and unsubdued. "The defects" – birth, aging, and so forth – are what arise from the afflictions. Birth is to join again and again due to actions and afflictions. Aging is the continuous changing of the aggregates which are a fruitional result. Sickness is of various types, these being included in mental and physical illness, as well as bodily pain. Death is the giving up of the body of this life. Misery or suffering is of different types: suffering due to not finding an object that one desires even though one makes much effort, suffering due to meeting the unattractive, suffering due to being separated from an attractive object, and so forth. All these sufferings arise from the view of the transitory collection.

Chandrakirti's autocommentary says:

> They are, without exception, arisen from the view of the transitory collection [since] all afflictions are taught in sutra to bear the cause of the view of the transitory collection:[125]
>
> > [They] bear the root of the view of the transitory collection, bear the cause of the view of the transitory collection, and bear the origin of the view of the transitory collection.

The view of the transitory collection is the root of all afflictions, the cause of all afflictions, and the origin of all afflictions. "[They] bear the root of the view of the transitory collection" means that the afflictions have as their root the view of the transitory collection. "They bear the cause of the view of the transitory collection" means that the afflictions have as their cause the view of the transitory collection. Because the view of the transitory collection is the origin of all afflictions, it is the origin of all the various types of sufferings.

Chandrakirti's autocommentary says:

> Because formations strongly manifest and because the suffering of birth and so forth arise in those who did not abandon the view of the transitory collection, they, without exception, bear the cause of the view of the transitory collection.

Due to the view of the transitory collection, actions – that is, karmic formations – are accumulated, whereby birth and so forth arise. However, when this subject is debated a fault is found in the wording. Here it says that as long as one does not repudiate the referent object of the view of the transitory collection, one continues to accumulate actions and therefore to wander in cyclic existence. Nagarjuna's *Precious Garland* (G. Churinoff's translation) says:

> As long as grasping to the aggregates exists,

[124] Amend Poisson's Tibetan from the Derge: *nyon.mongs.pa rnams.dang skyon.rnams.so*.

[125] Source unidentified.

So long grasping to the I exists, due to it.
When grasping to I exists, [there is] also action;
From that, also, there is rebirth.

Having three paths in mutual causation,
Without a beginning, middle or end –
This wheel of samsara will revolve
Like the wheel of a firebrand."

J. Hopkins' translation in *Compassion in Tibetan Buddhism* says:

As long as the aggregates are [mis]conceived,
So long is there [mis]conception of an 'I'.
When this conception of an 'I' exists,
There is action which results in birth.

With these three pathways in mutual causation
Without a beginning, middle, or an end
This wheel of cyclic existence
Turns like the 'wheel' of a firebrand.

"They, without exception, bear the cause of the view of the transitory collection" refers to the fact that all defects or faults arise from the view of the transitory collection.

Student: What is the fault in the wording?
Geshe Jampa Gyatso: With regard to the first verse above from Nagarjuna's *Precious Garland*, one can debate this statement asking: Do bodhisattvas on the first ground accumulate projecting actions since they still have the view of the transitory collection, the conception of a self of persons, and the conception of a self-sufficient substantially existent person? What is the scriptural authority for this? The fourth chapter of the *Supplement* (J. Hopkins, *Compassion in Tibetan Buddhism*) says:

There for the sugata child an illumination arises
Produced from a greater cultivation of the harmonies
Of perfect enlightenment, surpassing the copper light.
What is related to the view of a self is extinguished. [4.2]

Until they attain the fourth ground, bodhisattvas still have the conception of a self-sufficient substantially existent person. This conception is extinguished on the fourth ground, therefore, it no longer exists on the fifth ground. Through which ground do bodhisattvas have a conception of self of phenomena or of truly existent aggregates? They have it through the seventh ground. This is the reason why the first seven grounds are called impure grounds. On the other hand, the next three grounds are called pure grounds because the afflictions have been abandoned. This is what is asserted by the Prasangika Madhyamikas. Since bodhisattvas have the conception of truly existent aggregates through the seventh ground, it would seem that they still have the view of the transitory collection and, therefore, still accumulate projecting actions and are reborn in cyclic existence. This is the fault in the wording. One text says: "One who sees the truth, is without projecting actions. One who is free from craving is not reborn." This means that one who sees emptiness directly no longer creates projecting actions and one who is free from craving no longer takes birth.

Chandrakirti's autocommentary says:

> The referent of that is only the self, because grasping to I is the object-possessor of the self. There, only the view of the transitory collection is the object to be abandoned by those desiring to fully abandon afflictions and defects without exception.

Those who wish to abandon the afflictions and defects must abandon the view of the transitory collection.

Chandrakirti's autocommentary says:

> That also will be abandoned through comprehending the selflessness of the self; hence, the yogi initially acts to refute only the self.

When selflessness is realized, the conception of a self is gradually abandoned, therefore, a yogi first refutes, not the conventional self, but the self that is the object of negation,.

Chandrakirti's autocommentary says:

> If, from refuting that, the view of the transitory collection will be abandoned, if afflictions and defects without exception will be reversed, completely analyzing the self is the means of achieving liberation. Therefore, the yogi for a while initially acts to completely analyze only the self saying, "What is this so-called self like that is the referent of the view of the transitory collection?"

Since by this means the afflictions and defects are also abandoned, the way to achieve liberation is to completely analyze the self. Thus, the yogi initially completely analyzes the self asking himself, for example: "What is the observed object of the view of the transitory collection? What is the object of the mode of apprehension of the view of the transitory collection?" Keep in mind that there are many ways to posit the self that is the observed object of the view of the transitory collection; these ways of positing it will be discussed later on in detail.

Lama Tsongkhapa's *Illumination* (Tibetan text page 340) says:

> Having, thus, presented the selflessness of phenomena by means of scripture and reasoning, next, in order to present the selflessness of persons, it is explained:
>
> *Having seen with intelligence that afflictions and faults*
> *Without exception arise from the view of the transitory collection and*
> *Having realized that the self is the object of that,*
> *Yogis refute the self.* [6.120]
>
> Here, yogis who desire to engage in suchness and desire to abandon the faults of the afflictions without exception, reflect thinking "What is the root of wandering in cyclic existence like?" When investigating in this way, *they see with intelligence that the afflictions*, attachment and so forth, and the *faults*, birth, aging, sickness, death, and so forth, *without exception*, *arise from the view of the transitory collection* which is an afflicted wisdom conceiving the two – that having the aspect of "I" and "mine" – to be inherently existent. They are, without exception, a result of the view of the transitory collection. When this is seen, there arises a desire to abandon the view of the transitory collection. At that time, if one has wisdom it is abandoned.
>
> Moreover, as cited before from [Nagarjuna's] *Praise of the Sphere of Phenomena* and [Aryadeva's] *Four Hundred Stanzas*, through seeing that a self like that apprehended by the view of the transitory collection does not exist on the object, one sees that it must be abandoned. Then, when one investigates this thinking "What is the observed object of this adherence to a basis by the

> view of the transitory collection?", one *realizes* "The I which is the *self*, that is, the 'I,' is *the object* – the observed object – *of that* view of a self" because that conception of I is the object-possessor of the self.

Having settled the meaning of the selflessness of phenomena, now Lama Tsongkhapa sets out the selflessness of persons. Those who desire to abandon the afflictions and faults should abandon the view of the transitory collection. In order to do this, one has to engage suchness, that is, to realize emptiness. To do so, one must first identify the afflictions and faults, and then the self that is the object of negation. This means that one should first identify the root afflictions, attachment, hatred, and so forth, as well as the secondary afflictions. Having done so, one will come to understand that there origin is the view of the transitory collection. Then one identify the view of the transitory collection – an afflicted wisdom that observing either the I or mine considers it to exist inherently. From this view of the transitory collection arise all afflictions and faults. In other words, the view of the transitory collection is the root or cause from which arise the results that are the afflictions and faults. Through reflecting upon this, one will develop the wish to abandon the view of the transitory collection. Having developed this wish, the intelligent then strive to identify the observed object of the view of the transitory collection. In order to understand this, Lama Tsongkhapa says that one should refer to Nagarjuna's *Praise of the Sphere of Phenomena* and Aryadeva's *Four Hundred Stanzas*. One has to investigate what is the observed object of the view of the transitory collection and what is the mode of apprehension of the view of the transitory collection. The I is the observed object of the view of the transitory collection. In order to prove this Lama Tsongkhapa sets out the reason: "because that conception of I is the object-possessor of the self." "I" or "self" are synonymous, they refer to the nominally existent self. *Collected Topics* says that I, self, being, and person are synonyms; they refer respectively to the I and so forth that exist nominally.

Tuesday morning, 30 January 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 341) says:

> At that time, those desiring to abandon all afflictions and faults without exception should abandon the root – that view of the transitory collection itself. Furthermore, this is abandoned through comprehending the selflessness – that is, the lack of establishment by way of its own entity – of the self, its observed object. Therefore, yogis initially investigate just the self thinking "Is the so-called 'self' – the object of whoever conceives a self – established or not established by way of its own entity?" When *yogis* abandon the view of the transitory collection through *refuting* an inherently existent *self*, they eliminate all afflictions and faults. Hence, this complete analysis in regard to the self is the method to achieve liberation.

When the yogi analyzes whether the self exists inherently or not, he comes to realize that it does not. This analysis is the method for achieving liberation, for abandoning the view of the transitory collection, and for eliminating all afflictions.

Lama Tsongkhapa's *Illumination* (Tibetan text page 341) says:

> As [Shantideva's] *Compendium of Trainings* says:
>
> > When the emptiness of persons is thoroughly achieved in that way, because of that, all the afflictions will never arise since the root has been cut.
>
> As it says in the *Secret Sutra of the Arya Tathagata*:
>
> > It is like this, Shantimati. For example, when the root of a tree is cut, all the branches, leaves, and twigs dry up. Shantimati, similarly, when the view of the transitory collection is pacified, all the afflictions and secondary afflictions are pacified.

Shantideva's *Compendium of Trainings* also says that in dependence on the realization of the lack of an inherently existent self, the root of the afflictions is cut and, therefore, sufferings no longer arise. It is like when, having merely cut the branches and leaves of a tree without cutting its root, the tree will not stop growing but may even grow better, therefore, it is necessary to cut the root of the tree. Likewise, by merely cutting the secondary afflictions the root of cyclic existence is not cut, but when the root, the view of the transitory collection, is cut cyclic existence is destroyed. This is because when the view of the transitory collection is cut all the root afflictions, attachment and so forth, and all the secondary afflictions, belligerence and so forth, also cease. Aryadeva's *Four Hundred Stanzas* says:

> Like the body sense power [abides in] the body,
> Confusion abides in all.

When ignorance or the view of the transitory collection is destroyed, all the afflictions are destroyed, likewise, when the body sense power is destroyed so too are all the other physical sense powers, such as the eye sense power and so forth.

Lama Tsongkhapa's *Illumination* (Tibetan text page 341) says:

> Since the lords of the wise accord with teaching in this way, initially one should understand the shortcomings of cyclic existence well and then contemplate them. Then, one should identify its root. Then, if one wishes to abandon it, one should understand that, having gained ascertainment of the view of the selflessness that negates its referent object without lacking the method for abandoning it, it is necessary in both the great and lesser vehicles to accustom oneself to its meaning.

Having identified the shortcomings of cyclic existence, one should identify their root. Having done so, one will develop the wish to abandon it. Then, in order to not mistake the means for abandoning it, one should ascertain the view of selflessness which negates the referent object of the conception of a self. Then, one has to familiarize oneself with that selflessness. In order to do so, one has to engage in the three, hearing, thinking, and meditating, independent of whether one is following the great vehicle or the lesser vehicle.

Lama Tsongkhapa's *Illumination* (Tibetan text page 342) says:

> OBJECTION: [Nagarjuna's] *Precious Garland* (v. 35) says:
>
> > As long as there is the conception of the aggregates
> > Until then there exists the conception of I.
> > When there exists the conception of I, action also exists.
> > From that action, there is also birth.
>
> This explains the conception of truly existent aggregates – the conception of a self of phenomena – to be the root of cyclic existence, whereas here [in the *Supplement*] the view of the transitory collection is explained to be the root of cyclic existence. These two [explanations] are contradictory because it is not admissible for two discordant [things] to be the root of cyclic existence.
> RESPONSE: There is no fault. The system here distinguishes the two conceptions of a self in terms of their observed objects, whereas the aspects of their modes of apprehension are not different,
>
> - because both have the aspect of also conceiving establishment by way of its own character and
> - because two contradictory roots of cyclic existence refer to positing two discordant modes of apprehension engaging an object as the root of cyclic existence.

According to the Prasangika Madhyamikas, the conception of a self of persons and the conception of a self of phenomena are distinguished from the point of view of their observed objects and not from the point of view of the aspects of their mode of apprehension because they both have the aspect of apprehending their object to be established by way of its own character or inherently existent. What does it mean that the two conceptions of a self are distinguished from the point of view of their observed objects? When a conception observes the person, from among the two, persons and phenomena, and conceives it to be established by way of its own character, this is a conception of a self of persons. On the other hand, when a conception observes a phenomenon, such as the aggregates, from among the two, persons and phenomena, and conceives it to be established by way of its own character, this is a conception of a self of phenomena. Contrarily, in the lower schools these two conceptions are distinguished from the point of view of their modes of apprehension and not their observed objects. For example, in the Svatantrika Madhyamika system, the conception of a self of persons is defined as a conception conceiving either the person or a phenomenon to be self-sufficient substantially existent, whereas the conception of a self of phenomena is a conception conceiving either the person or a phenomenon to be truly existent. The Chittamatra system posits the conception of self of persons in the same way as the Svatantrika Madhyamikas, but posits the conception of a self of phenomena as a conception that conceives any phenomena, from form through the exalted knower of all aspects, to be established by way of its own character as the basis for a term or as the basis for the conception apprehending it. They also say that the conception of a self of phenomena is the conception conceiving apprehendeds, that is, objects, and apprehenders, that is, object-possessors, to be different substances. The Vaibhashika and Sautrantika schools do not assert a conception of a self of phenomena, that is, they assert only a conception of a self of persons, because they assert that there is a self of phenomena.

Lama Tsongkhapa's *Illumination* (Tibetan text page 342) says:

> Hence,
> - when the conception of a self of phenomena is presented as the cause of the view of the transitory collection, the two subdivisions of ignorance are presented as cause and result, and
> - when both [conceptions of a self] are presented as the root of the afflictions, they are presented as the root of all other afflictions whose mode of apprehension is discordant with themselves.
>
> Since that mode, furthermore, exists for both [conceptions], they are not contradictory; like both a former and later [moment of] a similar type of ignorance are not contradictory in being the root of cyclic existence.

"The two subdivisions of ignorance are presented as cause and result" means that the conception of a self of phenomena is the cause of the conception of a self of persons, the view of the transitory collection. Hence, there first arises a conception of a self of phenomena and then a conception of a self of persons. For example, when we see someone for the first time, we initially see his aggregates and conceive them to be established by way of their own character, this being a conception of a self of phenomena. Then, when that person introduces himself as Tashi Dorje, we conceive an inherently existent Tashi Dorje, this being a conception of a self of persons. Thus, the conception of a self of persons arises in dependence on the conception of a self of phenomena because in order for there to be the appearance of the person there must first be the appearance of the aggregates. In short, the appearance of the person arises in dependence on the appearance of the aggregates. In conclusion, it is not contradictory to posit both the view of the transitory collection and the conception of truly existent aggregates as the root of cyclic existence.

A former moment of ignorance can be posited as the root of cyclic existence and a later moment of ignorance as the root of cyclic existence. Do they have a common locus? There do not

because former and later are mutually exclusive, yet, since the continuum is one, they can both be the root of cyclic existence.

Lama Tsongkhapa's *Illumination* (Tibetan text page 342-3) says:

3B1C-2B3E-2B2 How to refute the two – an inherently existent self and mine

A Refuting an inherently existent self
B Refuting an inherently existent mine

3B1C-2B3E-2B2A Refuting an inherently existent self

1 Refuting a self that is a different entity from the aggregates, which is imputed by other schools
2 Refuting the assertion that the aggregates themselves are the self, which is imputed by our own schools
3 Refuting the three remaining positions other than those two: support, supported, and so forth
4 Refuting a substantially existent person that does not exist as oneness and as otherness
5 Explaining the self posited as a mere dependent imputation along with an example
6 Indicating the excellent quality of positing in this way of easily abandoning the conceptions holding to an extreme

3B1C-2B3E-2B2A-1 Refuting a self that is a different entity from the aggregates, which is imputed by other schools

Here "other schools" includes the Samkhyas, Vaisheshikas, and so forth who have their own particular ways of positing a self. Shantarakshita's *Compendium of Suchness* extensively sets out the other schools' various ways of positing a self.

A Stating their positions
B Refuting that system

3B1C-2B3E-2B2A-1A Stating their positions

Chandrakirti's autocommentary says:

If said: What is that self, the referent of the view of the transitory collection? Just that is not known.

Lama Tsongkhapa's *Illumination* (Tibetan text page 343) says:

QUESTION: What is the self that is the observed object of the view of the transitory collection? Due to not understanding that itself, it is indicated:

1 Stating the Samkhya system
2 Stating the Vaisheshika system and so forth

3B1C-2B3E-2B2A-1A1 Stating the Samkhya system

Chandrakirti's autocommentary (Tibetan text page 146) says:

There, first of all:

The self imputed by the Forders is an enjoyer,
Permanent thing, not creator, without qualities or actions.
The systems of the Forders are differentiated
In dependence on small small divisions of it.[126] [6.121]

The Samkhyas assert twenty-five objects of knowledge for engaging in and becoming free of cyclic existence. These twenty-five objects of knowledge include the self which has five attributes:
1. it is an eater or enjoyer,
2. it is a permanent thing,
3. it is not a creator,
4. it lacks qualities, and
5. it lacks activities.

Because there are different ways of identifying the self, Chandrakirti says: "The systems of the Forders are differentiated in dependence on small small divisions of it." This means that there are different Forder schools in dependence on the slightly different ways in which they identify the self. For example, the Vaisheshikas assert that the self possesses qualities, whereas the Samkhyas say that it lacks qualities.

Chandrakirti's autocommentary says:

> There, the Samkhyas state [in the *Samkhyakarika*]:[127]
>
> > The fundamental nature is not a transformation —
> > The great one, etc., the seven, are natures and transformations and
> > The sixteen indeed are transformations;
> > The being is not a nature, not a transformation.
>
> There, due to thoroughly creating (*prakaranat*), it is a nature (*prakriti*)[128]

That the fundamental nature, or the general principal, is not a transformation means that it is not a result.

"The great one, etc., the seven" refer to:
1. the great one,
2. the I-principle,

and the five subtle objects:
3. forms,
4. sounds,
5. odors,
6. tastes, and
7. tangible objects.

These seven are natures because they are causes, and are transformations because they are results.

"The sixteen indeed are transformations" means that sixteen are only results. These are:
- the five awareness faculties (or five mental faculties, see *Meditation on Emptiness*),
- the five action faculties

[126] See the Sanskrit in Poisson, p. 283. The Tibetan: *za.po* for the Sanskrit *bhokta*, seems to accord either with "utilizer" or "enjoyer."

[127] Poisson, p. 283, note 3.

[128] Poisson, p. 284.

- the mental faculty (or intellectual faculty, see *Meditation on Emptiness*), and
- the five elements.

These are called "the eleven faculties together with the five elements." The five action faculties are:
1. the speech faculty,
2. the arm faculty,
3. the leg faculty,
4. the anus faculty, and
5. the genital faculty.

These are so-called because they perform actions.
The five awareness faculties are:
1. the eye faculty,
2. the ear faculty,
3. the nose faculty,
4. the tongue faculty, and
5. the body faculty.

There is also the mental faculty and, in addition, the five elements:
1. earth,
2. water,
3. fire,
4. wind, and
5. space.

"The being is not a nature, not a transformation" means that the being is neither a cause nor a result. These are the twenty-five objects of knowledge asserted by the Samkhyas. The self asserted by them is also called "consciousness," "cognizer," and "being." Tibetans usually refer to it saying "the being which is the three, self, consciousness, and cognizer."

Chandrakirti's autocommentary says:

> If asked: In what situation is there creation?
>
> At the time of perceiving the desire of the being. When desire having the aspect to thoroughly enjoy (utilize) the object, sound and so forth, is produced in the being, then the nature, fully knowing the being's desire, conjoins with the being and thereby issues forth sound and so forth.[129]

The Samkhyas say that everything arises from the nature, that is, the general principal is the creator of everything. It creates in response to the desires of beings, meaning that the general principal knows the desire of beings to hear attractive sound and then creates an attractive sound and so forth.

Chandrakirti's autocommentary says:

> This is the order:
>
> There, the method is this. From the nature, the great one; from that, the I-principle; from that, the group of sixteen. Also, among the sixteen, the five elements are from the five [subtle objects], that is, the five elements arise from sound and so forth.[130]

[129] See *Practice and Theory of Tibetan Buddhism*, pp. 58-62.

[130] Citation uncertain.

What is the great one? The Samkhyas say that it is like a two-sided mirror which reflects everything. From the great one, comes the I-principle; from that, the group of sixteen. Among the sixteen, the five elements arise from the five subtle objects.

Chandrakirti's autocommentary says:

> "Is not a transformation" means that, since it is only a thorough producer, it is not also a transformation like the great one and so forth. The great one and so forth are thorough producers and are also transformations, therefore, it is mentioned that "The great one, etc., the seven, are natures and transformations, and…"

The general principal is not a transformation, that is, it is not a result, because it is only a cause due to being the creator. The fundamental nature is not a transformation, whereas the seven, the great one and so forth, are transformation. In fact, the great one and so forth are both thorough producers and transformations. This is Chandrakirti's explanation of the verse in the Samkhya text ""The great one, etc., the seven, are natures and transformations..."

Chandrakirti's autocommentary says:

> The great one and so forth are also natures through reliance on their own transformations; they are transformations through reliance on the nature.

The seven, the great one and so forth, are called "natures," that is, causes, with respect to their results, and are called "transformations," that is, results, with respect to their causes.

Chandrakirti's autocommentary says:

> The intellectual facu1ties and so forth – the sixteen – are only transformations. Therefore, it is mentioned that "the sixteen are transformations." The term "indeed" is in order to specify "only transformations."

The sixteen are only transformations, that is, they are only results. This is understood from the term "indeed" of the line "The sixteen indeed are transformations" which specifies that they are only results, that is, transformations.

Chandrakirti's autocommentary says:

> To mention that "The being is neither a thorough producer nor a transformation," it is stated "The being is not a nature, not a transformation."

The being is not a nature, that is, a cause, and it is not a transformation, that is, a result. Therefore, among the twenty-five objects of knowledge there are four possibilities:
1. that which is only a cause,
2. that which is only a result,
3. that which is both, and
4. that which is neither.

An example of the first is the general principal or fundamental nature. An example of the second is the sixteen, such as the five mental faculties and so forth. An example of the third is the seven, the great one and so forth. An example of the fourth is the self or the being.

Tuesday afternoon, 30 January 2001

Chandrakirti's autocommentary says:

> Since the entire group of transformations are produced in this order, one must tell how the being who produces desire becomes an intimate enjoyer. The intellect grasps to sound and so forth – the objects apprehended by the intellectual faculties of the ear and so forth – due to the blessings (empowerment) by the mentality. Thereby, the being (*parusha*) creates understanding about the objects that the intellect has grasped. Thus, because the being's mind is its own entity that exists, it is said that "The self intimately enjoys objects."

The Samkhyas say that the group of transformations arises in the order set out above: from the nature comes the great one, from that the I-principle, and from that the various transformations. The being is an intimate enjoyer. How does it enjoy? This being desires to enjoy objects, such as forms, sounds, and so forth. The awareness or intellect then adheres to sound and so forth, due to which the being develops and understanding of the object, or it can be said that the awareness adheres to an object and then the being thinks about it. This is explained so because the Samkhyas also call the being "one possessing intention." "The self intimately enjoys objects" refers to the objects of the various faculties.

Chandrakirti's autocommentary says:

> Thus, objects are intimately enjoyed out of desire. And, when the being separates from attachment to objects due to diminishing attachment [for them], at that time, [the being] gradually meditates on the concentrations and by correctly adopting the divine consciousness, views the nature by way of the divine eye. As a result of being viewed by it and becoming ashamed – like the wife of another[131] – [the nature] does not proceed[132] with the self and will separate. Because of thoroughly extinguishing (absorbing) into that itself (the nature) by means of reversing from the order of generating the entire group of transformations, it becomes unclear (invisible) in nature. Then the being abides alone, thereby liberated.

When the being separates from attachment to objects, it meditates on the concentrations and achieves clairvoyance. Then, with the divine eye it looks at the nature due to which the nature becomes embarrassed and withdraws, like another man's wife. The nature slowly disappears while withdrawing all the groups of transformations. Thus, whereas initially the nature expanded everything out from itself, it now absorbs everything back into itself. In this way, the transformations become unclear, that is, they reabsorb into the nature. The nature is also called "the invisible one" because it does not manifest itself as an object of the sense powers. After this reabsorption what remains is only the being, who is also called "self," "consciousness," and "cognizer." In this way the being is said to attain liberation. Chandrakirti says: "Then the being abides alone, thereby liberated."

[131] *Practice and Theory of Tibetan Buddhism*, p. 61: "like a mistress when seen by a wife."

[132] LTK, p. 361, has Tibetan: *bdag.la mi.'gro zhing* – "does not proceed to the self," commenting on the Tibetan translation of Chandrakirti: *bdag.la mi.k'ro zhing*, "not angry with the self." Poisson translates it as "sans sirriter" on p. 285 and in note 2.

Chandrakirti's autocommentary says:

> That [being or self] is termed "permanent" because of always abiding as a solitary entity since not being crippled even though the transformations were already impaired. Because the nature is a creator and among the transformations some are also creators, since the self is lazy about activity, it is said that "It is not a creator." Intimate enjoyment was already indicated in the manner that was mentioned.

Although the transformations are impaired, the being nevertheless remains. "Among the transformations some are also creators" refers to the seven – the great one, the I-principle, and the five subtle objects. "Since the self is lazy about activity, it is said that "it is not a creator." Although the self is not a creator, it is an enjoyer.

In short, the Samkhyas say that the general principal creates things for beings who then enjoy them. However, when beings become tired of enjoying these objects and look at the general principal it becomes embarrassed and withdraws.

Chandrakirti's autocommentary says:

> Because without *rajas* (activity), *tamas* (darkness), and *sattva* (lightness), it is just without qualities. Because of pervasiveness, it is without activity. Thus are the attributes of the being.

The being is without qualities because it lacks the three qualities – activity, darkness, and lightness. The being lacks activity because it is pervasive and, therefore, has no need of the activity of going here and there. In short, the being or self is:

1. a consumer,
2. a permanent thing,
3. not a creator,
4. without the qualities of activity, darkness, and lightness, and
5. without activity.

Chandrakirti's autocommentary says:

> There, if asked: In the statement, "The nature itself is a creator and among the transformations some are also creators," which transformations are creators and which ones are not creators?

Here someone asks: "The nature is a creator as are some of the transformations, which transformations are creators and which are not?"

To explain this Chandrakirti's autocommentary says:

> In order to explain the particulars regarding this, I shall say a little bit. There, *rajas* (activity), *tamas* (darkness), and *sattva* (lightness) are the three qualities. There, *rajas* is movement and has an essence of engagement. *Tamas* is heavy and has an essence of covering. *Sattva* is lightweight and has an essence of extreme clearness. So-called pleasure, pain, and bewilderment are synonyms of only these. The situation of equal parts of these is the principal because in it the qualities are foremost and are extremely pacified. The situation of their not transforming is the nature.

The nature has the three qualities of activity, darkness, and lightness. Which of the three qualities are respectively synonyms of pleasure, pain, and confusion? Activity or motility is a synonym of pain. Darkness, which is heavy and covering or obscuration, is a synonym of bewilderment or confusion. Lightness is a synonym of pleasure. Pleasure is related to attachment, pain to hatred, and bewilderment or confusion to ignorance. It is our own experience that from attachment arises pleasure; from hatred, pain; and from ignorance, obscuration. This is discussed in Kunkyen Jamyang Shepa's *Great Tenets*.

When the three qualities of activity, darkness, and lightness are in equilibrium this is called the general principal "because in it the qualities are foremost and are extremely pacified."

"The situation of their not being manifest is the nature" means that when the three qualities are not manifest this is the nature which is not visible to the sense powers.

Chandrakirti's autocommentary says:

> *From the nature*, *the great one* – the great one being a synonym of the intellect. *From the great one*, *the I-principle* – that is threefold: transformative, possessing *sattva*, and possessing *tamah*. There, from the transformative I-principle, the five subtle-objects (potencies): form, sound, odor, taste, and tangibility. From the subtle-objects, the elements: earth, water, fire, wind, and space.

The great one is a synonym of awareness or intellect, it is likened to a two-sided mirror in which both outer objects and the inner being are reflected. From the transformative I-principle come the five subtle objects or potencies: forms, sounds, odors, tastes, and tangible objects. From these five subtle objects come the five elements.

Chandrakirti's autocommentary says:

> From the I-principle possessing *sattva*, the five action faculties: speech, hand, leg, anus, and genitalia; the five faculties of intellect: eye, ear, nose, tongue, and skin; and the mental faculty which possesses both essences – in this way there are eleven.

From the I-principle possessing lightness come the eleven: the five action faculties (speech, hand, leg, anus, and genitals), the five faculties of intellect, or awareness faculties, (eye, ear, nose, tongue, and skin), and the mental faculty. "The mental faculty which possesses both essences" means that the mental faculty has the nature of both the action faculties and awareness faculties or faculties of intellect.

Chandrakirti's autocommentary says:

> The I-principle possessing *tamas* produces engagement of the two I-principles.

The I-principle possessing darkness produces engagement in the transformative I-principle and the I-principle possessing lightness.

Chandrakirti's autocommentary says:

> There, the great one, the I-principle, and the five subtle objects are both natures and transformations; the ten faculties, mentality, and the great elements are only just transformations. The nature is just not a transformation.

The aforesaid is the scriptural tradition.

In short, the Samkhyas assert twenty-five objects of knowledge. In the context of the refutation of production from self Acharya Bhavaviveka sets out a syllogism:

The eye and so forth, as the subject, are not produced from self because they are existents; like one possessing intention.

This is an important reasoning for refuting production from self. Here "the eye and so forth" includes twenty-three of the twenty-five objects of knowledge. One can also say:

The transformations are not produced from self because they are existents; like one possessing intention.

Wednesday morning, 31 January 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 343) says:

[Chandrakirti's *Supplement* says:]

A self that is a consumer, permanent, not a creator,
Lacking qualities and activity is imputed by the Forders. [6.121ab]

For instance, [the *self*] *imputed by the Forders* – the Samkhyas – is:

1. *a consumer*, that is, an enjoyer of happiness, suffering, and so forth,
2. a *permanent* thing, and
3. *not a creator* of transformations, and
4. it *lacks* the *qualities* of motility, darkness, and lightness, and
5. lacks *activity* because of being a pervader.

Gedun Drup's *Mirror of the Clarification of the Thought,* as translated by Martin Willson, says:

3B1A-6C5A-2B1A-1A Stating the Enumerators' hypothesis

An experiencing, permanent, non-creative self,
Without qualities or actions, is conceived by some non-Buddhists. [6.121ab]

The non-Buddhist Enumerators (Samkyas) conceive that that self is the experiencer, it is permanent in nature, not a creator of effects, without the [three] qualities, and without activity [since it is all-pervading].

3B1A-6C5A-2B1A-1B Stating the Particularists' view

Depending on diverse definitions of it,
The schools of the non-Buddhists become different. [6.121cd]

Depending on various definitions of that self, the non-Buddhist schools become different. The Particularists (Vaisheshikas) say that that self is the experiencer, is permanent in nature, is a creator, does have qualities, and is without activity.

Lama Tsongkhapa's *Illumination* (Tibetan text page 343-4) says:

With respect to it, the Samkhyas propound:

The fundamental nature is not a transformation,
The seven – the great one and so forth – are natures and transformations, and
The sixteen are transformations.
The being is not a nature and not a transformation.

> There, due to thoroughly producing a result, it is a nature. On what occasion does it produce? [It does so] when it sees the desire of beings. When the desire that has the aspect of enjoying an object, sound and so forth, is produced, at that time the nature – which thoroughly knows the desire of the being – and the being join together and then the principal issues forth sounds and so forth. The stages are said to be:
>
> > The way this happens is as follows. From the nature, [arises] the great one; also from that, the I-principle; from that, the eleven faculties and the five elements[133] – the collection of sixteen. Also among the sixteen, the five elements [arise] from the five subtle objects, that is, the five elements arise from the five, sound and so forth.
>
> That which "is not a transformation" is only what is a thorough producer of results; that is, it is not also a transformation as are the great one and so forth. The seven, the great one and so forth, are natures in relation to their own transformations and transformations in relation to the fundamental nature. The sixteen – the awareness faculties and so forth – are just transformations. The being is neither a thorough producer nor a transformation.

The seven, the great one and so forth, are both causes and results, that is, both natures and transformations. The sixteen are:

- the five action faculties,
- the five awareness faculties (*blo'i dbang po*),
- the mental faculty (*yid*), and
- the five elements.

These are only transformations. The being is the fourth possibility, that is, neither a nature nor a transformation, as the Samkhya scriptures say: "The being is not a nature and not a transformation."

Lama Tsongkhapa's *Illumination* (Tibetan text page 344) says:

> The awareness adheres to objects, such as sounds and so forth, which are thoroughly apprehended by the five faculties of the ear and so forth, due to being empowered by mentality. Then, the being thinks about the object which is adhered to by the awareness. In this way, due to desiring to enjoy an object, the object is thoroughly enjoyed. At that time, due to a small level of attachment to the object, the being, through seeing the shortcomings regarding the object, becomes free from attachment and gradually cultivates a concentration. In dependence on that, when he attains the clairvoyance of divine eye he views the principal by means of that eye. Viewed by that, the principal becomes embarrassed, like the wife of another, due to which it does not approach and separates from the self. Because, through reversing the order of their production, all the collections of transformations also fully absorb into the principal itself, they become unclear entities. At that time, the being abides alone, because of which it is called "liberated." The self, because of always abiding as a separate entity, is called "permanent."

Due to the power of thinking about something, the eye begins to see, the ear begins to hear, and so forth. Then, the being thinks about the object apprehended by the awareness, thinking "Is this form beautiful or not?" and so forth. The person then desires to enjoy the object, whereby it is enjoyed. Then, through examining the object, the person comes to see its faults due to which there is a lessening of attachment. Although initially the person sees an object as beautiful, he gradually comes to see it as unattractive. This is true of forms, sounds, and so forth. Thus, although initially there is a liking for an object, this gradually diminishes and transforms into dislike. At that time, the person begins to cultivate a concentration. Through this he attains the clairvoyance of the divine eye with which he looks at the general principal. Previous to this the person did not understand how transformations arise, but then, through the clairvoyance of the divine eye, he sees that the general principal is the emanator of all the transformations. Having identified the general principal as the

[133] The Tibetan mistakenly reads *de tsam* (subtle object), whereas it should read '*byung ba* (element).

creator, the general principal becomes embarrassed, like the wife of another man when observed (this must refer to ancient times when women were more easily embarrassed than they are nowadays!). Due to this the general principal, instead of approaching the self, separates from it and disappears. In this way, all the transformations are absorbed into it and nothing remains except the being who abides alone. At this point, the being is liberated in the sense that it is free from everything.

Lama Tsongkhapa's *Illumination* (Tibetan text page 344-5) says:

> QUESTION: Which of them is the creator and which are not creators?
> RESPONSE: In regard to that, motility, darkness, and lightness are the three qualities. Motility has the nature of moving and engaging; darkness has the nature of heaviness and covering; lightness has the nature of lightness and great clarity. "Happiness, suffering, and confusion" are synonyms of just these. The occasion of equal parts of these [qualities] is the principal because here these qualities are foremost and thoroughly pacified.

The self is permanent and abides separately. Thus, in response to the question "Which of them is the creator and which are not creators?", the answer should be that the self is not a creator. Then, who is the creator? Here it is explained to be that which possesses the three qualities of motility, darkness, and lightness.

"Motility has the nature of moving and engaging" refers to movement from east to west and so forth. "Darkness has the nature of heaviness and covering" is like the gloom in a dark room. "Lightness has the nature of lightness and great clarity." Lightness is related to pleasure, darkness to ignorance, and motility to suffering. The occasion of equilibrium of the three qualities is called the principal "because here these qualities are foremost and thoroughly pacified." The general principal is foremost and abides thoroughly pacified.

Lama Tsongkhapa's *Illumination* (Tibetan text page 345) says:

> The occasion of their non-transformation is the nature. From the nature [arises] the great one. The two, the great one and awareness, are synonyms. In it arise both the reflections of outer objects and the inner being. From the great one [arises] the I-principal. The I-principal is of three [types]: (i) that possessing transformation, (ii) that possessing lightness, and (iii) that possessing darkness. From the transformative I-principal [arise] the five subtle objects: forms, sounds, odors, tastes, and tangible objects. From the five subtle objects [arise] the elements, those called "earth, water, fire, wind, and space."
>
> From the I-principal that possesses lightness [arise] the five action faculties – the faculties of speech, arms, legs, anus, and genitals – and the five awareness faculties – the faculties of the eye, ear, nose, tongue, and skin or body – and the mental faculty which has the nature of both; in this way there are eleven. The I-principal that possesses darkness produces the engagement of the two other I-principals.
>
> The great one, the I-principle, and the five subtle objects – the seven – are both natures and transformations. The ten faculties, the mental faculty, and the five elements are only transformations. The fundamental nature, the principal, is only a nature. This is their scriptural system.

Does this mean that each of the five elements arises from its respective subtle object or that all five elements arise from each of the subtle objects? Think about it. In general, Buddhists say that the evolutes (forms, sounds, odors, tastes, and tangible objects) arise from the elements, whereas the Samkhyas say that the elements arise from the five subtle objects (forms, sounds, odors, tastes, and tangible objects).

Is the I-principle, literally pride, actually pride or is it something else? The great one or awareness is explained in Dharmakirti's *Commentary on [Dignaga's] Compendium of Valid Cognition*

saying: "The great one or awareness is like a two-sided mirror." It is likened to a two-sided mirror because it reflects both external objects and the inner being.

As in the Buddhist teachings, the Samkhyas define the subtle object that is form as the main object apprehended by an eye consciousness, the subtle object that is sound as the main object apprehended by an ear consciousness, and so forth.

The five action faculties are the faculties of speech, arms, legs, anus, and genitals. The faculty of speech functions to speak, the faculty of arms functions to move the arms, the faculty of legs functions to walk and so forth, the anus has its particular function, as do the genitals. These faculties or powers are called "action faculties" because they empower particular actions.

"The mental faculty which has the nature of both" means that it has the nature of both the action faculties and the awareness faculties. This is because when the mental faculty thinks about something it influences or empowers the various functions of the action and awareness faculties.

In Dharmakirti's *Commentary on [Dignaga's] Compendium of Valid Cognition* the general principal is posited as having five attributes:

1. being partless,
2. being pervasive,
3. being invisible,
4. being a creator, and
5. possessing qualities.

Thus, the general principal is without parts, pervades all, is not seen, is a creator, and possesses the three qualities of motility, darkness, and lightness. In his text Dharmakirti first presents the assertions of the Samkhyas and then later refutes them. Also in Shantarakshita's *Compendium of Suchness* there is a chapter that investigates the general principal, one that investigates Ishvara, and so forth. In this way it sets out all the assertions of the non-Buddhist schools. Because this text presents the non-Buddhist schools without refuting them, some non-Buddhists think that it is a presentation of their tenets and include this text among their scriptures.

One text says that because the objects of knowledge are many we cannot come to know them all.

Wednesday afternoon, 31 January 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 345) says:

3B1C-2B3E-2B2A-1A2 Stating the Vaisheshika system and so forth

Chandrakirti's autocommentary says:

> Just as the Samkhyas accept an I like that, similarly, [6.121cd] *in dependence on small small divisions of it*, the systems of the Forders become different. Like this, the Vaisheshikas propound nine qualities of a self: awareness, pleasure, pain, desire, hatred, effort, dharma, non-dharma, and strength of composition.[134]

These Vaisheshikas present six categories of existents (literally, meanings of words, *tshig don drug*) which are objects of knowledge:

1. generality,
2. quality,
3. activity,

[134] Compare this with the different emphasis in presenting the *Vaiheshika* tenets in *Practice and Theory of Tibetan Buddhism*, p. 56-57.

4. substance,
5. particularity, and
6. compounding.

One text says:

> Generality, quality, activity, substance,
> Particularity and compounding.

A generality is a cause of engaging terms and conceptions. It is of two types: a generality that pervades all and a generality that pervades an occasion. A generality that pervades all is existence-ness. A generality that pervades an occasion refers to the fact that each individual phenomena has its own generality, for example, pot-ness, pillar-ness, Patrick-ness, and so forth. This means that the term 'pot' refers only to pot. The pot is a cause for the term 'pot' that engages pot and a cause for the conception 'pot' that engages pot.

A quality is a phenomenon that depends on a substance. A substance is a phenomenon that is the basis of a quality. An activity is, for example, extending and contracting the legs. A particularity is posited similar to the way in which it is posited by the Buddhist schools; for example, a pot is a particularity of the objects of apprehension of an eye consciousness. Compounding refers to the strong formation of merit.

The Vaisheshikas present twenty-five qualities and nine substances (see J. Hopkins, *Cutting Through Appearances*). Among the twenty-five qualities there are nine related to the self: awareness, pleasure, pain, desire, hatred, effort, dharma, non-dharma, and strength of composition.

Chandrakirti's autocommentary says:

> There, awareness is what apprehends an object. Pleasure experiences the object of desire. Pain is the opposite of that. Desire is the hoping for a thing that is desirable. Hatred is the reluctance for an undesirable object. Effort is, with regard to an aim to be accomplished, the skillfulness of mind to finish that. That from which high status and definite goodness are achieved is the Dharma. The opposite of that is non-dharma. Mere production from consciousness and being the cause of consciousness is the strength of composition.

The Vaisheshikas say that "awareness is what apprehends an object," whereas the Buddhists say that an awareness is what cognizes an object, therefore, they posit very similar definitions. "Pleasure experiences the object of desire." "Pain is the opposite of that," that is, it is the experience of an undesirable object. "Desire is the hoping for a thing that is desirable" means the wish to have a desirable object. "Hatred is the reluctance for an undesirable object" means hatred is a turning away from an undesirable object, this being our own experience when we have a bad relationship with someone. "Effort is, with regard to an aim to be accomplished, the skillfulness of mind to finish that." "That from which high status and definite goodness are achieved is the Dharma." Similarly, the Buddhists say that the Dharma enables one to achieve the states of high status and definite goodness. "The opposite of that is non-dharma" refers to what, instead of bringing one closer to high status and definite goodness, takes one away from them. "Mere production from consciousness and being the cause of consciousness is the strength of composition" means what is produced from consciousness and what is the cause of consciousness is the strength of composition.

Chandrakirti's autocommentary says:

> As long as those nine qualities of the self assemble and exist with the self, for that long there will be cyclic existence, because of establishing virtuous and non-virtuous actions compounded by them. When the qualities of awareness and so forth along with their roots are cut by the consciousness which perfectly realizes the being, then one will abide with one's essential nature and be liberated.

Due to these nine qualities, one continues to circle in cyclic existence. On the other hand, when these nine qualities are annihilated, the being remains alone and liberation is achieved.

Chandrakirti's autocommentary says:

> That self is also propounded as permanent, creator, consumer, with qualities, and also without activity because of pervading. Some accept it as with activity due to contraction and extension.

The self is:
1. permanent,
2. a creator,
3. a consumer,
4. with qualities,
5. without activity.

Because of pervading all the self is without activity. However, it is not that the self does not have any activity at all since it has such activities as contracting and extending.

Chandrakirti's autocommentary says:

> Those propounding the Vedas accept that "Like the space of vases and so forth, due to different bodies, the single is the variety itself," and so forth.

There are four types of Vedas. "The space of a vase and so forth" refers to the space of a cup, the space of a meditation hall, and so forth [which are the one] but a variety. Likewise, due to different bodies [a single self appears as various selves].

Chandrakirti's autocommentary says:

> Thus, in dependence on small small differences of the self, the systems of the Forders become mutually different.

In short, due to very slight differences in the way of asserting a self, there are the different systems of the Forders.

This concludes the exposition of the Vaisheshika system in the autocommentary. In this way, Chandrakirti sets out the systems of the Samkhyas and Vaisheshikas.

Lama Tsongkhapa's *Illumination* (Tibetan text page 345) says:

> [Chandrakirti's *Supplement* says:]
> *In dependence on very slight distinctions of that*
> *There are the different systems of the Forders.* [1.121cd]

> Just as the Samkhyas assert a self, likewise, *in dependence on very slight distinctions of that* self *there are the different systems of the Forders*. Thus, the Vaisheshikas proclaim (1) awareness, (2) happiness, (3) suffering, (4) desire, (5) hatred, (6) effort, (7) Dharma, (8) non-dharma, and (9) the strength of activity to be the qualities of a self. In regard to them:
>
> 1. awareness apprehends objects;
> 2. happiness experiences objects of desire;
> 3. suffering is the opposite of that;
> 4. desire formulates hope for desirable things;
> 5. hatred turns away from undesirable objects;
> 6. effort, with respect to what accomplishes one's welfare, is skillfulness of mind in the final [welfare];
> 7. Dharma is that from which high status and definite goodness are accomplished;
> 8. non-dharma is the opposite of that; and
> 9. the strength of formation is that produced from consciousness and that which is a cause of consciousness.
>
> As long as these nine qualities of a self are gathered together and exist in a self, until then, because of accomplishing the virtuous and non-virtuous actions that are connected with them, there will be cyclic existence. When the consciousness that perfectly realizes the being severs the qualities of awareness and so forth along with their roots, at that time one abides in one's own nature and is liberated.
>
> They propound the self, moreover, to be:
>
> - permanent,
> - a creator of results,
> - a consumer which enjoys results,
> - a possessor of qualities, and
> - without activity because of pervading.
>
> However, some Vaisheshikas assert it to have activity due to contracting and extending.

Here Lama Tsongkhapa's commentary is very similar to Chandrakirti's autocommentary. I am not sure what contracting and extending mean in relation to a self.

Lama Tsongkhapa's *Illumination* (Tibetan text page 346) says:

> The Vedantists assert "Like the space of different pots and so forth is one, a single self supported by different bodily supports is the variety itself" and so forth.

The space in pot, the space in a house, and so forth are all the same in being the mere non-affirming negative that is the mere negation of obstructive contact. Likewise, while the bodies that are the support of the self are the variety, the self supported on them is just one.

Lama Tsongkhapa's *Illumination* (Tibetan text page 346) says:

> The autocommentary says "In dependence on very slight differences of the self, the systems of the Forders become mutually different," therefore, that this scriptural system explains the Forders' systems as divided in dependence on the division of the Samkhyas is a misunderstanding.

In short, the Forders' systems are not divisions of the Samkhyas.

Lama Tsongkhapa's *Illumination* (Tibetan text page 346) says:

3B1C-2B3E-2B2A-1B Refuting that system

Chandrakirti's autocommentary says:

> The self which is propounded in each scriptural tradition of the Forders:
>
> *Like a barren woman's son, because separated from production,*
> *The self like that does not exist and*
> *It is also improper as the support of I-grasping –*
> *It is not asserted to exist even deceptively.* [6.122]
>
> – because of contradiction with their own inference. The propounded self just does not exist because of not being produced, like the son of a barren woman. It is also unfit as the object of I-grasping because of just not being produced. Not only is it improper as existing in that way and as the very object of I-grasping, it should be known that even deceptively it does not exist as the two.

The self propounded by the Forders is not admissible.

Gedun Drup's *Mirror of the Clarification of the Thought* (Tibetan text page 54), as translated by Martin Willson, says:

3B1A-6C5A-2B1A-2 Refuting it

> *Since, like a barren woman's son, it's void*
> *Of birth, a self like that does not exist.* [6.122ab]

A self like that which the non-Buddhists conceive does not exist in absolute reality because it is devoid of birth; for example, it is like a barren woman's son.

> *It can't be the basis of self-grasping either.* [6.122c]

Out of the observed object and the aspect [object] of innate self-grasping, this self which is like that also cannot be the basis or observed object, for it is unborn. [That object is the mere I or person, and is asserted to be a functional thing.]

> *Even conventionally, it can't be held to exist.* [6.122d]

Even conventionally, it is not maintained to exist, for it does not exist validly even conventionally.

> *Since all its attributes non-Buddhists teach*
> *In one or another treatise are refuted*
> *By the reason of non-birth, on their own report,*
> *Therefore not one of its attributes exists.* [6.123]

All the attributes of that self hypothesized by the non-Buddhists are also non-existent, because the attributes of that self which the non-Buddhists teach in the Enumerators' treatises and the treatises of the Particularists and others are contradicted by the reason of non-production, which is reported by the non-Buddhists themselves.

Chandrakirti says:

> *Like a barren woman's son, because separated from production,*
> *The self like that does not exist and...*

This verse sets out the syllogism:

> A self like that, as the subject, does not exist because separated from production, like a barren woman's son.

The *Mirror of the Clarification of the Thought* sets out this syllogism as:

> A self like that which the non-Buddhists conceive, as the subject, does not exist in absolute

reality because it is devoid of birth; for example, it is like a barren woman's son.

Chandrakirti continues:

It is also improper as the support of I-grasping –
It is not asserted to exist even deceptively. [6.122]

Such a self is also not the support that is the observed object of the conception of I because is it not produced. The self of the Forders also does not exist conventionally because it is not established by a valid cognizer, like the son of a barren woman.

"Because of contradiction with their own inference" refers to the fact that such a self contradicts the inference asserted by the Forders themselves. As the next verse (6.123) says; "Are harmed by the reasoning of not being produced – renowned to themselves."

Chandrakirti himself sets out the syllogism:

The propounded self just does not exist because of not being produced, like the son of a barren woman.

Chandrakirti then says: "Not only is it improper as existing in that way and as the very object of I-grasping, it should be known that even deceptively it does not exist as the two." What are "the two"?
Student: They are "the self as an existent" and "the self as the object of the conception of I."

Chandrakirti's autocommentary says:

Not only is it improper as an existent and as the very support of I-grasping, furthermore:

Since all the attributes of that which are
Indicated by the Forders in treatises [and] treatises,
Are harmed by the reasoning of not being produced –
Renowned to themselves – therefore, even its attributes do not exist. [6.123]

There, in the Samkhya's texts, the attributes of the self are asserted as permanence, not being a creator, enjoyer, without qualities, and without activity. There, the self is not permanent and it is also not not a creator through it is also not without activity because it is not produced by itself, like the son of a barren woman. Similarly, "The self is not permanent and also not a creator" and so forth "because it is not produced by itself" should also be expressed in regard to the Vaisheshika texts.

The attributes of the self propounded by the Samkhyas and those propounded by the Vaisheshikas in their treatises do not exist because they are harmed by the reasoning of being unproduced which is renowned even to themselves. The attributes of a self asserted in the treatises of the Samkhyas and Vaisheshikas are not feasible because they are invalidated by the reasoning of being unproduced which is known even to themselves.

Thursday morning, 1 February 2001

The following syllogism is flung at the Vaisheshikas:

The self imputed by the Forders, as the subject, does not exist in that way because it is unproduced; for example, like the son of a barren woman.

Chandrakirti's autocommentary says:

This position should be understood as excluding the self-entity and attributes of theirs in every propounding as a self due to the reasoning of just not generating and the example of the son of a barren woman.

The syllogism above is flung at those who propound a permanent self, whereby the entity and attributes of the self they propound – for example, both the Samkhyas and the Vaisheshikas propound a self with five attributes – are eliminated through the reason and example.

Chandrakirti's autocommentary says:

> Therefore, in that case:
>
> *Therefore, other than the aggregates, the self is non-existent* [6.124a]
>
> Therefore, the self does not exist as different from the aggregates because, apart from them, the self is not apprehended. If existing as different from the aggregates, then it could be apprehended as separately (individually) established. Yet, since it is not like that, therefore, other than the aggregates, the self is non-existent,

The Forders propound a self that is a different entity from the aggregates, however, that self does not exist because without the appearance of the aggregates the self or person cannot be apprehended. In this way the Prasangika Madhyamikas establish that the self and the aggregates are not different entities. Contrarily, if the self and the aggregates were different entities they should be apprehended separately or individually. However, there is no occasion on which one can separately point to the self and the aggregates. For example, in order to say "I saw Cesare" one has to have seen his aggregates. Therefore, without having apprehended Cesare's aggregates one cannot say "I saw Cesare."

Chandrakirti's autocommentary says:

> *Because apart from the aggregates, apprehending that is not established.* [6.124b]

Chandrakirti says: "Therefore, other than the aggregates, the self is non-existent because apart from the aggregates, apprehending that is not established" (v. 6.124ab). Thus, in order for the self to appear to an awareness it is necessary for the aggregates of the person to appear to that awareness. In order to prove this, Chandrakirti's autocommentary says:

> As was taught [in *Fundamental Wisdom*, 27.7]:
>
> The self is not admissible
> As other than the appropriated.
> If it were other, without the appropriated,
> It would exist to apprehension in theory, yet it is non-existent to apprehension.

The two, the appropriated, that is, the aggregates, and the appropriator, that is, the self, do not exist as different entities. If they were different entities the appropriator, the self, would be apprehended without apprehending the appropriated, the aggregates, but this is not the case.

Chandrakirti's autocommentary says:

> Similarly, [in *Fundamental Wisdom*, 18.1cd]:
>
> If other than the aggregates, it would not have the aggregate's characteristics.

What are the characteristics of the aggregates? They are production, abidance, and disintegration. If the self and the aggregates were different entities, then, when the aggregates die, conventionally one would not say "The person has died."

Chandrakirti's autocommentary says:

> Not only is there no self different from the aggregates, furthermore:
>
> *It is not asserted even as the support of the mundane mind grasping to I,*
> *Because of viewing the self even without knowing that.* [6.124cd]

The self propounded by the Forders is not the support or basis that is the observed object of the awareness conceiving I.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *Therefore, there's no self separate from the aggregates,*
> *For apart from the aggregates it isn't proved to be seen.* [6.124ab]

It should be understood that there is no self of separate entity from the aggregates because it is not established that that self is perceived separately, apart from perceptions of the aggregates.

> *Nor is it held to be the base of the world's self-grasping*
> *Mind, for its non-perceivers still see the self.* [124cd]

This self of entity different from the aggregates is also not asserted to be the objective support of the innate self-grasping mind of the world, for even those who do not perceive such a self have the view of the self.

Chandrakirti's autocommentary says:

> Even those who do not grasp that self in such a way will view the self through the attribute of strongly settling saying "self and mine." Therefore, this self is improper as the support of grasping the I as different from the aggregates.

Even those who do not conceive the self possessing five attributes, which is asserted by the Forders, have a view of the self, "therefore, this self is improper as the support of grasping the I as different from the aggregates."

Chandrakirti's autocommentary says:

> In case it is considered: Whoever does not now understand that qualified with permanence, unproduced, and so forth, they too will have its subject, the view which grasps to an I, due to the power of previous familiarity.

Even those who do not have an acquired conception of an I possessing the five attributes as asserted by the Forders, have an innate conception of I, for example, cats.

Chandrakirti's autocommentary says:

That is also not so. Only some have the view as a self from having familiarized with their treatises. Also those without previous familiarization are seen to employ I-grasping here. It is like this:

Also those who were consigned many eons as animals
Do not perceive this unproduced, permanent [self],
Yet they are seen to employ I-grasping.
Hence, a self other than the aggregates does not exist at all. [6.125]

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

Though those plunged[135] *in the animal realm many eons*
Do not perceive this unborn, permanent [self],
Even in them, self-grasping is seen to take place,
Therefore, there's no self separate from the aggregates. [6.125]

There is no self of separate entity from the aggregates, since although those sentient beings who have been plunged in the animal realm for many eons do not see this unborn, permanent self, self-grasping is seen to take place even in them.

Animals do not have a conception of a permanent, unproduced self, yet they do have a conception of I, that is, they do have an innate view of the transitory collection.

Chandrakirti's autocommentary says:

Also those sentient beings that as yet have not reversed from the animal rebirth state, although having spent eons, do not refer to that type of self. The term "also" includes those reborn in hell and so forth.

The term "also" in the root verse includes sentient beings born in the hells and so forth. Those who are born in the hell realm also have a conception of I even though they do not have a conception of a permanent, unproduced self. "And so forth" includes those born in the hungry ghost realm. Therefore, it refers to all the beings who are not trained in tenets yet still have a conception of self even though they do not conceive a permanent, unproduced self.

Student: Verse 6.125 says:

Also those who were consigned many eons as animals
Do not perceive this unproduced, permanent [self],
Yet they are seen to employ I-grasping.
Hence, a self other than the aggregates does not exist at all. [6.125]

How does this reasoning conclude that there is no self that is a different entity from the aggregates?
Geshe Jampa Gyatso: This verse indicates that even animals do not perceive a self that is a different entity from the aggregates. They also do not see a self that is permanent and not dependent on the aggregates. However, they still have a conception of I because when they perceive their own aggregates they conceive "I." In conclusion "a self other than the aggregates does not exist at all." The

[135] *brkyal: pf. of rkyal*, "to swim" (Goldstein) – *santarana* = crossing over, passing through; *rkyal byed pa – avagahana* = immersion, bathing, being plunged in, being absorbed in.

Samkhyas say that the aggregates and the self are different entities because they assert that the self has the five attributes of being permanent and so forth.
Student: Therefore, when someone perceives an inherently existent self that is different from the aggregates this view is induced by adhering to the views of the Forders, therefore, all other beings who do not adhere to this view would not perceive an inherently existent self in the aggregates?
Geshe Jampa Gyatso: Even those who have not trained in the tenets or scriptures of the Forders and so forth have a conception of I. This can be understood from the fact that even an insect has a conception of I. This conception is an innate conception of I, it is not an acquired conception of I because none of these beings conceive I due to reasoning. For example, a mouse who gives birth to a baby, even though it has not studied tenets it still has an innate conception of "mine" in regard to that baby. All animals have this innate conception of I and mine which is shown by the fact that they take care of themselves and their babies.

Chandrakirti's autocommentary says:

> Having seen even those who do not refer to that type of self as employing I-grasping, who with wisdom could conceive that type of self as the support of I-grasping? Therefore, a self different from the aggregates is non-existent.

Lama Tsongkhapa's *Illumination* (Tibetan text page 346) says:

> *Like the son of a barren woman, because it is free from production*
> *Such a self does not exist and*
> *Is also not suitable to be a support for the conception of I.*
> *Even conventionally it is not asserted to exist.* [6.122]
>
> The reason "Whatever different *self* is propounded in each of the Forders' scriptural systems, *does not exist like that*, that is, in that way, in the way in which it is imputed by them, *because it is free from production*, that is, because it is unproduced" is the Forders' own inference, that is, assertion; for example, it is *like the son of a barren woman*. That there is no fault, even though the subject expressed by that reason is refuted, is due to the point of it being the mere exclusion of both the reason and the predicate.

The syllogism set out here is:

> The self as asserted by the Forders does not exist in that way because it is free from production, like the son of a barren woman.

However, this reason of it being unproduced or free from production is accepted by the Forders themselves. The Vaisheshikas, for example, accept direct valid cognizers and inferential valid cognizers due to which they posit different types of valid cognizers such as an inferential valid cognizer by the power of the fact, an inferential valid cognizer by the power of renown, and an inferential valid cognizer through a similar example, however, they do not accept an inferential valid cognizer by the power of belief.

"Even though the subject expressed by that reason is refuted" means that, in the syllogism above, the subject –"the self as asserted by the Forders" – does not exist. In other words, the subject expressed – "the self as asserted by the Forders" – by that reason does not exist. What exists is either (i) a subject that is its own support or (ii) a conceived subject, this being the meaning generality of the subject expressed. The predicate here is "does not exist in that way" and the reason is "because it is unproduced." Both of these are non-affirming negatives because they are a mere negation of the object of negation. Therefore, there is no fault of the three modes not being complete.

The subject expressed is unproduced and does not exist in that way. Similarly, the conceived subject is unproduced and does not exist in that way because the meaning generality of that subject

does not exist in that way. Instead of translating *de kho na nyid du yod pa min* as "does not exist in that way" if it were translated as "does not exist in suchness" this could be debated saying, for example: "Does emptiness not exist in suchness because it is unproduced?" This is discussed extensively in Dharmakirti's *Commentary on [Dignaga's] Compendium of Valid Cognition*, in which the main point is the refutation of the general principal.

Although the subject expressed – "the self asserted by the Forders" – is not an established base, the reason does not have the fault of being an incorrect reason.

For example, there is the syllogism:

> The general principal, as the subject, does not exist as a substantial cause for the varieties of transformations because it is a non-thing.

This is a correct reason. The subject expressed is "the general principal" which does not exist. However, there does exist a meaning generality of the general principal. What is this meaning generality? It is what appears as the general principal. Thus, even if something does not exist, a meaning generality of it does exist.

Thursday afternoon, 1 February 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 347) says:

> *The* self imputed by others in this way *is also not suitable to be a support for the* innate *conception of I*; the reason and the example being as above. The statement "That called 'the support for the conception of I' – from among the two, the observed object and aspect – is not the object that is the observed object" means that its object is the mere I, the person, and so forth. Moreover, since it is asserted to be a functioning thing, it is contradictory for it to be unproduced. Since the object that is the aspect is a self of persons, it is not established even in mere conventional terms, due to which it is not contradictory for it to be unproduced.

The support of the conception of I must be an existent, therefore, it cannot be the selves with their particular attributes that are posited by the Samkhyas and Vaisheshikas. Therefore, the support of the conception of I or the support of the view of the transitory collection is the conventionally existent self, the mere I. Among the observed object and aspect, the self asserted by the Samkhyas is not the observed support of the conception of I. Since the conception of I observes the person which is a functioning thing, it would be contradictory for it to be unproduced. On the other hand, "since the object that is the aspect is a self of persons, it is not established even in mere conventional terms." Since a self of persons does not exist even in mere conventional terms, it is not contradictory for it to be unproduced.

Lama Tsongkhapa's *Illumination* (Tibetan text page 347) says:

> Therefore, stating "The self of persons of this system is asserted to exist linguistically" is to talk frivolously without finely distinguishing the difficult points of this tenet [system] and the objects that are the observed object and the aspect of the view of the transitory collection.

Without finely distinguishing the two – the difficult points of these tenets and the observed object and the aspect of the view of the transitory collection – stating "The self of persons of this system is asserted to exist linguistically" would be frivolous talk. Even the horns of a rabbit exist linguistically.

Lama Tsongkhapa's *Illumination* (Tibetan text page 347) says:

> Hence, refuting that a self exists and that it is the object of the conception of I is from the point of view of affixing the qualification 'ultimate' to the object of negation. Not only that, the two should also

be understood to be refuted *even conventionally*. At that time, "A self *is not asserted to exist*" means that the self is not substantially existent.

In short, a self that exists ultimately and an object of the conception of I that exists ultimately are to be refuted. What are "the two"? The two are the two selves that were identified: the self that does not exist and the self that is not a support for the conception of I. As the root verse says:

Like the son of a barren woman, because it is free from production
Such a self does not exist and
Is also not suitable to be a support for the conception of I.
Even conventionally it is not asserted to exist. [6.122]

However, an easier way of understanding "the two" is that it refers to the self imputed by the Samkhyas and the self imputed by the Vaisheshikas, these two selves do not exist ultimately and also do not exist conventionally. "At that time" refers to the time of refuting the two. "A self is not asserted to exist" means that there is no substantially existent self. This is because according to the Prasangika Madhyamika system there is nothing that is substantially existent because if it is an established base it is imputedly existent.

Lama Tsongkhapa's *Illumination* (Tibetan text page 347) says:

Therefore, the attributes of that in the treatises and the treatises,
Whatever are presented by the Forders, all of them,
Are harmed by the reasoning renowned to themselves of it being unproduced.
Therefore, all its attributes do not exist. [6.123]

It is to be cognized that "Not only do the two, the reason and the example, refute the two objects of negation, moreover, *all the attributes* of the self imputed by the Forders *do not exist*."

The reason is "because of being unproduced" and the example is "like the son of a barren woman." By means of this reason and example the self asserted by the Samkhyas and that asserted by the Vaisheshikas along with their attributes are refuted.

Lama Tsongkhapa's *Illumination* (Tibetan text page 347) says:

For that reason, *therefore*, *in the treatises* of the Samkhyas and *the treatises* of the Vaisheshikas and so forth, the qualities that are the *attributes of that* self, *whatever are presented by the Forders*, *all of them* – that is, every one of them – *are harmed by the reasoning renowned to* the Forders *themselves of it being unproduced*. In addition, all those explained to be the attributes of the self of the Samkhyas and Vaisheshikas, which were explained before, are also to be negated stating "They do not exist."

The selves imputed by the Samkhyas and the Vaisheshikas are harmed by the reasoning of being unproduced which is also renowned to them. Due to this, the attributes of these selves also become non-existent.

Before Lama Tsongkhapa said: "Hence, refuting that a self exists and that it is the object of the conception of I is from the point of view of affixing the qualification 'ultimate' to the object of negation." This refers to the syllogism:

The self asserted by the Forders does not exist in that way because of being unproduced;
like the son of a barren woman.

If the predicate "does not exist in that way" instead were translated "does not exist in suchness" would that be correct? Think about it.

The self asserted by the Samkhyas and the self asserted by the Vaisheshikas are similar in possessing five attributes. However, the Samkhyas say that the self is

1. a consumer,
2. a permanent thing,
3. not a creator,
4. without activities, and
5. without qualities.

The Vaisheshikas say it is:

1. a consumer,
2. a permanent thing,
3. a creator,
4. with qualities, and
5. without activity.

Thus, these two selves have three common qualities and two uncommon qualities.

Lama Tsongkhapa's *Illumination* (Tibetan text page 348) says:

> In regard to all that is propounded as a self by this position, through the reason of it being unproduced and the example of the son of a barren woman, the entity and attributes of the self imputed by them should be clearly understood.

It would seem to be more meaningful if rather than saying "clearly" (*gsal*) the Tibetan were to read "eliminated" (*bsal*) as then it would read "In regard to all that is propounded as a self by this position, through the reason of it being unproduced and the example of the son of a barren woman, the entity and attributes of the self imputed by them should be understood as eliminated." However, we can leave the spelling as it still means that the entity and attributes of the self imputed by them does not exist, like the son of a barren woman.

Lama Tsongkhapa's *Illumination* (Tibetan text page 348) says:

> *Therefore, a self which is different from the aggregates does not exist*
> *Because, excluding the aggregates, apprehending that is not established.* [6.124ab]
>
> *Therefore, a self which is* a *different* entity *from the aggregates does not exist because, excluding* apprehending *the aggregates*, selectively *apprehending* a self *is not established*. On the other hand, if the self were a different entity from the aggregates, since both [types of] relationships would not exist, they would be unrelated. At that time, without apprehending a pot it would have to be apprehended while selectively apprehending a woolen cloth because otherwise it would not be seen even at times.

The self and the aggregates are one entity because the self cannot appear without the appearance of the aggregates. If the aggregates and self were different entities then both types of relationships, a causal relationship and a relationship of same nature, would not exist between the two. In other words, if the self and the aggregates were different entities it would follow that they would be unrelated because they would not have either a causal relationship nor a relationship of same nature. Since it is not correct to say either that the aggregates are the cause and the self is the result nor that the self is the cause and the aggregates are the result, they do not have a causal relationship. On the other hand, they also do not have a relationship of same nature because they are not one entity. In this way, the self and the aggregates would become like a woolen cloth and a pot which are different entities because in order for one to appear the other does not have to appear. Likewise, the self would appear without the appearance of the aggregates. However, without seeing the Sixte's aggregates one cannot say "There is Sixte." In short, only in dependence on seeing his aggregates can one say "There is Sixte." On the other hand, if Sixte and his aggregates were different entities it would follow that

there would be the appearance of Sixte without the appearance of his aggregates. This is likened to a woolen cloth and pot which are different entities due to which one can apprehend woolen cloth without the appearance of a pot. Likewise, it would follow that one could apprehend the self without the appearance of the aggregates. However, this is not seen at any time.

Lama Tsongkhapa's *Illumination* (Tibetan text page 348) says:

> Similarly, [Nagarjuna's] *Fundamental Wisdom* (v. 27.7) also says:
>
> A self is not feasible
> As other than the appropriated.
> If it were other, without the appropriated
> It would be suitable to be apprehended, but it is not apprehended.

A self that is separate from the aggregates is not feasible because if the self were other than the aggregates, it would be apprehended even without apprehending the aggregates, whereas it is not. Therefore, without the appearance of the appropriated, the aggregates, it is not possible for the appropriator, the self, to appear.

Lama Tsongkhapa's *Illumination* (Tibetan text page 348) says:

> And (v. 18.1cd):
>
> If other than the aggregates,
> It would not have the characteristics of the aggregates.
>
> "The appropriated" is the aggregates.

If the self were other than the aggregates it would not have the characteristics of the aggregates. What are the characteristics of the aggregates? The characteristics of the aggregates are (i) production, (ii) abidance, and (iii) disintegration. If the self were other than the aggregates it would not have these characteristics in common with the aggregates, whereas it is usually said that the self has the three characteristics of compounded phenomena.

Lama Tsongkhapa's *Illumination* (Tibetan text page 348) says:

> There are also other faults:
>
> *It is not asserted even to be the support of a worldly awareness conceiving I*
> *Because even without cognizing it there is a view of a self.* [6.124cd]
>
> A self that is a different entity from the aggregates *is not asserted even to be the support* – that is, the observed object – *of the awareness conceiving I* from the beginningless time *of the world*, i.e., of sentient beings, *because even without cognizing* a self like that imputed by the Forders, that is, even without apprehending its aspect, *there is* the strong adherence – that is, specifically, a *view of a self* stating "I" and "mine."

If the self and the aggregates were other there would be other faults. Another fault is that because the self imputed by others is not the observed object of the conception of I that exists since beginningless time, the self imputed by the Forders is not admissible. In short, there is a conception of I even without apprehending the self imputed by the Forders.

Lama Tsongkhapa's *Illumination* (Tibetan text page 348) says:

> Saying that "It is not suitable even as the support for an awareness conceiving I" does not repeat the previous refutation because earlier a mere substantially existent self was refuted to be the observed object of the view of a self, whereas here [a self] observed to be a different entity from the aggregates is refuted.
> OBJECTION: Even those persons who do not now understand the self qualified by being permanent, unproduced, and so forth have an object-possessor of that self – a view conceiving I – due to the force of previous familiarization.
> RESPONSE: That is not so because apprehending a self which is a different entity from the aggregates to be the support of the conception of I exists only in those whose minds have been affected by bad tenets. Even those sentient beings who lack familiarity with bad tenets are here seen to engage in conceiving an I. It is like this:
>
> *Also those who have spent many eons as animals*
> *Do not see that which is unproduced and permanent*,
> *Yet they too are seen to engage in conceiving I.*
> *Hence, a self that is different from the aggregates does not exist at all.* [6.125]
>
> *Also those* sentient beings *who have spent many eons as animals*, that is, who have already earlier gone to just that, as well as those who have still not turned away from the animal abode of rebirth, *do not see the unproduced* and *permanent* self imputed by the Forders. Having *seen* – that is, understood – *that they too engage in conceiving I*, who possessing wisdom would adhere to such an aspect of the self imputed by the Forders as the support of the conception of I? *Hence*, *a self that is* a *different* entity *from the aggregates does not exist at all*. The term 'also' (v. 6.125a) includes those born in the hells and so forth.

There is no fault of redundancy here because earlier a self-sufficient substantially existent self that is the support of the view of the transitory collection was refuted. A fault of redundancy means that the words explained are the same without a different subject and different purpose, whereas if they are the same words but with a different subject or different purpose there is no such fault.

All sentient beings have a conception of I even though they do not see the permanent, unproduced self imputed by the Forders. Thus, even though sentient beings do not conceive such a self, they still have a conception of I.

Friday morning, 2 February 2001

To review the Samkhya's assertion, they say that from the sound that is a subtle object comes the space element; from the tangible object that is a subtle object comes the wind element; from the form that is a subtle object comes the fire element, from the taste that is a subtle object comes the water element, and from the odor that is a subtle object comes the earth element. What is the I-principle? They describe it as the I that is characterized by possessing fortune. The great one or awareness is that in which phenomena are reflected. Consciousness and awareness are mutually exclusive according to them because consciousness is the self. The *Illumination* says: "When the desire that has the aspect of enjoying an object, sound and so forth, is produced, at that time the nature – which thoroughly knows the desire of the being – and the being join together and then the principal issues forth sounds and so forth." They say that the general principal and the being are respectively like a blind person with good legs and a lame person with good sight who together function well. Because the being is consciousness and therefore a knower, it is likened to one with good sight. On the other hand, the general principal is partless and permanent but it pervades all.

There is a Indian story about a child of the past whom was both very clever and very good. He would tell the other children that God exists and that they should practice Dharma by creating virtue and not committing non-virtue. He also told them to be honest and to not cheat and was, thus, very well liked by the other children. However, his father, who was a king of that area and also a mara, did not like what his child was teaching and plotted to kill his son. He placed his daughter, who had particular powers, with the son in her lap in the center of a circular area around which a wall was

built and inside of which fire was lit. However, although the daughter was burnt up, the son remained untouched. Another time the father threw his son into the Ganges River but instead of drowning he floated on the water and returned home. The father then said to him, "You say that there are gods, but where are they?" The son said that they are everywhere. The father asked, "Are they in this pillar?" The son said that they are. The father angrily punched the pillar and said "If there is god here, come out!" Out of the pillar came a huge lion with the wings of a garuda and long claws that grabbed the father and killed him. Similar to this god of the Indian child, the general principal is said to exist everywhere in an unmanifest form.

Student: It was said that those who follow the Samkhya doctrine later on easily enter the Madhyamika. Why is that?
Geshe Jampa Gyatso: This statement is based on the story of Ashvagosha and Aryadeva. It is said that Ashvagosha was a Samkhya who, having debated with Aryadeva, lost. Unable to accept the defeat, he flew up into the sky but was followed by Aryadeva who warned him not to go too high. To test whether this was in fact dangerous, Ashvagosha threw his long hair up whereupon it was chopped off. He then came down to Nalanda where he was locked in the library and began to read the Buddha's scriptures. He soon came across a predication regarding his debate with Aryadeva and subsequent defeat. Being truly amazed he took ordination as a Buddhist monk and joined the monastery, whereupon he immediately became a Madhyamika and eventually became a great scholar of the Madhyamika system. One of the texts written by Ashvagosha is the *Life Stories of the Buddha*.

Lama Tsongkhapa's *Illumination* (Tibetan text page 349) says:

3B1C-2B3E-2B2A-2 Refuting the assertion that the aggregates themselves are the self, which is imputed by our own schools

- A Indicating the harm in asserting the aggregates to be the self
- B Indicating the proof that it is unreasonable to assert thus
- C Indicating other harm to propounding the aggregates to be the self
- D Explaining the intention of teaching the aggregates to be the self
- E Indicating others' systems as lacking relationship

3B1C-2B3E-2B2A-2A Indicating the harm in asserting the aggregates to be the self

1. Actual meaning
2. Refuting the response that abandons faults

3B1C-2B3E-2B2A-2A1 Actual meaning

- A Stating the previous position
- B Refuting that system

3B1C-2B3E-2B2A-2A1A Stating the previous position

Chandrakirti's autocommentary says:

> Here, some of our sects claim:
>
> *Because an established self other than the aggregates is non-existent,*
> *The referent of viewing the self is only the aggregates.* [6.126ab]
>
> Because, due to the reasoning that was explained, a self different from the aggregates is not established, therefore, because an established self that is other than the aggregates is non-existent, the referent of the view of the transitory collection is only the aggregates. Therefore, the self is only the mere aggregates. This position is that of our own sect, the Sammitiyas.

Within our own Buddhist schools, some say that the aggregates are the observed object of the view of the transitory collection. Chandrakirti quotes them in his root verse saying: "Because an established self other than the aggregates is non-existent, the referent of viewing the self is only the aggregates." These Buddhist schools say that because there is no self that is a different entity from the aggregates, the aggregates themselves are the observed object of the view of the transitory collection. In short, when they are asked to posit the self, they say that it is the aggregates.

Chandrakirti's autocommentary says:

> Also in that:
>
> *Some, as support of viewing the self, assert*
> *Also the five aggregates. Some assert the mind alone.* [6.126cd]
>
> Some [Sammitiyas] mention: Also the five aggregates together, "Form, feeling, discrimination, compositional factors, and consciousness," are asserted as the referent of the view of the transitory collection and this strong settling upon a self is also about that.

There are various assertions regarding the aggregates being the self, for example, the Sammitiyas assert the continuum of all five aggregates to be the self, while the Vatsiputriyas assert the collection of all five aggregates to be the self.

Chandrakirti's autocommentary says:

> They declare: As was taught by the Tathagata [in sutra]:
>
> > O bhikshus, any trainee in virtue or brahmin who correctly subsequently views the "self," they correctly subsequently view only these five appropriated aggregates.
>
> – therefore, it is in order to clarify the statement:
>
> > This view of yours about them is about the collection which bears a transitory essential-nature, it is not [a view] about the self or the mine.
>
> – that the view that employed the aspects of self and mine is taught as the view of the transitory collection.

The Sammitiyas say that the aggregates are the self and in order to prove this cite the sutra that says: "O bhikshus, any trainee in virtue or brahmin who correctly subsequently views the 'self,' they correctly subsequently view only these five appropriated aggregates."

Chandrakirti's autocommentary says:

> Others [of the Sammitiyas] assert "Self with mind." They say, in the verse [in the *Collection of Teachings*, 23.14]:
>
> > One self is ones own master.
> > Who else can be master?
> > By well subduing oneself,
> > The wise will attain high status.
>
> – the term self is taught regarding the mind itself.

There are also those who assert the mind to be the self, for example, true aspectarian Chittamatrins assert the mind-basis-of-all to be the self, as do the Sautrantikas, Vaibhashikas, and Svatantrika Madhyamikas. They quote the above verse to prove that the mind is the self in that they say "the term self is taught regarding the mind itself."

Chandrakirti's autocommentary says:

> If asked: From where is it [known]?
>
> Because a self different from the aggregates is non-existent and because also in other sutras it is taught with regard to subduing the mind, [such as] in [the *Collection of Teachings*, 31.1cd]:
>
> To subdue the mind is excellent;
> To subdue the mind leads to bliss.
>
> Therefore, the "self" is imputed to the basis of I-grasping, the mind.

From this it is to be understood that when the mind is subdued the person is also subdued. This means that the response to the question "What is the illustration of the person?" is "The mind." This mind is specifically the sixth consciousness, the illustrative mental consciousness.

Lama Tsongkhapa's *Illumination* (Tibetan text page 349-50) says:

> HERE, OUR OWN SCHOOLS SAY:
> *"Because there does not exist a self which is different from the aggregates,*
> *The observed object of the view of a self is just the aggregates."* [6.126ab]
>
> *Because there does not exist a self which is* a *different* entity *from the aggregates*, the observed object – from among the two, *the observed object* and aspect *of the view of a self*, that is, the view of the transitory collection – *is just the aggregates*. This is because, through ascertaining there to be two:
>
> 1. positing that which is a different entity from the aggregates and
> 2. positing the inner aggregates
>
> to be the observed object, since the former is unsuitable, [these schools] say that the self is one's own mere aggregates. This position is that of the noble Sammitiya school, the Vatsiputriya school and so forth.
>
> *Some also assert that the support of the view of a self*
> *Is all five aggregates. Some assert mind alone.* [6.126cd]
>
> Apart from them, *some* Sammitiyas *also assert that the support*, that is, the observed object, *of the view of a self is all five* of one's own *aggregates* and that also the strong adherence to a self [arises] from those five aggregates, as the Bhagavan said:
>
> Monks, any trainees in virtue or brahmins who perfectly and subsequently view "I,"
> they perfectly and subsequently view just the five appropriated aggregates.
>
> Because of just that, in order to clarify to them the statement "This view of yours is with regard to a collection that has the nature of being transitory; it is not with regard to the I and mine," it is said "The view that engages the aspects of I and mine is taught to be the view of the transitory collection." However, in dependence on the teaching "It views the five appropriated aggregates," the observed object of the view of a self is asserted to be the five aggregates.
>
> *Some* Sammitiyas *assert* "The *mind alone* is the self," teaching the term 'self' in regard to the mind in the verse:
>
> Just the self is the master of the self;
> Who else is the master?
> By subduing just the self well,
> The wise will attain high status.

> From where does this [come]? Because a self that is a different entity from the aggregates does not exist and because this is also taught in other sutras in regard to subduing the mind stating:
>
> To subdue the mind is excellent;
> To subdue the mind leads to happiness.

Some of our own schools say that observed object of the view of a self is just the aggregates, that is, the observed object of the conception of I or mine is the aggregates. In answer to the question "What is the self?" they say that it is the aggregates. Within the Sammitiya school there are different assertions, some say that all five aggregates are the self, some that the collection of all five aggregates is the self, and some that the mind is the self.

To subdue the mind implicitly means to subdue the self, therefore, in order to subdue the mind one has to subdue the self. Based on the above citation, some Sammitiyas assert the mind to be the self. However, the Prasangika Madhyamikas say that neither the five aggregates not the mind are not the self.

Lama Tsongkhapa's *Illumination* (Tibetan text page 351) says:

> Therefore, "self" is imputed on the mind, the basis of the conception of I. [Bhavaviveka's] *Blaze of Reasoning* also says:
>
> Thus, we too explicitly impute the term 'self' to the consciousness conventionally.
> Hence, it is said "The consciousness is the self because of appropriating existence."
> This is because of closely imputing it to the collection of body and sense powers.
>
> Moreover, he propounds:
>
> - the scriptural proof to be that in some sutras it is taught that, when the mind is subdued, happiness is attained, whereas in some it is taught that by subduing the self high status is attained; therefore, the mind is posited as the self, and
> - the proof of reasoning to be that the appropriator of the aggregates is the self, and because the consciousness also appropriates existence the consciousness is posited as the self.
>
> Since this master does not assert a basis-of-all, the consciousness which appropriates a body is the mental consciousness. It is the same for others who also do not assert a basis-of-all. Through asserting a basis-of-all, the mind-basis-of-all itself is propounded as the illustration of the person.
>
> Moreover, although these systems assert that hearers and solitary realizers realize that the person does not exist as substantially existent, they do not assert that they realize that the two consciousnesses do not exist as substantially existent. Therefore, propounding that the person is not self-sufficient substantially existent is asserted from the point of view of the person itself; it is not asserted as such with respect to the consciousness, the illustration of the person.

Those who do not posit a mind-basis-of-all assert the person to be the sixth consciousness, the illustrative mental consciousness. They are the Sautrantikas, false aspectarian Chittamatrins, the Sautrantika Svatantrika Madhyamikas, and the Yogachara Svatantrika Madhyamikas, as well as some Vaibhashikas.

According to the lower schools, the person itself is not self-sufficient substantially existent because it is imputedly existent. This is based on the definition of the person which is: the I that is imputed in dependence on any of the five aggregates. The person is not substantially existent because in order for the person to appear to an awareness one of the five aggregates has to appear. In other words, the person cannot appear in isolation from the appearance of another phenomenon.

There is no contradiction in positing the mental consciousness to be the illustration of the person even though the mental consciousness is substantially existent. This means that in order for the illustrative mental consciousness to appear to an awareness it is not necessary for a phenomenon other than itself to appear to the awareness. The Prasangika Madhyamikas refute this assertion.

QUESTIONS AND ANSWERS

Student: Is the meaning of *merely* imputed: "existing in no way other than being imputed by conceptuality"? If it is, then does the term 'merely' mean 'no way other than' in this context?
Geshe Jampa Gyatso: According to the Prasangika Madhyamikas the word 'merely' eliminates that things exist from their own side, whereas in the Chittamatrin system the word 'merely' it said to eliminate phenomena not being the same entity as the mind. "Merely" can be used in relation to terms saying "phenomena are merely posited by terms" and in relation to conception saying "phenomenon are merely imputed by conception." Everything depends on conception, for example, the mind invents a particular type of car and then it is actualized. In short, "merely imputed" indicates that an object does not exist from its own side.

Student: According to Lati Rinpoche in *Mind in Tibetan Buddhism:* "sense consciousnesses can be trained such that an *eye consciousness* can know not only that a person being seen is a man but also that that person is one's father." Is this statement in accordance with the Prasangika view? If it is, then will Geshe-la please explain how this would work since it seems that in order to know someone as one's father, a meaning generality (and thus a mental consciousness) would necessarily be involved.
Geshe Jampa Gyatso: I am not sure in what context Lati Rinpoche taught that. However, when someone sees the body of another person there is both an eye consciousness seeing it and an eye consciousness remembering "This is my father." For example, when someone sees Emily walking and thinks "There is Emily," there is an eye consciousness seeing Emily and based on that there is a mental consciousness thinking "There is Emily." However, different scholars posit the eye consciousness differently. For example, it can be asked: "Is the eye clairvoyance an eye consciousness or not?" The answer is that it is not because an eye clairvoyance has to be a mental consciousness. In addition, it is said that when Emily becomes an enlightened being her eye consciousness will also be able to perceive sounds, odors, and so forth, that is, all phenomena as well as their emptinesses. In other words, her eye consciousness will directly realize all objects of knowledge; it will be omniscient mind. This is one interpretation. Others say that an eye consciousness cannot be omniscient mind, whereby it follows that an omniscient mind is necessarily a mental consciousness.
Student: Is it correct to say that "eye consciousness realizes father," "eye consciousness realizes father as father," both, or neither?
Geshe Jampa Gyatso: The eye consciousness realizes the form of the father. Conventionally, when the form of the father is seen, one says "There is my father."

Student: All phenomena are merely imputed by conceptuality, i.e., by mental consciousness. Appearances of inherent existence are also phenomena; thus, they are merely imputed by mental consciousness. Since we said that inherent existence appears to a sense consciousness (although it is not apprehended), this seems to imply that mental consciousness imputes the appearance of inherent existence on the object *before* it appears to the sense consciousness, but this is clearly impossible. So, how does it work?
Geshe Jampa Gyatso: The appearance of inherent existence to an eye consciousness is merely imputed by conception. In regard to "Merely imputed by conception" whose conception is it? For example, when my eye consciousness sees an object, that object appears to exist inherently. However, when that happens, there is no need for me to think "That object is inherently existent." In general it is said that first there arises a conception of a self of phenomena because we first see the aggregates of a person. At that time, by the power of seeing the aggregates, we have an innate conception of a self of the aggregates. After that, we generate a conception of a self of persons. For example, when someone who has never seen Maurizio before sees Maurizio, he immediately has a conception of true existence or a conception of a self of Maurizio's aggregates, that is, a conception of a self of phenomena arises. After

Maurizio introduces himself, this person comes to have a conception of a self of persons. This is what is presented in the teachings on the Stages of the Path by Lama Tsongkhapa.

For example, when I see this eyeglass case, I have an appearance of an inherently existent case. But, whose conception imputes it to be inherently existent? It is imputed by conception to be inherently existent but that conception does not have to be my own conception, it can be anyone's. The appearance of inherent existence to sentient beings is imputed by conception. My conclusion is that the imputing conception does not have to be one's own. Therefore, the appearance of inherent existence which is imputed by a conception can occur before the appearance of inherent existence, but the appearance of inherent existence only occurs at the time of perceiving an object.

Student: Then, the eye consciousness has the appearance of inherent existence because it is imputed by someone else?

Geshe Jampa Gyatso: It is just because we have a conception of a self, it is not because someone else has a conception that imputes inherent existence.

END

Monday afternoon, 5 February 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 351) says:

3B1C-2B3E-2B2A-2A1B Refuting that system

Chandrakirti's autocommentary says:

I shall express a reply to this:

If the aggregates were the self, therefore,
Since they are many, the selves would also be many,
The self would be a substance and to view as that
Would not be mistaken since engaging a substance. [6.127]

There, whoever's position it is that "The aggregates are the self," according to them, because the aggregates are many, the self would also be many. Also, according to those for whom the mind is the self, the self would also be many because of multiplicity due to the divisions of the consciousness of the eye and so forth or due to consciousness being produced and ceasing in each instant. Or, one should express the defects in accordance with what is proper.

If the aggregates were the self it would follow that there would be many selves because there are many aggregates, that is, because there are five aggregates there would be five selves. In addition, it would follow that the self is substantially existent because the aggregates are substantially existent and the aggregates are the self. It would then follow that the awareness conceiving the person to be self-sufficient substantially existent would not be incorrect because the person is, in fact, self-sufficient substantially existent.

Gedun Drup's *Mirror of the Clarification of the Thought* (Tibetan text page 56), as translated by Martin Willson, says:

3B1A-6C5A-2B1B-1A2 Refuting it

If the self were the aggregates, then since
They are several, those selves would also be several. [6.127ab]

If the self were the aggregates, it follows, therefore, that those selves would also be multiple: since (a) the self is one with the aggregates and (b) those aggregates are multiple.

The self would be a substance. [6.127c]

It should be understood that it follows that the self would be substantially existent because the self is the aggregates.

The view of them,
Since engaging a substance, would not be incorrect. [6.127cd]

It follows that the view of those aggregates[136] would not be incorrect for it engages a substance, [i.e.,] has an object [which exists substantially].

In short, it would follow that there would be many selves because the aggregates are the self and there are many aggregates.

[136] *'jig.lta*

In the case that the mind is asserted to be the self it follows that there would be six selves because there are six consciousnesses, the eye consciousness and so forth. It would also follow that there are many selves because there are many divisions of former and later moments of consciousness due to which there would be many selves arising and disintegrating momentarily.

Chandrakirti's autocommentary says:

> Thus, this fault should be expressed to those propounding the aggregates and the consciousness to be the self and since also other faults which will be explained only befall them, they are to be expressed also in regard to both positions.

Such faults are to be expressed to those who assert the aggregates to be the self or the mind to be the self. "Both positions" refers to the position holding the five aggregates to be the self and the position holding the mind to be the self.

Chandrakirti's autocommentary says:

> Nor is the self asserted as multiple in the scriptural citation that says:[137]
>
> When the world is born, the person is born alone.

Therefore, the self is not asserted to be many. In general, when someone is born in the world it is said that the person alone is born, not that the aggregates are born.

Chandrakirti's autocommentary says:

> [If the aggregates were the self] [6.127c] *The self would be a substance and* – because only the substances of form and so forth, differentiated by divisions of past and so forth, would be expressed as the aggregates themselves and because only they are proclaimed to be the self, the self would be substantially existent. Yet, it is not even asserted in these statements [from sutra]:[138]
>
> O bhikshus, these five are mere names, mere designations, mere imputations – those like this are: past, future, space, nirvana, and the person.

If the self were the aggregates, since the form aggregate and so forth are substantially existent, the self would also be substantially existent. If this were the case, the awareness viewing the self to be substantially existent would not be incorrect. "These five" refer to "past, future, space, nirvana, and the person" which are imputedly existent. Because they, including the person, are imputedly existent, they cannot be substantially existent, therefore, the self or person cannot be substantially existent.

Lama Tsongkhapa's *Illumination* (Tibetan text page 351-2) says:

> *If the aggregates were the self, because of that,*
> *Since they are many, the selves would also be many.* [6.127ab]
>
> *If* it were according to the position that *the* five *aggregates* of one's own continuum *are the self*, *because of that*, *since* the aggregates *are many*, *the selves would also be many* even in a single person. If it were the case that the mind is the self, because there are many [minds] due to the divisions of eye consciousness and so forth and due to divisions of the many consciousness being

[137] Poisson cites Ang. 1.33.

[138] Poisson notes it is cited in Jaya-ananda's commentary, p. 389.5.

produced and ceasing in each moment, there would also be many selves. Here the autocommentary says:

> The consequence that there would be many selves is flung at the first two of the previous positions, or, alternatively, the other faults are also flung at both of them.

Since it is not suitable to fling this [consequence] at those who merely assert [the self and the aggregates] to be many or to be one entity; it is flung at those who assert the two, the self and the aggregates, to be one [entity] and not at all different. Moreover, since right from the beginning others do not assert in this way, there is no fault in falsities being merely one or different entities. However, with respect to those who assert the two, the self and the aggregates, to be truly existent, having dictated that if they are one entity they are inseparably one, after that the consequence that the many selves and the five aggregates would be one is flung. At that time, in the passage that states: "When the world is born, the person is born alone," the opponents also do not assert the self to be many.

The following consequence can be flung at those who assert that the self and the aggregates are one inseparable unit: it would follow that there are many selves because there are many aggregates. Or it would follow that the five aggregates are one because the self is one. Those who assert the five aggregates to be the self assert them to be a single truly existent entity. If they are a single truly existent entity they would be an inseparable and undifferentiable unit. By debating in this way, the opponents are gradually forced to give up their thesis.

To summarize, to those who hold the first position, which is to assert that the aggregates are the self, the Prasangika Madhyamikas say:

> It would follow that there are many selves because, the self and the aggregates are one truly existent entity, due to which the self would be many because the aggregates are the self.

To those who hold the second position, which is to assert that the mind is the self, they say:

> It would follow that there are many selves because there are many minds, such as the eye consciousness through the mental consciousness, because the mind and the self are one inherently existent entity.

The main point here is to show that if the self and aggregates were an inherently existent entity they would be an inseparable unit. The faults of positing the aggregates or the mind to be the self are:

- there would be many selves because there are many aggregates,
- there would be one aggregate because there is one self,
- there would be many selves because there are many consciousnesses, or
- there would be many selves because there are many moments of consciousness.

The sutra clarifies that this is not the case saying that the person alone is born.

[Chandrakirti's *Supplement* says:]

> *The self would be a substance and since the view of them*
> *Engages them to be a substance it would be unmistaken.* [6.127cd]

"*The self would be a substance*" (v. 6.127c) [means that] the self would be self-sufficient substantially existent

- because just those that are different are expressed to be the aggregates themselves and
- because just those are said to be the self,

due to the divisions of the substances that are forms and so forth into past and so forth. However, the opponents also do not assert the self to be a substance through the [following] statements:

> Monks, these five are mere names, mere conventions, mere imputations. What is so is past time, future time, space, nirvana, and the person.

The sutra here shows that the self cannot be substantially existent because the five – past time, future time, space, nirvana, and the person – are mere names and so forth due to which they are imputedly existent and not substantially existent. The main point here is that because the person or the self is imputedly existent it is not substantially existent.

Chandrakirti's autocommentary says:

> Similarly:
>
> Just as chariot is expressed
> In dependence on the collection of limbs,
> Similarly, in dependence on the aggregates,
> Conventionally one says "sentient being."
>
> Therefore, because the self would follow as substantially existent, the aggregates are not the self.

Taking the chariot as an analogy, just as it is imputed in dependence on its parts, also conventionally the sentient being is imputed in dependence on either the collection of the aggregates or any one of the aggregates.

If it is asserted that the aggregates are the self it would follow that the self is substantially existent because the aggregates are substantially existent, therefore, the aggregates are not the self.

Chandrakirti's autocommentary says:

> Furthermore, because the view of the transitory collection would be the possessor of an object, a substance, like the consciousnesses of blue, yellow, and so forth, it would not be mistaken. Therefore, the view of the transitory collection would not be abandoned by abandoning [true] origins or would be abandoned by only abandoning aspirational attachment which refers to it like an eye consciousness refers to mere blue, yellow, and so forth.

Because the view of the transitory collection would be an object-possessor of a substance, it would not be a mistaken awareness, just like a consciousness of blue, yellow, and so forth are not mistaken. In this way, the view of the transitory collection would not be an object of abandonment because it is not a mistaken awareness, rather it is an unmistaken awareness.

Stating "[the view of the transitory collection] would be abandoned by only abandoning aspirational attachment which refers to it like an eye consciousness refers to mere blue, yellow, and so forth" is an assertion of the Vaibhashikas, not of the Prasangika Madhyamikas. This is understood from the fact that the Vaibhashikas say that when the aspirational attachment observing an object is abandoned, the object is also abandoned. The Vaibhashikas posit abandonment while possessing. They say, for example, that when attachment to a person is abandoned so too is that person. Therefore, by abandoning aspirational attachment for an object, the object itself, blue, yellow, and so forth, is also abandoned, whereby the eye consciousness observing blue and so forth is also abandoned.

Lama Tsongkhapa's *Illumination* (Tibetan text page 352) says:

> Similarly:

> Just as in dependence on the collection of components
> It is expressed as a chariot,
> Similarly, in dependence on the aggregates,
> Conventionally one says "sentient being."
>
> Furthermore, *since the view of* the transitory collection, which views the aggregates, *engages them as a substance*, that is, it is an object-possessor of the substantially existent, *it would be* just *unmistaken*, like a consciousness of blue, yellow, and so forth. Because of that, when the view of the transitory collection is abandoned:
> - it is not abandoned in a manner of a similar type not arising uninterruptedly or
> - it is abandoned through only abandoning the aspirational attachment that observes the view of the transitory collection, like a consciousness that observes mere blue, yellow, and so forth.

If the lower schools are asked whether the aggregates are substantially existent, they would say that they are not. However, when the Prasangika Madhyamikas debate with them, they are forced to accept that they are substantially existent because they posit a self that is found among the aggregates when sought. Since they posit a self that is found among the aggregates when sought by thorough analysis, they assert that the aggregates are the self. Because the aggregates are substantially existent, the self would have to be substantially existent since they do not posit a self that is other than the aggregates. In this way, the view of the transitory collection becomes an object-possessor engaging a substance. This brings the absurd consequence that the view of the transitory collection is an unmistaken awareness because it is similar to an eye consciousness apprehending blue, yellow, and so forth.

In general, the way in which to abandon an object of abandonment is in a manner of interrupting the arising of a similar type. However, in this case another absurd consequence is that when the view of the transitory collection is abandoned it would not be abandoned in a manner of a similar type not arising uninterruptedly. This would mean that the view of the transitory collection is abandoned through abandoning attachment to the view of the transitory collection. In this way, it would be said that one has abandoned the view of the transitory collection because one has abandoned attachment to the view of the transitory collection. This is like in the world it is said "I have given up my wife" and so forth in the sense that attachment to her has been abandoned. We, for example, have attachment to someone for a period of time because that particular person makes us happy, but when we no longer experience this happiness we give up our attachment to that object and in this way give up the object. If it were as asserted by the lower schools, the abandonment of the view of the transitory collection would be similar to the abandonment of a wife, whereas it is not.

Chandrakirti's autocommentary says:

> Furthermore:
>
> *At the time of nirvana, the self would definitely be annihilated.*
> *In the instants prior to nirvana it would be produced and disintegrate.*
> *Since without agent, its effect would not exist.*
> *[Actions] accumulated by some would be consumed by others.*[139] [6.128]

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *When one passed beyond sorrow, the self would really cease.* [6.128a]

[139] See Hopkins, p. 690 for the root verse and for commentary on the individual points. See Hopkins, pp. 183-185, and Cabezon, pp. 187-192.

It follows that at the time of nirvana without remainder, the self would truly be destroyed, for at that time the five aggregates are destroyed. You have accepted this reason.

In the moments before nirvana, it would be born
And perish. [6.128bc]

It follows that the self would be born and destroyed in entitiness (inherently) in [each] moment before nirvana, because (a) the self is one with the aggregates and (b) the aggregates are born and destroyed in entitiness.

As there's no agent, it has no result. [6.128c]

It follows that action would be unconnected with its result, since the self that is the agent (or creator) does not exist (Skt.: has been destroyed).

One would enjoy the karma[140] *another had hoarded.* [6.128d]

You may say, "There is no fault since the result of karma created in an earlier instant is enjoyed in later instants." But then one person would experience the result (or "fruit") heaped up by another, for the ripe result of the karma created by one would be enjoyed by another. If you accept this, karma created would be consumed and you would meet with karma you had not created.

Chandrakirti's autocommentary says:

> If the self had the nature of the aggregates, at the time of nirvana the self would be annihilated since the continuity of all five aggregates are annihilated. Therefore, [the view of the transitory collection] would follow as an extreme view since it holds to an extreme of annihilation because you present whatever apprehends a self, due to viewing the transitory collection having the aspects of I and mine, as a view holding to an extreme since it holds to permanence and annihilation. Therefore, the self cannot be accepted as annihilated even at the time of nirvana because the view grasping to extremes would follow as a consequence. Therefore, the self does not have the essential nature of the aggregates.

The Prasangika Madhyamikas fling the following consequence at the lower schools:

> It follows that when a person with a nirvana with remainder attains a nirvana without remainder the continuum of the self would be cut because the continuum of the aggregates is cut.

It would also follow that prior to entering nirvana, there would not be a relationship between actions and results. This is because it follows that prior to nirvana, just as the aggregates arise and disintegrate momentarily, so too would the self arise and disintegrate momentarily by way of its own entity. [Because the self arises and disintegrates momentarily by way of its own entity], one would not remember past lives because an action and its result would be unrelated. It would also follow that an action accumulated by someone would be experienced by someone else and that an action created would go to waste. These are the consequences "if the self had the nature of the aggregates."

If it is asserted that the continuity of the self is cut when a nirvana without remainder is attained, this would be a view of annihilation because the self would become non-existent. "Therefore, the self cannot be accepted as annihilated even at the time of nirvana because the view grasping to extremes would follow as a consequence. Therefore, the self does not have the essential nature of the aggregates." In short, the self is not inherently one entity with the aggregates.

Chandrakirti's autocommentary says:

[140] Restore *la* to *las*, after the Skt.

> In the instants prior to entry into nirvana, just as the aggregates are produced and disintegrated in each instant, similarly also the self would have production and disintegration because of the self being the nature of the aggregates.

This consequence is flung at the lower schools who assert

- that a self is found among the aggregates when sought or
- that the self and the aggregates are a single inherently existent entity.

Tuesday morning, 6 February 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 353) says:

> [Chandrakirti's *Supplement* says:]
>
> *At the time of nirvana the self would definitely be annihilated.*
> *In the moments prior to nirvana,*
> *It would be produced and disintegrate.* [6.128abc]
>
> In addition, if one's own aggregates were the self, then, according to you, since *at the time of* a *nirvana* without remainder all five aggregates are annihilated, *the self would definitely be annihilated*. Therefore, that would be a view of annihilation that holds to an extreme because you assert the very apprehension of any self to be a view holding to permanence and annihilation, that is, holding to an extreme.
>
> *In the moments prior to* entering *nirvana*, just as the aggregates are produced and disintegrate in each moment, so too *would* the self *be* individually *produced and disintegrate* by way of its own entity in each moment.

If the aggregates were the self it would follow that upon attaining a nirvana without remainder the continuity of the self would cease because the continuity of the aggregates ceases. In addition, just as prior to nirvana the aggregates are produced and disintegrate in each moment so too would the self be produced and disintegrate by way of its own entity in each moment. If such production and disintegration of a self existed inherently it would not be possible to remember other rebirths.

Chandrakirti's autocommentary says:

> Therefore, just as the statement "This body of mine arose" would not be said, similarly the statement "At that time, on that occasion, I was called King Mandhatri" would not be taught because the self at that time was also destroyed like the body and because of accepting just other as produced at this [time].

If the self were produced and disintegrated momentarily by way of its own entity in the same way as the aggregates, it would follow that one could not remember previous lives due to which one would not say "This body of mine arose in the past." In that case, also it would not be acceptable to say "At that time, on that occasion, I was called King Mandhatri." This particular king was a previous incarnation of Shakyamuni Buddha who reigned over all four human continents, but, dissatisfied, having gained control over the entire desire realm, went to the first level of the form realm, Brahma Realm. However, because of his karma he was unable to gain control over this realm and fell, that is, returned to India, where no one recognized him.

"Because the self at that time was also destroyed like the body" means that the self or person that was King Mandhatri was destroyed when his body was destroyed. "Because of accepting just other as produced at this [time]" means that the person of this life is an inherently existent other than

the person of the previous life. If the self of this life is an inherently existent other, one could not say "I was born as such-and-such before" because the past rebirth and this present rebirth would be unrelated.

Chandrakirti's autocommentary says:

> It is also taught in the *Treatise* [*on the Middle Way*, 27.6]:
>
> The appropriated are not the self,
> They arise and disintegrate.
> How could what is appropriated
> Be the appropriator?

Here "the appropriated" are the aggregates; they are not the self. The aggregates arise and disintegrate in each moment, therefore, how could what is appropriated be the appropriator? If the aggregates were the self it would follow that the aggregates are the appropriator because the aggregates are the self. "The appropriator" is what takes rebirth.

Chandrakirti's autocommentary says:

> Similarly, [in the *Treatise*, 18.lab]:
>
> If the aggregates were the self,
> It would have production and disintegration.

If the aggregates were the self, just as the aggregates are produced and disintegrate, so too would the self be produced and disintegrate.

Chandrakirti's autocommentary says:

> Also, if states of production and disintegration existed, since the agent-self would not exist, its effect would just not exist. If that by which the action was done were just impermanent, the action would not even have a support since the agent would not exist at the time [of the effect]. Therefore, since [the action] would not exist, the relationship between actions and effects would just not exist.

Because the accumulator of actions is impermanent, it would follow that the accumulator of actions is non-existent. If the accumulator of actions does not exist, it follows that the support of actions does not exist, due to which it follows that actions and results would be unrelated.

Others hold the position that the agent, the accumulator of actions, is an inherently existent self. If an inherently existent accumulator of actions performs an action, that action should be inherently existent. If there were an inherently existent agent and an inherently existent action, these two would be unrelated and independent. Just as these two are unrelated, it would follow that the actions and the results that arise later would be unrelated because they are inherently existent.

Chandrakirti's autocommentary says:

> If the effect of the action done in the previous instant were intimately enjoyed in the later instants, because the maturation of the action accumulated by some would be enjoyed by others, the action accumulated by some would be consumed by others. Therefore, that done will be wasted and that not done will be met.

According to the opponents' assertions, former and later moments would be unrelated because they are inherently existent. Due to this, it follows that, because the former moment in which an action is created and the later moment in which the result is experienced are inherently existent and therefore unrelated, an action accumulated by one person would be experienced by someone else. Thus, it would follow that one would experience the result of an action that one did not do. This would contradict one of the four characteristics of actions which is the result of an action not created is not experienced. In addition, it would follow that actions created would be wasted, which also contradicts one of the four characteristics of actions, that is, that actions created are not wasted.

Chandrakirti's autocommentary says:

> It is also taught in the *Treatise* [chapter 27.10-11]:
>
> If this [self] were other, it would arise even without that.
> Similarly, it would abide and would be reborn, not dying there.
>
> Annihilated, actions wasted, actions done by some
> Individually experienced by others – that and so forth would follow.
>
> Therefore, it is improper to say that "The aggregates are the self."

These are the consequences flung at the opponents.

Lama Tsongkhapa's *Illumination* (Tibetan text page 353) says:

> Therefore, when remembering one's rebirths, just as one would not apprehend them stating "How did this body of mine arise previously?", similarly, one also would not state "At that time, on that occasion, I was called King Mandhatri"
>
> - because also the self of that time, like the body, has been destroyed, whereby it does not exist now, and
> - because it is asserted that in this life another self which is inherently different from the previous self is born.
>
> [Nagarjuna's] *Fundamental Wisdom* (v. 27.6) also says:
>
> The appropriated themselves are not the self;
> They arise and disintegrate.
> How could what is appropriated
> Become the appropriator?
>
> And [this text (v. 18.1ab)] says:
>
> If the aggregates were the self,
> It would have production and disintegration.
>
> [Chandrakirti's *Supplement* says:]
>
> *Since the agent would not exist, their results would not exist.* [6.128c]
>
> If former and later moments were other by way of their own entity, then, *since* the self which is *the agent would not exist*, actions would not have the support of an abode. Because of this, actions also would not exist, due to which actions *would* just *not* have a relationship with their *results*.
> OBJECTION: Since the result of an action which was created by a former moment is enjoyed in later moments there is no fault.
> RESPONSE:
>
> *That accumulated by another would be consumed by someone else.* [6.128d]
>
> At that time, because the ripening of an action which was accumulated by another would be experienced by someone else, a result *accumulated by another* continuum *would be consumed by*

> *someone else*. In that case, actions that were created would go to waste and those not created would be encountered.

These are the consequences flung at those who assert inherent existence or who assert that a self is found among the aggregates when sought. In other words, if there were an established by way of its own entity self it would follow that the self of a former moment and the self of a later moment would be completely unrelated. Thus, in a former moment one would create an action and, then, in a second moment the self of the former moment would become non-existent because it disintegrates by way of its own entity. In this way, the support that is the abode of the action would become non-existent. If there is no abode for the action, also the action would no longer exist. This means that there would be no relationship between an action and a later result.

Here someone makes the objection that there is no fault because an action created in a former moment is experienced in a later moment. The Prasangika Madhyamikas respond saying that this is incorrect because, if that were the case, it would follow that an action accumulated by one person would be consumed by another person of a different continuum because the two, the one who accumulated the action and the one who consumes it, would be different. In this case, it would follow that actions are wasted because the action is accumulated in a former moment by a person who then becomes non-existent. The second consequence is that, because the person of the second moment experiences the result of an action created by the person of the former moment, he would experience the result of an action that he did not create. Lama Tsongkhapa says: "In that case, actions that were created would go to waste and those not created would be encountered."

Lama Tsongkhapa's *Illumination* (Tibetan text page 354) says:

> [Nagarjuna's] *Fundamental Wisdom* (v. 27.10-11) also says:
>
> If they were other,
> It would arise even without that.
> Similarly, it would abide and,
> Without dying here, would be reborn.
>
> Annihilation and wasting of actions,
> Actions created by another
> Individually experienced by someone else:
> These and so forth would follow.
>
> [Nagarjuna] says that if former and later were inherently other, since [the later] would be unrelated to the former it would arise even without the existence of the former. Similarly, a self that is former would abide and, without dying here, would be reborn there and so forth.

It would follow that the person of this life, without dying, would be reborn because these two persons are unrelated. In other words, the self of this life and the self of a previous life are unrelated because of existing inherently. If this were the case, that is, if they were inherently existent, then the person of a previous life, without dying, would be reborn in this life. In other words, the person of this life would be reborn without depending on the person of the past life. These are the consequences of asserting an inherently existent self. Although there is no inherently existent self and accumulator of actions, if there were there would be the consequences of the self becoming non-existent and, therefore, actions being created by someone being experienced by another and actions created going to waste.

In short, there is no inherently existent self of a past life and future life, but if there were then many absurd consequences would follow. However, those who assert inherent existence say that the aggregates are the self because when the self is sought it is found among the aggregates. Therefore, there are Buddhist schools who assert the five aggregates to be the self and those who assert one, that is, the mind, to be the self. Both these assertions are negated here.

Lama Tsongkhapa's *Illumination* (Tibetan text page 354) says:

3B1C-2B3E-2B2A-2A2 Refuting the response that abandons faults

Chandrakirti's autocommentary says:

It is mentioned here: Even if former and later instants are other, in that case too, since this continuum is only one, we do not have this fault.

I shall explain:

If there were no fault if the continuum exists in thusness,
The defect about continuum was already explained when analyzed before. [6.129ab]

[That is, it was explained before] in the text [6.61a]: *The qualities supported on Maitreya and Upagupta are…*

The lower schools say that although former and later moments are other, they are still one continuum, due to which there is no fault of actions being wasted and actions not created being consumed.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B1A-6C5A-2B1B-1B Refuting a denial of the fault

If "With one stream in reality, there's no fault,"
The fault in the stream was explained when we checked before. [6.129ab]

You may say, "There is no fault, since although earlier and later [thought-]moments are other in entitiness, in absolute reality there is one stream of personality." But that too is inadmissible, for we have already explained the fallacy in the inherently different being one continuum, at the time of an earlier analysis. (See 6.61.)

Thus the self can't be the aggregates or the mind. [6.129c]

It follows that the aggregates and the mind cannot be the self, for if they were, then there would be the fallacies of karma not created being met with and that created being consumed.

The faults of former and later moments being other but still being one continuum were already analyzed in relation to verse 6.61:

The qualities based on Maitreya and Upagupta
Are not included in a single continuum because they are otherness.
It is not reasonable for whatever are individually established by way of their own character
To be included in a single continuum. [6.61]

Chandrakirti's autocommentary says:

It is also taught [in *Fundamental Wisdom*, 27.16]:[141]

If the human were other than the deva,
Then it would be non-eternal.
If the human is other than the deva,

[141] See Poisson p. 297, note 1, for the Sanskrit. The Tibetan, here being ambiguous, needs commentary. The Sanskrit is clearer.

The continuum would not be appropriate.

Therefore, since the state of belonging to one continuum is solely unreasonable for such mutually different characteristics, there is no reversing the consequence. Therefore, in order to indicate that the aggregates are not the very self and neither is the mind, it is explained:

Therefore, aggregates and mind are unreasonable as the self, [6.129c]

The meaning of the statement "If the human were other than the deva, then it would be non-eternal" is not very clear (note that 'non-eternal' could also be translated as 'impermanent').

Then, Nagarjuna says: "If the human is other than the deva, the continuum would not be appropriate." A god can transmigrate from a previous life and take rebirth as a human being. If that human being were inherently existent, the human being would be permanent. Also if the human and the god were inherently existent other, they could not be the same continuum. It is generally said that there is (i) a self that came from a past life to this life, (ii) a self that transfers from this life to the next and (iii) a self that is specific to this present life. The self that comes from a past life to this life is of six types because there is:

1. a self that comes from a god,
2. a self that comes from a anti-god,
3. a self that comes from a human being,
4. a self that comes from an animal,
5. a self that comes from a hungry ghost, and
6. a self that comes from a hell being.

Thus, there are six types of selves that come from a past life to the present life because there are six classes of beings. There is also a self that pervades all rebirths and a self specific to this life. For example, in my own case the specific self of this life is the self that is "Geshe Jampa Gyatso."

What is meant by "belonging to, or included in, one continuum"? For example, it can be said that Geshe Jampa Gyatso is included in the same continuum as the six types of migrating beings. This is because he can be reborn in the next life as a god, a human being, and so forth. On the other hand, if the person were inherently existent one could not say "He is included in the same continuum as the six types of migrating beings" because the continuum of the person and the continuum of the six types of migrating beings would be other, that is, different.

Tuesday afternoon, 6 February 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 354) says:

OBJECTION: Former and later moments are indeed other, however, even though they are such, since they are one continuum, there is no fault.

RESPONSE:

"There is no fault in them existing as a continuum in that way," but
The faults regarding a continuum were already explained when thoroughly analyzed before. [6.129ab]

That *there is no fault* due to those that are different substances having continuity *existing as* one *continuum in that way*, is also not admissible. *The faults* of what is inherently different being one *continuum were already explained when* this was *thoroughly analyzed before*, that is, here [in the *Supplement*], stating "The qualities based on Maitreya and Upagupta..." (v. 6.61).

The lower schools say that although former and later moments are inherently other they are still one continuum, due to which there is no fault. The Prasangika Madhyamikas respond saying that what is

inherently existent and inherently other cannot be one continuum. In fact, the faults regarding this were already explained in the context of verse 6.61:

> *The qualities based on Maitreya and Upagupta*
> *Are not included in a single continuum because they are otherness.*
> *It is not reasonable for whatever are individually established by way of their own character*
> *To be included in a single continuum.* [6.61]

In brief, phenomena that are established by way of their own character cannot be included in the same continuum because they exist independently and unrelatedly.

Lama Tsongkhapa's *Illumination* (Tibetan text page 354) says:

> [Nagarjuna's] *Fundamental Wisdom* (v. 27.16) also says:
> If the human is other than the god,
> In that case, it would be impermanent.
> If the human and the god were other,
> Their being a continuum would not be admissible.
>
> Therefore, since those that are inherently different are not suitable to be just one continuum, the consequences that (i) actions which are not created would be met, (ii) those that have been created would be wasted, and so forth would not be averted.
> [Chandrakirti's *Supplement* says:]
> *Therefore, the aggregates and the mind are not suitable as the self,* [6.129c]
>
> *Therefore*, it is *not suitable* to assert that one's *aggregates* and one's *mind* are one's *self*.

Gedun Drup's commentary on the twenty-seventh chapter of [Nagarjuna's] *Fundamental Wisdom* says:

> When born as a human being from a god, the two, the god and the human, are either inherently one or inherently different. If it were the first:
>
> > That god, as the subject, it follows that it would be permanent because it is inherently one with that human.
>
> If that it accepted:
>
> > That god, as the subject, it follows that it would not be produced.
>
> There is pervasion because production does not exist for the permanent.
> If the human is inherently other than the god, in that case it would follow that that human being would be impermanent and its continuum would be cut. There is pervasion because if the god and the human are inherently other it would not be admissible for them to be one continuum.
> OBJECTION: The unit does not have the fault of being permanent and impermanent because, having given up the body of a human, one takes the body of a god.
> RESPONSE: The person who is born as a god from a human, as the subject, it follows that it is permanent and impermanent because from the side of the self one part is a god, whereas from the side of the body one part is a human. If that is accepted, that too is not suitable.
> The subject, [the person who is born as a god from a human], that is neither permanent nor impermanent follows as not existing inherently because if it were established to be both permanent and impermanent, although suitable to assert what is not permanent as also established to not be impermanent, it is not established to be permanent and impermanent.
> OBJECTION: The self is permanent because it has been circling since beginningless time.
> RESPONSE: It follows that a permanent self does not exist because if a self that comes from

somewhere and goes somewhere existed inherently, there would exist a self that has circled since beginningless time, but that does not exist.
It follows that an impermanent [self] existing inherently does not exist because a permanent [self] does not at all exist inherently. [The self] that is eliminated to be both permanent and impermanent and the two does not exist inherently because what is permanent and what is impermanent individually do not exist inherently.

In short, if the aggregates were the self there would be the consequence that actions would be wasted and the results of actions not created would be consumed.

Lama Tsongkhapa's *Illumination* (Tibetan text page 354) says:

3B1C-2B3E-2B2A-2B Indicating the proof that it is unreasonable to assert thus

Chandrakirti's autocommentary (Tibetan text page 156) says:

Not only are the aggregates and the mind incorrect as the self due to the consequence that the faults explained would logically follow, besides this:

Because the world possessing limit and so forth do not exist. [6.129d]

Because the world just possessing a limit and so forth[142] are expressed as non-existent, therefore, it is unreasonable to say "The aggregates and the mind are the self." These fourteen unpredicted categories were expressed by all sects. Because the Bhagavan taught:

> It is like this. To say "The world is eternal," "The world is not eternal," "The eternal is eternal, the not eternal is not eternal," "Neither eternal nor not eternal," and so forth. These are not to be described.

– they are presented as the unpredicted categories.

Not only are there the above faults regarding the aggregates being the self and the mind being the self, there are also other faults, one being that the fourteen unspecified views would also not exist. These fourteen are divided into four groups, three groups of four and one group of two:
(1-4) the views that the self and the world have an end, do not have an end, have both, and have neither,
(5-8) the views that the self and the world are permanent, impermanent, both, and neither,
(9-12) the views that a tathagata arises after dying, does not arise, both, and neither,
(13-14) the views that the body and the life force are one and that they are other.
These views are called 'unspecified" because when the Buddha was asked, for example, "Do the self and the world have an end, not have an end, both, or neither?" he did not respond. This is because if the Buddha had responded, it would not have benefited the questioners who posed these questions on the basis of accepting a self of persons.

In the context of the fourteen unspecified views the word 'world' refers to the aggregates.

Chandrakirti's autocommentary says:

They are thus prohibited and if a bhikshu were to grasp to the statement that "The world is eternal," it is explained in the scriptures of the Purvashaila sect [of the Vaibhashika tradition] that he is not to be accompanied, saying: "The action of expulsion should also be done for he having a view

[142] "And so forth" – the so-called Fourteen Unpredicted Categories.

> like 'The world is eternal;'" "The action of expulsion should also be done for he having a view like 'The world is not eternal;'" "The action of expulsion should also be done for he having a view like 'The world is eternal [concerning] the eternal; not eternal [concerning] the not eternal,'" and "The action of expulsion should also be done for he having a view like 'The world is neither eternal nor not eternal.'"

In general, according to the monks' rules there are four types of punishment for wrong behavior, the worst of which is expulsion from the monastery. According to the Purvashaila sect if a fully ordained monk holds that the world is permanent, that the world is impermanent, that the world is both permanent and impermanent, or that the world is neither permanent nor impermanent, he should be expelled. In short, it is said that one should not associate with a fully ordained monk who holds the fourteen unspecified views because through doing so oneself may gradually come to develop the same kind of view.

Chandrakirti's autocommentary says:

> Thus, the unpredicted categories are to be expressed as the fourteen. Therefore, if the term 'world' specifies the aggregates, then because the aggregates are not eternal, since they are produced and disintegrate, it would also be predicted that "The world is not eternal." Since the aggregates are non-existent after nirvana, it would also be predicted that "The world possesses a limit." Similarly, it would also be predicted that, "The Tathagata does not exist after passing away." Therefore, because of negating that the world possesses a limit and so forth, to say that "Only the aggregates are the self" is improper.

Lama Tsongkhapa's *Illumination* (Tibetan text page 354-5) says:

> [Chandrakirti's *Supplement* says:]
> *Because the world having an end and so forth do not exist.* [6.129d]
>
> By means of the reasonings explained above, not only are the aggregates and the mind not the self, in addition, *because* it is asserted that the fourteen – the twelve views:
> (1-4) *the world has an end and so forth*, that is, it does not have an end, both, and neither,
> (5-8) the world is permanent, impermanent, both, and neither,
> (9-12) a tathagata arises after dying, does not arise, both, and neither,
> and the two views:
> (13) "What is the body itself is the life force" and
> (14) "The body is also other, the life force is also other" –
> *do not exist* as specified because they are asserted by all schools to be unspecified views, the aggregates are not suitable to be the self.

The Prasangika Madhyamikas say that it is not suitable to assert that the aggregates are the self because then the fourteen unspecified views would not exist. Because all eighteen divisions of the Vaibhashika school accept the fourteen unspecified views, the Prasangika Madhyamikas say that they cannot assert the aggregates to be the self.

Lama Tsongkhapa's *Illumination* (Tibetan text page 355) says:

> If the term 'world' refers to the aggregates, then, because it is our own system that the aggregates are produced and disintegrate, the world would have to have been specified as impermanent. According to you since the aggregates do not exist after passing beyond sorrow, it would also have had to be specified that "The world has an end" and that "A tathagata does not exist after dying."

> For that reason, because the response to "Does the world have an end?" and so forth is refuted to have been specified, it is not suitable to state "The aggregates are the self."
>
> In regard to that, life force is a synonym of self. The question about the world is asked in reference to the self. Furthermore, when the question is asked thinking about the being who is an inner agent, since the qualified basis is not established, the qualification is unspecified. When specifying that it is from the point of view of a self which is a mere imputation, then that too was not specified due to the questioners not having the fortune to realize such a selflessness.

Why did the Buddha not respond to these questions? He did not respond because the qualified basis of the questions, the being who is an inner agent, does not exist. If the Buddha had said that the world has an end it would have been correct for non-Buddhists, but not for Buddhists, because the questioner asked his question thinking:

- that the self which is the basis of the question is qualified by being permanent, partless, and independent or a self-sufficient substantially existent, and
- that the aggregates are an object of use of such a person.

In one text it is said: "When asked 'Is a limit to the beginning seen?' the Subduer remained without answering." This is because this question was asked by non-Buddhists who were not a proper vessel for the teaching on selflessness. If the Buddha had said that the self and the aggregates were not permanent, this would have been acceptable for the non-Buddhists but not for the Buddhists.

'Unspecified' in this context is not the unspecified discussed in the context of virtue and non-virtue. What does unspecified mean in the context of virtue and non-virtue?

Student: Because the Buddha did not say that it was either virtuous or non-virtuous, it is unspecified.

Geshe Jampa Gyatso: That means that if the Buddha had said it is virtue it would become virtue and if he said that it is non-virtue it would become non-virtue! What is the definition of unspecified in the context of virtue and non-virtue? Are the first four of the fourteen views – the views of the self and the world being permanent, impermanent, both, and neither – virtuous or non-virtuous?

Student 1: They are neutral or unspecified.

Student 2: They are non-virtuous because in the autocommentary it says that if a fully ordained monk holds these views he is to be expelled from the monastery.

Geshe Jampa Gyatso: The *Treasury of Knowledge* says:

> All those of the upper realms are unpredicted.
> In the desire realm, they are the view of the transitory collection,
> That holding an extreme, and the ignorance that is simultaneous with them.
> The remaining here are non-virtuous. [5.19]

Therefore, all the remaining views among the fourteen are non-virtuous, acquired, and afflicted.

Wednesday morning, 7 February 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 355) says:

> 3B1C-2B3E-2B2A-2C Indicating other harms to propounding the aggregates to be the self

Chandrakirti's autocommentary says:

> Furthermore:

For you yogi perceiving non-self,
Then, things will certainly not exist.
If a permanent self is rejected, then, therefore,
Your mind or aggregates will not be the self. [6.130]

Gedun Drup's *Mirror of the Clarification of the Thought* (Tibetan text page 57), as translated by Martin Willson, says:

3B1A-6C5A-2B1B-3 Another refutation of the hypothesis that the aggregates are the self

According to you, for a yogin seeing non-self,
Functioning things then will certainly not exist. [6.130ab]

It follows that on the view of you Sam□atiyas, when a yogin directly perceives selflessness, he would definitely realize at that time that the functioning things which are the aggregates do not exist, because the self is the aggregates. [This you do not accept.]

If it's a permanent self he rejects, so then
Your mind or aggregates will not be the self. [6.130cd]

If you say, "There is no fault, since when he directly perceives selflessness, he realizes that there is not a permanent, single, independent self," then it follows that the aggregates and mind are not the self, as you asserted, because at that time of directly perceiving selflessness, he abandons, or perceives the non-existence of, a permanent self.

Chandrakirti's autocommentary says:

> If the aggregates or the mind were the self, when, in the period of perceiving the truths, the yogi perceives the truth of suffering in the aspect of non-self saying "All phenomena are selfless," then, perceiving the aggregates as non-existent, he would perceive the self as non-existent. Yet, such is not even asserted, therefore the aggregates are not the self.

If the aggregates or the mind were the self, then, when a yogi realizes selflessness, that is, the non-existence of a self, it would follow that he would realize the aggregates and the mind to be non-existent because they are the self. This is the consequence of applying the term 'self' to the aggregates.

Chandrakirti's autocommentary says:

> In case it is considered: When the term 'self' is applied at the time of relating actions and effects, it is used for only the aggregates because another self [besides the aggregates] is impossible at that time. When perceiving the self as non-existent, at that time [the term 'self'] is used for the inner creator being imagined by others (i.e., the Forders). Therefore, even at the time of perceiving the self to be non-existent, a mere compositional factor separated from the inner creator being will be perceived, it will not follow as a consequence that functioning things be perceived as non-existent.

The lower schools say that there is no such fault because when a yogi sees selflessness he sees the selflessness that is the emptiness of a permanent, partless, and independent self. They say that the yogi realizes this selflessness, he does not realize the non-existence of compounded phenomena.

Chandrakirti's autocommentary says:

> Response: *If a permanent self is rejected, then, therefore, your mind or aggregates will not be the self.* If, out of fear – since it would follow as a consequence that functioning things be perceived as non-existent – the term 'self' fully specifies the state of a permanent self and the aggregates and mind are not asserted as the self – in that case, well, the position will degenerate.

"The position will degenerate" means that the position that asserts the aggregates to be a self and the position that asserts the mind to be the self will degenerate.

Chandrakirti's autocommentary says:

> In case it is considered: This is not asserted as applying to that type of object, therefore [our position is] without fault.

The lower schools respond that they are without fault.

Chandrakirti's autocommentary says:

> This too, is not so. To act as one wishes without reason saying "Here the inner creator being is the self, elsewhere the aggregates are," – where do you get that?

The Prasangika Madhyamikas say that it is not so in that the lower schools do have this fault.

Chandrakirti's autocommentary says:

> If said: It is because it is impossible.
>
> It was already indicated "There does not exist the possibility for this to apply also to the aggregates." Therefore, if here the term 'self' is not asserted to apply to the aggregates saying "All phenomena are selfless," it must not be asserted elsewhere either. In case it is asserted to apply to the aggregates elsewhere, that must also be asserted here.

That the term 'self' cannot be applied to the aggregates has already been explained. However, according to the lower schools the term 'self' is applied to the aggregates. The Prasangika Madhyamikas say that, on the other hand, if they do not apply the term 'self' to the aggregates here, the term 'self' should also not be applied to the aggregates in the context of the relationship of actions and results, whereas it is.

Chandrakirti's autocommentary says:

> Furthermore:
>
> *You, yogi, by perceiving non-self,*
> *Will not realize the thusness of forms and so forth.*
> *Because engaging through referring to form, attachment, etc.*
> *Will be produced because without realization of its entity.* [6.131]

Gedun Drup's *Mirror of the Clarification of the Thought,* as translated by Martin Willson, says:

> *According to you, a yogin who sees non-self*

Would not perceive the reality of form and so on. [6.131ab]

On your view, it follows that the yogin who directly perceives non-self does not realize the reality of forms and so on, for at that time he perceives the non-existence only of a permanent, single, independent self.

Working when form's perceived, attachment and so on
Will arise, for he has not understood its essence. [6.131cd]

It follows that in the person striving to realize non-self perfectly, still more attachment and so on will arise because they operate when he perceives the form as true, since he has no understanding of that form's entity or way of being.

When a yogi perceives selflessness he does not realize the thusness of forms and so forth because at that time he only realizes the selflessness which is imputed by the outsiders, that is, the lack of a permanent, partless, and independent self. In other words, the yogi still observes forms and so forth to be truly existent and, therefore, still generates the attachment observing forms and so forth because he has not realized their mode of abidance. For this reason, the realization of the emptiness of a permanent, partless, and independent self is not sufficient as a realization of the selflessness.

Chandrakirti's autocommentary says:

> Whoever did not experience the sweetness of the pistil does not observe the sweetness by merely saying "The cuckoo exists on the pistil." Also, while experiencing the taste, the sweetness is not unobserved saying "The cuckoo does not exist there," and the strong settling which is included in that is not abandoned.
>
> Similarly, here also, if the yogi perceives the phenomena of form and so forth like that, separated from a permanent self, then, due to not fully knowing the nature of that, what will arise concerning that? Or, even if attachment and so forth referring to that is abandoned by observing the self-entities of those forms and so forth, what will arise concerning the non-existent property of the self? That by which, out of fully knowing that [permanent self] as non-existent, attachment and so forth to objects will be abandoned, does not cultivate objects of pleasurable experience saying, "May any inner creator being be happy." It also does not abandon meeting with undesirable objects due to fearing it as suffering.
>
> Therefore, having referred to form, attachment and so forth will be produced because of operating. Because the cause of abandoning attachment and so forth does not exist [by] fully knowing the self-entity of that; they should be considered like the outsiders.

A cuckoo takes the nectar from the pistils of a flower, whereas, because we do not do so, we do not perceive the sweetness that is there. However, it cannot be said that a flower does not have sweetness because there is no cuckoo on its pistils. The meaning of this is that by merely refuting a permanent, partless, and independent self, one does not perceive selflessness, that is, such a yogi does not realize the mode of abidance of forms and so forth. Therefore, the Prasangika Madhyamikas say that the mere realization of the emptiness of a permanent, partless, and independent self is not sufficient to overcome attachment because the yogi has not realized the mode of abidance of the object. In other words, this realization is not a cause for overcoming the conception of a self.

In short, the realization of the non-existence of the permanent, partless, and independent self imputed by the Forders does not overcome the attachment observing forms and so forth to be truly existent. Such a yogi would be like an outsider, that is, a Forder, who, because they assert a self, do not posit selflessness. In fact, they affirm that there is a permanent, partless, and independent self.

In short, a yogi who realizes the emptiness of the permanent, partless, and independent self imputed by the Forders does not realize selflessness.

Lama Tsongkhapa's *Illumination* (Tibetan text page 355) says:

> There are also other faults:
> *For you, when yogis see selflessness*
> *Things would definitely become non-existent.* [6.130ab]
>
> According to *you*, when *yogis* directly *see selflessness*, they see true sufferings in the aspect of being selfless thinking "All phenomena are selfless." *At that time*, *they would definitely* see the *things* that are the aggregates *as non-existent*, due to which they would see the self as non-existent because the aggregates and the mind are the self. Since you also do not assert this to be the case, therefore, the aggregates are not the self.

The Prasangika Madhyamikas say that according to the lower schools when a yogi directly sees the absence of a self, he would see true sufferings in the aspect of being selfless, due to which he would see the aggregates as non-existent because he sees the non-existence of a self. According to the lower schools, the aggregates and the mind are the self, therefore, when the self is seen to not exist, things, such as the aggregates, are seen to not exist. The Prasangika Madhyamikas say that the lower schools have this fault. However, the lower schools do not accept that when non-existence of the self is realized, the aggregates and the mind are realized to not exist. Because of this, the Prasangika Madhyamikas say that the lower schools should not assert the aggregates to be the self.

Lama Tsongkhapa's *Illumination* (Tibetan text page 356) says:

> OBJECTION: Also in the system that does not assert the aggregates to be the self, when the selflessness of persons is directly seen, the entire person who is posited as the illustration of the self would have to be seen as non-existent for the same reason.

This is the argument of the lower schools to which the Prasangika Madhyamikas respond as follows:

> RESPONSE: When the subtle reasoning regarding that is not realized, one cannot respond, therefore, it is explained [as follows]. The opponents, who assert the aggregates and the mind to be the self, posit it through seeking the imputed object, without realizing it to be merely posited by the force of conventions. In this case, the aggregates and the mind that are the self are an established by way of its own entity self. When the self is directly seen to not exist, that self must be realized to be non-existent in all ways. Therefore, the opponents, for whom the things that are the aggregates and the mind are the self, acquire the fault of necessarily seeing that all of these do not exist, whereas they are posited through mere nominal imputation. The system that does not assert them to be posited through seeking the imputed object does not have this fault in all ways.

When asserting the aggregates and the mind to be the self, the lower schools posit a self that is not just merely imputed by the force of conventions but posit a self that is findable among the aggregates when sought. The Prasangika Madhyamikas say that if the aggregates and the mind are an established by way of its own entity self, then, when selflessness is realized, the non-existence of such a self should be realized. However, because the lower schools do not accept this, the Prasangika Madhyamikas say that they have this fault, whereas the Prasangika Madhyamikas themselves do not have this fault because they do not posit the self as being found when sought. In fact, they are free from this fault because they posit things to be merely imputed by the force of conventions and do not posit them as being findable when sought. On the other hand, the lower schools have such faults because they posit the imputed object to be found when sought. If it were like this, then it would

mean that the self exists inherently, whereby it would be the self that is the object of negation. Then, when selflessness is realized, such a self should be realized to not exist. The Prasangika Madhyamikas do not have these faults because they posit the self to be merely imputed by term and conception. Because such a self is not an object of negation, they say that they are free from such faults.

In short, the lower schools posit a self that is found when sought and, therefore, have these faults. Because the Prasangika Madhyamikas do not posit such a self, but instead posit a self that is merely imputed by term and conception, they do not have these faults.

Lama Tsongkhapa's *Illumination* (Tibetan text page) says:

> OBJECTION: When the term 'self' is applied in the context of the relationship between actions and results, because a self that is an object other than the aggregates is impossible, it is applied only to the aggregates. However, when the self is seen to not exist, [the term 'self'] is applied to the being who is an inner agent that is imputed by the others, the Forders. Therefore, even when the self is seen to not exist, one sees a mere compositional factor separate from the being who is an inner agent; there is not the fault of not seeing the things that are the aggregates and so forth.

Here the lower schools say that the term 'self' is applied to the aggregates in the context of the relationship between actions and results. On the other hand, in the context of the realization of selflessness, the term 'self' is applied to the being who is an inner agent imputed by the others. Thus, when selflessness is realized, what is realized is the non-existence of the being who is an inner agent. When such a self is seen to not exist, there is no pervasion that things which are the aggregates and so forth are seen to not exist. For this reason, the lower schools say that they do not have this fault.

Stating that "the term 'self' is applied to the aggregates in the context of the relationship between actions and results" means that for the lower schools this is not the self that is an object of negation. For them, the self that is the object of negation is a permanent, partless, and independent self – the being that is the inner agent imputed by the Forders. According to the lower schools, this is the self that is to be negated. They say that this self, which is the object of negation, is a permanent, partless, and independent self, not the self that exists conventionally.

Lama Tsongkhapa's *Illumination* (Tibetan text page 356-7) says:

> RESPONSE:
>
> *At that time, if a permanent self is abandoned, because of that,*
> *Your mind or aggregates are not the self.* [6.130cd]
>
> *At that time if* it is asserted that, at the moment selflessness is seen, *a permanent self* – the being who is an inner agent – *is abandoned*, that is, is seen to not exist, it is not suitable to cite another meaning of the term 'self' in other contexts. *Because of that, your aggregates and mind are not the self*; this being the case, your position deteriorates.

In short, the lower schools say:

1. in the context of the relationship of actions and results the term 'self' is applied to the aggregates, and
2. in the context of the realization of selflessness, the term 'self' is applied to the self that is an inner agent imputed by the others.

To this, the Prasangika Madhyamikas say that the lower schools should not take the term 'self' to mean whatever they like, instead the term 'self' should be taken to mean the same in all contexts. In this way, when the lower schools come to say that the aggregates and the mind are not the self their thesis would deteriorate in that previously they said that the aggregates are the self and that the mind is the self, whereas now they withdraw this assertion.

Wednesday afternoon, 7 February 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 357) says:

> OBJECTION: In the context of the relationship between actions and results, the Forders' term 'self' is not asserted to be applied to such an object, therefore, there is no fault of our position deteriorating.
> RESPONSE: That too is unsuitable because it is not suitable to behave as you like stating "Here, the being who is an inner agent is the self, whereas elsewhere, in the context of the relationship between actions and results, it is the aggregates."

The lower schools say that in the context of the relationship between actions and results the self is not the self that is the being who is an inner agent. Therefore, they say that there is no fault of their position deteriorating.

Lama Tsongkhapa's *Illumination* (Tibetan text page 357) says:

> OBJECTION: This is because in the context of actions and results the being who is an inner agent cannot be the agent of actions and the experiencer of results.
> RESPONSE: It was already explained before that "The term 'self' is also not applied to the aggregates." Therefore, if the term 'self' is not asserted to be applied to the aggregates here [in the context of] stating "All phenomena are selfless," it also should not be asserted elsewhere in the context of actions and results. If the term 'self' is asserted to be applied to the aggregates in the context of actions and results, the term 'self' should also be asserted in regard to the aggregates here stating "All phenomena are selfless."

The lower schools assert that the aggregates are the self. In response to this, the Prasangika Madhyamikas say that it would follow that when yogis realize selflessness they would realize that the aggregates do not exist. This is because the aggregates are the self and the self is the object of negation.

Lama Tsongkhapa's *Illumination* (Tibetan text page 357) says:

> There are also other faults:
> *For you, the yogis who see selflessness*
> *Do not realize the suchness of forms and so forth, and,*
> *Because of engaging through observing forms and so forth,*
> *Attachment and so forth are produced because of not realizing their entity.* [6.131]
>
> According to *you*, *the yogis* who *see selflessness* directly *do not realize the suchness of forms and so forth* because at that time they see that the mere permanent self imputed by the Forders does not exist. Therefore, *because of engaging through observing forms and so forth* to be truly existent, the *attachment and so forth* which are the object-possessors of forms and so forth *are* also still *produced because of not realizing the entity*, that is, the mode of being, *of those* forms and so forth. For example, by merely stating "There is a cuckoo on the stamens of a flower" without experiencing the sweetness of the stamens oneself, one does not observe their sweetness; likewise, although it is permissible for yogis to merely see that the phenomena which are the aggregates are free from a permanent self, without previously knowing the nature of those forms and so forth, the later realization of it is not observed at all.

According to the lower schools, yogis who see selflessness directly would still observe forms and so forth to be truly existent and, therefore, would still generate the attachment that is an object-possessor observing them.

Lama Tsongkhapa's *Illumination* (Tibetan text page 357) says:

> Also, it is not that, due to the mere non-existence of a cuckoo on the stamens, while experiencing the sweetness of the stamens the taste is not observed. And, due to observing the own entity of forms and so forth to be truly existent while not being able to abandon the strong adherence which is included in that, what kind of cause for abandoning the attachment and so forth observing forms and so forth would arise in those who see a permanent self does not exist? It would not [arise]. Any person who abandons the attachment and so forth that are the object-possessors of forms and so forth through seeing that a permanent self does not exist, does not rely on objects of pleasurable experience thinking "May the being who is an inner agent be happy," nor acts to avoid meeting undesirable objects through fearing that [the being who is an] inner [agent] will suffer.[143] Therefore, think "Since he does not have the causes for abandoning attachment and so forth, he will not become free from cyclic existence; like the non-Buddhists."

In brief, the conception conceiving forms to be inherently existent cannot be harmed by the realization of the emptiness of a permanent, partless, and independent self. In other words, the realization of the emptiness of a permanent, partless, and independent self does not harm the conception of true existence. Therefore, the realization of the emptiness of permanent, partless, and independent self does not become a cause for abandoning the attachment observing forms. The realization of emptiness of a permanent, partless, and independent self does not harm the conception that forms and so forth are inherently existent. Because this realization does not abandon the conception of true existence, it also cannot abandon the attachment and so forth which engage forms and so forth in a manner that is not different from that of the conception of true existence. Aryadeva's *Four Hundred Stanzas*, as cited previously in the *Illumination*, also says:

> Like the body sense power [abides in] the body,
> Confusion abides in all.

The commentary on this says:

> Confusion, because of obscuring to realize them as truths just as they are, thoroughly operates to exaggeratedly superimpose true existence on things as their own entity. Because the two, attachment and so forth, also operate to superimpose the distinctions of attractiveness and unattractiveness and so forth on only the nature of things which are imputed by confusion, they operate not differently from confusion. They are also based on confusion because confusion is the main [affliction].

> When this is explained [it is as follows]. "Confusion, because of obscuring to realize them as truths just as they are, thoroughly operates to exaggeratedly superimpose on things their own entity of truth" indicates that confusion is the conception of true existence. "Attachment and so forth... operate not differently from confusion" [means that] they operate concomitant with confusion and do not operate free from it.

The realization of the emptiness of a permanent, partless, and independent self does not harm the conception of true existence and does not harm the attachment and so forth that operate in a manner that is not different from the conception of true existence. Lama Tsongkhapa says: "Therefore, because of engaging through observing forms and so forth to be truly existent, the attachment and so forth which are the object-possessors of forms and so forth are also still produced because of not realizing the entity, that is, the mode of being, of those forms and so forth." To clarify this, the example of a cuckoo is set out saying: "For example, by merely stating 'There is a cuckoo on the stamens of a

[143] There appears to be some mistake in the Tibetan which reads *nang rtag bde sdug bsngal bar dogs nas*, but, it is not clear how to correct it. Perhaps *rtag bde* should be omitted. See Chandrakirti's *Supplement* which simply reads "due to fearing it as suffering."

flower' without experiencing the sweetness of the stamens oneself, one does not observe their sweetness." Similarly, by means of the mere realization of the emptiness of a permanent, partless, and independent self, the emptiness of inherent existence of forms and so forth is not realized. Likewise, if one does not experience a particular taste, one does not observe that taste. For example, if someone eating some food says that it is delicious, one does not observe that taste unless that food is placed on one's own tongue. In other words, just through someone describing sweetness as being a lack of sourness, one does not observe that sweetness.

"Also, it is not that, due to the mere non-existence of a cuckoo on the stamens, while experiencing the sweetness of the stamens the taste is not observed" means that if someone says that a particular flower is not sweet because there is no cuckoo on it, there is no pervasion because if that flower is tasted its sweetness can be experienced. The absence of the cuckoo is not a correct reason for saying that the flower is not sweet because there is no pervasion. Similarly, even if someone realizes the absence of a permanent self, that person still adheres to forms and so forth as truly existent. Who would such a person be? He could be a Vaibhashika in that they realize the emptiness of a permanent, partless, and independent self, yet assert the self to be truly existent. Since the Vaibhashikas adhere to forms and so forth as truly existent, they do not have the cause for abandoning the attachment and so forth observing forms and so forth. In brief, the realization of the emptiness of a permanent self does not act to abandon the conception of true existence of forms and so forth and the attachment and so forth to them.

Hence, although someone has the realization of the non-existence of a permanent self, he still conceives a truly existent person. Due to this, he still adheres to forms and so forth as truly existent and makes use of them in order to experience happiness. He conceives happiness and suffering to exist truly. He lacks the cause of abandoning attachment and aversion for such feelings and, therefore, like the non-Buddhists, is unable to become free from cyclic existence.

Thursday morning, 8 February 2001

Because the self imputed by others does not exist, one who realizes this would not act to bring about its happiness and would not fear that it suffers, due to which one would not engage in a method for avoiding that it suffers. In other words, because the self or being imputed by the Forders is seen to not exist, there is no discussion as to its experiencing and not experiencing suffering.

Lama Tsongkhapa's *Illumination* (Tibetan text page 358) says:

3B1C-2B3E-2B2A-2D Explaining the intention of teaching the aggregates to be the self

1 Explaining the meaning of teaching that all views of a self are a view of the aggregates alone
2 Explaining, in dependence on other sutras, that the mere collection of the aggregates is not the self
3 Refuting that the structure which is the shape of the mere collection of aggregates is the self
4 Presenting other harm to asserting the mere collection of the aggregates to be the self
5 The Subduer taught the self to be imputed in dependence on the six constituents and so forth

3B1C-2B3E-2B2A-2D1 Explaining the meaning of teaching that all views of a self are a view of the aggregates alone

A Indicating the intention of the scriptures to be from the negative position of eliminating the object of negation
B Even treated as being from the affirmative position, the aggregates are not indicated to be the self
C Dispelling others' arguments regarding these

3B1C-2B3E-2B2A-2D1A Indicating the intention of the scriptures to be from the negative position of eliminating the object of negation

Chandrakirti's autocommentary says:

> In case it is considered: We, taking the scriptures as valid, are not harmed by the valid cognition of logicians. Scripture also indicates the aggregates alone to be the self. As was taught [in sutra]:
>
> > O bhikshus, any trainee in virtue or brahmin who correctly subsequently views the "self," they correctly subsequently view only these five appropriated aggregates.

Someone says that because they take the scriptures as valid they are not harmed by the logicians, or non-Buddhists, who assert a self that is a different entity from the aggregates. This is because in this sutra citation the Buddha says that the aggregates are the self.

Chandrakirti's autocommentary says:

> It is also similar here.
>
> *When, since the teacher said the aggregates are the self,*
> *Therefore, the aggregates are asserted as the self,*
> *That refutes a self other than the aggregates*
> *Because other sutras teach form is not self and so forth.* [6.132]
>
> This sutra, from which it is believed that "The aggregates are the self," just does not clarify the aggregates as the very self.

The Prasangika Madhyamikas say that although this sutra says that the aggregates are the self, the aggregates are not the self. Then, what was the Buddha's intention in saying this? His intention was to refute a self that is other than the aggregates, that is, a self that is a different entity from the aggregates. According to the Prasangika Madhyamikas, the aggregates and the self are one entity, not different entities.

In short, the Buddha did say that the aggregates are the self but this is not to be literally accepted in that the intention was to refute a self that is a different entity from the aggregates.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> 3B1A-6C5A-2B1B-4A1 Showing that the meaning of the teaching is from the point of view of negation
>
> *You may maintain the aggregates are the self*
> *Because Buddha said, "The aggregates are the self."*
> *But this was denying a self apart from the aggregates,*
> *For another sutra says they are not the self.* [6.132]

You may say, "I maintain that the aggregates are the self because the Master taught the aggregates were the self, since he said, '[O bhiks□us,] those shramanas or brahmans who examine "I" in their minds examine only these five constituent aggregates.'" That sutra is denying a self of separate entity from the aggregates, but is not teaching that the aggregates are the self, for in another sutra it is taught "The self is not form" and so on.

Chandrakirti's autocommentary says:

> If asked: Well then, what?

> The intention of the Bhagavan is that "There does not exist any self different from the aggregates" in order to refute the Forders' scriptures through reliance on the deceptive truth and in order to clarify that as mistaken deceptive truth.

In brief, there does not exist any self that is a different entity from the aggregates. "In order to refute the Forders' scriptures through reliance on the deceptive truth" means that the self asserted by the Forders does not exist even conventionally, therefore, it neither exists ultimately nor conventionally. The self posited by the Forders is an object of negation for the Prasangika Madhyamikas, whereas for the Forders themselves it is a conventionally existent self. What is the self posited by the Forders? As was mentioned before it is a consumer, permanent, and so forth. According to the Prasangika Madhyamikas, a self that possesses the five qualities does not exist. How do Buddhists define the self? They would say that it is a non-associated compositional factor.

Chandrakirti's autocommentary says:

> Also, if asked: From where is this statement so ascertained, "This is to refute a self other than the aggregates?"
>
> Because in other sutras, also form and so forth are refuted to be the very self.
>
> If asked: How?

Chandrakirti paraphrases sutra saying:

> *Since form and feeling are not the self, nor is discrimination;*
> *Compositional factors are not, nor is consciousness,*
> *Is taught in other sutras – therefore,*
> *The teaching in the sutra does not assert "The aggregates are the self."* [6.133]
>
> Therefore, in the sutra which states:
>
> > ... correctly subsequently views the "self" in only these five appropriated aggregates…
>
> – it is ascertained to only refute a self that is different from the aggregates.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *Because another sutra says that form*
> *And feeling aren't the self, nor is recognition,*
> *And volition and consciousness are not,*
> *The sutra's teaching is not "The self is the aggregates."* [6.133]

This teaching in the sutra, "shramanas or brahmans who, etc.," is not asserting that the aggregates are the self, because in another sutra it is taught that form and feeling are not the self, nor is recognition, volition is not self and consciousness too is not.

This was taught only to refute a self that is a different *entity* from the aggregates.

Chandrakirti's autocommentary says:

> In that [sutra] in which also form and so forth are refuted to be the very self, it should be known that "The dependently imputed self, the object of the view of the transitory collection, the possessor

of the appropriated aggregates" is refuted because of coming in the context of contemplating suchness. It is appropriate to separate from attachment also to form and so forth saying "When the appropriator is not observed, also its appropriations do not exist."

Since it is taught in other sutras, therefore, the previous [line]: *the teaching in the sutra does not assert "The aggregates are the self."*

In short, the sutra does not assert "The aggregates are the self," rather it refutes a self that is a different entity from the aggregates.

Lama Tsongkhapa's *Illumination* (Tibetan text page 358) says:

OBJECTION:

"The Teacher taught 'The aggregates are the self.'" [6.132a]

We, who take the scriptures as valid, are not harmed by the valid cognizers of logicians in that the scriptures also present the aggregates alone to be the self. *The Teacher*, by stating [the following], *taught "The aggregates are the self"*:

> Monks, any trainees in virtue or brahmins who perfectly and subsequently view thinking "Self," they perfectly and subsequently view just the five appropriated aggregates.

RESPONSE:

If, because of that, you assert the aggregates to be the self,
This was to refute a self that is different from the aggregates
Because other sutras teach "Form is not the self" and so forth. [6.132bcd]

If, because of that, you assert the aggregates to be the self, it is not that the aggregates are presented in this sutra to be the self. Why is that? The intention of the Teacher is *to refute* the assertion that *a self which is a different* entity *from the aggregates* is the observed object of the view of the self by the delineating term 'just'

- because he refutes the Forder's texts in dependence on the conventional truth and
- because he unmistakenly presents the self that exists as a conventional truth.

When the Buddha taught that the aggregates are the self in this brief presentation in sutra, his intention was that indicate that there does not exist a self that is a different entity from the aggregates. For this reason, the Prasangika Madhyamikas conclude that the aggregates and the self are one entity, however, this does not mean that a self is found when sought among the aggregates, nor does it mean that the aggregates are the self.

What do the Prasangika Madhyamikas posit as the observed object of the view of the transitory collection? They posit the self. This self is not a self that is a different entity from the aggregates, but is a self that is merely imputed. Because the self that is merely imputed in dependence on the aggregates is the observed object of the view of the transitory collection, this presentation refutes the self imputed by the Forders exists conventionally and, simultaneously, presents the self that exists conventionally. What is this self? It is the self that is merely imputed in dependence on any of the five aggregates. This is what is meant by the Buddha saying: "they perfectly and subsequently view just the five appropriated aggregates." The aggregates are the objects of appropriation and the self is the appropriator.

Lama Tsongkhapa's *Illumination* (Tibetan text page 359) says:

QUESTION: Moreover, from what is it to be understood that a self which is different entity from the aggregates is refuted?

RESPONSE: *It is because* by stating "*Form is not the self*" *and so forth in other sutras* it is *taught* that form and so forth are refuted to be the self.

This is quite clear in itself.

Lama Tsongkhapa's *Illumination* (Tibetan text page 359) says:

QUESTION: How is this refuted in other sutras?
RESPONSE:

Because in other sutras it is taught that
Forms and feelings are not the self, discriminations are also not,
Compositional factors are also not, consciousnesses are also not,
The brief presentation does not assert "The aggregates are the self." [6.133]

Because in other sutras it is taught that forms and feelings are not the self, discriminations are also not the self, *compositional factors are also not* the self, *consciousnesses are also not the self, the brief presentation* "...who perfectly and subsequently view just the five appropriated aggregates thinking 'self'..." *does not assert "The aggregates are the self,"* whereas the assertion that there is a self which is different entity from the aggregates is ascertained to just be refuted by the word 'just.'

The term 'just' refutes the assertion that there is a self that is a different entity from the aggregates. Who asserts such a self? The Samkhyas, Vaisheshikas, Nirgranthas, Naiyayikas, and so forth assert a self that is a different entity from the aggregates.

Lama Tsongkhapa's *Illumination* (Tibetan text page 359) says:

OBJECTION: Although this sutra by stating "views just..." indeed refutes a self which is another object, through teaching that one views the five aggregates stating "views just the five aggregates" it clearly presents the aggregates to be the observed object of the view of a self, therefore, the intention of the sutra is that the aggregates are the observed object of the view of a self.

This objection is made by the lower schools.

Lama Tsongkhapa's *Illumination* (Tibetan text page 359-60) says:

RESPONSE: If that were the case, it would contradict the teachings in other sutras that the five aggregates are not the self because from among the two, (i) the observed object and (ii) the aspect of the conception of I, the innate view of the transitory collection, if it is the observed object it must be the self. There is no harm to the meaning of the latter sutra that teaches this because the harm to the contrary meaning was explained many times before and it will be explained yet again.

If it is said that the aggregates are the self, this would contradict the sutras that say that the aggregates are not a self, in that the observed object of the view of the transitory collection is the conventionally existent self. To summarize, in this context there are two sutra citations:

1. "they perfectly and subsequently view just the five appropriated aggregates" and
2. "Forms and feelings are not the self, discriminations are also not, compositional factors are also not, consciousnesses are also not."

There is no harm to the citation from the latter sutra because the observed object of the view of the transitory collection is posited to be the mere I that is imputed in dependence on any of the five aggregates. "Because the harm to the contrary meaning was explained many times before and it will be explained yet again" means that the harm to the contrary meaning – that is, that forms are the self, feelings are the self, and so forth – has already been explained and will be explained again.

Lama Tsongkhapa's *Illumination* (Tibetan text page 360) says:

> The previous sutra does not present the aggregates to be the observed object of the view of the transitory collection. Therefore, stating "views the aggregates" clarifies that the self that is imputed in dependence on the aggregates is indicated to be the observed object because it refutes that
> - what is a different entity from the aggregates and
> - the aggregates themselves
>
> are the observed objects of the conception of a self.

That which is a different entity from the aggregates and the aggregates themselves are refuted to be the observed object of the conception of a self.

Lama Tsongkhapa's *Illumination* (Tibetan text page 360) says:

> In any sutra in which forms and so forth are also refuted to be the self, the self that is imputed in dependence – the observed object of the view of the transitory collection – should be understood to refute an inherently existent possessor of the appropriations which are the aggregates that appropriates the aggregates because the teaching that forms and so forth are not the self is in the context of thinking about suchness.

Thursday afternoon, 8 February 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 360) says:

> Hence, it is appropriate to separate from the attachment that also adheres to forms and so forth as truly existent stating "When an inherently existent appropriator is not observed, also the appropriated objects of that self, the aggregates, do not exist inherently."

Since the appropriator, the self, does not exist inherently, also the objects to be appropriated, the aggregates, do not exist inherently. Therefore, "it is appropriate to separate from the attachment that also adheres to forms and so forth as truly existent."

Lama Tsongkhapa's *Illumination* (Tibetan text page 360-1) says:

> Having excellently compared the sutra sets to one another, (1) what is a different entity from the aggregates and (2) the aggregates are refuted to be the observed object of the conception of a self. Then, the uncommon way of positing the selflessness of persons, which is a self imputed in dependence on the aggregates that is merely posited by the force of a nominality which is a name – the intention of the sutras which did not[144] clearly emerge in spite of the scholars of our own upper and lower schools exerting themselves well in the many commentaries on the sutras – is extracted by means of unmistaken scriptural authority and reasonings. In dependence on that, also other phenomena are clearly presented as without a self of phenomena which is not a different way of positing that. Then, one should strive to understand well the uncommon assertions of the lord of the wise that nakedly reveal the sources of the extremely subtle intention of the Buddha Bhagavan.

When one investigates the sutras they are found to say that there is no self that is a different entity from the aggregates and that the aggregates are not the observed object of the conception of a self of persons. The uncommon way of positing the self of persons in the Prasangika Madhyamika system is to posit it as merely imputed in dependence on any of the aggregates. Thus, in this school there is no self existing from its own side as a different entity from the aggregates.

[144] The negative particle is missing in the Tibetan.

"The scholars of our own upper and lower schools exerting themselves well in many commentaries on the sutras" refers to the lower schools, the Vaibhashika and Sautrantika, and the upper schools, the Chittamatra and Svatantrika Madhyamika, who are unable extract the meaning of the sutras. On the other hand, the Prasangika Madhyamikas have an uncommon mode of positing the two selflessness which clearly reveals the subtle intention of the Buddha Bhagavan. The lower schools distinguish the two selflessnesses in terms of the object of negation, whereas the Prasangika Madhyamikas distinguish them in terms of the basis of negation and not in terms of the object of negation. Thus, they say that the person's emptiness of inherent existence is the selflessness of persons, whereas the aggregates' emptiness of inherent existence is the selflessness of phenomena.

Lama Tsongkhapa's *Illumination* (Tibetan text page 361) says:

3B1C-2B3E-2B2A-2D1B Even treated as being from the affirmative position, the aggregates are not indicated to be the self

Chandrakirti's autocommentary says:

> Furthermore, even though this [statement] indicated in the sutra sets is ascertained in the positive mode, it is not able to indicate the aggregates as just being the self.
>
> If asked: Why?
>
> Like this:
>
> *When expressing "The aggregates are the self," it is the*
> *Collection of aggregates, not the entity of the aggregates.* [6.134ab]
>
> For example, when expressing, "The trees are the forest," the collection of trees is the forest; the entity of tree is not because each tree would also follow as the forest. Similarly, the very collection of aggregates is the self.

Even if the sutra citation "Monks, any trainees in virtue or brahmins who perfectly and subsequently view thinking 'Self,' they perfectly and subsequently view just the five appropriated aggregates" is explained from the point of view of the affirmative position, it does not indicate each of the five aggregates to be the self.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B1A-6C5A-2B1B-4A2 Even put from the point of view of establishment, it does not show that the aggregates are the self

> *When it says, "The aggregates are the self," it is*
> *The group of aggregates, not the aggregates' entities.* [6.134ab]

"Although this sutra, 'The shramanas or brahmans who…', teaches that the aggregates are the self, it is not teaching that the entities of the aggregates individually are the self, for when it says 'The aggregates are the self,' it is teaching that the collection of aggregates is the self. For example, when we say 'The trees are the forest,' the collection of trees is the forest, but we do not say each tree is the forest." – thus the establisher states an example to his opponent.

The sutra that says "views just the five appropriated aggregates" indicates that the collection of the five aggregates is the self, not that each of the aggregates is the self. The analogy set out here is that of a collection of trees which is called a forest, whereas each individual tree is not called a forest. This is

an example that is established for the opponents. "Similarly, the very collection of aggregates is the self."

In short, the collection of aggregates is indicated to be the self, not the individual aggregates. However, if it is said that the collection of aggregates is the self, our own system responds that it is also not that the collection of aggregates are the self.

Chandrakirti's autocommentary says:

> Therefore, because the collection of aggregates is just not anything:
>
> *Not protector, nor subduer, nor witness –*
> *Because that is non-existent, that is not the collection.* [6.134cd]
>
> When, it is taught as the very protector and the very witness in that which the Bhagavan said [in sutra]:
>
> Oneself is one's own protector,
> Oneself is also one's own enemy,
> Oneself is one's own witness
> To the good and bad done.
>
> and when taught as the subduer in the statement [in the *Collection of Teachings*, 23.14cd]:
>
> By well subduing oneself,
> The wise will attain high status.
>
> – the mere collection, not being substantially existent, is not even appropriate as the very protector, subduer, or witness. Therefore, the collection is not the self.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *It's not the Protector, the Subduer, nor the Witness,*
> *As it doesn't exist, so the group cannot be it.* [6.134cd]

If you say, "I maintain that the group of aggregates is the self," then just the group of aggregates is not the self, for it is not the Protector, and is also not the Subduer nor the Witness, since it does not exist substantially.

Neither the collection of aggregates nor the individual aggregates are indicated to be the self. In order to prove that the collection is not the self, the Prasangika Madhyamikas cite the sutra that says:

> Oneself is one's own protector,
> Oneself is also one's own enemy,
> Oneself is one's own witness
> To the good and bad done.

On this basis they say that the collection of the aggregates is not the self because the collection of aggregates is not one's own protector, one's own enemy, and one's own witness. Who is one's own protector, one's own enemy, and one's own witness? It is the self.

Sutra also says: "By well subduing oneself, the wise will attain high status." This means that by subduing the self well, one will be reborn as a human being and so forth.

Chandrakirti concludes saying: "The mere collection, not being substantially existent, is not even appropriate as the very protector, subduer, or witness. Therefore, the collection is not the self." This subject is often discussed in the teachings on the stages of the path (lam-rim).

Lama Tsongkhapa's *Illumination* (Tibetan text page 361) says:

> Although the statement "views just the five appropriated aggregates" presents the aggregates to be the self from the point of view of the affirmative position, it does not present each aggregate as the self. Why is that?
>
> *When it is stated "The aggregates are the self," it is the collection of*
> *The aggregates; it is not the entity of the aggregates.* [6.134ab]
>
> It is like this. *When it is stated "The aggregates are the self," the collection of the aggregates* are expressed as the self; *the entity*, that is, each, *of the aggregates is not* presented as the self. For example, when it is stated that "The trees are the forest" it is the collection of trees that is the forest; it is not that each entity of a tree is said to be a forest due to the individual trees becoming a forest. This expresses an example that is established for others.

The sutra that says "The aggregates are the self" says that the collection of the aggregates is the self, not that the individual aggregates are the self. In order to explain this the analogy of a forest is set out in that, similarly, the collection of the trees is a forest, not the individual trees. Therefore, even if the sutra citation "views just the five appropriated aggregates" is taken from the affirmative position, the Buddha meant that the collection of the aggregates is the self, not that the individual aggregates are the self.

Lama Tsongkhapa's *Illumination* (Tibetan text page 361) says:

> OBJECTION: The collection is asserted to be the self.
> RESPONSE:
>
> *It is not a protector, neither is it a subduer nor a witness,*
> *Because it does not exist; thus, it is not the mere collection.* [6.134cd]
>
> In that case, the self was taught to be a protector, a subduer, and a witness, however, according to you, a single collection is *not a protector*, *neither is it a subduer nor a witness*, *because it*, a mere collection, *does not exist* substantially; *thus*, the self *is not the mere collection* of the aggregates. The way in which the self was taught to be a protector and so forth is in the sutra that says:
>
> Oneself is one's own protector;
> Oneself is also one's own enemy;
> Oneself is one's own witness
> To the good and bad created.
>
> This [verse] teaches it to be a protector and witness, whereas it [also] says:
>
> By subduing oneself well,
> The wise attain high status.

Someone says that the collection of the aggregates is asserted to be the self because the Buddha said so. Our own system says that too is not correct and to prove this quotes the sutra that says: "Oneself is one's own protector..." This verse shows that one's own protector and so forth is the self, not the collection of the aggregates. Our system then quotes another sutra that says "By subduing oneself well, the wise attain high status," which means that through subduing one's mental continuum, in the future one will take a rebirth of high status. One text says: "Is the mind that is hard and unsubdued not as hard as a diamond?" A diamond is known to for the fact that it cannot be broken by other objects. Also, is the unsubdued mind not like a crazed elephant? Just as a crazed elephant is difficult to control, so too is an unsubdued mind.

"Oneself is one's own protector" means that one has to protect oneself, no one else can do so. How can we protect ourselves? We can do so by taking care of our body and mind through protecting our physical health and protecting our mind from disturbing thoughts. For example, we may drink alcohol or take other substances thinking that they will make us happy, but instead they lead to suffering. In this way oneself becomes one's own enemy. We should also be our own witness in the sense of being honest with ourselves and not deceiving ourselves.

Lama Tsongkhapa's *Illumination* (Tibetan text page 361) says:

3B1C-2B3E-2B2A-2D1C Dispelling others' arguments regarding these

Chandrakirti's autocommentary says:

> In case it is considered: Because the collection does not exist as a different [entity] from the collection-possessor, the resultant [protector, subduer, etc.] will be realized as being the collection-possessor's. Therefore, it will be appropriate as the very protector, subduer, and the very witness.
>
> That is also not so, because the fault in this was already explained.

The opponents say that the collection of the aggregates is the protector, subduer, and witness because it brings the result of protecting, subduing, and witnessing. Therefore, the collection of the aggregates is the self. Our own system says that this is not the case because the fault in this was already explained just above.

Chandrakirti's autocommentary says:

> Furthermore:
>
> *Then, the collection of its components abiding [in one place]*[145]
> *Would be the chariot itself. The chariot and the self are similar.* [6.135ab]
>
> It is also taught in sutra:[146]
>
> O mind of mara saying "Self," you are a [wrong] view.
> This aggregate of compositional factors is empty. In it, there is no sentient being.
>
> Just as the chariot is expressed in dependence on the collection of components,
> Likewise, conventionally, is "sentient being" in dependence on the aggregates.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B1A-6C5A-2B1B-4A3 Rejecting an opponent's argument against this

You may say, "It is not contrary to the Protector, Subduer, and Witness because the action of protecting is a member of the group. This pervades because the group and the group members are one entity." But this too is inadmissible, for if the word "self" sometimes applies to the group of aggregates and sometimes applies to members of the group, it is illogical.

> *Then, its parts remaining collected would be*
> *The cart itself. The cart and the self are similar.* [6.135ab]

[145] See LTK, p. 379. Compare with verse 6.152ab.

[146] See Poisson, p. 303 for the Sanskrit of a possible source.

Furthermore, you should understand that it follows that when you maintain that the collection of aggregates is the self, the collection of the parts of that cart lying together will be the cart itself, because the cart and the self are both alike in being posited or not upon the collections of their parts; and also because it is taught in a sutra,

> "Just as, dependent on collections
> Of their parts, one speaks of 'carts',
> Likewise, dependent on the aggregates,
> Conventionally, one says 'sentient being'."

Sutra says: "O mind of mara saying 'Self' you are a [wrong] view." This means that always thinking or saying "I, I, I," is the mind of mara. "This aggregate of compositional factors is empty" means that it is empty of inherent existence. Sutra says: "In it, there is no sentient being."

Just as a chariot is imputed in dependence on the collection of its parts, so too is the self imputed in dependence on the collection of the five aggregates. The collection of the five aggregates is not a self, just as the components of a chariot are not a chariot. For example, when one dismantles a chariot and spreads out its parts, the components of the chariot remain there, however, with regard to them one would not say "There is a chariot" because the components that are lying there do not perform the function of a chariot. Another example is in regard to a dismantled watch, the parts of which are laid out on a table, no one would say "There is a watch on the table," even though all its parts are on the table. This is because the components of the watch do not function as a watch.

Lama Tsongkhapa's *Illumination* (Tibetan text page 361-2) says:

> OBJECTION: Because the collection does not exist as a different entity from the possessor of the collection, the result – protecting and so forth – is realized to be of the possessor of the collection, therefore, [the collection] is suitable to be a protector, subduer, and witness.
> RESPONSE: The term 'self' is sometimes taken to be the collection of aggregates, whereas sometimes it is affixed to the possessor of the collection, the aggregates. In regard to this, the faults were already explained above stating "The term 'self' should not be affixed to them individually as one likes."

Neither each of the five aggregates nor the collection of the five aggregates is the self.

Lama Tsongkhapa's *Illumination* (Tibetan text page 362) says:

> There are also other faults:
> *Then, the collection of components of that abiding*
> *Would be the chariot itself. The chariot and the self are similar.* [6.135ab]
>
> *When* the collection of aggregates is asserted to be the self, there is the fault that *the collection of the components of* a chariot *abiding* in one place *would be the chariot itself* because the two, *the chariot and the self, are similar* in being posited and not being posited in regard to the collection of their components. They are also shown to be similar in sutra stating:
>
> Mind of mara called "the self,"
> You are a view.
> The compositional factors aggregate is empty;
> In regard to it, the sentient being does not exist.
>
> Just as in dependence on a collection of components
> 'Chariot' is expressed;
> Likewise, in dependence on the aggregates
> Conventionally one says "sentient being."

Friday morning, 9 February 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 362) says:

3B1C-2B3E-2B2A-2D2 Explaining, in dependence on other sutras, that the mere collection of the aggregates is not the self

Chandrakirti's autocommentary says:

If like that:

It is taught in sutra to be in dependence on the aggregates.
Therefore, the mere assembly of aggregates is not the self. [6.135cd]

Since sutra says that the self is imputed in dependence on the aggregates, the self is not the collection or the assembly of the aggregates.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says::

3B1A-6C5A-2B1B-4B Showing, relying on other sutras, that the self is not the mere group of aggregates

A sutra says, "It depends on the aggregates,"
So the mere assembly of aggregates isn't the self. [6.135cd]

The mere assembly of five aggregates is not the self because it is taught in a sutra that one imputes "sentient being" dependent on a group of aggregates.

The self is imputed in dependence on the aggregates, due to which the collection or group of aggregates is not the self.

Chandrakirti's autocommentary says:

That which is imputed in dependence on something is not the mere collection of components which appropriate the imputation because it is dependently imputed, like that arisen from the elements (i.e., the secondary elements).

That arisen from the elements (the secondary elements or the evolutes) are blue and so forth. These arise from the elements, but are not the elements. In short, blue and so forth are not earth, water, fire, wind, or space.

Chandrakirti's autocommentary says:

Just as, having taken the elements as a cause, that arisen from the elements – blue and so forth and the eye and so forth – are indeed imputed; the two are not just the mere assembly of the elements. Similarly, having taken the aggregates as a cause, the self also has the nature of imputation – it is not suitable to be the mere collection of the aggregates.

Blue and so forth and the eye and so forth are not an assembly of the elements. The aggregates are the causes for imputing the self, but they themselves are not the self. Here the word "cause" is to be understood in terms of it being a basis of imputation, not in terms of it being an actual cause.

Chandrakirti's autocommentary says:

> If said: That is uncertain due to vases and so forth.
>
> That is also not so, because even vases and so forth are not established as being just the mere collection of form and so forth and because of similar dispute and investigation.

Vases and so forth are merely imputed on the elements, but the elements of the vase and so forth are not the vase. An assembly of elements cannot be a vase because there are assemblies of elements that are not vases. Thus, the mere assembly of the eight particles is not a vase, that is, when the term 'vase' is imputed on the basis of the eight particles that assembly of eight particles is not necessarily a vase. Likewise, when the self is imputed on the aggregates, that collection of aggregates is not necessarily a self. Thus, while the basis of imputation of the self is the assembly of the aggregates, that basis is not the self.

"Because of similar dispute and investigation" means that this subject can be similarly disputed and investigated in regard to many other things besides vases and so forth.

Lama Tsongkhapa's *Illumination* (Tibetan text page 362) says:

> *In sutra it is taught that it depends on the aggregates,*
> *Therefore, the mere assembly is not the self.* [6.135cd]
>
> As explained above, *in sutra it is taught* "The sentient being is imputed *in dependence on* the collection of *the aggregates*." *Therefore, the mere assembly*, that is, the collection, of aggregates *is not the self*. This is clarified by the speech that proves just this [as follows].
>
> Whatever is imputed in dependence on something is not the mere collection of components that appropriate that imputation because it is imputed in dependence [on that], like the evolutes. Just as, through taking the elements as a cause, the evolutes – such as blue and so forth and the eye and so forth – are indeed imputed, but the two are not the mere assembly of elements; likewise, even though the self has the nature of being imputed through taking the aggregates as a cause, it is not suitable to be the mere collection of aggregates.

In sutra the Buddha said that the self is imputed in dependence on the collection of the aggregates, yet the collection of the aggregates is not the self. Similarly, the evolutes are imputed on the elements, but the evolutes are not the elements. In other words, blue and so forth and the eye sense power and so forth arise from the elements, but blue and so forth and the eye sense power and so forth are not the elements because a mere assembly of elements is not pervaded by being blue and so forth nor the eye sense power and so forth. What is the eye sense power composed of? It is an aggregation of the eight types of particles. If it is an aggregation of the eight types of particles is it pervaded by being matter? Do the Prasangika Madhyamikas assert matter as one of the three types of functioning things? They do. Are form and matter synonymous according to the Prasangika Madhyamikas? If someone says that they are, then it can be asked: "Is the eye sense power of a buddha an assembly of the eight particles? Does the impure exist in a pure realm?" The various tenet systems would answer these questions differently; for example, the Chittamatrins do not accept matter which is an aggregation of the eight particles. Similarly, the Yogachara Svatantrika Madhyamikas do not assert matter because they say that there is nothing that is an aggregation of external particles. However, if they are asked whether form exists, they would accept that it does, therefore, the Chittamatrins and Yogachara Svatantrika Madhyamikas differentiate form and matter. *Collected Topics*, which is according to the Sautrantika system, presents matter, consciousness, and non-associated compositional factors, whereas others posit form, consciousness, and non-associated compositional factors. Thus, according to Sautrantikas form and matter are synonymous.

Lama Tsongkhapa's *Illumination* (Tibetan text page 362-3) says:

> OBJECTION: When sutra teaches "In dependence on the collection of aggregates," the collection is not suitable to be the person. However, since [this sutra] does not state more than "Likewise, in dependence on the aggregates," it is not the source for positing the collection of aggregates to be the basis of the person.
> RESPONSE: It is not so. In the context of the example, stating "Just as [in dependence on] a collection of components" explains it to be a chariot in dependence on the collection of its components. Therefore, when setting out the chariot and the meaning of the example, although 'collection' is not explicitly expressed in the context of stating "Likewise, in dependence on the aggregates," it is very clear that this must emerge. Therefore, this is the way in which the lord of the wise brings forth the ability to interpret the words of the sutra, thereby, producing delight in the mind when finely understood.

The Prasangika Madhyamikas say that the self is imputed in dependence on the collection of the aggregates, but that the collection of aggregates is not the self. Someone objects to this saying that there is no scriptural source for saying this since the sutra only states "Likewise, in dependence on the aggregates" and does not say the self is imputed in dependence on *the collection* of the aggregates. The Prasangika Madhyamikas say that it is not so because this is stated through the analogy of the chariot. Lama Tsongkhapa says that when the words of the sutra are interpreted properly, delight is produced in the mind.

Lama Tsongkhapa's *Illumination* (Tibetan text page 363) says:

> OBJECTION: This is not definite due to pots and so forth.
> RESPONSE: That too is not so
> - because pots and so forth are also not established to be the mere collection of form and so forth and
> - because here there is also the same dispute and investigation as in the case of the self.
>
> Hence, the two are presented as being similar in that just as the self is not suitable to be posited as the collection of its components, so too are pots and so forth not suitable to be posited as the mere collection of their components.

The mere collection of the eight particles, form and so forth, is not the pot. The eight particles refer to visual form particles, odor particles, taste particles, tangible object particles, earth particles, water particles, fire particles, and wind particles. A pot arises from the collection of these eight particles, yet a collection of these eight particles is not necessarily a pot. Thus, the self and a pot are similar in the sense that just as the self is not suitable to be posited as the collection of its components, so too is a pot not suitable to be posited as the collection of its components. Thus, the collection of components is not the pot and the collection of aggregates is not the self, yet the pot is imputed in dependence on the collection of components and the self is imputed in dependence on the collection of aggregates.

Lama Tsongkhapa's *Illumination* (Tibetan text page 363) says:

> 3B1C-2B3E-2B2A-2D3 Refuting that the structure which is the shape of the mere collection of aggregates is the self

Chandrakirti's autocommentary says:

> In case it is considered: The mere collection of the wheel and so forth is not the chariot.
>
> If asked: What is?

When the wheels and so forth come to have a special shape, then it will obtain the name chariot. Similarly, the mere structure of the form and so forth is the self.

That is also not so

If asked: Why?

If shape is said, because that exists with the possessor of form,
For you, just those would be the self;
The collection of mind and so forth would not be the very self, [6.136abc]

If asked: Why?

Since those do not have shape. [6.136d]

It is thought that "They are not a possessor of form."

Someone says that the collection of aggregates is not the self and, similarly, the components of a chariot, the wheels and so forth, are not the chariot, but the shape of the chariot is the chariot. They say: "When the wheels and so forth come to have a special shape, then it will obtain the name chariot. Similarly, the mere structure of the form and so forth is the self." In other words, this person says that the arrangement is not the chariot, but its shape is the chariot. To this, the Prasangika Madhyamikas respond that the shape is also not the self and to prove this set out the analogy of a chariot. They say that when the components of a chariot are not assembled they are not called a chariot, and that only when they are assembled together do they come to be called "chariot."

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says::

3B1A-6C5A-2B1B-4C The self is not the shape or structure of the group of aggregates

If it's the shape, then that's in what has form,
So according to you, only they would be the self,
While the group of mind and so on would not be the self,
Because in these there is not any shape. [6.136]

If you say, "The shape or structure of the group of aggregates is the self," then it follows that you are saying that, according to you, only those things which have form are the self, but the collection of mind and so on is not the self because shape exists in what has form, and in mind and so on there is no shape.

Lama Tsongkhapa's *Illumination* (Tibetan text page 363) says:

OBJECTION: The mere collection of the wheels and so forth not being the chariot, well then, what is? If the collection of the wheels and so forth become what possesses the specific shape of a chariot, then it acquires the name 'chariot.' Similarly, the mere structure which is the shape of the aggregates of form and so forth in the continuum of a sentient being is the self.

RESPONSE:

If "It is shape" is said, because it exists in that having form,
For you, they would be called "the self," whereas
The collection of minds and so forth would not be the very self
Because they do not have shape. [6.136]

Because shape *exists in* just *that having form*, when distinguished *for you* – that is, according to you – just *those* having form *would be called "the self*," *whereas the collection of minds and so forth*, that is, the mental factors, *would not be* posited as *the very self because they*, minds and mental factors, *do not have shape*, thinking "Because they do not have form."

In short, when the opponents say that the shape is the self the Prasangika Madhyamikas say that it is not so because shape exists only in that which has form, that is, that which is physical, due to which minds and mental factors do not have shape because they are not physical. The lower schools assert that the mind is the self, therefore, the mere collection of the minds and mental factors is the self. This can be debated: "Is there no self in the formless realm because there is no shape in the formless realm?"

In conclusion, the collection is not the self nor is the shape the self.

QUESTIONS AND ANSWERS

Student: In the presentation of the three natures by Prasangika, what is an example of an *existent* imputational factor?
Geshe Jampa Gyatso: Space.
Student: Why?
Geshe Jampa Gyatso: It is both an existent and an imputational factor!
Student: Is pot an existent imputational factor?
Geshe Jampa Gyatso: It is not an imputational factor, it is an other-powered phenomenon. The three natures are nominally asserted by the Prasangika Madhyamikas, but their way of defining them is different. They say that an other-powered phenomenon is: that which is produced by its own causes and conditions. A thoroughly established nature is an ultimate truth, that is, it is the final observed object of a path that purifies. Imputational factors are divided into the existent and non-existent due to which their definition becomes more complicated. There is no standard definition given in the texts, however, an imputational factor can be defined as: that which is merely superimposed by the conception apprehending it. This definition can however, be debated.
Student: If it is a superimposing consciousness is it not a wrong consciousness?
Geshe Jampa Gyatso: According to *Awarenesses and Knowers* it would be a wrong consciousness but... That is enough about this subject for now.

Student: What is the definition of an imputed existent?
Geshe Jampa Gyatso: That which is observed by a valid cognizer. For example, this table is an imputed existent. For the Prasangika Madhyamikas imputed existence means: imputed by a valid cognizer on a valid basis.

Student: What is the difference between the appearance of inherent existence and the meaning generality of inherent existence? Is the appearance of inherent existence permanent or impermanent?
Geshe Jampa Gyatso: The appearance of inherent existence and the meaning generality of inherent existence are different. For example, an ordinary being has the appearance of inherent existence but is not a meaning generality of inherent existence. Ordinary being, as the subject, is not a meaning generality of inherent existence but has an appearance of inherent existence.

The eye consciousness has the appearance of inherent existence, is that appearance permanent or impermanent? In general for the Prasangika Madhyamika the appearance of inherent existence is a knowledge obstruction and, therefore, a functioning thing because it obstructs the attainment of omniscience. However, this question is similar to asking: "Are objects of knowledge permanent or impermanent? In general, they are said to be permanent, but to this someone can say: "Pot, as the subject, is permanent because it is an object of knowledge. There is pervasion because objects of knowledge are permanent." However, there is no pervasion.

Student: Verse 6.106 says: "The statement 'Actions arise in dependence on confusion, they do not arise without ignorance' is certainly realized by only the unwise." To whom does 'unwise' refer?

Geshe Jampa Gyatso: It refers to us! Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

In the way the power of distorted sight makes someone perceive
Hair falling, two moons, peacock feathers, flies and so on, wrongly,
Like that, by the power of the fault of delusion, the unwise
Perceive with their intelligence the various conditioned things. [6.105]

You should understand that by the power of the fault of delusion[147], the unskillful perceive the various conditioned things with their understanding; for because the world has thick delusion like a layer of cloud, objects therefore appear wrongly. It is just like the way the power of distorted sight makes someone wrongly perceive falling hair, two moons, peacock feathers, flies and so on.

"Karma arises dependent on delusion. Without delusion
It doesn't arise." Certainly only the unskilled have to know this.
Having completely dispelled dense darkness with the sun of good intelligence,
Those who are skillful understand voidness thoroughly, and become free. [6.106]

It is certain that only the unskillful have to understand or be concerned with [the teaching], "If karma arises dependent on delusion[148] [or ignorance[149]], then, without delusion, that karma will not arise." For the skillful, who have completely eliminated the dense darkness [of their ignorance] with the sun of good intelligence that realizes absolute reality, thoroughly understand voidness and become liberated.

We create virtuous and non-virtuous actions out of ignorance. This is due to being unwise or unskillful in the sense of not understanding emptiness. Those who are wise – that is, those who directly realize emptiness – no longer create non-virtuous actions and actions to be reborn in cyclic existence. It can also be said that those who continue to circle in cyclic existence due to actions and afflictions are the unwise. Why do they remain in cyclic existence? It is due to their dense ignorance or confusion, due to which they create non-virtuous actions and continue to circle in cyclic existence.

Student: The definition of consciousness is "that which is clear and knowing." Is 'knowing' the only possible function of a consciousness, or are there also other functions? If it is the only one, how can we explain other functions that the mental consciousness seems to perform, e.g., imputing, retrieving memories, creating mental objects (such as dreams)?
Geshe Jampa Gyatso: The definition of consciousness as "clear and knowing" indicates the entity of consciousness, just as the definition of fire as "that which is hot and burning" indicates the entity of fire. Is burning the only function of fire? It is not, it also functions to boil tea, cook food, and so forth. Likewise, when consciousness is defined as clear and knowing this is its entity, whereas it has many functions such as imputing, thinking, creating, inventing, and so forth.

Lama Tsongkhapa's *Illumination* (Tibetan text page 364) says:

3B1C-2B3E-2B2A-2D4 Presenting other harm to asserting the mere collection of the aggregates to be the self

Chandrakirti's autocommentary says:

> Furthermore:
>
> *The taker itself and the appropriated are not reasonable as one thing.* [6.137a]
>
> If asked: Why?
>
> *If like that, the acted upon and the agent would be identical.* [6.137b]
>
> Here, since making appropriation, it is the taker – the agent; [since] to be appropriated it is the appropriated – the acted upon. Here, the appropriator is the self; the appropriated are the five aggregates.
>
> There, if a mere collection of form and so forth were the self, then agent and acted upon would be one. This is also not asserted because the elements and forms that took them as causes, and a vase and the potter, would also follow as identical.

'The appropriator' is the self, whereas 'the appropriated' are the five aggregates. It is not feasible for these two to be one. If the self, the appropriator, and the aggregates, the appropriated, were one, it would follow that agent and acted upon are one. This is because both the appropriator and the appropriated would be the self. Thus, the Prasangika Madhyamikas say that the appropriator and the appropriated cannot be one.

Other faults are that it would also follow that the elements and the evolutes would be one, a pot and the potter would be one, and so forth. Thus, it would follow that the elements which act as causes – earth, water, fire, and wind – and their results, the evolutes that are what arises from them – form, sounds, and so forth – would be one, likewise, the clay and a clay pot would be one.

Chandrakirti's autocommentary says:

> As taught [in the *Treatise on the Middle Way*, 10.1ab]:
>
> If that which is fuel is the fire,
> Agent and acted upon would be one.
>
> and [in 10.15]:
>
> By fire and fuel, all stages of
> The self and the appropriated,
> Together with vase, woolen cloth, etc.,
> Without exception, are completely explained.
>
> Here, just as fire and fuel are not asserted as identical, similarly, it is intended to not assert the self and the appropriated either.

There is the fault of the absurd consequence that if fuel and fire were one, agent and acted upon would be one. What is the agent in this case? What is the acted upon? Fire is the agent because it functions to burn, whereas the fuel is the object to be burned, that acted upon. If burner and the object to be burnt were one, it would follow that agent and acted upon would be one.

Nagarjuna says that the explanation of fire and fuel should also be applied to vases, woolen clothes, and so forth. Just as fire and fuel are not asserted to be one, so too the self and the appropriated should not be asserted to be one.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B1A-6C5A-2B1B-4D Another refutation of the hypothesis that the self is the mere group of aggregates

The grasper itself and the grasped can't be one thing.
If they were, then object and agent would be oneness. [6.137ab]

You should understand that it is impossible that that self, the appropriator, should be a single thing with its own appropriation, the aggregates, for if the self and the aggregates were one like that, the object and agent would be one.

Chandrakirti's autocommentary says:

In case it is thought: Whatever is the very agent – the appropriator – is just not existing at all. It is limited to a mere assembly of the appropriated.

Someone raises the above objection.

Chandrakirti's autocommentary says:

As that also is just unreasonable, it is explained:

If it is thought: "The agent does not exist, that acted upon does,"
It is not so, since without the agent, that acted upon does not exist. [6.137cd]

It is not like that. If the agent is not asserted, that acted upon without cause is not to be asserted either.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

If you think there's no agent, but the object exists,
Not so, for without the agent there's no object. [6.137cd]

If you think that, although the self, the agent, does not exist, the mere assembly of the aggregates, acting as the object, exists inherently, that is also inadmissible, because without the agent, the object does not exist.

The Prasangika Madhyamikas say that if you assert that the agent does not exist, you should not assert the acted upon to exist.

Chandrakirti's autocommentary says:

It is also taught in the *Treatise* [*on the Middle Way*, 8.13]:

Similarly should appropriation be known,
Because of excluding acted upon and agent.
The remaining things should be known by
The agent and that acted upon.

Understanding that the agent and the acted upon are negated to exist inherently, one should also understand that the appropriator and appropriated are also negated to exist inherently. This understanding is to be applied similarly to all remaining things; for example, producer and product are also negated to exist inherently. Likewise, the same is true of the goer and the going; the watcher of TV and the show on TV; the listener and the object of listening, such as guitar music, or the object acted upon, the guitar; the smeller and the perfume; the tongue that tastes and the taste; the body consciousness and a tangible object such as something soft, and so forth. Similarly, one who studies to gain qualities and the qualities to be gained are also negated to exist inherently. Also the meditator and the object of meditation, such as love or compassion, are negated to exist inherently. In this way, the refutation of inherent existence can be applied similarly to all remaining things.

Chandrakirti's autocommentary says:

> Here, having given the *lut* affix to a thing, since appropriated it is called "the appropriated." Also, since things do not arise without an establisher, its establisher – that to be appropriated and the appropriator – are posited as appropriation. The term 'appropriation,' having given the *lut* affix to the acted upon saying "*krit* and *lut* are mostly," just expresses the acted upon to be the appropriated.

In the context of how the various Sanskrit vowels (one long and one short) are added to a word, a single thing can be indicated to be two things. The *lut* affix refers to the pair of Sanskrit vowels *li* and *lii*. In Sanskrit there are three particles which can, for example, be added to the word 'being' (*parusha*) to indicate a superior being, middling, being, or inferior being, as well as another eight particles. In addition, there are twenty-two affixes (literally, conditions). When the *lut* affix is added to a thing, that word comes to refer to both the appropriator and the appropriated. For example, Nanni is one person but is both father and son because in relation to his father he is a son and in relation to his children he is a father. This affix indicates that Nanni is both father and son, and, similarly, it indicates one thing to be both appropriator and appropriated. Likewise, it can indicate one thing to be both producer and product; for example, fire is a producer because it produces smoke and it is also a product because it is produced from fuel. Thus, by adding this affix, one thing can be indicated to be two things.

The *krit* affix refers to the pair of Sanskrit vowels *ri* and *rii*.

Chandrakirti's autocommentary says:

> Therefore, just as one will impute the acted upon in dependence on the agent, also the agent in dependence on the acted upon, similarly, one will impute appropriator in dependence on the appropriated, the appropriated in dependence on the agent itself.
>
> It is also taught [in the *Treatise on the Middle Way*, 27.8]:
>
> Thus, it is not other than the appropriated,
> Nor is it the appropriated itself.
> The self is not without the appropriated;
> It is also not ascertained as just non-existent.
>
> Therefore, it should be thus understood that "If the agent does not exist, the acted upon also does not exist."

In brief, if the appropriator does not exist, the appropriated does not exist, and, similarly, if the appropriated does not exist, the appropriator does not exist. Thus, "if the agent does not exist, the

acted upon also does not exist." This is to be understood in the sense of existing inherently, however, it can also be asserted in the sense of existing conventionally.

Chandrakirti's autocommentary says:

> Also, from that [*Sutra of Ultimate Emptiness*][150] in which it is expressed:
>
> The agent is not observed, yet the acted upon exists, maturation also exists.
>
> – inherently existing agent should be understood to be refuted. It should not be understood that "that which is to be dependently imputed – what has become the limb of convention – is also refuted."

Although the agent is not observed to be inherently existent, maturation still exists conventionally. "The agent is not observed" does not mean that the agent does not exist conventionally; rather, it means that the agent exists conventionally but not ultimately. How is it known that the acted upon exists? This is deduced from the following sutra citation.

Chandrakirti's autocommentary says:

> Also, as was extensively taught [in the *Sutra on the Ten Grounds*]:
>
> This person who subsequently follows ignorance, strongly forms the merit which is to be strongly formed.

This sutra explains the twelve links. Due to ignorance, one creates actions that are meritorious, demeritorious, and immovable, which are deposited on the consciousness, the third link. From this comes a maturation or fruitional result, this being name and form and so forth.

In short, there are no inherently existent agents and objects acted upon. However, if there were it would follow that the agent and the acted upon would be one, whereby, agent and acted upon would not be admissible. However, agent and acted upon do exist conventionally in mutual dependence. Therefore, there is an accumulator of actions and there are actions accumulated, due to which there is the fruition or maturation of actions.

Tuesday morning, 13 February 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 364) says:

> There are also other faults:
>
> *Oneself, the appropriator, and the appropriated are not suitable to be one thing.*
> *If that were the case, that acted upon and the agent would be oneness.* [6.137ab]
>
> Hence, since acting to appropriate, *oneself* is *the appropriator*, that is, the self is the agent; and, since they are that which is appropriated, the five aggregates are *the appropriated*, that is, that acted upon. These two *not being suitable to be one thing*, the mere collection is not suitable to be posited as the self. *If it were the case* that the mere collection of the aggregates of form and so forth were the self, *that acted upon and the agent would be one*. However, this is also not asserted because the two, an element and the form that is an evolute, as well as a pot and the potter, would be oneness.

[150] Identified by LTK, p. 383.

The lower schools assert that either one of the aggregates is the self or that the collection of the aggregates is the self. The Prasangika Madhyamikas say that if this were the case it would follow that the appropriator and the appropriated would be one. However, the self, which is the appropriator, and the aggregates, which are the appropriated, cannot be one thing. For this reason the mere collection of the aggregates cannot be posited as the self. Likewise, if the aggregate of form and so forth were the self, it would follow that the agent and that acted upon would be one. The Prasangika Madhyamikas say that this is not correct because an element and the form that is an evolute of it are not one, and a pot and the potter are not one. Therefore, agent and acted upon do not exist inherently.

Lama Tsongkhapa's *Illumination* (Tibetan text page 364) says:

> [Nagarjuna's] *Fundamental Wisdom* (v. 10.1ab) also says:
>
> If fuel were fire,
> Agent and the acted upon would be one.
>
> And (v. 10.15):
>
> By fire and fuel, all stages of
> The self and the appropriated,
> Along with pots, woolen clothes, and so forth,
> Without exception, are thoroughly explained.
>
> Here, just as fire and fuel are not asserted to be oneness, likewise, also the self and the appropriated should not be asserted [to be oneness] because these two are taught to be similar.

It would follow that the agent, the fire, and that acted upon, the fuel, would be one, yet they are not one. However, if fuel were fire, then agent and object of the action would be one. Similarly, this fault would also be applicable to other agents and objects such as the appropriator and the appropriated, pots, woolen clothes, and so forth. That is, pot and the clay or the potter would be one, woolen cloth and the thread or the weaver would be one. In short, such things are never one.

Lama Tsongkhapa's *Illumination* (Tibetan text page 364) says:

> *If it is thought "The agent does not exist, that acted upon exists,"*
> *It is not so because without an agent, the acted upon does not exist.* [6.137cd]
>
> *IF IT IS THOUGHT*: "That which is *the agent*, the appropriator of the collection of aggregates, *does not exist* at all. The agent that *exists* is the mere assembly of the aggregates – the appropriated, *that acted upon*."
> RESPONSE: That *is not* so because when *the agent does not exist*, *the acted upon*, which is without a cause, also *does not exist*.

This is quite clear.

Lama Tsongkhapa's *Illumination* (Tibetan text page 364) says:

> [Nagarjuna's] *Fundamental Wisdom* (v. 8.13) also says:
>
> Likewise, appropriation should be understood
> Because the acted upon and the agent are eliminated.
> By means of the agent and the acted upon
> The remaining things should be understood.

(Note that a previous translation (see transcript of week 33) of the same verse quoted earlier in the *Illumination* (Tibetan text page 333) said as follows and that there was some discussion as to the spelling in the Tibetan version as to whether the text should read 'eliminated' or 'clarified:

> Understand appropriation to be similar
> Because that acted upon and agent are clarified.[151]
> By means of that acted upon and the agent,
> The remaining things should be understood.)

Lama Tsongkhapa's *Illumination* (Tibetan text page 364-5) says:

> By means of the reasoning that refutes the acted upon and agent to exist inherently, also the appropriated and the appropriator should be understood to be refuted to exist inherently. Regarding "the remaining things," [Chandrakirti's] *Clear Words* says:
>
> > Things without exception – that which is produced and the producer, the going and the goer, that which is a view and that which views, the definition and the illustration, that which arises and that which causes arising, the components and the possessor of components, the qualities and the possessor of qualities, valid cognizers and objects of comprehension, and so forth – having been refuted to be established by way of their own entity are to be understood by those with wisdom as just being established in mutual dependence.
>
> The acted upon and the agent in general, and, in particular, the acted upon and the agents that are valid cognizers and objects of comprehension, are not established by way of their own entity and are asserted in a manner of establishment in dependence. In regard to establishment in dependence, it is necessary to understand that both exist for the uncommon mode of positing, which is mutual dependence.

Chandrakirti's *Clear Words* says that definition and illustration are mutually dependent. According to the Sautrantika system, as appears in *Collected Topics*, the <u>definition of definition</u> is: that which fulfills the three qualities of substantial existence. These three qualities are:

1. in general it is a definition,
2. it is established in terms of its own basis of illustration,
3. it is the definition of that which is its own definiendum and not of any other.

In *Collected Topics*, the <u>definition of illustration</u> is: that which is a basis of illustrating the definiendum in the context of the definition. It is also defined as: that which is a basis for ascertaining a definition prior to ascertaining the definiendum.

Thus, it is clear that definition and definiendum are posited in mutual dependence.

Clear Words also says: "The components and the possessor of components." What are they? In regard to a human being, the human being is the possessor of components or limbs, and the arms, legs, and so forth are the components or limbs.

In regard to "The qualities and the possessor of qualities," the possessor of qualities is the person and the qualities are knowledge and so forth. Qualities are of various types, for example, qualities of body, speech, and mind. All such qualities are possessed by the person, therefore, the person is called "the possessor of qualities."

Regarding "valid cognizers and objects of comprehension," it can be said that because there are two valid cognizers there are two objects of comprehension or because there are two objects of comprehension there are two valid cognizers. The two types of objects of comprehension are manifest phenomena and hidden phenomena. A manifest phenomenon is that which is realized by the force of

[151] Note that earlier, on page 333, the Tibetan text of the *Illumination* read *gsal*, clarified, whereas here on page 364 it reads *bsal*, eliminated.

one's own experience without depending on a reason, whereas a hidden phenomenon is that which can be realized only in dependence on a reason.

In short, all these pairs are refuted to be inherently existent because of being mutually dependent.

Lama Tsongkhapa's *Illumination* (Tibetan text page 365) says:

> In regard to stating "appropriation" (*nye bar len pa*) here [in *Fundamental Wisdom* (v. 8.13a)], when the *lut* affix is added to the grammatical term "*upatra*" with respect to a thing, due to it being appropriated it is called "the appropriated." However, since things also do not arise without their own establisher, both the appropriated and the appropriator (their respective establisher) are posited as "appropriation."
> QUESTION: Because the *lut* affix expresses that which is merely appropriated, how does it express the action of appropriating?
> RESPONSE: Since in the grammar text it says "mostly *krit* and *lut*,"[152] it is mostly like that. However, when the affix *lut* is given to an action it is not contradictory for it to also express the action of appropriating. [Nagarjuna's] *Fundamental Wisdom* (v. 27.8) also says:
>
> Thus, it is not other than the appropriated,
> Nor is it the appropriated itself.
> The self is not without the appropriated;
> It is also not ascertained to just not exist.
>
> This [verse] says that:
> - the self is not a different entity from the appropriated,
> - the appropriated are not the self,
> - it is also not that the self does not depend on apprehending the appropriated, and
> - it is not that the self also does not exist,
>
> therefore, also an action does not exist without an agent.

In brief, the agent, that acted upon, and the action are established in mutual dependence, whereby in the absence of one of them the others do not exist. For example, a person typing on a computer is the agent, the action is that of typing, and the object of the action is the computer. Another example is that of a dancer who is the agent, the action which is the movement of dancing, and the object of the action which is the place in which he or she is dancing. Therefore, without the place, for example, the dancer cannot dance. In the context of eating, the eater is the agent, the action is that of eating, and the object of the action is the food. For example, I am drinking tea now, in this case I am the agent, the drinker of the tea, the action is that of drinking tea, and the object of the action is the tea (the Tibetan word *las*, translated in other contexts as action or karma, in this case does not refer to the action but to the object of the action).

In brief, the discussion about the *lut* affix refers to the fact that Sanskrit grammar can indicate one single thing to be both appropriator and appropriated. For example, a human rebirth can be both an appropriator and what is appropriated in dependence on the particular context.

Lama Tsongkhapa's *Illumination* (Tibetan text page 366) says:

> The *Sutra of Ultimate Emptiness* also says:
>
> The agent is not observed, yet the acted upon exists, ripening also exists.

[152] Note that there is a mistake in the Tibetan text of the *Illumination* which reads *ta* instead of *lut*.

> The sutra that expresses this should be understood to refute an inherently existent agent; it should not be understood to state "What is imputed in dependence, that which is a component conventionally, is also refuted." It also extensively says:
>
> > The person who is subsequently linked to ignorance also strongly composes that which is strongly composed, merit.

"The agent is not observed" means that an inherently existent agent is not observed, it does not mean that a nominally existent agent is not observed. "Yet the acted upon exists, ripening also exists" means that the acted upon and ripening exist conventionally.

Lama Tsongkhapa's *Illumination* (Tibetan text page 366) says:

> Although [Vasubandhu's] *Suitable Explanations* indeed says "The above sutra does not conform with the proponents of entitilessness, but conforms with the way of the Chittamatrins," the way of positing the person in this supreme system [is as follows].
>
> An agent that is a different entity from the aggregates does not exist even in mere conventions. When asserting the acted upon and ripening conventionally, as is taught by the latter sutra it is necessary to definitely assert an agent of that acted upon, the person. Therefore, moreover, to posit [the agent] as the appropriator of [the aggregates], without positing it amongst what is appropriated, is the very best.

Someone says that the citation "The agent is not observed, yet the acted upon exists, ripening also exists" is acceptable for the Chittamatrins but not for the Prasangika Madhyamikas, but Lama Tsongkhapa says that this not the case.

"The above sutra" refers to the sutra citation: "The agent is not observed, yet the acted upon exists, ripening also exists." "The latter sutra" is that which says: "The person who is subsequently linked to ignorance also strongly composes that which is strongly composed, merit." All schools accept the person, the accumulator of actions. However, the Prasangika Madhyamikas say, in particular, that although the person exists it is not posited as findable among the aggregates. Thus, in this school in general when a phenomena is sought within its basis of imputation it is not found. They say that if it were found it would be inherently existent, whereas this is what is to be refuted. Someone can ask: "When someone loses a bicycle cannot it not be found?! However, this way of searching is different. Also when we look for the footprint of a dog can we find the dog? It can be found. However, this way of searching for something is not the same way in which the imputed object is sought within the basis of imputation, that is, analyzing whether or not it exists from its own side.

Tuesday afternoon, 13 February 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 366) says:

> 3B1C-2B3E-2B2A-2D5 The Subduer taught the self to be imputed in dependence on the six constituents and so forth

Chandrakirti's autocommentary says:

> Furthermore:
>
> *Because the Muni finely indicated the self*
> *In dependence on "Earth, water, fire, wind,*
> *Consciousness, and space" – the six elements and*
> *The eye and so forth – the six supports of contact and* [6.138]

Definitely taught it having finely apprehended the phenomena
Of mind and mental factors, therefore, it is not those and
That itself; it is not the mere collection itself.
Therefore, I-apprehending awareness does not [refer] to them. [6.139]

Gedun Drup's *Mirror of the Clarification of the Thought* (Tibetan text page 60), as translated by Martin Willson, says:

3B1A-6C5A-2B1B-4E The Sage taught that that self is a mere dependent imputation upon the six elements and so on

Since Buddha taught that that self is dependent on
The six elements, which are called earth and water, fire,
Air, consciousness, and space, and on the six
Bases of sense contact, the eye and so on; [6.138]

And certainly said it's supported on the mind
And mental factor dharmas, therefore, it's not
The same thing as these, nor the same as just the group;
Therefore the self-grasping mind is not on these. [6.139]

You should understand that it follows that the innate self-grasping mind is not based on the individual aggregates and the group, because that self is not identical with those individual aggregates and is not the same as just the group of aggregates; for the Sage taught that that self is dependent on the six elements called earth, water, fire, air, consciousness, and space, and the six bases of sense contact of the eye and so on, and said definitely it was supported on the mind and mental factor dharmas as the base of imputation.

Chandrakirti's autocommentary says:

It is taught in the *Sutra* [*of the Meeting of Father and Son*]:

> Great King, the being, this person, is the six elements, the six entrances of contact, and the eighteen proximate mental movements.[153]

There, the six elements are earth, water, fire, wind, consciousness, and space. The self is imputed in dependence on them.

The eye and so forth, the six supports of contact are from the entrance of assembly – contact – of the eye through the entrance of assembly – contact – of the mind. The self is imputed in dependence on them.

The eighteen proximate mental wanderings are the six proximate movements of the happy mind which refers to form, sound, smell, taste, tactility, and phenomena; similarly, the proximate movements of the unhappy mind, and similarly the proximate movements of equanimity. The self is imputed in dependence on them and having finely apprehended the phenomena of mind and mental factors.

Because it is taught:

> ... imputed as the self by way of those elements and so forth,

– therefore, *it is not those and that itself* – meaning, "not just not another." It is also not reasonable as just their mere collection.

[153] See Hopkins, pp. 627-628.

The Prasangika Madhyamikas say that the collection of the aggregates are not the self. On the other hand, if one accepts that the collection of the aggregates is the self there are faults. One fault is that the Buddha taught that the self is not the individual six elements – earth, water, fire, wind, space, and consciousness – nor is it the collection of the six elements. Similarly, the Buddha said that the self is not any of the six bases of contact, the eye constituent and so forth. They are called "the six bases of contact" in the context of the contact that occurs in dependence on the meeting of a sense power, consciousness, and object; for example, an eye sense power, an eye consciousness, and a visual form. In turn, the six bases of contact act as the basis for the three feelings – pleasant, unpleasant, and neutral – in relation to each of the six consciousnesses, for a total of eighteen feelings. All of these are not the self. Likewise, the phenomena that are minds and mental factors are not the self.

In short, none of these – the six elements, the six bases of contact, the eighteen mental movements, and minds and mental factors – are the self, nor is the collection of them the self. Because they are not the self, they are not the object of the conception of I. In other words, they are not the observed object of the conception of I because they are not the self. Is the observed object of the conception of I a different entity from the five aggregates? It is not. The six elements, six spheres, and so forth are not the observed object of the conception of I, yet there is no self that is the object of the conception of I which is a different entity from the six elements and so forth.

Nagarjuna's *Precious Garland* (J. Hopkins, *Buddhist Advice for Living and Liberation*) says:

> A person is not earth, not water,
> Not fire, not wind, not space,
> Not consciousness, and not all of them.
> What person is there other than these? [80]

In short, the self is merely imputed on the basis of the six elements.

Chandrakirti's autocommentary says:

> Because those phenomena which were explained are unsuitable as the very self, therefore, the I-apprehending awareness [referring] to those is unreasonable. When thus, the aggregates are not even the object of I-apprehension, differing from the aggregates does not exist either, therefore, the [referent] object itself of I-apprehension does not [inherently] exist. Hence, the yogi, through not referring to [inherently existent] self, thoroughly knows also mine as just not having essence and having excluded all formations, without appropriation, will pass beyond sorrow. Therefore, this complete analysis is very beautiful.

Lama Tsongkhapa's *Illumination* (Tibetan text page 366) says:

> There are also other faults in asserting the mere collection of aggregates and so forth to be the self.
> *Therefore, the Subduer finely presented the self*
> *In dependence on the six constituents stating*
> *"Earth, water, fire, wind, consciousness, space" and*
> *The six bases of contact, the eye and so forth, and* [6.138]
>
> *He taught it depends on closely apprehending phenomena,*
> *Minds and mental factors. Therefore, it is not them and*
> *It is not that itself; it is not the mere collection of them.*
> *Therefore, the mind conceiving "I" is not with regard to them.* [6.139]
>
> *For this* reason, *the Subduer*, in the *Sutra of the Meeting of Father and Son*, *finely presented the self*

- *in dependence on the six constituents stating* "The constituents of *earth, water, fire, wind*, the constituent of *consciousness*, the constituent of *space*, the cavities such as the cavities in the nose and so forth" and
- in dependence on *the six* spheres, the sphere *of contact* of *the eye and so forth*, that is, the sphere of contact of mentality, *and*

he definitely, that is, clearly, *taught* "They are imputed to be the self"

- in dependence on *closely apprehending phenomena – minds and* the *mental factors* that are other than those [minds] – as the bases of imputation.

Therefore, *the* self *is not the* single units of the earth constituent and so forth *and it is not that itself*, that is, each of those is not suitable as the self. However, even *the mere collection of them is not* posited as the self. *Therefore*, *the mind that conceives* thinking "*I,*" which has operated since beginningless time, *does not* observe the collection of those phenomena nor the single units.

The individual six elements, or six constituents, and the collection of them are not the self. Instead, the self is merely imputed upon them. Just as the self is imputed in dependence on the collection of the six elements, so too is it imputed in dependence on the six spheres – the eye sphere through the mental sphere – and on the eighteen mental movements. Since individually they are not the self and the collection of them is also not the self, they are not the object of the conception of I. What is the observed object of the conception of I that has operated since beginningless time? It is the mere I.

Lama Tsongkhapa's *Illumination* (Tibetan text page 367) says:

> The way this is taught in sutra is:
>
> > Great King, the being, the person, is the six constituents, the six spheres of contact, and the eighteen mental movements.
>
> Nagtsho's translation of this is the best:
>
> > ... the assembly of the six constituents, the six bases of contact, and the eighteen mental activities.
>
> With regard to this, the being and the person are synonyms. The three, "the assembly of the six constituents, the six bases, and the eighteen," are phenomena that are possessed, therefore, those phenomena are possessed phenomena. The person is the possessing basis that possesses any of them. [The possessed phenomena] are taught to be the bases of imputing the person in dependence on any of them.

This is very clear in itself.

Lama Tsongkhapa's *Illumination* (Tibetan text page 367) says:

> The eighteen mental movements are: the six movements of happy feeling toward the six attractive objects, the six movements of suffering feeling toward the six unattractive ones, and the six movements of equanimity feeling toward those that are in-between. Because, by the force of happy, suffering, and equanimity feelings, the mind moves again and again toward forms, sounds, and so forth, they are called "mental movements" (*yid kyi nye bar rgyu ba*).

Because the eye consciousness and so forth go or move toward attractive objects and so forth due to feelings, these feelings are called "mental movements." For example, when an eye consciousness observes an attractive object a happy feeling arises in its retinue, when it observes an unattractive object a suffering feeling arises, and when it observes a neutral object equanimity feeling arises. Likewise, these three types of feelings arise in the retinue of an ear consciousness and so forth.

Lama Tsongkhapa's *Illumination* (Tibetan text page 367-8) says:

> Thus, from among the two, the observed object and the aspect of the innate conception of a self, the aggregates are also not the observed object. However, because there also does not exist an observed object of [the conception of a self] which is a different entity from the aggregates, the observed object of the conception of a self does not exist inherently. Therefore, yogis,
>
> - through not observing an inherently existent self, understand that also the mine just does not have the essence of inherent existence and,
> - through eliminating the bondage of all compounded cyclic existence, also definitely attain nirvana without taking future existences.
>
> Therefore, the single units and the collection of the five aggregates and whatever is a different entity from them are not posited as the observed object of the view of a self. Also in this case, the observed object of the view of a self should be understood to be excellently posited as the person. In dependence on those reasons, the analysis that posits the person to be empty of inherent existence is extremely attractive for the very sharp-facultied who desire liberation because there are no other tenets that captivate the mind like this.

From among the observed object and aspect, the collection of the aggregates is not the observed object of the view of the transitory collection. Nor are the individual aggregates the observed object of the view of the transitory collection. Also a self that is a different entity from the aggregates is not the observed object of the innate conception of I. Thus, the aggregates are not the observed object of the view of the transitory collection, nor is it a self that is a different entity from the aggregates. For this reason, Lama Tsongkhapa says that it is important to know how to posit the observed object and aspect of the view of the transitory collection. The observed object of the view of the transitory collection is the person that is merely imputed in dependence on the five aggregates. Because the person is merely imputed in dependence on the aggregates, it does not exist inherently. Thus, when it is understood how to posit the observed object of the view of the transitory collection as the person lacking inherent existence, one who wishes liberation approaches his or her aim. This is marvelous "because there are no other tenets that captivate the mind like this."

Geshe Jampa Gyatso: Is there a difference between the earth element and earth?
Student: There is a difference, for example, this wooden table has the water element but it does not have water.
Geshe Jampa Gyatso: So it is the same for the remaining elements? For example, the tea in my cup has fire element but does not have fire? If it did have fire, what would happen?! It would follow that it would burn my stomach. However, this can be debated because if I drink hot tea it does burn my stomach. What about space and the space element, are they the same or different?
Student 2: They are not different, the words are different but the meaning is the same.
Geshe Jampa Gyatso: So space and space element are the same?
Student 2: Yes.
Geshe Jampa Gyatso: Then how do you explain the line in the first chapter of *Treasury of Knowledge* that says:

> *Cavities, the so-called space constituent,*
> *Are illumination and darkness, they claim.* [1.25ab]

The Vaibhashikas say that when cavities are illuminated they are illumination, and when they are not they are darkness. Space is imputed on these. Thus, according to the Vaibhashikas, space and the space element, or space constituent, are different.

[The first chapter of Gedun Drup's commentary on the *Treasury of Knowledge* (translated by George Churinoff) says:

> The Vaibhashikas state that the cavities such as the mouth, etc., are the space constituent

and that that (i.e., the space constituent), moreover, is the illumination of day and the darkness of night. Since it is of an obstructive entity and is present in the surroundings of other obstructive [things], it is obstructive-surrounding.
"*They claim*" is a phrase of disagreement with the Vaibhashikas by the Sautrantikas who state that uncompounded space is the space constituent and that since it is of an unobstructive entity and is present in the surroundings of other unobstructive [phenomena], it is an unobstructive-surrounding. Hence, in that case, it is to be included in the phenomena entrance or the phenomena constituent.]

Wednesday morning, 14 February 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 368) says:

3B1C-2B3E-2B2A-2E Indicating others' systems as lacking relationship

Chandrakirti's autocommentary says:

According to the position that says "The objects of I-grasping are the aggregates and the mind," as long as the aggregates arise, that long I-grasping will operate because the basis, the functioning thing, of I-grasping exists.

The system that asserts all five aggregates to be the self and that which asserts the mind to be the self are incorrect. Because they posit a self that is findable among the aggregates, it follows that the conception of I exists as long as the aggregates exist because the basis of the conception of I exists. In other words, because the self is asserted to exist inherently and because the aggregates are asserted to be the self, as long as the aggregates, the basis of the conception of I, exist, so too will the conception of I exist.

Chandrakirti's autocommentary says:

It is explained:

At the time of realizing non-self, permanent self is rejected and
It is not even asserted as the support of I-grasping.
Therefore, to propound that knowing non-self removes
Even the final self view is very amazing. [6.140]

If this permanent self were the object of I-grasping, due to its non-existence I-grasping would be abandoned. Saying "The object of I-grasping is other and through seeing the other as a non-existent thing, one overcomes I-grasping," O my, you have done beautifully. In order to clarify this very meaning which lacks mutual relation by way of an example, it is explained:

Seeing a snake dwelling in a hole in one's house's wall,
Dispelling apprehension saying "There is no elephant in here,"
Acting to abandon even fear of the snake –
Oh my, it will just become the jest of others. [6.141]

Whoever, although the condition of fear is already close, does not perceive the fear existing in that, and not producing the remedy, due to stupidity, manifests themselves as just fearless – they will be grasped by the snake since they merely find comfort [in the words of another fool], because the fear due to that snake cannot be dispelled by [saying] an elephant does not exist.

> Similarly, also according to this propounding [of the self] as the aggregates and the consciousness, by the non-existence of the permanent self, the I-grasping which has as its object the aggregates cannot be dispelled. Therefore, definitely his samsara will not degenerate.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> 3B1A-6C5A-2B1B-5 The opponents' method has no connection
>
> *When non-self's seen, you reject a permanent self;*
> *This is not held to be the base of self-grasping,*
> *Therefore to say that knowing there's no [such] self*
> *Completely drives out the wrong view of the self is amazing.* [6.140]
>
> *It's like seeing a snake in a hole in the wall of your house,*
> *And reassuring yourself, "There's no elephant here,"*
> *Giving up fear even of the snake.*
> *Oh dear, you'll be the laughing-stock of others.* [6.141]

You should understand that to say that the mere knowledge that a permanent, single, independent self does not exist completely expels the wrong view of the self present since beginningless time is most amazing; for when you realize the non-existence of self, you only reject a permanent self, and it is not asserted that this permanent self is either the observed object or the aspect object, or base, of innate self-grasping. For example, it is like [a person who] sees a snake living in a hole in the wall of his house, and is frightened, then when he has been reassured, "There is no elephant in this [house]," gives up his fear even of the snake; oh dear, how other learned men will laugh and smile!

In short, the realization of the emptiness of a permanent, partless, and independent self does not harm the innate conception of I that has operated since beginningless time. This is because a permanent, partless, and independent self is neither the observed object of the innate conception of I or the object-aspect (object that is the aspect) of the innate conception of I. The object-aspect is the object of the mode of apprehension.

In order to explain this, there is the analogy of someone who frightened of a snake in his house is reassured by someone saying "There is no elephant in your house," whereby the learned laugh at and mock him. This example indicates that just as saying there is no elephant in the house does not dispel the fear of the snake in the house because the non-existence of the elephant is not related to the existence of the snake, likewise, the realization of the lack of a permanent, partless, and independent self does not harm the innate conception of I that has operated since beginningless time because the non-existence of a permanent, partless, and independent self is not related to the innate conception of I.

Lama Tsongkhapa's *Illumination* (Tibetan text page 368) says:

> When seeking the imputed object that is the self, the observed object of the conception thinking "I," some propound "It is all five aggregates" and some propound "It is only the mind." If it accorded with these positions, then as long as the aggregates arise in one's continuum, until then would the conception of a self of persons operate because, when posited through seeking the imputed object that is the I of the thought "I," it would exist as a thing that is an object – the basis, that is, the aspect, conceived to be a self of persons. This is explained [as follows]:
>
> *When selflessness is realized, saying "A permanent self is abandoned," and,*
> *Without asserting that to also be the basis of the conception of I,*
> *Saying "Therefore, through the knowledge of the lack of a self,*
> *The view of a self is also eradicated" is truly amazing!* [6.140]

> *When* it is asserted that the *selflessness* of persons *is* directly *realized*, alas,
> - your *saying* "*A* mere *permanent self is abandoned*, that is, is seen to not exist," and,
> - *without asserting that* permanent self *to also be* an object that is either (i) the basis, that is, the observed object, or (ii) the aspect of *the conception of I* which is the innate view of the transitory collection, saying "*Therefore*, *through* cultivating *the knowledge* seeing *the lack of a* mere permanent *self*, *the view of a self* which has operated since beginningless time *is also eradicated*, that is, uprooted"
>
> *is truly amazing!* The meaning of asserting that "By seeing that a mere permanent self does not exist, the beginningless conception of a self is abandoned" is explained in order to clarify [a mere permanent self and the beginningless conception of a self], by means of an example of worldly beings, as lacking a mutual relationship.
>
> *Like seeing a snake abiding in a hole in the wall of his house,*
> *Having dispelled his anxiety saying "There is no elephant in here,"*
> *If it also acts to give up the fear of the snake,*
> *Alas, he would become the laughing stock of others.* [6.141]
>
> It is *like* some foolish person who, having *seen a snake abiding in a hole in the wall of his house*, becomes frightened. Then, when someone else *dispels his anxiety saying* to him "O you, do not be afraid, *there is no elephant in this* house," if, by understanding that an elephant does not exist in that house, not only is the fear of that averted, but *it also serves to give up the fear of the snake, alas*, *he would become the laughing stock* – that is, the object of laughter – *of others*, the wise. Hence, although the conditions for fearing a snake already abide close by, through not perceiving fear for the snake that exists due to the words of another fool, if without developing a method for averting the fear of that one is completely relaxed, that is, remains still, through understanding that an elephant does not exist, one will be seized by the snake. Similarly, by familiarizing with the perception of the non-existence of a mere permanent self, which is like the elephant, one will be completely relaxed through considering the fear of the conception of the self that has operated since beginningless time – which is like the snake – has been averted. Due to this, because one is unable to eliminate the view of the transitory collection which is the conception of the I that is asserted to be the object-possessor of the aggregates, this person's cyclic existence is definitely not weakened.
>
> This shows that many of [the followers] of our own and other schools who wish to settle the suchness of things, due to not understanding how to repudiate the object apprehended by the innate conception of a self, discard it and then strive wearily in an essenceless point, all the presentations that settle what is other than that. Understanding this is an extremely important point.

If someone, having realized the emptiness of a permanent, partless, and independent self, relaxes even though the conception of I that has operated since beginningless time remains in his continuum, he is like someone who frightened of a snake in his house relaxes due to hearing that there is no elephant in his house. In other words, it is like someone frightened by the existence of a snake in his house who, upon hearing the words of another fool who says that there is no elephant in the house, abides there relaxed but is later seized by the snake. The conception of I that has existed in the continuum since beginningless time is likened to the snake that exists in the house, whereas the non-existence of a permanent, partless, and independent self in the continuum is likened to the non-existence of the elephant in the house. Thus, even though one has realized the emptiness of a permanent, partless, and independent self, one will still be bitten by the snake of the conception of I and will, therefore, create actions and continue to wander in cyclic existence.

Student: Is the refutation of the lack of a permanent, partless, and independent self not a branch of the refutation of an inherently existent self?
Geshe Jampa Gyatso: It is not. It is usually said that the realization of coarse selflessness is the method for the realization of subtle selflessness. However, the refutation of a permanent, partless, and independent self does not assist the refutation of an inherently existent self.

Lama Tsongkhapa's *Illumination* (Tibetan text page 369) says:

3B1C-2B3E-2B2A-3 Refuting the three remaining positions other than those two: support, supported, and so forth

We have concluded the refutation of the first two positions

- 'Refuting a self that is a different entity from the aggregates, which is imputed by other schools' and
- 'Refuting the assertion that the aggregates themselves are the self, which is imputed by our own schools,'

now the three remaining positions 'support, supported, and possession' are refuted. When an inherently existent self is refuted there are two ways to do so:

1. by means of five reasonings and
2. by means of seven reasonings.

Of the five reasonings, we have discussed the first two – the self is not other than aggregates and the self is not the aggregates – and now we will discuss the remaining three:

- 'support,' which refers to the fact that the self is not the support of the aggregates,
- 'supported,' which refers to the fact that the self is not supported on the aggregates, and
- 'possession,' which refers to the fact that the self does not possess the aggregates as, for example, Devadatta possesses cows.

A Refuting the position of support, supported, and possession
B Adding together the meaning of these refutations, then presenting them

3B1C-2B3E-2B2A-3A Refuting the position of support, supported, and possession

Chandrakirti's autocommentary says:

> Therefore, having correctly established the two positions such as "The self does not have the nature of the aggregates, nor is it other than the aggregates," in order to express the very existence of the self as also non-existent as support and supported, it is explained:
>
> *Self does not exist in the aggregates; also in the self*
> *Those aggregates do not exist. Because, if otherness*
> *Existed here, conception would be here, yet*
> *That otherness is non-existent, therefore, it is conception.* [6.142]
>
> If otherness existed, they would be reasonable as the properties of support and supported. For example, like saying, "Yogurt exists in a metal dish." The two, metal dish and yogurt, are just other in the world – hence are seen as the properties of support and supported. The aggregates are not different from the self like that. Since the self is also not different from the aggregates, there does not exist the properties of support and supported for the two.
>
> Although just possessing the aggregates, just as not existing in the self, in order to indicate thus, it is explained:
>
> *Self is not asserted to possess form because self does not exist,*
> *Therefore, the connective meaning of possession does not exist.*
> *If other, possessing cow, [or] not other, possessing form,*
> *Self being just that [or] just other than form is non-existent.* [6.143]
>
> The self being identical to [thatness/sameness] and just other [otherness] than the aggregates was already refuted before. Also, the affix of possession[154] refers to the non-different, "Devadatta possesses form." "He possesses a cow" is when there is difference. Since form and self have no identity or otherness, it is also impossible to say "Self possesses form."

[154] See Hopkins, p. 692.

The positions asserting that the self and the aggregates are a truly existent one and the self and the aggregates are a truly existent other have already been refuted. Now Chandrakirti explains that because the self and the aggregates are support and supported, they are not established by way of their own entity.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B1A-6C5A-2B1C-1 Refuting the positions of container, contents and possession

The self does not exist in the aggregates
And in the self these aggregates don't exist.
Since if there were otherness here, there'd be this concept,
But there's not that otherness, so it is misconception [6.142]

You should understand that these hypotheses that the self and the aggregates are inherently existing container and contents are posited through wrong conception, for the self does not exist inherently [contained] in the aggregates, and these aggregates also do not exist inherently [contained] in the self. This is because if, in this self and aggregates, otherness inherently existed, there would be this concept of existing inherently as container and contents, but that inherent otherness does not exist in the self and aggregates.

The self's not held to have form, because the self
Does not exist. [6.143ab]

It is not maintained that the self inherently possesses [the aggregate of] form, because the self does not exist inherently.

So there's no relation of having.
If they're other – having cows – or not other – having form –
The self is neither one with nor other than form. [6.143bcd]

No relation inherently exists in the sense of the self's possessing the aggregates; for possessing what is other is like Devadatta's possessing a cow, and possessing what is not other is like Devadatta's possessing a form, but the self does not exist either the same as or other than form.

In short, the following syllogism can be set out:

The being, such as Devadatta, as the subject, does not exist inherently because:

1. he is not an inherently existent one with the aggregates,
2. he is not an inherently existent other that the aggregates,
3. he is not an inherently existent support of the aggregates,
4. he is not inherently supported on the aggregates, and
5. he is not an inherently existent possessor of the aggregates.

Even more briefly put:

Devadatta, as the subject, is not inherently existent because he is not found when sought by means of the five-fold analysis.

In order to condense the seven-fold reasoning, the following syllogism can be set out:

Devadatta, as the subject, is not inherently existent, because:

1. he is not inherently one with the aggregates,
2. he is not inherently other than the aggregates,

3. he is not an inherent existent support of the aggregates,
4. he is not inherently supported on the aggregates,
5. he is not an inherently existent possessor of the aggregates,
6. he is not the collection of the aggregates, and
7. he is not the shape of the aggregates.

This seven-fold reasoning will be discussed later in the context of the analogy of the chariot.

Conventionally the self is supported on the aggregates and conventionally the aggregates are the support of the self. Also, conventionally the aggregates are possessed by the self. However, conventionally the self and the aggregates are not one. Does that mean that the self and the aggregates are different entities? It does not. The self and the aggregates are one entity but are not one. In order to be one, what is necessary? The definition of being one, as found in *Collected Topics*, is: phenomena that are not distinct. Therefore, the self and the aggregates are not one, yet they are one entity. What is the definition of being one entity?
Student: A phenomenon and its parts that arise, abide, and disintegrate simultaneously.
Geshe Jampa Gyatso: Therefore, permanent and the isolate of permanent, as the subject, it follows that they are produced, abide, and disintegrate simultaneously because they are one entity! That is not correct. What is the definition of being one entity?
Student 2: Phenomena that cannot be distinguished by a direct perceiver.
Geshe Jampa Gyatso: Is that correct?
Student 3: It is just about what is usually said.
Geshe Jampa Gyatso: So how would you posit being one entity?
Student 4: Phenomena that do not appear differently to a direct perceiver.
Geshe Jampa Gyatso: Can two things not exist differently, for example, permanent and the isolate of permanent?
Student: They are different, but they do not appear to be different to a direct perceiver.
Geshe Jampa Gyatso: It follows that they do not exist because they do not appear distinctly to a valid direct perceiver!

Wednesday afternoon, 14 February 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 369-70) says:

> Thus, having presented the self and the aggregates to not be established as either inherently one or different, in order to state that the self and the aggregates are also not established by way of their own entity as mutual support and supported, it is explained:
>
> *The self does not exist in the aggregates; also the aggregates*
> *Do not exist in the self. Therefore, if here*
> *They existed as otherness, there would be these conceptions here,*
> *Whereas, because they are not otherness, it is a conception.* [6.142]
>
> *The self does not exist on the aggregates* in a manner of an established by way of its own entity supported, and *also the aggregates do not exist on the self* in a manner of an established by way of its own entity supported. *For that* reason, *if here* the aggregates and the self *existed as* an established by way of their own entity *otherness*, *there would be* the two *conceptions* of inherently existent support and supported *here*, *whereas because they are not* inherent *otherness*, they are merely posited by a mistaken *conception* of establishment by way of its own entity to be support and supported. For example, in the world, the two, a metal dish and yogurt, are seen to be different

> entities, the support and the supported. Since the two, the aggregates and the self, are not seen like that, they do not exist inherently as the entities of support and supported.

The self and aggregates being inherently existent one or being different entities has already been negated, in addition, they are also not inherently existent support and supported. The self is not inherently supported on the aggregates, and the aggregates are not an inherently existent support of the self. It can be said that the self is supported on the aggregates and the aggregates are supported on the self. Although they are mutually dependent, their mode of dependence is not established by way of its own entity.

Lama Tsongkhapa says: "For that reason, if here the aggregates and the self existed as an established by way of their own entity otherness, there would be the two conceptions of inherently existent support and supported here, whereas because they are not inherent otherness, they are merely posited by a mistaken conception of establishment by way of its own entity to be support and supported." The example is given of a metal dish and yogurt which are seen to be different entities but are support and supported. Another example is that of a cup and the tea in it, although they are different entities they function respectively as support and supported, in that the cup is the support of the tea and the tea is supported on the cup.

The self and aggregates are support and supported in the context of being one entity, but not in the context of being different entities.

Lama Tsongkhapa's *Illumination* (Tibetan text page 370) says:

> Even though it possesses the aggregates, in order to show how the self is not established by way of its own entity it is explained:
>
> *The self is not asserted to be a possessor of form. Because of that,*
> *The self does not exist. Therefore, it is not connected with the meaning of possession.*
> *Whether they are other, the possessor of cattle, or not other, the possessor of form,*
> *The self in relation to form is not oneness and not otherness.* [6.143]
>
> *The self is not asserted to be* an established by way of its own entity *possessor* of the *form* aggregate. *For that* reason, since *the self* was already refuted to be inherently one with or different from the aggregates, it *does not exist*. *Therefore*, the self *is not* inherently *connected with* the *possession* of the aggregates. Hence, although there are the conditions for possession,
>
> - *whether they are other*, that is, different entities connected together, like Devadatta is said to be *the possessor of cattle*, that is, cows, or
> - whether they are what are *not other* entities connected together, like Devadatta *possesses form*,
>
> *the self in relation to form is not* (i) *oneness*, i.e., it is not one with it, and (ii) not *otherness*, i.e., it is not different from it. Therefore, the self also cannot be an inherently existent possessor of form. By these [statements], it should be understood that [the self] is also refuted to be an established by way of its own entity possessor of the remaining four aggregates.

The self possesses the aggregates. However, it does not possess them by way of their own entity. This is because the self and the aggregates are not inherently existent one, nor are they inherently existent other. The way in which the self possesses the aggregates is not the way in which Devadatta inherently possesses cattle that are different entities from himself, and it is also not the way in which Devadatta inherently possesses a form aggregate that is one entity with himself.

Lama Tsongkhapa says: "The self in relation to form is not (i) oneness, i.e., it is not one with it, and (ii) not otherness, i.e., it is not different from it. Therefore, the self also cannot be an inherently existent possessor of form." This can also be applied similarly to the remaining four aggregates; for example, the self possesses the feeling aggregate but it does not inherently possess the feeling aggregate.

Lama Tsongkhapa's *Illumination* (Tibetan text page 370) says:

3B1C-2B3E-2B2A-3B Adding together the meaning of these refutations, then presenting them

Chandrakirti's autocommentary says:

> Now, by indicating the condensed positions already refuted, in order to indicate by way of enumerating the view of the transitory collection as engaging incorrectly [by] referent and aspect, it is explained:
>
> *Form is not the self, the self does not possess form,*
> *The self is non-existent on form, nor does form exist on the self.*
> *Thus in four aspects should all the aggregates be known –*
> *These are asserted as the twenty viewing the self.* [6.144]
>
> When the five aggregates – separated from self – are apprehended as the very self by way of four aspects by the view of the transitory collection, there will be twenty parts of the view of the transitory collection.

Here Chandrakirti presents the twenty types of acquired views of the transitory collection, there being four views of the transitory collection in relation to each of the five aggregates. The first group of four in relation to the form aggregate are set out in the root verse saying:

Form is not the self, the self does not possess form,
The self is non-existent on form, nor does form exist on the self. [6.144ab]

The four refutations are:
1. form is not the self,
2. the self does not inherently possess form,
3. the self does not inherently exist on form, and
4. form does not inherently exist on the self.

Therefore, the four views are (see *Meditation on Emptiness* page 176):
1. viewing form as inherently one with the self
2. viewing the self as inherently possessing form,
3. viewing the self as inherently supported on form,
4. viewing form as an inherently existent support of the self.

In describing these four views, the lower schools would substitute the term 'inherently' with 'substantially.' Similarly, it can be said: "Feeling is not the self, the self does not possess feeling, the self is non-existent on feeling, nor does feeling exist on the self." In the same way, one can substitute the word 'feeling' with 'discrimination,' 'compositional factor,' and 'consciousness.'

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B1A-6C5A-2B1C-2 Stating in summary the points refuted

The self is not form, the self does not have form,
The self's not in form, and form's not in the self.
Each aggregate is to be known as fourfold thus.
These are asserted as twenty wrong views of the self. [6.144]

You should understand that there are held to be twenty parts of the view of the aggregates as the self. For there are the wrong view of form, which is not the self, as the self; the wrong view of the self which does not inherently possess form as doing so; and the wrong views of the self that does not exist in form, and also form, which does not exist inherently in the self, as doing so; and you should understand that there are wrong views about all five aggregates in the four ways like these.

The vajra of seeing non-self destroys the mountain
Of views of the self. What the self perishes with
Are these high peaks in the range of enormous mountains
Of wrong view of the perishable aggregates. [6.145]

As for these twenty high peaks dwelling in the range of huge mountains of wrong views of the perishable aggregates, amassed by delusiveness; if they are abandoned, the fruit of stream enterer is made manifest. For if the mountains of wrong views about the perishable aggregates are destroyed by the thunderbolt of transcendent knowledge-wisdom which freshly and directly perceives the non-existence of self, these are what the view about the self which is destroyed will perish and be abandoned together with.

Chandrakirti's autocommentary says:

> If it is said: Coming in the context of five-fold analysis, was it not taught in the *Treatise* [*on the Middle Way*, 22.1]:
>
> > Not the aggregates, not other than the aggregates,
> > The aggregates do not exist on him, he does not exist on them,
> > The Tathagata does not possess the aggregates –
> > What is the Tathagata?
>
> – therefore, if it is in twenty-five parts, why was it expressed in twenty parts?

[Note that the Tibetan text we are using says 'five parts' instead of 'twenty-five parts' but this could also be right.]

In short, sutra presents twenty views of the transitory collection, whereas Nagarjuna's *Fundamental Wisdom* presents twenty-five. Here someone asks why is there this difference. The five views set forth in Nagarjuna's *Fundamental Wisdom* are:
1. the tathagata is not inherently one entity with the aggregates,
2. the tathagata is not inherently other than the aggregates,
3. the aggregates do not inherently exist on the tathagata,
4. the tathagata does not inherently exist on the aggregates, and
5. the tathagata does not inherently possess the aggregates.

These can also be set forth as:
(1) viewing the self and the aggregates to be inherently one entity
(2) viewing the self and the aggregates to be inherently different entities,
(3-4) viewing the self and aggregates to be inherently support and supported,
(5) viewing the self to inherently possess the aggregates.

Gedun Drup's commentary on Nagarjuna's *Fundamental Wisdom* says:

> OBJECTION: The continuity of existence exists inherently because the tathagata exists inherently.
>
> RESPONSE: Any tathagata, as the subject, does not exist inherently because:
>
> 1. he is not one with the aggregates,
> 2. he is not inherently other than the aggregates,
> 3. he is not inherently supported on the aggregates,
> 4. the aggregates are not inherently supported on him,

5. he does not inherently possess the aggregates.

The subject, 'the tathagata,' can be substituted by 'the self' or 'the person,' whereas 'the aggregates' can be substituted by the individual aggregates. Thus, there are, for example, the four views in relation to the form aggregate:
(1) the view of the self and the form aggregate as inherently one,
(2) the view of the self and the form aggregate as inherently different,
(3-4) the view of the self and the form aggregate as inherently existent support and supported, or the view of both the self and the form aggregate as inherently existent supported,
(5) the view of the self as inherently possessing the form aggregate.

In conclusion, the five additional views that are added to the twenty in Nagarjuna's *Fundamental Wisdom* are
1. viewing the self and the form aggregate to be different entities,
2. viewing the self and the feeling aggregate to be different entities,
3. viewing the self and the discrimination aggregate to be different entities,
4. viewing the self and the compositional factors aggregate to be different entities,
5. viewing the self and the consciousness aggregate to be different entities.

Chandrakirti's autocommentary says:

> Those [twenty] parts of the view of the transitory collection are presented in the sutra sets. Since the [view of the transitory collection] cannot strongly settle on the self, not apprehending the aggregates [beforehand], it refers to the aggregates by way of four aspects and engages [the self].
>
> Like this, since strongly settling on the self never exists except for the aggregates, a fifth aspect of the view of the transitory collection is impossible. Therefore, the view of the transitory collection is only in twenty parts. It should be understood that, "the fifth position of otherness taught in the *Treatise* is in order to refute the system of the Forders."

The reason why twenty views are taught in sutra and twenty-five are taught in Nagarjuna's *Fundamental Wisdom* is because the presentation of the twenty views in sutra is for the purpose of refuting our own schools, whereas the twenty plus five additional views in *Fundamental Wisdom* are presented for the purpose of also refuting the non-Buddhist schools that assert a self which is a different entity from the aggregates, in that they assert a permanent, partless, and independent self.

Chandrakirti's autocommentary says:

> There, "having destroyed the lofty twenty mountain peaks of the view of the transitory collection with the vajra of exalted wisdom, the result of stream enterer is made manifest," which was taught in scripture means:
>
> *The vajra that realizes non-self destroys*
> *The mountainous view. What will disintegrate together with the self*
> *Are the high peaks which dwell on the huge massive mountain*
> *Of the view of the transitory collection – these.* [6.145]
>
> Due to the vajra of the arya's exalted wisdom not descending on the mountain of the view of the transitory collection, the rock of affliction will increase daily. Arisen from beginningless samsara; lofty as the three realms in height; pervading to the edge of all directions; coming forth from the

golden foundation of ignorance – when broken up by the vajra of comprehending non-self, those which will disintegrate together with the very lofty peak are to be known as being peaks.

Thursday morning, 15 February 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 371) says:

Now, by adding together, that is, presenting, the positions that were already refuted before, in order to indicate the enumeration of mistaken engagements through (i) the observed object and (ii) the aspect due to the view of the transitory collection, it is explained:

Form is not the self, the self is not the possessor of form,
The self does not exist in form, form also does not exist in the self.
All the aggregates should be understood in these four ways.
These are asserted to be the twenty views of a self. [6.144]

There are four:

1. the view of a self with respect to *form not being the self*;
2. the view of that with respect to *the self not being* an established by way of its own entity *possessor of form*; and
3. the view of that with respect to *the self not existing* inherently *on form, and*
4. [the view of that with respect to] *form not existing* inherently *on the self*.

Just as they are explained in regard to the aggregate of form, there *should be understood* to be four views each *in regard to all the* four *aggregates* of feelings and so forth regarding the four aspects – the ways in which they are viewed by the view of the transitory collection. *These are asserted to be the twenty* parts of the *view of a self*, the view of the transitory collection.

QUESTION: Having added the view of the self and the form aggregate as different entities, is it not also taught [as follows] that there occurs an occasion of a five-fold analysis in regard to each of the aggregates? [Nagarjuna's] *Fundamental Wisdom* (v. 22.1) says:

He is not the aggregates, nor other than the aggregates.
The aggregates do not exist on him, he does not exist on them.
The tathagata is not the possessor of the aggregates.
What is the tathagata?

Therefore, it must be twenty-five parts, so why is it expressed above as twenty parts?

RESPONSE: The twenty parts of the view of the transitory collection are presented in sutra. The reason for positing them like this is that without apprehending the aggregates beforehand the view of the transitory collection cannot strongly adhere to a self. Due to this, it observes the aggregates by means of the four ways each and engages a self. Because of that, since a fifth basis of adherence to an other, excluding the aggregates, as a self does not arise except for the Forders, a fifth part is not taught. It should be understood that "The other position, the fifth, is taught in *Fundamental Wisdom* in order to refute the Forders' system."

It is taught in scripture:

Having destroyed the twenty lofty mountain peaks of the view of the transitory collection with the vajra of exalted wisdom, the result of stream enterer is manifested.

[Chandrakirti's *Supplement* similarly says:]

The mountain of the view is destroyed by the vajra realizing selflessness.
What is destroyed along with a self
Are the lofty peaks abiding on the massive mountain
Of the view of the transitory collection. [6.145]

Through observing the I, the observed object, the vajra of a superior's exalted wisdom does not descend on the *mountain of the view* of the transitory collection conceiving the aspect as inherently existent, whereby the rocky cliff of the afflictions increases daily. When that arisen from beginningless cyclic existence, lofty as the three realms, pervading the edges of the directions without exception, emerging from the golden foundation of ignorance, *is destroyed*, that is, shattered, *by the vajra* of the exalted wisdom directly *realizing selflessness*, *what is destroyed along*

> *with any* of the views *of a self* that are destroyed are the *lofty peaks abiding on the massive mountain of the view of the transitory collection*, the root that was just explained – these being the twenty, *those* explained as four-fold in regard to each of the five aggregates explained before.
>
> Here the translation of the autocommentary says:
>
> > Those destroyed together with any of the great lofty peaks should be understood as being the peaks.
>
> Also according to the translation as 'root,' it should say "together with the view of the transitory collection that is the root." Moreover, since the innate view of the transitory collection, the conception of I, is not any of the twenty explained before, stating "abiding on the massive mountain of the view of the transitory collection" means that the views of the transitory collection that are the twenty peaks abide on the view of the transitory collection that is the root. The twenty along with it are also imputed views of the transitory collection which are the roots abandoned by stream enterers. In addition, not taking it to be the mere conception of establishment by way of its own character, instead the seeds of conceiving its mode of apprehension to be correct in dependence on bad tenets are abandoned by stream enterers.

The explanation here of twenty views of the transitory collection accords with the explanation given in sutra. The view of the transitory collection does not conceive I without the appearance of the aggregates. For example, a person of the desire realm has a view of the transitory collection that conceives I mainly due to the appearance of the form aggregate. Because the beings of the formless realm do not have form, their view of the transitory collection does not depend on the appearance of the form aggregate, but instead depends on the appearance of the discrimination aggregate. Because there is form in the form realm, there the view of the transitory collection can depend on the appearance of the form aggregate but it mainly depends on the appearance of the feeling aggregate.

Are the twenty views of the transitory collection mentioned here actual views of the transitory collection? They are not. They are called "views of the transitory collection," but because they arise due to training in tenets they are only imputed views of the transitory collection. Those who hold to particular tenets conceive:

1. the self and the aggregates to be inherently one entity,
2. the self to inherently possess the aggregates,
3. the aggregates to be an inherently existent support of the self, and
4. the self to be inherently supported on the aggregates.

The four views in relation to the form aggregate can be applied in a similar manner to each of the remaining four aggregates, for a total of twenty views. These twenty views of the transitory collection are likened to high, slippery, steep mountains completely surrounding us and covered in darkness due to which it is difficult to become free from them. In conclusion, all twenty views of the transitory collection are acquired views of the transitory collection. Such mountain-like views are destroyed by the vajra-like wisdom realizing selflessness. What is this "vajra-like wisdom"? It is an uninterrupted path of the path of seeing. By means of the antidote of an uninterrupted path of the path of seeing, in subsequent attainment the view of the transitory collection has been destroyed and one attains the result of stream enterer. Scripture says: "Having destroyed the twenty lofty mountain peaks of the view of the transitory collection with the vajra of exalted wisdom, the result of stream enterer is manifested." Although this explanation is given in the context of the hearers' path, it is similar in regard to the bodhisattvas' path in terms of the twenty exemplary sangha and twenty meaning sangha. According to the Prasangika Madhyamika system even those who are approachers to stream enterer are superior or arya beings, whereas in the Svatantrika Madhyamika system approachers to stream enterer are not necessarily superior beings. The twenty sangha were explained extensively in the *Ornament for Clear Realizations*, and were also discussed in the *Supplement to the 'Middle Way'* in the context of the first mind generation in which the 'eighth' superior being is mentioned saying:

Advancing from ground to ground he ascends,
Now all his paths to bad migrations have ceased,
All the levels of ordinary beings are ended.
He is shown to be like the eighth superior. [1.7]

Here 'the eighth' is in the context of counting the eight sangha beginning from:
(1) abider in the result of foe destroyer,
(2) approacher to the result of foe destroyer,
(3) abider in the result of non-returner,
(4) approacher to the result of non-returner,
(5) abider in the result of once returner,
(6) approacher to the result of once returner,
(7) abider in the result of stream enterer, and
(8) approacher to the result of stream enterer.
In short, by means of the vajra-like wisdom one becomes a stream enterer.

The view of the transitory collection is defined as: an afflicted wisdom that observing I or mine conceives it to exist inherently. In general the word "mine" refers to something that belongs to oneself such as "my leg," "my arm," "my face," and so forth. Is the awareness conceiving "my leg" to be established by way of its own character a view of the transitory collection? It is not because it not a conception of a self of persons. This is because an awareness conceiving "my leg" to be established by way of its own character conceives a phenomenon to be established by way of its own character, not the person. Are there not two types of views of the transitory collection, one conceiving "I" and one conceiving "mine"? There are two. What is the difference between them? The view of the transitory collection conceiving "I" is a view of the transitory collection that observing the mere I conceives it to exist inherently. The view of the transitory collection conceiving "mine" is a view of the transitory collection that observing mine conceives it to be inherently existent. Or it can be said that, taking the mine as an observed object, it conceives an inherently existent I. The mine, without qualifying it by "my leg" and so forth is, according to Kunkyen Jamyang Shepa, the I.
Student: Is the mine, from among persons and phenomena, neither a person nor a phenomenon according to Jedzun Chogyi Gyeltshen?
Geshe Jampa Gyatso: He does not distinguish it. However, conceiving "my eye," "my nose," and so forth is to conceive of a phenomenon.

In the monastic universities it is usually said that 20% of one's understanding comes from one's own personal study, 30% from teachings received from a master, and 50% from debate and discussion with one's classmates. This is because when the wisdom of many people come together it enriches one's own understanding. For example, a single person cannot lift a huge boulder alone, even two or three together would find it difficult, but ten people together can lift it up and even move it. This is due to putting together the strength of many individual persons. Likewise, is it similar in the case of putting our individual wisdoms together.

Lama Tsongkhapa's *Illumination* (Tibetan text page 373) says:

3B1C-2B3E-2B2A-4 Refuting a substantially existent person that does not exist as oneness and as otherness

A Stating the previous position
B Refuting that system

3B1C-2B3E-2B2A-4A Stating the previous position

Chandrakirti's autocommentary says:

Now, in order to exclude the person propounded as substantially existent, imagined by the Sammitiyas, it is explained:

> *Some assert the person as substantially existent,*
> *Inexpressible as thatness, otherness, permanent, impermanent, etc.*
> *That is asserted as the object of the six consciousnesses and*
> *That is also asserted as the basis of I-grasping.* [6.146]

There, firstly, because apprehending it is not established except for the aggregates, the person as other than the aggregates does not come about. Nor does it have the nature of the aggregates, because it would follow as possessing production and disintegration. Therefore, when like that, it is inexpressible as thatness and otherness from the aggregates.

Just as not being thatness and otherness, similarly it is also inexpressible as permanent and impermanent. Yet, it is known by the six consciousnesses. The person is also reasonable as just substantially existent because it is expressed as the agent itself and the consumer itself, and because it is the very relation-bearer between samsara and nirvana, and bondage and liberation. It is also asserted as the very object apprehended as the self.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B1A-6C5A-2B1D-1 Stating the hypothesis

> *Some assert a substantial personality*
> *Indescribable as one or other, permanent or impermanent.*
> *They assert it's the object of the six consciousnesses,*
> *And hold it is also to be the basis of self-grasping.* [6.146]

Some Sammatiyas assert a substantially existent personality which cannot be said to be identical or separate, permanent or impermanent, and so on. They also assert it to be an object of knowledge of the six consciousnesses, and assert too that that personality is the base or object of innate self-grasping.

According to one of the Vaibhashika schools, the Sammitiyas, the person is inexpressible as either one substance or as different substance, and as either permanent or impermanent. Chandrakirti says: "Some assert the person as substantially existent, inexpressible as thatness, otherness, permanent, impermanent, etc." (v. 6.146ab). The Sammitiyas assert the person to be:

- self-sufficient substantially existent,
- an object of the six consciousnesses, and
- the basis of the conception of I.

They say that the person is self-sufficient substantially existent and, therefore, can be expressed to be a consumer, an agent, the one who attains liberation, and the one who is bound in cyclic existence. However, such a person cannot be expressed to be:

- one substantial entity with the aggregates,
- a different substantial entity from the aggregates,
- impermanent, or
- permanent.

This is the way in which the Sammitiyas posit the person. When they say that the person is an agent it is because the person is the accumulator of actions. These actions can be either virtuous or non-virtuous. This person is also an experiencer because he is the one who experiences the result of these actions as happiness or suffering. Due to creating many actions, the person remains bound in cyclic existence. On the other hand, if the person meditates on selflessness – the person's emptiness of being

permanent, partless, and independent – he will attain liberation. Therefore, they say that the person is also the one who attains liberation.

Lama Tsongkhapa's *Illumination* (Tibetan text page 373) says:

> Then, in order to eliminate the propounding of a substantially existent person which is imputed by the noble Sammitiyas, it is explained:
>
> *Some assert a substantially existent person that is inexpressible as*
> *Oneness, otherness, permanent, impermanent, and so forth.*
> *It is asserted to be an object of knowledge of the six consciousnesses and*
> *It is also asserted to be the basis of the conception of I.* [6.146]
>
> *Some* of our schools – the Sammitiyas – due to the reasoning "because, except for the aggregates, apprehending that is not established," [say that] the person is not a different entity from the aggregates, yet it also does not have the nature of the aggregates because, if it did, the self would have production and disintegration. Therefore, the self or the person is *inexpressible as oneness* with or *otherness* from the aggregates. Similarly, the person is also inexpressible as *permanent, impermanent*, *and so forth*. *The person is* also *asserted to be substantially existent*
>
> - because it is said to be the agent of the two actions and the consumer of happiness and suffering, the results of these two, and
> - because on the occasions of bondage to cyclic existence and nirvana it is the one who has become free and the one who is to be liberated.
>
> The self is also *asserted to be an object of knowledge of the six consciousnesses and* the self *is also asserted to be the basis*, that is, the observed object, *of the conception of I*.

The Sammitiyas assert that the self is not a different entity from the aggregates, but it also does not have the nature of the aggregates. They say that if it were the nature of the aggregates, the self would also have the characteristics of production and disintegration. Similarly, when they are asked whether the person is permanent or impermanent, they say that it is inexpressible as either permanent or impermanent. They do not say that the self is permanent nor that it is impermanent. If they were to say that it is permanent, which of their theses would they lose? They would lose the thesis that the person is empty of being permanent, partless, and independent. What would be the fault of their asserting the person to be impermanent? If the person were impermanent it would share the characteristics of the aggregates of being produced and disintegrate, however, they do not accept that. The Sammitiyas assert that the person is not the same as the aggregates because when we die, our aggregates are burned, buried, and so forth.

Thursday afternoon, 15 February 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 373) says:

> 3B1C-2B3E-2B2A-4B Refuting that system

Here the Prasangika Madhyamikas refute the Sammitiyas' assertion that the person is inexpressible as oneness, otherness, permanent, and impermanent.

Chandrakirti's autocommentary says:

> To explain also this proposition is just unreasonable:

Since mind is not understood as inexpressible from form,
Existent things are not realized as inexpressible.
If some self were established as a thing,
Established like the mind, it would not be inexpressible. [6.147]

Therefore, this verse, having indicated substantial existence itself as impossible for the inexpressible, in order to indicate [the person] as imputedly existent, it is explained:

Because your vase, an entity not established as a thing,
Is inexpressible from form and so forth – hence,
Whatever is a self would be inexpressible from the aggregates –
It should not be maintained as established as existing by itself. [6.148]

Gedun Drup's *Mirror of the Clarification of the Thought* (Tibetan text page 62), as translated by Martin Willson, says:

3B1A-6C5A-2B1D-2 Refuting it

Since the mind, as to form, is not seen as indescribable,
What exist as things likewise aren't seen as indescribable,
So if any self existed as a thing,
Existing like the mind, the thing wouldn't be indescribable. [6.147]

It should be understood that if any self existed as a thing, it would follow that the thing, which exists like the mind, would not be indescribable as identical or separate, because just as mind is not perceived to be indescribable as identical with or separate from form, what exist as things are not perceived to be indescribable as identical or separate.

Since, for you, a pot is an entity not existing
As a thing, not describable relative to form and so on,
The self, which you cannot describe regarding the aggregates,
Is not to be seen as established as self-existent. [6.148]

It should be understood that that self which is indescribable as identical with or separate from the aggregates should not be understood to be established as existing by its own entity, because according to you, a pot is an entity not established as a substantially existing thing, not describable as identical with or separate from [its parts,] form and so on.

The Sammitiyas say that the self is substantially existent and that it is inexpressible. To this, the Prasangika Madhyamikas say that that which is inexpressible is not admissible as substantially existent. In brief, they say that if it is substantially existent it is not inexpressible, instead it is expressible as either oneness or otherness and as impermanent or permanent.

One can ask the Sammitiyas: "Is the mind expressible?" The Prasangika Madhyamikas say: "Form, as the subject, it follows that it is not expressible as one with the self or as other than the self." The Sammitiyas would respond that form is expressible as one with or other than the self. To this, the Prasangika Madhyamikas say: "Is that which is substantially existent expressible as oneness with the self or as other than the self? It is expressible as such because form is expressible as oneness with the mind or as other than the mind." The Sammitiyas assert the self to be substantially existent and assert the substantially existent to be inexpressible as either one with or other than the self.

Chandrakirti's autocommentary says:

It is thought: "The vase is asserted to be inexpressible as thatness and otherness from form and so forth and is asserted to be imputedly existent. Similarly, also the self, like the vase, is imputedly existent."

The Prasangika Madhyamikas make the above argument. The self, as the subject, it follows that it is imputedly existent because it is similar to a vase which is imputedly existent. The Prasangika Madhyamikas say to the Sammitiyas that there is also an imputed existent that is inexpressible because you say that vase and form are inexpressible as oneness or otherness. Do you accept imputed existents? The Sammitiyas say that they do. Therefore, the self must also be imputedly existent because it is inexpressible as oneness with or other than the aggregates.

Chandrakirti's autocommentary says:

Therefore, having thus finely indicated refutation and establishment by two verses, now, having expressed thatness and otherness as the very support of things, to begin refuting the self since it just does not have the support of the property of things:

Your consciousness is not asserted as other than
Its own self: asserted as a thing other than form and so forth and
The two aspects are seen in things.
Therefore, self is non-existent because separated from the properties. [6.149]

If, according to you, self were substantially existent, undoubtedly, like consciousness, it would not be other than its own essential nature (self), and would be an entity different from form and so forth. Yet, this does not even exist. Therefore, because of just not having the support of the properties of things, self does not exist like the vase.

Verse 147 is the refutation and verse 148 is the establishment.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

You don't assert consciousness is separate from its own nature,
But assert it's a thing separate from form and so on.
In things, those two aspects are seen, therefore
There is no self, for it lacks the dharmas of a thing. [6.149]

It follows that that self is not a substantially existent thing, because it is devoid of the qualities of a thing, identity and separateness. This pervades, since you do not assert that consciousness is separate from its own entity[155], but assert that it is a thing separate from form and so on – those two aspects, identical and different, would be seen in [the self likewise, if it were] a thing.

The Sammitiyas say that the consciousness is expressible as not other than its own nature. The Prasangika Madhyamikas say that the self should be asserted in the same way as expressible as not other than its own nature. The form aggregate being other than the self is not possible. In other words, are the self and the aggregates expressible as one entity or not? The response is that they can be expressed as one entity. Are the aggregates and the self one entity or different entities? If they are said to be different entities, the Sammitiyas say that this is inexpressible. However, this is because they do not want to accept the self as it is asserted by the non-Buddhists. It should be recalled that some lower

[155] *bdag nyid*

Buddhist schools assert all five aggregates to be the self, whereas others assert the mind to be the self. Do the Sammitiyas assert all five aggregates to be the self or do they assert the mind to be the self?
Student: Before it was said that they assert the five aggregates to be the self, but here it seems that they assert neither the five aggregates nor the mind to be the self because they say that the self is inexpressible as one with or other than the aggregates.
Geshe Jampa Gyatso: They should assert one of the aggregates to be the self. Perhaps this is clarified in Kunkyen Jamyang Shepa's *Great Tenets*.

Lama Tsongkhapa's *Illumination* (Tibetan text page 373) says:

> That it is also unsuitable to propound a substantially existent person is explained:
>
> *Since mind is not realized to be inexpressible in regard to form,*
> *Existent things are not realized to be inexpressible.*
> *If some self were established to be a thing,*
> *The thing established like the mind would not be inexpressible.* [6.147]
>
> *For that* reason, just as *mind is not realized*, that is, not asserted, *to be inexpressible* as either oneness with or other *than form*, so *are existent things* – that is, substantially existents things – *not realized to be inexpressible* as oneness or otherness. Hence, *if some self were established to be a thing*, that is, to be substantially existent, *the thing which is established like the mind would not be inexpressible* in either of the two ways.
>
> Therefore, the above verse (v. 6.147) having indicated that substantial existence is impossible in regard to the inexpressible, in order to show that the person is imputedly existent it is explained:
>
> *Because of that, for you, a pot – an entity that is not established to be a thing –*
> *Is inexpressible in regard to form and so forth.*
> *Since whatever is a self is inexpressible in regard to the aggregates,*
> *You should not realize it to be established as existing by itself.* [6.148]
>
> *For that* reason, according to *you a pot – an entity that is not established to be a* self-sufficient substantial *thing – is* asserted to be *inexpressible* as oneness with – that is, as identical with – or as different *from the form and so forth* that are its components. Therefore, similarly, *whatever is a self* is also an imputed existent which *is inexpressible* as oneness or as an otherness that is a different entity *from the aggregates*. Because of that, *you should not realize*, that is, apprehend, the person *to be established as existing by way of its own* entity.
>
> Thus, these two verses (v. 6.147-8) refute substantial existence and precisely indicate its establishment as an imputed existent. Now, having expressed the two, oneness and otherness, to be the very support of things, [the *Supplement*] next refutes a self-sufficient substantially existent self since it is just not the support.
>
> *You do not assert your consciousness to be other than its own nature, but*
> *Assert it to be a thing which is other than form and so forth.*
> *Since the two aspects are seen in things,*
> *The self does not exist because it is free from the property of things.* [6.149]
>
> If for you the self is substantially existent, just as you *assert your consciousness to not be other than its own nature*, so too you must definitely express the person to be oneness since it is not other than its own nature. Also, just as you *assert* your consciousness *to be a thing which is other than form and so forth*, so too you must express the person to be a different entity from the aggregates. *Since, the two aspects* of one and different *are* definitely *seen in things, the self does not exist* substantially *because it is free from the property of things* – establishment as the two, oneness and other.

The person is expressible as not being different from its own nature because the mind is expressible as not being different from its own nature. Thus, the self is expressible as oneness because the consciousness is expressible as oneness, that is, literally as that itself. Also, just as the consciousness is expressible as other than form and so forth, likewise, the self is expressible as other than form and so forth. Therefore, the Prasangika Madhyamikas ask: "Do you Sammitiyas not understand that the self is expressible as oneness – as that itself – and is expressible as other?" The self should be expressible

because a single thing is seen to have two aspects: the aspect of being oneness and the aspect of being otherness. Lama Tsongkhapa says: "the two aspects of one and different are definitely seen in things."

Lama Tsongkhapa then says: "the self does not exist substantially because it is free from the property of things – establishment as the two, oneness and other." Is there a difference between 'substantially existent' or 'existing as a substance' (*rdzad su yod pa*) and 'substantial existent' or 'substantial existence' (*rdzad yod*)? According to the lower schools if something is substantially established or established as a substance (*rdzad su grub pa*) it does not have to be a substantial existent or substantial existence (*rdzad yod*). First one has to differentiate between what is a substance (*rdzad*) and what is a substantial existent or substantial existence (*rdzad yod*). For the lower schools, a substance is that which has the ability to perform a function. However, the non-Buddhists, such as the Vaishashikas, define substance differently.

In conclusion, in the Prasangika Madhyamika system the person is not a substantial existent but is an imputed existent. For them, whatever is an established base is pervaded by being an imputed existent, thus, there is nothing that is a substantial existent. However, they say if it is a substantial existent it would exist self-sufficiently. Do the Prasangika Madhyamikas accept substances? Is there a substance that is renowned to the world? Is there an aggregation of the eight particles? Think about it.

Friday morning, 17 February 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 375) says:

3B1C-2B3E-2B2A-5 Explaining the self posited as a mere dependent imputation along with an example

- A Indicating that the self, although not existing as the seven extremes, is imputed in dependence like a chariot
- B Extensively explaining the two remaining positions that were not explained before
- C Dispelling others' arguments in regard to explaining in that way
- D Indicating other objects that are nominal conventions as also being established

3B1C-2B3E-2B2A-5A Indicating that the self, although not existing as the seven extremes, is imputed in dependence like a chariot

The self is not findable in the seven ways, or as the seven extremes. Five of the seven extremes have already been explained, the remaining two have yet to be explained. The seven-fold reasoning refuting them is:
(1) the self and the aggregates are not inherently one,
(2) the self and the aggregates are not inherently different entities,
(3-4) the self and the aggregates are not inherently support and supported,
(5) the self does not inherently possess the aggregates,
(6) the mere collection of the aggregates is not the self, and
(7) the shape of the collection of the aggregates is not the self.

Chandrakirti's autocommentary says:

> Because, if completely analyzed like that, the person is unreasonable as substantially existent:
>
> *Therefore, the support of I-grasping is not a thing,*
> *[Self] is not other than the aggregates, not the entity of the aggregates,*
> *Not the support of the aggregates; it does not possess them.* [6.150abc]
>
> The object of I-grasping, if definitively inquired into, is unreasonable as substantially existent and unsuitable as different from the aggregates, besides not having the nature of the aggregates, and is also not the support of the aggregates. Or, since it has the aggregates as a support, "supported on

the aggregates" is said. In order to clarify both positions of support and supported, the condensed words relied on both. The self is also unreasonable to possess the aggregates.

Therefore, to explain that "The self is still suitable since asserted as imputed or not observed; the self is not to be accepted in the aspects which were propounded," it is said:

It becomes established dependent on the aggregates. [6.150d]

Just as in accepting merely this much: "in dependence on this, this arises," in order to not eliminate the presentation of the deceptive truth, there is no production from [the four], without cause and so forth, similarly, here also, in correctly relying on dependent imputation, having dispelled the types possessing the faults explained, merely this much, 'imputed in dependence on the aggregates,' is to be accepted in order that the conventions of the world completely abide, because of seeing an imputed convention to be the self.

For the purpose of establishing the self as merely imputed, in order to clarify the very meaning which was explained, an external example is indicated and explained:[156]

The chariot is not asserted as other than its components,
Not none other, does not possess them, and
Is not on the components, the components are not on it,
Is not the mere assembly, is not the shape. Just like that. [6.151]

It is not admissible for the person to be substantially existent. An inherently existent self is not the observed object of the conception of I.

Gedun Drup's *Mirror of the Clarification of the Thought,* as translated by Martin Willson, says:

3B1A-6C5A-2B1E-1 The self does not exist in the seven extremes, but is dependently imputed, like a cart

So the basis of self-grasping is not a thing. [6.150a]

The self which is the basis of self-grasping is not an inherently existent functioning thing, for if it is logically analyzed, it does not exist substantially.

It's not separate from the aggregates, isn't their entity,
The aggregates are not contents, it does not possess them;
It is established dependent on the aggregates. [6.150bcd]

It should be understood that this self is established dependent on the aggregates, for while this self is not a separate object from the aggregates, nor is the self the entity of the aggregates, it is not inherently container and contents with the aggregates, and it does not inherently possess those aggregates, we can see nevertheless that the convention of self cannot be denied[157].

A cart's not held to be separate from its own parts,
Is not unseparate, and also does not possess them.
It's not in the parts, the parts are not in it, and
It's not just the assembly, nor the shape – like this. [6.151]

For example, it is like the way a cart is [not] asserted to be a separate object from its own parts, is not one, unseparate, also does not possess those parts, and is not contained in the parts, and the parts are not inherently contained in that cart, the mere assembly of parts is not the cart, and the shape of the parts is not the cart; but it is imputed as a cart dependent on the parts.

[156] See Hopkins, pp. 179-183, and Wilson, pp. 30-49.

[157] *bsngon pa*

The self does not exist inherently because, just like a chariot, it is not found when sought in the seven ways. For example, oneself does not exist independently and unrelatedly, that is, inherently. Is one's form aggregate oneself? It is not. Does oneself exist as separate entity from the aggregates? Oneself does not. Analyzing oneself in this way, one will realize that oneself and one's aggregates exist as support and supported. For example, when we have a headache and say "I am sick," this a sign that there is a relationship between the self and the aggregates.

We possess aggregates, however, they are not inherently possessed. We have a collection of aggregates, but that collection is not the I. Because there is a collection of aggregates, it has a shape, in that each one of us has a particular shape, some of us being tall, some short, some round, and so forth. For example, when offering a mandala, the four continents each have their respective shapes. Why is that? It is said that the shape of the continents corresponds to the shape of the face of the human beings living in that continent, for example, the human beings of Jambudvipa, our world, have a chariot-shaped face. Is that shape the self? It is not.

In brief, when the self is sought in these seven ways, it is not found. The Prasangika Madhyamikas say that if the self were found when sought in any of these seven ways it would exist inherently, however, it is not found. Contrarily, the lower schools say that when the imputed object is sought, it is found. They say that if something exists it exists inherently and is found when sought.

There could be the following debate between a Vaibhashika and a Prasangika Madhyamika. For example, a fully ordained monk of the Vaibhashika system could ask a fully ordained monk of the Prasangika Madhyamika system: "Can something not be found when it is sought? Can you not find your food when you look for it?" The Prasangika Madhyamika monk cannot say that he cannot find his food. Therefore, the Vaibhashika says: "Therefore, you do find your food. You can also find your saffron-colored mantle, can you not?" The Prasangika Madhyamika cannot say that he cannot find it because he does find it. The Vaibhashika monk can then say: "Are there not people who offer you the Dharma robes?" The Vaibhashika monk can also ask: "When you lose your horse, can you not find it?" To these arguments, the Prasangika Madhyamika monk would say: "The way of searching for the self by means of the seven extremes and the way of searching for one's food or one's horse are different." In short, when a horse is sought, it is found. This is a possible debate between a Vaibhashika and Prasangika Madhyamika. The Prasangika Madhyamika says that the way of searching for one's horse and so forth is a way of searching that accords with the worldly conventions of ordinary beings, whereas the way of searching for the self by means of the seven ways is different in that when an object is sought by these reasonings it is not found. In short, when an object is sought by reasoning it is not found, but when it is sought in accordance with worldly conventions it can be found, therefore, these two ways of searching are completely different.

QUESTIONS AND ANSWERS

Student: In verse 6.107, there is the following objection:

> *"If things do not exist in suchness,*
> *Also in conventional terms, like the son of a barren woman,*
> *They would not exist. Therefore,*
> *They are just inherently existent."* [6.107]

What does it mean to 'exist in suchness'?

Geshe Jampa Gyatso: "Exist in suchness" means "exist ultimately" or "exist truly" or "exist inherently."

Student: Then, in general, when it is said "do not exist in suchness" it means that?

Geshe Jampa Gyatso: There is the problem that this could also be translated as "exist *as* suchness." Ultimate truth exists *as* suchness, but a pot does not exist *as* suchness. Conventional phenomena do

not exist as suchness, if they existed as suchness they would be inherently existent and independently existent. Inherently existent things do not exist, like the son of a barren woman does not exist.
Student: Who says that "If things do not exist in suchness, they do not exist conventionally, like the son of a barren woman"?
Geshe Jampa Gyatso: Here someone says that if a pot, for example, does not exist ultimately, it does not exist conventionally. Here someone is posing a hypothetical question.

Student: Tsongkhapa (*Illumination*, Tibetan text page 337-8) posits examples of the two extremes: the extreme of non-existence is emptiness ultimately exists, while the extreme of existence is phenomena ultimately exist. Why is emptiness ultimately existing an extreme of non-existence?
Geshe Jampa Gyatso: If emptiness existed ultimately it would be non-existent. Viewing emptiness to be non-existent would be an extreme of non-existence. What is the meaning of 'emptiness'? It is the emptiness of existing truly, existing inherently, and so forth. If emptiness existed inherently it would be the opposite, that is, emptiness would be non-existent, that is, non-existent conventionally, because it would exist truly.

Student: When one has a manifest conception of true existence while disbelieving in the referent object of this conception, what does this factor of disbelieving do? Is it possible for this manifest conception to produce other afflictions while one is disbelieving?
Geshe Jampa Gyatso: This can be answered by means of our own experience. However, in short, there are those who disbelieve in the referent object of the conception of true existence but still have a manifest conception of true existence. Disbelieving (*sun 'byin pa*) the referent object of the conception of true existence means that the referent object has been opposed or harmed. If someone has a conception of true existence, he does not have to believe in the true existence of the referent object. For example, someone who has realized the table is not truly existent can still have an innate conception of true existence of the table. When the table appears to this person, it appears to be truly existent and inherently existent. Therefore, this person has a conception of true existence. But, if he is asked whether he thinks that the table exists truly, he will say that he does not believe that the table exists truly. However, here a distinction has to be made between the person and the awareness.

A person who has realized emptiness and disbelieves the referent object of the conception of true existence can still generate afflictions such as attachment, anger, and so forth. This is also true in the case of someone who has directly realized emptiness.

END

Monday afternoon, 19 February 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 375) says:

> For that reason, according to the previous explanation, when thoroughly analyzed in this way a substantially existent person is not justifiable.
>
> *Therefore, the support of the conception of I is not a thing.*
> *It is not other than the aggregates, not the entities of the aggregates,*
> *Not the support of the aggregates, not their possessor.* [6.150abc]
>
> *Therefore*, *the support* – that is, the observed object – *of the conception of I is not a thing*, that is, it is not inherently existent. When thoroughly analyzed,
>
> - the self *is not other than*, that is, a different entity from, *the aggregates*,
> - the self is neither the collection nor the single units of *the entities of the aggregates*,
> - the self *is not the support of the aggregates* and the aggregates also do not exist as a support of the self,
> - the self is also *not an* existing by way of its own entity *possessor of those* aggregates.
>
> Therefore, our schools, due to asserting the statements "The self is imputedly existent" or "The self is not observed ultimately" to also be suitable, should not assert the self by means of the ways propounded above. This is explained stating:
>
> *It is established in dependence on the aggregates.* [6.150d]
>
> The self *is established in dependence on the aggregates*. Just as when asserting merely that "In dependence on this, that arises" in order to not eliminate the presentation of conventional truths, one does not assert production from the four, without causes and so forth; likewise, also in the context of the self, when asserting it to be imputed in dependence on the aggregates, having dispelled the previous positions that possess the faults that were explained above, one should assert merely that "It is imputed in dependence on the aggregates" in order that the conventions of the world completely remain, because of seeing that it is not possible to deny that conventionally imputed as the self.

When the self is analyzed through reasoning, it is not acceptable to say that it is substantially existent. Therefore, such an inherently existent self is not the observed object of the conception of I. When the self is analyzed it not found to be other than, that is, a different entity from, the aggregates. In short,

- the self is not inherently one entity with the aggregates,
- the self and the aggregates are not inherently different entities,
- the self and the aggregates are not inherently existent support and supported, and
- the self does not inherently possess the aggregates.

In this way the self is analyzed in the five ways. These refutations were explained before, now the remaining two positions are refuted:

- the collection of aggregates are the self and
- the shape of the aggregates are the self.

These two positions are asserted by the lower schools. The self exists but does not exist ultimately, it exists nominally. The self is posited in dependence on the aggregates. In fact the <u>definition of the person</u> is: that which is posited in dependence on any of the five aggregates. The self arises dependently and relatedly and is, therefore, a dependent-arising or dependent-relation. In brief, the person is a conventional truth. In the Prasangika Madhyamika system production in general is accepted but production from self, production from other, production from both, and causeless production are not acceptable. The self exists as a mere imputation in dependence on the aggregates and exists to worldly renown. Lama Tsongkhapa says: "one should assert merely that 'It is imputed in dependence on the aggregates' in order that the conventions of the world completely remain, because

of seeing that it is not possible to deny that conventionally imputed as the self." The self exists as a mere imputation and as it is renowned to the world.

Lama Tsongkhapa's *Illumination* (Tibetan text page 376) says:

> In order to clarify the meaning explained above as meaning that the self is established as a mere imputation, an external example is presented and explained:
>
> *Just as a chariot is not asserted to be other than its components,*
> *It is not not other, it is also not the possessor of them, and*
> *It is not on its components, the components are not on it,*
> *It is not the mere assembly, and it is not the shape, so is it.* [6.151]
>
> *Just as a chariot*:
> 1. *is not asserted to be* an object *other than its components*,
> 2. *it is not not other*, that is, it is also not established to be one,
> 3. *it is not the possessor of* components,[158]
> 4. *it is not* supported there *on the components*,
> 5. *the components are not* inherently supported *on* the chariot,[159]
> 6. *it is not the mere assembly* of the components, *and*
> 7. *it is not the shape* of the components,
>
> *likewise*, so too should the two, the self and the aggregates, be understood similarly.

The analogy of a chariot is presented in order to clarify the meaning. The additional two refutations here are:

- the mere collection of the components of the chariot is not the chariot and
- the shape of the components is not the chariot.

Lama Tsongkhapa's *Illumination* (Tibetan text page 376) says:

> 3B1C-2B3E-2B2A-5B Extensively explaining the two remaining positions that were not explained before
>
> 1 Actual meaning
> 2 Changing that reasoning in regard to others
>
> 3B1C-2B3E-2B2A-5B1 Actual meaning
>
> A Refuting the assertion that the collection is the chariot
> B Refuting the assertion that the mere shape is the chariot
>
> 3B1C-2B3E-2B2A-5B1A Refuting the assertion that the collection is the chariot

Chandrakirti's autocommentary says:

> Here, the five positions – the position of thatness, the position of otherness, the position of support, the position of supported, and the position of possessing them – were already explained. Since the two – the position of the collection and the position of the shape – are necessarily to be established, I shall begin to indicate them:

[158] . The Tibetan text reads "aggregates" but Geshe Jampa Gyatso says that it should read 'components' in order to correspond with the example of a chariot.

[159] The Tibetan text reads "self" but Geshe Jampa Gyatso says that it should read 'chariot' in order to correspond with the example of a chariot.

If the mere collection were the chariot, the chariot itself
Would exist in [the collection][160] abiding as separate pieces. [6.152ab]

Although already explained before [in 6.135ab], this is finely set out again in order to clarify it by way of expressing other faults.

Therefore:

Because there are no components without a component-possessor,
Hence the mere shape is also not reasonable as the chariot. [6.152cd]

Because components do not exist if the component-possessor is non-existent, therefore, components are just non-existent. Therefore, a collection of what would become the chariot? The term 'also' means inclusion, in order to make known that "neither the mere shape is reasonable as the chariot, nor is the mere collection reasonable."

If asked: From where [is that known]?

Because there are no components if the component-possessor is non-existent, therefore, a mere shape is unsuitable as the chariot. The component-possessor as just non-existent is accepted by those [sects] of ours.

The five positions were explained before:
1. the position of thatness or oneness,
2. the position of otherness,
3. the position of support,
4. the position of supported, and
5. the position of possessing them.

These five positions have been refuted and next the Prasangika Madhyamikas say that if the collection of components were the chariot it would follow that when the chariot is dismantled and the components are heaped together that this heap of components should be called "chariot" because it is the collection of its components.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B1A-6C5A-2B1E-2A1 Refuting the hypothesis that the collection is the cart

If just the collection were the cart, then when
It was in fragments, the same cart would exist. [6.152ab]

It should be understood that when the parts of the dismantled cart were in separate pieces, the same cart would exist, because just the collection of parts of the cart are supposed to be the cart.

Since there's no part owner, there are no parts, therefore
Only the shape also cannot be the cart. [6.152cd]

Just the shape of the parts and collection of parts of the cart also cannot be the cart, because the parts of the cart do not exist, since the owner of the parts, the cart, does not exist; for neither the cart's individual parts nor the collection are the cart, and there is no cart which is not them. You have already accepted this last reason.

The collection of the components or parts is not the chariot, also the shape of the components is not the chariot because if there is no possessor of components there are no components. Therefore, not

[160] See LTK, p. 394. Compare with verse 6.135ab.

only is the collection of components not the chariot, also the shape of the components is not the chariot.

In general, if a chariot is dismantled and its components are heaped together it is no longer called a chariot. It is only called a chariot when the components are assembled together and are able to perform the function of a chariot. Such a chariot exists conventionally. A dismantled chariot is, therefore, not a chariot. However, there can be debate about this such as the question: "When the components of a chariot are defective, is it no longer a chariot?" The answer is that although they are defective it is still a chariot. In fact, there was once a debate like this in which the challenger said: "If the components of a chariot are defective is it still called 'chariot'?" The defendant said that is was not, to which the challenger than asked: "Then, is a lame person not 'a human being'?" The defendant was forced to that he is not a human being because he is not a fully-qualified human being. However, the defendant himself had a defective arm!

Lama Tsongkhapa's *Illumination* (Tibetan text page 376) says:

> Since the five previous positions were already explained, here the refutation of the two – the position of the collection and the position of the shape – being the chariot needs to be proven, therefore, they are indicated next:
>
> *If the mere collection were the chariot,*
> *The chariot itself would exist in the fragmented remains.* [6.152ab]
>
> *If the mere collection* of the components of the chariot *were the chariot*, *the chariot itself would* also *exist in* the collection, *the fragmented remains*, of the components of a broken chariot. Although the refutation of the collection of components being its own possessor of parts was already explained before, it is set out here in order to indicate faults other than those indicated before. There are also other faults:
>
> *Because of that, the possessor of components not existing, the components would not exist.* [6.152c]
>
> *For that* reason, if *the possessor of components does not exist* also *the components would not exist*, because of which the components would become non-existent given that our schools assert there does not exist a possessor of components in regard to the chariot.
>
> OBJECTION: They also assert that the collection of components is the possessor of parts and that the components are the parts. They also assert similarly in regard to the components and the possessor of components. Therefore, they do not assert that a possessor of components does not exist.
>
> RESPONSE: There is no such fault. In our system both the single units and the collection of the aggregates are the appropriated, therefore, they are not asserted to be the appropriator. Similarly, both the individual components and the collection of the chariot are posited as the components; they are not posited as the possessor of the components because these schools also do not assert a possessor of components which is not the collection and because they also refute that.
>
> *Therefore, the mere shape is also not suitable to be the chariot.* [6.152d]
>
> The term 'also' (v. 6.152d) means that the collection which is not explicitly expressed is included because the way in which it is included should be understood to be that "*The mere shape is also not suitable to be the chariot*, the mere collection is also not suitable."

The components and the chariot are

- not inherently one entity,
- not inherently different entities,
- not inherently existent support and supported,
- the chariot does not inherently possess the components,
- the collection of the components is not the chariot, and
- the shape of the components is not the chariot.

This is an analogy set forth to explain the self and the aggregates:

- the self and the aggregates are not inherently one entity, or the self and aggregates are not one,
- the self and the aggregates are not different entities
- the self and the aggregates are not inherently support and supported,
- the self does not inherently possess the aggregates,
- the collection of the aggregates is not the self, and
- the shape of the collection of the aggregates is not the self.

These seven can be summarized in a syllogism:

> Devadatta, as the subject, does not exist inherently because he is not found at the end of the analysis by means of the seven reasonings.

Like the chariot, the self does not exist inherently and is therefore not found when analyzed in the seven ways. The lower schools, on the other hand, say that when the self is sought it is found among the aggregates. Some of them say that it is found because the collection of the aggregates are the self, whereas others say it is found because the sixth consciousness, the mental consciousness, is the self, and still others say that it is found because the seventh consciousness, the mind-basis-of-all, is the self. The Prasangika Madhyamikas refute all these assertions and also refute the self as it is asserted by the non-Buddhists, that is, a permanent, partless, and independent self. Both the non-Buddhist schools and the lower Buddhist schools say that the self exists inherently because all internal and external phenomena exist inherently. They say that the self exists inherently because when the self that is a mere nominal imputation is sought it is found. According to the Prasangika Madhyamikas the reasoning seeking the imputed object is a reasoning analyzing the ultimate, whereas according to the lower schools is a reasoning analyzing a conventionality.

In short, the collection of the components is not the chariot. If it is asserted to be the chariot, the Prasangika Madhyamikas ask: "When the components are heaped up on the ground is there a chariot there?" The lower schools would have to say that there is no chariot there. In that case, the Prasangika Madhyamikas say that it follows that there are no components of the chariot because there is no chariot, the possessor of the components. This is in fact accepted by the lower schools.

If the lower schools are asked is the collection of the components the chariot, they would not say that it is because they do not accept that the collection of the components is the chariot. Although they accept that the components are there, they would not accept that there is a chariot there.

The Prasangika Madhyamikas ask the lower schools: "Is the collection of the aggregates not the self? Is an isolated aggregate not the self?" The Prasangika Madhyamikas say that they are not the self because they are not the appropriator of the aggregates, but rather are the appropriated and that, therefore, the lower schools should understand that the aggregates cannot be the appropriator, the self. Due to this, the lower schools cannot posit either the collection of the aggregates to be the self nor a single isolated aggregate to be the self, whereby they unable to posit the self. This is the way in which the Prasangika Madhyamikas debate with the lower schools who, in consequence, are forced to gradually give up their tenets and to become Prasangika Madhyamikas. In order to become a buddha one has to enter the Madhyamika, the middle way. Just as one chooses a highway in order to get somewhere faster, one must choose the middle way in order to reach enlightenment faster.

There is a story about two people who ran a race up and down a hill. One of them took the main road which zigzagged up the hill, whereas the other went straight up the side of the hill. However, the one who went straight up continually slipped backward on the muddy ground. Thus, the one who had taken the longer route in the end won the race.

What is the main reasoning proving the selflessness of persons? What is the main reasoning proving the selflessness of phenomena? In the *Supplement* and the *Explanation of the 'Supplement to the "Middle Way"'* the main reasoning establishing the selflessness of phenomena is the diamond sliver reasoning

and the main reasoning proving the selflessness of persons is the seven-fold reasoning. In Shantarakshita's *Ornament for the Mahayana Sutras* the main reasoning is that of freedom from one and many. In Jnanagarbha's *Two Truths* the main reasoning is the reasoning refuting production by the four alternatives. In Kamalashila's *Illumination of the Middle Way* the main reasoning is that refuting production of an existent and non-existent. These are the five reasonings proving the lack of true existence. If the object established is from the point of view of the Svatantrika Madhyamika it should be understood as lacking true existence, whereas in the Prasangika Madhyamika system it should be understood as lacking inherent existence. The lack of inherent existence is to be realized through the force of reasoning, not through the force of experience. There is a story about one geshe who during pujas would sit in meditation posture without speaking and moving for two to three hours. When his classmates asked him what he was doing, he responded that he was meditating on emptiness. They then asked him what emptiness looks like, to which he responded that emptiness is like a blue haze. The other monks laughed at him and asked him how could that be. The monk said that emptiness was indescribable, but if they wanted an answer it was like a blue haze, like empty space. He came to be called "Blue Emptiness"! However, perhaps he had actually realized emptiness.

Tuesday morning, 20 February 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 377) says:

3B1C-2B3E-2B2A-5B1B Refuting the assertion that the mere shape is the chariot

Chandrakirti's autocommentary says:

> Furthermore, if a mere shape is asserted as the chariot, is that shape thought to be the components' or the collection's?
>
> There, even if asserted to be the particular shape of the components, it would be deemed to be [a shape] which did not give up the former particular shapes or which did give up the former particular shapes. There, if the former is asserted, it is unreasonable.

When the opponents assert the shape of the components to be the chariot, the Prasangika Madhyamikas ask: "Is the shape of the individual components the chariot or is the shape of the collection of components the chariot?" They then say that if it is the shape of the individual components "it would be deemed to be [a shape] which did not give up the former particular shapes or which did give up the former particular shapes." If the former is asserted, that is not correct. Chandrakirti then explains why it is incorrect.

Chandrakirti's autocommentary says:

> If asked: Why?
>
> *For you, just like the shape existed in the past in each component,*
> *It is also like that when included in the chariot.*
> *Just as in those that were separated,*
> *Also now, the chariot does not exist.* [6.153]
>
> If, just as the particular shapes of the wheels and so forth existed prior to the occasion of the chariot, the particular shapes of the wheels and so forth do exist – like only that, also at the time of the chariot, as it was non-existent at the time the components were separated, the chariot is to be ascertained as not existing also at the time of the chariot itself, because the shapes of its components are not different.

Gedun Drup's *Mirror of the Clarification of the Thought* (Tibetan text page 64), as translated by Martin Willson, says:

3B1A-6C5A-2B1E-2A2 Refuting the hypothesis that the shape is the cart

If you say that the shape of the parts is the cart, then either the shape of the individual parts is the cart, or the shape of the collection of parts is the cart.

On the first view, either a shape without difference from the shape at the time when the parts were not put together is the cart; or a shape unlike the shape at that time is the cart.

You say the shape of each part is the same
When it belongs to the cart as it was before –
Then, just as in those that were separate,
Still, similarly, the cart does not exist. [6.153]

On the first view, it follows that just as the cart does not exist in the separated parts, so likewise, even when the parts have been put together, there is no cart. For (a) just as the shape existed before, at the time when the parts were not put together, the shape also exists like that when they are included in the cart, and (b) the mere shape of the individual parts is posited as the cart.

Chandrakirti's autocommentary says:

In the case of the second position – only another shape will be called "chariot:"

Now, if at this time of the chariot itself,
The wheels and so forth have different shapes,
This would be apprehended, yet that also does not exist.
Therefore, the mere shape does not exist as the chariot. [6.154]

If solely another particular shape of those [components] from that which existed before – rectangular, long, round, and so forth, the individual particular shapes of the components of the chariot, the wheels, axle, pegs, and so forth – were to be produced at the time of the chariot itself, although it would exist to apprehension, it is not apprehended.

Thus, for the wheel, the possessor of shapes that are different – the spokes, rim, hub, and so forth – its shapes are not perceived to be altered on the occasion of the chariot. Therefore, it is unreasonable to say, "the shape of the parts is the chariot."

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

Now if, at this time when it is a cart,
The wheels and so on have a different shape,
This will be perceived; but it is not,
Therefore just the shape is not the cart. [6.154]

On the second view, if you say that now, in this time when it is established as a cart, the wheels and so on have a different shape, unlike before, then the mere shape of the individual parts is not the cart; for if this shape like that existed, it would be perceivable, yet it is not.

The Prasangika Madhyamikas ask: "Is the shape of the individual components of the chariot the chariot or is the shape of the collection of components the chariot?" If the opponents say that the shape of the individual components is the chariot, the Prasangika Madhyamikas ask them whether it

is their shape when the individual components are assembled together or their shape when they are not assembled together. The Prasangika Madhyamikas say that if the chariot is asserted to be the shape of the components when they are not assembled together this is not correct because in that case there would exist a chariot with respect to each of the components, the wheels and so forth. On the other hand, if the chariot is asserted to be the shape when the individual components are assembled together, the Prasangika Madhyamikas ask: "Does the shape of the individual components when not assembled still exist or not when they are assembled?" They say that also with respect to the shape of the components when they are assembled together there would be no chariot because when the components are separate there is no chariot.

In short, if the opponents say that the shape of the individual components is the chariot it follows that each of the individual components should be a chariot but they are not. Therefore, the Prasangika Madhyamikas say that it follows that there would be no difference between when the components are assembled and when they are not assembled because the shape of the components is not different. Thus, it follows that according to the lower schools each of the individual components, the wheels, the nails, the axle, and so forth, should be a chariot, but they are not. In other words, according to the lower schools the shapes of round, long, and so forth should be a chariot, whereas they are not. The conclusion is that the shape of the individual components is not the chariot because if the shape of the individual components were the chariot, the chariot would be apprehended even before the components are assembled, whereas this is not the case.

Chandrakirti's autocommentary says:

> In case it is considered: The particular shape of the collection of the wheels and so forth is the chariot.
>
> It is explained that "that is also unreasonable:"
>
> *Because your collection does not exist at all,*
> *The shape is not of the collection of components.*
> *In dependence on that which is nothing at all,*
> *How could there be shape here?* [6.155]
>
> If a thing called 'collection' were to exist a little, shape having its support would be imputed, yet the so-called "collection of components" does not exist even a little. How could shape also be imputed having the support of that which does not exist even a little, because [you] accept imputation as only having the support of substance?

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *Since your collection does not exist at all,*
> *That shape is not of the collection of parts;*
> *Based on what is nothing whatsoever,*
> *How can there be any shape in this?* [6.155]

If you say that the shape of the collection of parts is the cart, then in this case, dependent on that collection of parts which is not substantially existent at all, how can there be any such shape? It follows that there cannot, because that shape is not a phenomenon imputed with just the collection of parts, since according to you, the collection is by no means a substantial existent. You have already accepted the major premise [that what does not exist substantially cannot be a base of imputation].

The shape of the collection of the components is also not the chariot. If it were, the fault would arise that when the components are not assembled and are heaped together it would follow that that heap is a chariot.

The collection of components does not exist even slightly as the chariot. Chandrakirti says: "How could shape also be imputed having the support of that which does not exist even a little, because [you] accept imputation as only having the support of substance?"

In short, the shape of the individual components is not the chariot nor is the shape of the collection of the components the chariot. Therefore, the chariot does not exist as either of these, nor is it found to be either of these. If the shape of the individual components is asserted to be the chariot, the Prasangika Madhyamikas ask whether it is the shape when the components are not assembled or when they are assembled. In conclusion, the chariot is not the shape of the individual components when they are not assembled nor when they are assembled. The shapes of round, long, and so forth are not the chariot.

If the opponents ask the Prasangika Madhyamikas what they posit as the chariot, on what would they say that the chariot is imputed, the shape or something else?

Student: The Prasangika Madhyamikas would say that the chariot is imputed on the basis of the collection of the components.

Geshe Jampa Gyatso: Therefore, the chariot is imputed in dependence on the collection of the components and is not found when sought. What is posited as a chariot in the perspective of an innate awareness lacking analysis?

Student: It is the shape of the collection of the components.

Geshe Jampa Gyatso: Do the rest of you agree?

Student: You could carve the shape of a chariot in stone but it would not be a chariot, so perhaps it is what performs the function of a chariot that is posited as a chariot.

Geshe Jampa Gyatso: If we talk instead about the person, we would not say that the shape of the aggregates is the person. On the other hand, a chariot is probably imputed mainly in dependence on the shape, but also in dependence on being able to perform the function of a chariot. What is the definition of a chariot? Think about it. A drawing of a chariot has the shape of a chariot but, even though it does not perform the function of a chariot, it is still called a chariot. Similarly, a toy that has the shape of a chariot is also called a chariot.

Lama Tsongkhapa's *Illumination* (Tibetan text page 377) says:

> Furthermore, if you assert the mere shape of the chariot to be the chariot, do you consider that shape to be that of each of the components or to be that of the collection? If it were the first case, it would either be:
>
> - a shape that has not relinquished the particular shape of the previously non-assembled [chariot] or
> - a shape that has relinquished the particular shape of the previously [non-assembled chariot].
>
> Why is it that if the first case is asserted, that too is unsuitable?
>
> *For you, just like the shape that existed earlier in each of the components,*
> *Likewise, it would be similar also when it is realized to be chariot*
> *Just as in those which were separate,*
> *Likewise, also the chariot would not exist.* [6.153]
>
> According to *you*, *just like the shape that existed* in *each of the components* of the chariot, such as the wheels and so forth, *earlier* when it was not assembled, *likewise*, would [the shape] be *similar* to before *also* later when it is assembled – that is, when it is *realized*, that is, established, *to be a chariot*. Then, *just as* the chariot did not exist *in* the components *which were separate*, not yet having been assembled, *likewise*, when the components are assembled together, *also the chariot would not exist*

- because you posit the mere shape of the individual components to be the chariot and
- because the shape of the individual components before and later would not be different.

The second position is:

If now at the time of the chariot itself
The shapes of the wheels and so forth were different,
That would be apprehended but it too is not;
Therefore, the mere shape does not exist as the chariot. [6.154]

If another particular shape, different from the previous, arising later on were the chariot, then, *if now at the time the chariot itself* is established, the individual particular *shapes* of the components of the chariot, *the wheels and so forth* – that is, the axle, the nails, and so forth – and the shapes of being quadrangular, that is, square, as well as long, round, and so forth, *were different*, that is, incongruous with the earlier [shapes] when not assembled, *that* incongruous shape of the individual components *would be apprehended* by the eye consciousness *but it too is not*. *Therefore, the mere shape* of the individual components *does not exist as the chariot*.

OPINION: The particular shape of the collection of the assembled components, the wheels and so forth, is posited as the chariot.

RESPONSE: The explanation that "That too is unsuitable" is:

Because of that, since for you the collection does not exist at all,
That shape is not of the collection of the components. [6.155ab]

If that called "the collection" existed in the slightest bit as a thing, that is, substantially, it would be imputed on the shape which depends on it. However, that called "the collection of components" does not have the slightest substantial existence. *For that* reason, *since* according *to you the collection does not exist at all* – that is, it does not exist substantially even in the slightest – *that shape is not* imputed in dependence on taking *the collection of the components* as the basis of imputation

- because you assert such imputed existents to only take a substantial existent as a basis and
- because you assert the collection of components to also be imputedly existent.

In dependence on that which does not exist at all,
Here how could it be seen to be the shape? [6.155cd]

Therefore, *in dependence on* taking *that which does not exist at all*, i.e., that which does not exist substantially in the slightest, to be the basis of imputation, *here* in the context of a chariot *how could it be seen to be the shape* that is posited as the chariot*?* It could not. Here the opponents assert that imputedly existent things are imputed in dependence on some self-sufficient substantial existents existing as the bases of imputation and they also assert that both the collection and the shape are imputed existents. Therefore, when the collection is asserted to be the basis of imputation of the shape, not only is this contradictory, but, just as the color of a being is not suitable to be posited as the being, also in regard to a chariot neither its color nor its shape are suitable to be posited as the chariot because these two are the objects of appropriation of the chariot. This it to be understood.

Is the chariot the shape of the individual components or the shape of the collection of the components? If it were the first case, the Prasangika Madhyamikas ask: "Is the chariot the shape of the individual components at the time when they are not assembled together or is it the shape of the individual components at the time when they are assembled together?" In brief, the shape of the individual components at the time when they are not assembled together is not the chariot. If it were the second case, that is, it is the shape of the individual components at the time when they are assembled together, the Prasangika Madhyamikas ask: "Is the shape of the individual components at the time when they are not assembled together given up when they are assembled together?" In other words, when the components are put together does the shape of the individual components change? The Prasangika Madhyamikas say that the shape of the individual components at the two times, when they are assembled and when they are not assembled, is not different. Therefore, just as there does not exist a chariot when the components are not assembled there would not exist a chariot when the components are assembled together because the shape of the individual components at both times is

the same. Or they would say that it follows that when the individual components are not assembled together there would still be a chariot because when they are assembled together there is a chariot. This is because the shape of the individual components is the same at both times, that is, when they are assembled together and when they are not assembled together. For example, a round component at the time of non-assemblage is still round when the components are assembled together. This can be confirmed by what is seen in the world without any need to study philosophy.

In conclusion, a chariot does not exist as the shape of the individual components nor as the shape of the collection of the components. The chariot cannot be the shape of the collection of components because this does not exist as a substantially existent basis even slightly. Lama Tsongkhapa says: "Here the opponents assert that imputedly existent things are imputed in dependence on some self-sufficient substantial existents existing as the bases of imputation and they also assert that both the collection and the shape are imputed existents." According to the lower schools if something is an imputed existent its basis of imputation is a substantial existent. The Prasangika Madhyamikas say that there is nothing that is substantially existent, whereas that there is no basis of imputation that is a substantial existent is the lower schools' own assertion. This is similar to the fact that the color or complexion of a being is not the being. Likewise, the color of the chariot is not the chariot nor is the shape of the chariot the chariot. This is because the shape of the chariot is an object to be appropriated by the chariot. For example, the color and shape of the being is not the being but is that which is appropriated by the being. The person or being is merely imputed by means of a name on the collection of the aggregates. Likewise, a chariot is imputed on a collection of components having the ability to perform the function of a chariot.

The Tibetan word for chariot, *shing rta*, literally 'wood-horse,' was originally given on the basis of a collection of wooden components drawn by a horse. However, there are similar objects pulled by oxen or human beings.

A car is also composed of individual components, wheels, doors, windows, and so forth, which when disassembled and heaped together, even though all the components are there, one would not say that there is a car there. There is only a car when the components are assembled together. This is because prior to their assemblage that collection of components is not able to function as a car. When a heap of individual components of a car is assembled together, the shape of the collection changes but not the shape of the individual components, for example, the shape of the wheels at the time when the car is not assembled and at the time when it is assembled remains the same. The Prasangika Madhyamikas' argument here is that just as the lower schools would say that a car exists subsequent to assembling the components together, so too should they say that a car exists prior to their assemblage. And just as they say that there is no car that is the shape of the individual components prior to their assemblage, there is no car that is the shape of the individual components subsequent to their assemblage.

Geshe Jampa Gyatso: Where is the I?
Student: Which I? The mere I or the inherently existent I, the substantially existent I, the permanent, partless, and independent I?
Geshe Jampa Gyatso: Just the usual "I." Does that I exist among the aggregates? Is it the shape of the aggregates or the collection of the aggregates? What is it?
Student: It is not any of those.
Geshe Jampa Gyatso: On what is the I imputed?
Student: It is imputed on any of the five aggregates, whichever one I am paying attention to at that time.
Geshe Jampa Gyatso: Would you call your head "I"?
Student: My head is not the I.
Geshe Jampa Gyatso: What about when you are paying attention to your head?

Student: Then, it is the basis of imputation of the I.
Geshe Jampa Gyatso: Then your head is the basis of imputation of I or Jonathan?
Student: The feeling of my head is the basis of imputation of the I.
Geshe Jampa Gyatso: If someone hits you on the head and you feel pain, is that feeling the basis of imputation of the I?
Student: It is.
Geshe Jampa Gyatso: We should all spend some time looking for the I. His Holiness the Dalai Lama, one time when teaching the Great Seal, told everyone to spend the next day looking for the I. So the next day, together with Khensur Lobsang Nyima, we went for a picnic to look for our I. We pointed at each other in order to make a strong I arise. Although this I, the object of negation, appears, it is difficult to recognize. It is also said that when someone becomes very angry there is a brief moment in which the object of negation arises, however, it is still difficult to recognize. It is said that also when happy the I that is the object of negation arises faintly. It is important to recognize this I that is the object of negation. This I, which appears very briefly is a concrete, independent I that arises without depending on anything. When one seeks the I that is the object of negation it is this I that one should identify. When sitting relaxed, the I that is the object of negation is difficult to identify. We should try to recognize this concrete, independent I that is the object of negation, and then negate it. Such an independent I does not exist in reality, yet it appears briefly in particular situations. The advice of the holy masters is to first recognize the I that is the object of negation and then to negate it.

Lama Tsongkhapa's *Illumination* (Tibetan text page 379) says:

> 3B1C-2B3E-2B2A-5B2 Changing that reasoning in regard to others

Chandrakirti's autocommentary says:

> In case it is asserted: In dependence on the collection, although specified as untrue, there will be untrue shape.

In dependence on the collection of components which is imputedly existent, there is shape that is imputedly existent.

Chandrakirti's autocommentary says:

> It is like that and:
>
> *Just as you assert this, thus,*
> *All kinds of effects having untrue natures*
> *Should also be known to be produced*
> *Having depended on untrue causes.* [6.156]
>
> In dependence on untrue ignorance, [karmic] formations solely having untrue nature are produced. In dependence on a seed having untrue nature, a sprout having untrue nature is produced. Likewise are the entities of cause and effect having untrue nature, without exception also to be realized. Since it is useless to strongly settle on things such as a deer of the shadows, the flesh of which is unable to be consumed even through hundreds of exertions, what is to be done?

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B1A-6C5A-2B1E-2B Change of that argument for the other

You may say, "The imputedly existent shape is imputed based on the imputedly existent collection." –

Understand that just as you hold this,
Everything is produced having the nature
Of an untrue appearance of result,
Dependent on a cause which is untrue. [6.156]

Then you should understand that everything is to be understood as produced with the nature of the untrue aspect of a result dependent on an untrue cause, for this is admitted in just the way you maintain that an imputedly existent shape is imputed based on an imputedly existent collection.

An untrue cause produces an untrue result or a false cause produces a false result. For example, ignorance which is untrue produces the result of karmic formations which is untrue. Similarly, a barley seed which is untrue produces the result of a barley sprout which is also untrue. Chandrakirti says: "Likewise are the entities of cause and effect having untrue nature, without exception also to be realized." It should be understood that untrue causes produce untrue results. On the other hand, a true cause, that is, an inherently existent cause, cannot produce an inherently existent result. In brief, conceiving an object to be true, although it is not, is meaningless. For example, a hunter who, wishing to eat the flesh of a deer but seeing merely its shadow and settling on that, will not come to eat the flesh of a deer. Likewise strongly settling on things as true, although they are untrue, is useless.

Chandrakirti's autocommentary says:

Due, to this, it is also just unreasonable to say "Awareness of vase
Regarding [atoms of] forms and so forth abiding like that." [6.157ab]

There, some [of our own sects] propound "There will be awareness of vases and so forth regarding forms and so forth abiding like that." That also is excluded by the example of the chariot.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

Hence, too, you cannot say the pot's conceived
In form and so on, which remain like that. [6.157ab]

This demonstration that the collection of the cart's parts is not the cart also compels other things, for it shows also that one cannot say there is the idea[161] of a pot in the collection of the eight kinds of atoms of form, etc. of the pot, which remain like that.

Someone thinks that the collection of the eight particles of a pot is the pot, however, this too is not correct. This was already refuted by means of the example of the chariot in which the shape of the individual components of the chariot and the shape of the collection of components of the chariot were refuted to be the chariot.

If it is asked how the eight particles of the pot exist, there are different responses from the various schools. For example, some schools say that the eight particles exist in the pot in a manner of touching or adhering to each other. Others say that they do not touch each other but that there is space between the particles. Still others say that they touch each other but without merging. However, if the particles of a tea cup abide without touching each other there would be the consequence that

[161] *blo*

when it is filled with tea, the tea will leak out between the particles. In order to avoid this consequence, these schools say that the wind energy between the particles prevents the tea from leaking out. On the other hand, if the particles are asserted to adhere to each other, it would follow that the entity of the particles would merge or mix. However, it is said that their entities do not merge.

Thus, either the eight particles of a pot exist in a manner of touching or not touching each other. The conclusion of the argument here is that the shape of the individual eight particles is not the pot and the shape of the collection of the eight particles is not the pot.

Chandrakirti says: "There, some [of our own sects] propound "There will be awareness of vases and so forth regarding forms and so forth abiding like that." This too is excluded by the example of the chariot."

Chandrakirti's autocommentary says:

> Furthermore:
>
> *Since without production, form and so forth also do not exist.*
> *Therefore, also their shape is unreasonable.* [6.157cd]
>
> How there is no production for forms and so forth was already explained before. Therefore, because of non-production, forms and so forth do not exist. How could those not existing be reasonable as the very reason of imputing vases and so forth? Therefore, since unreasonable to assert vases and so forth as having appropriation of substance, vases and so forth do not have the essential-nature of the particular shape of the form and so forth.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *Since there's no birth, form and so on don't exist,*
> *Therefore it also cannot be their shape.* [6.157cd]
>
> As for the form, etc. of a pot, that pot and so on cannot be their shape for they too do not inherently exist, since there is no inherent production.

Since there is no inherent production, forms and so forth do not exist inherently. "Also their shape is unreasonable" means that inherently existent shape is also unreasonable. "Since without production, form and so forth also do not exist" means that because there is no inherent production, forms and so forth do not inherently exist.

Chandrakirti says: "How could those not existing be reasonable as the very reason of imputing vases and so forth?" This means that since there is no inherently existent vase there is no inherently existent basis of imputation. Is a vase, or a pot, color or shape?

Student: It is shape.

Geshe Jampa Gyatso: Since it is not color, it is shape. Shape is an object of apprehension of an eye consciousness. "Vase" is imputed on that attribute of shape. A vase is defined as: that which is bulbous, flat bottomed, and capable of holding fluid. Would it be sufficient to say that a vase is that which is bulbous and capable of holding fluid? The stomach is bulbous and capable of holding fluid, but it is not flat-bottomed. Why is a cup not a vase?

Student: Just because of worldly conventions.

Geshe Jampa Gyatso: That is right. The collection of the eight particles is not the vase and the shape of the collection of the eight particles is not the vase, but the term "vase" or "pot" is affixed through worldly renown. Some texts say that what is bulbous-bellied is the definition of a vase or pot without mentioning its other two features of being flat-bottomed and capable of holding fluid. A definition is

that which is posited, therefore, the bulbous-bellied is what is posited as the vase or pot. Is there something that looks like a vase but does not have space into which fluid can be poured? There is. *Collected Topics* says that pot and pillar are contradictory. Therefore, if it is asked whether there is a common locus of pillar and pot, the response is that there is not. Yet if many pots are piled up on top of each other and a beam is placed on top of the pile, would it not function as a pillar, which is that which holds up a beam? The definition of a pillar is that which performs the function of holding up a beam. To this debate one can respond that a pile of pots is not a pot.

Lama Tsongkhapa's *Illumination* (Tibetan text page 379) says:

> OBJECTION: Although an untrue collection is considered to be imputedly existent, in dependence on it there is a shape that is untrue, that is, imputedly existent.
> RESPONSE:
>
> *Just as you assert that, likewise,*
> *Through depending on untrue causes,*
> *The types of results having an untrue nature –*
> *Everything – should also be understood to be produced.* [6.156]
>
> *Just as you assert that* an imputedly existent shape is posited in dependence on an imputedly existent collection, *likewise*, *through depending on untrue causes* such as ignorance and a seed, you should understand that *the types of results*, such as karmic formations and a sprout, *having an untrue nature* or entity, are produced. Similarly, you should *also* understand the entities of causes and results other than them – *everything* having an untrue nature – *to be produced*.

An untrue shape is imputed in dependence on an untrue collection and from untrue causes come untrue results. It is acceptable that from a false cause comes a false result.

Here it is said that if, through seeing the shadow of a deer, one adheres to it and thinks to kill it in order to eat its meat, all one's actions will be without result. Likewise, conceiving an inherently existent cause to bring an inherently existent result is meaningless. However, this is what is asserted by all the lower schools. In other words, the Prasangika Madhyamikas say that the lower schools conceiving an inherently existent result to be produced from an inherently existent cause is like a hunter conceiving the shadow of a deer to be an actual deer in that all one's actions become meaningless or useless.

Lama Tsongkhapa's *Illumination* (Tibetan text page 379) says:

> *Hence, saying "With respect to those abiding such as form and so forth,*
> *There is an awareness of pot" is also just not suitable.*
> *Since there is no production, also forms and so forth do not exist.*
> *Therefore, they too are not suitable to be shape.* [6.157]
>
> Strong adherence to falsities – like shadow deer, the flesh of which cannot be eaten even though one makes hundreds of attempts – as truly existent is meaningless, *hence*, what is to be done? Many of our own schools propound *saying* "Since the collection that *abides* as a combination – *such as* the eight particles, *form and so forth*, of a pot – is the pot, there is an *awareness of pot*." Since that is eliminated by the example of a chariot, it *is also just not suitable*. In addition, *since* it was already explained before that *there is no* inherent *production*, *also forms and so forth do not exist* inherently. *Therefore*, since it is also not suitable to assert pots and so forth to be substantially existent appropriations, *those* pots and so forth are *not suitable* to be the attribute of *shape* of form and so forth.

Lama Tsongkhapa says: "Many of our own schools propound saying 'Since the collection that abides as a combination – such as the eight particles, form and so forth, of a pot – is the pot, there is an

awareness of pot.'" This was refuted previously by means of the example of the chariot in which the collection of the components were refuted to be the chariot and so forth.

There is debate about whether the eight particles of the pot abide combined together. Some of the lower schools say that they abide combined together, others that they abide without being combined together, however, all the lower schools say they abide existing inherently. This is what is refuted by the Prasangika Madhyamikas. Lama Tsongkhapa says: "In addition, since it was already explained before that there is no inherent production, also forms and so forth do not exist inherently."

Lama Tsongkhapa then says: "Therefore, since it is also not suitable to assert pots and so forth to be substantially existent appropriations, those pots and so forth are not suitable to be the attribute of shape of form and so forth." The lower schools posit substantial existents and posit the eight particles as such. In other words, they say that form and so forth are substantial existents. Bhavaviveka in his *Blaze of Reasoning* says that pots and so forth are substantial existents. Likewise, trees, forests, and so forth are not imputed existents, but are substantial existents. Therefore, it would seem that Bhavaviveka says that forms and so forth are substantial existents. In this way, he indirectly says that forms are not imputed existents, whereby pots also cannot be imputed existents.

On the other hand, according to the Prasangika Madhyamika system there are no substantial existents because for them whatever is an established base is an imputed existent in that they say that everything is merely imputed by conception. It can be asked: "Does whatever is imputed by conception necessarily exist?" If someone says that it does, one can ask: "Do the horns of a rabbit exist because there is a conception that imputes the horns of a rabbit?" However, one time someone sent Lama Yeshe a photo of a rabbit with horns! In conclusion, whatever is imputed by conception does not necessarily exist because we impute many things that do not exist, for example, true existence. In order for something to exist, the basis of imputation must be valid. For example, when imputing "pen" it must be imputed on a valid basis – that which has the shape of a pen and functions to write. It is not sufficient just to have the shape of a pen, for example, my little finger. In short, everything imputed by a conception does not necessarily exist.

In conclusion, "pot" is imputed to a special shape. When something is imputed to be a table, it must have particular attributes. If someone were to call a chair "table" this would be harmed by worldly conventions. When a name or term is imputed to something, it must have special attributes, be able to perform a particular function, and not be invalidated by worldly conventions. For example, when "pot" is imputed on a basis, it must have the special attributes of a pot, be able to perform the function of a pot, and the imputation must not be invalidated by worldly conventions. Since a Prasangika Madhyamika is one who accords with worldly conventionalities, he is not invalidated by worldly conventions.

Student: Calling this book "book" cannot be invalidated by worldly conventions because it is a valid basis for imputing book, however, truly existent book is also not invalidated by worldly conventions, therefore, it would seem that it is not sufficient to say that it is not invalidated by worldly conventions.
Geshe Jampa Gyatso: To avoid this problem we could also specify "it is also not invalidated by a valid cognizer of the ultimate."

Lama Tsongkhapa's *Illumination* (Tibetan text page 379) says:

3B1C-2B3E-2B2A-5C Dispelling others' arguments in regard to explaining in that way

Chandrakirti's autocommentary says:

> It is mentioned here: Well then, when sought in seven ways in the manner which was explained, if this chariot does not exist, then since the chariot is non-existent, that which is imputed

conventionally in the world as the chariot would become eliminated. Yet, statements such as "Fetch the chariot, buy the chariot, repair the chariot," and so forth are seen. Therefore, because renowned to the world, chariots and so forth just exist.

Response to this: This fault will [apply] to only you. It is like this. When sought in seven ways in the manner explained before, the chariot is incorrect and yet you, having completely analyzed, do not accept another means of establishment in presenting the thing as established. Therefore how will the conventions of the world which state "Fetch the chariot" and so forth, be established for you? We do not have this fault.

Because:

That indeed will not be established by the seven modes
For the world or in thusness.
Without analysis, here through just the world,
It is imputed in dependence on its components. [6.158]

Indeed, the chariot will not be established ultimately and deceptively when that is sought in seven ways by this manner: "The chariot is not asserted as other than its components" and so forth. Nonetheless, having abandoned analysis, it is imputed in dependence on its components – the wheels and so forth – through the world itself, like blue and so forth and feeling and so forth.

Therefore, because of accepting dependent imputation like accepting dependent arising, the mere state of having this as a condition, the conventions of the world will not follow as cut off for our position. Just this is worthy to be accepted also by the other side.

Just as in the case of the chariot, likewise, also the person is not findable when sought by means of the seven-fold analysis, yet exists as a worldly convention that is found by an innate awareness lacking investigation and analysis. Therefore, the person exists conventionally and is able to perform a function.

Wednesday morning, 21 February 2001

When a chariot is sought by means of the seven ways it is not found. However, the chariot that is accepted in the world saying 'Buy the chariot' and so forth exists, and, therefore, a chariot exists. On the other hand, it is not possible to posit the chariot through seeking the imputed object. This is because if the chariot were posited through seeking the imputed object the faults mentioned before would be accrued. The lower schools have these faults because they do not have any other way of positing the chariot other than as the imputed object that is found when sought by means of thorough analysis. Chandrakirti says: "Therefore how will the conventions of the world which state "Fetch the chariot" and so forth, be established for you? We do not have this fault." The Prasangika Madhyamikas do not have this fault because they do not posit the chariot through seeking the imputed object, but instead posit it in accordance with worldly conventions. Positing it in this way, the chariot exists.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B1A-6C5A-2B1E-3 Rejecting an opponent's argument against such an explanation

Neither in reality, nor for the world, indeed,
Do the seven ways establish that.
But without analysis, just from the world's viewpoint,
Here it's imputed, dependent on its own parts. [6.158]

It follows that although the cart is not found by seeking in the seven ways, it is not necessary that it does not exist; for seeking in the seven ways does indeed not establish it in absolute reality or for the world, but without analysis which seeks the imputed object, by worldly convention only, it is imputed here depending on its own parts.

The chariot cannot be found when sought by means of the seven-fold analysis, but is posited in accordance with worldly conventions. Thus, it exists in the perspective of an innate awareness lacking investigation and analysis and is posited in dependence on its components. When something is sought by means of the seven ways, it is not found to exist either conventionally or ultimately. Therefore, one should not posit it by seeking it in the seven ways but posit it in accordance with worldly conventions.

The examples of blue, feelings, and so forth are posited in accordance with worldly conventions, they are not posited by thorough analysis. Likewise, a chariot is posited in the same way. A chariot is a dependent-arising, a mere conditionality. Chandrakirti says: "Therefore, because of accepting dependent imputation like accepting dependent arising, the mere state of having this as a condition, the conventions of the world will not follow as cut off for our position." The worldly assert that a sprout is produced from a seed and for this to happen conditions such as water, manure, and so forth are necessary. Just as a sprout is produced from a seed, similarly, a mother gives birth to a child. This is the position of the Prasangika Madhyamikas who, therefore, do not have the aforementioned faults. The Prasangika Madhyamikas say that the opponents should also accept this. Chandrakirti says: "Just this is worthy to be accepted also by the other side." It would be best if the opponents were to also posit things without thorough analysis but in accordance with worldly conventions.

Lama Tsongkhapa's *Illumination* (Tibetan text page 379) says:

> HERE SOMEONE SAYS: Well then, when the imputed object that is the chariot is sought in the seven ways in the manner explained before, if it does not exist the chariot becomes non-existent, whereby that which is imputed conventionally in the world by 'chariot' would be interrupted; however, that is not admissible. Yet, statements "Get the chariot," "Buy a chariot," "Repair the chariot," and so forth are also necessarily seen. Therefore, because they are renowned to the world, chariots and so forth exist.
>
> RESPONSE: Since this fault, between us and yourselves, applies only to you, we laugh at you! Why is that? Because, having thoroughly analyzed, that is, sought, the imputed object that is the chariot, you posit the chariot and do not assert other means for establishing the imputed object without seeking it. And, when the imputed object is sought in the seven ways, how are worldly conventions such as "Get the chariot" and so forth established for you? They would not [be established]. In regard to such arguments the *Treatise* responds in this way. However, those who assert themselves to be present-day Tibetan Prasangikas propound the argument "If it is not found through seeking it in the seven ways, the chariot cannot be posited" to be the Madhyamika system. Thereby, they pollute the system that is completely pure by exerting themselves in the dirty water of bad conceptions. We do not have the errors of the argument that were explained before.
>
> *That is indeed not established by the seven ways*
> *In thusness or in the world.*
> *However, it is imputed here in the world*
> *In dependence on its components without thorough analysis.* [6.158]
>
> The autocommentary says:
>
> When *that* chariot, the imputed object, is sought *by the seven ways in thusness*, that is, ultimately, *or in* the conventions of *the world*, the chariot *is indeed not established.* Nonetheless, the chariot, like blue, feelings, and so forth, *is imputed here among the* conventions of *the world in dependence on its components*, the wheels and so forth, *without* the *thorough analysis* seeking the imputed object. Therefore, just as seeds, sprouts, and so forth are asserted to be dependent-arisings, mere conditionality,

> because a chariot is also asserted to be imputed in dependence on its components, it is not that the worldly conventions of "Get the chariot" and so forth are unsuitable for our position. This is also worthy of being accepted by our opponents.
>
> Therefore, this indicates that in the Madhyamika system – which does not posit through seeking the imputed object that is the chariot – worldly conventions are asserted and that they must also be asserted by the opponents. When the faults that were flung at them are turned back against us, we should not say "We do not assert that."

In short, although the chariot is not found when sought by means of the seven-fold analysis, it does exist in accordance with worldly conventions. The lower schools argue that if the chariot does not exist inherently it follows that it does not exist at all whereby worldly conventions would be destroyed. However, worldly conventions such as "Buy the chariot" and so forth cannot be destroyed, due to which the chariot exists. The Prasangika Madhyamikas say that they do not have this fault, but that this fault is accrued by the lower schools. This is because the lower schools posit the chariot through searching for the imputed object and do not have another way of positing the imputed object when it is not found. On the other hand, the Prasangika Madhyamikas say that when the imputed object is sought it is not found and therefore posit the imputed object without searching for it.

Here Lama Tsongkhapa scolds the Tibetans saying: "However, those who assert themselves to be present-day Tibetan Prasangikas propound the argument 'If it is not found through seeking it in the seven ways, the chariot cannot be posited' to be the Madhyamika system. Thereby, they pollute the system that is completely pure by exerting themselves in the dirty water of bad conceptions." In short, some people say that they are Prasangika Madhyamikas but posit things through searching for the imputed object.

Lama Tsongkhapa says:" We do not have the errors of the argument that were explained before." This is because when the chariot is sought by means of the seven ways it is not found either conventionally or ultimately. A chariot exists conventionally when not investigated and not analyzed as imputed in dependence on its components, the wheels and so forth. Similarly, blue and so forth are also posited in the same way. The autocommentary says: "Therefore, just as seeds, sprouts, and so forth are asserted to be dependent-arisings, mere conditionality, because a chariot is also asserted to be imputed in dependence on its components, it is not that the worldly conventions of 'Get the chariot' and so forth are unsuitable for our position." When someone says "Get the chariot" and so forth this is a worldly convention; the Prasangika Madhyamikas posit in accordance with such worldly conventions and therefore do not accrue the above mentioned faults. The autocommentary says: "This is also worthy of being accepted by our opponents."

Lama Tsongkhapa says: "When the faults that were flung at them are turned back against us, we should not say 'We do not assert that.'"

Lama Tsongkhapa's *Illumination* (Tibetan text page 381) says:

3B1C-2B3E-2B2A-5D Indicating other objects that are nominal conventions as also being established

Chandrakirti's autocommentary says:

> For this position, not only is imputing the convention "chariot" by way of renown to the world established very clearly, also those which are different names of it are to be accepted, without analysis, by way of renown to the world.

It is clearly established that the chariot is imputed in terms of what is renowned in the world. Also the different names for it are to be accepted without analysis by means of what is renowned in the world.

Chandrakirti's autocommentary says:

> Like this:
>
> *"That itself possesses components, that possesses parts,*
> *That chariot itself is the agent," are stated to migrators.*
> *The appropriator itself is also established for beings.* [6.159abc]
>
> There, the chariot is the component-possessor itself through reliance on its components, the wheels and so forth; the part-possessor itself through reliance on its parts, the wheels and so forth; the agent itself through reliance on the action of appropriating that to be appropriated, the wheels and so forth, and the appropriator itself through reliance on its appropriations.

Gedun Drup's *Mirror of the Clarification of the Thought,* as translated by Martin Willson, says:

> 3B1A-6C5A-2B1E-4 Showing, furthermore, that the conventional meaning of names is established
>
> *It is the component-owner and part-owner;*
> *For sentient beings, that cart is called the agent.*
> *For people, one establishes as the appropriator.* [6.159abc]

You should understand that the conventional meaning of the name for the cart is, furthermore, established; for that same cart is established, in relation to its own components, as the owner of the components, and in relation to its parts, as the owner of the parts; and in relation to the [action of appropriating the wheels etc. which are] to be appropriated, that same cart is described for sentient beings as the agent, while in relation to [its basis of imputation,] the appropriation, [– form etc. –] one establishes for people as simply the appropriator[162].

The chariot is a possessor of components and its wheels and so forth are the components. A wheel can also be a possessor of components in which case its parts are the components. In addition, the chariot is the appropriator and the wheels and so forth are its appropriations.

Chandrakirti's autocommentary says:

> Some, due to mistakenly realizing the meaning of the scriptures, say that the mere collection of components exists, yet the component-possessor does not exist in any way because it is not observed as different from that. Similarly, a mere part exists, the part-possessor is non-existent; only action alone exists, the agent is non-existent. Because it is not observed as different from the appropriations, only the appropriations exist; the appropriator is non-existent.
>
> According to the mistakenly propounded deceptive [truth] of the world which abides in such a way, the mere components and so forth would also follow as non-existent due to that very reasoning. Hence,
>
> *Do not destroy the deceptive that is renowned in the world.* [6.159d]
>
> This is only to be avoided.

Gedun Drup's *Mirror of the Clarification of the Thought,* as translated by Martin Willson, says:

> *Do not destroy the conventional known in the world!* [6.159d]

[162] *len.pa.po*

"Do not destroy the conventionalities well known in the world, carts and so on!" the proponent of real existence[163] is to be dissuaded; for the individual parts of the cart and the collection are not the cart, and he asserts that no cart which is not these exists.

Some say that action exists but not the agent. This is incorrect because if an action exists an agent must exist. Agent and action are mutually dependent and, therefore, both exist. Similarly, it cannot be said parts exist but not the possessor of parts, because if there are parts there is necessarily a possessor of parts. It is also incorrect to say that there is a collection of components but not a possessor of the collection of components because if there is a collection of components there is necessarily a possessor of the collection of components. In short, in the Prasangika Madhyamika system everything that exists is established in dependence, whereas the lower schools do not know how to posit the imputed object without it being found.

If someone says that there are actions but no agents this would be a mistaken engagement of worldly conventions. For example, if there is an object to be appropriated, there must be an appropriator. Someone who says that there are appropriations but no appropriator destroys worldly conventions. Chandrakirti says: "According to the mistakenly propounded deceptive [truth] of the world which abides in such a way, the mere components and so forth would also follow as non-existent due to that very reasoning." The Prasangika Madhyamika system says that one should not destroy the conventionalities renowned to the world. On the other hand, stating that actions exist but no the agent and that appropriations exist but not the appropriator harms worldly conventions and is therefore to be avoided.

Lama Tsongkhapa's *Illumination* (Tibetan text page 381) says:

> In the Madhyamika position not only is it very clearly established that the convention 'chariot' is imputed in terms of what is renowned in the world, also other particulars of names for chariot should be asserted in terms of what is renowned in the world without thorough analysis in the manner of seeking the imputed object.
>
> *That itself is a possessor of components and a possessor of parts.*
> *A chariot itself is recounted to migrating beings saying "agent."*
> *It is established for beings to be the appropriator itself.* [6.159abc]
>
> A chariot *itself is a possessor of components* in relation to its components, the wheels and so forth, and *it* is also *a possessor of parts* in relation to the parts of the wheels and so forth. *A chariot itself is recounted to migrating beings saying "agent"* in relation to the action of appropriating what is to be appropriated, the wheels and so forth, and *is established for beings to be the appropriator itself* in relation to its bases of imputation which are forms and so forth, its objects of appropriation.
>
> Some who mistakenly realize the meaning of the scriptures [say that] the mere collection of components exists, yet the possessor of the components which is not that mere collection does not exist in all ways because it is not observed to be a different entity from the collection. Applied similarly, according to those who mistakenly propound worldly conventionalities that abide in that aspect stating "The mere collection of parts, that acted upon, and the appropriated exist, yet the possessor of parts, the agent, and the appropriator which are not them do not exist in all ways because they are not observed to be a different entity from them," even the mere components and so forth would become non-existent due to the very reason just explained that the possessor of components does not exist.
>
> *Do not bring to ruin the conventionalities that are renowned in the world.* [6.159d]
>
> Therefore, only turn this back on them stating "*Do not bring to* ruin, that is, destroy, *the conventionalities*, chariots and so forth, *that are renowned in the world*."

[163] *dngos.smra.ba*

> Here, some of our own upper and lower schools who assert the collection of components and so forth to be the possessor of components and so forth, having seen that if they do not posit them to be the possessor of components and so forth a possessor of components that is a different entity from them also would not exist, assert such due to not knowing how to posit a possessor of components and so forth that is able to function. Thus, when they do not find them through seeking the imputed object which is the possessor of components and so forth, they do not know how to posit them. Because of that, since they do not assert chariots and so forth to be mere nominal imputations, they assert chariots and so forth to be established by way of their own character. Therefore, in regard to them the autocommentary says:
>
> They mistakenly realize the meaning of the scriptures.
>
> Although this supreme system does not consider either the mere collection of components nor its single units and so forth to be the illustration of the possessor of components and so forth, since the ability to excellently posit agents and actions with respect to mere nominal conventions, which is explained to be the meaning of the scriptures, is the Subduer's uncommon intention, the analytical should learn this system of commenting on his intention.

What is the chariot? In regard to a possessor of components and the components, the chariot is the possessor of components and the wheels and so forth are the components. In regard to a possessor of parts and the parts, the chariot is the possessor of parts and the parts of the wheels and so forth are the parts. In regard to an appropriator and the appropriated, the chariot is the appropriator and the wheels and so forth are the appropriated. Similarly, in regard to taking rebirth we are the appropriator and our aggregates are the appropriated.

The example of a chariot is set forth here in order to indicate that the self is also not found when sought by means of the seven ways. Although the self is not found to exist when sought in the seven ways, it does exist for an innate awareness lacking investigation and analysis. In fact, everything is posited in the perspective of an innate awareness lacking investigation and analysis. This is the way in which things are renowned in the world, they are not superimpositions of a worldly awareness. When positing something without being polluted by tenets, it accords with worldly conventions. All things exist in mutual dependence. Are the possessor of the components and components one entity or different entities?

Student: They are one entity.
Geshe Jampa Gyatso: Why?
Student: Because they are not perceived distinctly by a valid direct perceiver.
Geshe Jampa Gyatso: What about their isolates?
Student: For a conceptual consciousness they are different phenomena.
Geshe Jampa Gyatso: Are the two wheels and the chariot one entity?
Student: I cannot say that they are one entity.
Geshe Jampa Gyatso: Therefore, they are different entities?
Student: They are.
Geshe Jampa Gyatso: Why are they different entities?
Student: Because you can take a wheel and make something else out of it, for example, a chandelier.
Geshe Jampa Gyatso: When the wheels are taken off the chariot, are they still the wheels of a chariot?
Student: Before they were the wheels of a chariot, but now they are not.
Geshe Jampa Gyatso: When the wheels are taken off the chariot, are they no longer components of a chariot?
Student: They are components of a chariot even when separated from the chariot but they are not the same entity.
Geshe Jampa Gyatso: Why is a wheel still a component of a chariot when it is separated from the chariot?
Student: It is by definition, for example, I can say "My chandelier is the wheel of a chariot."
Geshe Jampa Gyatso: Then my table can be called a chariot?

Student: It cannot be called a chariot because it is not round and so forth.
Geshe Jampa Gyatso: Think about this. Is your hair a component of your body?
Student: It is.
Geshe Jampa Gyatso: Then, when you cut your hair is it still a component of your body? Are your arms and your body one entity or different entities?
Student: I cannot say that they are one entity.
Geshe Jampa Gyatso: Therefore, they are different entities?
Student: I know that I should say that they are one entity but I cannot!
Geshe Jampa Gyatso: Think about it. However, the conclusion is that there is no part of the body that is not one entity with the body. Think about the meaning of "possessor of components" and "components" and about the meaning of "appropriator" and "appropriated."

Wednesday afternoon, 21 February 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 383) says:

3B1C-2B3E-2B2A-6 Indicating the excellent quality of positing in this way of easily abandoning the conceptions holding to an extreme

A Actual meaning
B Dispelling arguments regarding this
C Connecting the conventions of a chariot and the self to the meaning of the example
D Indicating other excellent qualities of asserting a self that is imputed in dependence
E Identifying the self which is the basis of bondage and freedom of the wise and the foolish

3B1C-2B3E-2B2A-6A Actual meaning

Chandrakirti's autocommentary says:

Because if this deceptive [truth] of the world is completely analyzed like that it would not exist, it exists by uninvestigated renown. Therefore, when the yogi completely analyzes about this in this very order, he will only very quickly measure the depth of suchness.

If asked: How?

"How can that which is non-existent in the seven ways
Exist?" Thus, the yogi does not find its existence.
Due to that, thusness will also be easily entered – so,
Here, its establishment is to be asserted likewise. [6.160]

For the yogi who thoroughly investigates thinking, "If there were to exist some inherently established thing called 'chariot,' without doubt, that would be found to essentially exist in one or another way among the seven ways [of analysis], but it is not found. Therefore, the so-called 'chariot' is imagined by solely those [whose eyes of awareness] are impaired by the covering of ignorance. Inherent establishment does not exist," – certainty will be produced and the yogi will also easily engage suchness.

When one posits in accordance with worldly conventions without investigation and analysis, the conception holding to an extreme will be easily removed. In other words, conventionalities or phenomena exist when not investigated and analyzed but do not exist when sought in the seven ways. Understanding that phenomena do not exist when thoroughly analyzed but do exist as worldly conventions, one will easily realize the depth of suchness.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B1A-6C5A-2B1F-1 The substance

"How can what's seven ways non-existent exist?" –
Thus the yogin does not find its existence.
Since by that one also easily penetrates reality,
One should accept its existence this way here. [6.160]

You should understand that one should suppose this way, in this Madhyamika case, that that cart exists when the manner of its existence is not examined for. By that way of existing, not only is conventional truth acceptable, but one also easily penetrates absolute reality. This is because, if it existed inherently, an imputed object would have to be found when sought, and the yogin, saying "How can an imputed object which does not exist when sought in the seven ways, exist?," does not find this cart's existence.

When a yogi seeks the imputed object by means of the seven ways he does not find it. When he understands that phenomena do not exist inherently but do exist conventionally, it becomes very easy for him to realize the depth of suchness.

When one analyzes the self, one should do so in the same way as in the case of the chariot. When the chariot is sought by means of the seven ways it is not found, therefore, it does not exist inherently. Does this mean that it does not exist in all ways? It does exist but only in the perspective of an innate awareness lacking investigation and analysis. Those who have the cataracts of ignorance, ordinary beings, conceive phenomena to exist inherently. They see a chariot and so forth as existing from their own side. In addition, those who are trained in tenets think that when the chariot is sought it is found within the basis of imputation and, thus, exists inherently. On the other hand, yogis definitely generate an ascertainment of the lack of inherent existence of chariots and so forth and thereby easily engage suchness.

Chandrakirti's autocommentary says:

> The term 'also' means "will not also degenerate the deceptive." Therefore, it is to be asserted as established without investigation. The wise ones should surely accept this position having considered it "faultless and beneficial."

If someone accepts that phenomena exist inherently, he deviates from conventionalities because for the Prasangika Madhyamika system if something exists ultimately it cannot exist conventionally. According to this system someone viewing phenomena as existing inherently falls into the extreme of permanence. On the other hand, someone who thinks that if phenomena do not exist inherently they do not exist all falls into the extreme of annihilation. The middle way is to understand that phenomena do not exist inherently but still exist conventionally. With this understanding, it becomes easy to realize the meaning of emptiness.

Lama Tsongkhapa's *Illumination* (Tibetan text page 383) says:

> Therefore, when worldly conventionalities are analyzed in the seven ways of seeking the imputed object as explained before, they are not found to exist and, because they do exist by way of renown without investigation, when yogis analyze the self and a chariot as above in the very order that was explained before, they very quickly fathom the depth of suchness. How do they do that?
>
> *How can what does not exist by the seven ways be said to exist?*
> *Yogis not finding the existence of that*
> *Also easily engage suchness. Therefore,*
> *Here its establishment should be similarly asserted.* [6.160]

> If a chariot were inherently existent, when it is sought by the seven ways it would definitely have to be found to be one among the seven, however, *yogis do not find* that very *existence of* the chariot. At that time, *how can what is not* found when sought *by the seven ways be said to exist* inherently*?* It does not. Therefore, that called "an established by way of its own entity chariot" is imagined by only those whose awareness eyes are impaired by the film of ignorance. On the other hand, such thoughts as "Inherent existence does not exist" are definitely produced in yogis and by this means yogis *also easily engage suchness*. The term "also" (v. 6.160c) includes the fact that they also do not damage the presentation of conventionalities. This being so, *here*, in the context of the Madhyamika, the way of *establishing* a chariot is that it *should be similarly asserted* to be established without investigation.
>
> With respect to the Madhyamika system, the autocommentary states "The wise should definitely assert the position explained above thinking 'It is faultless and has beneficial qualities.'" Therefore, one should assert [Chandrakirti's] faultless system as one's own, and not inflict harm on it saying "They do not have a system."

Although a chariot is not found when sought by means of the seven ways, it exists when not investigated and analyzed. A yogi who understands this will quickly realize suchness. On the other hand, if something exists inherently it will be found when sought by means of the seven ways of analysis. However, because a yogi does not find the chariot and so forth by this means, he understands that they do not exist inherently.

Those who assert that a chariot exists by way of its own entity do so because their awareness eyes are impaired by the cataracts of ignorance. Just as someone who has cataracts does not see things clearly, likewise, when one's awareness eye is impaired by ignorance one sees phenomena as though existing inherently even though they do not exist inherently. Yogis understand that this is not correct and thereby are able to quickly realize suchness. In addition, yogis never deviate from the presentation of conventionalities, instead they understand that phenomena do not exist when they are investigated and analyzed but do exist when they are not investigated and analyzed. Lama Tsongkhapa says: "This being so, here, in the context of the Madhyamika, the way of establishing a chariot is that it should be similarly asserted to be established without investigation." For this reason, one should assert the Madhyamika position to be faultless and beneficial. One should also assert such a faultless system and not assert that the Prasangika Madhyamikas do not have a system, that is, a thesis. Nagarjuna's *Sixty Stanzas of Reasoning* (v. 50) says:

> Great beings lacking argument,
> They have no position.
> For those who have no position
> How could others' positions exist?

Some say that the Prasangika Madhyamikas do not have a particular system or assertions, however, this is not correct.

Lama Tsongkhapa's *Illumination* (Tibetan text page 384) says:

> 3B1C-2B3E-2B2A-6B Dispelling arguments regarding this

Chandrakirti's autocommentary says:

> It is mentioned here: The yogi indeed does not observe the chariot, yet observing a mere collection of its components it is not non-existent.

When a yogi searches for the chariot, he does not find it.

Chandrakirti's autocommentary says:

> I shall explain. You who search for yarn in the ashes of a burned woolen cloth are an object of laughter, [since]:
>
> *If the chariot is not just existent, then*
> *Component-possessor does not exist, nor do its components exist.* [6.161ab]
>
> If it is said: If the chariot is broken, is not the collection of its wheels and so forth indeed observed? Therefore, why say "Without the component-possessor, the components also do not exist?"
>
> It is not like that. Only one who has realized, who [previously] cognized the relation with the chariot, realizes that "These wheels and so forth are the [components of the][164] chariot;" – another will not,[165] for he will realize only the wheels and so forth as themselves component-possessors in reliance on their own parts. Although the wheels and so forth are related to the chariot, they are not realized as components of the chariot at that time due to being only dispelled to a distance.
>
> Furthermore, this meaning should be known via this example:
>
> *If the chariot is burned, the components do not exist, for example, likewise,*
> *Component-possessor burned by the fire of intelligence, the components.*[166] [6.161cd]
>
> For example, if the chariot, the component-possessor, is burned by fire, its components will also definitely be burned. Likewise, if the chariot is burned without remainder by the fire of intelligence, possessing the burner of non-observation, arisen from friction of the fire-stick of complete analysis, the components, which are the fuel-wood of the fire of wisdom, will not create a settled state of self (i.e., cannot inherently endure)[167] because they are definitely burned.

It would be ridiculous to search for yarn in the ashes of a burned woolen cloth. Similarly, if a chariot is burned so too are its components since it is not possible for the chariot to be burned but not its components. Just as a chariot is not established by way of its own entity or does not exist inherently, so too are its components not established by way of their own entity or do not exist inherently.

Gedun Drup's *Mirror of the Clarification of the Thought,* as translated by Martin Willson, says:

3B1A-6C5A-2B1F-2 Rejecting counter-argument

You may say, "The cart indeed does not exist, only the collection of the cart's parts exists inherently."

If the cart is non-existent, then
There's no part owner, nor do the parts exist. [6.161ab]

That too is unacceptable, for if the cart is not [inherently] existent, then the owner of the parts does not exist [inherently], and neither do its parts exist [inherently].

If the cart is burnt, there are no parts, for example –
If the mind's fire burns the part owner, there're no parts. [6.161cd]

---

[164] LTK, p. 402.

[165] Compare the following with the different interpretations of Poisson, pp. 322-323, and Huntington, p. 261, note 194. See LTK, p. 402 and *red.mda'.ba*, p. 271.

[166] The Tibetan translation preserved in *red.mda'.ba*, p. 271, reverses the order of the lines to read:
Burning the component-possessor with the fire of intelligence, the components
Will not exist like the components of a burned chariot.

[167] LTK, p. 403.

If the fire of the mind which realizes voidness burns up the inherently existent owner of the parts, then the inherently existent parts cannot remain; for then it is realized there are no inherently existent parts. If the cart is burnt up, there are no parts: it is like this example.

Someone says that although the chariot is not found by means of the seven ways, the mere collection of the components of the chariot exists inherently. Chandrakirti responds (v. 6.161ab): "If the chariot is not just existent, then the component-possessor does not exist, nor do its components exist." This means that if the chariot, the possessor of components, does not exist inherently, also its components do not exist inherently. The analogy set forth here is that when the chariot, the possessor of the components, is burned so too are its components, in that it is not possible for the chariot to be burned but not its components. Chandrakirti says (v. 6.161cd): "If the chariot is burned, the components do not exist, for example, likewise, component-possessor burned by the fire of intelligence, the components." The conception of true existence is like fuel which, when burned by the fire of intelligence, also the inherent existence of phenomena is burned. With this wisdom one realizes all phenomena as selfless.

Lama Tsongkhapa's *Illumination* (Tibetan text page 384) says:

> HERE SOMEONE SAYS: Yogis, when analyzing as above, indeed do not observe the chariot, yet they observe the mere collection of its components to be inherently existent.
> RESPONSE: You who search for yarn in the ashes of a burnt woolen cloth are an object of laughter!
> *When a chariot just does not exist, then*
> *A possessor of components does not exist; also its components do not exist.*[6.161ab]
>
> *When a chariot just does not exist* inherently, *then a possessor of components does not exist* by way of its own entity, whereby *also its components do not exist* by way of their own entity.

In short, the lower schools say that although the chariot is not found when sought by means of the seven ways, the mere collection of its components exists inherently. They say that although the chariot is not found when sought in the seven ways, the collection of the components of the chariot is the chariot. The Prasangika Madhyamikas say that if the chariot is not inherently existent also its components do not exist inherently. In other words, if the possessor of components does not exist inherently also the components do not exist inherently.

Lama Tsongkhapa's *Illumination* (Tibetan text page 384) says:

> QUESTION: When a chariot is broken into bits, is the collection, the wheels and so forth, not observed? Therefore, why is it said "Without the possessor of components, the components also do not exist"?
> RESPONSE: It is not like that. Taking the components which are dispersed separately to be the components of a chariot, it is only through previously cognizing them to have been related to the chariot that one realizes "They, the wheels and so forth, are the components of a chariot." However, without having previously known them to have been such, it is not [known] by another [means].
> The person, in dependence on its parts, the wheels and so forth, realizes only the wheels and so forth to be possessors of components. In the perspective of that person, although the wheels and so forth are related to a chariot, since they have been cast to a distance, at that time they are not realized to be components of a chariot.

The lower schools ask the Prasangika Madhyamikas: "When the chariot is dismantled and its components are spread out, do the components no longer exist because the chariot, the possessor of components, no longer exists?" In this way they say that although the possessor of components no

longer exists it is not necessary that the components no longer exist when they are dismantled. The Prasangika Madhyamikas respond saying that they are only conceived to be components of a chariot based on having previously seen them when assembled together. In other words, if someone only sees the components of a chariot after they have been dispersed, he does not conceive these components to be the components of a chariot. The Prasangika Madhyamikas say that according to the lower schools even someone who has not seen the chariot assembled should conceive the components to be the components of a chariot, however, this is not possible. Lama Tsongkhapa says: "In the perspective of that person, although the wheels and so forth are related to a chariot, since they have been cast to a distance, at that time they are not realized to be components of a chariot."

Lama Tsongkhapa's *Illumination* (Tibetan text page 384) says:

> In addition, the meaning of "When the chariot is not inherently existent, its components are also not inherently existent" should be understood from the example:
>
> *When a chariot is burned by fire, its components no longer exist. Like the example,*
> *When a possessor of components is burned by the fire of intelligence so too are its components.* [6.161cd]
>
> For example, *when a chariot*, a possessor of components, *is burned by fire*, *its components* also *no longer exist*, that is, they too are burned by fire. *Like the example*, *when the possessor of components*, the chariot, *is burned* without any remainder of inherent existence *by the fire of intelligence*, that is, the wisdom, realizing the unobservable, which arises from rubbing together the tinder of thorough analysis, *its components*, the fuel of the fire of wisdom, are unable to endure as a steadfast essence – that is, as inherently existent – because they are definitively burned by the fire of wisdom.

Wisdom is said to burn the conception of true existence in the sense of abandoning or dispelling it. Just as when two sticks are rubbed together, fire arises, likewise, when the wisdom of thorough analysis arises it burns the afflictions. This was mentioned before in the third chapter of the *Supplement* saying:

> *Because the light of the fire wholly consuming*
> *The fuel of objects of knowledge arises,*
> *This third ground is called the Luminous, for a copper*
> *Splendor like the sun appears to the sugata child.* [3.1]

Wisdom consumes all our many types of ignorance. In fact, each time we develop some new wisdom or new knowledge, one particular ignorance is burned. When even a small amount of wisdom is present it illuminates the darkness of our ignorance, just as a small light dispels thick darkness.

Lama Tsongkhapa's *Illumination* (Tibetan text page 385) says:

3B1C-2B3E-2B2A-6C Connecting the conventions of a chariot and the self to the meaning of the example

Chandrakirti's autocommentary (Tibetan text page 174) says:

> Just as dependent imputation was presented contemplating the manner of completely analyzing the chariot in order not to eliminate the deceptive truth and in order that yogis easily enter into suchness,
>
> *Similarly, the renown of the world also asserts*
> *The self as the very agent in dependence on*
> *The aggregates, the elements, and, likewise, the six entrances.* [6.162abc]
>
> Just as one imputes a chariot in dependence on the wheels and so forth, and there, the wheels and so forth are the appropriated, the chariot is the appropriator, similarly the self is also asserted to be the appropriator in order not to eliminate it as the deceptive truth in all the conventions of the world.
>
> The five aggregates, six elements, and six entrances are the appropriations of that self, because it is imputed as the self in dependence on the aggregates and so forth. Just as the wheels and so forth are the appropriations of the chariot, similarly, the aggregates are also called "appropriations of the self."
>
> Just as this presentation of appropriations and appropriator is presented as the conventions of the world, similarly, the presentation of its [object] acted upon and agent are also to be accepted like the chariot. To explain the aforesaid:
>
> *The appropriated is the acted upon – it is also the agent.* [6.162d]
>
> The so-called "appropriated" – the aggregates and so forth – are presented as the very [object] acted upon and the self [is presented] as the so-called "agent."

The person does not exist inherently as an ultimate, but does exist as a conventional truth. Yogis engage in the ultimate truth in dependence on the conventional truth. Just as after thorough analysis the chariot is presented to exist in dependence on its components, likewise, the self is established for the world in dependence on the aggregates, constituents, and spheres. The self is the appropriator, in that being what takes rebirth it is, therefore, what appropriates the aggregates, constituents, and spheres, or entrances. As taught in *Collected Topics* the self or the person is the being imputed in dependence on any of the five aggregates. This means that the self does not exist from its own side but exists in dependence on the five aggregates and so forth. The five aggregates are the form aggregate, feeling aggregate, discrimination aggregate, compositional factors aggregate, and consciousness aggregate.

Chandrakirti then mentions the six elements or six constituents which are the earth element, water element, fire element, wind element, space element, and consciousness element. In Nagarjuna's *Precious Garland* it says that the person is imputed to the composite of the six elements. Thus, the being is not the elements individually and is not the composite of the six elements but is what is imputed on that composite.

Chandrakirti then mentions the entrances, or spheres, of which are twelve, whereas here only the six internal spheres are mentioned: the eye sphere, ear sphere, nose sphere, tongue sphere, body sphere, and mental sphere. These six are also what is appropriated, whereas the self or being is their appropriator.

It can also be said that the self is the agent, while the aggregates, elements, and spheres are what is acted upon. This is the context of the three factors: the agent, action, and the object, or the acted upon.

Gedun Drup's *Mirror of the Clarification of the Thought* (Tibetan text page 67), as translated by Martin Willson, says:

> 3B1A-6C5A-2B1F-3 Connecting the metaphor of the cart and the meaning, the self
>
> *Like that, through worldly opinion, we hold that the self*
> *Dependent on aggregates, elements, and likewise*
> *The six sense spheres, is also the appropriator.*
> *The appropriation's the object, and this [self]'s the agent.* [6.162]

You should understand that the self is to be understood as corresponding to the cart. For through worldly opinion, we suppose that the self, based on the aggregates, the elements, and likewise the six sensory spheres, is also the appropriator; the "appropriation," the aggregates, is the object, and this self is also the agent.

Lama Tsongkhapa's *Illumination* (Tibetan text page 385) says:

> In order not to eliminate conventional truths and in order for yogis to easily engage suchness, imputation in dependence was presented through considering the way of thoroughly analyzing a chariot.
>
> *Similarly, through worldly renown – in dependence on*
> *The aggregates, constituents, and, likewise, the six spheres –*
> *The self is also asserted to be just an appropriator.*
> *The appropriated are the acted upon. It is also the agent.* [6.162]
>
> *Similarly*, from the point of view of what is *renowned in the world – in dependence on the* five appropriated *aggregates*, the six *constituents*, *and, likewise, the six spheres – the self*, like the chariot, *is also asserted to be just an appropriator* because in dependence on them it is imputed as the self. Likewise, there is the presentation "*The appropriated* aggregates *are that acted upon*, whereas the self *is also the agent*.

What are the aggregates, constituents, and spheres? In order to contemplate this we should take the aggregates and so forth as an object of meditation. For example, when we meditate on the four close placement of mindfulness:

1. the close placement of mindfulness on the body means to observe the form aggregate,
2. the close placement of mindfulness on feelings means to observe the feeling aggregate,
3. the close placement of mindfulness on phenomena means to observe the discrimination aggregate and compositional factors aggregate, and
4. the close placement of mindfulness on the mind means to observe the consciousness aggregate.

We can also place our mindfulness on the form aggregate by meditating on the specific characteristics of the body such as that it is light or heavy, that it is impure, and so forth, or we can do so by meditating on its general characteristics such as that it is impermanent, suffering, empty, and selfless. We should be sure to meditate on these in terms of our own body.

We can also meditate on the different types of feelings and their respective results: the happiness feeling that gives rise to attachment, the unhappy feeling that gives rise to hatred, and the

equanimity feeling that gives rise to ignorance or confusion. We should understand that feelings are the main basis of all our unhappiness. For example, when we meet a particular person an unhappy feeling arises and from this comes anger for that person, whereas when we meet another person a happy feeling arises and from this comes attachment to that person. On the other hand, when we meet a stranger we have neither a happy nor an unhappy feeling but instead a neutral feeling arises from which comes ignorance. By meditating on this process, we will come to understand that we need to abandon these feelings by applying their respective antidotes.

Lama Tsongkhapa's *Illumination* (Tibetan text page 385) says:

3B1C-2B3E-2B2A-6D Indicating other excellent qualities of asserting a self that is imputed in dependence

Chandrakirti's autocommentary says:

> When dependent imputation is correctly relied upon, since the self is just not the support of the conceptions of stability, instability, and so forth in any way, the conceptions of permanence, impermanence, and so forth will be easily overcome.

Because the self is imputed in dependence on the aggregates, it is neither inherently stable nor inherently unstable. When this is understood, the view holding to the extreme of permanence and the view holding to the extreme of annihilation will easily be eliminated. Chandrakirti says: "the conceptions of permanence, impermanence, and so forth will be easily overcome." In other words this means that the realization that the self does not exist inherently overcomes the conception that the self is inherently permanent and the conception that it is inherently impermanent.

Chandrakirti's autocommentary says:

> To explain the aforesaid:
>
> *Because thing does not exist, it is not stable and*
> *Not just unstable; it is not produced or destroyed;*
> *In it, permanence and so forth also*
> *Do not exist, thatness and otherness are non-existent.* [6.163]

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B1A-6C5A-2B1F-4 Demonstrating other advantages of accepting a dependently imputed self

Because it's not a thing, it is not durable
And not non durable; it is not born or destroyed;
It also has no permanence and so on,
And no identity or separateness. [6.163]

This self is not durable[168], and does not inherently exist as non-durable; it does not take birth or perish inherently, and it also does not inherently have permanence and so on; it is not inherently identical or separate; for it does not exist inherently as a thing.

The self is not inherently stable nor is it inherently unstable. It also is not inherently produced nor does it inherently perish or disintegrate. It is also not oneness (identical) with the aggregates, nor it is

[168] *brtan.pa*

other than the aggregates (separate from the aggregates); that is, the self is not inherently one with the aggregates nor is it inherently a different entity from the aggregates.

The following syllogisms regarding the first statement can be set out:

> The self, as the subject, is not inherently stable because it is imputed in dependence on the aggregates.
>
> The self, as the subject, is not inherently unstable because it is imputed in dependence on the aggregates.

If the self existed inherently:

- it would follow that the being that existed in a previous lifetime and the being of this lifetime would be one, or
- it would follow that the self that is the appropriator of the aggregates of a previous lifetime and the self that is the appropriator of the aggregates of this lifetime would be different entities.

Is the self of this lifetime and the self of a previous lifetime one entity or different entities? For example, are the self that was a donkey previously and the self that is a human being now, one entity? They are not. On the other hand, if the self existed inherently they would be one entity. Since the self does not exist inherently, the donkey of the past and the human being of the present are not one entity in general. There are three types of self:

1. the self that came from a previous life to this life,
2. the self that goes from this life to the next life, and
3. the self that is specific to this life.

What is the difference between these three?

Student: The basis of imputation is different.

Geshe Jampa Gyatso: What about the selves?

Student: Because the basis is different the selves are different.

Geshe Jampa Gyatso: What is the difference between the self that came from a previous life to this life and the self that goes from this life to the next life?

Student: Because the first one exists earlier and the second one exists later, they exist at different times and are, therefore, different.

Geshe Jampa Gyatso: Are the Sze Gee that came from Singapore to Italy, the Sze Gee that is living in Italy now, and the Sze Gee that will return from Italy to Singapore, different? Think about it. It is said that they are different due to their special causes. If that special cause exists, a human rebirth exists, without it this human rebirth would not exist. What is the special cause that brings about this human life? It is a meritorious action qualified by, for example, having observed morality, having been together with good companions who practiced the six perfections, and having made specific prayers for a human rebirth. In short, to create the special cause of a human rebirth is not easy. However, we have presently acquired such a rebirth due to our own positive actions of previous rebirths. In order to obtain such a human rebirth again, we need to create the special causes.

Chandrakirti's autocommentary says:

> This self which is imputed in dependence on the aggregates is neither just stable nor just unstable. There, if the self were unstable, then it would contradict the *Treatise* [*on the Middle* Way] that says [in 27.6]:
>
> > The appropriated itself is not the self;
> > They arise and disintegrate.
> > How could what is to be appropriated
> > Be the appropriator?

And similarly [in the *Treatise*, 27.12]:

> It does not arise from the not arisen
> Since there would follow faults in this,
> That the self would be a product and
> Would also possess causeless production.

Therefore, if the aggregates were the self, it would have production and disintegration; yet it is not even asserted as having production and disintegration. Therefore, this consequence which says "The aggregates are not the self" is also feasible. Therefore, it is also unfeasible as just unstable.

The appropriated is not the self, "the appropriated" is the aggregates. If the appropriated were the self it would follow that:

- when the aggregates arise the self would also arise and
- when the aggregates disintegrate the self would also disintegrate.

Thus, there would be the absurd consequence that the self would arise and disintegrate just like the aggregates. This refers to the fact that when we die the aggregates disintegrate, that is, they are left behind. Thus, if the aggregates were the self, when the aggregates are placed in a coffin and buried so too would the self be buried. Likewise, when the body turns to dust so too would the self turn to dust. However, the self is not like the aggregates. In conclusion, the appropriated and the appropriator do not exist inherently since otherwise there would be this absurd consequence. While it is correct to assert that the self is the appropriator and the aggregates are the appropriated, if they existed inherently this would not be feasible.

Does the self arise from a self that did not exist before? A self cannot arise from a self that did not exist before. On the other hand, a mere self did exist before and therefore can be said to exist now. In conclusion, a self does arise in dependence on a previous self. This topic can be debated asking: "Does the self that is specific to this life arise from the self that existed in a previous life? Did the self that is specific to this life exist before in a previous live?" Because it did not, it would seem to imply that the self that exists now did not exist before. In short, there is a self that pervades all lifetimes. That self is the mere self. This mere self existed before and exists now. If it is asked "Does the I specific to this life go to the next life?" If someone says that it does, one can ask: "Does the self that is monk go to the next life as a monk?" On the other hand, if he responds that the monk that is the self specific to this life does not go to the next life, one can ask: "Does the monk of this life not take a future rebirth?" One has to say that he does take a future rebirth, but if it is asked "Does the monk go to a future rebirth?," the response is that he does not. In conclusion, the monk does take rebirth because his mere self which pervades all lives takes rebirth. Is that mere self which pervades all lives a monk? It is not. Are there two selves existing on the basis of the five aggregates of a monk, one that is a monk and one that is not a monk? This kind of debate sharpens our mind. However, if we analyze too much we may fall into nihilism!

Student: Can it be said that the self is imputed on the same continuum but on different aggregates and on different times?
Geshe Jampa Gyatso: It is so in general, for example, the self which is specific to this life is imputed to the aggregates specific to this life.

In short, if a self were to arise from a self that did not exist before there would be faults. One fault would be that the self would be produced from adventitious causes and conditions. The self is not like that, it is produced from its respective causes. Another fault would be that the self would be produced without causes. In short, these two faults are not accrued because the self does not exist inherently

and because the self is imputed in dependence on the aggregates and so forth. Therefore, the self is not produced incidentally and it is not produced without causes.

To summarize, Chandrakirti says: "Therefore, if the aggregates were the self, it would have production and disintegration." The self would be like the aggregates, in that just as the aggregates are produced the self would be produced and just as the aggregates disintegrate the self would disintegrate; however, this is not the case. If the self were the aggregates, there would be these faults but because the self is not the aggregates these faults do not occur. The Prasangika Madhyamikas assert that the self is imputed in dependence on the aggregates and that when sought it is not found within the aggregates. Chandrakirti concludes: "Therefore, it is also unfeasible as just unstable."

Chandrakirti's autocommentary says:

> Similarly, it is also incorrect as stable. As was taught [in the *Treatise*, 27.3-4]:
>
> It is unfeasible to say
> "It arose in the past."
> What arose in previous lives,
> That itself is not this [life's self].
>
> If considered that, that itself is the self,
> The appropriated are different,
> Your self is something
> Apart from the appropriated.

"Stable" and "unstable" should be understood to mean "inherently stable" and "inherently unstable." Or they can be understood to mean that the aggregates are unstable while the self is stable. The self is stable in the sense of continuing from life to life, whereas the form aggregate in particular does not continue from life to life but ceases. The form aggregate is unstable in that it ceases at the end of a life, due to which the continuity of the form aggregate is unstable. On the other hand, the self or the person is stable in the sense of continuing from life to life and eventually becoming a buddha. In the eight chapter of the *Ornament for Clear Realizations* it says that the person is called permanent in the sense of continuing.

The self is not found when sought within the aggregates nor is it one of the five aggregates; it is imputed on the collection of the five aggregates. This self is what performs activities, for example, it is what goes from a higher realm to a lower realm or from a lower realm to a higher realm, or from Tibet to India, from India to America, and so forth. In brief, the self is merely imputed in dependence on the aggregates and does not exist inherently.

Tuesday afternoon, 13 March 2001

When [Nagarjuna's] *Fundamental Wisdom* says "It is unfeasible to say it arose in the past," it means that it is not feasible to say "In the past an inherently existent self existed." In other words, an inherently existent self did not arise in the past.

"What arose in previous lives, that itself is not this" refers to the self of this life.

The next verse means that it is incorrect to think that the self that existed before became the self of this life. This is because the aggregates that were appropriated by the self in the past and the aggregates that were appropriated by the self now are different. There is no self that does not depend on the aggregates, the appropriated.

Chandrakirti's autocommentary says:

> The two qualifications of the statement "It is not produced nor destroyed" are the assertions of the Acharya [Nagarjuna] through this very consequence that was stated [in the *Treatise*, 18.1b – see below]:
>
> > ... it would have production and disintegration.

If the aggregates were the self it would follow that the self would be produced and would disintegrate just like the aggregates. In general the self is produced and does disintegrate.

Chandrakirti's autocommentary says:

> Nor does this [self] have permanence and so forth, for these [following verses] were taught when the Acharya fully investigated the self with the method of investigating the Tathagata. [In the *Treatise on the Middle Way*, 22.12-14]:
>
> > Permanent, impermanent, and so forth, the four, what peace exists in this?
> > Limited, limitless, and so forth, the four, what peace exists in this?
> >
> > He who grasps at solid apprehensions produces conceptualizations saying,
> > "The Tathagata exists," or "does not exist in nirvana."
> >
> > It will not be correct to think, about he who is emptied by self-nature,
> > "The Buddha, having passed beyond sorrow, exists" or "is non-existent."

The first set of four views mentioned in verse 22.12 are:
1. viewing the Tathagata to be permanent,
2. viewing the Tathagata to be impermanent,
3. viewing the Tathagata to be both, and
4. viewing the Tathagata to be neither.

These four views are incorrect. When Nagarjuna says "what peace exists in this?" it means "How can these four exist ultimately?" Because they do not exist ultimately, these four are ultimately pacified. Because they are ultimately pacified, how can they exist ultimately?

The second set of four views are:
1. viewing the Tathagata to have an end,
2. viewing the Tathagata to not have an end,
3. viewing the Tathagata to have both, and
4. viewing the Tathagata to have neither.

These four views are also incorrect because the Tathagata is ultimately pacified.

The second verse (22.13) means that the proponents of true existence, due to their "solid apprehensions" or thick conceptions of true existence, conceive the Tathagata to exist after having passed away, to not exist after having passed away, and so forth.

The third verse indicates that the conception that the Buddha exists after having passed beyond sorrow is not correct because the Buddha is empty of inherent existence, whereas the proponents of true existence assert that the Buddha exists inherently.

Chandrakirti's autocommentary says:

> Nor does this exist as thatness or otherness from the aggregates. As was taught [in the *Treatise on the Middle Way*, 18.1]:
>
> > If the self were the aggregates,

> It would have production and disintegration;
> If other than the aggregates,
> The character of the aggregates would not exist.

"Nor does this exist as thatness or otherness from the aggregates" can be understood to refer either to the self or to the Tathagata; for example, the Tathagata does not exist as one with his aggregates nor does he exist as other than his aggregates. In order to prove this, Chandrakirti quotes from Nagarjuna's *Fundamental Wisdom*. If the aggregates were the self, the self would be produced and would disintegrate like the aggregates; that is, the self would be inherently produced and would inherently disintegrate like the aggregates. However, this is not the case.

If the self were other than the aggregates, it would follow that the self would not have the characteristics of the aggregates, such as production, abidance, disintegration, and impermanence. These are the four characteristics of compounded phenomena. Because the aggregates are compounded phenomena they have these characteristics. If the self were other than the aggregates, it would not have these four characteristics.

Chandrakirti's autocommentary says:

> And similarly [in the *Treatise*, 10.4a]:
>
> > Wood itself is not the fire…
>
> – and so forth.

Wood or fuel is not the fire, yet there is no fire without depending on wood or fuel. The existence of fire indicates the existence of the wood or fuel.

Chandrakirti's autocommentary says:

> Also, if asked: Why are these conceptions of non-stability and so forth unsuitable for the self?
>
> Having mentioned "Because thing does not exist" [6.163a], if some self-nature of a functioning thing exists, the conceptions of unstable and so forth would exist for it. Yet, the self does not exist at all because that is only non-existent.
>
> As taught in sutra:
>
> > Four inexhaustible phenomena were indicated by the Protector of the World:
> > Sentient beings, space, bodhichitta, likewise, the buddha-dharmas.
> >
> > If they existed substantially, they would be deemed to be fully exhaustible;
> > Non-existent, they are inexhaustible; therefore, they are taught as inexhaustible.

Here the "four inexhaustible phenomena" refer to
1. sentient beings who are inexhaustible,
2. the limits of space which is inexhaustible,
3. the benefits of bodhichitta which are inexhaustible, and, likewise,
4. the Buddha's Dharma which is inexhaustible.

If these four existed substantially, they would be exhaustible. Instead they are inexhaustible, that is, they are not inherently existent. However, they do exist because they exist imputed in dependence, that is, they exist as dependent-arisings.

Lama Tsongkhapa's *Illumination* (Tibetan text page 385) says:

> When positing the self to be imputed in dependence, since it is not the support of the conceptions holding to an extreme of stability, instability, and so forth, it is explained [as follows] that the conceptions apprehending the impermanent and so forth to be established by way of their own character are easily overcome:
>
> *Because the thing does not exist, it is not stable and*
> *It is not just unstable. It is not produced and does not disintegrate.* [6.163ab]
>
> *The* self that is imputed in dependence on the aggregates *does not* inherently exist as *stable and just unstable*. If the self existed by way of its own entity as unstable, the appropriated would be the self since the two – the self and the appropriated – would not be suitable to be different entities. If that were the case, it would not be suitable because
>
> - the self would be individually *produced and disintegrate* in each moment, whereby former and later [moments] would *not* be related and
> - the appropriated would be the appropriator.

The self is a dependent-arising, that is, the self is imputed in dependence and exists in dependence on the aggregates. When this is understood, the conception holding to the extremes of permanence and annihilation will quickly be overcome. For this reason, it is important to understand that the self is a dependent-arising as in this way one will understand that the self does not exist inherently.

The word "stable" refers to the self and "unstable" to the aggregates, this is because the self continues while the aggregates cease. Or the words "stable" and "unstable" can be understood to mean that the self and the aggregates are not inherently stable and not inherently unstable. If the self were inherently unstable, it would follow that the self would be like the aggregates. In addition, because they exist inherently the self, the appropriator, and the aggregates, the appropriated, would not be different entities. In other words, if the self existed inherently it would be one with the aggregates, whereby the appropriator and the appropriated would be one.

If the former and later moments of the self existed inherently, the self of a former moment and the self of a later moment would be completely unrelated because the former self would have disintegrated. They would be unrelated is because the former moment and the later moment of that which is inherently existent are unrelated.

If the self and the aggregates are inherently one, it follows that the appropriator and the appropriated would be one. In this way, the appropriated would be the appropriator, however, this is never the case.

Lama Tsongkhapa's *Illumination* (Tibetan text page 385-6) says:

> Similarly, it is also not admissible as stable, that is, as permanent. If it were permanent, that very self at the time that it arises in a previous lifetime would be the self that arises here, whereas the appropriated aggregates of the two selves of a past life and this life are different entities. Due to this, it would not be suitable for there to be a single self because a self that is a different entity from the appropriated does not exist. The autocommentary says:
>
> The setting out of the two attributes of "without production and disintegration" is Acharya [Nagarjuna's] assertion in [*Fundamental Wisdom* (v. 18.1)]:
>
> If the self were the aggregates,
> It would have production and disintegration.
>
> This production and disintegration are established by way of their own entity.

That the self is inherently stable is also not feasible for the above reasons. Production and disintegration refer to production and disintegration that are established by way of their own character.

Lama Tsongkhapa's *Illumination* (Tibetan text page 386) says:

> *Also permanence and so forth in regard to that*
> *Do not exist. It does not exist as oneness or as otherness.* [6.163cd]
>
> *Also* the set of four of *permanence and so forth in regard to the* self *do not exist* inherently because [Nagarjuna's] *Fundamental Wisdom* (v. 22.12ab), when thoroughly conceptualizing it through the method for investigating the tathagata, says as [follows] and so forth:
>
> How can the four, permanence, impermanence, and so forth,
> Exist in that peace?

There are several sets of four views, one of which is:
1. viewing the world and the self to be permanent,
2. viewing the world and the self to be impermanent,
3. viewing the world and the self to be both, and
4. viewing the world and the self to be neither.

Another set is with regard to the world and the self having an end, not having an end, and so forth.

In the Prasangika Madhyamika system there are no substantial existents. For them, if it is an established base it is pervaded by being an imputed existent. They say that if it is substantially existent it is inherently existent. A substantial existent exists without dependence; according to the Prasangika Madhyamikas there is no such thing. However, according the Svatantrika Madhyamika system "substantial existent" does not mean that which exists without dependence, rather it is a phenomenon that appears to an awareness without the need for something else to appear to that awareness. In other words, for this system a substantial existent is a phenomenon that does not depend on another phenomenon appearing to an awareness in order for it to appear to an awareness, whereas an imputed existent is one that depends on another phenomenon appearing to an awareness in order for it to appear to an awareness. For example, in order for Sixte to appear to an awareness, his aggregates must appear to an awareness. Thus, something else has to appear in order for Sixte to appear.

Lama Tsongkhapa's *Illumination* (Tibetan text page 386) says:

> The self *does not* inherently *exist as oneness*, that is, as one entity, *or as otherness*. The reason for these is because *the thing* called "self" *does not exist* inherently. As sutra says:
>
> Four inexhaustible phenomena
> Were presented by the Protector of the World:
> Sentient beings, space, the mind of enlightenment,
> Likewise, the Buddha-Dharma.
>
> If they existed substantially,
> They would be deemed thoroughly exhausted.
> Not existing, they are inexhaustible;
> Therefore, they were taught to be inexhaustible.
>
> This is the scriptural source for teaching that since sentient beings lack substantial existence they are inexhaustible

Lama Tsongkhapa's *Illumination* (Tibetan text page 386) says:

3B1C-2B3E-2B2A-6E Identifying the self which is the basis of bondage and freedom of the wise and the foolish

Chandrakirti's autocommentary says:

> When something is sought in the seven ways, it is impossible as permanent and impermanent, and those not seeing the very non-existence of something and those who, having settled on it as just existing through the power of ignorance, strongly settle, thinking, "this is the self," will circle [in samsara] due to the view of the transitory collection:
>
> *That self to which all migrators perpetually*
> *Give rise to I-grasping awareness and to that*
> *Which is its, give rise to an awareness grasping to mine,*
> *To uninvestigated renown, is from confusion.* [6.164]

When the self is sought in the seven ways, analyzing whether it is permanent and so forth, it is not found. Due to the power of ignorance or the view of the transitory collection, the self is not realized to not exist inherently. Instead, due to the view of the transitory collection one conceives the I to exist inherently, whereby one remains bound in cyclic existence.

Gedun Drup's *Mirror of the Clarification of the Thought* (Tibetan text page 68), as translated by Martin Willson, says:

3B1A-6C5A-2B1F-5 Recognizing the self which is the basis of binding and liberation

Now you may ask, "What is the self which is the basis of binding and liberation?"

> *That self for which, in beings, self-grasping mind*
> *Is always arising strongly, and for whose*
> *Possessions the mind that grasps at "mine" arises,*
> *In unconsidered opinion, is from delusion.* [6.164]

Although the imputed object, the self, is not found when sought with the seven points, there is not the fault that it does not exist; for that self Ð based on which the self-grasping mind strongly arises and the mind grasping at whatever is of that self as "mine" arises in samsaric beings Ð is established from delusion with respect to unconsidered opinion.

Chandrakirti's autocommentary says:

> When some [self] is thoroughly sought, the Forders conceive, everything mistakenly, the nature of that [self] as different [in entity] from the aggregates since it is unfeasible [for the aggregates to be the self] by their reasoning. And our own sects too, due to the error in considering "The self is non-existent as different from the aggregates," accept just the mere aggregates as the self.

According to the Forders when the self is sought it is found to be separate from the aggregates, due to which they consider the self and aggregates to be different entities. However, this is not correct.

"Our own sects" refers to the lower schools who assert the aggregates to be the self. They say that there is no self that is a different entity from the aggregates and therefore the aggregates are the self. This position is also incorrect.

Chandrakirti's autocommentary says:

> Those who unmistakenly realize the detailed teachings by the Tathagata, having understood that "[Those two positions] are just not so," should understand that that to be totally liberated one hundred times is the self, and that, with regard to which the I-grasping awareness always arises for all those dwelling in the migration states of migrating humans, animals, hungry ghosts, and so forth – those subsequently related with unknowing – is the self.
>
> Where this [self] controls or there is some relation [with it], the awareness grasping to mine arises with regard to that having an internal nature, the eyes and so forth, the support of imputing this [self], and [with regard to] the external. That self is established through unknowing, it is not established by its own entity.
>
> Because indeed this does nor exist [inherently] but is imputed conventionally through confusion, therefore yogis do not observe [such a self] in any way. When that is not observed, the eyes and so forth, its appropriations, also will not arise. Thus the yogi does not observe any things whatsoever by entity; therefore he will be completely liberated from samsara.
>
> As was taught [in the *Treatise on the Middle Way*, 18.4]:
>
> > When thinking about I and mine is exhausted for the internal and external themselves,
> > appropriation will be ceased and since that ceases, rebirth ceases.

Human beings, animals, hungry ghosts, and animals, due to not knowing the reality of the self and instead conceiving it to exist inherently, remain bound in cyclic existence. In short, beings circle in cyclic existence due to conceiving the I to exist inherently. On the other hand, when this conception of I is eliminated, they attain liberation. In short, when one realizes that things do not exist inherently, one attains liberation from cyclic existence.

When the conception that internal and external phenomena exist inherently is removed, rebirth ceases and freedom from cyclic existence, liberation, is attained. In order to attain liberation, one must eliminate the strong conception of "I, I, I" and "mine, mine, mine," for example, the conceptions thinking "I am George W. Bush" and "These are my subjects." In order to ensure our own liberation, we must overcome these strong conceptions of I and mine. We can gradually reduce these strong conceptions by accumulating much hearing, thinking, and meditation. Of these three, the main one is meditation. Meditation is of two types: analytical meditation and stabilizing meditation. By means of these two, one will gradually improve. Although there are some people who say that analytical meditation is not real meditation, this is not correct. If meditation means not thinking, then a marmot standing upright on its mound would be meditating! In fact, there is a Tibetan expression that says "Among the marmots there are some who are great meditators"!

Wednesday morning, 14 March 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 386-7) says:

> Whoever, when searching for the imputed object by means of the seven ways,
> - finds that it cannot be permanent or impermanent,
> - does not see any self that lacks inherent existence, and
> - strongly adheres, due to the view of the transitory collection, to the self as inherently existent through adhering to inherent existence by the force of ignorance,
>
> will circle [in cyclic existence]. When a self is thoroughly sought, it is thought that it must be asserted to be one of the two:
> 1. the Forders, by the reasoning that seeks a self, see that it is inadmissible for the aggregates themselves to be the self, whereby, all who are mistaken with respect to the own entity of that self adhere to it as a different entity from the aggregates, and

2. our own schools, due to the mistake of thinking "A self which is a different entity from the aggregates does not exist," assert just the mere aggregates themselves to be the self.

> *The self that always thoroughly gives rise in migrating beings*
> *To an awareness conceiving I and that gives rise to*
> *An awareness conceiving mine with respect to whatever is of that,*
> *Is through confusion with respect to uninvestigated renown.* [6.164]

Those who unerroneously explain the meaning of the scriptures, thinking "[The self] does not exist as either of the previous two," understand that

- the self that is to be liberated a hundred times, and
- *the self that always thoroughly gives rise*, in all the *migrating beings* dwelling as human beings, hungry ghosts, animals, and so forth, *to an awareness conceiving I* through observing any basis of observation, and
- that is a controller or anything associated with that self *that gives rise to an awareness conceiving mine with respect to what* is the mine *of that* self – internal entities, such as the eye and so forth, that are the basis of imputation of the self and external [things],

is established *through confusion*, that is, unknowing, *in* the perspective of *uninvestigated renown*, and is not established by way of its own entity.

Therefore, because the self indeed does not exist inherently, but nonetheless is conventionally imputed to exist through confusion, or unknowing, yogis do not observe such a self in all ways. When not observing that, they will not observe the appropriations of that inherently existent self, the eyes and so forth. This being the case, yogis do not observe any established by way of their own entity things that are the bases of the self and mine. Because of that, they are liberated from cyclic existence. [Nagarjuna's] *Fundamental Wisdom* (v. 18.4) says:

> When thoughts of I and mine are extinguished
> With respect to the internal and external,
> Appropriation will cease and,
> This having been extinguished, rebirth is extinguished.

When the self, the imputed object, is sought in the seven ways it is not found. The seven ways in which the self does not exist are:
(1) the self is not oneness with the aggregates,
(2) the self is not inherently other than the aggregates,
(3-4) the self and the aggregates are not inherently support and supported,
(5) the self does not inherently possess the aggregates,
(6) the collection of the aggregates is not the self, and
(7) the shape of the aggregates is not the self.
The concluding syllogism is:

> The self, as the subject, does not exist inherently because it is not found when sought by means of the seven ways.

The self is not inherently stable, it is not inherently unstable, and it is not perceived to exist inherently. Ordinary beings, on the other hand, perceive the self to exist inherently due to which they continue to circle in cyclic existence. In other words, because of conceiving an inherently existent I and mine sentient beings circle in cyclic existence. When positing the conventionally existent I,

- the Forders posit a self that is different entity from the aggregates, whereas
- our own schools assert that, because the self is not a different entity from the aggregates, the aggregates are the self.

Thus, when the lower Buddhist schools search for an illustration of the I among the aggregates, they say that it is found. Some of them posit the person or the self to be the mental consciousness, some posit it to be the mind-basis-of-all, some posit it to be the continuum of the consciousness, and some posit it to be the mere collection of the aggregates. According to the Prasangika Madhyamikas all such assertions are mistaken. They say that, when thoroughly sought, the self is not found among the five

aggregates, yet it does exist for a non-investigative and non-analytical awareness. In short, the self is not found when thoroughly sought by means of the seven ways, yet it exists for an innate non-investigative and non-analytical awareness. What is the self? The self is what is sitting on a cushion here in this room! For us the mode of abidance of the self is unclear due to ignorance. On the other hand, yogis do not perceive the I and mine to be established by way of their own entity. Seeing that the I and mine are not established by way of their own entity, they become free from cyclic existence. Thus, by extinguishing the conceptions of I and mine one attains liberation. That is, one no longer circles in cyclic existence by the force of actions and afflictions because one no longer takes rebirth by the force of actions and afflictions. If someone takes rebirth does he necessarily do so by the force of actions and afflictions? That is not the case since there are beings who take rebirth intentionally or by the power of prayer. There are three types of rebirth:

1. rebirth that is taken by the force of actions and afflictions,
2. rebirth that is taken intentionally, and
3. rebirth that is taken by the power of prayer.

There are particular prayers to be reborn, for example, in Sukhavati; by the power of such prayers one takes rebirth there.

In short, we should put an end to taking rebirth by the force of actions and afflictions by eliminating the conception of I through cultivating the realization of the selflessness of persons.

This concludes the discussion refuting an inherently existent self, next is the discussion refuting an inherently existent mine.

Lama Tsongkhapa's *Illumination* (Tibetan text page 388) says:

3B1C-2B3E-2B2B Refuting an inherently existent mine

Chandrakirti's autocommentary says:

> Also, if asked: Why is the mine also non-existent if the self is non-existent?
>
> In order to indicate this, it is explained:
>
> *Because the [object] acted upon having a non-existent agent is non-existent,*
> *Therefore, the self's without the self does not exist.*
> *Therefore, viewing self and self's as empty,*
> *The yogi will be completely released.* [6.165]

Gedun Drup's *Mirror of the Clarification of the Thought* (Tibetan text page 68), as translated by Martin Willson, says:

3B1A-6C5A-2B2 Refuting inherently existent "mine"

> *Because there's no object which has a non-existent agent,*
> *Therefore without the self, no "mine" exists.* [6.165ab]

You should understand that the self not existing inherently, "mine" does not exist inherently, because there is no object that has a non-existent agent.

> *Thus, when he sees the self and "mine" are empty,*
> *The yogin will be fully liberated.* [6.165cd]

That yogin who sees and meditates on the self and "mine" as empty of inherent existence will be fully liberated, for there are no inherently existent self and "mine."

In brief, because the self does not exist inherently, also the mine does not exist inherently. I and mine are interdependent in that I depends on mine and mine depends on I. When a yogi realizes that the I and mine lack inherent existence, he is liberated from cyclic existence.

Chandrakirti's autocommentary says:

> Just as pot is impossible without the potter, similarly, there is also no self's (i.e., no mine) without the self. Therefore, by finely not observing the self and the self's, when samsara is not seen, the yogi will be released.

Chandrakirti sets out the illustration "Just as pot is impossible without the potter" to show that there is no mine without the self. Self and mine do exist, but they do not exist inherently. Not observing an inherently existent self and mine, one will be liberated.

Chandrakirti's autocommentary says:

> When form and so forth are not observed, since attachment and so forth included in them do not arise, the hearers and solitary realizers are presented as passing beyond sorrow without taking [another existence]; the bodhisattvas, although already having perceived non-self, grasp a continuity of becoming until enlightenment due to the influence of compassion. Hence, the wise should fully seek non-self just as was explained.

"When form and so forth are not observed, since attachment and so forth included in them do not arise" means that when form, for example, is observed attachment and so forth arise, whereas when it is not observed attachment and so forth do not arise. When one has strong attachment to an object and is unable to apply the appropriate antidote, it is important to distance oneself from that object of attachment. Vasubandhu's *Treasury of Knowledge* says that there are three causes for generating attachment:

1. not having abandoned the afflictions,
2. having improper mental attention, and
3. being close to an object.

Thus, when one is unable to apply the respective antidote to attachment one should at least distance oneself from the object of attachment. For example, if someone is attached to drinking alcohol but stays away or remains far from places where there is alcohol, he will gradually be able to overcome his attachment to alcohol. On the other hand, if that person is close to alcohol, attachment for it will easily arise. The same is true of attachment to smoking cigarettes, listening to music, and so forth.

Hearers and solitary realizers pass beyond sorrow, whereas bodhisattvas, even though they perceive selflessness, continue to take rebirth until enlightenment by the power of their compassion. That they "grasp a continuity of becoming" means that they take rebirth in cyclic existence. Such bodhisattvas know that if they take rebirth in a womb, with a body composed of the six elements, they will be of benefit. Therefore, when it is time to take rebirth they search for a man and women who are having sexual intercourse and take rebirth in that womb. Due to this the craving of this man and woman is said to be a condition for the bodhisattva's rebirth. Bodhisattvas also take spontaneous rebirth. In short, in order to be reborn in cyclic existence one has to depend on attachment or craving. Although bodhisattvas take rebirth by the power of compassion, they do so in dependence on the craving of a man and woman, they do not take rebirth like a flower arising from the ground.

Lama Tsongkhapa's *Illumination* (Tibetan text page 388) says:

> QUESTION: Moreover, if the self does not exist inherently how does the mine also not exist inherently?
> RESPONSE:
>
> *Because the acted upon having a non-existent agent is non-existent,*
> *The mine does not exist without the self.*
> *Therefore, the self and the mine are viewed as empty and*
> *The yogi will be completely liberated.* [6.165]
>
> Because just as an object acted upon, a clay pot, that has a non-existent agent, the potter, is non-existent, an inherently existent mine does not exist without an inherently existent self. Therefore, the two, the self and the mine, are viewed as empty of inherent existence and, when he familiarizes with the meaning of that, the yogi will be completely liberated from cyclic existence. When forms and so forth are not observed to be inherently existent, the afflictions of attachment and so forth which conceive forms and so forth to be inherently existent will be extinguished, whereby hearers and solitary realizers also pass beyond sorrow without taking existence. However, although bodhisattvas have already seen such selflessness, by another force, compassion, they take rebirth, which is the continuity of existence, until enlightenment. Because this is the supreme point of the paths of both the greater and lesser vehicles, the wise should thoroughly seek the selflessness explained above.

If the self does not exist inherently, how can the mine exist inherently? It cannot. Lama Tsongkhapa says: "Because just as an object acted upon, a clay pot, that has a non-existent agent, the potter, is non-existent, an inherently existent mine does not exist without an inherently existent self." If a writer does not exist, a letter does not exist. If a cook does not exist, cooked food does not exist. In conclusion, the mine does not exist inherently. Therefore, both self and mine do not exist inherently. Through meditating on the lack of inherent existence of the I and mine, one will become free from cyclic existence.

Lama Tsongkhapa says: "hearers and solitary realizers also pass beyond sorrow without taking existence." This point about hearers and solitary realizers not taking rebirth in cyclic existence can be debated: "Are there not hearers who are approachers to stream enterer who take seven rebirth existences, that is, who are reborn from a god rebirth to a god rebirth and from a human rebirth to a human rebirth?" However, what is to be understood here is that the main object of abandonment of hearers and solitary realizers is cyclic existence. On the other hand, bodhisattvas continue to take rebirth in cyclic existence in order to benefit other beings. They make specific prayers to do so such as "May I remain in cyclic existence as long as cyclic existence is not exhausted." Thus, bodhisattvas take rebirth under the power of compassion in order to benefit other sentient beings. Since bodhisattvas take rebirth in cyclic existence by the power of compassion is this a rebirth that is taken intentionally? It is.

Lama Tsongkhapa concludes saying: "Because this is the supreme point of the paths of both the greater and lesser vehicles, the wise should thoroughly seek the selflessness explained above."

This concludes the discussions refuting an inherently existent I and an inherently existent mine.

Lama Tsongkhapa's *Illumination* (Tibetan text page 388) says:

> 3B1C-2B3E-2B3 Indicating the analysis of a self and a chariot to be applicable also to other things
>
> A Its applicability to things such as pots, woolen blankets, and so forth
> B It applicability to things that are causes and results
> C Dispelling others' arguments regarding this
>
> 3B1C-2B3E-2B3A Its applicability to things such as pots, woolen blankets, and so forth

Chandrakirti's autocommentary says:

> Just as imputing the self and its appropriations is similar to the complete analysis of the chariot, likewise, because it is repeatable saying "[the analysis] of other things is also":
>
> *Vase, woolen cloth, rough cloth, army, forest, rosary, tree,*
> *House, cart, guest house, and so forth; whatever things and* [6.166ab]
>
> are mentioned, adding this [6.167cd]: "these objects do not exist in the seven ways by means of the analysis of the chariot and, other than that, do exist by way of worldly renown."
>
> Other things of such types whatsoever:
>
> *Are likewise to be realized in the ways they are related by these beings,* [6.166c]
>
> – [to exist] only for uninvestigated renown.
>
> If asked: Why:
>
> *Because the Mighty Sage did not dispute with the world.* [6.166d]
>
> [Since taught] in the scriptural citation [from *Indicating the Three Vows*] which says:
>
> The world disputes with me, but I do not dispute with the world.
>
> – one should not harm the renown of the world.

The way in which the self and a chariot were analyzed should also be applied to other things. What should be analyzed? The example given here is that of a vase, woolen cloth, and so forth. A vase or pot is that which is bulbous, flat bottomed, and capable of holding fluid. Woolen cloth refers to cloth made out of wool. Rough cloth is a particular cloth made out of the rough hair that is found on the neck and belly of a yak and is used to make tents and so forth. Also "army, forest, rosary, tree, house, cart, guest house, and so forth" are to be analyzed in the same way as the self and a chariot.

Gedun Drup's *Mirror of the Clarification of the Thought* (Tibetan text page 68), as translated by Martin Willson, says:

> 3B1A-6C5A-2C1 Repetition for the functioning things of pots, woolen cloth, etc.
>
> *Pots and woolen cloth, tents of felt, armies, forests and rosaries,*
> *Trees and houses, small carts, hotels, and other things should be*
> *Understood thus, in whatever ways these men speak of them,*
> *Because the King of Sages does not argue with the world.* [6.166]

You should understand that pots, woolen cloth, felt tents, armies, forests, rosaries, trees, houses, small carts, hotels, and other functioning things, in whatever ways these people speak about them, are to be understood as existing like that, without consideration; for the King of Sages does not argue with the world, he accept what exists in the world.

Wednesday afternoon, 14 March 2001

Just as the Bhagavan asserts according to what is accepted in the world without arguing with the world, so too do the Prasangika Madhyamikas.

Chandrakirti's autocommentary says:

Again, if asked: How does the world impute conventions, due to what properties?

In order to indicate that, it is explained:

Qualities, components, attachment, definition, fuel-wood, and so forth, and
Quality-possessor, component-possessor, desirous, illustration, fire, etc.:
These objects do not exist in the seven ways by means of the analysis of the chariot and,
Other than that, do exist by way of worldly renown. [6.167]

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

"How, in what ways, are functioning things spoken of?" you may ask.

Parts and qualities, desire, definitions, fuel, and so on,
And owners of parts and qualities, desires, instances, fire, and so on –
These objects, by the cart analysis, don't exist in the seven ways.
They do exist otherwise than that, by way of the world's opinion. [6.167]

The owner of the parts, the pot, and its parts, the potsherds; the owner of the qualities, the pot, and the qualities, the blue fire design[169], and so on; the desirer, the sentient being desiring an object, and the desire, the craving for a pleasant object; the instance of the definition, the pot, and definition (i.e. defining characteristics), the big belly, [hanging lip, long neck and so on]; and the burning fire and so on, and the fuel which is burnt and so on, are not to be analyzed in absolute reality by analytical logic; for imputed objects do not exist when analyzed by the seven ways as in the metaphor of the cart, they exist otherwise, by way of the world's opinion.

Chandrakirti's autocommentary says:

> Just as vase is a component-possessor, baked clay and so forth are its components; and vase is a quality-possessor, a fire design, sky blue, and so forth are its qualities; and vase is the illustration, fat belly, hanging spout, long neck, and so forth is its definition – similarly, it should be applied also to woolen cloth and so forth

A pot is a component-possessor while the baked clay and so forth are its components. Likewise, a gold pot is a component-possessor while gold and so forth are its components. A pot is also a possessor of qualities, while the design on, it such as that of flames of fire, is one of its qualities. Likewise, its color is a quality that is possessed by the pot or vase. A vase or pot is also an illustration, while "fat belly, hanging spout, long neck, and so forth" is its definition.

One can ask: "Are a possessor of components and its components inherently support and supported? Are they oneness or otherness?" In other words, the seven ways of analyzing which were mentioned before can also be applied to a vase and so forth.

Woolen cloth is also a possessor of components while its component are the strands of yarn. It is also a possessor of qualities, these being its color and its tangibility, smoothness, roughness, and so forth. One can analyze the woolen cloth and the strands of yarn as to whether they are inherently support and supported, or oneness, or otherness. Similarly one can ask: "While the woolen cloth possesses strands of yarn, does it inherently possess them? Is the collection of strands of yarn the woolen cloth? Is the shape of the collection of the strands of yarn the woolen cloth?" Conventionally, the woolen cloth cannot be found when analyzed in these seven ways. This is the way in which to apply the analysis by means of the seven ways to other objects, such as rough cloth, army, and so

[169] a glaze?

forth. Rough cloth, as was said earlier, is that made from the neck and belly hair of a yak. An army consists of four types of soldiers: infantry, cavalry, navy, and airforce. These are, therefore, the components of an army.

A forest is composed of many trees, just one or even a few trees are not sufficient for it to be called a forest. A rosary is composed of 108 beads; the rosary is the possessor of components while its components are each of the beads.

Chandrakirti's autocommentary says:

> Attachment is excessive clinging; the desirous is the support of attachment. Fire is the burner; fuel-wood is that to be burned. There, one imputes as component-possessor having taken the components as the cause; one imputes components through reliance on the component-possessor – hence, similar to the example of the chariot – up to "there is fire through reliance on fuel-wood; there is fuel-wood through reliance on that [fire]."
>
> One should not engage in analysis regarding those that are the conventions of the world.

Is there a difference between attachment and one with attachment (the desirous)? One with attachment is a person, whereas attachment is a mental factor that is excessive clinging thinking "He or she is so beautiful, so beautiful." On the other hand, when we think "He is ugly" and so forth anger arises. We can also analyze whether hatred and the one with hatred are inherently support and supported, whether they are oneness or otherness, whether the one with hatred inherently possess hatred, and so forth.

Fire is what burns, whereas fuel is what is burned. These are also established in mutual dependence and do not exist inherently. It cannot be said "This is inherently what burns and this is what is inherently burned." This statement can be applied to other objects in the same way.

Lama Tsongkhapa's *Illumination* (Tibetan text page 389) says:

> Just as the imputations which are the self and its appropriations are similar to the analysis of a chariot, in order to indicate "So too is the analysis of other things" [there is the following explanation].
>
> *Whatever things – pots, woolen blankets, canvas, armies, forests,*
> *Rosaries, trees, houses, carts, guest houses, and so forth – and,*
> *From the point of view of whatever else is similar, those spoken of by beings should be realized*
> *Because the Lord of Subduers did not argue with the world.* [6.166]
>
> *Whatever things – pots, woolen blankets, canvas, armies, forests, rosaries, trees, houses, carts, guest houses, and so forth* – when, *by means of the thorough analysis of a chariot*, their respective imputed objects are sought *in the seven ways, they do not exist*. *However*, *they do exist in terms of being renowned in the world as other than that* sought, that is, without analysis.
>
> In regard to carts, some Tibetan lamas say that a *shakakra* is that having wheels, that is, a cart for loading merely three bamboo boxes of tea. In addition, it is also said to be a single house that exists between wheels.
>
> Also, *from the point of view of whatever* other things having *similar*, that is, such, reasonings, *those spoken of* – that is, those imputed conventionally – *by beings should be realized* to exist as just uninvestigated renown *because*, for that reason, *the Lord of Subduers* taught *without arguing with the world* in disagreement with the world. The *Sutra Indicating the Three Vows That Are a Heap of Jewels* says:
>
> The world argues with me, but
> I do not argue with the world.

Since positing them to exist without harming worldly conventions is also accepted by the Subduer, one should not harm worldly renown.
QUESTION: By what properties do worldly beings impute conventions?
RESPONSE: In order to indicate that, there is [the following] explanation:

A component, quality, attachment, definition, fuel, and so forth,
A possessor of qualities, possessor of components, the attached, a illustration, fire, and so forth – these objects,
By means of the thorough analysis of a chariot, do not exist in the seven ways, however,
They do exist in terms of being renowned in the world as other than that. [6.167]

Just as

- *a possessor of components*, a pot, and its *components*, gravel and so forth,
- *a possessor of qualities*, a pot, and its *qualities*, a drawing of flames, clear blue, and so forth,
- *the attached* – a sentient being or person, the basis of attachment, who has attachment to an attractive object – and *attachment*, excessive craving due to observing a contaminated, attractive object,
- *an illustration*, a pot, and its *definition*, that which has a distended belly, an overhanging lip, a long neck, and so forth,
- *fire*, that which burns, and *fuel*, that which is burned,

and so forth are imputed to be a possessor of components in dependence on components and to be a component in dependence on a possessor of components; likewise, through to fire and fuel are they imputed in mutual dependence. When their imputed objects are sought in the seven ways, they do not exist. However, they can be posited to exist, this being by means of worldly conventions, not by employing the analysis of the reasonings for analyzing suchness

In short, any object, such as a table, can be analyzed by means of the seven ways. For example, the table is a possessor of components and its parts are the components.

"The attached" is the person, whereas attachment is craving due to observing a contaminated, attractive object, this being the wish to not be separated from it. There is attachment to different types of objects, such as food, clothes, and so forth. The person who is attached and the attachment can be analyzed in the seven ways as to whether they are inherently support and supported, oneness or otherness, and so forth. However in this particular case, it is difficult to know how to analyze the collection and the shape. Perhaps "shape" can be analyzed in terms of the object of attachment. In fact, the analysis can also be applied to attachment and the object of attachment asking "Are the attachment and the object of attachment oneness or otherness? Are they inherently support and supported? Does the attachment inherently possess the object of attachment? Is the shape of the object of attachment the attachment, and so forth? In short, when the attachment is sought by means of the seven ways it is not found. However, attachment exists for an awareness that is not investigating and not analyzing; it is posited by the force of worldly conventions. Thus, attachment exists in the perspective of a non-investigative and non-analytical awareness.

Lama Tsongkhapa's *Illumination* (Tibetan text page 390) says:

3B1C-2B3E-2B3B It applicability to things that are causes and results

Chandrakirti's autocommentary says:

To explain that "Not only are components and so forth established by mutual reliance, the two – cause and effect – are also mutually reliant," because,

If a cause produces that to be produced, then it is a cause and
If an effect is not produced, without that, it will have no cause.
Also an effect will be produced if a cause exists. Therefore, [6.168abc]

Also these two – cause and effect – are to be known saying, "if one or another exists, the other is existent; cause and effect are not inherently existent."

In case those two are thought to be established by way of their own entity – O dear!

Which would transform from what, which would be prior to which? Explain it. [6.168d]

A cause or an effect transforms from what previously established cause or effect? From the two, does a cause or does an effect transform first? Therefore, it should be understood that they are also imputed as cause and effect, like the chariot, having taken [the other] as cause, they are not transformed from self-nature.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B1A-6C5A-2C2 Repetition for the functioning things of cause and effect

If a cause produces a product, then it is a cause.
If a result is not produced, then without that, it is causeless.
If the cause exists, the effect is also born, therefore. [6.168abc]

It should be understood that cause and effect are established in relation to each other [but do not exist inherently]; for it is if a cause produces a product [or effect], that it is a cause; and if an effect is not produced, since that production does not exist, that effect has non-existent cause; while if the cause exists, the effect also is born.

Tell me, what is born from what? Which is before which? [6.168d]

If cause and effect exist inherently, then tell me – from what cause is what effect born? Which of those two, the cause and the effect, exists earlier than the other? If they exist inherently, the cause cannot come first, for the effect [in relation to which the cause is a cause] must exist in the time of the cause. The effect also cannot, since the effect would then be causeless.

Just as a possessor of components and its components are established in mutual dependence so too are causes and results. The cause, that which produces, and the result, that which is produced, exist in mutual dependence. In short, not only are a possessor of components and its components established in mutual dependence but so too are causes and results. If it produces a result it is a cause, whereas if it is not able to produce a result it is not a cause. Similarly, *Collected Topics* says that the definition of a cause is that which produces, whereas the definition of a result is that which is produced. If there is a cause there will be the production of a result. Therefore, cause and result are established in mutual dependence; they are not inherently other. While not existing inherently, they are established in mutual dependence.

Someone asks: "How do they exist if they do not exist inherently?" They exist for a non-investigative awareness and exist nominally. They exist as does a harvest which is produced in dependence on the sowing of seeds. If causes and results are considered to exist inherently, one can ask: "Which comes first, the cause or the result?" If cause and result were inherently existent, they would be unrelated whereby one would not come first and the other later. *Collected Topics* says that cause, result, and functioning thing are synonyms. Although this is true in general it is not the case when applied to a specific basis. In general if it is a cause it is a result because due to being a cause it must be the result of a previous cause. For example, a mother is pervaded by being a daughter, she arises from her own mother. There is no causeless mother. In short, cause and result are established in mutual dependence.

The analysis by means of the seven ways can also be applied to causes and results asking whether they are oneness or otherness and so forth. The conclusion is that there is no inherently existent cause or result.

Chandrakirti's autocommentary says:

> Furthermore, if an effect were inherently produced by a cause, would it be produced through meeting or not meeting? There, respectively:
>
> *If your cause produces an effect through meeting, then, as*
> *They are one potential, producer and effect would be undifferentiated,*
> *And if separate, this cause would have no distinction from a non-cause.*
> *Having rejected these two, other conceptions will also not exist.* [6.169]
>
> There, if a cause produces an effect through meeting, then there is meeting and, like the undifferentiated meeting of the waters of a river and the ocean, they are one. Hence, because the distinctions "this is a cause" and "this is an effect" do not exist, which was produced from which?
>
> In case it is produced without meeting, then, just as other non-effects are not produced without meeting, similarly an effect will also not be produced without meeting. Yet, if produced while not meeting, everything will be produced.
>
> In propounding cause and effect as inherent[ly existent], also another third conception except for meeting and not meeting is not possible. Hence, an inherently existent cause solely does not produce an effect.

Gedun Drup's *Mirror of the Clarification of the Thought,* as translated by Martin Willson*,* says:

If you say that the cause and effect exist inherently, then is the effect produced by the cause after meeting, or produced without meeting?

> *If, for you, causes produce effects on meeting, then*
> *Since they are a single potential, the producer and result aren't different.* [6.169ab]

If the former, then it follows that the producer and the result will not be different entities, since the cause and the effect are a single potential. [So what is what?]

> *If they are separate, this cause will be no different from non-causes.* [6.169c]

If the latter, then it follows that that "cause" will be no different from non-causes, because it is inherently distinct from the effect [, i.e. unrelated to it].

> *When we've rejected both of these, there is no other view.* [6.169d]

It follows that the cause does not inherently produce the effect; for it does not produce it by meeting or not meeting with the effect, and when these two, meeting and not meeting, are rejected, there is no other, third concept [for a proponent of cause and effect as inherently existent].

Chandrakirti's autocommentary says:

> Therefore:
>
> *As your cause does not produce an effect, therefore*
> *The so-called 'effect' does not exist;...* [6.170ab]
>
> When a cause does not produce an effect, then since an effect does not exist:

... devoid
Of effect, a cause would have no reason. This also does not exist. [6.170b]

The reason of taking a cause as the cause itself is that an effect arises. If even without an effect, a cause became the cause itself, then, the cause-ness of the cause would have no reason. But, this is also not asserted. Therefore, the two – cause and effect – are not inherently existent.

If asked: How is it for you?

Because both these two are also like illusions, therefore
There will be no faults for me. Worldly things also exist. [6.170cd]

The complete analysis occurs here about the very object to be produced and the very producer being [established by] their own characteristics according to some. According to some [others], since things are merely produced by wrong imagination, they are of a non-produced nature, like illusions. And, although without inherent [existence], they become objects of conceptualization, like the falling hair and so forth observed by one with cataracts. [Similar faults] are just unimaginable for that. Therefore, there does not exist an occasion of the explained faults for me; and although the things of the world are established without investigation, they do exist – hence, everything is established.

Gedun Drup's *Mirror of the Clarification of the Thought,* as translated by Martin Willson, says:

But if you say causes don't produce effects, the so-called effect
Therefore exists not. [6.170ab]

You should understand that the so-called effect does not exist inherently, if you say on the other hand that the cause does not inherently produce the effect.

Effectless, the cause has no reason. [6.170b]

It follows that the cause will have no reason to be posited as a cause, since it is devoid of production of an effect.

It too can't exist. [6.170b]

If you accept this, [the cause] also cannot exist, since it is [not] established as being a cause.

Because both these are similar to illusions, therefore for us
No fault arises, though the things of worldly folk exist. [6.170cd]

For us Madhyamikas, the fault of cause and effect conceived as meeting or not meeting does not arise, although the functioning things of worldly folk exist. This is because this cause and effect are both like illusions, not existing inherently, but existing conventionally.

Does a cause produce a result by meeting or not meeting its result? Does a seed produce a sprout through meeting or not meeting the sprout?
Student: They meet because they are a continuity of similar type.
Geshe Jampa Gyatso: Such a meeting is not like the meeting of a mother and her son. Does a mother produce a son through meeting or not meeting him?
Student: The approaching of the cessation of the cause and the approaching of the production of a result meet.
Geshe Jampa Gyatso: That is right, they do meet. The approaching of the cessation of the cause and the approaching of the production of a result exist simultaneously, however, the cessation of a cause and the production of a result do not exist simultaneously. The result is produced as the cause ceases.

In conclusion, things do not exist inherently and the imputed object is not found when thoroughly sought. Through reflecting on this, one will develop one's understanding of emptiness and thereby shatter the foundations of cyclic existence.

Thursday morning, 15 March 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 390) says:

> The explanation of the statement "Not only are components and so forth mutually dependent establishments, also the two, causes and results, are established in mutual dependence" [is as follows]:
>
> *If it is the case that a cause produces a product, it is a cause, and*
> *If a result is not produced, without that, it does not have a cause.*
> *Results too, when their causes exist, are produced. Therefore,* [6.168abc]
>
> Because of that, *if it is the case that a cause produces a product*, a result, *it is* a producer, that is, *a cause, and if a result is not produced,* since it is *without that* production, that result *does not have a cause*. *Results too, when their causes exist, are produced* from them. *Therefore*, also the two, causes and results, exist in mutual dependence; they do not exist inherently.
>
> OBJECTION: Causes and results are established by way of their own entity.
>
> RESPONSE:
>
> *Tell us which comes from what? Among them, which comes first?* [6.168d]
>
> Oh, tell us *which* of the two *comes* in dependence on *what* cause or result? *Among* the two, *which*, cause or result, *comes first?* In regard to their inherently existing like that, the cause coming first is not suitable; at the time of the cause, the result that depends on that cause would necessarily be established. Also the result coming first is not suitable since it would be without causes. Therefore, it should be understood that also those imputed as causes and results, like a chariot, are established in mutual dependence; they do not arise from their nature.
>
> In addition, if causes inherently produce results, they would produce them either through meeting or not meeting their results.
>
> *If, for you, a cause produces a result through meeting, at that time*
> *They would be one potential, whereby producer and result would not be different, and,*
> *If they were distinct, there would be no distinction between causes and non-causes.*
> *Having abandoned those two, another conception also does not exist.* [6.169]
>
> Regarding that, *if*, according *to you*, *a cause produces a result through meeting* the result, *at that time they*, the cause and the result, *would be one potential*; like the meeting of the water of a river and an ocean. If they become one, they could not be distinguished saying "cause and result." Because *producer and result would not be different*, what would produce what?
>
> *If they were* produced *separate*ly, that is, without meeting, *there would be no distinction between those* asserted to be the *causes* of a result and *those that are not* its *causes* and between a producer and a non-producer because inherently existent separate [things] are different unrelated objects. With regard to propounding causes and results to be inherently existent, *having abandoned the two* conceptions of meeting and not meeting in regard to product and producer, since *another* third *conception* aside from them *also does not exist*, inherently existent causes and results are just not produced.
>
> *For you, a cause does not produce a result, therefore, a so-called "result" does not exist.*
> *A cause free from a result, not having a cause, also does not exist.* [6.170ab]
>
> Because of that, according *to you*, an inherently existent *cause does not produce a result, therefore, a so-called "result" does not exist* inherently. The reason for positing a cause as a cause is that there arises a result. On the other hand, if one were able to posit *a cause* – even though it is *free from*, that is, without, *a result* – as a cause, at that time, since the cause *would have no* reason to be posited as a cause, it *also does not exist*. Therefore, the two, causes and results, do not exist inherently.
>
> QUESTION: Well then, according to you how do they exist?
>
> RESPONSE:

Because of that, also both of them are illusion-like. Therefore,
For us the faults do not occur; worldly beings' things also exist. [6.170cd]

According to the opposition, the two, product and producer, are asserted to be established by way of their own character, but, having investigated the meeting and non-meeting of causes and results, there are faults in both positions. However, *because of that*, that is, according to that, because things are produced by the force of mistakenly imputing them and are posited by a conception of a mere conventionality, *also both* causes and results *are*, *like illusions*, not produced inherently, and, although they are not inherently existent, like the falling hair and so forth observed by those with cataracts, they are objects that are posited by a mere conception of conventionalities. In regard to that, faults similar to those of setting forth the assertion of inherently existent causes and results are just unimaginable*. Therefore, for us the faults* of meeting and non-meeting that were explained above *do not occur* and, since *the things* renowned *in the world* that are established without investigation – causes, results, chariots, and so forth – *also exist*, everything is established.

Here, the autocommentary expresses the harm to causes and results that are inherently existent, established by way of their own character, and so forth, the qualification of the object of negation. When propounding the illusion-like lack of inherent existence is turned back against oneself, it is necessary to say "It is not accrued," however, one should not at all give a facsimile of a response which does not distinguish the two, inherent existence and existence.

Because causes and results are established in mutual dependence they do not exist inherently. Just as a possessor of components and its components are established in mutual dependence so too are causes and results. If causes and results existed inherently, one could ask: "Which comes first, the cause or the result?" If they existed inherently it would not be feasible for the cause to exist first and for the result to arise later because to exist inherently means to exist without dependence. On the other hand, if the result existed first then it would arise without a cause. These are the faults of inherently existent causes and results. Such faults are not accrued by the Prasangika Madhyamikas who assert that phenomena do not exist inherently but exist only when not investigated and not analyzed.

Another argument is: "Does a cause produce its result by meeting it or without meeting it?" If a cause produces its result by meeting it, it would follow that the cause and result would be one. It would be like the example of a river becoming one with the ocean when it flows into or meets it, in that one cannot separate them because they have become one entity. This is the fault of a cause producing a result by inherently existent meeting. On the other hand, if a cause produces a result by inherently existent non-meeting, it would follow that a result would arise from both causes and non-causes; that is, anything could arise from anything.

Causes and results are to be understood in terms of the conventions of the world. Through understanding external causes and results, one come to understand that causes and results in general lack true existence. Due to this, one comes to understand that all phenomena lack true existence. When all causes and conditions are complete a result arises, therefore, a result depends on causes and conditions. Even though a cause is present, if the conditions are not complete the result will not arise. For example, when a seed is planted in a dry field, a sprout will not arise. This is because various conditions, such as heat, water, manure, and so forth, are necessary for the production of the sprout.

In the conventions of the world does a cause produce its result through meeting or not meeting? For example, when we are hungry we eat food, due to which we become full. Eating the food is a cause, due to which the stomach becomes full, the result. The condition is the action of eating the food. Do the cause and result meet in this case? What about the case of a mother who gives birth to a child?
Student: What is the definition of meeting?
Geshe Jampa Gyatso: That which is suitable to be called meeting and cannot be invalidated by the conventions of the world.

Lama Tsongkhapa's *Illumination* (Tibetan text page 392) says:

3B1C-2B3E-2B3C Dispelling others' arguments regarding this

1 The argument that there is a similar fault in refuting inherently existent causes and results
2 Indicating the response that there is no similar fault for us

3B1C-2B3E-2B3C-1 The argument that there is a similar fault in refuting inherently existent causes and results

The lower schools say that in refuting inherently existent causes and results a similar fault is accrued by the Prasangika Madhyamikas.

Chandrakirti's autocommentary says:

> Here, if someone says in response, whatever was mentioned [by the Madhyamikas] saying, "Does a cause produce an effect through meeting or rather not meeting?" – are here also similar arguments and investigations for you. How?
>
> *"Does this refutation refute that to be refuted through meeting or*
> *Not meeting?" Will not this fault occur also for you?* [6.171ab]
>
> If the refutation refutes that to be refuted through meeting, then this very fault will occur. But if not meeting, also then just that [fault] will occur. Having rejected these two, another conception will not exist. When thus, your refutation does not have the ability to refute that to be refuted, then since your refutation is refuted, indirectly also functioning things of cause and effect are just established. In order to establish the aforesaid it is mentioned:
>
> *When that is mentioned and only one's own position is destroyed,*
> *Then you are unable to refute that to be refuted.* [6.171cd]

Gedun Drup's *Mirror of the Clarification of the Thought,* as translated by Martin Willson, says:

3B1A-6C5A-2C3A Argument

You may say:

> *"Does not this fault, that this refutation either refutes its object*
> *On meeting it, or without meeting, also arise for you?* [6.171ab]

"The fault of conceiving cause and effect as meeting or not meeting is the same for you too. Is there not this fault for you, that this refutation either refutes the object to be refuted on meeting, or refutes it without meeting? There is, because if it refutes on meeting, then since they are one potential, what is refuted by what? If it refutes without meeting, then all things, equal in not meeting, would refute it. And when these two are rejected, there is no other, third concept.

> *"When, speaking these words, you only destroy your own position,*
> *Then you're not able to refute the object of refutation.* [6.171cd]

"When saying these words of specious refutation destroys only your own position, then you cannot refute the object of refutation.

Chandrakirti's autocommentary says:

> Furthermore:
>
> *Because spurious arguments that equally follow also for one's own words*
> *Unreasonably deny all things, therefore*
> *The holy beings will not accept you, and because*
> *You, lacking your own position, are also a quibbler.* [6.172]

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *Since, with self-confuting arguments, following equally for your own words,*
> *Without logic, you are contradicting all things, therefore*
> *Holy beings will not accept you.* [6.172abc]

"Besides, you Madhyamikas will not be accepted by holy beings, for with self-confuting arguments such that the same consequence flung at your opponent also applies to your own words, without logic you contradict all functioning things. [How is this? What logic is there in saying that if it is produced without meeting, then it must be produced by everything that is equal in not meeting, but it is not produced by them? A magnet likewise attracts suitably placed iron, without meeting, but does not attract everything it does not meet; the eye, too, sees a suitably placed form only without meeting, but does not see everything it does not meet. Similarly, although a cause is apprehended to produce without meeting, it will not produce everything it does not meet, but produces only the appropriate effect.]

> *"Because you have no position*
> *Of your own, you are also a disputant who refutes everything."* [6.172cd]

"You are also a disputant refuting whatever you come upon[170], because you have no position of your own to posit, and just set out to refute others' positions."

Chandrakirti's autocommentary says:

> There, the equality in following also for one's own words was already mentioned [in 6.171ab]. The statement "unreasonably deny all things" is to be explained. Whatever was stated [by the Madhyamikas], "[if produced without meeting, it must be produced] by [everything] equal in not meeting, yet, it is not produced [by them],"– what reason exists in this?
>
> Like this. A magnet attracts iron which abides in a suitable place without meeting, [but] does not [attract] everything. Similarly, the eye sees forms abiding in a suitable place only without meeting, it does not [see] all. Similarly, although a cause is held to produce without meeting, it will not produce everything without meeting – it will produce only the appropriate effects.
>
> Because thus, unreasonably all things are denied, therefore the holy beings will not accept you. Furthermore, you are also a mere quibbler since a disputant who is devoid of his own position and engages in merely dispelling the position of others is called a 'quibbler' (or 'sophist'). You do not have any position of your own because your complete analysis is a mere dispelling of other's positions.

The lower schools ask the Prasangika Madhyamikas whether or not a refutation meets that which is to be refuted. If the Prasangika Madhyamikas say that they do, the lower schools say that then all the previously mentioned faults that the Prasangika Madhyamikas flung at them would also be accrued by the Prasangika Madhyamikas themselves. There are only two possible types of investigation: as to whether they meet or whether they do not meet. What is that which refutes, the refutation, and what is that which is to be refuted, the object of refutation? The assertion of inherent existence is what is to be refuted; it is the object of refutation. What refutes it, the refutation, are the reasonings refuting inherent existence and the scriptures refuting inherent existence.

What is to be refuted is, for example, the assertion "A cause inherently produces a result." The lower schools ask the Prasangika Madhyamikas: "When you refute what is to be refuted does the

[170] *sun.ci.phyin.du.rgol.ba.po*

refutation occurs through the meeting or the non-meeting of the refutation and the object of refutation?" They say that if the refutation occurs through their meeting, all the faults mentioned previously by the Prasangika Madhyamikas would be accrued by the Prasangika Madhyamikas themselves. On the other hand, if the refutation occurs without their meeting, it would follow that the object of refutation would be refuted by both a refutation and a non-refutation. In this way, all the faults flung at the lower schools are accrued by the Prasangika Madhyamikas.

In short, the argument regarding the meeting and non-meeting of causes and results can be applied similarly to the meeting and non-meeting of the refutation and the object of refutation.

To review, the lower schools say that although the Prasangika Madhyamikas fling the faults at others, they are actually accrued by the Prasangika Madhyamikas themselves, whereas the lower schools do not accrue such faults. The lower schools say that the Prasangika Madhyamikas only refute others meaninglessly since the faults are actually accrued only by them. In this way, the Prasangika Madhyamikas' assertion of the lack of inherent existence actually deprecates the existence of all phenomena. This is because the lower schools assert that it is the Prasangika Madhyamikas who have a view that deprecates or a view of annihilation. They say that according to the Prasangika Madhyamikas nothing would exist. In other words, the lower schools say that the faults of asserting inherent existence flung at them by the Prasangika Madhyamikas are actually accrued by the Prasangika Madhyamikas themselves who do not assert inherent existence.

The subject of "spurious arguments" is discussed in Dharmakirti's *Commentary on [Dignaga's] Compendium of Valid Cognition*. In this text, someone makes an argument to which someone else flings a consequence without a correct proof, but instead with a facsimile of a proof. In the end, the two parties, the lower schools and the Prasangika Madhyamikas, become like politicians who proclaim that they are the best and that the opposition is full of faults!

In short, the main point here is that the Prasangika Madhyamikas say that causes and results are established in mutual dependence due to which they are empty of inherent existence. They ask: "If causes and results are inherently existent, do causes produce their results by meeting or not meeting their results?" They then point out the faults of both their meeting and non-meeting. To this, the lower schools respond asking them: "What about the case of a refutation and its object of refutation, does the refutation refute the object of refutation by meeting or not meeting?" The lower schools say that if they do meet, the refutation and the object of refutation would become one potential due to which the refutation could not refute the object of refutation. On the other hand, if the refutation refutes the object of refutation without meeting, then both those that are refutations and those that are not refutations could refute the object of refutation. They say that the faults are the same as those flung by the Prasangika Madhyamikas at the lower schools regarding the meeting and non-meeting of causes and results.

Lama Tsongkhapa's *Illumination* (Tibetan text page 392) says:

> Here, regarding the response that refutes inherently existent causes and results, someone [says]: The investigation of meeting and non-meeting in regard to the production of results by causes as explained above is also similar for you. How is that?
>
> *"Do the faults of 'The refutation either refutes through meeting*
> *The object of refutation or without meeting it' not also occur for you?"* [6.171ab]
>
> *Do the faults* of stating "Your *refutation either refutes through meeting the object of refutation* or refutes *without meeting it*" *not also occur for you?* They do. In that case, if [the refutation] were to refute through meeting [the object of refutation], since they would become one, what would refute what? On the other hand, if [the refutation] were to refute without meeting [the object of refutation], since it would be refuted by everything similar without meeting it, that would not be suitable.

However, there also does not exist a third investigation which is other than these two investigations. When considered in this way, since your refutation does not have the ability to refute the object of refutation, your refutation is refuted, whereby, implicitly, also the things that are causes and results are just inherently existent. In order to indicate this, it is said:

"When that is mentioned and only your own position is completely destroyed,
At that time you are unable to refute the object of refutation." [6.171cd]

When that facsimile of a refutation is *mentioned and only your own position is completely destroyed, at that time you are unable to refute the object of refutation*, others' systems.

"With spurious arguments similar to these consequences even in your own words,
Illogically you deprecate all things. Therefore,
You will not be accepted by the holy beings and, because of that,
Due to lacking your own position, you are also a disputant refuting anything." [6.172]

In addition, because of that, *with spurious arguments*, that is, facsimiles of refutations, *similar to the consequences* flung at other opponents in that they are *even in your own*, the opponent's, *words*, *illogically you deprecate all things*. *Therefore, you will not be accepted by the holy beings*. Why is that? What reasoning is there in stating "If it is produced without meeting, it would necessarily be produced by everything that is similar without meeting, however, it is not produced by them"? Just as a magnet attracts iron which abides in a suitable place without meeting it, but does not attract everything not met, and, also the eyes see forms that abide in a suitable place without meeting them, but everything not met is not seen, similarly, even though a cause has also already produced without meeting, it does not produce everything not met, but produces only suitable results.

Furthermore, *because of that*, you would also become a disputant refuting anything because a disputant who is devoid of positing his *own position* and merely eliminates others' positions is called "*a disputant refuting anything*" and you also abide like that.

The argument flung by the lower schools at the Prasangika Madhyamikas is that the Prasangika Madhyamikas would accrue the same faults and give the example of the meeting and non-meeting of a refutation and its object of refutation. The lower schools say that by this argument the Prasangika Madhyamikas' refutation becomes impotent and that their own position that causes and results exist inherently becomes solidified. They say that the Prasangika Madhyamikas' refutation is only a facsimile of a refutation, whereas their own position is correct, and that the Prasangika Madhyamikas' refute themselves and not others' positions. In this way, they say that the Prasangika Madhyamikas deprecate all phenomena and become unacceptable to holy beings.

To illustrate this Lama Tsongkhapa mentions the example of a magnet saying: "Just as a magnet attracts iron which abides in a suitable place without meeting it, but does not attract everything not met, and, also the eyes see forms that abide in a suitable place without meeting them, but everything not met is not seen, similarly, even though a cause has also already produced without meeting, it does not produce everything not met, but produces only suitable results." A magnet attracts iron without meeting or touching it. Likewise, the eyes see forms in a suitable place without meeting or touching them, but this does not imply that everything that is not met is seen. The lower schools say that just as everything not met is not seen, so too a cause produces a result without meeting the result, but it is not that everything that is not met is a result produced by that cause. Only a suitable result is produced.

In conclusion, the lower schools say that the Prasangika Madhyamikas are disputants who are devoid of positing their own position and merely eliminate others' positions, therefore, their reasoning is only a facsimile of reasoning. In the next section the Prasangika Madhyamikas give their reply to the lower schools' argument.

Thursday afternoon, 15 March 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 393) says:

3B1C-2B3E-2B3C-2 Indicating the response that there is no similar fault for us

A The correct way of refuting and establishing for our own position
B Clearly explaining the reason that it is not similar to others' consequences
C Others are unable to establish the contrary like we are able to establish the lack of inherent existence
D The way of making known additional refutations that are not explained here

3B1C-2B3E-2B3C-2A The correct way of refuting and establishing for our own position

1 The way of asserting the refutation of others' positions in conventional terms
2 The way of asserting the establishment of our own position

3B1C-2B3E-2B3C-2A1 The way of asserting the refutation of others' positions in conventional terms

Chandrakirti's autocommentary says:

I shall explain about this:

This fault already mentioned "Does a refutation refute
That to be refuted without meeting or else through meeting?" would
Occur for he who has a definite position. Since I do not have
This position, this consequence is not possible. [6.173]

This is the Prasangika Madhyamikas' response to the lower schools' argument about the meeting and non-meeting of the refutation and the object of refutation. "A definite position" refers to the lower schools who hold the position asserting inherent existence. Because the Prasangika Madhyamikas do not hold this position, they say the consequence flung by the lower schools does not apply to them. In brief, these faults are accrued by those who assert inherent existence and not by those who assert the lack of inherent existence.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B1A-6C5A-2C3B-1A How the opponents' position is refuted

This fallacy you have stated, that a refutation either
Refutes its object without meeting or on meeting it,
Occurs for those who have the definite position, but as
We do not have this position, this consequence does not arise for us. [6.173]

For us Madhyamikas, this consequence you just stated, "The refutation either refutes the object of refutation without meeting or, on the other hand, refutes it on meeting," does not arise, since these kinds of fallacy become a problem for those with the definite position, asserting inherent existence, but we do not have this position asserting inherent existence.

Chandrakirti's autocommentary says:

There, what was mentioned saying "The spurious argument which equally follows for one's own words," will not follow equally for our own position. Because for our position, the refutation does not refute through meeting that to be refuted, nor does the refutation refute that to be refuted without meeting, because the two – refutation and that to be refuted – are not established inherently. Therefore, do not make contemplation of meeting and not meeting.

As is extensively taught [in the *Middling Prajñaparamita*, 27]:

> [Shariputra]: Venerable Subhuti, will an unproduced attainment be attained due to a produced quality, or will an unproduced attainment be attained due to an unproduced quality?
> Subhuti: Venerable Shariputra, I do not assert unproduced attainment to be attained due to a produced quality, nor assert attainment of the unproduced due to the unproduced.
> Shariputra: Venerable Subhuti, are there no attainments and no clear realizations?
> Subhuti: Venerable Shariputra, indeed attainments exist and clear realizations exist, however, not in a dual mode. Venerable Shariputra, attainments and clear realizations are in the conventions of the world. Stream enterers, once returners, non-returners, arhats, solitary realizers, and bodhisattvas are also in the conventions of the world. Ultimately, there are no attainments and no clear realizations.

Here Chandrakirti quotes from sutra in order to support his position. "Attainment" or "acquisition" is an assertion of the Vaibhashikas. They say that acquisition is of the three times. There is a difference between the acquisition and the phenomenon to be acquired. With respect to an unproduced phenomenon to be acquired what acquisitions are there? Subhuti says: "I do not assert unproduced attainment to be attained due to a produced quality, nor assert attainment of the unproduced due to the unproduced." Acquisition, according to the Vaibhashikas, is a substance that acts to bring about the possession of an object to be acquired. Acquisition is of three times: past acquisition, present acquisition, and future acquisition. Each in turn is of three times: past past acquisition, present past acquisition, future past acquisition, and so forth. This subject is discussed in detail in Vasubandhu's *Treasury of Knowledge*. Acquisition is one of the fourteen non-associated compositional factors posited by the Vaibhashikas. Acquisition can be applied to calm abiding, for example, in which case calm abiding is the phenomenon to be acquired and the acquisition of calm abiding is a substance that acts to bring about the possession of the object to be acquired, calm abiding. For example, there is an acquisition of our evening dinner; this acquisition is only a present acquisition, there is no future and past acquisition of our evening dinner because food is an unpredicted phenomenon and, therefore, has small potential. On the other hand, virtuous phenomena have past, present, and future acquisition as do non-virtuous phenomena.

In short, there is no inherently existent past, present, and future acquisition. Acquisition exists but does not exist ultimately. In the conventions of the world, stream enterers, solitary realizers, and so forth exist. Stream enterers are of two types: an approacher to stream enterer and an abider in the result of stream enterer. What is the result of stream enterer? It is the result that is the abandonment of the three thorough entanglements that are to be abandoned by the path of seeing: (i) the acquired view of the transitory collection, (ii) the view holding bad ethics and conduct as supreme, and (iii) afflicted doubt. These three are the main obstacles to the attainment of liberation. Why? Due to the view of the transitory collection one does not wish to attain liberation, due to the view holding bad ethics and conduct as supreme, even though one wishes to attain liberation, one takes a mistaken path, and due to afflicted doubt even though one has entered a path one doubts how to proceed. For example, someone who does not wish to go from Pomaia to Bologna will not go, someone who wishes to go but takes the wrong road will perhaps end up in Rome, and someone who has entered the road but doubts it is right will have difficulty reaching Bologna.

The <u>definition of an approacher to stream enterer</u> is: one who is striving to abandon the three thorough entanglements that are to be abandoned by the path of seeing.
The <u>definition of an abider in the result of stream enterer</u> is: one who has abandoned the three thorough entanglements that are to be abandoned by the path of seeing.
The <u>definition of an approacher to once returner</u> is: one who is striving to abandon most of the five partial concordances with the lower.
The <u>definition of an abider in the result of once returner</u> is: one who has abandoned most of the five partial concordances with the lower.

The is striving to abandon is: one who is striving to abandon all of the five partial concordances with the lower.
The definition of an abider in the result of non-returner is: one who has abandoned all of the five partial concordances with the lower.
The definition of an approacher to foe destroyer is: one who is striving to abandon the five partial concordances with the upper.
The definition of an abider in the result of foe destroyer is: one who has abandoned the five partial concordances with the upper.

There are two types of solitary realizers: rhinoceros-like solitary realizers and congregating solitary realizers. A bodhisattva is a being who has the heroic mind wishing to attain enlightenment for the welfare of all sentient beings.

These different types of attainments are all conventions of the world, but do not exist ultimately.

Chandrakirti's autocommentary says:

> Here, just as the attaining of attainments due to produced or unproduced qualities is negated because of the consequence of following as dual – and it is accepted as attained in the conventions of the world without investigation because of not reasoning about non-things although dual – similarly, indeed also that to be refuted and the refutation do not meet nor not meet, however it should be understood that "Conventionally the refutation refutes that to be refuted."

Attainments do not exist inherently. Inherently existent attainments and non-attainments are not feasible, but do exist in the conventions of the world when not analyzed. The refutation and the object of refutation are similar. An inherently existent refutation does not refute its object of refutation by meeting or not meeting, while there is no third possibility. There is no meeting and no non-meeting of an inherently existent refutation and object of refutation, but conventionally a refutation and its object of refutation do exist.

Lama Tsongkhapa's *Illumination* (Tibetan text page 394) says:

> This is expressed [as follows]:
>
> *The fault already mentioned stating "The refutation either refutes without meeting*
> *The object of refutation or else through meeting it," here*
> *Definitely becomes that for whoever has the position,*
> *Whereas, since we do not have this position, this consequence is not possible.*[6.173]
>
> *The fault already mentioned* above *stating "The refutation either refutes without meeting the object of refutation or else* it refutes *through meeting* it," *here becomes that* fault for any opponent *who has the position*, that is, who formulates an ultimate that is inherent existence, *whereas since we do not have the position* that formulates an ultimate that is inherent existence, *the consequence* that indicates fault in both meeting and not meeting *is not possible* for us because, according to us, both the object of refutation and the refutation are asserted to not exist inherently. In the autocommentary, as the reason with respect to others' position above that the fault of investigating meeting and not meeting in regard to a cause producing a result is not similar for us, we set out the assertion that they are like illusions which are not inherently existent in [response] to the opponents' assertion that causes and results are established by way of their own character. Also in this context, the reason that the fault that is flung at others does not occur for us is the lack of inherent existence. Through stating this, the reason that it is not similar for us is that it should be unquestionably asserted that the two positions are not asserted to exist inherently. Because of this, [Nagarjuna's] *Refutation of Objections* says:

> If by us there are some theses,
> Then that fault would exist for us.
> Since we do not have this thesis,
> The fault just does not exist for us.

As is extensively taught in the *Mother of the Conquerors*:

> [SHARIPUTRA]: Venerable Subhuti, is an unproduced attainment attained due to a produced quality or is an unproduced attainment attained by an unproduced quality?
>
> SUBHUTI: Venerable Shariputra, I do not assert that an unproduced attainment is attained due to a produced quality, nor do I assert an unproduced attainment is attained due to the unproduced.
>
> SHARIPUTRA: Venerable Subhuti, are there also no attainments and no clear realizations?
>
> SUBHUTI: Venerable Shariputra, indeed attainments also exist, clear realizations also exist, however, not in a manner of duality. Venerable Shariputra, attainments and clear realizations are worldly conventions. Stream enterers, once returners, non-returners, foe destroyers, solitary realizers, and bodhisattvas are also worldly conventions. Ultimately, there are no attainments and no clear realizations.

With respect to this, the statement "Nor do I assert an unproduced attainment is attained..." onward [means that] when the imputed objects – the two, the object of attainment and the attainer – are sought they are not found. Therefore, at the time of analyzing in that way, because from the point of view of both positions

- the attainment of the object of attainment is refuted and
- it is not suitable for the object of attainment which is analyzed dualistically to be a non-existent inherently existent thing,

that they are asserted to be attained in worldly conventions without investigation is indicated by stating "indeed attainments also exist, clear realizations also exist, however, not in a manner of duality." "Attainment" is the attainment of the object of attainment and clear realizations. Just as these two are asserted to be conventions without existing ultimately, so too should it be understood that even though the refutation does not ultimately refute the object of refutation, it does refute it conventionally.

If phenomena existed inherently, a thesis would exist inherently due to which it could not be overcome no matter how much it were debated. The Prasangika Madhyamikas say that only the lower schools have the consequence "Does a cause produce a result by meeting or not meeting?" because only they assert that causes and results exist inherently. The Prasangika Madhyamikas do not accrue this fault since they do not assert causes and results to exist inherently nor do they assert a refutation and its object of refutation to exist inherently. In other words, the Prasangika Madhyamika system does not analyze whether the refutation refutes its object of refutation by meeting or not meeting. Such analysis is only done when searching for the imputed object. When one searches for the imputed object it cannot be found.

In conclusion, attainments and clear realizations exist in the conventions of the world but do not exist ultimately. What kind of objects of attainment exist in the world? There are many, for example, the states of stream enterer, once returner, non-returner, foe destroyer, and so forth. The different types of clear realizations or paths also exist. These are found when not sought by thorough analysis, whereas they are not found when sought by thorough analysis. For example, a table is an object that is visible but when thoroughly analyzed as to which part of the table is the table and so forth it is not found. Why is the table not found by means of thorough analysis? The non-finding of the table upon searching for it is the ascertainment of emptiness. The mere non-affirming negative which is the negation of the object of negation is its emptiness. Due to lacking this understanding, one can come to

think that nothing exists and thereby fall into the extreme of annihilation. On the other hand, if one finds the imputed object upon searching for it and thinks that it exists truly, one falls into the extreme of permanence. The middle way is to not fall into either of these two extremes. One finds the middle way when one understands that although phenomena do not exist inherently they do exist conventionally.

One can search for an object within the conventions of the world and one can search for the imputed object by means of thorough analysis. If one searches for the table in the manner of the conventions of the world it can be found. If one searches for the table by means of thorough analysis as to which part is the table and so forth, the table is not found.

(Masters Program Correspondence Course please note that there were no teachings Monday afternoon, 19 March 2001)

Lama Tsongkhapa's *Illumination* (Tibetan text page 395) says:

3B1C-2B3E-2B3C-2A2 The way of asserting the establishment of our own position

Chandrakirti's autocommentary (Tibetan text page 183) says:

Furthermore:

Just as you can see the distinctions the solar disc has
Even in a reflection during an eclipse and so forth, though
The sun and the reflection completely meeting and not meeting are
Indeed unreasonable, a mere convention will arise in dependence and [6.174]

Even while untrue, for that to be established – one's face as pretty –
It exists. Likewise similarly here too, from reasoning
Devoid of correctness, which is perceived able to cleanse the wisdom face,
Also that to be established is known to be realized – should be known. [6.175]

Gedun Drup's *Mirror of the Clarification of the Thought* (Tibetan text page 71), as translated by Martin Willson, says:

3B1A-6C5A-2C3B-1B How our position is established

Know that just as, in times of eclipses and so on, you can see
The variations in the sun's disk even in a reflection,
And though meeting and not meeting of the reflection with the sun
Are incorrect, it arises dependently, as a mere convention; [6.174]

And as, although it's not true, it exists for what is to be established,
The beauty of one's face; likewise here too, from reasonings which
We see are effective in cleaning the face of wisdom, and are devoid
Of admissibility, what is to be established is also realized. [6.175]

In times of eclipses and so on, you can see the variations there are in the sun's disk even relying on a reflection; if you seek the imputed object, the production of the reflection meeting and not meeting the sun, this production is incorrect, but the reflection arises as a mere convention, dependent on the sun; and although a reflection is not true, that reflection is effective for what is to be established, the beauty of one's face. Likewise also in this case of the exemplified meaning, although it does not exist inherently, establishment of our own system is admissible. For you should know that from the reasonings [such as dependent arising[171] and being neither one nor several[172]], which we see are effective in cleaning the face that is wisdom [of its dirt of ignorance], and are devoid of inherently existent admissibility, what is to be established, non-inherent existence, is also realized. [The word "also" (v. 6.175d) means that a refutation devoid of inherently existent admissibility can also refute an object of refutation.]

Chandrakirti's autocommentary says:

[171] *rten 'brel*

[172] *gcig du bral*

> Just as, because a so-called "reflection" does not exist even a little, all conceptions of so-called "production meeting or not meeting the solar disc" are indeed impossible, but when observing a reflection from proximity with the condition, form, the object desired to be realized is definitely produced; likewise, a refutation emptied by inherent nature refutes the object to be refuted and due to reasoning which is emptied by inherent nature and devoid of correctness, that to be established is established. Since also not following as dual, the similar consequence also for our own words is unreasonable. The aforesaid should be understood.
>
> Since wisdom itself is a face – "wisdom face." To cleanse that means total purification by the abandonment of ignorance. "Which is perceived able" concerning that means "perceived as having the capacity for that." Since this propounding as dual is unreasonable for all imputed existents, therefore, the Madhyamikas do not find the opportunity at any time to propound refutation and response in dependence on the dual.
>
> As taught by Aryadeva [in the *Four Hundred Verses*, 16.25]:
>
> Censure cannot be expressed even over a long time to one
> Who has no positions of "existence, non-existence; existence and non-existence."
>
> and similarly in the *Treatise* [*on the Middle Way*, 4.8]:
>
> When dispute was made due to emptiness, whatever response is mentioned,
> All of that was not answered – being similar to the object to be established.
>
> By this causes that produce are also to be thoroughly explained.

In dependence on seeing the reflection of the sun in a mirror one says "I see the sun." Likewise, in dependence upon seeing the reflection of one's face in a mirror one says "I see my face." Similarly, in dependence on seeing the reflection of an eclipse in a mirror one says "There is a solar eclipse." Here the question is asked: "Do the sun and the reflection of the sun meet or not?" When we thoroughly search for the imputed object it cannot be found. Does our face and the reflection of our face in a mirror meet or not? When the imputed object is thoroughly sought it is not feasible to find their meeting and non-meeting. However, in terms of the conventions of the world the face and the reflection of the face are related in that in dependence on seeing the reflection we say "I see my face." However, is there an actual face in the mirror? There is not, yet in dependence on the reflection of one's face in a mirror one can clean one's face of dirt, shave one's beard, put on make-up, and so forth. Thus, when not sought, the reflection exists in terms of conventions.

Here the reflection of a face is an analogy for the cleaning of our wisdom face by freeing ourselves from ignorance. In order to remove the dirt of ignorance we have to remove the conception of true existence in dependence on a reason, or sign. What is that reason? There are many, for example, "because of being a dependent-arising," "because of being free from being one and many," and so forth. In short, in order to abandon the conception of a self of phenomena one relies on the diamond sliver reasoning and in order to abandon the conception of a self of persons one relies on the seven-fold reasoning.

In regard to the position asserting inherent existence there is no acceptable reasoning establishing it, that is, it lacks a correct proof. On the other hand, there is a correct proof establishing the lack of inherent existence. In short, the lower schools are without a correct proof establishing inherent existence, whereas the Prasangika Madhyamikas have a correct proof establishing the lack of inherent existence. When the lower schools fling their refutations at the Prasangika Madhyamikas they cannot defeat them because the Prasangika Madhyamikas do not hold the position of inherent existence. This is because the Prasangika Madhyamikas assert phenomena to be free from inherent existence. This position is feasible and correct and cannot be defeated by any of the lower schools'

refutations. Although the lower schools argue with the Prasangika Madhyamikas and refute them saying that it is not correct that phenomena do not exist inherently, their assertions are not correct. In short, the Prasangika Madhyamikas cannot be invalidated by the lower schools because the reasonings that the lower schools set out in order to prove their thesis are not correct. The theses of the lower schools are held to inherently exist as are their proofs, yet this is incorrect. For example, the Svatantrika Madhyamikas say "A pot, as a subject, exists inherently because it is a dependent-arising." The Prasangika Madhyamikas say that this is a contradictory sign. For the Svatantrika Madhyamikas dependent-arising is a sign establishing phenomena to be inherently existent. For them if it is not a dependent-arising it is not existent. While both the Prasangika Madhyamikas and Svatantrika Madhyamikas use the word "dependent-arising" its meaning is different for them.

Chandrakirti's autocommentary says:

> There, someone (Bhavaviveka) says: In this *Treatise on the Middle Way*, it is the occasion of the generating cause, not the clarifying [cause or reason]. Also the debate of meeting and not meeting is about the clarifying cause, not about the generating [cause]. Hence, there is no occasion of a spurious argument about our words.
>
> That which makes the aforesaid statement is not an answer, since if expressing a quality along with the opportunity [of others] (i.e., along with expressing the fault of others), like the producer being true for the insufferable other side, there also exists opportunity regarding the clarifying [reason]. Hence that answer is just improper.

The lower schools say that the discussion about meeting and non-meeting is in the context of a clarifying cause, not in the context of a generating cause. What is a clarifying cause and what is a generating cause? A clarifying cause is a reason clarifying a thesis. Some Madhyamikas, that is, Bhavaviveka in particular, say that the discussion of the meeting and non-meeting of the sun and its reflection is in the context of a clarifying cause, not a generating cause. However, the Prasangika Madhyamikas say that this is not correct.

In short, Bhavaviveka thinks that a clarifying cause is a reason, it is a clarifying cause in that it clarifies the thesis. He says that the meeting or non-meeting of the sun and its reflection and the meeting and non-meeting of a face and its reflection are in terms of a clarifying cause. The Prasangika Madhyamikas say that this is not correct because the faults of meeting and non-meeting that apply to a generating cause also apply to a clarifying cause. Thus, if one analyzes them it comes down to the same thing.

Chandrakirti's autocommentary says:

> Furthermore, [Bhavaviveka], in order to establish the asserted meaning of the *Treatise*, acts to propound answers that set forth spurious arguments concerning the refuters of the fully upheld proof. Therefore, this is only an object to be refuted by others – only the response given by us is very beautiful.

The Prasangika Madhyamikas say that their own responses are the most beautiful.

Lama Tsongkhapa's *Illumination* (Tibetan text page 395-6) says:

> *It is just how you see the attributes that exist in the sun's orb*
> *At the time of an eclipse and so forth even in a reflection, yet*
> *The thorough meeting and non-meeting of the sun and the reflection being*

Indeed inappropriate, it arises as a mere convention in dependence. [6.174]

Furthermore, *it is just how* – that is, for example – *you see the attributes that exist in the sun's orb* and a face *at the time of* a solar *eclipse and so forth* in dependence *even on* seeing *their reflections*. *Yet*, when they are analyzed in a manner of seeking the imputed object stating "The two – (i) *the sun* and the face and (ii) their *reflections* – are produced through *thoroughly meeting or not meeting*," that production *is indeed inappropriate*. Nonetheless, the reflection *arises* through *mere*ly being posited by the force of *conventions in dependence* on the sun or a face.

And, even while untrue, just as it exists for what is to be established –
One's face as beautiful, similarly, also here it should be understood
"What is to be established is realized even through reasons lacking feasibility
That are seen to be effective in cleaning the face of wisdom,." [6.175]

And, also due to that, *even while* the desired object that is ascertained and the reflection are *untrue*, *just as* a reflection is effective *for what is to be established – one's face as beautiful, similarly, also here it should be understood that what is to be established* – the lack of inherent existence – *is realized through the reasons of* dependent-arising, freedom from being one and many, and so forth, *which are seen to be effective in cleaning* the stains, the ignorance, of the *face*-like *wisdom*. Moreover, they are reasons *lacking the feasibility* of being established as inherently existent. By the term "*even*" (v. 6.175c) it should be understood that even a refutation that lacks inherently existent feasibility is able to refute the object of refutation.

Therefore, because it is not suitable for those who propound the imputed existence of mere nominalities to propound the duality of seeking the imputed object, the Madhyamikas never find the opportunity to express a refutation and response in dependence on duality. [Aryadeva's] *Four Hundred Stanzas* says:

Censure cannot be expressed
Even over a long time to one
Who does not have a position of either
"Existence, non-existence, or existence–non-existence."

[Nagarjuna's] *Fundamental Wisdom* (v. 4.8) also says:

When disputing about emptiness,
Whoever gives a response
Does not respond at all,
This being similar to what is to be established.

By means of this presentation of the analysis of whether the refutation and the object of refutation meet or do not meet, it should be understood as also negated through analyzing whether a cause that is a producer and its result meet or do not meet.

The discussion of the meeting and non-meeting of the sun and its reflection is only in terms of the conventions of the world. On the other hand, if the imputed object is thoroughly sought, it is not found. In worldly conventions, in dependence on the reflection of the sun one can say "I see the sun." Likewise, in dependence on the reflection of one's face in a mirror, one can say "My face is dirty" and thereby clean one's face of the dirt. Similarly, in dependence on the reflection of solar eclipse, we can say "There is a solar eclipse." However, do the face and the reflection of the face in the mirror meet or not meet? Do the face and the mirror itself meet or not meet? Does 'meeting' mean touching? In short, when the imputed object is thoroughly sought in this way it is not found. For example, when someone meets the president is their shaking of hands the meaning of 'meeting'? When this meeting is thoroughly sought by this analysis it is not found, yet it is acceptable as a mere worldly convention.

Here there is also a discussion of the refutation and the object of refutation asking whether the refutation and the object of refutation meet or not. Similarly, do the producer and the produced meet or not? The purpose of this analysis is to negate inherent existence. The conclusion is that meeting and non-meeting are acceptable when not investigated and not analyzed.

Lama Tsongkhapa's *Illumination* (Tibetan text page 397) says:

In regard to this Bhavaviveka says:

> In the *Treatise on the Middle Way* the context is that of a cause that produces, not that of a cause that clarifies. The analysis of meeting and not meeting is also in regard to a cause that clarifies, it is not in regard to a cause that produces; therefore, our words are not the source of spurious argument.

With respect to a cause that produces, [Bhavaviveka's] propounding "Reasons and so forth – causes that clarify or make known – do not withstand the analysis that analyzes meeting and non-meeting" is not a response because, when giving a response that has an occasion for others – that is, that expresses a fault – the opponents cannot bear it. However, just as a fault is accrued when asserting the truth in regard to [a cause] that produces, there is also that fault when asserting inherent existence in regard to a cause that clarifies. Moreover, Bhavaviveka, with respect to the *Treatise on the Middle Way*, as a proof that is set out in order to establish the meaning of the thesis, the lack of inherent existence, gives a response that is a spurious argument in order to abandon the faults of the refutations set out by others, whereby [his response] is only to be refuted by others. Therefore, when inherent existence is asserted, our response alone – "Although the faults of meeting and non-meeting in regard to both causes that produce and those that clarify are similar, because of not asserting [inherent existence] there is no fault" – is the most beautiful.

Bhavaviveka sets out two types of causes: (i) a cause that clarifies and (ii) a cause that produces. He says that the discussion here is in terms of the meeting and non-meeting of a cause that clarifies and the result that is clarified. He says that one should not analyze whether a cause that produces and the result that is produced meet or not as this would be a spurious argument. The Prasangika Madhyamikas say to the Svatantrika Madhyamikas that the faults accrued are the same whether the discussion is in terms of (i) a cause that clarifies and a result that is clarified or (ii) a cause that produces and a result that is produced. That is, asserting either of these sets to be inherently existent has the same harm. Thus, the Prasangika Madhyamikas say that their own responses are the best and that asserting (i) a refutation and its object of refutation to be inherently existent, (ii) a cause that produces and its result that is produced to be inherently existent, and (iii) a cause that clarifies and its result that is clarified to be inherently existent, are all incorrect. The Prasangika Madhyamikas say that the meeting and non-meeting of the refutation and the object of refutation should not be asserted to be inherently existent, nor should the meeting and non-meeting of a cause that produces and the result that is produced, and the meeting and non-meeting of a cause that clarifies and the result that is clarified. The Prasangika Madhyamikas say that because they do not assert this they themselves do not have the corresponding faults and that their own response is the best because they do not assert inherent existence.

Student: What is the difference between a cause that clarifies and a cause that produces?
Geshe Jampa Gyatso: A cause that clarifies is a reason that clarifies a thesis, whereas a cause that produces is one that produces a result. In this case, the name 'cause" is given to a reason. In general, a cause is a producer. However, a cause that clarifies – a reason – produces understanding in one's continuum, that is, it produces an inference, due to which it is called "a cause that clarifies."

Lama Tsongkhapa's *Illumination* (Tibetan text page 397) says:

> 3B1C-2B3E-2B3C-2B Clearly explaining the reason that it is not similar to others' consequences

Chandrakirti's autocommentary says:

> Furthermore:

If the reason making one's object of proof understood existed as a thing,
And the entity of that to be proved: actually understood, also existed,
The reasoning of meeting and so forth would closely apply, yet
Since that too does not exist, it is solely your despair. [6.176]

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B1A-6C5A-2C3B-2 Reason that the opponent's consequence is not similar

If the reasoning making understood one's object of proof existed
As a thing, and the entity of the object of proof to be actually grasped
Also existed, the logic of meeting and not meeting would apply.
As that also does not exist, this is only depressing for you. [6.176]

You should understand that this ascription to the pure side of the fault we ascribed to the impure side is only depressing for you proponents of true existence; for if the thing [or entity] of the reasoning which makes one's object of proof understood existed inherently, and the entity of the object of proof which is what is actually to be understood existed inherently also, then the argument of cause and effect meeting, etc., would apply; but that [inherent existence] also does not exist.

Chandrakirti's autocommentary says:

> Setting the faults of the totally impure position upon the totally pure position, you are realized as being only uselessly frustrated about us.

Whatever reason the proponents of true existence set out regarding their thesis of inherent existence, they say that that reason itself exists inherently. The Prasangika Madhyamikas say to the lower schools that because the reasons that they set out exist inherently it is only for them to despair. The Prasangika Madhyamikas say that they are on the pure side, whereas the lower schools are on the impure side.

Chandrakirti's autocommentary says:

> For example, refutation of the oneness, many-ness, long-ness, roundness, blackness and so forth, of the falling hairs and so forth observed by one with cataracts, does not harm those without cataracts; similarly, when completely analyzing non-inherently existing cause and effect, you also do no harm by setting forth the refutation through fully upholding the two.

For the Prasangika Madhyamikas causes and results do not exist inherently, whereas for them it is feasible for a non-inherently existent cause to produce a non-inherently existent result. On the other hand, the lower schools hold that an inherently existent cause produces an inherently existent result and set out reasonings to prove this, however, these do not affect the Prasangika Madhyamikas. This is likened to the fact that although those with cataracts see falling hair, this does not harm those without cataracts who do not see falling hair. The Prasangika Madhyamikas are like those without cataracts who are not affected by whatever is said by those with cataracts with respect to falling hairs.

Our eyes see forms without the eyes and the form touching. On the other hand, when form touches our eyes, for example, when an eye medicine is applied to our eyes, that eye medicine is not seen. If the eye medicine is held in front of our eyes it is seen, but it is not seen when actually applied to the

eyes. This show that a form is seen by the eyes without the eyes and the form touching. In this context, "to meet" means "to touch."

In the case of a magnet, it attracts iron just by being close to it, without meeting or touching it. The conclusion is that although there is meeting and non-meeting, there is no inherent meeting and inherent non-meeting.

Chandrakirti's autocommentary says:

> Therefore, even those examples which were presented as one's doing an action without meeting – eye, magnet, and so forth – should be understood as negated, because of the similar consequence also for them. You – who, having forsaken the straight path of non-inherent existence, joined the very twisted path of bad speculation by the bad labor of one's conceptualization – delight in negating the correct path. What will this very great difficulty do for you?

The Prasangika Madhyamikas say to the lower schools that they should not stubbornly maintain their position. Although the lower schools insist that their position is correct, the Prasangika Madhyamikas do not change their own position.

Tuesday afternoon, 20 March 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 397) says:

> *If the thingness of the reason – that which causes understanding of one's object to be proved – were established, and*
> *Also the entity of what is to be proved – that which is to be actually understood – existed,*
> *The reasoning of meeting and so forth would be thoroughly applicable.*
> *However, since that too does not exist, it is only to your despair.* [6.176]

If the thingness, that is, the entity, *of the reason – that which causes understanding of one's object to be proved* – and *the entity of what is to be proved – that which is to be actually understood – existed* inherently, *the reasoning* that establishes and repudiates in regard to the *meeting and so forth* – that is, the non-meeting – of what is to be proved and the proof *would be thoroughly applicable*. *However*, *since that too does not exist* inherently, the fault set out regarding the impure position – that set out by you in regard to the pure position – is realized, *only* to [*your*] *despair*, that is, depression, to be meaningless for us. For example, refuting the positions of the one-ness, many-ness, round-ness, black-ness, and so forth of the falling hair and so forth that are observed by those with cataracts does not harm those who do not have cataracts. Similarly, when analyzing non-inherently existent causes and results, you do not harm us by setting out a refutation through taking into consideration the analysis of the two, [the meeting and non-meeting,] which seeks the imputed object. Because of just that, it should be understood that also the examples that you presented regarding the respective activities without meeting – such as an eye, a magnet, and so forth – are refuted, because when inherent existence is asserted also the consequences of meeting and not meeting with regard to them are similar. You who, having forsaken the straight path of the lack of inherent existence, joined the very crooked path of bad logic due to the bad fabrications of your own conceptions delight in refuting the correct path. What does this extremely, that is, very, great difficulty do for you?

The lower schools posit an inherently existent reason to prove an inherently existent thesis. Thus, whatever reason they set out it is inherently existent, as is the thesis. For the lower schools because the thesis is established by a valid cognizer it exists, as does the reason. They accept that, in dependence on a reason, an inference is generated with respect to that thesis and because that reason exists it exists inherently. In this context the Prasangika Madhyamikas ask them whether the refutation and the object of refutation meet or not. Other examples of meeting and not meeting are one who understands

and what is to be understood, the producer and the produced, the clarifier and the clarified, and so forth.

Lama Tsongkhapa says: "You who, having forsaken the straight path of the lack of inherent existence, joined the very crooked path of bad logic due to the bad fabrications of your own conceptions delight in refuting the correct path." Because the lower schools join a crooked path they experience many obstacles, just as when we take a road that is not straight we may get lost and have difficulty arriving at our destination.

Those with cataracts have the fault of see falling hairs, whereas those without them do not. Those who assert inherently existent causes and results are like those with cataracts who have many faults, whereas those who assert causes and results to not be inherently existent are like those without cataracts who do not have those faults.

Lama Tsongkhapa's *Illumination* (Tibetan text page 398) says:

3B1C-2B3E-2B3C-2C Others are unable to establish the contrary like we are able to establish the lack of inherent existence

Chandrakirti's autocommentary says:

Furthermore:

Just as the ability to bring about realizing all things as non-things
Is very easy, one is not able to make others comprehend
Inherent existence as easily as that.
Why entrust the world to this with nets of bad speculation? [6.177]

Just as [the Madhyamika] is able to bring about the realization of things of the world as non-inherently existent with only the examples which establish our own position, dreams, illusions, and so forth – it is not as easy as that for someone to bring about the apprehension of things as having inherent nature because there is no example renowned to both. Being thus, all disputes are reversed by us, even a reply cannot be expressed by anyone.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B1A-6C5A-2C3B-3 Non-inherent existence can be established, but its denial cannot be established

Being able to induce the insight that all things don't exist as things
Is very easy, but for others inherent existence is not
Possible to get to understand easily like that. [6.177abc]

You should understand that while it is very easy [for us Madhyamikas] to be able to induce the understanding that no things exist inherently as things, [by examples such as an illusion or a dream, established for both us and the adversary,] it is not readily possible like that to make others – Madhyamikas – understand that they do exist inherently, for there is no example of true existence that both acknowledge.

Why are you made to do this to the world, with the net of an evil system? [6.177d]

As for you proponents of true existence, who made you do this? Why do you bind the world in the net of an evil system? It follows you should not, for this disputation grasping at true existence is to be cast out.

According to the Prasangika Madhyamikas it is easy to make someone understand the lack of inherent existence of phenomena, whereas the lower schools cannot do the same, that is, they cannot cause someone to understand that phenomena exist inherently because there is no example that

establishes inherent existence. On the other hand, the Prasangika Madhyamikas can easily posit an example proving the lack of inherent existence, such as dreams, illusions, and so forth.

Chandrakirti's autocommentary says:

> Therefore, who urged you on in order to do what is not beneficial for the world? And, in addition to the world being enveloped by the cocoon of its own conceptions like the silk-worm of the afflictions, why did you set for all mothers a very troublesome trap spread with the threads of bad speculation? This dispute must be given up.

The Prasangika Madhyamikas ask the lower schools who urged them to establish that things exist inherently? The Prasangika Madhyamikas say that no matter how much the lower schools strive to establish inherent existence the Prasangika Madhyamikas' position cannot be defeated. While the Prasangika Madhyamikas have correct examples establishing that phenomena do not exist inherently, the lower schools cannot posit correct examples establishing that phenomena exist inherently. Thus, whatever arguments the lower schools fling at the Prasangika Madhyamikas, the Prasangika Madhyamikas are able to respond and thereby defeat the lower schools' arguments. On the other hand, when the Prasangika Madhyamikas respond to the lower schools, the lower schools are left without responses because the Prasangika Madhyamikas respond in accordance with the conventions of the world, while the lower schools do not. For this reason the lower schools are said to be enveloped in the cocoon of their afflictions and wrong conceptions and wrapped in the threads of bad speculation. In short, the lower schools are entrapped by the afflictions as well as by the acquired conceptions. Therefore, the lower schools should give up their argument with the Prasangika Madhyamikas.

Chandrakirti's autocommentary says:

> All those reflection-like things have no specific characteristics and no general characteristics. What direct perception or even inference is there? Here, that is exhausted in only a single direct perception, the exalted wisdom which knows all [things] whatsoever.

In brief, that which knows the exact mode of abidance of all phenomena is only an exalted knower of all aspects. A direct perceiver knows some phenomena, as does inference but they do not know all things in the same way that an exalted knower of all aspects knows them. In other words, the fact that phenomena are like reflections is known by a direct perceiver and an inferential cognizer, but the very best knower is an exalted knower of modes in that only omniscient mind directly knows the two truths simultaneously and nakedly. Direct perceivers and inferential cognizers do not know the mode of abidance of the two truths directly, only an exalted knower of all aspects knows this. Is there an inferential cognizer that knows the two truths simultaneously? One passage says that such an inferential cognizer is the exalted wisdom of meditative equipoise realizing emptiness by way of a meaning generality. Is that exalted wisdom of meditative equipoise of the path of preparation an inferential cognizer or a direct perceiver? The response depends on the school; for the Prasangika Madhyamikas a direct perceiver can be conceptual, whereas for the Svatantrika Madhyamikas a direct perceiver is pervaded by being free from conceptuality and unmistaken. The section on the path of preparation in Jedzun Chogyi Gyeltshen's *General Meaning* sets out the question: Which of the seven awarenesses is the exalted wisdom of meditative equipoise of the path of preparation that realizes emptiness by means of a meaning generality? The response is that it is not a wrong consciousness, nor an awareness to which an object appears but is not ascertained, nor a correct assumption, nor doubt.

Why is it not an inferential cognizer? It is not because it is not a wisdom arisen from hearing nor is it a wisdom arisen from reflection, it is a wisdom arisen from meditation. It is not a wisdom arisen from hearing because this exalted wisdom is not produced in dependence on a correct reason for the purpose of others. It is not a wisdom arisen from thinking because it is not produced in dependence on a correct reason for one's own purpose. Therefore, this exalted wisdom can only be a subsequent cognizer.

In general, a subsequent cognizer is an awareness realizing that which has already been realized. The debate here is that if the exalted wisdom of the path of preparation is a subsequent cognizer what was the previous realizer? Was the subsequent cognizer induced by a direct perceiver or was it induced by an inferential cognizer?

Lama Tsongkhapa's *Illumination* (Tibetan text page 398) says:

> *One can easily induce the realization that all things*
> *Do not exist as thingness, but one cannot easily make others*
> *Understand inherent existence in the same way.* [6.177abc]
>
> Furthermore, by means of examples – mirages, dreams, and so forth – which are established for the opponents as well as for our own position, the Madhyamikas *can easily induce the realization that all* the *things* of the opponents' world *do not exist as thingness* – that is, as inherently existent. However, *one cannot easily make* those who are *other* than the opponents, that is, the Madhyamikas, *understand in the same way* that things *inherently exist* because there are no examples of true existence that are renowned to both.

The Prasangika Madhyamikas set out examples proving the lack of inherent existence. It is easy to prove this to an opponent by means of examples such as that of an illusion. On the other hand, the Svatantrika Madhyamikas have difficulty making others understand that phenomena are inherently existent "because there are no examples of true existence that are renowned to both."

Lama Tsongkhapa's *Illumination* (Tibetan text page 399) says:

> Hence, it is taught that the lack of true existence is not ascertained by a valid cognizer with respect to a subject without ascertaining, in regard to a concordant example, that the reason – such as dependent-arising – in the proof of the lack of true existence is pervaded by the lack of true existence.

For example, the syllogism: sound, as the subject, is impermanent because of being a product, for example, a pot. On the basis of the example "pot" one first realizes that a product is pervaded by impermanence. Then one ascertains the pervasion "product is pervaded by impermanence" on the basis of the subject "sound." It is similar in the case of the syllogism: external and internal phenomena, as the subject, do not exist inherently because they are dependent-arisings, for example, like a reflection. According to the Svatantrika Madhyamika system the pervasion can be ascertained on the basis of a concordant example, meaning that dependent-arisings can be ascertained to be pervaded by being inherently existent on the basis of a concordant example. However, because the Svatantrika Madhyamikas cannot posit a correct example of inherent existence, the Prasangika Madhyamikas say that such a pervasion cannot be ascertained on the basis of a concordant example. In the same way, such a pervasion cannot be ascertained with respect to the subject, external and internal phenomena. In other words, when the lower schools set out to prove inherent existence they cannot posit a correct example of true existence that is common to both themselves and the Prasangika Madhyamikas.

Lama Tsongkhapa's *Illumination* (Tibetan text page 399) says:

> Therefore, we eliminate all the arguments of the proponents of true existence, whereas a response with concordant qualities cannot even be expressed by anyone.
>
> *Why are you appointed to do this to the world with the net of bad speculation?*[6.177d]
>
> Because of that, who *appointed* – that is, instigated – you *to that* in order to inflict meaningless harm on *the world*? And, in addition to you worldly beings being enveloped by the cocoon of your own afflictions – your own conceptions – like a silk-worm, *why* did you set the very troublesome *net*, or the trap, of the entwined threads *of bad speculation* for all your mothers? The argument conceiving true existence must be discarded. What inherently existent specific and general characteristics, direct perception or inference, do all the falsities that are reflection-like things have? Here, that is extinguished with respect to just a single direct perceiver of all objects of knowledge – the exalted wisdom of omniscient beings.

When the Prasangika Madhyamikas refute the lower schools, the lower schools cannot give a correct response. In addition, to being enveloped in the afflictions, the lower schools are also entrapped by the acquired conceptions of true existence. Thus, the Prasangika Madhyamikas say that they should give up their argument.

Lama Tsongkhapa says: "What inherently existent specific and general characteristics, direct perception or inference, do all the falsities that are reflection-like things have?" There are no inherently existent specific and general characteristics, nor is there inherently existent direct perception or inference. Chandrakirti says: "All those reflection-like things have no specific characteristics and no general characteristics. What direct perception and even inference is there?"

Lama Tsongkhapa's *Illumination* (Tibetan text page 399) says:

> 3B1C-2B3E-2B3C-2D The way of making known additional refutations that are not explained here

Chandrakirti's autocommentary says:

> Furthermore:
>
> *The additional refutation also indicated above, having been known,*
> *Should be given up here for sake of response of the position: meeting, etc.*
> *Also, just as quibblers do not exist,*
> *The additions explained before should be realized by this very position.* [6.178]
>
> Having known the additional refutations from those very explanations which refuted the others' position: the presentation of dependent arising and the presentation of dependent imputation, one should give up the refutation concerning that propounded by some as the response of the refutation which stated: "Does the cause produce an effect through meeting or not meeting?"
>
> [The negations] in the *Treatise* [*on the Middle Way*] are asserted to express the reversal of conceptions. Because that too was already indicated by us, how could there be quibblers? On account of what does this constructed definition become a correct definition? Who posited their own position and overcame the position of others? Therefore, this definition of quibbling is an all ways improper. Like that and so forth, the additional refutations are to be realized by this very position.
>
> There, starting from [verse 6.8a] "That itself does not arise from that," until [verse 6.119d] "If completely analyzed, will be quickly liberated;" by these, the selflessness of phenomena is made highly evident.
>
> From [verse 6.120ab] "Delusions and faults without exception arise from the view of the transitory collection," and below this, the selflessness of persons is made evident.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B1A-6C5A-2C3B-4 How to understand the extra refutations not explained here

You should understand the extra refutation explained above,
And reject what's here as the answer of the position of meeting or otherwise.
We are not disputants who refute everything like that.
By this position, the extra explained before should be understood. [6.178]

You should understand that the extra refutation stated to proponents of true existence [besides dependent arising, e.g. of a sprout, and dependent imputation, e.g. of a person], the refutation of cause and effect meeting or not meeting, explained above, is also to be understood; and the answer not similar to our own in this debate, involving meeting or not meeting as regards the refutation for the sake of [stating] the position refuted in the analysis of the meeting or otherwise of cause and effect, is to be abandoned. For to the position asserting non-inherent existence, analysis seeking imputed objects does not apply.

The Madhyamikas are also not disputants who refute whatever they come upon like that, for we do not accept the assertions either that our own position is not posited conventionally, or that the refutation of the opponent's position is ultimate.

With this same position explained just now there is a point, for it is so that the extra refutation so explained before should be understood.

The selflessness of phenomena and the selflessness of persons have been explained and their meanings have been settled. The meaning of the selflessness of phenomena is settled by verses 6.8 through 6.119, whereas the meaning of the selflessness of persons is settled by verses 6.120 through 6.178.

The analysis of meeting and non-meeting can be applied to any kind of phenomenon. True existence or inherent existence does not exist upon any basis, whether persons or phenomena. The main reason proving the selflessness of phenomena is the diamond slivers reasoning, whereas the main reason establishing the selflessness of persons is the seven-fold reasoning. In the context of establishing the selflessness of persons, there is a section in the text that establishes that the I does not exist inherently and another section that establishes that the mine does not exist inherently.

Wednesday morning, 21 March 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 399) says:

Having also understood the additional refutation indicated above,
Here give it up for the sake of the response of the position of meeting and so forth. [6.178ab]

In the context of the presentations of

- dependent and related arising, such as a sprout being produced in dependence on a seed, and
- dependent imputation, such as the person being imputed in dependence on the aggregates,

one should also understand the additional refutation explained in regard to the position of the proponents of true existence – the refutation *indicated above* stating "Do causes produce results by their meeting or not meeting?" *Having* done so, *for the sake of* expressing *the response of the position* that investigates, or refutes, this stating "A cause produces a result through *meeting and so forth*, that is, through not meeting," *here*, when arguing with the opponents who propound through investigating meeting and non-meeting in regard to refutations, *one should give up* the refutation which is the response that the investigation of that is not like our own, in that the presentation above is to be understood as a mere illustration.

In brief, the presentation of dependent and related arising presents the selflessness of phenomena and the presentation of dependent imputation presents the selflessness of persons. The presentation of the selflessness of phenomena encompasses the refutation of production from the four extremes: that a sprout arises from self, from other, from both, and without causes. This is discussed in verses 6.8-119. If a sprout were produced from self it would follow that its production would be endless and meaningless. If a sprout were produced from other it would follow that everything would arise from everything, for example, dense darkness would be produced from a fire flame. In short, things would arise from both causes and non-causes. If things were produced from both there would be both the consequences related to production from self and those related to production from other. Production from self is mainly asserted by the Samkhyas, whereas production from other is asserted by the lower schools, from the Svatantrika Madhyamika downward. Production from both is asserted by the Nirgranthas, and causeless production is asserted by the Charvakas.

Thus, a self of phenomena is refuted by means of refuting production from the four extremes, meanwhile a sprout is established to be a dependent-arising.

The selflessness of persons is established by means of the analysis of the self in terms of it being neither one or different from the aggregates, due to which the person is established to be merely imputed upon the aggregates.

When the lower schools assert inherent existence, the Prasangika Madhyamikas ask them: "If they exist inherently do causes produce results through their meeting or non-meeting?" If a cause produces a result through meeting it follows that they would become one. On the other hand, if a cause produces a result without meeting it follows that everything would be produced from everything, that is, it follows that a result would be produced by a non-cause which is not a suitable potential for it. When the imputed object, the relationship between cause and result, is sought by means of thorough analysis there are these faults. On the other hand, the Prasangika Madhyamikas posit the relationship between causes and results without investigation and analysis, but posit it in terms of the conventions of the world.

Lama Tsongkhapa's *Illumination* (Tibetan text page 400) says:

> The purpose of the negation and presentation in the treatise, *Fundamental Wisdom*, is the desire to express the elimination of the conceptions conceiving true existence. Moreover, because this was already indicated in the context of our stating "Ordinary beings are bound by conception" and so forth, how could the treatise be "a disputant who refutes anything"? This is because a disputant who refutes anything is one who, through fearing the occurrence of faults when presenting his own position, refutes others' positions. Here, also our elimination of others' position does not exist ultimately because nothing whatsoever exists ultimately. Therefore, how can we be disputants who refute anything? For that reason, "one having the characteristic of not having his own position to posit and asserting the elimination of others' positions ultimately" becomes the correct definition of "a disputant refuting anything."
>
> *We are also not like such disputants refuting anything.*
> *The additional, as explained previously, should be realized by means of this very position.*
> [6.178cd]
>
> Since there does not exist a Madhyamika (i) who does not posit our position nominally and (ii) who asserts the elimination of others' positions ultimately, the Madhyamikas *are also not disputants who refute anything*, therefore, this is not suitable in all ways. The *additional* refutation, *as explained previously*, *is to be realized by means of this very position* that was just explained.
>
> [The verses] beginning from "That itself does not arise from that" (v. 6.8a) through "Those who completely analyze will quickly be liberated" (v. 6.119d) clarify the selflessness of phenomena. [The verses] from "Having seen with intelligence that afflictions and faults without exception arise from the view" (v. 6.120ab) onward clarify the selflessness of persons.

The purpose of the presentation in Nagarjuna's *Fundamental Wisdom* is to eliminate the conception of true existence in the continua of sentient beings. Sentient beings are bound by the conception of true existence due to which they circle cyclic existence, in order to for them to become free Nagarjuna presented emptiness by way of negating others' systems and presenting his own system. Therefore, the reason Nagarjuna presented emptiness was to free sentient beings from the bondage of the conception of true existence; he did not do so for the sake of argument. In brief, Nagarjuna's purpose in presenting emptiness by way of negating others' systems and presenting his own system was to eliminate the conception of true existence and not for the sake of argument. The same is true of Chandrakirti's presentation. Chandrakirti composed his commentary *Clear Words* on Nagarjuna's *Fundamental Wisdom* as a word commentary (a commentary explaining the words) and composed his *Supplement to the 'Middle Way'* as a meaning commentary (a commentary explaining the meaning). Thus, the purpose for us to listen to and reflect on Nagarjuna's *Fundamental Wisdom* and Chandrakirti's *Supplement to the 'Middle Way'* is to become free from the conception of a self. A passage in one text says: "Hearing is a lamp dispelling the darkness of ignorance. Such wealth can never be stolen away by any thief." However, our wealth of hearing can be stolen away by the thief of forgetfulness. It is recounted that when a yeti catches a marmot it sits on it in order to hold on to it, but that when he reaches out to catch another marmot, he rises up slightly whereby the first marmot caught escapes. In this way, even though the yeti may catch as many as ten marmots he is only left with the last one caught. It is said that some people study in the same way in that as they progress from one section of a text to another they forget the previous and therefore only remember the last section studied. In fact, there is the Tibetan expression "Do not study in the way in which a yeti catches marmots."

Lama Tsongkhapa's *Illumination* (Tibetan text page 400) says:

3B1C-2B3E-3 Explaining the divisions of the emptiness so established

A Brief presentation of the divisions of emptiness
B Extensive explanation of the meanings of the individual divisions

3B1C-2B3E-3A Brief presentation of the divisions of emptiness

Chandrakirti's autocommentary says:

Therefore, through desire to indicate this and express the fine divisions of emptiness, it is explained:

This non-self, in order to completely liberate migrators,
Is taught two ways: by divisions of phenomena and persons. [6.179ab]

This selflessness is taught is two aspects through condensation: the selflessness of phenomena and the selflessness of persons.

Yet if asked: "Why were two kinds of selflessness finely indicated?"

I shall explain. "In order to completely liberate migrators" – this two-fold selflessness was finely indicated by the Bhagavan for the aim of completely liberating migrators. There, the selflessness of persons was indicated in order to completely liberate the solitary realizers and hearers; in order to completely liberate the bodhisattvas, since they attain the exalted knower of all aspects itself, both were indicated. Although hearers and solitary realizers indeed perceive dependent arising of merely this much condition, nonetheless, they have not totally completed meditation on the selflessness of phenomena; they have a mere method to abandon [the seeds of] afflictions experienced in the three realms. They are presented as having meditation on the entire selflessness of persons.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B1A-6C5B-1 The divisions of emptiness, in brief

In order to liberate beings, this non-self is taught in
Two ways, classed as dharmas and the person. [6.179ab]

The teaching of two kinds of this non-self, divided into dharmas (phenomena) and the personality, is necessary, for it is to liberate sentient beings from cyclic existence.

All kinds of emptiness can be condensed into two:
1. the selflessness of persons and
2. the selflessness of phenomena.

The purpose for the Bhagavan to teach these two emptinesses was in order to liberate sentient beings. The Bhagavan taught the selflessness of persons in order to free sentient beings from the conception of a self which is an afflictive obstruction, and taught the selflessness of phenomena in order to free sentient beings from the knowledge obstructions. Thus, the two types of selflessnesses are taught in order to abandon the two types of obstructions. The conception of a self of persons is to conceive the person to exist inherently, whereas the conception of a self of phenomena is to conceive any phenomenon other than the person to exist inherently. These two emptinesses are therefore related to the basis of negation in that the emptiness of the person existing inherently is the selflessness of persons and the emptiness of phenomena existing inherently is the selflessness of phenomena. Which of the two selflessnesses is easiest to realize? It is said to be easier to realize the emptiness of the self of persons due to the difference in the basis of negation. Through realizing that the person depends on the aggregates, one approaches the realization of the selflessness of persons. This is the way in which the realization of the two selflessnesses are presented in terms of experience.

The purpose of presenting the two selflessnesses, in short, is to liberate sentient beings from cyclic existence. The selflessness of persons is presented in order to free hearers and solitary realizers from the afflictive obstructions, while the selflessness of phenomena is presented in order to free bodhisattvas from the knowledge obstructions that prevent the simultaneous cognition of all phenomena.

Hearers and solitary realizers meditate on the selflessness of persons in a complete way but do not meditate on the selflessness of phenomena in a complete way. Why is this? Do they not directly realize the selflessness of phenomena? They do, in that earlier in the *Supplement* it was said that hearers and solitary realizers are also pervaded by having the realization of the selflessness of phenomena. Since hearers and solitary realizers do meditate on and realize the selflessness of phenomena how is it that they do not meditate in a complete way?

Student: It is because they do not meditate by means of many reasonings on the selflessness of phenomena.

Geshe Jampa Gyatso: What do you think?

Student 2: It was said that hearers and solitary realizers do not have a sufficient collection of merit to complete the meditation on the selflessness of phenomena in that they lack the mind of enlightenment.

Student 3: The motivation would be a factor because they do not have the motivation to teach emptiness and liberate many sentient beings.

Student 4: Hearers and solitary realizers do not have a complete meditation on the selflessness of phenomena because they only want to attain liberation and this is not necessary for that, it is only necessary in order to attain complete enlightenment.

Student 5: Hearers and solitary realizers do not need to abandon the knowledge obstructions therefore they do not have this complete meditation.

In short, the hearers and solitary realizers do not have a complete cultivation of the selflessness of phenomena which is needed to abandon the knowledge obstructions but have a complete cultivation of the selflessness of persons which is needed to abandon the afflictive obstructions.

Chandrakirti's autocommentary says:

> *Thus, the teacher taught this itself yet again,*
> *In many ways, divided for those to be subdued.* [6.179cd]

The second selflessness was again indicated by the Bhagavan as many, due to the various inclinations of those to he subdued. There,

> *With elaboration, having explained sixteen*
> *Emptinesses, yet again condensed,*
> *Explained as four. They are*
> *Also asserted as the great vehicle.* [6.180]

It is taught [in the *Prajñaparamita Sutra*]:[173]

Subhuti, moreover, the great vehicle of the bodhisattva is like this:

1. inner emptiness,
2. outer emptiness,
3. outer and inner emptiness,
4. emptiness of emptiness,
5. emptiness of the great,
6. ultimate emptiness,
7. compounded emptiness,
8. uncompounded emptiness,
9. emptiness passed beyond extremes,
10. emptiness without beginning or end,
11. unrejectable emptiness,
12. natural emptiness,
13. emptiness of all phenomena,
14. emptiness of one's definition,
15. emptiness of the not observed,
16. emptiness of the entitiness of non-things.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *Likewise, the Master taught the same again,*
> *Divided in many types, for those to be tamed.* [6.179cd]
>
> *In expanded form, he explained*
> *Sixteen emptinesses. Condensed*
> *Into four he explained them again.*
> *Also he stated they were the great vehicle.* [6.180]

[173] See Conze, p. 144

It should be understood that the Master taught the same emptiness like that again to those to be tamed, divided into many types; for in expanded form, he explained sixteen emptinesses, then he explained them again condensed into four emptinesses, and he also stated they were the great vehicle.[174]

The Buddha taught selflessness in many way according to the thoughts of sentient beings. For this reason, he explained sixteen emptinesses and then later on taught four emptinesses, for a total of twenty emptinesses. Here Chandrakirti quotes the Buddha's teaching in the *Middling Perfection of Wisdom Sutra*. In brief, the sixteen emptinesses are:
(1) The emptiness of the internal, 'internal' refers to the sense powers.
(2) The emptiness of the external, 'external' refers to the objects of the sense powers, forms, sounds, and so forth.
(3) The emptiness of the external and internal, 'the external and internal' refers to the five loci of the sense powers, for example, the eye ball which is external relative to the eye sense power and internal relative to external phenomena, or is internal due to being conjoined with feelings.
(4) The emptiness of emptiness, 'emptiness' is the basis of emptiness, it too is empty of inherent existence.
(5) The emptiness of the great, 'the great' refers to the ten directions which are empty of inherent existence.
(6) The emptiness of the ultimate, 'the ultimate' is ultimate truth or the exalted wisdom of meditative equipoise.
(7) The emptiness of the compounded, 'the compounded' are phenomena produced from their respective causes and conditions, they are empty of inherent existence.
(8) The emptiness of the uncompounded, 'the uncompounded' are phenomena that are not produced by their respective causes and conditions, these too are empty of inherent existence.
(9) The emptiness of that passed beyond extremes, 'extremes' refers to the extreme of permanence and the extreme of annihilation.
(10) The emptiness of the beginningless and endless, 'the beginningless and endless' is cyclic existence, which is empty of inherent existence.
(11) The emptiness of the undiscardable, 'the undiscardable' is the thirty-seven harmonies with enlightenment, which are empty of inherent existence. They are called undiscardable or unrejectable because they are not to be discarded or rejected.
(12) The emptiness of nature, 'nature' is the nature of any phenomena.
(13) The emptiness of all phenomena, 'all phenomena' are those ranging from form through an exalted knower of all aspects.
(14) The emptiness of its respective definition, 'its respective definition' refers to the respective definitions of form through an exalted knower of all aspects, which are empty of inherent existence.
(15) The emptiness of the unobservable, 'the unobservable' refers to the three times, which are empty of inherent existence.
(16) The emptiness of the entity of non-things, 'non-things' are those that lack the ability to perform a function.
This is very brief presentation of the sixteen emptinesses.

Wednesday afternoon, 21 March 2001

Chandrakirti's autocommentary says:

[174] See Conze, *The Large Sutra on Perfect Wisdom*, pp. 144, 148.

Having indicated the sixteen emptinesses, yet again four emptinesses were indicated [in the same sutra] saying:

> Subhuti, moreover,
> 1. things are emptied by things,
> 2. non-things are emptied by non-things,
> 3. self-being is emptied by self-being,
> 4. other-being is emptied by other-being.
>
> These emptinesses are called the great vehicle.

In the context of 'things empty of things' the word 'things' refers to the five aggregates, their emptiness is "the emptiness of things." In the context of "non-things empty of non-things" the word 'non-things' refers to uncompounded phenomena, their emptiness of inherent existence is "the emptiness of non-things." In the context of "nature empty of nature" 'nature' refers to the self, from among the two, self and other. 'Other things empty of other things' means that other things are empty of inherent existence. All phenomena are included in things and non-things and are also included in self and other. These are the four emptinesses mentioned in the root verse saying "yet again condensed, explained as four."

Chandrakirti's autocommentary says:

> Emptiness or non-emptiness do not exist even a little; they are no more than designated conventionally like forms and so forth, due to the power of the beings to be subdued by such aspects.
>
> Just as is taught in the *Treatise* [*on the Middle Way*, 13.7]:
>
> > If the not empty existed a little, the empty would exist a little.
> > If the not empty does not exist a little, how cou1d the empty even exist?
>
> [And in 22.11]:
>
> > [The Tathagata] should neither be expressed saying "empty" nor saying "not empty", and
> > Not both and neither; he should be expressed as the imputed object.

Lama Tsongkhapa's *Illumination* (Tibetan text page 400-1) says:

> *That selflessness, in order to liberate migrating beings,*
> *Was taught to be of two types by way of the divisions of persons and phenomena.* [6.179ab]
>
> Through desiring to state the fine divisions of emptiness, they are explained [as follows]. *The selflessness* that is the lack of inherent existence of phenomena *was taught* by the Bhagavan to be of *two types: the divisions of* (i) the selflessness of *persons and* (ii) of the selflessness of *phenomena*. The way in which [selflessness] is divided into these two is not, moreover, that it is divided in terms of two different selves which do not exist on the bases, persons and phenomena; rather, the self that does not exist is inherent existence. Therefore, [the two selflessnesses] are distinguished by means of the divisions of the basis or the substratum: (i) phenomena that are the aggregates and so forth and (ii) persons.
> QUESTION: What is the purpose in presenting these two?
> RESPONSE: The selflessness of persons is presented in order to completely liberate the migrating beings who are hearers and solitary realizers from cyclic existence, whereas both selflessnesses are presented *in order to* completely *liberate* the *migrating beings* who are bodhisattvas, through their attaining omniscience. As was explained before, although hearers and solitary realizers do indeed see the suchness that is dependent-arising, mere conditionality, they do not have thorough,

complete meditation on the selflessness of phenomena, like that explained before, from the point of view of kinds and time. Nonetheless, they do have a mere method for abandoning the seeds of the afflictions of the three realms. [On the other hand,] they are presented to have all the meditations, without exception, on the selflessness of the person that is an inherently existent person. Although they do not generate the wisdom of all the kinds of reasonings negating a truly existent person, they do completely cultivate the antidotes to the seeds of the afflictions, but do not completely cultivate the antidotes to the obstructions to knowledge.

Thus, the Teacher once again taught trainees
That itself divided in many ways. [6.179cd]

Having explained sixteen emptinesses
Together with elaboration, once again condensed,
He posited them as four.
They are also said to be the great vehicle. [6.180]

Thus, the Bhagavan *once again taught trainees* the second selflessness *itself divided, together with the elaboration* of *many ways,* for their various thoughts.

QUESTION: How did he do so?

RESPONSE: *Having explained* the division of *sixteen emptinesses* in the *Mother of the Conquerors*, *once again condensed he posited them as four* and *said*, that is, explained, *them to also be the great vehicle*. In this way, [the Bhagavan] taught two condensed divisions, four middling divisions, and sixteen extensive divisions. [Sutra] says:

> Subhuti, moreover, the great vehicle of the bodhisattvas is like this: (1) emptiness of the internal, (2) emptiness of the external, (3) emptiness of the external and internal, (4) emptiness of emptiness, (5) emptiness of the great, (6) emptiness of the ultimate, (7) emptiness of the compounded, (8) emptiness of the uncompounded, (9) emptiness of that passed beyond extremes, (10) emptiness of the beginningless and endless, (11) emptiness of the indestructible, (12) emptiness of nature, (13) emptiness of all phenomena, (14) emptiness of its respective definition, (15) emptiness of the unobservable, and (16) emptiness of the entity of non-things.

Having presented the sixteen emptinesses, once again he presented four emptinesses:

> Subhuti, moreover, (1) things are empty of things, (2) non-things are empty of non-things, (3) natures are empty of natures, and (4) other things are empty of other things.

These emptinesses are called “the great vehicle.” Inherently existent emptiness and non-emptiness do not exist even in the slightest, in that, to those subdued by such individual aspects of emptiness, they are said to exist conventionally. As [Nagarjuna’s] *Fundamental Wisdom* (v. 13.7 and v. 22.11) also says:

If what is not empty existed slightly,
The empty would exist slightly.
If what is not empty does not exist slightly,
How could the empty even exist?

“Empty” should not be said,
Nor should “Not empty”, and
Not both, and not neither;
They should be said with respect to the imputed object.

The first [verse] means that they should not be said with respect to the side of being established by way of their own entity; the latter that they should be said with respect to the conventionally existent, that is, the imputed object.

All emptinesses are condensed in two: the selflessness of persons and the selflessness of phenomena. The object of negation of the two types of selflessness is the same, their difference lies in the basis of negation which is the basis qualified by emptiness. The selflessness of persons was taught in order to liberate hearers and solitary realizers from cyclic existence, whereas the selflessness of persons and the selflessness of phenomena were taught in order for bodhisattvas to attain enlightenment for the benefit of sentient beings by abandoning the two obstructions.

In short, the condensed presentation of emptinesses is of two emptinesses, the middling presentation is of four emptinesses, and the extensive presentation is of sixteen emptinesses. There is also a presentation of twenty emptinesses in the first chapter of Haribhadra's *Commentary Clarifying the Meaning* in the context of the achieving through the collection of exalted wisdom. This commentary gives examples of these.

The hearers and solitary realizers do not cultivate a complete antidote to the knowledge obstructions, that is, they do not strive in this, but instead strive to attain liberation by abandoning the afflictive obstructions.

Nagarjuna's *Fundamental Wisdom* says:

> "Empty" should not be said,
> Nor should "Not empty", and
> Not both, and not neither;
> They should be said in regard to the imputed object.

This means that "empty" should not be said in the context of what is inherently existent, but should only be said in the context of what is not inherently existent. Lama Tsongkhapa says: "The first [verse] means that they should not be said with respect to the side of being established by way of their own entity; the latter that they should be said with respect to the conventionally existent, that is, the imputed object." This means, in short, that one cannot assert emptiness in the context of inherent existence. In other words, "empty," "not empty," and so forth should not be expressed in regard to what is established by way of its own entity. This is the meaning of the first seven lines of these two verses. The last line says that they should be expressed in regard to the conventionally existent, the imputed object.

Lama Tsongkhapa's *Illumination* (Tibetan text page 403) says:

3B1C-2B3E-3B Extensive explanation of the meanings of the individual divisions

1 Extensive explanation of the division into sixteen emptinesses
2 Extensive explanation of the division into four emptinesses

3B1C-2B3E-3B1 Extensive explanation of the division into sixteen emptinesses

A Explanation of the four: the emptiness of the internal and so forth
B Explanation of the four: the emptiness of the great and so forth
C Explanation of the four: the emptiness of that passed beyond extremes and so forth
D Explanation of the four: the emptiness of all phenomena and so forth

3B1C-2B3E-3B1A Explanation of the four: the emptiness of the internal and so forth

1 Explanation of the emptiness of the internal
2 Explanation of the remaining three emptinesses

3B1C-2B3E-3B1A-1 Explanation of the emptiness of the internal

A Actual meaning
B Ancillarly, a presentation of the way of asserting the nature

3B1C-2B3E-3B1A-1A Actual meaning

Chandrakirti's autocommentary says:

> There, from the viewpoint of inner emptiness, it is explained:

Because its nature is that,
Therefore, eye is emptied by eye.
Likewise should ear, nose, tongue,
Body, and mind also be described. [6.181]

Because of not abiding unchanged
And not disintegrating,
What is the non-inherent existence
Of the six, eye and so forth,
That is asserted as inner emptiness?[175] [6.182]

Like that extensively taught [in the *Prajñaparamita Sutra*]:

> Therein, if asked: What are the inner phenomena that have inner emptiness?
> The so-called inner phenomena are eye, ear, nose, tongue, body, and mind. Therein, because of just not abiding forever and not disintegrating, the eye is emptied by eye. If asked why, it is because its nature is that.

Gedun Drup's *Mirror of the Clarification of the Thought,* as translated by Martin Willson, says:

3B1A-6C5B-2A Emptiness divided into sixteen

(1) The emptiness of the internal.

Because that is its essential nature,
The eye is empty of an eye.
The ear, nose, tongue, body, and mind
Are also to be described like that, [6.181]

Because they do not unchangeably
Remain, and they do not perish.
The non-inherent existence of
The six sense organs is accepted
As the emptiness of the Internal. [6.182]

That there are no inherently existent [internal dharmas, i.e. the] six sense organs is accepted as the emptiness of the internal, for it is the emptiness[176] of being empty of truly existent internal. This should also be understood in the following. The eye is empty of entitiness of eye, for the essential nature of that eye is to be empty [of existence by its own nature], since ultimately it does not remain unchangeably and it does not perish. The ear, nose, tongue, body and mind are also to be described similarly.

The bases of the emptiness of the internal are the six sense powers, the eye sense power through the mental sense power. "The eye is empty of eye" should not be understood literally but should be understood to mean that "the eye is empty of an inherently existent eye" or "the eye is empty of an established by way of its own entity eye." In the same way, the ear is empty of an inherently existent ear, the nose is empty of an inherently existent nose, and so forth.

Because they are empty, the eye and so forth do not abide or remain constantly, that is, they do not abide ultimately. They also do not disintegrate, that is, they do not inherently disintegrate or ultimately disintegrate. Because of this, the six sense powers, the eye sense power and so forth, are empty of inherent existence.

[175] This verse appears to have five lines in the Tibetan.

[176] *stong cha*

Chandrakirti says: "What is the non-inherent existence of the six, eye and so forth, that is asserted as inner emptiness? (6.182)" The six, the eye and so forth, are the bases of emptiness; because they are internal their emptiness is termed "the emptiness of the internal."

Chandrakirti's autocommentary says:

> It is taught:[177]
>
> Therein, not abiding forever itself should be taken to not discard self-nature. That too, because of having abided a little while, it just does not disintegrate by becoming reversed. This will be indicated, for the functioning thing that is together with a self-nature undoubtedly is not unchanged and must become not reversible.

The six sense powers do not abide inherently and do not disintegrate inherently. "Abiding forever" or "abiding constantly" means to be permanent. If it is permanent it must be irreversible.

Chandrakirti's autocommentary says:

> As taught in the *Treatise* [*on the Middle Way*, 15.1-2]:
>
> Self nature is not reasonable to arise from causes and conditions.
> Arisen from causes and conditions, self nature would be a product.
>
> In what way would it be suitable to say self nature is a product?
> Self nature itself is not artificial and is without reliance on others.

If "nature" (translated here as "self nature") is taken to be inherent existence, then if inherent existence arose from causes and conditions it would be a product, but this is not possible. Such a nature, inherent existence, is not fabricated or not artificial and does not rely on other. However, "nature" can also be taken to refer to emptiness which is also not artificial, or not fabricated, and does not rely on others.

Lama Tsongkhapa's *Illumination* (Tibetan text page 403) says:

1. Emptiness of the internal

Because its nature is that,
The eye is empty of eye.
This should also be similarly addressed to
The ear, nose, tongue, body, and mentality. [6.181]

Because not remaining constantly
And not disintegrating,
The lack of inherent existence of any of
The six, the eye and so forth,
Is asserted to be the emptiness of the internal. [6.182]

[177] LTK points out that *pa.tsab*'s translation into Tibetan is mistaken, and it quotes the translation of *nag.tso*:

> It is taught: "Unchanged is expressed for the entitiness of non-degeneration, because, if thus, the permanence of abiding forever is negated, also the eyes and so forth, having themselves abided a little while, in negating degeneration or true disintegration which reverses afterwards, there is just not disintegration." The functioning thing that exists by its own entitiness will remain forever or become degenerated.

> Internal phenomena *are the six, the eye and so forth*. *The lack of inherent existence of any of them is asserted to be the emptiness of the internal*. Moreover, *the eye is empty of* an *eye* established by way of its own entity *because the nature of that* eye *is that* emptiness of establishment by way of its own entity. The explanation of the eye *should also be similarly addressed to the ear, nose, tongue, body, and mentality*. For the reason that they are empty in this way, the eye and so forth ultimately do *not remain constantly and without disintegrating*.
>
> At this point, Patshab's translation [of the autocommentary as follows] is an erroneous translation:
>
> > 'Not remaining constantly' means 'not giving up its nature.' Moreover, since, having remained for a little while, it will also reverse, it is taught "Because... not disintegrating" (v. 6.182b). This is indicated, in that any thing that has inherent existence must certainly not be constant and must be irreversible.
>
> [It is erroneous] because in that case the opposite of the predicate would have to be pervaded by the sign. Hence, Nagtsho's translation, translated [as follows], is best since it clarifies the former as an erroneous system using the negative particle:
>
> > Any thing that exists by way of its own entity would remain constantly or would degenerate.

There are two translations of the autocommentary, one by Patshab and one by Nagtsho. In this context the translation by Nagtsho is more accurate. Patshab was born in the Pembo area Tibet, while Nagtsho was from Upper Tibet. Both are known as great translators.

In short, the six sense powers are internal objects, their emptiness of inherent existence is "the emptiness of the internal." The six sense powers are called "internal" because they are conjoined with feelings. External phenomena, on the other hand, are the six objects, forms and so forth, which are not conjoined with feelings.

The eye is said to be empty of an inherently existent eye. This formula can also be applied similarly to the remaining sense powers. Do the eyes and so forth remain constantly? Do they not disintegrate? They do not remain constantly and do disintegrate. Therefore, the statement that they do not remain constantly and do *not* disintegrate should be understood to mean that the eyes do not remain constantly ultimately and do not disintegrate ultimately.

Patshab's translation "'Not remaining constantly' means 'not giving up its nature'" is incorrect. Likewise his stating "Moreover, since, having remained for a little while, it will also reverse" is also incorrect. Lama Tsongkhapa says: "[It is erroneous] because in that case the opposite of the predicate would have to be pervaded by the sign." The opposite of the predicate of the probandum is the predicate of the negandum, this would have to be pervaded by the sign, but it is not. Therefore, Nagtsho's translation is better: "Any thing that exists by way of its own entity would remain constantly or would degenerate." Lama Tsongkhapa say that this translation is best because "it clarifies the former as an erroneous system using the negative particle."

Lama Tsongkhapa's *Illumination* (Tibetan text page 404) says:

> Also the [following] explanation in [Jayananda's] *Explanatory Commentary* is not suitable because if it were so there would not exist disintegration, whereas disintegration does exist:
>
> > Having extracted [the lines] "Because remaining constantly and not non-disintegrating...," if the eye and so forth existed inherently, since inherent existence does not have transformation and disintegration, they would not have transformation and disintegration, but because that does not exist they do not exist inherently.
>
> If it were necessarily that, it would contradict the sutra that says:
>
> > Because of just not disintegrating.
>
> Also the statement "not remaining constantly" should be translated as in Nagtso's translation:
>
> > 'Constant' is expressed to be the entity of non-degeneration.

> Therefore, when the permanence that is to remain constantly is negated in this way, in order to cease the thought "After the eye and so forth have remained for a trifling period, is the disintegration which is their reversal truly existent?," it is taught [in sutra] "Because of just not disintegrating." In brief, this means "Because they are not either truly existent permanent nor impermanent." In [Arya Vimuktisena's] *Illuminating the Twenty Thousand* this is also taught in another way. The nature of phenomena is also as taught in [Nagarjuna's] *Fundamental Wisdom* (v. 15.1-2)
>
> The nature is not suitable to arise
> From causes and conditions.
> Arisen from causes and conditions,
> The nature would have production.
>
> How would it be suitable to say
> "The nature is a product"?
> The nature is not fabricated and
> Does not rely on other.

The six sense powers are not truly existent permanent nor truly existent impermanent. "To remain constantly" means to be permanent, whereas "to disintegrate" means to be impermanent.

"In *Illuminating the Twenty Thousand* this is also taught in another way" refers to the fact this text by Arya Vimuktisena explains the lines in sutra that are summarized by Chandrakirti in his root verse as "Because not remaining constantly and not disintegrating" (6.182ab) differently. According to Lama Tsongkhapa, Arya Vimuktisena also explains the meaning of this statement incorrectly.

In short, the emptiness of the internal is the emptiness of inherent existence of the eye sense power and so forth.

Thursday morning, 22 March 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 404) says:

> 3B1C-2B3E-3B1A-1B Ancillarly, a presentation of the way of asserting the nature

Chandrakirti's autocommentary says:

> Also, if asked: Does the self-nature like that specified by the Acharya [Nagarjuna] in the *Treatise* [*on the Middle Way*] exist as an assertion of the Acharya?

Acharya Nagarjuna asserts nature in general. This nature is the emptiness of inherent existence. Nagarjuna does not assert phenomena to exist inherently.

Chandrakirti's autocommentary says:

> From the viewpoint of which the Bhagavan extensively taught:
>
> Whether the tathagatas arise or do not arise, this dharmata of phenomena just abides.
>
> – the so-called dharmata exists. This so-called dharmata is also whatever is the nature of these eyes and so forth.
>
> If asked: Yet, what are their natures?
>
> These are not artificial and are what are without reliance on others; their own entity which is to be realized by a consciousness devoid of the cataract of ignorance. Was not "whether it exists or does not exist" mentioned? If it does not exist, for what purpose will bodhisattvas meditate on the

> paramita path, because the bodhisattvas thus strive in hundreds of hardships in order to realize that dharmata?

Dharmata, translated as 'reality,' refers to the nature or emptiness. "This dharmata of phenomena" is the final nature of the eyes and so forth. Such a nature is unfabricated and does not rely on other, that is, it is not dependent on causes that produce it. Such a nature is realized only by those who are free from the cataracts of ignorance, that is, it is only directly seen by a superior's exalted wisdom of meditative equipoise.

If there is no reality what would be the purpose to meditate for a long period of time? Because reality exists "the bodhisattvas thus strive in hundreds of hardships in order to realize that dharmata," that is, they do so in order to realize reality directly. Bodhisattvas must accumulate the collection for one countless eon in order to realize reality.

Chandrakirti's autocommentary says:

> As is taught [in the *Cloud of Jewels Sutra*]:
>
> > Son of good lineage, the ultimate (the highest meaning) is without birth, without cessation, without disintegration, without coming, without going, not to be expressed with letters, indescribable with letters, and is not realized by elaboration. Son of good lineage, the ultimate is inexpressible and peace, the object of the arya's personal knowledge.
> >
> > Son of good lineage, the ultimate is: whether the tathagatas arise or do not arise; on account of which the bodhisattvas, having cut their hair and mustaches, don saffron robes, with perfect faith set out homeless from home and, having set out, also in order to attain that dharmata, like setting fire to hair or robes, strive energetically and without completely destroying abidance.
> >
> > Son of good lineage, if the ultimate did not exist, chaste conduct would be meaningless and the arisal of the tathagatas would be meaningless. Because the ultimate exists, therefore the bodhisattvas are called "skilled in the ultimate."

The ultimate, literally the highest meaning, is the nature or emptiness which is without production, without cessation, without disintegration, and so forth. This ultimate or this nature cannot be expressed. How is it realized? It is only realized by a superior's individual cognizer (here translated as 'personal knowledge'). The homage to the perfection of wisdom recited prior to the recitation of the *Heart Sutra* says:

> The perfection of wisdom
> Is indescribable, inconceivable, and inexpressible,
> Unproduced and unceasing, the very nature of space,
> The sphere of the supreme analytical wisdom:
> Homage to the mother of the conquerors of the three times.

Bodhisattvas strive to realize reality just as one would strive to immediately extinguish one's burning clothes or hair without the slightest laziness. A son of the lineage, a bodhisattva, leaves his home, cuts his hair and beard, takes ordination, and so forth all for the purpose of realizing reality. On the other hand, if the ultimate did not exist this would all become meaningless, but, because reality, emptiness, exists it is meaningful.

Chandrakirti's autocommentary says:

> It is mentioned here: O my, not asserting things even a little and yet asserting a nature which is adventitiously non-artificial and non-reliant on others, you express mutually contradictory meanings.

"O my" or "how sad" is an expression that shows both amazement and sadness. Some Madhyamikas do not assert things to be even slightly inherently existent and yet assert a nature which is adventitiously unfabricated and without dependence on other. Here someone says that this expresses mutually contradictory meanings. What are these mutually contradictory meanings? Think about it.

Chandrakirti's autocommentary says:

> Response: You have not understood the intention of the *Treatise* [*on the Middle Way*]. Its intention is: if just this dependently arisen self entity of the eyes and so forth, which is to be apprehended by childish beings, is their self nature, because that is also realized by [a mind] which is mistaken, chaste conduct would be meaningless. Yet, since just this is not the self nature, therefore, chaste conduct has meaning for the sake of viewing that.

If the nature of the eyes and so forth were realized by childish beings it would follow that the nature of phenomena would be realized by a mistaken awareness. In this case, chaste conduct would become meaningless. Thus, the nature that is apprehended by the eye consciousness of childish beings is not the nature that is emptiness. The nature that refers to emptiness is not fabricated (not artificial) and is ultimate truth.

Chandrakirti's autocommentary says:

> I express that too as just not artificial and just not reliant on others through reliance on the deceptive truth. That itself which is not to be viewed by childish beings is proper as the self nature, yet due to merely that, the ultimate is not a thing nor a non-thing, that is "because pacified by nature."

Such a nature, emptiness, is the pacification of the object of negation which is inherent existence. In short, there exists a nature that cannot be realized by the awarenesses of childish beings, this nature is emptiness. "The ultimate is not a thing nor a non-thing" means that both things and non-things have the nature of not existing inherently and therefore being pacified.

Chandrakirti's autocommentary says:

> This self nature is not only asserted by the Acharya – since others can also be converted to accept this meaning, this self nature is also presented as established for the two. [To assert] like those who mention the self natures of fire and so forth as being hot and so forth, is completely unsuitable, because of being just artificial due to dependent arising and because of having reliance.

Acharya Nagarjuna asserts the nature. "Since others can also be converted to accept this meaning, this nature is also presented as established for the two" means that this nature is established for both oneself and others or for both the first party and the second party.

If someone were to say that "nature" refers to, for example, the nature of the elements – the nature of fire being hot and burning, the nature of water being wet, the nature of earth being solidity,

and the nature of wind being movement – this would be incorrect. This "is completely unsuitable, because of being just artificial due to dependent arising and because of having reliance." The nature of fire and so forth are fabricated and dependent upon other since they depend on causes and conditions. Thus, the natures of the elements, fire and so forth, do not possess the three attributes of the nature that is emptiness:

1. being unfabricated,
2. not relying on other, and
3. not being realized by those with the cataracts of ignorance.

Chandrakirti's autocommentary says:

> Because of existence itself, it is even improper to express it as "Therein, the artificial does not exist and there exists no reliance on others," because, due to this statement about it there does not exist a thing apprehended as supreme because of indicating the meaning of that type conventionally. Enough extensiveness; the ordinary should be explained.

The nature of fire and so forth should not be asserted to be unfabricated and without dependence on other. Their nature does depend on other because the nature of hot and burning, for example, does depend on causes and conditions. Because of this these natures cannot be said to be unfabricated and not dependent on other. The nature that is emptiness is not the nature of fire and so forth but is a supreme nature. In brief, the nature of this context is the supreme nature, not the ordinary nature of things.

Chandrakirti says: "Enough extensiveness; the ordinary should be explained." Chandrakirti says that this is enough detail and that this has been a supplementary or ancillary discussion. He will now continue the discussion of the main topic, the sixteen emptinesses.

Chandrakirti's autocommentary says:

> Therein, by mentioning the eyes and so forth as emptied by the eyes and so forth themselves, the self-nature emptiness (or: emptiness of self-nature) is fully clarified. It is not the emptiness of the lack of one in one (other) saying "The eye is empty because devoid of an inner creator and emptied by the very self of apprehended and apprehender."

The nature is also not the lack of one in another. In short, the nature that is emptiness is not the emptiness of the apprehender and apprehended being different substances. This type of non-duality is not the nature of this context.

Lama Tsongkhapa's *Illumination* (Tibetan text page 404-5) says:

> [The autocommentary] says:
>
> > QUESTION: Does the nature – like that qualified in the *Treatise* by the Acharya stating "The nature that is not produced from causes and conditions" and that is asserted by the Acharya – exist?
> >
> > RESPONSE: From any point of view, that called "reality" – which was taught by the Bhagavan saying "Whether the tathagatas arise or do not arise, the reality of phenomena just abides" – exists. Whatever is so-called "reality" is also the nature of the eyes and so forth. What is their nature? The eyes and so forth are unfabricated and their production does not depend on other, for they are entities that are objects to be realized by a consciousness free from the cataracts of ignorance.

Each and every phenomena has two types of natures: (i) an ultimate or final nature and (ii) a conventional or individual nature. For example, the individual nature of fire is hot and burning. In this context "nature" is not the conventional nature of fire which is hot and burning, but is the final nature of fire, its emptiness of inherent existence. This ultimate nature is asserted by Acharya Nagarjuna and should also be asserted by both oneself and others. The nature of this context is therefore the final nature which is the emptiness of inherent existence. This final nature has three attributes: (i) being unfabricated, (ii) not depending on other, and (iii) not being realized by other than the exalted wisdom which is free from the cataracts of ignorance. Such a nature abides or exists. It is free from the eight – production, cessation, and so forth. The final nature of the eyes and so forth, their emptiness of inherent existence, is called "the emptiness of the internal." Such a nature is what is asserted by Acharya Nagarjuna.

Thursday afternoon, 22 March 2001

The nature asserted by Acharya Nagarjuna is their final or ultimate nature, their emptiness of inherent existence. Thus, the nature of the eye is the eye's emptiness of inherent existence. This final nature possesses three attributes:
1. being unfabricated
2. not relying on other, and
3. not being realized by other than the exalted wisdom which is free from the cataracts of ignorance.

Acharya Nagarjuna does not say that there is no reality or final nature or ultimate truth.

Lama Tsongkhapa's *Illumination* (Tibetan text page 405) says:

> These [passages] excellently refute those who say that "The Acharya does not assert ultimate truths and reality to exist," and those who propound that when the pollution of ignorance is eliminated the consciousness becomes non-existent.
>
> Is reality propounded to exist or to not exist? If it does not exist, for what purpose would the bodhisattvas meditate on the path of the perfections? They would not. If ultimate truth did not exist, they would not progress in the culmination of its realization, and, if that [progress] did not exist, meditation on the path would be meaningless, but, because there is the realization of reality and progress in its culmination, bodhisattvas strive in hundreds of hardships. This indicates that those who strive in many hardships on the path, while asserting the ultimate truth that is called "reality" to not be the object of any awareness, are the extremely dull facultied.

Nagarjuna does assert ultimate truth and reality to exist. If ultimate truth did not exist the bodhisattvas would not strive in cultivating the path. On the other hand, because it exists they meditate and bear hardships in order to cultivate the path.

Lama Tsongkhapa's *Illumination* (Tibetan text page 405-6) says:

> As is also clearly taught in the *Cloud of Jewels Sutra*:
>
> > Son of the lineage, the ultimate is without production, without cessation, without disintegration, without coming, without going, not to be expressed by letters, thoroughly indescribable by letters, and is not realized by elaboration.
> >
> > Son of the lineage, the ultimate is inexpressible and peace is to be individually cognized by superiors.
> >
> > Son of the lineage, the ultimate [exists] whether the tathagatas arise or do not arise, on account of which the bodhisattvas, having cut their hair and beards, don saffron robes. With perfect faith, leaving their homes they take ordination as a homeless one. Having

> taken ordination, also in order to attain that reality they strive with effort, as though their hair or robes were set on fire, and do not completely destroy abidance.
>
> Son of the lineage, if the ultimate did not exist, pure conduct would be meaningless and the arisal of the tathagatas would be meaningless. Therefore, because the ultimate exists, the bodhisattvas are called "Those skilled in the ultimate."

The ultimate truth cannot be expressed by words. It is only perceived by the individual cognizer, the exalted wisdom, of superiors. In order to cultivate the wisdom realizing the ultimate, bodhisattvas bear such hardships as leaving their homes, cutting their hair and beards, and so forth. Their effort is like that of someone putting out the fire burning his hair or clothes. On the other hand, if the ultimate did not exist "pure conduct would be meaningless and the arisal of the tathagatas would be meaningless." Therefore, because ultimate truth does exist the bodhisattvas are called "those skilled in the ultimate."

Lama Tsongkhapa's *Illumination* (Tibetan text page 406) says:

> That it is "inexpressible" and "not realized by elaboration" means that terms and conceptions cannot take it as an object as does the non-conceptual exalted wisdom seeing the ultimate; it does not mean that it cannot be realized in general. [The ultimate] is taught to exist also when presenting the harm to the ultimate truth not being an existent and when presenting the opposite of that, and also previously it was presented to exist. Therefore, distinguishing it to be non-existent and to not exist is merely presented for those of extremely inferior intelligence.

The final nature is inexpressible by means of words and cannot be conceived.

Lama Tsongkhapa's *Illumination* (Tibetan text page 406) says:

> In many texts translated by Patshab, it says "[Whether the tathagatas] arise or do not arise, on account of which...," however, Nagtsho's translation says "Although they do not arise, since the ultimate is without degeneration..." Since this accords with the statement in the sutra cited in the autocommentary above, "Although they do not arise, the reality of phenomena still abides," it is the best [translation].
> The autocommentary says:
>
> > OBJECTION: How sad, your not asserting things to be even slightly inherently existent, yet asserting their nature to also be adventitiously unfabricated and without dependence on other, is to express mutually contradictory meanings.
> >
> > RESPONSE: You have not understood the intention of the *Treatise on the Middle Way*. Its intention is [as follows]. If that own entity of the eyes and so forth – dependent and related arising – which is what is apprehended by childish beings were the nature that is the mode of being of those eyes and so forth, pure conduct would be meaningless because that nature is also directly realized by a mistaken awareness. Yet, since the eyes and so forth being dependent-arisings is not the nature that is their mode of being, pure conduct has the meaning of being for the purpose of viewing that.

The nature of this context is not that directly realized by the awareness of childish beings. If it were, then the pure conduct of a bodhisattva would be meaningless, whereas the purpose of bodhisattvas in maintaining pure conduct is to attain a direct realization of emptiness. In other words, the nature of the eye sense powers is not directly realized by the awareness of childish beings. The final nature of things is emptiness, such a nature is never directly realized by the awareness of childish beings. Here "directly" is mentioned because ordinary beings do have a realization of emptiness, for example, the bodhisattvas on the path of accumulation and on the path of preparation have a realization of

emptiness by way of a meaning generality. In other words, hearers on their path of accumulation and path of preparation and solitary realizers on their path of accumulation and path of preparation do realize emptiness but do not realize it directly. Here "childish beings" refers to these hearers and solitary realizers.

Nagarjuna never asserts that the reality of the eye sense power and so forth does not exist. The eye sense power and so forth themselves are not the final nature. The final nature asserted by Nagarjuna is only the reality that is the negation of the inherent existence of the eye. Thus, the reality of the eye sense power and so forth is the nature.

Lama Tsongkhapa's *Illumination* (Tibetan text page 407) says:

> Therefore, refuting the nature is to refute that the eyes and so forth are the mode of being (*bshis lugs*), whereas refuting the assertion of a nature is to assert a nature that is "the reality of the eyes and so forth." Therefore, refuting things to exist inherently and asserting a nature that is the reality of things is without even the slightest contradiction.

It is not contradictory to negate the inherent existence of things and to assert the reality, or nature, of things. In other words, asserting that there is a reality or final nature of things does not contradict the negation of their inherent existence.

Lama Tsongkhapa's *Illumination* (Tibetan text page 407) says:

> Such a reality is, moreover, expressed by us to be unfabricated and without dependence on other in dependence on being established to be a conventional truth, that is, a mere nominality.

Reality or nature exists conventionally. Is it a conventional truth? It is not because it is an ultimate truth. An ultimate truth cannot be a conventional truth because they are mutually exclusive. However, reality exists as a mere nominality or as a mere conventionality.

Lama Tsongkhapa's *Illumination* (Tibetan text page 407) says:

> The reality which is not an object to be viewed by ordinary childish beings is suitable to be the nature, yet due to merely asserting it to be conventionally existent, it also does not inherently exist as a thing or non-thing, that is, ultimately, because inherent existence is just pacified.
>
> The [following] statement [in the autocommentary] must be ascertained in particular:
>
> > Not only is this nature – reality – asserted by the acharya, Arya [Nagarjuna], but, since others, the opponents, can also be brought to assert this meaning, at the end of the argument this nature is also presented to be established for both ourselves and others.

Nature is a synonym of reality. It is not only asserted by Nagarjuna but others can also be brought to assert it, in that the opponents, for example, the Svatantrika Madhyamikas, can also be brought to accept this final nature of phenomena at the end of the argument as do the Prasangika Madhyamikas.

Lama Tsongkhapa's *Illumination* (Tibetan text page 408) says:

> When asserted to accord with those who propound the nature that is the mode of being of fire and so forth to be hot and so forth, this is unsuitable in all ways
>
> - because heat and so forth are fabricated due to being produced in dependence and
> - because they are existents that are produced in dependence on causes and conditions.

It is not suitable to assert the nature of fire and so forth to be hot and burning since this nature of hot and burning is produced in dependence on causes and conditions and therefore cannot be the final nature which is unfabricated and does not rely on other.

Lama Tsongkhapa's *Illumination* (Tibetan text page) says:

> It is also not suitable to say "The eye and so forth are unfabricated and do not depend on other – causes and conditions," "because," as Patshab's translation says, "due to this statement there would be nothing that is apprehended as the supreme and because it indicates the objects which are such aspects to be conventionalities." On the other hand, Nagtsho's translation says "because according to that there would not exist apprehension of the supreme and because it establishes objects just as they are as conventionalities." Stating "According to that" is the best, whereas the meaning of the rest is "because the thing that is the referent object of the conception of true existence does not exist and because it indicates the meaning of such attributes of being conventionally fabricated and dependent on other." Since it is indicated that the acharya, Arya [Nagarjuna], asserts the nature in this way, the *Praise of the Sphere of Phenomena* says:
>
> The sutras that present emptiness,
> All the Conqueror's teachings on the varieties –
> All of these eliminate the afflictions;
> They do not act to degenerate his constituents.

The referent object of the conception of true existence does not exist. To assert the nature in this way means to assert reality.

Lama Tsongkhapa's *Illumination* (Tibetan text page 408) says:

> This should also be understood to mean that "The sutra sets that present emptiness destroy the reference point (*dmigs gtad*) of the affliction that is the conception of true existence, but do not present the emptiness that is the refutation of its reference point to be the degeneration, that is, the annihilation, of the Tathagata's constituents."

The Buddha taught emptiness in order to destroy the reference point of the conception of true existence.

Lama Tsongkhapa's *Illumination* (Tibetan text page 408) says:

> Regarding that, by teaching that the eyes and so forth are empty of eyes and so forth, it clarifies that the eyes and so forth are empty of inherent existence. It is not like the assertion of the hearer schools who state "The eye is empty, that is, it is free from a self that is an inner creator," and not like the assertion of the Chittamatrins who state "The eye, the apprehended, and the apprehender are empty of being mere different substances" as an emptiness which is the non-existence of one with respect to another, which is not the eye and so forth being empty of being established by way of their own entity.

"The eyes and so forth are empty of eyes and so forth" means that the eyes are empty of inherently existent eyes and so forth. The nature refers to their final mode of being, the lack of inherent existence. The nature must be the emptiness of inherent existence of the eyes and so forth, it is not the emptiness of one not existing with respect to another. It is not the emptiness of apprehended and apprehender being different substances.

There are different types of emptiness according to the different schools. The emptiness asserted by the Vaibhashikas and Svatantrika Madhyamikas are not the final nature. Only that asserted by the Prasangika Madhyamikas, the emptiness of inherent existence of the eyes and so forth,

is the final nature. The nature asserted by Arya Nagarjuna is not that asserted by the Vaibhashikas nor is it that asserted by the Chittamatrins. The Vaibhashikas posit the emptiness of the person as being the person's lack of being permanent, partless, and independent, while the Chittamatrins posit emptiness as the emptiness of the apprehended and apprehender being different substances.

Lama Tsongkhapa's *Illumination* (Tibetan text page 409) says:

3B1C-2B3E-3B1A-2 Explanation of the remaining three emptinesses

Chandrakirti's autocommentary says:

There, outer emptiness is:

Because its nature is that,
Therefore, form is emptied by form.
Sound, smell, taste, touch, and
Phenomena themselves are also likewise. [6.183]

The non-entitiness of form and so forth
Is asserted as the external emptiness. [6.184ab]

As was taught before [in the *Prajñaparamita Sutra*]:

Therein, if asked: What is outer emptiness?
Those to be known as outer phenomena are form and so forth. Therein, because of not abiding forever and because of not disintegrating, form is emptied by form; because its nature is that.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

(2) The emptiness of the external.

Because that is its essential nature,
Visible form is empty of form.
Sounds and smells, tastes, tangibles
And mental objects are also so. [6.183]

The non-inherent existence of objects
Is held to be emptiness of the external. [6.184ab]

It should be understood that an [external] visible form is empty of entitiness of visible form, because the essential nature of that visible form is that emptiness. Sounds, smells, tastes, tangibles, and mental objects are also like that. That there are no inherently existent [six objects not included in the person,] such as visible forms, is accepted as the emptiness of the external, similarly. [In this and the remaining cases, what is taught in the sutra, "because they do not remain unchangeably and do not perish," is to be understood, in accord with the explanation about emptiness of the internal above.

In the context of the emptiness of the external, "the external" are the six objects of the six sense powers: forms, sounds, odors, tastes, tangible objects, and phenomena. They are called external because they are not included in the continuum. If it is included in the continuum is it necessarily conjoined with feeling? Think about it. The emptiness of these external objects is the emptiness of the external. If it is form is it pervaded by not being included in the continuum? There is no pervasion, for example, the hand is form and is included in the continuum. A form not included in the continuum is, for example, the shape and color of a table.

"Abiding forever" or "remaining constantly" means to be permanent. Forms and so forth do not remain constantly because they are empty of inherent existence and are not established by way of their own entity. Do forms remain constantly? Do sounds remain constantly? They do not, therefore, they are said to not abide forever. It is difficult to understand why the sutra says "because of not disintegrating" but this can be resolved by saying "because of not disintegrating ultimately."

"Form is emptied by form" or "form is empty of form" means that, as before in the case of "the eye is empty of eye," form is empty of inherently existent form. This formula is to be applied similarly to sounds, odors, tastes, tangible objects, and phenomena. They too are empty of inherent existence.

Chandrakirti's autocommentary says:

> *The non-inherent existence of both*
> *Is outer and inner emptiness.* [6.184cd]
>
> As was taught before [in the *Prajñaparamita Sutra*]:
>
> > Outer and inner phenomena just lacking an inherent nature of outer and inner phenomena is outer and inner emptiness.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

(3) The emptiness of the both.

> *That the both lacks inherent existence*
> *Is external-internal emptiness.* [6.184cd]

The non-inherent existence of that both external and internal, [such as the physical bases of the six senses, which are both included in the continuum of consciousness and not included in the sense organs,] is the emptiness of the external and internal, similarly.[178]

The external are the six objects of the six sense powers, forms and so forth, whereas the internal are the six sense powers. The emptiness of the six objects, forms and so forth, is the emptiness of the external. The emptiness of the six sense powers is the emptiness of the internal. Here it seems that the emptiness of these two is the emptiness of both the internal and external. However, in the *Ornament for Clear Realizations* it says that the bases of the emptiness of the internal and external must be included in the continuum, thus it is the loci of the sense powers. They are considered to be external with respect to the sense powers, and internal with respect to external forms. In Haribhadra's *Commentary Clarifying the Meaning* it says that the emptiness of inherent existence of the six loci of the sense powers is the emptiness of both.

"Outer and inner phenomena are empty of outer and inner phenomena" means "outer and inner phenomena are empty of inherently existent outer and inner phenomena." As was mentioned before, the reason in this case is also "because they do not remain constantly and do not ultimately disintegrate."

Chandrakirti's autocommentary says:

[178] The *Sutra* describes this emptiness as the internal dharmas being empty of the external. Chandrakirti quotes a version of the *Sutra* rewritten after his interpretation.

All phenomena just lacking an inherent nature,
The wise describe saying "emptiness."
That emptiness is also asserted as
Emptied by the entity of emptiness. [6.185]

The emptiness of so-called emptiness,
That which is asserted as emptiness of emptiness,
Is taught in order to overcome the grasping
Of those thinking emptiness a thing. [6.186]

As is taught [in the *Prajñaparamita Sutra*]:

> Therein, if asked: "What is the emptiness of emptiness?"
> This emptiness emptied by the emptiness that is the emptiness of all phenomena is called 'the emptiness of emptiness.'

It is finely indicated for the sake of overcoming the grasping to emptiness as a thing of those who strongly settle even upon emptiness as a thing.

As taught [in the *Praise of the Supramundane*, 23]:[179]

> In order to destroy all imaginations, the nectar of emptiness was indicated. Whoever has grasping even for that, they are reviled by you.

The lack of inherent existence of phenomena is called "emptiness," this emptiness is also empty of inherent existence. The *Perfection of Wisdom Sutra* says: "This emptiness empty of the emptiness which is the emptiness of all phenomena is called 'the emptiness of emptiness.'" Emptiness is also empty of inherent existence. The Buddha taught the emptiness of emptiness in order to overcome the conception of the true existence of emptiness or the conception of the inherent existence of emptiness. In short, the Buddha taught the emptiness of emptiness in order to overcome the thought that emptiness exist inherently. Emptiness's emptiness of inherent existence is the "emptiness of emptiness." This was taught in order to overcome the thought that emptiness exists inherently.

The Buddha taught the nectar of emptiness in order to overcome all conceptions.

Geshe Jampa Gyatso: Why were these four emptiness taught in the order of (i) the emptiness of the internal, (ii) the emptiness of the external, (iii) the emptiness of both, and (iv) the emptiness of emptiness?
Student: The *Ornament for Clear Realizations* says that the emptiness of the internal is realized first, so perhaps they were taught in this order in terms of their ease of realization.
Geshe Jampa Gyatso: Why is it easier to realize the emptiness of the internal than the emptiness of the external? Think about it.

Friday morning, 23 March 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 409) says:

2. Emptiness of the external

Because their nature is that,
Forms are empty of forms.
Also sounds, odors, tastes, tangible objects, and

[179] See Lindtner, pp. 136-137.

Phenomena are like that. [6.183]

The very lack of nature of forms and so forth
Is asserted to be the emptiness of the external. [6.184ab]

The very lack of nature – which is the emptiness of inherent existence of the six objects, *forms and so forth*, which are not included in the continuum – *is asserted to be the emptiness of the external*. External *forms are empty* of being established as the very entity *of forms because the nature of those* forms *is that*. *Also* the way in which *sounds, odors, tastes, tangible objects, and phenomena are* empty is to be understood *like that*. The teaching regarding these and the remaining, in short, "because they do not remain constantly and they do not disintegrate," is to be understood as it was explained in the context of the emptiness of the internal.

The six objects are the forms, sounds, odors, tastes, tangible objects, and phenomena that are not included in the continuum. These six are also called "external spheres." Their lack of inherent existence is the emptiness of the external. Forms and so forth do not remain constantly and do not ultimately or inherently disintegrate. To "remain constantly" means to abide forever or always. Forms and so forth do not remain constantly because they disintegrate momentarily, although forms and so forth disintegrate they do not disintegrate ultimately. Can it be said that the phenomena sphere disintegrates? It cannot because the phenomena sphere is said to be permanent. There are different kinds of permanence such as occasional permanence; for example, the space in a cup which is permanent but, when the cup is broken, ceases.

Lama Tsongkhapa's *Illumination* (Tibetan text page 409) says:

3. Emptiness of the external and internal

The very lack of nature of both
Is the emptiness of the external and internal. [6.184cd]

For example, the loci that are the supports of the sense powers, which are included in the continuum of consciousness, are *both* due to being included in the continuum of consciousness and not being included in the sense powers. Their *very lack of the nature* of being established by way of their own entity *is the emptiness of the external and internal*. The remaining is as above.

"The external and internal" are the loci or organs that are the supports of the sense powers. The loci are not the sense powers which are lucid matter; relative to the sense powers they are external.

Lama Tsongkhapa's *Illumination* (Tibetan text page 409) says:

4. Emptiness of emptiness

The very lack of nature of phenomena
Is described by the wise to be "emptiness."
Also that emptiness is asserted
To be empty of the entity of emptiness. [6.185]

Any emptiness of what is called "emptiness"
Is asserted to be the emptiness of emptiness.
It was taught in order to overcome
The conception of an awareness of emptiness as a thing. [6.186]

The very lack of establishment by *nature of phenomena* that are external and internal, as explained before, *is described by those who are wise* in just that *to be* "The nature, *emptiness*." *Also that*

> *emptiness*, the nature of external and internal phenomena, *is asserted to be the empty of* being established as *the entity of emptiness* or of true existence. That being the case, *any emptiness of what is called "emptiness,"* the basis of emptiness, *is asserted to be the emptiness of emptiness*. Teaching emptiness to be empty of true existence *was taught* in the *Mother of the Conquerors in order to overcome the conception* of true existence *of an awareness* conceiving *emptiness* or reality *to be a thing*, that is, to be truly existent. Also in regard to it being so, [Nagarjuna's] *Praise of the Supramundane* clearly says:
>
> In order to eliminate all conceptions,
> When teaching the nectar of emptiness
> You thoroughly reproached
> Whoever adheres to it.
>
> By these [lines], the Conqueror is said to thoroughly reproach both those who propound [emptiness] to be truly established stating "Ultimately it is true" due to considering it to be the mere elimination of true existence, and others who assert it to be true due to considering it to be an affirmative phenomenon that is an independent reality, like blue and yellow which are not the mere elimination of the object of negation,.

Emptiness itself is empty of inherent existence. The Buddha taught this in order to eliminate the conception that emptiness exists inherently. There are some who say that ultimate truth is truly existent, for example, Jampa Chogyi Sengge. On the other hand, there are others, such as Kunkyen Jonangba, who assert ultimate truth to be an affirmative phenomenon that is an independent reality. Both Jampa Chokyi Sengge and Kunkyen Jonangba were famous scholars.

QUESTIONS AND ANSWERS

Student: When the imputed object is sought in the seven ways, it is not found. What is the imputed object in this context:

a) the inherently existent self,
b) the conventionally existent self, or
c) the self not qualified by either inherent existence or conventional existence?

Geshe Jampa Gyatso: To search for the self means to analyze asking "What is the self?" For example, when one searches for the fist, one asks "Is it the thumb? Is it the index finger?" and so forth. In this way, none of the fingers are found to individually be the fist. When one finger, for example, the index finger is bent, is this index finger a fist? When one finger alone is bent, it is not a fist. Only when the collection of fingers are bent inward is it called a fist. When the fist is thoroughly sought, it is not found from the side of the basis of imputation. Likewise, when the self is thoroughly sought among the aggregates it is not found from the side of the aggregates. What is this imputed object that is sought? It is the I. We search for the I that is the imputed object.

Student: In the four point analysis, one first has to ascertain what is the inherently existent I and then determine whether that I is one with or different from the aggregates. That I is the object of negation.

Geshe Jampa Gyatso: The four point analysis is related to the reasoning of freedom from being a truly existent one and a truly existent many. There are nine points:

(1) ascertaining the object of negation,
(2) ascertaining the pervasion; for example, the person, as the subject, is not inherently existent because it is not found when sought by means of the seven ways,
(3) ascertaining that the self is not one with the aggregates,
(4) ascertaining that the self is not a different entity from the aggregates,
(5-6) ascertaining that the self and the aggregates are not inherently existent support and supported,
(7) ascertaining that the aggregates are not possessed by the self,
(8) ascertaining that the collection of the aggregates is not the self, and
(9) ascertaining that the shape of the aggregates is not the self.

These can be synthesized into four points:
1. ascertaining the object of negation,
2. ascertaining the pervasion,
3. ascertaining the object of negation,
4. ascertaining the property of the subject.

In regard to the analysis of freedom from one and many having four points, for example, the person, as the subject, does not exist truly because
1. it does not exist as a truly exist one,
2. it does not exist as a truly existent many,
3. it does not exist as both, and
4. it does not exist as either.

In this way there is the ascertainment of the object of negation, the ascertainment of the pervasion, and ascertainment that if it does not exist as a truly existent one or many it does not exist truly. In this way the third and fourth points are to ascertain that the person is not at truly existent one and a truly existent many.

Student: Then the third point is whether the object of negation, the inherently existent self, is the same as the aggregates or different from the aggregates?

Geshe Jampa Gyatso: The thesis is that the self does not exist inherently, whereas the reason is that the self is not inherently one with the aggregates and the self is not inherently different from the aggregates. In this case the object of negation is "the self that is an inherently existent one" or "an inherently existent self that is not one."

Student: Sutra says (*Illumination,* Tibetan text page 361):

> Oneself is one's own protector;
> Oneself is also one's own enemy;
> Oneself is one's own witness
> To the good and bad created.

How does this sutra passage prove that the self must be substantially existent? The lower schools cite this verse in order to prove that the self is substantially existent, whereas the Prasangika Madhyamikas cite it in order to negate the self being substantially existent.

Geshe Jampa Gyatso: According to the lower schools, for example, the Svatantrika Madhyamikas, the self is not a substantial existent but is an imputed existent. The Vaibhashikas would also say that the self is an imputed existent because all the lower schools define the person as "the I that is imputed on any of the five aggregates." Bhavaviveka's *Blaze of Reasoning* says that although the person in terms of the isolate of the self is not a substantial existent, there is no contradiction that the base of the isolate of the self, the illustrative mental consciousness, is a substantial existent. Thus, in short, the illustrative mental consciousness is a substantial existent. Previously Lama Tsongkhapa (*Illumination*, Tibetan text page 351) said:

> Moreover, although these systems assert that hearers and solitary realizers realize that the person does not exist as substantially existent, they do not assert that they realize that the two consciousnesses do not exist as substantially existent. Therefore, propounding that the person is not self-sufficient substantially existent is asserted from the point of view of the person itself; it is not asserted as such with respect to the consciousness, the illustration of the person.

Student: Is there an actual view of the transitory collection that is intellectually acquired according to Prasangika?

Geshe Jampa Gyatso: There is an acquired view of the transitory collection and an innate view of the transitory collection. The acquired view of the transitory collection is an object of abandonment of the path of seeing. In other words, the view of the transitory collection that is to be abandoned by the uninterrupted path of the path of seeing is the acquired view of the transitory collection. The view of the transitory collection that is to be abandoned by the uninterrupted path of the path of meditation is the innate view of the transitory collection.

The conception of a self-sufficient substantially existent person is not an acquired conception, it is an innate conception.

Student: If it is an acquired view of the transitory collection, is it pervaded by being one of the twenty views of the transitory collection?
Geshe Jampa Gyatso: There is no pervasion, for example, a view of the transitory collection that is not any of the twenty such as the afflicted wisdom thinking "I exist inherently" or "I exist by way of its own character." This is not any of the twenty views but is an acquired view of the transitory collection.
Student: Why is it an acquired view of the transitory collection?
Geshe Jampa Gyatso: Because it is conception conceiving the acceptability of this. This conception is a reasoning based on tenets. Because of this it is an acquired conception, an acquired conception being a conception that arises in dependence on reasonings. On the other hand, an innate conception arises naturally.

By meditating on this subject the foundations of cyclic existence will be shattered, therefore, we have a fortunate opportunity.

END

Monday afternoon, 26 March 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 410) says:

3B1C-2B3E-3B1B Explanation of the four: the emptiness of the great and so forth

The four emptinesses discussed under this outline are:

- the emptiness of the great,
- the emptiness of the ultimate,
- the emptiness of the compounded, and
- the emptiness of the uncompounded.

5. Emptiness of the great

Chandrakirti's autocommentary says:

> *Because of pervading without exception*
> *Sentient beings and the vessel world and*
> *Because the immeasurables are, by example,*
> *Boundless, the directions are immense.* [6.187]

Apart from the directions, there is no world of sentient beings and no vessel world. Hence, due to just pervading migrators without exception, the directions are immense. Because meditation on love and so forth is taught with the example of the immeasurable directions due to meditating through fully discerning the directions; therefore it is also immense since without boundary.

> *That which is just emptied*
> *By these ten directions*
> *Is the great emptiness,*
> *Taught to overcome grasping to the great.* [6.188]

As was extensively taught [in the *Prajñaparamita Sutra*]:

> If asked: What is great emptiness?
> The southern direction is emptied by the southern direction.

The great emptiness is indicated in order to overcome the grasping of those grasping to the directions as great thinking, "The directions are immeasurable." Like this, the Vaisheshikas understand the directions as substantial.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

(5) The emptiness of the immensity

> *Because they embrace every world*
> *Of sentient beings and physical objects,*
> *And by their example the immeasurables*
> *Are boundless, the directions are "the immensity."* [6.187]
>
> *The emptiness of all these ten*
> *Of any directions is the emptiness*
> *Of immensity. This is taught*
> *In order to stop grasping at the immensity.* [6.188]

The ten directions are the immensity, because they pervade all the worlds of sentient beings and inanimate objects [as there is no being or physical object outside these directions], and because by the example of their immeasurability, the loving kindness and so on that perceive the sentient beings of the ten directions are taught to be boundless or immeasurable. That all these ten directions are empty of inherent nature of directions is the emptiness of the immensity; this teaching is necessary, for it is in order to prevent the immensity's being grasped as truly existent.

"The great" refers to the ten directions, they are the basis of emptiness of "the emptiness of the great." The ten directions are called "great" because they pervade all the worlds of the inhabitants – sentient beings – and the environment. Thus, the ten directions are "the great" and their emptiness is "the emptiness of the great." Just as the ten directions are called "great" because they pervade all, similarly, the four immeasurables, for example, immeasurable love, are so called because they observe immeasurable sentient beings. This love is also called "great love" because it pervades all sentient beings.

Why did the Buddha teach the emptiness of the great? He did so in order for the sentient beings of the ten directions to abandon the conception of true existence. The ten directions are the four cardinal directions, the four intermediate directions, and up and down.

Chandrakirti says: "Like this, the Vaisheshikas understand the directions as substantial." The Vaisheshikas assert the ten directions to be a substance. The Vaisheshikas classify objects of knowledge in six categories of meanings: generalities, particularities, substances, qualities, activities, and assemblages. Substances are of nine types composed of two types: substances that extend to all and substances that do not extend to all. Qualities are of twenty-five types. The Vaisheshikas say that the directions are a substance that extends to all.

6. Emptiness of the ultimate

Chandrakirti's autocommentary says:

> *Since it is the supreme purpose,*
> *Nirvana is the ultimate (highest meaning* or *highest aim).*
> *That which is emptied by that itself*
> *Is ultimate emptiness.* [6.189]
>
> *In order to overcome the grasping*
> *Of those thinking nirvana a thing,*
> *The knower of the ultimate indicated*
> *Ultimate emptiness.* [6.190]

As extensively set forth [in the *Prajñaparamita Sutra*]:

> Therein, if asked: What is ultimate emptiness?
> The "ultimate' is nirvana. Because of not abiding eternally and just not disintegrating, nirvana is emptied by nirvana.

That too is taught in order to overcome the grasping as a thing of those strongly settling upon nirvana as a thing.

The term "meaning"[180] is a word of purpose or a word of that to be known.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

[180] Sanskrit: *artha*; Tibetan: *don* – of the Sanskrit: parama-artha; Tibetan: *don.dam* – literally, highest meaning/object – rendered here as "ultimate."

(6) The emptiness of the ultimate goal

Because it is the supreme purpose,
Nirvana is the ultimate goal.
That it is empty of being that
Is the emptiness of the ultimate goal. [6.189]

In order to stop the grasping of those
Who believe nirvana is real,
He who knows the ultimate goal
Taught the emptiness of the ultimate goal. [6.190]

Nirvana, [here the dharmakaya,] is the ultimate goal since it is the supreme purpose. That that ultimate goal is empty of entitiness of that is the emptiness of the ultimate goal. The teaching of the emptiness of the ultimate goal, by the knower of the ultimate goal, [the Buddha,] is necessary, for it is in order to prevent the grasping of those whose mind grasps nirvana as real, or truly existent.

The ultimate is nirvana, the state of having passed beyond sorrow or having passed beyond the obstructions. The emptiness of this is called "the emptiness of the ultimate." According to the Prasangika Madhyamikas, nirvana is a true cessation and an ultimate truth, whereby it is also an emptiness. According to the lower school, nirvana is not an ultimate truth. The Svatantrika Madhyamika school asserts nirvana to be a conventional truth, but, when they set out various types of ultimate – ultimate attainment, ultimate object, and ultimate achieving or practice – they consider nirvana to be the ultimate attainment. They posit ultimate achieving as a true path, that is, a superior's exalted wisdom of meditative equipoise, and posit the ultimate object as ultimate truth or emptiness. In the Svatantrika Madhyamika system an emptiness is an ultimate object in the sense of being an observed object.

The Chittamatrins also consider nirvana to be an ultimate truth and to exist truly because it is a thoroughly established phenomenon.

As in the case of the other emptinesses, stating "nirvana is empty of nirvana" means that "nirvana is empty of an inherently existent nirvana." Similarly, nirvana is also to be understood as "not remaining constantly and not disintegrating" in that it does not inherently remain constantly and does not inherently disintegrate. The Buddha taught the emptiness of nirvana "in order to overcome the grasping as a thing of those strongly settling upon nirvana as a thing." In short, why did he teach the emptiness of the ultimate? He taught it in order to eliminate the conception of true existence of the nirvana that is to be attained.

Chandrakirti says: "The term 'meaning' is a word of purpose or a word of that to be known." This refers to the fact that the word Tibetan translated as "ultimate" is composed of two syllables that literally mean "highest meaning" (*don dam*). Nirvana is said to be the highest meaning because it is the highest purpose.

7. Emptiness of the compounded

Chandrakirti's autocommentary says:

Because arising from conditions, the three realms
Are definitely described as being compounded.
That which is emptied by that itself
Is taught as compounded emptiness. [6.191]

As extensively taught [in the *Prajñaparamita Sutra*]:

> Therein, if asked: What is compounded emptiness?
> The "compounded" is the three realms. Therein, the desire realm is emptied by the desire realm.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

(7) The emptiness of the conditioned

> *Because the three realms arise from conditions,*
> *They are truly described as "the conditioned".*
> *That they are empty of that is taught*
> *As the emptiness of the conditioned.* [6.191]

The three realms are truly described as "the conditioned," because they arise from [causes and] conditions. That those three realms are empty of entitiness of that is taught as the emptiness of the conditioned, similarly.

The three realms are the desire realm, form realm, and formless realm. These three realms are called "the compounded" because they arise from their respective causes and conditions. How many subdivisions does the desire realm have?
Student: It has six subdivisions.
Geshe Jampa Gyatso: Do you mean the six migrations? Does the term "desire realm" refer to the migrating beings in the desire realm or to the place?
Student: It refers to the sentient beings.

The emptiness of the compounded is extensively taught in the *Perfection of Wisdom Sutra*. The desire realm is composed of:

- the human beings of the four main continents and eight sub-continents,
- the six abodes of the gods,
- the abode of the antigods,
- the abodes of the eight hot hells, eight cold hells, and so forth,
- the abode of the hungry ghosts, and
- the abode of animals.

The third chapter of Vasubandhu's *Treasury of Knowledge* says:

> Hell beings, hungry ghosts, animals,
> Human beings, and the six gods
> Are the desire realm. The hells and
> The divisions of the continents make twenty.

Gedun Drup's commentary on the *Treasury of Knowledge* (translated by David Patt) says:

> There is also a division of the desire realm into twenty parts: By dividing the hells into eight hot hells [plus the hungry ghosts and the animals] there are ten bad migrations; and by dividing the humans into the four continents [plus the six types of gods] there are ten abodes of good migration.

In short, the three realms are called "the compounded," while their emptiness of inherent existence is "the emptiness of the compounded." The Buddha taught this emptiness in order to overcome the strong adherence to compounded phenomena that arise from causes and conditions as truly existent. Because the three realms do not remain constantly and do not disintegrate, they are empty of inherent existence.

8. Emptiness of the uncompounded

Chandrakirti's autocommentary says:

> *Whatever does not have production,*
> *Abidance, and impermanence is the uncompounded.*
> *That which is emptied by that itself*
> *Is uncompounded emptiness.* [6.192]
>
> "By that" means "by the uncompounded."
>
> As taught before [in the *Prajñaparamita Sutra*]:
>
> > Therein, if asked: What is uncompounded emptiness?
> > The "uncompounded" is whatever does not have production, does not have cessation, does not have disintegration, and does not have transformation from abidance. Therein, the uncompounded is emptied by the uncompounded.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

(8) The emptiness of the unconditioned

> *What lacks birth, duration, and*
> *Impermanence is unconditioned.*
> *That it is empty of being that*
> *Is the emptiness of the unconditioned.* [6.192]

Space is unconditioned because it is something that lacks birth, [alteration of] duration, and impermanence, [i.e., cessation or perishing].[181] That this unconditioned is empty of entitiness of that is taught as the emptiness of the unconditioned, similarly.

"The uncompounded" are phenomena that are without production, abidance, and impermanence; their emptiness of inherent existence is called "the emptiness of the uncompounded." Gedun Drup's commentary mentions space as an example of uncompounded phenomenon because it is without production, transformation from abidance, and disintegration.

If it is uncompounded it is not pervaded by being an uncompounded phenomenon, for example, the horns of a rabbit, the tail of a human being, a sky-flower, and the son of a barren woman. These are uncompounded but are not uncompounded phenomena. According to Vasubandhu's *Treasury of Knowledge* there are three types of uncompoundeds: space, analytical cessations, and non-analytical cessations. The Prasangika Madhyamikas set out more types of uncompounded, including emptinesses, the selflessness of persons, the selflessness of phenomena, and true cessations. If it is an uncompounded phenomenon it is pervaded by being a permanent phenomenon.

Lama Tsongkhapa's *Illumination* (Tibetan text page 410) says:

> **5. Emptiness of the great**
>
> *Because they pervade the worlds of sentient beings and*

[181] Production, "alteration of duration," and perishing are the three marks of the conditioned taught in the *Tri-lakshana-sutra*, as quoted and discussed at length in *Abhidharmakosha* (ADK) II, pp. 222ff, and *Prasanna-pada* VII (see Murti, *Central Philosophy of Buddhism*, p. 191). There is little agreement on the interpretation of the second mark, which is often abbreviated, as here, to "duration, remaining." It may well be simply equivalent to "aging," as the Vaibhashika in ADK asserts.

The environment without exception, and
Because, by the example of the immeasurables,
They are limitless, the directions are great. [6.187]

- *Because they pervade the worlds of sentient beings and the environment without exception* since the two, the environment and the inhabitants, do not exist apart from the directions, east and so forth, and
- because they are posited as immeasurable from the point of view of the observed object since, when meditating on the four immeasurables, love and so forth, one meditates on all sentient beings who pervade the directions,

just as the directions are immeasurable, *by the example of the immeasurables*, in regard to meditating in this way, *because they* also *are* posited as *limitless*, that is, immeasurable, *the* ten *directions are the great*.

That which is the emptiness
Of those of all ten directions
Is the emptiness of the great.
It was taught in order to overcome conceiving them as great. [6.188]

That which is the emptiness of those, east and so forth, of establishment by way of the entity *of all ten directions is the emptiness of the great*. *It was taught in order to overcome the conception* of the directions *as* inherently existent *great*. A mistaken conception regarding the directions is, for example, the Forder Vaisheshikas' conception that the directions are a permanent substance.

The directions pervade the worlds of sentient beings and the environment. For this reason, the directions are called "the great" and "the pervading." Just as the directions are great because they pervade all, so too are love and so forth immeasurable in that their objects, sentient beings, are immeasurable. In other words, because the observed object is immeasurable it is called "immeasurable love" and so forth. We should cultivate the four immeasurables thinking respectively:

- May all sentient beings have happiness and the cause of happiness.
- May all sentient beings be free from suffering and the cause of suffering.
- May all sentient beings never be parted from the happiness that is without suffering.
- May all sentient beings abide in equanimity, free from attachment and hatred, holding some close and others distant.

We should mix these words with our continuum. In other words, while reciting them, the immeasurables and our mind should become a single entity.

In short, the directions are called "the great" because of pervading all the worlds of sentient beings and the environment. The emptiness of the directions of inherent existence is called "the emptiness of the great." The Buddha taught the emptiness of the great in order to overcome strong adherence to the ten directions as inherently existent. For example, the Vaisheshikas assert the directions to be a permanent substance. Are the directions a substance for our own school? They are a substance but not a substantial existent.

Lama Tsongkhapa's *Illumination* (Tibetan text page 410) says:

6. Emptiness of the ultimate

Since it is the supreme purpose,
The ultimate is nirvana.
That which is its emptiness is
The emptiness of the ultimate. [6.189]

In order to overcome the conception of
An awareness of nirvana as a thing,

The Knower of the Ultimate taught
The emptiness of the ultimate. [6.190]

The term "meaning" of "*ultimate*" (literally, highest meaning – Tib*. don dam*), from among the two:

- taking it to mean "purpose," such as "It has a purpose," and
- taking it to mean "object," what is to be known such as "The five objects,"

here *is nirvana*, the truth body, *since that*, nirvana, *is the supreme purpose* to be attained. *That* which is the truth body's *emptiness* of establishment by way of its own entity *is the emptiness of the ultimate*. Moreover, *in order to overcome the conception* of true existence *of an awareness* conceiving *nirvana*, the truth body, *to be a thing*, that is, to be truly existent, *the Knower of the Ultimate*, the Buddha, *taught the emptiness of the ultimate*.

The truth body to be attained is empty of inherent existence, its emptiness is called "the emptiness of the ultimate." The Buddha taught this emptiness in order to overcome the conception of true existence of nirvana, the truth body.

Lama Tsongkhapa's *Illumination* (Tibetan text page 410) says:

7. Emptiness of the compounded

Because of arising from conditions, the three realms
Are definitely described as compounded.
That which is their emptiness
Is taught to be the emptiness of the compounded. [6.191]

Because of arising, that is, being produced, *from* causes and *conditions*, *the three realms are definitely described as compounded*. *That which is* the three realm's *emptiness* of inherent existence *is taught to be the emptiness of the compounded*.

The basis of "the emptiness of the compounded" is the three realms, which are compounded because they arise from their respective causes and conditions. The emptiness of the three realms of inherent existence is called "the emptiness of the compounded."

Lama Tsongkhapa's *Illumination* (Tibetan text page 411) says:

8. Emptiness of the uncompounded

Whatever lacks these – production,
Abidance, impermanence – is the uncompounded.
That which is their emptiness
Is the emptiness of the uncompounded. [6.192]

Whatever phenomenon lacks these – (i) *production*, (ii) *impermanence*, that is, cessation or disintegration, and (iii) transformation into other through *abidance – is the uncompounded*. *That which is* their *emptiness* of inherent existence *is* taught to be *the emptiness of the uncompounded*.

The uncompounded is what lacks production, cessation, and disintegration. The emptiness of inherent existence of the uncompounded is called "the emptiness of the uncompounded."

Tuesday morning, 27 March 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 193) says:

3B1C-2B3E-3B1C Explanation of the four: the emptiness of that passed beyond extremes and so forth

The four emptinesses discussed here are:

- the emptiness of that passed beyond extremes,
- the emptiness of the beginningless and endless,
- the emptiness of what is not to be discarded, and
- the emptiness of nature.

9. Emptiness of that passed beyond extremes

Chandrakirti's autocommentary says:

> *That which does not have an extreme,*
> *Is expressed as passed beyond extremes.*
> *That just emptied by only that,*
> *Is described as emptiness of the passed beyond extremes.* [6.193]

As extensively taught [in the *Prajñaparamita Sutra*]:

> Therein, if asked: What is the emptiness passed beyond extremes?
> "Extremes" are the extreme of permanence and the extreme of nihilism; that which does not have an extreme is passed beyond extremes. That passed beyond extremes is emptied by the passed beyond extremes.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

(9) The emptiness of that beyond extremes

> *What does not have the extremes*
> *Is called "that beyond extremes."*
> *Its emptiness of this same is described*
> *As the emptiness of that beyond extremes.* [6.193]

Interdependent origination is called "that beyond extremes," because it lacks the extremes of eternalism[182] and nihilism.[183] [The extremes are the eternalism and nihilism through holding to which one falls into the abyss of heresy, and not, for example, holding that the unconditioned is permanent,[184] or that for an arhat the series of births and deaths governed by karma has ended.[185]] That that beyond extremes is empty of entitiness of just that is described as the emptiness of that beyond extremes, similarly.

[It is taught in order to stop the grasping at true existence that thinks, "Is not the middle, avoiding the extremes, true?" For example, the Chittamatrins assert that mind, the middle free of such extremes as eternalism or nihilism according to their system, is truly existent.]

In the context of the emptiness of that passed beyond extremes, "the extremes" are the extreme of permanence, which is inherent existence, and the extreme of annihilation, which is not existing conventionally. All phenomena have passed beyond these extremes; their emptiness is "the emptiness of that passed beyond extremes." To fall into an extreme of permanence means to think and assert that

[182] *rtag.pa*

[183] *chad.pa*

[184] *rtag.pa*

[185] *chad.pa*

phenomena exist truly, whereas to fall into an extreme of annihilation is to think and assert that if phenomena do not exist inherently they do not exist at all. There are three sets of extremes:
1. the extreme of permanence and the extreme of annihilation,
2. the extreme of existence and the extreme of non-existence, and
3. the extreme of superimposition and the extreme of deprecation.

All phenomena have passed beyond these extremes.

The *Perfection of Wisdom Sutra* says: "that which does not have an extreme is passed beyond extremes. That passed beyond extremes is emptied by the passed beyond extremes." What has passed beyond extremes is empty of an inherently existent passed beyond extremes.

10. Emptiness of the beginningless and endless

Chandrakirti's autocommentary says:

> *An initial beginning and final end –*
> *Since without those, samsara is*
> *Expressed as without beginning or end.*
> *Because free of going and coming, this is a* [6.194]
>
> *Dream-like existence; that which is*
> *Isolated of that is called*
> *"Emptiness without beginning and end" –*
> *Certainly described in the treatise.* [6.195]

As was taught [in the *Prajñaparamita Sutra*]:

> If asked: What is that without beginning and end?
> That in which a beginning and end is not observed, does not have a middle and that in which a beginning, end, and middle are not observed, does not have coming and going. Therein, because of not abiding forever and because of just not disintegrating, beginning, end, and middle are emptied by beginning, end, and middle...

"Beginning" applies to the initial, "end" to the final.

Gedun Drup's *Mirror of the Clarification of the Thought,* as translated by Martin Willson, says:

(10) The emptiness of that without beginning or end

> *Lacking a first beginning and*
> *A final end, samsara is*
> *Called "without beginning or end".*
> *As it is free of going and coming,* [6.194]
>
> *This samsara is like a dream;*
> *That it's without that is the emptiness*
> *Of that without beginning or end,*
> *It is truly related in the treatise.* [6.195]

Samsara is called "that without beginning or end," since it does not have a beginning or origin, [such that up to there it had not arisen and from there on it has arisen,] or an end which is a finish, [such that thereafter it does not arise]. That this samsara, which is like a dream because it is devoid of inherently existing going and coming, is without entitiness of that [samsara], is truly described in the [great] shastra[186] [after the *Prajnaparamita Sutra*] as the emptiness of that without beginning or end, similarly.

[186] cf. *Mula-madhyamaka-karika* XI.1:

That which is beginningless and endless is cyclic existence, or samsara. In general, the beginning of cyclic existence cannot be pointed out nor can its end. However, with respect to a specific person although cyclic existence is beginningless it does have an end because when that person realizes the selflessness of persons his cyclic existence comes to an end. In other words, at that time this person is liberated from cyclic existence whereby *his* cyclic existence has an end.

What is cyclic existence? Is this table a cyclic existence? Is this room a cyclic existence? Is my head a cyclic existence? Is my fist a cyclic existence? The usual definition of cyclic existence is: the factor of continuous joining due to the force of actions and afflictions. If one were to say that cyclic existence is the "continuous joining *from life to life* due to the force of actions and afflictions" there would be debate, for example, the case of someone who has become a foe destroyer in this life and therefore no longer will be reborn in cyclic existence by the force of actions and afflictions. Also my fist is a cyclic existence even though it does not join from life to life.

The subject of whether or not cyclic existence has a beginning and end is discussed in the second chapter of the *Ornament for Clear Realizations*. This text says that a general cyclic existence has no beginning and no end, whereas a specific cyclic existence does not have a beginning but does have an end. A specific cyclic existence has an end because when someone realizes the selflessness of persons his cyclic existence ceases. Aryadeva's *Four Hundred Stanzas* says: "By seeing selflessness, a future end is seen."

11. Emptiness of what is not to be discarded

Chandrakirti's autocommentary says:

> *"Rejection" is definitively expressed*
> *For casting away and forsaking.*
> *Non-rejection is what is not given up,*
> *Never rejected at all.* [6.196]
>
> *That which is the emptiness of that itself,*
> *Non-rejection by that itself,*
> *Is therefore expressed as the*
> *"Emptiness of non-rejection."* [6.197]
>
> As extensively taught [in the *Prajñaparamita Sutra*]:
>
> > Therein, if asked: What is the emptiness of non-rejection?
> > Rejection is casting away, forsaking, and giving up. Therein, non-rejection is emptied by non-rejection.
>
> To reject is to give up. Non-rejection means "never giving something up."

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

(11) The emptiness of non-rejection

> *So-called "rejection" is truly explained*
> *As scattering and forsaking.*
> *"Non-rejection" is that which one*

> "When asked, 'Can you see a beginning?'
> The great ascetic answered 'No.'
> Samsara is without beginning or end
> Has no before and has no after.

Does not give up or reject at all. [6.196]

Simply that this non-rejection
Is empty of being just that
Is therefore stated to be called
"The emptiness of non-rejection". [6.197]

The so-called "rejection" is truly explained as scattering and forsaking; non-rejection is that not given up, [the unrejectable], the great vehicle[187] is non-rejection, because none of its essence is to be rejected at any time. [The emptiness which is] simply that non-rejection is empty of entitiness of this very [non-rejection] is stated to be called the emptiness of non-rejection, because it is the emptiness which is non-rejection's being empty of true existence, [since the essential nature of non-rejection is to be empty.]

The *Perfection of Wisdom Sutra* says: "Rejection is casting away, forsaking, and giving up." Chandrakirti does not explain the basis of the emptiness of the unrejectable, that which is not to be discarded, however, it is the mahayana Dharma. In addition, some texts take the basis of this emptiness to be the thirty-seven harmonies with enlightenment which are what are to be adopted and not to be rejected or discarded. In short, whatever is a mahayana Dharma is not to be discarded.

It is said that there were once two well-known Amdo teachers from Tashi Kyil Monastery, one of whom said that a pot is a cyclic existence, whereas the other said that it is not. The one who asserted that a pot is a cyclic existence composed a text on this subject of about 600 pages. The other also composed a text based on his own reasonings that a pot is not a cyclic existence because it not a factor of continuous joining by the force of actions and afflictions and because it is not conjoined with feelings.

12. Emptiness of nature

Chandrakirti's autocommentary says:

Because the entitiness of the compounded
And so forth, is not made by the disciples,
Solitary realizers, Conqueror's children, and tathagatas,
Therefore, the entitiness of [6.198]

The compounded and so forth
Is described as the very nature.
That which is the emptiness of that
By that itself is natural emptiness. [6.199]

As was extensively taught [in the *Prajñaparamita Sutra*]:

> Therein, if asked: What is natural emptiness?
> That which is the unmade and manifestly uncompounded nature of phenomena is not made by the hearers...

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

(12) The emptiness of essence

Because the entitiness of conditioned
Things and so on is not made

[187] According to Conze (p. 145 n.11), the *dharma* that is not rejected is nirvana, "because in regard to it absolutely nothing needs removing."

By disciples, pratyekabuddhas,
Buddha-sons, or tathagatas, [6.198]

Therefore, the entitiness of conditioned
Things and so on is called "the essence."
That it is empty of just that
Is the emptiness of essence. [6.199]

The entitiness or very nature of conditioned things and so on is described as the essence, because this entity or very nature of conditioned things and so on is their natural disposition from the beginning, not made by disciples or hearers, solitary realizers, the conquerors' sons, or tathagatas. That the essence is empty of entitiness of that is the emptiness of essence, similarly.

[Was not this meaning also discussed under emptiness of emptiness? Yes, but it is not a repetition. That was to dispel the thought that maybe the emptiness of external and internal dharmas is truly existent, since it is established by a correct consciousness pondering suchness. But here it is taught to dispel the thought that if it is an essence existing naturally, unmade by anyone, then maybe it is truly existent.]

The nature or entity of compounded phenomena is not made by disciples, solitary realizers, bodhisattvas, or buddhas, but instead has always existed. The nature of compounded phenomena is of two types:
1. ultimate nature and
2. conventional nature.

Both these natures of compounded phenomena arise when the basis itself arises. Thus, their nature can be understood to refer either to their ultimate nature or to their conventional nature, which in either case are empty of inherent existence. Such a nature arises simultaneously with the basis, it is not made by anyone. For a similar reason the Charvakas say that, for example, the roundness of peas, the sharpness of thorns, and so forth arise without causes, that is, they arise naturally, because they are not made by anyone. How would Buddhists explain the roundness of peas? Perhaps they would say that round peas arise from a seed of a plant that produces round peas in the presence of the necessary causes and conditions, water, sunshine, and so forth.

What is the substantial cause of a precious human rebirth?

Student: It is the sperm and egg of the parents.
Geshe Jampa Gyatso: What is the projecting cause of a precious human rebirth?
Student: It is the practice of morality.
Geshe Jampa Gyatso: Is this human rebirth this human body composed of flesh and bones?
Student: A human rebirth is not this body but is this experience.
Geshe Jampa Gyatso: What is it that is taken in taking rebirth? Is the rebirth the person or the body?
Student: The rebirth is the body, whereas the experiencer is the person.
Geshe Jampa Gyatso: You are saying that the taker is the person, while the taken is the aggregates. If you go to the kitchen and take some food, you, Cristiana, are the one who takes the food, whereas the food is what is taken. Therefore, you say that the rebirth is the object taken and the taker is the person.

In short, the nature is not made by hearers and so forth.

Lama Tsongkhapa's *Illumination* (Tibetan text page 411) says:

9. Emptiness of that passed beyond extremes

Whatever does not have an extreme

Is expressed as passed beyond extremes.
The emptiness of that of just that
Is described as the emptiness of that passed beyond extremes. [6.193]

When holding to an extreme, whether permanence or annihilation, one falls into the abyss of error. This is not like holding the uncompounded to be permanent and a foe destroyer's birth and death by the power of actions to be interrupted. Therefore, one should differentiate:

- the permanence and annihilation that make one fall into the abyss of the discordant class when holding either of them and
- mere permanence and annihilation.

Whatever basis *does not have an extreme* of permanence or annihilation, which is the falling into holding an extreme, *is* here *expressed as "passed beyond extremes*." *The emptiness of that* freedom from extremes *of just* an inherently existent freedom from extremes *is described to be the emptiness of that passed beyond extremes*. As the *King of Meditative Stabilizations Sutra* says:

> Having abandoned the two extremes of existence and non-existence and clean and non-clean, also do not consider that abiding in the middle.

This was taught in order to eliminate the conception of true existence that thinks "Perhaps the middle that is the abandonment of the extremes exist truly"; for example, the Chittamatrins assert that their own system's middle which is free from the extremes of permanence, annihilation, and so forth is a truly existent mind.

In the context of the two extremes, permanent is not to be understood as being phenomena that are non-momentary and annihilation as being the severance of a foe destroyer's rebirths taken by the force of actions and afflictions. Rather, if one holds phenomena to exist inherently one falls into the extreme of permanence and if one holds phenomena to not exist at all because of not existing inherently one falls into the extreme of annihilation. Thus, by holding the impermanent to be permanent one does not fall into the extreme of permanence and by holding that the continuity of rebirths of a foe destroyer is severed one does not fall into the extreme of annihilation.

The *King of Meditative Stabilizations Sutra* says: "Having abandoned the two extremes of existence and non-existence and clean and non-clean, also do not consider that abiding in the middle." Having abandoned the two extremes, one may hold the middle to exist inherently, this conception is also to be abandoned. This is in reference to the fact that the Chittamatrins, for example, consider their own middle, which is free from the extremes of permanence and annihilation, to be truly existent. What do they assert to be the extreme of permanence and the extreme of annihilation?

Student: They would say that to deny that things inherently exist is to fall into the extreme of annihilation, and to hold that external objects exist is to fall into the extreme of permanence.

Geshe Jampa Gyatso: Would the Chittamatrins say that glorious Chandrakirti has fallen into both extremes?

Student: They would.

Geshe Jampa Gyatso: Therefore, they would say that only they themselves have not fallen into the extremes? In this way, all the schools hold themselves to not have fallen into the extremes and to have found the middle way.

Lama Tsongkhapa's *Illumination* (Tibetan text page 411-12) says:

10. Emptiness of the beginningless and endless

Due to lacking them – an initial beginning and
A final end – cyclic existence is expressed
As beginningless and endless.
Because of being free from coming and going, [6.194]

This existence which is like a dream
Is what is just devoid of that.
This is definitively described in the treatise
Stating "That is the emptiness of the beginningless and endless." [6.195]

Due to lacking them – an initial beginning which is "That which has not arisen until now but arises hereafter" *and a final end* which is "That which will not arise henceforth" – *cyclic existence is expressed as beginningless and endless. This existence which is like a dream because of being free from* inherently existent *coming and going is what is just devoid* of the inherent existence *of that* existence. *This is definitively described in the* great *treatise*, the *Mother of the Conquerors*, *stating "That is the emptiness of the beginningless and endless*."

Can it be said that "this moment is the beginning of cyclic existence" and "that moment is the end of cyclic existence"? Lama Tsongkhapa says that an initial beginning is "That which has not arisen until now but arises hereafter" and a final end is "That which will not arise henceforth." There is no moment in which there was no cyclic existence and no moment in which there was no world. There are four types of eons: an empty eon, an eon of formation, an eon of abidance, and an eon of destruction. Prior to the formation of the world there was empty space. In that empty eon did cyclic existence exist? This is one way of debating this subject.

The basis of the emptiness of what is beginningless and endless is cyclic existence which is beginningless and endless.

Lama Tsongkhapa's *Illumination* (Tibetan text page 412) says:

11. Emptiness of what is not to be discarded

"The discarded" is definitely expressed
As the cast away and forsaken.
That not to be discarded or given up
Is what is not to be discarded at any time. [6.196]

Whatever is the emptiness of that itself
Of that not to be discarded,
Because that is that, is expressed as
"The emptiness of what is not to be discarded." [6.197]

"The discarded" is definitely expressed as the cast away and forsaken. *That not to be discarded or given up is what is not to be discarded*, or what is not suitable to be discarded, whatever its entity and *at any time* – the great vehicle. *Whatever is the emptiness of that itself*, the not to be discarded – the emptiness of inherent existence *of that not to be discarded – is expressed as "The emptiness of what is not to be discarded" because that* emptiness is the nature *of that* not to be discarded.

Any Dharma included in the path is not to be discarded. Are some paths to be discarded or rejected? In relation to the mahayana path is the hinayana path not to be discarded? In general it is not to be discarded but it is to be discarded in relation to the mahayana path. In other words, an awareness striving for solitary peace is to be discarded with respect to a mahayana awareness, but in general it is not to be discarded. Some might debate that it is to be discarded because it is to be discarded with respect to a mahayana awareness, however, the response is that there is no pervasion.

This subject can also be discussed with respect to the basis, path, and result. There are phenomena included in the basis that are to be discarded, whereas phenomena included in the path and phenomena included in the result are not to be discarded. This is because all paths are to be adopted.

Tuesday afternoon, 27 March 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 412) says:

12. Emptiness of nature

Because the entity of compounded phenomena
And so forth, is not made by
Disciples, solitary realizers,
The conquerors' children, and the tathagatas, [6.198]

The entity of compounded phenomena and so forth
Is described as the nature.
Whatever is the emptiness of that itself
Is the emptiness of nature. [6.199]

The entity – the reality – *of compounded phenomena and so forth is described as their nature* for the reason that *the entity*, the reality, *of compounded phenomena and so forth is not made by disciples*, or hearers, *solitary realizers, the conquerors' children*, or bodhisattvas, *and the tathagatas* and it is clear that this is their natural state primordially. *Whatever is the emptiness of that* nature *itself* of establishment by way of its own entity *is the emptiness of nature*.
QUESTION: Was this meaning not expressed also in the context of the emptiness of emptiness?
RESPONSE: That is indeed true. Nevertheless in the first context, [the emptiness of emptiness] was taught in order to dispel the thought "Since the emptiness of internal and external phenomena is established by a consciousness of [an ultimate] type comprehending suchness, perhaps it is truly existent," whereas here there is no repetition since [the emptiness of nature] is taught in order to dispel the thought "If it is a nature that is naturally established without being made by anyone perhaps it is truly existent." When it is understood that, even though both of these reasons for doubt exist regarding reality, there is no contradiction that true existence can be negated, the erroneous conception holding that ultimate truth is not realized by any awareness is eliminated.

Someone thinks that the emptiness of emptiness and the emptiness of nature are the same. With regard to the emptiness of nature, the emptiness of compounded phenomena is taken as the basis, its emptiness is the emptiness of nature. On the other hand, in the case of the emptiness of emptiness, emptiness itself is the basis which is empty of inherent existence. The Buddha taught the emptiness of emptiness in order to overcome the conception of true existence thinking that because the emptiness of internal and external phenomena appears to a consciousness of an ultimate type this emptiness exists truly. The Buddha taught the emptiness of nature in order to overcome the thought "If it is a nature that is naturally established without being made by anyone perhaps it is truly existent."

Some say that ultimate truth is not an object of any awareness, these emptinesses were taught in order to overcome this mistaken awareness.

Lama Tsongkhapa's *Illumination* (Tibetan text page 413) says:

3B1C-2B3E-3B1D Explanation of the four: the emptiness of all phenomena and so forth

1 Explaining the emptiness of all phenomena
2 Explaining the emptiness of its respective definition
3 Explaining the emptiness of the unobservable and the entity of non-things

3B1C-2B3E-3B1D-1 Explaining the emptiness of all phenomena

13. Emptiness of all phenomena

Chandrakirti's autocommentary says:

The eighteen elements, six contacts,
Six feelings arisen from them,
That having form and not having form; likewise
Compounded and uncompounded phenomena: [6.200]

Of all those phenomena,
Whatever emptiness is devoid of them – [6.201ab]

– this is the emptiness of all phenomena.

As taught [in the *Prajñaparamita Sutra*]:

Therein, if asked: What is the emptiness of all phenomena?
"All phenomena" are the compounded, the non-compounded... and so forth.
Therein, the eighteen elements are:

- the six inner entrances,
- the six outer entrances, and
- the six collections of consciousness.

The six contacts are: from "contact united with the eye," till "contact united with the mind." Also, the six feelings have contact as a cause. Therein, all phenomena are emptied by all phenomena.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

(13) The emptiness of all dharmas

The eighteen elements, the six contacts,
And the six feelings arising from them,
And the formed and the formless, likewise,
Conditioned and unconditioned dharmas – [6.200]

These are all dharmas. Their emptiness,
Which is that they're devoid of these,
[Is the emptiness of all dharmas.][188] [6.201ab]

As for the eighteen elements, [viz. six sense faculty elements, six sense consciousness elements, and six object elements,] the six contacts [from visual contact to mental contact], the six feelings which arise from these, that which has form and that which does not have form, and likewise conditioned and unconditioned dharmas: the devoidness of entitiness of all these dharmas is the emptiness of all dharmas, similarly.

In the context of the emptiness of all phenomena, the basis of this emptiness, "all phenomena," are the eighteen constituents, the six contacts, and the six feelings. All phenomena are included in these three. The eighteen constituents are: the six external spheres, the six internal spheres, and the six consciousness constituents. The six external constituents are the form, sound, odor, taste, tangible object, and phenomena constituents. The six internal constituents are the eye, ear, nose, tongue, body, and mental constituents. The six consciousness constituents are the eye consciousness constituent, ear consciousness constituent, nose consciousness constituent, tongue consciousness constituent, body consciousness constituent, and mental consciousness constituent.

Contact occurs when the three, (i) sense power, (ii) object, and (iii) consciousness – for example, the eye sense power, a form, and the eye consciousness – come together. In this way there

[188] Chandrakirti completes the sentence thus in his commentary.

are six contacts related respectively to the eye, ear, nose, tongue, body, and mentality. When the eye sense power, a form, and eye consciousness come together, contact occurs. In dependence on this contact, a feeling, either pleasant, unpleasant, and neutral, arises in the retinue of the eye consciousness. This feeling then induces a feeling in the retinue of the mental consciousness. Just as the feeling in the retinue of the eye consciousness can be either pleasant, unpleasant, or neutral, so too are there these three types of feelings in the retinue of the ear, nose, tongue, body, and mental consciousnesses, for a total of eighteen feelings.

"All phenomena," in the context of being the basis of this emptiness, are also those that have form and those that do not have form. Chandrakirti says: "That having form and not having form." These two groups include all phenomena, as do the two groups, compounded phenomena and uncompounded phenomena.

What is included in phenomena having form? They include forms, sounds, odors, tastes, tangible objects, and non-revelatory forms. Phenomena not having form include all types of consciousnesses, non-associated compositional factors, and uncompounded phenomena. What category includes horses, cows, and so forth as well as ourselves? They are all non-associated compositional factors because the definition of a non-associated compositional factor is: a compositional factor that is neither form nor consciousness.

Compounded phenomena are phenomena produced from their respective causes and conditions. Uncompounded phenomena are phenomena not produced from causes and conditions.

Chandrakirti says: "Therein, all phenomena are emptied by all phenomena." This means that all phenomena are empty of inherently existent phenomena.

Lama Tsongkhapa's *Illumination* (Tibetan text page 413) says:

13. Emptiness of all phenomena

The eighteen constituents, the six contacts,
The six feelings that arise from them,
That possessing form and that not possessing form, similarly,
Phenomena that are compounded and uncompounded: [6.200]

It is whatever is the emptiness that is the voidness of them
Of all these phenomena. [6.201ab]

All phenomena are:

- *the eighteen constituents* – (1-6) the six constituents that are the supporting sense powers, the eye and so forth, (7-12) the six constituents that are the supported consciousnesses, the eye consciousness and so forth, and (13-18) the six constituents that are the observed objects, forms and so forth,
- *the six contacts*, from the coming together, or the contact, of the eye through the coming together, or the contact, of the mental,
- *the six feelings that arise from those* six contacts,
- *that possessing form and that not possessing form*, and *similarly*,
- *phenomena that are compounded and uncompounded*.

Whatever is the emptiness of all these phenomena that is the voidness of their establishment by way of their own entity is the emptiness of all phenomena.

Lama Tsongkhapa's *Illumination* (Tibetan text page 413) says:

3B1C-2B3E-3B1D-2 Explaining the emptiness of its respective definition

A Brief presentation

B Extensive explanation
C Summarized meaning

3B1C-2B3E-3B1D-2A Brief presentation

14. Emptiness of its respective definition

Chandrakirti's autocommentary says:

> *That which is the non-thing of "suitable as form etc.,"*
> *Is the emptiness of specific definitions.* [6.201cd]

Gedun Drup's *Mirror of the Clarification of the Thought,* as translated by Martin Willson*,* says:

3B1A-6C5B-2A1A Brief exposition

> *That "formly" and so on are not real*
> *Is the emptiness of own marks.* [6.201cd]

That "formly" and so on do not exist as true things is the emptiness of own marks, similarly.

"Suitable as form" and so forth refers to the first of the 108 phenomena ranging from form through the exalted knower of all aspects. The definitions of all 108 phenomena are empty of inherent existence.

Lama Tsongkhapa's *Illumination* (Tibetan text page 413) says:

14. Emptiness of its respective definition

> *Whatever is the lack of thingness of that suitable to be form and so forth*
> *Is the emptiness of its respective definition.* [6.201cd]

Whatever is the lack of thingness – that is, the lack of establishment by way of its own entity – *of* the definition of the form aggregate, *that suitable to be form*, and that included in "*and so forth*" – the specific definition of completely pure phenomena through the exalted knower of all aspects – *is the emptiness of its respective definition*.

Lama Tsongkhapa's *Illumination* (Tibetan text page 413) says:

3B1C-2B3E-3B1D-2B Extensive explanation

1 The respective definitions of phenomena that are bases
2 The respective definitions of phenomena that are paths
3 The respective definitions of phenomena that are results

3B1C-2B3E-3B1D-2B1 The respective definitions of phenomena that are bases

Chandrakirti's autocommentary says:

> Also, if asked: What are the specific definitions of form and so forth?
>
> In order to indicate extensively, it is explained:

Form has the definition: suitable as form.
Feeling has the nature of experience.
Discrimination apprehends signs.
Compositional factors strongly compose. [6.202]

Individually cognizing objects
Is the specific definition of consciousness.
The specific definition of the aggregates is suffering.
The nature of the elements is asserted as poisonous snakes. [6.203]

To say, "the elements have the defining characteristics of poisonous snakes," means by way of qualitative similarity in grasping.[189]

The Buddha taught the entrances
As just being the doors of production, [6.204ab]

because of just being the doors of arisal and production of suffering.

The definition of that which is
Dependent arising is proper assemblage. [6.204cd]

Dependent arising has the definition, proper assemblage, because of finely classifying dependent arising by the proper assemblage [of causes and conditions].

Gedun Drup's *Mirror of the Clarification of the Thought,* as translated by Martin Willson, says:

3B1A-6C5B-2A1B-1 Own marks of dharmas of the base

Form has the mark of "formly." Feelings
Have the nature of experience,
Recognition is apprehending signs,
Volition is that which brings about. [6.202]

Understanding their separate objects
Is the own mark of consciousnesses. [6.203ab]

The specific own mark of form, "formly"[190] does not exist inherently, for it is free of inherently existent oneness or plurality. The following also should be understood similarly.

Feelings have the nature of experience [of happiness, suffering, or equanimity], the mark of recognition is apprehending signs [i.e. distinguishing external signs such as blue or yellow], the mark of volition is "mind which brings about [conditioned things]." The own mark of consciousnesses is understanding separately their [respective] objects, [visible forms, sounds, etc.].

The aggregates' own mark is suffering. The elements'
Nature is held to be poisonous snakes. [6.203cd]

Buddha said that the sensory spheres
Are of the nature of doors of arising.
Interdependent arising has
The mark of coming together and meeting. [6.204]

[189] LTK, p. 433 – The nature, i.e., the definition, of the elements is poisonous snakes. As others are held by them and brought to harm, sentient beings grasp to *samsara* [and hence, are harmed].

[190] *rupana*, here interpreted by the Tibetan translators (as at *Mahavyutpatti* 7546 and *Prasannapada* 456.9) as "suitable to be form" (from the root rup); but in the source Sutra (Lamotte p. 2035), as at *Prasannapada* 544.3, it is interpreted as "breakable," "destructible" (from the root *rup*). See ADK I, pp. 24-25.

The own mark of the aggregates is suffering. The nature of the elements is asserted to be holding sentient beings in samsara as poisonous snakes [grasping others and harming them]. The Buddha said that the own mark of the sensory spheres is to be the doors of arising [of suffering. These three mean samsaric aggregates, elements, and sensory spheres].

The own mark of interdependent arising is "that which is the coming together and meeting of cause and conditions."

Here Chandrakirti sets out the respective definitions of the five aggregates, for example, the definition of form is "that suitable to be form." That definition is also the definition given in *Collected Topics*. "Respective definition" refers to the fact that each phenomenon has its own respective definition. The definition of definition is: that which enables one to ascertain a definiendum upon a basis of illustration. *Collected Topics* gives the definition of definition as: that which fulfills the three qualities of a substantial existent. The definition of a definiendum is: that which fulfills the three qualities of an imputed existent. The three qualities of a substantial existent are:
1. in general, it is a definition,
2. it is established in terms of its own basis of illustration, and
3. it is the definition of that which is its own definiendum and not of any other.

The three qualities of an imputed existent are:
1. in general it is a definiendum,
2. it is established in terms of its own basis of illustration, and
3. it is not the definiendum of any definition other than its own.

For example, form is the definiendum, "suitable to be form" is the definition. There is no other definition of form other than this, and the definiendum of the definition "suitable to be form" is only form.

Chandrakirti says: "Feeling has the nature of experience." Feeling is, in general, a cognizer that experiences. This can be debated: "If it is a cognizer that experiences is it pervaded by being a feeling?" What does it experience? There are three objects of experience: happy feeling, unhappy feeling, and neutral feeling. Experience is, for example, happiness, suffering, and the neutral. This is the meaning of saying that feeling has the nature of experience.

"Discrimination apprehends signs" means that it apprehends the distinctive characteristics of an object, for example, blue instead of yellow. It also apprehends signs that are happiness, suffering, and so forth. In short, discrimination is what apprehends distinctive characteristics.

Chandrakirti says: "Compositional factors strongly compose" (6.202d). Compositional factors include many things, for example, all forty-nine mental factors as well as non-associated compositional factors. Vasubandhu's *Treasury of Knowledge* says: "The aggregate of compositional factors is any aggregate other than the four."

Chandrakirti says: "Individually cognizing objects is the specific definition of consciousness" (6.203ab). This means that each of the six consciousnesses cognizes its respective object, for example, eye consciousness cognizes forms.

Chandrakirti says: "The specific definition of the aggregates is suffering" (6.203c). This means that the aggregates are the nature of suffering, therefore, as long as we have these aggregates we will suffer.

Chandrakirti then says: "The nature of the elements is asserted as poisonous snakes" (6.203d). When caught by a poisonous snake one experiences suffering, similarly, the elements hold us in cyclic existence.

Chandrakirti says: "The Buddha taught the entrances as just being the doors of production" (6.204ab). The entrances or spheres are the door through which all our sufferings arise.

Chandrakirti says: "The definition of that which is dependent arising is proper assemblage" (6.204cd). That which is a dependent-arising is defined as the coming together of causes and conditions. In this context the meaning of dependent-arising is limited to that of the twelve links, not dependent-arising in general. Similarly, in this context the elements or constituents are to be understood in terms of the beings of cyclic existence. Thus, in this context the aggregates, constituents (elements), and spheres (entrances), and dependent-arising refer to those included in cyclic existence, which are the class of thoroughly afflicted phenomena.

Lama Tsongkhapa's *Illumination* (Tibetan text page 413-4) says:

> *Form has the definition: that suitable to be form.*
> *Feeling has the nature of experience.*
> *Discrimination apprehends signs.*
> *Compositional factors strongly compose.* [6.202]
>
> *What individually cognizes objects*
> *Is the respective definition of consciousness.*
> *The respective definition of the aggregates is suffering.*
> *The nature of the elements is asserted to be a poisonous snake.* [6.203]
>
> *The Buddha taught the spheres*
> *To be the very door of production.*
> *Whatever is a dependent and related arising*
> *Is defined as a coming together and meeting.* [6.204]

Form has the definition: that suitable to be form. Moreover, sutra says:

> Monks, because existing as form and suitable to be form it is called "the appropriated form aggregate."

Those respective definitions mentioned are the main ones that illustrate the specific nature without ascertaining what is the meaning isolate (*don ldog*).

One commentary says that the respective definition does not necessarily refer to a meaning isolate. There are four types of isolates:

1. self isolate,
2. general isolate,
3. meaning isolate, and
4. illustration isolate.

The self isolate and the general isolate are mutually inclusive. The meaning isolate is the definition. The illustration isolate is the basis of illustration. For example, the general isolate of form is form itself; the meaning isolate of form is that suitable to be form; and an illustration isolate of form is the color white.

Lama Tsongkhapa's *Illumination* (Tibetan text page 414) says:

> *Feeling has the nature of experience* of happiness, suffering, and equanimity. *Discrimination apprehends* the particularities of outer *signs*, blue, yellow, and so forth and of inner signs, happiness, suffering, and so forth. A sign is a distinct feature of an object. *Compositional factors strongly compose* the compounded; they are that which is other than the other four aggregates. *What individually cognizes* individual *objects*, form, sounds, and so forth, *is the respective definition of consciousness*. *The respective definition of the aggregates is suffering*. *The nature*, that is, the respective definition, *of the constituents is* that they hold sentient beings in cyclic existence, like *a poisonous snake* that, having caught hold of others, inflicts harm on them. *The Buddha taught the spheres to be the very door of* the arisal and *production* of suffering. These three are to be understood as being the aggregates, constituents, and spheres of cyclic existence.

Lama Tsongkhapa says: "These three are to be understood as being the aggregates, constituents, and spheres of cyclic existence." This is because an aggregate in general is not necessarily suffering, a sphere is not necessarily a door for the arisal of suffering, and a constituent is not necessarily like a poisonous snake holding sentient beings in cyclic existence. For example, the crown protuberance of a buddha is an aggregate, a constituent, and a sphere. Thus, the aggregates, constituents, and spheres existing in the continuum of a buddha are not suffering, a door of suffering, and do not hold sentient beings in cyclic existence. For example, the aggregates, constituents, and spheres existing in Sukhavati are pure in the sense of being free from true sufferings, phenomena that are produced by the force of actions and afflictions.

Lama Tsongkhapa's *Illumination* (Tibetan text page 414) says:

> The respective definition of that which is a dependent and related arising is distinguished by the coming together and meeting of causes and conditions.

This refers only to the dependent-arisings that are compounded phenomena, not to the dependent-arisings that are uncompounded phenomena because, for example, the dependent-arising that is space is not distinguished by the coming together and meeting of causes and conditions. Thus, in this context dependent-arisings must refer only to the twelve links.

This concludes the discussion of the respective definitions of phenomena that are bases.

We are extremely fortunate to have this opportunity to hear so many teachings on emptiness, and to reflect and meditate on them. It is said that emptiness is the best protection. This is because when we meditate on emptiness we are protected from the harms of humans and non-humans. When one practices the yoga without sign in tantra one absorbs into emptiness prior to falling asleep. In this way, even our sleep becomes a practice for the realization of emptiness.

Wednesday morning, 28 March 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 414) says:

3B1C-2B3E-3B1D-2B2 The respective definitions of phenomena that are paths

Chandrakirti's autocommentary says:

To give away is generosity gone beyond;
The definition of morality is without torment; patience's
Definition is non-anger; enthusiastic perseverance's
Is non-reproachfulness. [6.205]

– because perseverance has the definition of totally upholding virtue.

Concentration has the definition of gathering. [6.206a]

– because of acting to gather all virtuous phenomena.

The definition of wisdom is non-attachment. [6.206b]

– because without attachment to anything, in order to progress to nirvana.

These are expressed as being the definitions
Of the six paramitas. [6.206cd]

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B1A-6C5B-2A1B-2 Dharmas of the path

The perfection of generosity's giving;
The mark of morality's not having pain;
The mark of patience is not having anger;
Perseverance's, no non-virtues. [6.205]

Concentration has the mark of collecting;
Wisdom's mark is non-attachment.
These are said to be the marks
Of the six transcendent actions. [6.206]

The own mark of the transcendent action of giving is the will to give [completely one's body, enjoyments, and roots of virtue]. The mark of morality is [attaining coolness], without the pain of the defilements. The mark of patience is being without anger. The mark of perseverance is being without non-virtue, but delighting in virtues. The mark of meditative concentration is the mind single-pointed[ly abiding on a positive object in order] to collect all the virtuous dharmas. The mark of wisdom is non-attachment, [because in order to go to nirvana, one is without, or makes cease, attachment, or grasping at true existence, towards any dharma whatsoever]. It is stated in the sutras that these are the marks of the six transcendent actions.

Generosity is the mind of giving. It is of three types:
1. the generosity of giving material things,
2. the generosity of giving protection, and
3. the generosity of giving the Dharma.

In the tantra texts a fourth is mentioned, the generosity of giving love.

The definition of morality is a lack of torment. It is of three types:
1. the morality of abstaining from non-virtue,
2. the morality of gathering virtue, and
3. the morality of benefiting sentient beings.

Patience is an undisturbed mind, a mind able to bear or endure. There are three types:
1. the patience of non-retaliation,
2. the patience of voluntarily bearing suffering, and
3. the patience of definitely thinking about Dharma.

These were discussed in the third chapter of the *Supplement to the 'Middle Way'*.

Effort is to lack misdeeds. Chandrakirti says: "because perseverance has the definition of totally upholding virtue." Effort is to delight in virtue. In fact, the definition of this mental factor is the delight in virtuous activities. To delight in negative actions such as killing and so forth is not effort, it is a type of laziness, the laziness of adherence to trivial or bad actions. The *Ornament for Clear Realizations* mentions three types of effort which are the antidotes to the three types of laziness:
1. the laziness of adherence to bad activities,
2. the laziness of lethargy or indolence, and
3. the laziness of discouragement or inadequacy.

Their antidotes are:
1. courageous effort or effort lacking cowardice,
2. tireless effort, and

3. effort thoroughly upholding the path.

There are also:

1. the effort of abiding in the conventional,
2. the effort of abiding in the ultimate, and
3. the effort of enacting the welfare of sentient beings.

There are also (see *Meditation on Emptiness* page 251):

1. the effort of armoring,
2. the effort of application,
3. the effort of non-inferiority,
4. the effort of irreversibility, and
5. the effort of non-satisfaction.

Just as one puts on metal armor to protect oneself from harm in a battle, one puts on the armor of effort to protect oneself from the afflictions. The effort of application is to apply oneself continuously without interruption. One text says: "Effort should be maintained like the flow of a river." The effort of non-inferiority is to not put oneself down thinking that one is unable to do something, instead one should think "I can practice the path," "I can achieve buddhahood," and so forth. The effort of irreversibility is to continually progress on the path. Some people meditate for some years in a cave on a mountain but then give up everything, in this way they turn away from the path. The effort of non-satisfaction is to not be satisfied with one's meditation, one's study, and so forth but to strive instead to improve them. On the other hand, to not be satisfied with one's wealth, one's friends, and so forth only brings problems.

The definition of concentration is gathering because it acts to gather all virtuous qualities. Gathering is also in the sense of gathering or focusing one's mind on a virtuous object.

The definition of wisdom is non-attachment, meaning the non-adherence to true existence.

These are the definitions of the six perfections.

Chandrakirti's autocommentary says:

> *The concentrations, immeasurables, and*
> *Likewise the others which are formless,*
> *The perfect knower taught as*
> *Having the definition, imperturbable.* [6.207]
>
> They were taught by the Bhagavan as having the definition of non-anger, because they are attained by abandoning anger.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *The dhyanas and the immeasurables,*
> *And likewise the others which are formless –*
> *These are said by the All-Knowing*
> *To have the mark of non-agitation.* [6.207]

The [four] meditative concentrations, [the first dhyana, etc.,] the [four] immeasurables [immeasurable loving kindness, etc.,] and likewise, besides these, the [four] formless [absorptions, infinite space, etc.,] were said by the All-Knowing to have the mark of non-agitation, [because they are attained by abandoning anger;] this is not inherently existent, similarly.

"Imperturbable" or "non-agitation" means to have a clear mind.

The concentrations, immeasurables, and formless absorptions are each of four types. The four actual absorptions of the concentrations are: the first concentration, second concentration, third concentration, and fourth concentration. The four immeasurables are: immeasurable love, immeasurable compassion, immeasurable joy, and immeasurable equanimity. The four formless absorptions are: Infinite Space, Infinite Consciousness, Nothingness, and the Peak of Cyclic Existence. The Peak of Cyclic Existence is also called "Without Discrimination Not Without Discrimination." "Without discrimination" means that it is without coarse discrimination, whereas "not without discrimination" means it that it has subtle discrimination.

Chandrakirti's autocommentary says:

> *The thirty-seven practices favorable to enlightenment*
> *Are defined as producing definite emergence.* [6.208ab]

Definite emergence means the so-called "definite emergence, liberation." Because of being causes of passing from samsara, they are able to produce liberation. Hence, the meaning of saying, "have the definition of producing definite emergence, producing the attainment of liberation."

The concentrations and so forth were already explained before.

> *The definition of emptiness is*
> *Total isolation due to non-observation.* [6.208cd]

Because not defiled by the stains of conceptions due to not observing things, the emptiness door of complete liberation has the definition of total isolation.

> *The signless is pacification.*
> *The definition of the third is suffering and*
> *Non-confusion. …* [6.209abc]

The signless door of complete liberation has the definition of peace by way of not observing signs. "The third" means "the wishless door of complete liberation." As this wishless door of complete liberation has the definition of suffering and non-confusion because of not producing wishes when correctly reviewing compounded phenomena having suffering nature and when viewing the nature of the compounded with wisdom, the third door of complete liberation has the definition of suffering and non-confusion.

> *… The definition of the*
> *Complete liberations is producing deliverance.* [6.209cd]

The eight complete liberations are like this:

1. The possessor of form viewing forms is the first complete liberation.
2. Viewing external forms with the discrimination that there is no internal form is the second.
3. The attractive liberations having the nature of the four concentrations are the third.

4-7. The four formless [absorptions] as already explained.

8. The cessation of discrimination and feeling is the eighth.

These complete liberations have the definition of producing deliverance because of producing deliverance from the obscurations of the absorptions.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *The thirty-seven aids to enlightenment*
> *Have the own mark of making go forth.*
> *The mark of emptiness is separation*

Through not having objective support. [6.208]

Signlessness is pacification.
The mark of the third is suffering and
Non-delusion. The mark of the
Deliverances is liberating. [6.209]

The own mark of the thirty-seven aids to enlightenment is making one go forth [to liberation].

The mark of the emptiness door to deliverance is separation from grasping at true existence, because of not having, [or being unpolluted by, the stains of conceptualizations which are] the mental objective support for grasping at true existence. The own mark of the signlessness door to deliverance is pacification of signs[191] [through not perceiving them]. The marks of the third door to deliverance, [wishlessness,] are suffering and non-delusion, [because if one correctly views products, which have the nature of suffering, as suffering, and examines the mode of being of products with the wisdom realizing suchness, then one does not wish for samsaric perfection, and also has no wishing in relation to the supramundane level by way of grasping at true existence].[192]

The own mark of the [eight] deliverances[193] is liberating from the various obstructions of meditation.[194]

The thirty-seven harmonies with enlightenment are:
- the four close placements of mindfulness,
- the four thorough abandonings,
- the four legs of magical manifestation,
- the five powers,
- the five forces,
- the seven branches of enlightenment, and
- the eightfold path of superiors.

The thirty-seven harmonies with enlightenment are defined as that "producing definite emergence." The place to which one emerges is liberation, whereas the means to definitely emerge to it are the thirty-seven harmonies with enlightenment. In other words, they are the means to become free from cyclic existence.

Chandrakirti says: "The concentrations and so forth were already explained before." "And so forth" includes the four immeasurables and four formless absorptions. Where were these three explained before in the *Supplement to the 'Middle Way'*?

Chandrakirti says: "The definition of emptiness is total isolation due to non-observation." (6.208cd). It is isolated or devoid of the object of the conception of true existence. That isolation from the non-

[191] According to ADK VIII p.185, there are ten signs: the five sense objects, male and female, and the three marks of the conditioned (see. n. 5).

[192] These *samadhis*, the doors to deliverance, include the sixteen aspects of the four noble truths (ADK VIII.24, Abhidharma-samuchchaya p. 135); however, the allocations differ.

[193] Chandrakirti lists the eight deliverances as follows (additions from Lama Tsongkhapa): (1) viewing [external] forms [without destroying the recognition that internally] one has form; (2) viewing external forms with the recognition that one has no internal form; (3) the deliverance of the fair, having the nature of the fourth dhyana; (4) to (7) the four formless absorptions, Infinite Space, etc.; (8) [the absorption of] cessation of perception and feeling). (Skt. from ADK VIII pp. 204-7).

[194] (ADK VIII p. 207). The first two, according to Master Vasubandhu, liberate from attachment to color in the realms of desire and form; and according to Lama Tsongkhapa, from obscurations hindering emanation. The third, says Lama Tsongkhapa, is the antidote to the corruption of delighting in the manifestation of fair forms and not delighting in the manifestation of foul forms. Lama Tsongkhapa is apparently following ADS (pp. 164, 171).

existent object of the conception of true existence is the door of liberation of emptiness. Chandrakirti says: "Because not defiled by the stains of conceptions due to not observing things, the emptiness door of complete liberation has the definition of total isolation." What is the emptiness that is a door of liberation? It is that which destroys the reference point of the conception of true existence.

Chandrakirti says: "The signless is pacification." This refers to the pacification of the referent object of the conception of true existence.

Chandrakirti says: "The definition of the third is suffering and non-confusion." He says: "'The third' means 'the wishless door of complete liberation.' As this wishless door of complete liberation has the definition of suffering and non-confusion because of not producing wishes when correctly reviewing compounded phenomena having suffering nature and when viewing the nature of the compounded with wisdom, the third door of complete liberation has the definition of suffering and non-confusion." Chandrakirti's definitions of the three doors of liberation are different from the usual. The usual definitions are:

1. the door of liberation of emptiness is the entity of phenomena being empty of true existence,
2. the door of liberation of signlessness is all the phenomena included in causes lacking the sign of true existence, and
3. the door of liberation of wishlessness is not inherently wishing for all phenomena included in results.

How are these three doors of liberation related to the attributes of the four noble truths? The third and fourth attributes of true sufferings, empty and selflessness, are included in the door of liberation of emptiness. The four attributes of true cessations (cessation, pacification, auspicious highness, and definite emergence) and the four attributes of true paths (path, suitability, achievement, and deliverance) are included in the door of liberation of signlessness. The first two attributes of true sufferings (impermanence and suffering) and the four attributes of true origins (cause, origin, strong production, and condition) are included in the door of liberation of wishlessness.

Chandrakirti says: "The definition of the complete liberations is producing deliverance." The eight complete liberations are explained in terms of the three paths of manifestation and five paths for abiding in happiness in this life. The eight complete liberations are:

1. the complete liberation of the embodied looking at form,
2. the complete liberation of the formless looking at a form,
3. the liberation of a beautiful form for dispelling obstacles,
4. the complete liberation of infinite space,
5. the complete liberation of infinite consciousness,
6. the complete liberation of nothingness,
7. the complete liberation of peak of cyclic existence,
8. the complete liberation of the absorption of cessation.

What is the difference between the complete liberation of the absorption of cessation and the absorption of cessation? The sixth chapter of the *Supplement to the 'Middle Way'* sets out two types of absorptions of cessation, the common and uncommon. The complete liberation of the absorption of cessation is not either of these two types. When these two are explained by the *Ornament for Clear Realizations*, that is, according to the Svatantrika Madhyamikas, the absorption of cessation is a non-associated compositional factor, whereas the complete liberation of the absorption of cessation is a path.

What is the definition of a complete liberation? It is: an exalted knower that is not polluted by the afflictions of its own level. Chandrakirti says: "These complete liberations have the definition of producing deliverance because of producing deliverance from the obscurations of the absorptions."

This can be discussed in the context of the Sangha Jewel which has two types of qualities: qualities of knowledge and qualities of freedom. These are further divided into three each, plus the generalities that are the quality of knowledge and the quality of freedom themselves, for a total of eight qualities.
The three qualities of knowledge are:

- knowledge of varieties,
- knowledge of modes, and
- knowledge of inner sciences.

The three qualities of freedom are:

- freedom from the obscurations of attachment,
- freedom from the obstructive obscurations, and
- freedom from the obscuration of the inferior.

"Freedom from the obscurations of attachment" refers to freedom from the afflictive obstructions and knowledge obstructions, "freedom from obstructive obscurations" refers to freedom from the obscuration to absorption, "freedom from the obscuration of the inferior" means freedom from the mind seeking solitary peace.

Lama Tsongkhapa's *Illumination* (Tibetan text page 414) says:

> *The perfection of generosity is to give away.*
> *The definition of ethics is to be without torment.*
> *The definition of patience is a lack of anger.*
> *That of effort is to lack misdeeds.* [6.205]
>
> *Concentration has the characteristic of gathering.*
> *The definition of wisdom is a lack of attachment.*
> *The definitions of the six perfections*
> *Are expressed as being these.* [6.206]

The definition of *the perfection of generosity is* the mind of completely *giving away* one's body, enjoyments, and roots of virtue. *The definition of ethics is* the attainment of the coolness that has passed beyond, that is, which *is without*, the *torment* of the afflictions. *The definition of patience is a lack of anger*, that is, mental endurance. The definition of *effort* is to delight in thoroughly upholding the virtue that *is without misdeeds*. The definition of *concentration has the characteristic of* the mind abiding single pointedly on a virtuous observed object for the purpose of *gathering* all virtuous qualities. *The definition of wisdom is a lack of attachment* because without – that is, because of ceasing – adherence to true existence. In this way, *the definitions of the six perfections are expressed* in sutra *as being those* explained previously.

> *The concentrations, the immeasurables, and*
> *Similarly, the others, the formless –*
> *These, the Perfect Knower*
> *Taught as having the characteristic of imperturbability.* [6.207]

- *The* four *concentrations*, the first concentration and so forth,
- *the* four *immeasurables*, immeasurable love and so forth, *and similarly,*
- *those other* than the previous two, *the* four *formless* absorptions, infinite space and so forth –

these, the Buddha who is *the perfect knower taught as having the characteristic of imperturbability*, non-belligerence, because they are attained by abandoning belligerence.

> *The respective definition of the thirty-seven harmonies with enlightenment is*
> *That which brings about definite emergence.*
> *The definition of emptiness is*
> *Complete isolation due to lacking the referent object.* [6.208]

The respective definition of the thirty-seven harmonies with enlightenment is that which brings about definite emergence to liberation, the place to which one definitely emerges.

The definition of emptiness, a door of liberation, has the characteristic of *complete isolation* because of not being polluted by the stains of conceiving the *referent* object of the conception of true existence.

Signlessness is pacification.
The definition of the third is lacking suffering
And ignorance. The definition of the complete liberations
Is what brings about complete freedom. [6.209]

Signlessness, a door of liberation, has the characteristic of *pacification* from the point of view of not observing signs. *The definition of the third* door of liberation, wishlessness, has the characteristic of *lacking suffering and ignorance* because,

- when correctly and subsequently viewing those having the nature of the compounded – suffering – as suffering, and
- when viewing the mode of being of the compounded with the exalted wisdom realizing suchness,

one does not wish for the perfections of existence and (ii) one also does not wish for the supramundane state in terms of conceiving it to be truly existent.

The definition of the eight *complete liberations is what brings about complete freedom* from the obstructions of absorption. The eight complete liberations [are as follows]. The two complete liberations:

- viewing external form without destroying discrimination regarding the inner, the embodied being, and
- viewing external form having destroyed discrimination regarding the inner,

are the antidotes to the obstructions that hinder emanation. Many commentarial texts, in regard to the second, say "discrimination regarding inner form" but this is a corruption.

The third, the complete liberation of attractiveness which has the characteristic of the four concentrations, is the antidote of the thoroughly afflicted that is a liking for emanations that are attractive forms and a dislike for emanations that are unattractive.

The path for abiding in happiness in this life is of two [types]. Among them, the path for abiding in harmony with liberation is the complete liberations of the four formless absorptions. The path for abiding in peace is the single complete liberation of the absorption of cessation, the cessation of discriminations and feelings.

Lama Tsongkhapa defines the complete liberation of the absorption of cessation as the cessation of discriminations and feelings, otherwise his definitions are similar to those given in the autocommentary.

While all of us have generosity we but do not have the perfection of generosity. Thus, if it is generosity it is not pervaded by being a perfection of generosity. What is a perfection of generosity? According to the Prasangika Madhyamika system there are two types of perfection of generosity: a mundane perfection of generosity and a supramundane perfection of generosity. The *Supplement to the 'Middle Way'* (J. Hopkins, *Compassion in Tibetan Buddhism*) says:

Giving void of gift, giver, and receiver
Is called a supramundane perfection.
When attachment to these three is produced,
It is called a mundane perfection. [1.16]

Thus, the difference between mundane and supramundane perfection of generosity is whether or not there is attachment. "These three" are the gift, giver, and recipient. In the *Ornament for Clear Realizations*, that is, according to the Svatantrika Madhyamikas, there is no division of the perfection of generosity into mundane and supramundane. The Svatantrika Madhyamikas say that if it is a perfection of generosity it is pervaded by being a supramundane perfection of generosity and therefore omniscient mind. Hence, it exists only in the continua of buddha superiors. For them, the ten

perfections exist only in the continua of buddha superiors. They say that a first ground bodhisattva has a surpassing practice of the perfection of generosity but does not have a perfection of generosity. Likewise, a second ground bodhisattva has a surpassing practice of the perfection of morality but does not have a perfection of morality, and so forth. What is the meaning of having a surpassing practice of the perfection of generosity? It means that the bodhisattva does not have any stains of miserliness. The surpassing practice of the perfection of morality means that the bodhisattva does not have the stains of broken morality even in a dream. Chandrakirti (J. Hopkins, *Compassion in Tibetan Buddhism*) says:

> *Because his ethics are sublime and have pure qualities,*
> *He forsakes the stains of faulty ethics even while he dreams.*
> *Because his movements of body, speech, and mind are pure,*
> *He accumulates all ten paths of excellent deeds.* [2.1]

Wednesday afternoon, 28 March 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 416) says:

3B1C-2B3E-3B1D-2B3 The respective definitions of phenomena that are results

Chandrakirti's autocommentary says:

> *The strengths are taught to have*
> *The nature of absolutely deciding.* [6.210ab]

The ten strengths, which will be explained, should be understood to have the definition of absolutely deciding. They are called "the strengths" because of being characterized by non-obstruction due to absolute determination.

> *The fearlessnesses of the Protector*
> *Are the entity of utter stability.* [6.210cd]

There are four fearlessnesses. As is extensively found [in the *Shravaka Sutras*]:

1. It is like this: when I claim "I am perfectly and completely awakened!" – although a shramana, brahmin, deva, mara, Brahma or whoever says, 'O, about that, you are not manifestly and completely awakened regarding these phenomena," a legitimate reason thought to dispute me is not subsequently correctly seen in the world.

And it is said that:

2. When I claim "O, I exhausted the contaminations!" [although] a shramana, etc. [says] to me, "O, about that, you have not exhausted these contamination..." etc.

As before, it is said:

3. If one cultivates those that were taught by me as interrupting practices, there is no situation such that they will not become interrupting practices.

As is extensively found:

4. If endeavor is made in those paths also taught by me – the deliverances (definite removals) of the arya – definite emergence will perfectly exhaust the suffering of one who produces it, there is no situation such that "definitely not emerging will perfectly exhaust suffering."

These have the character of utter stability, because no one is able to make them otherwise.

The individual perfect knowledges,
Confident speech etc., have an unceasing character. [6.211ab]

The individual perfect knowledges will be explained [in a later section]. They have an unceasing (unending) character.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B1A-6C5B-2A1B-3 Dharmas of the result

The nature of the powers is said
To be completely ascertaining.
The fearlessnesses of the Protector
Are of the nature of being most firm. [6.210]

The discriminating knowledges' marks
Are ceaseless confident speech and so on. [6.211ab]

The [ten] powers[195] are said to have the nature [or mark] of being completely ascertaining. [They are called powers because since they completely ascertain objects, they have the mark of being unobstructed in the perception of objects.[196]]

The [four] fearlessnesses of the Protector [are that when he pronounces the four theses, "I am enlightened with respect to, or comprehend, all dharmas, correctly, non-erroneously, and completely or wholly," "I have exhausted the contaminations and their imprints," "I say attachment, etc. are dharmas hindering liberation," and "If you earnestly practice these stages and paths you will be liberated," no disputant can be found who can realistically say it is not so. Since no disputant whatever can change them, they] are of the nature of being most firm.

The [four] discriminating knowledges [of dharmas, meanings, words, and confident speech] have the marks of ceaseless [or inexhaustible] confident speech and so on.[197]

The strengths will be explained separately later. They are called "strength" or "power" (*stobs*) because they cannot be oppressed by their respective adversary. Chandrakirti says: "They are called 'the strengths' because of being characterized by non-obstruction due to absolute determination."

The four fearlessnesses are explained in the *Ornament for Clear Realizations*. There are two related to one's own and two related to others' welfare. These fearlessnesses are proclamations made by the Buddha which no one can prove wrong. The two related to one's own welfare are:

- "I am an enlightened being."
- "I have extinguished all contaminations."

The two related to others' welfare are:

- "This is an interference for you."
- "If you earnestly practice these stages and paths you will be liberated."

[195] These are cognitive powers, explained in detail below (XI B.19-31).

[196] cf. ADK VII.30cd. The commentary to ADK points out that this is a unique characteristic of the Buddha's cognition – anyone else's cognition is obstructed and cannot be called a "power."

[197] These are the knowledges that enable a buddha to teach perfectly. The description as "ceaseless" or "uninterrupted" is applied to them in the *Dasha-bhumi-sutra* (9th *bhumi*), which says they arise in the bodhisattva "always, uninterruptedly and not mixed up." The *Sutra* then lists ten sets of functions of the four, of which the first set is quoted by Chandrakirti in his commentary to Chapter 9, drawing the comment from Je Tsongkhapa that other texts describe them quite differently. (Certainly ADK, ADS and MSA do not describe any of them as "uninterrupted," though "unobstructed" occurs.) In this first set of functions, the same word "uninterrupted" is again applied to the discriminating knowledge of confident speech.

Those training in virtue, brahmins, devas, maras, and Brahma cannot prove the Buddha's statement wrong. Chandrakirti says: "the fearlessnesses of the Protector are the entity of utter stability."

The four individual correct knowledges are:

1. the individual correct knowledge of phenomena,
2. the individual correct knowledge of meanings,
3. the individual correct knowledge definitive words, and
4. the individual correct knowledge of self-assurance.

"Phenomena" are the 108 phenomena ranging from form through the exalted knower of all aspects.

Chandrakirti's autocommentary says:

> *Bestowing benefit upon migrators*
> *Is called great love.* [6.211cd]
>
> Great love has the character of bestowing benefit.
>
> *Fully protecting those with suffering*
> *Is great compassion. …* [6.212ab]
>
> Great compassion has the character of fully protecting sentient beings that are suffering.
>
> *… Joy is*
> *Characterized by extreme joy. …* [6.212bc]
>
> Great joy has the character of the extremely joyful.
>
> *… Equanimity*
> *Is said to have an unmixed character.* [6.212cd]
>
> Great equanimity has the character of being unmixed because of freedom from subsequent attachment, anger, and so forth.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *Accomplishing the benefit*
> *Of sentient beings is called "great love."* [6.211cd]
>
> *Fully protecting those who have suffering*
> *Is great compassion. Joy has the mark*
> *Of greatly joyful. equanimity*
> *Has the mark of "unmixed," it is said.* [6.212]

Accomplishing the benefit of sentient beings is [the mark of that] called "great loving kindness"; fully protecting those who have suffering is [the mark of] great compassion; [great] joy should be understood as having the mark of "greatly [or supremely] joyful," and [great] equanimity as having the mark of being unmixed with, [or free of,] attachment and hatred.

Chandrakirti says: "Great love has the character of bestowing benefit." And "Great compassion has the character of fully protecting sentient beings that are suffering." There is compassion that protects sentient beings and compassion that wishes other sentient beings to be free from their suffering. Which is stronger? The first is stronger. Love also has two aspects: that wishing others' to have happiness and that engaging in enacting others' happiness. "Great joy has the character of the extremely joyful." Joy is a happiness that is free from suffering.

"Great equanimity has the character of being unmixed because of freedom from subsequent attachment, anger, and so forth." Due to being from subsequent attachment for sentient beings and hatred for them, one's mind is said to not be mixed with them.

Chandrakirti's autocommentary says:

> *What are asserted as the eighteen*
> *Unshared qualities of a buddha,*
> *As the teacher is not deprived of them,*
> *Thus are self-characterized as undeprivable.* [6.213]

There, there are eighteen unshared qualities of a buddha [as explained in the *Prajñaparamita Sutra*]:

> Subhuti, between the time when the Tathagata manifestly and completely awakens to the highest, perfect and complete enlightenment and the time when he will pass beyond sorrow not having appropriation, the Tathagata:
> 1. has no mistakes,
> 2. has no chatter,
> 3. has no forgetfulness,
> 4. has no unequipoised mind.
>
> Likewise, he has no
> 5. recognition of difference,
> 6. indifference of not investigating individually,
> 7. loss of aspiration,
> 8. loss of enthusiastic – perseverance,
> 9. loss of mindfulness,
> 10. loss of concentration,
> 11. loss of wisdom,
> 12. loss of complete liberation.
> 13. Exalted wisdom precedes and exalted wisdom follows through all actions of body.
> 14. Exalted wisdom precedes and exalted wisdom follows through all actions of speech.
> 15. Exalted wisdom precedes and exalted wisdom follows through all actions of mind.
> 16. Unimpeded, unobstructed exalted wisdom vision penetrates into the past.
> 17. It is also to be thus expressed about the future and
> 18. present.

In the *Ornament for Clear Realizations* the eighteen unshared qualities of a buddha are divided into four groups:

- six unshared behaviors,
- six unshared realizations,
- three unshared activities, and
- three unshared exalted wisdoms.

The six unshared behaviors are:
1. not having errors of body,
2. not having chattering speech,
3. not having a lessening of mindfulness,
4. not having a non-equipoised mind,
5. not having discriminations of different minds,
6. not having the indifference of a non-individually analytical mind.

The six unshared realizations are:
1. not having a loss of aspiration,
2. not having a loss of enthusiastic perseverance,
3. not having a loss of mindfulness,
4. not having a loss of meditative stabilization,
5. not having a loss of wisdom,
6. not having a loss of complete liberation.

The three unshared activities are:
1. Exalted wisdom precedes and exalted wisdom follows all actions of body.
2. Exalted wisdom precedes and exalted wisdom follows all actions of speech.
3. Exalted wisdom precedes and exalted wisdom follows all actions of mind.

The three unshared exalted wisdoms are:
1. Unimpeded, unobstructed exalted wisdom vision penetrating into the past.
2. Unimpeded, unobstructed exalted wisdom vision penetrating into the future.
3. Unimpeded, unobstructed exalted wisdom vision penetrating into the present.

Chandrakirti's autocommentary says:

> Those which are the eighteen unshared qualities of a buddha like that have the character of being undeprivable because, as mistakes and so forth are not possessed, they are just without occasion and hence, are just unable to assail.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *What are held to be the eighteen*
> *Special* dharmas *of a buddha,*
> *Because the Master's not robbed of them,*
> *Have the own mark of "unrobbable."* [6.213]

What are held to be the eighteen special dharmas of a buddha have the own mark of unrobbable"[198], because the Master, the Buddha, cannot be robbed of them by their adversaries [since he does not have their adversaries.[199] They are special in that they exist only in a buddha and not in anyone else.

[198] Also from *Dasha-bhumika-sutra*, *9th bhumi* (Tog Palace ed., p. 339.2).

[199] Chandrakirti here devotes fourteen pages to an eloquent description of the eighteen special dharmas from the *Dharanshishvara-raja-pariprccha-sutra*. He lists them as follows. The Tathagata does not trip up, makes no noises or exclamations, is never forgetful, never has an unconcentrated mind, recognizes no difference [between *samsara* and *nirvana*], and is never thoughtlessly indifferent. He has no failing of his desire [to help sentient beings], enthusiastic perseverance, mindfulness, concentrate, wisdom or state of deliverance. All deeds of his body are preceded by wisdom-knowledge and conform to wisdom-

Chandrakirti's autocommentary says:

An explanation of these can be known from the *Questions of King Dharanishvara* [*Sutra*]:[200]

[1. Has no mistakes]

Son of good lineage, furthermore, how [can the Tathagata be criticized] due to his physical mistakes [when] the Tathagata has no mistakes which can be legitimately criticized by either the foolish or the wise?

Why? The buddha bhagavans have unmistaken physical actions. In looking around, looking intently, bending, stretching, and holding the Dharma robe, lower garment, begging bowl, and upper robe; the activities are beautiful, he has the four activities. When entering and leaving a village, town, or city, the soles of his feet do not touch the ground; a thousand-spoke wheel arises from the ground and an alluringly fragrant lotus appears upon which the Tathagata's foot alights. There, those sentient beings that have gone to the state of rebirth of whatever beasts that touch the Tathagata's foot will have extreme happiness for seven days. Even having died and transferred [consciousness], they will be reborn amongst the gods. Although robes do not contact the Tathagata's body by even four finger widths, even a violent cyclonic wind cannot disturb them. Body radiance gladdens sentient beings to the Avichi [hell]. Therefore, the Tathagata's body is called unmistaken.

The Tathagata has no verbal mistakes, which can be legitimately criticized by either the foolish or the wise.

Why? Son of good lineage, the Tathagata speaks punctually, speaks relevantly, speaks correctly, speaks truly,[201] acts in accordance with what he says. He has very grammatically precise language, has language which satisfies all sentient beings, has non-repetitive language, has language adorned with meaning and words. By expressing one statement, he satisfies the thoughts of all sentient beings. Therefore, the Tathagata's speech is called unmistaken.

How [can the Tathagata be criticized] due to his mental mistakes [when] the Tathagata has no mental mistakes which can be legitimately criticized by the foolish or the wise?

Why? Like this, he does not relinquish the state of meditative equipoise; although performing all the activities of a buddha, does not send the mind there and the unimpeded exalted wisdom vision penetrates all phenomena. Therefore, the Tathagata's mind is called unmistaken.

Just as his mind is unmistaken, he teaches the Dharma likewise to sentient beings in order to eliminate all mistakes.

This is the fifteenth tathagata activity of the Tathagata.

This is the first unshared quality of a buddha.

[2. Has no chatter]

Son of good lineage, furthermore, out of what chatter of his [can the Tathagata be found vulnerable when] the Tathagata has no chatter that can be found vulnerable by mara, gods of mara's class, or other Forders?

---

knowledge. Likewise those of his speech and mind. The vision of his wisdom-knowledge proceeds without attachment or obstruction into the past, future and present.

[200] Also called the *Sutra Showing the Great Compassion of the Tathagata*.

[201] Lacking in Poisson's edition.

Why? The Tathagata has no chatter or subsequent chatter. Why? The Tathagata is free of subsequent attachment and anger. Even though worshipped by all sentient beings he will not become high-minded. Even though not worshipped by all sentient beings he will not become disheartened. The Tathagata also does not have even a little bit of an action difficult to do or uncompleted, because of which subsequent chatter would arise due to regretting that.

The Tathagata does not dispute whatsoever with the world. Therefore, the Tathagata does not have chatter. The Tathagata abides in non-affliction: without "mine," without fully grasping, without appropriating, free of all knots. Therefore, the Tathagata does not have chatter.

Just as he has no chatter, he teaches the Dharma likewise in order to eliminate all the chatter of all sentient beings.

This is the sixteenth tathagata activity of the Tathagata.

This is the second unshared quality of a buddha.

[3. Has no forgetfulness]

Son of good lineage, furthermore, what forgetfulness [will give rise to confusion when] the Tathagata has no forgetfulness which gives rise to confusion about any phenomena?

Why? The Tathagata is not forgetful about all concentrations, complete liberations, meditative stabilizations, and meditative absorptions. The Tathagata is not forgetful about intently viewing the activities and movements of the minds of all sentient beings and about teaching the Dharma to an appropriate individual. The Tathagata is not forgetful about the individual perfect knowledges – meaning, phenomena, grammatical precision, and confident speech. The Tathagata is not forgetful about the unimpeded exalted wisdom seeing into the past, future, and present.

Just as the Tathagata himself has no forgetfulness, likewise he reaches sentient beings the unforgettable Dharma.

This is the seventeenth tathagata activity of the Tathagata.

This is the third unshared quality of a buddha.

[4. Has no unequipoised mind]

Son of good lineage, furthermore, the Tathagata does not have unequipoised mind. [Whether] the Tathagata is, walking...

– is found at length [in the Sutra, e.g. Whether walking, standing, sitting, lying down, eating, speaking or keeping silent, the Tathagata is]

Constantly concentrating on the unobstructed concentration attaining the most profound equipoised meditative stabilization. Other than the blessing of the Tathagata, no sentient being in the class of sentient beings whatsoever, whether in meditative equipoise or not in meditative equipoise, can view the Tathagata's mind.

Just as the Tathagata is constantly in a state of meditative equipoise, he teaches the Dharma likewise to sentient beings.[202]

This is the eighteenth tathagata activity of the Tathagata.

This is the fourth unshared quality of a buddha.

[5. Recognition of difference]

[202] Or as in the Lhasa edition of the *Sutra*: "Just as the Tathagata is constantly meditatively equipoised, the Tathagata teaches the Dharma likewise in order that sentient beings not mentally wander from meditative stabilization."

Son of good lineage, furthermore, due to what discrimination of difference will he abide in unequal mind, the Tathagata has no discrimination of difference?

Why? Because fields are inexhaustible like space, the Tathagata does not make discrimination of difference about sentient beings. Because of knowing the sphere of Dharma as unmixed and just equal, the Tathagata does not make discrimination of difference about buddhas.[203] Because of the natural character free of attachment, the Tathagata does not make discrimination of difference about phenomena.

The Tathagata is not favorable to those with morality or adverse to those with faulty morality; does not return benefit to those who benefited or return harm to those who harmed; is not reverential to[204] those worthy to subdue, and is not critical to those fixed in falsity. The Tathagata abides in equality towards all phenomena. Therefore...

– and so forth.[205]

This is the fifth unshared quality of a buddha.

[6. Indifference of not investigating individually]

Son of good lineage, furthermore, the Tathagata does not have equanimity that does not investigate individually.

Why? The equanimity of the Tathagata is meditation on the path, not non-meditation on the path.[206] Similarly, the equanimity of the Tathagata is meditation on wisdom, not non-meditation. The equanimity of the Tathagata is endowed with exalted wisdom and is supramundane, not fallen into the mundane.

From the aforesaid[207] until...

The Tathagata teaches the Dharma with a perfection such as great equanimity, in order to fully complete such equanimity in [all] sentient beings.

This is the twentieth tathagata activity of the Tathagata.

This is the sixth unshared quality of a buddha.

[7. Loss of aspiration]

Son of good lineage, furthermore, the aspiration of the Tathagata does not decrease.

Therein, what aspiration? Like this: the aspiration for virtuous qualities.

But what is that? The aspiration of the Tathagata for great love does not decrease. Similarly, his aspiration for great compassion, teaching Dharma, subduing sentient beings, sentient beings to be fully ripened, total isolation and inducing sentient beings to perfectly

[203] Or as in the Lhasa edition, "about Buddha fields."

[204] Lhasa edition: "is not equal to."

[205] From the Lhasa edition: "It is said that the Tathagata does not have discrimination of difference. Just as the Tathagata has no discrimination of difference. He teaches Dharma likewise in order to eliminate the discrimination of difference of all sentient beings. This is the nineteenth tathagata activity of the Tathagata."

[206] Add from the Lhasa edition, "It is meditation on the body, meditation on the mind, meditation on morality."

[207] From the Lhasa edition, "The equanimity of the Tathagata is endowed with exalted wisdom, not endowed with confusion. The equanimity of the Tathagata is supramundane, not fallen into the mundane. The equanimity of the Tathagata is exalted definite emergence, not unexalted indefinite emergence. The equanimity of the Tathagata turns the wheel of Dharma since it is not separated from great compassion for sentient beings. The equanimity of the Tathagata accomplishes in its own way. It is not the follower of an antidote. It is not high minded, not low minded; it does not fluctuate its state. It is free of any observation, utterly passed beyond conception and elimination. It views the time, does not pass beyond the time. It is unmoving, unintentional, non-conceptual, non-discursive, completely unestablished, unshowable, perfect, thus, suchness, not-another-suchness."

uphold enlightenment, does not decrease. His aspiration for not interrupting the lineage of the Three Rare Supremes (i.e., the Three Jewels) does not decrease. The Tathagata does not proceed by aspiration; the aspiration of the Tathagata is preceded by exalted wisdom.

Therefore...

is found at length.[208]

This is the seventh unshared quality of a buddha.

[8. Loss of enthusiastic-perseverance]

Son of good lineage, furthermore, the joyous effort of the Tathagata does not decrease. With regard to that, the joyous effort of the Tathagata is this. It is like this. The joyous effort which is not uncaring of sentient beings being subdued and the joyous effort which does not put off listeners of the Dharma. If the Tathagata finds any vessel of the Dharma, listener of the Dharma, who is not troubled by listening to the Dharma even for an eon, the Tathagata will teach the Dharma and also not get up for an eon though [his physical] continuum lacks food. Where the Tathagata as much as looks at a sentient being, even for the sake of a single sentient being subdued by Buddha wherever, he will pass and travel to as many buddha fields as there are sand grains of the Ganges River – the Tathagata has no physical fatigue, verbal fatigue, or mental fatigue.

The Tathagata – pliant in mind, commenced in joyous effort – speaks eulogy of joyous effort. Whatever correctly applied joyous effort by sentient beings will attain the complete liberation of an arya, that joyous effort is eulogized to sentient beings.

and so forth is set forth.[209]

This is the eighth unshared quality of a buddha.

[9. Loss of mindfulness]

Son of good lineage, furthermore, the mindfulness of the Tathagata is in the most complete way always without decrease.

Why? The Tathagata has no forgetfulness. Son of good lineage, as soon as the Tathagata manifestly and completely awakens to the highest perfect and complete enlightenment, he thoroughly sees into the [mental] continua of the past, future, and present sentient beings, but the Tathagata is utterly without forgetfulness about them. He knows, just as they are, the activities of sentient beings, but the Tathagata also does not forsake exalted wisdom there. The Tathagata is without a decrease of mindfulness due to setting forth in three aggregates, entering the faculties of sentient beings, entering the thoughts of sentient beings, and thoroughly seeing into the activities of sentient beings. The Tathagata does not teach the Dharma to sentient beings having been mindful, considering, or investigating. Although teaching, there is no decrease.

Why? The mindfulness of the Tathagata does not somehow decrease. Just as he himself…

– comes at length.[210]

This is the ninth unshared quality of a buddha.

[10. Loss of concentration]

[208] From the Lhasa edition, “Therefore, it is said that the aspiration of the Tathagata does not decrease. He teaches the Dharma in order to fully complete the highest aspiration in sentient beings. This is the twenty-first tathagata activity of the Tathagata.”

[209] From the Lhasa edition of the *Sutra*, “This is the twenty-second tathagata activity of the Tathagata.”

[210] From the Lhasa edition of the *Sutra*, "Just as he himself is mindful and without forgetfulness, he teaches the Dharma likewise to sentient beings. This is the twenty-third tathagata activity of the Tathagata.

> Son of good lineage, furthermore, the meditative stabilization of the Tathagata does not decrease. That which is the meditative stabilization of the Tathagata just equalizes all phenomena, does not unequalize, and is just as it is.
>
> Why does the meditative stabilization of the Tathagata not decrease? Meditative stabilization is equal to that which is equal to thusness. The Tathagata is equal to that which is equal to meditative stabilization. Therefore, it is called meditative equipoise.

From the aforesaid[211] until...

> Because of also not abiding in the threefold realms, it does not decrease. Therefore, it is said that the meditative stabilization of the Tathagata does not decrease. The Tathagata, in order that all sentient beings also attain meditative stabilization...

and so forth.[212]

This is the tenth unshared quality of a buddha.

[11. Loss of wisdom]

> Son of good lineage, furthermore, the wisdom of the Tathagata does not decrease.
>
> What wisdom? Whatever thoroughly knows all phenomena, knowledge that does not place reliance on others. Knowledge that perfectly teaches the Dharma to other sentient beings and to other persons. Knowing the subtle categories of words through skill in the individual perfect knowledges. Knowledge abiding and teaching for one hundred thousand eons through engaging one word. Knowledge that eliminates doubt however asked. Knowledge that is everywhere unimpeded. Knowing the doctrine setting forth the three vehicles. Knowledge that fully knows the eighty-four thousand activities of the minds of sentient beings. Knowledge demonstrating any of the individual eighty-four thousand bundles of Dharma. This was indicated: the wisdom of the Tathagata is infinite, endless, inexhaustible, and immeasurable.
>
> Just as the Tathagata has no decrease [in wisdom], he teaches the Dharma likewise in order that all sentient beings also not exhaust wisdom.
>
> This is the twenty-fifth tathagata activity of the Tathagata.

This is the eleventh unshared quality of a buddha.

[12. Loss of complete liberation]

> Son of good lineage, furthermore, the complete liberation of the Tathagata does not decrease. There, complete liberation is called complete liberation since the complete liberation of hearers follows the word, the complete liberation of solitary realizers comprehends conditions, and the complete liberation of buddhas is free from all clinging and

[211] From the Lhasa edition: It is equal to the limit of the freedom from attachment that is also equal to the limit of attachment. It is equal to the limit of the freedom from hatred that is also equal to the limit of hatred. It is equal to the limit of the freedom from confusion also, which is also equal to the limit of confusion. It is equal to the limit of the uncompounded, which is also equal to the limit of the compounded. It is equal to the limit of *nirvana* which is also equal to the limit of *samsara*, since it is equipoised on those equalities. Therefore, it is called meditative equipoise. Therefore, it is said that the meditative equipoise of the Tathagata does not decrease. Why? The equality does not decrease regarding that; it is totally non-decreasing. The meditative stabilization of the Tathagata also does not possess the eye, nor indeed does it possess the ear, nose, tongue, body and mind; yet the Tathagata is also not deficient in faculties. The meditative stabilization of the Tathagata does not abide in the earth element (*dhatu*). It does not abide in the water element, not in the fire element nor in the wind element. It does not abide in the desire realm (*dhatu*), does not abide in the form realm, does not abide in the formless realm, does not abide in this world, does not abide beyond the world. Because of not abiding, it does not decrease.

[212] From the Lhasa edition, "The Tathagata teaches the Dharma in order that all sentient beings attain meditative stabilization. This is the twenty-fourth tathagata activity of the Tathagata."

grasping. It is neither bound to the beginning, transferred to the future, nor abiding in the present.

It is complete liberation from grasping the eye and visible form as dual. It is complete liberation from grasping as dual: the ear and so forth,[213] mind and phenomena. It is complete liberation from the state of strongly holding on to grasping.

It knows similarly the mind to be naturally clear light, therefore, it is called manifestly and completely awakened to the highest perfect and complete enlightenment due to wisdom endowed with a singe mental instant.

From the aforesaid until: "teaches the Dharma..." is set forth.[214]

This is the twelfth unshared quality of a buddha.

[13. Exalted wisdom precedes and exalted wisdom follows through all actions of body]

Son of good lineage, furthermore, all physical actions [of the Tathagata] are preceded by exalted wisdom and followed through with exalted wisdom. Sentient beings are subdued by the physical activity of the Tathagata endowed with that, by looking. Sentient beings are subdued by speaking, by silence, by eating, by activities, by the [major] signs...

– is set forth at length[215] and

That activity of the buddha bhagavans that will not subdue sentient beings does not exist at all.

– is set forth at length.[216]

This is the thirteenth unshared quality of a buddha.

[14. Exalted wisdom precedes and exalted wisdom follows through all actions of speech]

Son of good lineage, furthermore, all verbal actions of the Tathagata are preceded by exalted wisdom and followed through with exalted wisdom.

Why? The Tathagata teaches fruitful Dharma, makes factual (or continual) predictions, speaks very definite words.

The speech of the Tathagata also makes everything known; makes to completely know; is not high; is nor low; does not deceive; does not stutter...

and so forth, until

... continues to the extent of space; is endowed with the supreme of all aspects...

which explains it as being endowed with the sixty branches [of melodious speech],[217] and

[213] From the Lhasa edition: "the ear and sound, nose and smell, tongue and taste, body and tangible object and"

[214] From the Lhasa edition of the Sutra, "Just as the Tathagata is the manifestly and completely awakened one, the Tathagata teaches the Dharma to other sentient beings and to other persons. This is the twenty-sixth tathagata activity of the Tathagata."

[215] From the Lhasa edition, "by the (minor) excellent exemplifications, by the crown of the head not appearing to sight, by a mere look, by giving off light, by taking strides and also by entering and leaving cities."

[216] From the Lhasa edition, "Therefore it is said that all physical actions of the Tathagata are preceded by exalted wisdom and followed through with exalted wisdom. This is the twenty-seventh tathagata activity of the Tathagata."

[217] From the Lhasa edition of the *Sutra*, "The speech of the Tathagata also makes everything known, makes to completely know, is not high, not low, does not deceive, does not stutter, does not dissimulate, is not cruel, dot rough, not incoherent, smooth, gentle, effective, not boisterous, not nonsensical, not hasty, not quick, not rapid, differentiating, very explanatory, utterly generates joy, is very pleasing, very melodious, very clear, uninterrupted, complete, pleasing, relevant, famous, worshipped, beautiful, without dust, free of dust, not hard-hearted, stainless, free of stain, without confusion, grammatically correct, not corrupt, liberated, clear-light, sincere, not inferior, not inflated, does not stammer, generates bliss, soothes the body, generates joyous mind, pacifies

Son of good lineage, the speech of the Tathagata is like that, therefore, etc.

is set forth.[218]

This is the fourteenth unshared quality of a buddha.

[15. Exalted wisdom precedes and exalted wisdom follows through all actions of mind]

Son of good lineage, furthermore, all mental actions of the Tathagata are preceded by exalted wisdom and followed through with exalted wisdom.

Why? The Tathagata is not to be expressed by mind, not by mentality, not by consciousness. [The Tathagata], differentiated by exalted wisdom, is the owner of exalted wisdom. The exalted wisdom of the Tathagata: has followed [the minds of] all sentient beings…

– from the aforesaid[219] until...

... definitely thinks about all phenomena, utterly and fully meditates on the branches of the path,[220] does not depend on others for all meditative stabilizations, is utterly passed beyond referents, is free from birth through conditions, has cleared away the three existences,[221] is completely liberated from all actions of Mara…

– and [from there][222] until...

... is inseparable from the sphere of Dharma. The mental actions of the Tathagata are thus preceded by exalted wisdom.

This is the twenty-ninth tathagata activity of the Tathagata.

This is the fifteenth unshared quality of a buddha.

[16. Unimpeded, unobstructed exalted wisdom vision penetrates into the past]

Son of good lineage, furthermore, the exalted wisdom vision [of the Tathagata] unimpededly and unobstructedly penetrates the past. However many buddha fields of the past

---

attachment, subdues hatred, clears away ignorance, defeats the Maras, clears away defilements, subdues adversaries, completely instructs, has the sound of the (battle) drum, pleases the wise, has the melodious sound of the Kalavingka (bird), the sound of Indra, the sound of Brahma, the sound of an ocean wave, the sound of a cloud, the melodious sound of earth, the sound of the crane, the cry of the peacock, the sound of the cuckoo, the sound of the Jivanjiva (bird with two heads), the sound of the king of geese, the sound of the king of hoofed animals, the sound of the lute, the three stringed lute, the gong, the flute, the conch, and cymbals, is to be known totally, is to be completely known, is charming, worth hearing, profound, not false, makes the ear blissful, generates roots of virtue, does not impair words and letters, completely explains words and letters, has meaning, has phenomena, has time, has all periods, does not vacillate from the time, indicates to know which are and are not the best faculties, is adorned by generosity, purified by morality, perfectly practiced through patience, utterly trained by joyous effort, made effective by concentration, has definitively investigated with wisdom, is very enterprising due to love, immovable due to compassion, joyous, clear light, has definitely investigated with equanimity, thoroughly presents the three vehicles, does not break the continuity of the lineage of the Three Supreme Rare Ones (the three jewels), differentiates the three aggregates, is completely purified by the three doors of complete liberation, fully stained with truth, fully stained by exalted wisdom, not maligned by the wise, praised by *aryas*, continues to the extent of space, is endowed with the supreme of all aspects.

[218] From the Lhasa edition, "Therefore it is said that all verbal actions of the Tathagata are preceded by exalted wisdom and followed through with exalted wisdom. This is the twenty-eighth tathagata activity of the Tathagata."

[219] From the Lhasa edition, "has entered the mentalities of all sentient beings, has known the consciousnesses of all sentient beings…"

[220] Found at a later point in the Lhasa edition.

[221] Lhasa edition also has, "utterly passed beyond all levels of pride."

[222] From the Lhasa edition, "is free of all dissimulation and deceit, has abandoned the grasping to I and the grasping to mine, free of the dark and unclear cataract of ignorance and close-mindedness, utterly and fully meditates on the branches of the path, is completely non-conceptual like space."

> arose and disintegrated; it thoroughly knows them all through the mode of enumeration. It also thoroughly knows all grasses, trees (bushes?), medicinal [plants], and forests that were in those [buddha fields]. However many groups of sentient beings were imputed as sentient beings in those [buddha fields, it also thoroughly knows them all. However many were the various activities of those sentient beings, it also thoroughly knows them all]. However many buddhas arose [in those buddha fields, however many doctrines were taught and explained by each of the buddhas], however many [sentient beings] were subdued in the hearers' vehicle, however many [sentient beings] were subdued in the solitary realizers' vehicle, however many [sentient beings] were subdued in the mahayana; it thoroughly knows them all.

> It also thoroughly knows the continuity of mind. Whatever minds arose after whatever [other] minds, those are also thoroughly known in the mode of enumeration, and furthermore, [realized] with the consciousness of direct perception and the consciousness which subsequently follows. Furthermore, it also observes the elapsed mental continua of the tathagatas.
>
> The Tathagata, due to having exalted wisdom like that, teaches the Dharma to sentient beings continually [according to their wishes].

and so forth.[224]

This is the sixteenth unshared quality of a buddha.

[17. It is also to be thus expressed about the future]

> Son of good lineage, furthermore, the exalted wisdom-vision of the tathagatas unimpededly and unobstructedly penetrates the future.
>
> [How does it penetrate?] Whatever sentient beings, dharmas, or fields [arise or cease or] will arise or will disintegrate in some future time, the tathagatas thoroughly knows them all.

– is set forth at length.[225]

> ... future mental continuum will not yet exist for eons, he teaches the Dharma to sentient beings by looking into the future.
>
> [This is the thirty-first tathagata activity of the tathagatas.]

This is the seventeenth unshared quality of a buddha.

[18. It is also to be thus expressed about the present]

---

[223] From the Lhasa edition of the *Sutra*, "It also thoroughly knows all the classifications of Buddha fields; thoroughly knows all the classifications of the Bhikshu Sangha, thoroughly knows all the classifications of life spans, thoroughly knows all the classifications of the abidance of the Dharma. It also thoroughly knows the inhalation and exhalation of breath and also thoroughly knows the enjoyment of the best food. It also thoroughly knows the past aspects, death and transference (of consciousness) and rebirth as migrators of all sentient beings. It also thoroughly knows their various faculties, various behaviors and various thoughts."

[224] From the Lhasa edition, "This is the thirtieth tathagata activity of the tathagatas."

[225] From the Lhasa edition, "However much will be burned by the eon of fire, however much will he destroyed by water, how many Buddha fields will abide, how much earth element there will be in those Buddha fields, how many smallest atoms there will be, how many grasses, trees (bushes?), medicinal plants and forests there will be, how many bodies of stars there will be, how many buddhas will arise in each of the infinite fields, how many hearers will arise, how many solitary realizers will arise, how many bodhisattvas will arise, how much enjoyment of the best food, inhalation, exhalation, walking, sitting and activities there will be, how many sentient beings each of the infinite tathagatas will liberate through the hearers' vehicle, the solitary realizers' vehicle and the Great Vehicle (mahayana) – the Tathagata thoroughly knows all those. How many rebirth states of sentient beings there will be in each of the infinite fields and how many minds and mental factors will be purified – the Tathagata thoroughly knows all those; yet while the Tathagata's...

> Son of good lineage, furthermore, the exalted wisdom-vision of the tathagatas unimpededly and unobstructedly penetrates the present.
>
> [How does it penetrate?] The Tathagata thoroughly knows through the [threefold] mode of enumeration of all present buddha fields in the ten directions. He thoroughly knows all present buddhas. Likewise, he thoroughly knows all [the present] bodhisattvas, hearers, and solitary realizers...

– from the aforesaid[226] until

> … He thoroughly knows all functioning things[227] and all the present earth element in the ten directions through the mode of enumerating it all smashed into atomic constituents.
>
> Similarly, he thoroughly knows the water element [of the ten directions] through the mode of enumerating [all the drops] carried with the tip of a hair, the fire element [of the ten directions] through the mode of enumerating [all] its production and cessation, all the wind element [of the ten directions] through the mode of its falling upon forms, all the space element [of the ten directions] through the mode of its being extensively filled with the tips of hairs.
>
> Similarly, [he knows the threefold sphere of sentient beings], he thoroughly knows the present sphere of sentient beings who have taken rebirth as migrators of hell and so forth,[228] and similarly knows the sphere of celestial sentient beings.

The aforesaid is to be extensively augmented.[229]

> ... because the Tathagata does not possess thorough knowing which is followed through with duality and [because he] apprehended non-duality, he teaches the Dharma to sentient beings.
>
> This is the thirty-second tathagata activity of the Tathagata.

This is the eighteenth unshared quality of a buddha.

The exalted wisdom of omniscience is
Accepted as having the character of direct perception.
Others, since of limited extent, are
Not accepted to be called direct perception. [6.214]

Gedun Drup's *Mirror of the Clarification of the Thought,* as translated by Martin Willson, says:

The wisdom-knowledge of omniscience

[226] From the Lhasa edition of the *Sutra*, "He thoroughly knows all the present bodies of stars. He thoroughly knows the present grasses, trees (bushes?), medicinal plants and forests."

[227] Not in the Lhasa edition.

[228] Lhasa edition, "He knows their causes and cause of liberation."

[229] From the Lhasa edition of the *Sutra*, "He also thoroughly knows the present threefold sphere of sentient beings. He thoroughly knows the present sphere of sentient beings that are hell sentient beings, thoroughly knows their causes of rebirth and causes of liberation. He thoroughly knows the present sphere of sentient beings that have migrated to an animal rebirth, thoroughly knows their causes of rebirth and causes of liberation. He thoroughly knows the present sphere of sentient beings of the world of Yama, thoroughly knows their causes of rebirth and causes of liberation. He thoroughly knows the present sphere of sentient beings that are humans, thoroughly knows their causes of rebirth and causes of liberation. He thoroughly knows the present sphere of celestial sentient beings, thoroughly knows their causes of rebirth and causes of liberation. He also thoroughly knows the present mental continua of sentient beings, thoroughly knows those with delusion and free of delusion. He also thoroughly knows the faculties of present sentient beings worthy to be subdued, thoroughly knows the faculties of those unworthy to be subdued. Besides thoroughly knowing thus,...

Is held to have the mark of "open".
Others, because of their limitedness,
Are not held to be called "open". [6.214]

While the wisdom-knowledge of omniscience is asserted to have the mark of "openly (or directly) knowing all knowables," other knowledge, since it perceives only limited objects, is not held to be called "openly (or directly) knowing all knowables."

Chandrakirti sets out the eighteen unshared qualities by citing extensively from sutra.

Lama Tsongkhapa's *Illumination* (Tibetan text page 416) says:

The powers are taught to be
The nature of very thorough settling. [6.210ab]

The ten *powers,* which will be explained, should be understood as having *the nature* or the characteristic *of very thorough settling*. They are called "powers" because of having the characteristic of engaging objects without impediment due to having settled objects.

The four fearlessnesses of the Protector
Are the entity of utter stability. [6.210cd]

The four fearlessnesses of the Protector regarding the [following] four declarations to which no opponents of corresponding qualities are seen to say "It is not like that" are:

1. the assertion "I am perfectly, unmistakenly, and completely, that is, without exception, awakened with respect to, that is, comprehend, all phenomena,"
2. the statement "I have extinguished the contaminations together with their latencies,"
3. the statement "I... phenomena that interfere with liberation, attachment and so forth," and
4. the statement "Through preserving in these grounds and paths, suffering will be extinguished,"

They have *the entity* or characteristic *of utter stability* because they cannot be modified by any opponent.

The individual correct knowledges,
Self-assurance and so forth – have the characteristic of not terminating.
That finely accomplishing the benefit of migrating beings
Is what is called "great love." [6.211]

That which thoroughly protects those possessing suffering
Is great compassion. Joy has
The characteristic of extreme joy. Equanimity
Is said to have the characteristic of being unmixed. [6.212]

The individual correct knowledges of phenomena, meanings, definitive words, and self-assurance – the four *self-assurance and so forth – have the characteristic of not terminating*, or not coming to an end. *That finely accomplishing the benefit* and happiness *of migrating beings is* the definition of *that called "great love*." *That which thoroughly protects* sentient beings *possessing suffering is* the definition of *great compassion*. Great *joy has the characteristic of extreme*, or supreme, *joy*. Great *equanimity* should be understood *to have the characteristic of being unmixed* with, or free from, subsequent attachment to some, anger toward others, and so forth.

Those asserted to be the eighteen
Unshared qualities of a buddha,
Because they cannot be taken away from the Teacher,
Have the respective characteristic of not being taken away. [6.213]

Those asserted to be the eighteen unshared qualities of a buddha have the respective characteristic of not being taken away by other. For the reason that the Teacher does not possess the discordant class of the unshared [qualities], mistakes and so forth, they *cannot be taken away* since lacking the opportunity because no one is able to do so.

The eighteen unshared qualities consist of three sets of six. The first set is that [a buddha] does not possess the six:

1. regarding his body, mistakes,
2. regarding his speech, chatter,
3. regarding his mind, forgetfulness,
4. unequipoised [mind],
5. conceptions apprehending cyclic existence and nirvana to be different, and
6. the equanimity that does not individually investigate.

The second [set is that a buddha] does not possess:

7. a loss of aspiration,
8. a loss of effort,
9. a loss of mindfulness,
10. a loss of meditative stabilization,
11. a loss of wisdom, and
12. a loss of the complete liberations.

The third [set] is:

13. exalted wisdom preceding and exalted wisdom following all actions of body,
14. exalted wisdom preceding and exalted wisdom following all actions of speech,
15. exalted wisdom preceding and exalted wisdom following all actions of mind,
16. a seer that is unobstructed and unimpeded exalted wisdom engaging the past,
17. a seer that is unobstructed and unimpeded exalted wisdom engaging the future, and
18. a seer that is unobstructed and unimpeded exalted wisdom engaging the present.

The explanation of the word "unshared" is that these qualities exist in the basis of only buddhas; since they do not exist in other bases, they are unshared bases. The explanation of these [qualities] should be understood from the *Questions of King Dharanishvara Sutra* cited in the autocommentary.

The exalted wisdom of an exalted knower of all aspects
is asserted to have the characteristic of being direct.
Others are not asserted to be "direct"
Due to being limited. [6.214]

The exalted wisdom of an exalted knower of all aspects is asserted to have the characteristic of directly knowing all objects of knowledge. All knowers other than an exalted knower of all aspects are not asserted to "directly know all objects of knowledge" due to engaging only limited objects.

In this way, the definitions of form through the exalted knower of all aspects are the mere respective entities illustrating them. Therefore, [the respective definition (*rang gi mtshan nyid*)] is very different from the establishment by way of its own characteristic (also *rang gi mtshan nyid*) that is the object of negation of the sign.

Thursday morning, 29 March 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 418) says:

3B1C-2B3E-3B1D-2C Summarized meaning

Chandrakirti's autocommentary says:

Whatever defines the compounded and
Whatever is the definition of the uncompounded,
They are indeed emptied by just that.
That is the emptiness of specific definitions. [6.215]

The explanation of the emptiness of specific definitions is finished.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B1A-6C5B-2A1C Summary

That what are marks of conditioned things
Or marks of the unconditioned
Are empty of being just that
Is the emptiness of own marks. [6.215]

That whatever are marks of conditioned [dharmas] or marks of unconditioned [dharmas] are empty of entitiness of just that is the emptiness of own marks, similarly.

All phenomena can be included in the compounded and the uncompounded, both are empty of inherent existence. Their emptiness of inherent existence is the emptiness of their respective definitions.

Lama Tsongkhapa's *Illumination* (Tibetan text page 418) says:

The emptiness of just that of them –
Whatever is a definition of the compounded and
A definition of the uncompounded –
Is the emptiness of its respective definition. [6.215]

The emptiness of just that, inherent existence, *of them – whatever is a definition of compounded* phenomena *and* whatever is *a definition* illustrating *uncompounded* phenomena – *is the emptiness of its respective definition*.

Lama Tsongkhapa's *Illumination* (Tibetan text page 418) says:

3B1C-2B3E-3B1D-3 Explaining the emptiness of the unobservable and the entity of non-things

15. Emptiness of the unobservable

Chandrakirti's autocommentary says:

This present does not abide and
The past and future do not exist.
Where they are not observed,
That is expressed as "the unobservable." [6.216]

That which is just isolated from the
Self entity of the unobservable,
Since not uniformly abiding nor disintegrating,
Is the emptiness called "the unobservable." [6.217]

Because the past and the future have disintegrated and not yet been produced, because the present does not abide, the three times do not exist together. That called 'the unobservable' is where the three times are not observed.

As is taught [in the *Prajñaparamita Sutra*]:

> Because of just not uniformly abiding in it and not disintegrating, the unobservable is emptied by the unobservable. Why? Because that is its nature. It is called "the unobservable emptiness."

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

(15) The emptiness of the unperceived

This present time does not remain,
And the past and future do not exist.
That in which these are not perceived
Is described as "the unperceived." [6.216]

That this unperceived is void
Of self-nature, since it's neither
Unchangeable nor perishing,
Is the emptiness called "the unperceived." [6.217]

It should be understood that time, in which these three times are not mutually perceptible, is described as "the unperceived," because the present does not remain a second moment, and since the past is destroyed and the future is unborn, they do not exist in the present. That this unperceived is devoid of own-entitiness as that is the emptiness called "the unperceived," because it is empty of a truly existent unperceived, since the unperceived ultimately does not remain unchangeably and does not perish.

The basis of "the emptiness of the unobservable" is the three times, whereby the lack of inherent existence of the three times is the emptiness of the unobservable. The past has already disintegrated, the future has not yet been produced, and the present is that which has been produced and has not yet ceased. Because they do not exist simultaneously, they are called "unobservable." The three times are to be posited with respect to a specific basis, for example, a pot. A pot that has been produced and has disintegrated is the past, a pot that has been produced but has not yet ceased is the present, and a pot that, due to a lack of complete causes and conditions, has not yet been produced is the future.

The sutra says: "Because of just not uniformly abiding in it and not disintegrating." This means because they do not ultimately remain constantly and do not ultimately disintegrate.

16. Emptiness of the entity of non-things

Chandrakirti's autocommentary says:

Because arisen from conditions, things
Do not have the entity of the assembled.
The assembled, just emptied by that itself,
Is the emptiness of non-things. [6.218]

The assembled arises through assembly. Because arisen from causes and conditions, the assembled does not exist. Entitiness is just a non-thing. Its emptiness is the emptiness of the entitiness of non-things.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

(16) The emptiness of unreal nature

Because they arise from conditions, things
Have no nature of an assemblage.
Emptiness of really being assemblages
Is the emptiness of the unreal. [6.218]

Effective things[230] do not have the inherently existing nature of being an assemblage, [or having arisen from a coming together of causes and conditions,] because they arise from [causes and] conditions; [therefore they are called "unreal"].[231] That they are empty of the entitiness of a real assemblage is the emptiness of unreal [nature], similarly.[232]

A thing, an assemblage, that arises through the coming together of causes and conditions does not exist by way of its own entity; its lack of inherent existence is the emptiness of the entity of non-things.

Chandrakirti says:

> The sixteen emptinesses, along with elaboration, have been explained.

Lama Tsongkhapa's *Illumination* (Tibetan text page 418) says:

15. Emptiness of the unobservable

The present does not abide, and
The past and the future do not exist.
Those, not being observed anywhere,
Are called "the unobservable." [6.216]

Whatever is the absence of
Its own entity of the unobservable,
Due to not remaining constantly and not disintegrating,
Is the emptiness of that called "the unobservable." [6.217]

That which arises in *the present does not abide* after its establishment; that already arisen, that which arose in *the past*, has disintegrated; and that which will arise, *the future*, will arise because it is not produced in the present. These three *do not exist*. *Those* – the already arisen, that which will arise, and the present – are respectively (i-ii) the two times of the disintegrated and the unproduced and (iii) after its establishment. *Not being observed anywhere*, they *are called "the unobservable."*

Whatever is the absence of establishment by way of *its own entity of the unobservable*, *due to not remaining constantly and not disintegrating, is the emptiness of that called "the unobservable."*

The three times are not observed to be inherently existent; their emptiness is the emptiness of the unobservable.

Lama Tsongkhapa's *Illumination* (Tibetan text page 418) says:

16. Emptiness of the entity of non-things

Because of arising from conditions,
Things do not have the entity of the assembled.
The emptiness of the assembled
Is the emptiness of non-things. [6.218]

[230] *dngos.po*

[231] Chandrakirti: "their nature is unreality."

[232] Very different interpretation of this emptiness in Mpps (Lamotte, pp. 2149-51).

> *Because of arising from* causes and *conditions, things do not have the entity*, the inherent existence, *of the assembled* – that is, what arises from the assembling of causes and conditions. Therefore, they are called 'non-things. *The emptiness of* establishment by way of its own entity of what arises from *assembling is the emptiness of* the entity of *non-things*.

This is similar to what is said in the autocommentary.

Lama Tsongkhapa's *Illumination* (Tibetan text page 418-9) says:

> In this way, those explained as the sixteen are not from the point of view of different reasonings negating true existence because all of them are also proven by the reasoning of not remaining constantly and not disintegrating. They are also not proven to lack true existence in general for one person because, when the lack of true existence is established by a valid cognizer in regard to a basis, an inner phenomenon such as the eye and so forth, when one directs one's awareness to another basis one's doubt will be resolved in dependence on a sign without depending on others setting out a proof. Therefore, they should be understood both
> - from the point of view of a single person and
> - from the point of view of an individual person whose adherence to an individual basis as truly existent is very strong.

The reasonings establishing each of the sixteen emptiness are the same: because of not remaining constantly and not disintegrating.

"They are also not proven to lack true existence in general for one person" means that it is not necessary to prove to a single person that each of the sixteen bases of emptiness do not exist inherently. This is because when a person understands one basis as lacking inherent existence, he also understands that all the remaining bases of emptiness lack inherent existence. Lama Tsongkhapa says: "when the lack of true existence is established by a valid cognizer in regard to a basis, an inner phenomenon such as the eye and so forth, when one directs one's awareness to another basis one's doubt will be resolved in dependence on a sign without depending on others setting out a proof."

Lama Tsongkhapa says that these sixteen are also to be understood "from the point of view of an individual person whose adherence to an individual basis as truly existent is very strong." This is because a particular person may have strong adherence to a particular basis as inherently existent but not have it regarding others. For example, when one has strong attachment to a specific basis, one also has a strong conception of the true existence of that object.

Aryadeva's *Four Hundred Stanzas* says:

> Like the body sense power [abides in] the body,
> Confusion abides in all.

Ignorance and attachment operate concomitantly in regard to an object. Thus, there is a correspondence between the strength of attachment to an object and the strength of the conception of the true existence of that object. The fourth chapter of the *Ornament for Clear Realizations* says:

> With respect to causes and paths, sufferings and
> Cessations, "Respectively
> There are eight, seven,
> Five, and sixteen" is declared. [*4.3*]

Thus, with respect to cessations there are these sixteen emptinesses.

Lama Tsongkhapa's *Illumination* (Tibetan text page 419) says:

3B1C-2B3E-3B2 Extensive explanation of the division into four emptinesses

This outline is in relation to the previous root verse:

Having explained sixteen emptinesses
Together with elaboration, once again condensed,
He posited them as four.
They are also said to be the great vehicle. [6.180]

The sixteen emptinesses have already been explained, now Chandrakirti will explain the four emptinesses.

1. Emptiness of things

Chandrakirti's autocommentary says:

Those that are the four others are to be expressed:

By the term things, in summary,
The five aggregates are expressed.
That which is just emptied of those
Is explained as the emptiness of things. [6.219]

"Functioning things" are the five aggregates. To say "functioning things are emptied by functioning things" is like the above. This is called the emptiness of things.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B1A-6C5B-2B Emptiness divided into four

By the word "things," in summary,
The five aggregates are described.
That they are empty of being that
Is explained as the emptiness of things. [6.219]

The word "things" describes, in summary, [not divided individually,] the five aggregates. That they are empty of entitiness of that is explained to be the emptiness of things, similarly.

"Things" or "functioning things" refers to the five aggregates because all functioning things are included in the five aggregates. Hence, the lack of inherent existence of the five aggregates is "the emptiness of things."

2. Emptiness of non-things

Chandrakirti's autocommentary says:

In summary, non-things
Is expressed for uncompounded phenomena.
That itself just emptied by non-things
Is the emptiness of non-things. [6.220]

"Non-things" are uncompounded phenomena such as space, nirvana and so forth. There, non-things are emptied by non-things; this is called the emptiness of non-things.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *In summary, "non-things" describes*
> *The dharmas that are unconditioned.*
> *Their being empty of that non-thing*
> *Is the emptiness of non-things.* [6.220]

"Non-things" describes, in summary, unconditioned dharmas, [such as space and nirvan□]. Their being empty of that entitiness of non-things is the emptiness of non-things, similarly.

"Non-things" are uncompounded phenomena, such as space, which are not produced by causes and conditions. Their lack of inherent existence is "the emptiness of non-things."

3. Emptiness of natures

Chandrakirti's autocommentary says:

> *The non-entitiness of self-nature is*
> *The emptiness of "self-nature."*
> *Since self-nature like this is not made,*
> *It is described as "self-nature."* [6.221]
>
> The expression, "self-nature," is applied to the self-nature [of phenomena] because it was not produced by the hearers and so forth. Self-nature is emptied of self-nature; this is the "emptiness of self-nature."

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *Own-being's lack of, entitiness*
> *Is the emptiness called "own-being."*
> *Because this own-being is not made thus,*
> *It is said to be called "own-being."* [6.221]

That own-being does not exist by entitiness (or inherently) is the emptiness called "of own-being",[233] similarly own-being, or true nature (dharmata), is described as "own-being" because it is the natural mode of being of things, not made, thus by the hearers and so on.

"The nature" (self-nature or own-being) refers to the nature that exists in all phenomena without depending on whether a tathagata arises or not. The lack of inherent existence of the nature is "the emptiness of nature."

4. Emptiness of the thingness of other

Chandrakirti's autocommentary says:

> *Whether the buddhas arise or*
> *Do not manifestly arise,*
> *The emptiness of all things*
> *Is proclaimed as the other thing.* [6.222]

[233] This is so similar to No. 12, emptiness of essence, that their Tibetan names are identical.

The true end and suchness,
They are the other thing emptiness. [6.223ab]

The other thing is suchness that has arisen supremely. Its supremely arisen state is the state of permanent existence. In one way, the other thing is the thing to be realized by perfect exalted wisdom. That is emptied by that itself.

Furthermore, existence on the farther side is the other thing. Because passed beyond cyclic existence, "the other thing" is the true end; since not changing into [another] aspect, it means suchness.

The emptiness that has the characteristic of emptiness is the emptiness of the other thing.

Gedun Drup's *Mirror of the Clarification of the Thought,* as translated by Martin Willson*,* says:

Whether buddhas appear bodily,
Or whether they do not appear,
The emptiness of all things
Is proclaimed as other-being.[234] [6.222]

The true end and suchness, they
Are emptiness or other-being. [6.223ab]

Whether buddhas appear bodily [in the world] or do not appear, the emptiness [of essence] of all things is proclaimed other-being or entity. [*Para* can mean "supreme," "other," or "beyond." In the first case, *para-bhava* is suchness, which is "supreme being" – i.e. it exists permanently, without abandoning the characteristics of suchness. In the second case, the *para* is "other than worldly" – perfect supramundane wisdom-knowledge, non-conceptual wisdom-knowledge and the *bhava* is the object realized by that wisdom-knowledge. In the third case, *para-bhava* is "existing beyond." Because it transcends samsara, the true end is beyond samsara – "end" is here nirvana, which is the ending of samsara.] The non-inherent existence of (= which is) the true end and suchness is the emptiness of other-being, since it is the emptiness of truly existent other-entity.[235]

The emptiness of any entity other than the nature is "the emptiness of the thingness of other" (other thing emptiness or emptiness of other-being). "Other" is explained in different ways.

These are four additional types of emptiness, thus when added to the sixteen there are a total of twenty emptinesses which are explained in Haribhadra's *Commentary Clarifying the Meaning*. This text sets out seventeen "achievings through collection," one of which is the collection of exalted wisdom. The collection of exalted wisdom refers to the twenty types of exalted wisdoms realizing the twenty

[234] *Nag-tso* translation, if the lines not quoted by Je Tsongkhapa are the same as Patshab's, reads:

"Whether buddhas appear, or whether
They do not appear, that all
Things are empty of own-being
Is proclaimed 'empty of other-being'."

[235] The *Sutra* (Lamotte p. 2036) reads:

"What is emptiness of other-being? Whether tathagatas appear of do not appear, this state of dharmas, the true nature, the dharma-element, the law of dharmas, suchness, non-fallacious suchness, unaltered suchness, the true end, is established. That these dharmas are thus empty of other is called emptiness of other-being.

Conze points out (p.148 n.19) that, as explained in *Mula-madhyamaka-karika* XV, own-being in relation to something else is called other-being; for example, warmth, the "own-being" of fire, is other-being in relation to fluidity, the "own-being" of water. Hence suchness and its synonyms are also emptiness of other-being. The Patsab translation of verse 222, suggesting that emptiness of other-being is a kind of emptiness of emptiness (inconsistent with the next verse, let alone the *Sutra*), is no doubt incorrect.

emptinesses. The collection of exalted wisdom is spread out over the five paths. For example, the first three exalted wisdoms – the exalted wisdom realizing the emptiness of the internal, the exalted wisdom realizing the emptiness of the external, and the exalted wisdom realizing the emptiness of both – are posited in relation to the small, middling, and great levels of the path of accumulation.

Why are they explained in this order, first the emptiness of the internal, then the emptiness of the external, and so forth? It is said that the emptiness of the internal is explained first because we have greater familiarity with the basis of this emptiness.

Aryadeva's *Four Hundred Stanzas* says that when one realizes the emptiness of one of the twenty emptinesses, one also indirectly realizes the remaining without need to depend on a reason.

Chandrakirti's autocommentary says:

> *Those were proclaimed thus*
> *Through the manner of the wisdom gone beyond.* [6.223cd]

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *These explanations were proclaimed*
> *In the* Prajnaparamita Sutras. [6.223cd]

These emptinesses are explained in the Sutras, for they are proclaimed just as explained above in the Sutras about the transcendent action of wisdom.

Lama Tsongkhapa's *Illumination* (Tibetan text page 419) says:

1. Emptiness of things

> *The term "thing" refers in brief*
> *To the five aggregates.*
> *Whatever is their emptiness*
> *Is explained to be the emptiness of things.* [6.219]

The term "thing" of "the emptiness of things" *refers to the five aggregates*. Moreover, it refers to them *in brief*, or in general, without distinguishing them. *Whatever is the emptiness of* inherent existence of *those* five aggregates, *is explained* in brief *to be the emptiness of things*.

2. Emptiness of non-things

> *In brief, non-things*
> *Are said to be uncompounded phenomena.*
> *The emptiness of non-things, they themselves,*
> *Is the emptiness of non-things.* [6.220]

In brief, without distinguishing them, *non-things are said to be the uncompounded*, space and so forth and nirvana. *The emptiness of* inherent existence of those *non-things*, the uncompounded, *is* called "*The emptiness of non-things*."

While Chandrakirti says "space, nirvana, and so forth," Lama Tsongkhapa says "space and so forth and nirvana." How many nirvanas are there? There are three types: nirvana with remainder, nirvana without remainder, and non-abiding nirvana. The Prasangika Madhyamikas say that a nirvana with remainder is a nirvana that has the remainder of the appearance of true existence, whereas a nirvana

without remainder is nirvana without the remainder of the appearance of true existence. On the other hand, the lower schools say that a nirvana with remainder is a nirvana that has the remainder of the suffering aggregates, whereas a nirvana without remainder is a nirvana that does not have the remainder of the suffering aggregates.

Space and nirvana are examples of uncompounded phenomena.

A distinction has to be made between "non-things that are phenomena" and "non-things." Non-things that are phenomena are space, true cessations, and so forth. Non-things are those that are empty of being able to perform a function. Non-things are of two types: those that exist and those that do not exist. Those that exist are space, true cessations, and emptiness. Those that do not exist are the son of a barren woman, inherent existence, a sky-flower, and the horns of a rabbit.

Lama Tsongkhapa's *Illumination* (Tibetan text page 419) says:

3. Emptiness of natures

The lack of entity of the nature,
Is the emptiness of that called "nature."
It is referred to as "nature"
Since such a nature is not made. [6.221]

The nature is the nature that is reality because *such a nature* abides as the mode of being of things *without being made* by hearers and so forth. That nature, or reality, *is called the* emptiness of *nature* – the lack of inherent existence.

4. Emptiness of the thingness of other

Whether buddhas actually
Arise or do not arise,
The emptiness of all things
Is thoroughly proclaimed to be the thingness of other. [6.222]

The perfect end and thusness
Is the emptiness of the thingness of other. [6.223ab]

Whether buddhas arise – that is, arise in the world – *or do not arise, the emptiness* of inherent existence *of all things is thoroughly proclaimed to be the thingness*, or entity, *of other*. Here, Nagtsho's translation is best:

Whether buddhas arise or
Do not arise, the very nature –
The emptiness of all things –
Is proclaimed to be the emptiness of the entity of other. [6.222]

An equivalent term for "entity of other" (*gzhan gyi ngo bo*) since it encompass the three – supreme (*mchog*), other (*gzhan*), and beyond (*pha rol*) – is, in the first case, "the suchness that arises as supreme." The meaning of "arises as supreme" is to exist without passing beyond the definition of suchness. In the second case, "other" is the highest exalted wisdom which is other than the mundane, that is, the supramundane – a non-conceptual exalted wisdom. Thingness or entity is what is realized by that exalted wisdom. In the third case, what exists on the far shore is the entity of other. Moreover, the far shore of cyclic existence, because of having passed beyond cyclic existence, is *the perfect end*; the end being the nirvana that is the extinguishment of cyclic existence. Since it does not transform into another aspect other than the characteristic of suchness, it is *thusness*. The emptiness that has the characteristic of being empty of the inherent existence of that itself *is* called "*the emptiness of the thingness*, or the entity, *of other*."

Although the emptiness of nature and so forth were explained previously, here the explanation is not a repetition in that here it is from the point of view of the middling division. When asserting that which occurs repeatedly in the context of both the latter two explanations – the extensive and

middling – to be (i) reality, that is, the [mode of] being of things, (ii) existing always, and (iii) existing as the object of comprehension of non-conceptual exalted wisdom, the aim is to eliminate the qualm thinking "It is truly existent." Therefore, they should be understood to not be contradictory.

These are thoroughly proclaimed according
To the manner of the Perfection of Wisdom*.* [6.223cd]

The explanation here of the emptinesses which are like that *is thoroughly proclaimed*, that is, explained, *according to the manner of the Perfection of Wisdom* – the way in which they are divided and the way in which they are empty in the *Mother of Conquerors*.

Lama Tsongkhapa says that here Nagtsho's translation of Chandrakirti's autocommentary is better than Patshab's translation. Patshab was the first to translate this text from Sanskrit into Tibetan, allowing Nagtsho to improve it in his own translation.

There is an emptiness of nature included among both the sixteen emptinesses and the four emptinesses, however, there is no redundancy in also including it in the four emptinesses because previously it was set forth in the context of the extensive division of emptiness, whereas here it is set forth in the context of the middling division. The small division of emptiness, the division of emptiness into two types – the selflessness of persons and the selflessness of phenomena – was mentioned previously.

Thursday afternoon, 29 March 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 420) says:

3B1C-2B4 Final summary in terms of expressing the qualities of the ground

Chandrakirti's autocommentary says:

Now, in order to fully complete the chapter of wisdom by way of expressing the perfect uncommon qualities of the bodhisattvas with superior appreciation for the wisdom gone beyond, it is explained:

He who produced the brilliance with rays of intellect like that,
Realizing, like a myrobalan fruit resting in his hand,
These three existences without exception as unborn from the beginning,
Proceeds to cessation by the strength of the nominal truth. [6.224]

There, the term "like that" is for the purpose of closely indicating the complete analysis that was explained. He who produced the brilliance that destroyed the darkness preventing seeing suchness with light rays of intellect arisen from the complete analysis that was explained is said thus about the bodhisattva that has it. He will absorb in cessation by the strength of the conventional truth.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B1A-6D Conclusion, describing the qualities of the stage

Having created clear light with rays of wisdom thus,
He perceives, like an olive resting in his hand, all these
Three realms as without production from the beginning,
And, by the power of conventional truth, goes to cessation. [6.224]

The bodhisattva abiding in the sixth stage, who with light rays of wisdom [arisen from analysis] in the way explained above, makes clear light [which dispels the darkness of obstructions to seeing suchness], by the power of conventional truth (or conventionally) goes to the absorption on cessation; for he directly perceives all these

three realms, like an olive (or literally, probably a fruit of *Emblic Myrobalan*) resting in his hand, as without [inherent] production from the beginning.

On the sixth ground, the bodhisattvas attains a surpassing perfection of wisdom. This bodhisattva possesses qualities that are uncommon to the bodhisattvas on the lower grounds: he has the wisdom realizing the coarse and subtle twelve links and realizing the lack of inherent existence since the beginning of the three existences (the three existences are either above, on, and below the ground or the desire realm, form realm, and formless realm). Chandrakirti says: "Realizing, like a myrobalan fruit resting in his hand, these three existences without exception as unborn from the beginning." Sixth ground bodhisattvas see the reality of the three existences as clearly as one sees an olive (or a myrobalan fruit) in the palm of one's hand.

"[He] proceeds to cessation by the strength of the nominal truth" means that conventionally he proceeds to cessation in the sense of absorbing into it. This "cessation" is not a true cessation, it is the absorption of cessation. There are two types of absorptions of cessation, a common and an uncommon. This was mentioned earlier in the *Supplement* saying:

> *Approaching the qualities of a perfect buddha*
> *And seeing the suchness of arising-dependent-upon-this*[i]
> *Due to which they abide in wisdom, [bodhisattvas]*
> *On the Manifest, abiding in equipoise, attain cessation.* [6.1]

Thus, this cessation is not that in the context of the four noble truths, rather it is the absorption of cessation.

Chandrakirti's autocommentary says:

> "Nor does he discard the thought of fully protecting migrators due to the entity of cessation," is explained:
>
> *Though always possessing thought pertaining to cessation,*
> *He still produces compassion for protectorless migrators.* [6.225ab]
>
> Since his behavior pertains to samsara and his higher thought pertains to nirvana, his compassion for protectorless migrators will very greatly increase.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *Always, although he has the thought belonging to cessation*
> *Still he generates compassion for protectorless sentient beings.* [6.225ab]

Although he is absorbed in cessation, he does not abandon the thought of protecting sentient beings, for always, although he has the thought belonging to cessation, or clear light, still he generates compassion for protectorless sentient beings. [Therefore, his action belongs to samsara and his thought to nirvan□.]

Although this bodhisattva absorbs into cessation, he does not give up the welfare of sentient beings who lack a protector. In other words, he does not lessen his compassion for sentient beings, instead it increases through his absorbing into cessation.

Chandrakirti's autocommentary says:

Above that, he will also defeat by mind those born from
The Sugata's speech along with the middling buddhas, without exception. [6.225cd]

Those who are together with intermediate buddhas are those along with the middling buddhas. Who are they? They are those born from the speech of the Sugata, meaning "the hearers." Further above the sixth bodhisattva ground, on the seventh and so forth, he will also defeat all those with his wisdom.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

Above this, he also mentally outshines all those
Born from the Sugata's speech, besides the intermediate buddhas. [6.225cd]

He, above this sixth stage, in the seventh stage, surpasses [or outshines] all the hearers born from the teaching of the sugatas, and the "intermediate buddhas" or solitary realizers, mentally also; for on the seventh stage he can enter and leave the absorption of cessation in every instant.

When the sixth grounder achieves the seventh ground he defeats or outshines the hearers, solitary realizers, and the bodhisattvas on the sixth ground and below by way of his intelligence. That is, the seventh grounder outshines them due to his capacity to enter into and arise from cessation in the shortest moment of an action, the duration of a fingersnap.

Chandrakirti's autocommentary says:

Spreading vast white wings of the conventional and thusness,
The king of swans, having advanced in front of the swans of beings,
Proceeds to the supreme further shore of the ocean of the conqueror's
Qualities with the powerful strength of the wind of virtue. [6.226]

His conventional qualities will also blaze exceedingly. Due to what? He, together with the swans of beings who produce perfection, will proceed to the further shore of the ocean of the qualities of the conqueror. The two truths are the two vast wings.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

Spreading his broad, white wings of the conventional and the real,
That king of geese leads the geese of ordinary beings,
And by the power of the strength of the wind of virtues, he goes
To the supreme far shore of the ocean, the qualities of the conquerors. [6.226]

He goes to buddhahood by the path of pure method and wisdom, for he is the king of geese who, stretching out his broad, white, right and left wings of the conventional, the vast stage of the path, and the profound stage of the path, realizing suchness, leads the geese who are the people to be tamed, and by the power of the great strength of the wind of [previously accumulated] virtues, goes to the supreme far shore of the ocean, the qualities of the conquerors.

The king of swans, this sixth grounder, advances to the fore of other swans, that is, ordinary beings, by spreading his right and left wings, the conventional truth and ultimate truth, whereby he achieves the buddha ground.

Chandrakirti's autocommentary says:

The explanation of the sixth mind generation is finished, the sixth mind generation from the *Explanation of the 'Supplement to the "Middle Way."'*

Lama Tsongkhapa's *Illumination* (Tibetan text page 420) says:

In order to complete the chapter on the perfection of wisdom in terms of expressing the uncommon qualities of bodhisattvas who strongly believe in the perfection of wisdom it is explained:

Those who illuminate with the rays of intelligence like that,
Realizing, like an olive resting in their hand,
That from the start the three existences without exception are not produced,
Go to cessation by the force of nominal truth. [6.224]

The bodhisattvas *who illuminate* the darkness preventing the seeing of suchness *with the* light *rays of intelligence* arising from thorough analysis *like* that of the aspects of the previous explanation, directly *realizing, like* the fruit of a fresh *olive resting in their hand, that from the start the three existences without exception are not produced* inherently, also *go to cessation* – that is, absorb into it – *by the force of nominal*, or conventional, *truth*, i.e., conventionally.

The statement "Although gone to the entity of cessation, they do not give up the thought of protecting migrating beings" is explained:

Though they indeed always have the thought pertaining to cessation,
Still they also generate compassion for protectorless migrating beings. [6.225ab]

Though sixth ground bodhisattvas *indeed always have the thought pertaining to cessation*, or clear light, *still they also generate*, develop, their *compassion for protectorless migrating beings*. Because of that, their actions pertain to cyclic existence and their thought to nirvana.

Above that, they also overcome all those born from the Sugata's speech
Along with the middling buddhas without exception by their intelligence. [6.225cd]

Sixth-grounders *above* – that is, after – the sixth ground *also overwhelm*, or surpass, *all those born from the Sugata's speech* (the hearers) *along with the middling buddhas* (the solitary realizers) *without exception by* the strength of *their intelligence*.

The king of swans spreading his broad, white wings of the conventional and suchness,
Having advanced to the fore of the swans of ordinary beings,
Proceeds to the supreme shore of the ocean of qualities of a conqueror
By the force of the strength of the wind of virtue. [6.226]

The sixth-grounder, *the king of swans spreading his broad, white wings*, the right and left, *of* the stages of the vast path, *the conventional*, *and* of the stages of the profound path, *suchness*, *having advanced to the fore of the* outstanding *swans of ordinary beings* who are to be subdued, *proceeds to the supreme shore of the* great *ocean of qualities of a conqueror*, a buddha, *by the force of the* great *strength of the wind of virtue* accumulated in many previous lives. Therefore, those wishing to subsequently train in this must progress with the wings of both stages of the path, yet they should progress to the buddha ground by means of a path complete in both method and wisdom without being satisfied by not having one of the two wings or by having one broken wing, a partial path.

This is the explanation of the sixth ultimate mind generation in the *Illumination of the Thought, An Extensive Explanation of [Chandrakirti's] 'Supplement to the Middle Way.'*

We too need the understanding of the conventional truth and ultimate truth, the two aspects of the path, the vast and the profound, in order to proceed to buddhahood. Only by means of these two wings can be fly to buddhahood. Lama Tsongkhapa says: "they should progress to the buddha ground by means of a path complete in both method and wisdom without being satisfied by not having one of the two wings or by having one broken wing, a partial path." If one has only one wing

or a broken wing, one will not be able to proceed to buddhahood. In the second chapter of the *Ornament for Clear Realizations* Maitreya says:

> *Through knowledge, not abiding in existence;*
> *Through compassion, not abiding in peace;* [*1.10]*

Due to the wisdom realizing the selflessness of persons one is liberated from cyclic existence, and due to compassion one does not abide in solitary peace. Therefore, one needs to develop both wisdom, the wisdom realizing selflessness, and method, compassion for sentient beings.

It is said that when one studies or reads the *Middle Way*, one should not do so in a dry way, that is, like reading a newspaper. Instead it should be applied to one's own mind in order to overcome the afflictions, it should become a means to subdue and improve one's own mind. Therefore, we should make sure that our study of this text acts to pacify our mind. On the other hand, sometimes it happens that due to studying the great texts, instead of one's mind becoming pacified, the afflictions actually become stronger. There is a story about a monk who studied all the great texts in their entirety but, unable to use this study as a means to subdue his mind, was reborn as a human being with the ears of a donkey. Thus, whatever listening or studying we do, we should make sure that we use it to subdue our own mind.

In conclusion, we should understand that all phenomena do not exist inherently but are merely imputed by conception. Because of this, the presentation of the relationship of causes and results and agents and actions is feasible. We should make sure that our understanding of one truth helps improve our understanding of the other truth.

Although there are many things that Chandrakirti could have taken as his object of worship at the beginning of the *Supplement*, he pays homage to compassion. This shows that compassion is the necessary foundation for proceeding to buddhahood, that is, it is the substantial cause for the mahayana conventional mind of enlightenment. In order to understand the importance of generating compassion, one should meditate on the verse from the *Supplement* (J. Hopkins, *Compassion in Tibetan Buddhism*):

> *Homage to that compassion for migrators who are*
> *Powerless like a bucket traveling in a well*
> *Through initially adhering to a self, an 'I',*
> *And then generating attachment for things, 'This is mine.'* [1.3]

We wander in cyclic existence because of first conceiving "I" and then "mine." Due to this condition, we accumulate actions and circle in cyclic existence. In order to destroy these two conceptions, we need to cultivate the realizations of the selflessness of persons and the selflessness of phenomena. In other words, we have to realize selflessness and come under the influence of compassion. We need to transform our mind into the aspect of love and compassion.

Friday morning, 30 March 2001

THE SEVENTH MIND GENERATION

Lama Tsongkhapa's *Illumination* (Tibetan text page 422) says:

3B1C-2C Explaining the four grounds, the Gone Afar and so forth

1 Explaining the seventh ground
2 Explaining the eighth ground
3 Explaining the ninth ground
4 Explaining the tenth ground

3B1C-2C1 Explaining the seventh ground

Chandrakirti's autocommentary says:

Now, to explain from the point of view of the seventh mind generation:

On this, the Gone Afar, instant by
Instant he will enter cessation and
The method gone beyond will also blaze well. [7.1abc]

The absorption on cessation is the absorption on the true end. Hence, it is called "cessation in suchness," because all elaborations are ceased in it. Here on the seventh ground, Gone Afar, the bodhisattva will absorb instant by instant in that cessation attained on the sixth ground.

As is extensively taught [in the *Sutra on the Ten Grounds*]:

> O children of the Conqueror, on the sixth ground of the bodhisattva and below, the bodhisattva absorbs in cessation. The bodhisattva abiding on this seventh ground of the bodhisattva, also absorbs in cessation and arises mental-instant by mental-instant. He does not manifest cessation.

He will also fully purify greatly the skill in means gone beyond.

Method, prayer, strength and exalted wisdom are to be known to operate on special aspects of the wisdom [gone beyond][236] itself. "Wisdom gone beyond" is expressed only in the context of thorough discrimination; not in others.

The Seventh Mind Generation from the *Explanation of the 'Supplement to the "Middle Way."'*

Gedun Drup's *Mirror of the Clarification of the Thought,* as translated by Martin Willson, says:

3B1A-7 Explanation of the seventh stage, Gone Far

In this one, Gone Far, he can, in every
Instant, enter cessation, and
The transcendent action of means attains full bloom. [7.1abc]

This bodhisattva, dwelling in this seventh stage, Gone Far, attains qualities which are superior to those of the sixth stage; for in each instant, he can enter meditation on cessation, and also he attains the full blossoming of the transcendent action of means.

[236] LTK, p. 442.

When the sixth ground bodhisattva attains the seventh ground, he has the capacity to enter into and arise from the absorption of cessation, the perfect end, in the shortest moment of a complete action. On the seventh ground, he outshines the hearer and solitary realizer foe destroyers due to his intelligence, whereas on the first ground he outshone them due to his lineage. The hearer and solitary realizer foe destroyers lack the ability to enter into and arise from the absorption of cessation in the shortest moment of a complete action. However, does the seventh ground bodhisattva actualize cessation, the perfect end? He does not because he does not enter the perfect end in a manner of not arising again. To actualize the perfect end or cessation means to enter into it in a manner of not arising again, that is to not arise from meditative equipoise into subsequent attainment. For a buddha, meditative equipoise and subsequent attainment are not contradictory. For this reason, a buddha, while in meditative equipoise, is still able to perform the activities of subsequent attainment. Therefore, a tathagata enters cessation – the perfect end or reality – in a manner of not arising again.

In short, on the sixth ground the bodhisattva attains the surpassing perfection of wisdom, on the seventh ground he attains the surpassing perfection of method, on the eight ground he attains the surpassing perfection of prayer, on the ninth ground he attains the surpassing perfection of power, and on the tenth ground he attains the surpassing perfection of exalted wisdom. Chandrakirti says: "Method, prayer, strength and exalted wisdom are to be known to operate on special aspects of the wisdom [gone beyond] itself. 'Wisdom gone beyond' is expressed only in the context of thorough discrimination; not in others." This means that the name "wisdom gone beyond" or the "perfection of wisdom" does not apply to the seventh, eighth, ninth, and tenth grounds.

"Method" or "means" in the context of the perfection of method can be subdivided into two groups: the six internal methods and the six external methods.

Lama Tsongkhapa's *Illumination* (Tibetan text page 422) says:

> *Here, on the Gone Afar, he enters*
> *Into cessation instant by instant and also*
> *Attains an excellently blazing perfection of means.* [7.1abc]

Here, *on* the seventh ground, *the Gone Afar*, the bodhisattva *absorbs into* the *cessation* that was attained on the sixth ground *instant by instant*, that is, in each instant. To enter into cessation is to absorb in the perfect end due to which thusness is called "cessation" because on the occasion of a superior's meditative equipoise all elaborations which are dualistic appearances cease in thusness. As the *Sutra on the Ten Grounds* extensively says:

> O children of the Conqueror, those on the sixth ground of a bodhisattva and below absorb into the cessation of absorption . The bodhisattvas abiding on this seventh ground of a bodhisattva absorb into and arise from cessation also mental-instant by mental-instant. They do not manifest cessation.

On this ground, *the perfection of* skill in *means also excellently blazes*, that is, it is greatly and completely purified. The way in which it is purified should be understood from the reasonings which were indicated previously in regard to the other grounds. Engaging in the special features of the perfection of wisdom is posited as the latter four perfections. The occasion of thoroughly distinguishing phenomena is called "the perfection of wisdom," other aspects are not.

"Cessation" in this context is a true cessation. According to the Prasangika Madhyamika system, a true cessation is an emptiness because it is the emptiness of a mind free from adventitious stains. This is an emptiness, a thusness, a cessation, a true cessation, and a perfect end. A tathagata enters into meditative equipoise on this forever. Lama Tsongkhapa says: "To enter into cessation is to absorb in the perfect end due to which thusness is called 'cessation.'" The reason that it is called "cessation" is "because on the occasion of a superior's meditative equipoise all elaborations which are dualistic appearances cease in thusness."

The last four perfections are a part or a subdivision of the perfection of wisdom.

Lama Tsongkhapa's *Illumination* (Tibetan text page 422-3) says:

> The skill in means that is posited as the perfection of skill in means [is as follows]. The *Bodhisattva Grounds* says:
>
> > The first of the two groups of six that were taught, the six internal skill in means that begin to accomplish the qualities of a buddha, are that the bodhisattvas:
> >
> > 1. view all sentient beings while possessing compassion,
> > 2. know the correct nature of all compounded phenomena just as it is,
> > 3. desire the unsurpassed exalted wisdom of enlightenment,
> > 4. do not forsake cyclic existence in dependence on viewing all sentient beings,
> > 5. circle in cyclic existence with an unafflicted mind in dependence on knowing compounded phenomena just as they are, and
> > 6. blaze with effort in dependence on desiring enlightenment.
> >
> > The six external skill in means that begin to ripen sentient beings are that the bodhisattvas:
> >
> > 1. transform the small roots of virtue of sentient beings into immeasurable results, and similarly,
> > 2. accomplish great roots of virtue by means of little hardship,
> > 3. eliminate the anger of those who hate the teachings,
> > 4. lead those who abide with a neutral mind regarding the teachings,
> > 5. ripen those who are engaging in [the teachings], and
> > 6. liberate those who have been ripened.
> >
> > These are the twelve skill in means.

The perfection of skill in means is further divided into twelve. Seventh ground bodhisattvas
1. look at sentient beings with compassion,
2. know the correct nature of all phenomena just as it is,
3. wish to attain the exalted wisdom of complete enlightenment,
4. remain in cyclic existence in order to lead sentient beings as it says in the lam-rim section of the *Lama Chopa*:

> Even if I must remain in the fires of Avichi
> For an ocean of eons for the sake of each sentient being,
> Inspire me to complete the perfection of joyous effort,
> And through compassion to strive for supreme enlightenment.

These bodhisattvas strive for sentient beings without discouragement, unlike ourselves. We should strive to develop effort like that of these bodhisattvas.
5. These bodhisattvas also take rebirth in cyclic existence, not by the force of actions and afflictions, but, through knowing reality, they do so for the welfare of other sentient beings, that is, by the force of compassion.
6. They also have blazing effort due to wishing for enlightenment.

These are the six internal skill in means. The six external skill in means are for the purpose of ripening other sentient beings. How do these bodhisattvas transform small roots of virtue into immeasurable results? They do so through teachings various methods to sentient beings. For example, the bodhisattva teaches sentient beings to give a little bit of food to some ants and to dedicate the roots of

virtue accumulated to complete enlightenment due to which there will be immeasurable results. This bodhisattva also teaches others to create great roots of virtue without much hardship. For example, he teaches others to rejoice, for example, to rejoice in all the study others are doing. By merely rejoicing in the good actions of others, one can create great roots of virtue.

The bodhisattva also eliminates the anger of those who disparage the Dharma and those who generate anger upon hearing religious teachings. The bodhisattva teaches them not to generate such anger telling them that, even if they do not want to listen to or practice the Dharma themselves, they should not become angry as otherwise they will experience problems of body and mind and be without mental peace due to this anger.

The bodhisattva causes those who have a neutral mind regarding the teachings, that is, who have neither liking or dislike for the teachings, to engage in the teachings. He also ripens those who are already engaging in the teachings and liberates those who have already been ripened.

These are the twelve types of skill in means mentioned in Asanga's *Bodhisattva Grounds*.

Lama Tsongkhapa's *Illumination* (Tibetan text page 423) says:

> This is the explanation of the seventh ultimate mind generation in the *Illumination of the Thought, An Extensive Explanation of [Chandrakirti's] 'Supplement to the Middle Way.'*

There are two types of mind generation: the conventional mind generation and the ultimate mind generation. The ultimate mind generation is divided into the ten mind generations of the ten grounds. The conventional mind generation is divided into two: the aspirational mind generation and the practical or engaging mind generation. It is also divided into four in the *Ornament for the Mahayana Sutras* in terms of boundaries: the mind generation using belief, the extraordinary pure mind generation, the fully ripened mind generation, and the mind generation that has abandoned the obstructions. The mind generation using belief is posited on the path of accumulation and path of preparation, the extraordinary pure mind generation is posited on the first through the seventh grounds, the fully ripened mind generation is posited on the three pure grounds, and the mind generation that has abandoned the obstructions is posited on the buddha ground.

We too should try to generate the mind of enlightenment beginning right from the moment we awake each day, thinking "I must attain enlightenment for the welfare of all sentient beings." We should think that all phenomena are like illusions and dreams, they are just imputed and exist only in dependence. If we think like this in the morning it becomes a brief meditation on both the conventional and ultimate mind generations and will bring a great result. In short, if we can integrate all the topics of the *Ornament* and the *Middle Way* it becomes equivalent to meditating on the lam-rim. If we do not do this, although we sit in meditation posture with our eyes closed it is not sure that we are actually meditating. There was a monk from Drepung Oseling who was known to be a great scholar. Although he had many students, one day he disappeared leaving them very worried as to what had happened. One year later they heard from some monk meditators that he was living in an isolated place. This scholar had asked one of the meditators to teach him lam-rim. However, this meditator was unable to teach the lam-rim in much detail, whereas the scholar had much knowledge of scriptures. Yet even though the scholar knew more than the meditator, he generated great respect for him and took him as his teacher. Later the Dalai Lama hearing about the scholar called him and told him to return to Drepung and to teach the monks and become a geshe.

QUESTIONS AND ANSWERS

Student: What is the definition of a "perfection" according to Prasangika?

Geshe Jampa Gyatso: If we were to say a "perfection" means a perfection of wisdom it is defined as: an exalted knower that is conjoined with a union of calm abiding and special insight that serves as the means for proceeding to or remaining in a non-abiding nirvana.

Student: According to Prasangika, can an actual fully-qualified perfection exist prior to the buddha ground?
Geshe Jampa Gyatso: Yes, it can. According to the Prasangika Madhyamika system there is a mundane perfection and a supramundane perfection. Among these two, a supramundane perfection is an actual fully-qualified perfection. This exists even on the first ground. Therefore, without achieving the buddha ground one has a fully-qualified perfection. A mundane perfection is posited on the path of accumulation and the path of preparation.

Student: In verse 6.209b of the *Supplement*, what is the correct translation: "The definition of the third is lacking suffering and confusion…" or "The definition of the third is suffering and non-confusion…"?
Geshe Jampa Gyatso: "The third" is the door of complete liberation of wishlessness, which is with respect to results. The results, the lack of suffering and the lack of confusion, are not conceived to exist truly. We wish for such results, a lack of suffering and a lack of ignorance. In conclusion, the lack of suffering and lack of ignorance are to be wished for but are not to be conceived to exist truly.

Student: Will Geshe-la please explain what is the observed object condition for a dream? I don't understand how the object can exist prior to the dream consciousness apprehending it.
Geshe Jampa Gyatso: According the Chittamatra system the observed object condition is of two types: one that is an appearance and one that is a potential. The observed object condition for a dream consciousness is an observed object condition that is a potential because things are perceived in a dream due to the activation of a latency. They say that the observed object condition that is an appearance is not a fully-qualified observed object condition, whereas the observed object condition that is a potential is a fully-qualified observed object condition. This is discussed in Khedrup Je's *Dose of Emptiness*.

The Prasangika Madhyamika system also accepts an observed object condition that is an appearance. This is, for example, the form appearing to an eye consciousness. For a dream consciousness the observed object conditions that are an appearance are the objects that appear to it. When they appear, they do so mainly due to latencies.

Student: Do all the appearances of a dream depend on the ripening of potentials?
Geshe Jampa Gyatso: They do depend on latencies. The Prasangika Madhyamikas also assert an appearance due to familiarity but this also arises due to latencies.
Student: What about dreams that are premonitions of what will happen in the future?
Geshe Jampa Gyatso: All dreams are due to the mind. There are cases that dreams correspond to future events. That is also due to latencies, it is not a type of clairvoyance.

Student: The dream object arises from a latency as does the dream consciousness. Is it possible to say that for the Prasangika Madhyamikas the dream object and dream consciousness are different entities?
Geshe Jampa Gyatso: They are not one entity but are different.
Student: So they arise from different latencies?
Geshe Jampa Gyatso: The appearing object of a dream is due to latencies. A dream object appears due to conditions. This is a complex subject. It is hard to say what a dream object is, although it is said that

it is form because it is an appearance of form to a dream consciousness. According to the Prasangika Madhyamikas that appearance of form is the observed object condition of the dream.
Student: Does that appearance arise from latencies?
Geshe Jampa Gyatso: I think that in the Prasangika Madhyamika system the appearance of form is an observed object condition. There is debate about this, such as: "Are the dream object and the dream consciousness cause and result? For example, is the appearance of the pleasant park of a dream the cause of the dream consciousness? Do the appearance of form that is the cause and the dream consciousness that is the result exist simultaneously?" The Prasangika Madhyamikas would specify that when they say that a cause and result do not exist simultaneously they are referring to a substantial cause and its result. However, there are phenomena that are causes and phenomena that are results that do exist simultaneously. In general, cause and result exist simultaneously but a substantial cause and its result are not established simultaneously. An example is a mother and her daughter, they exist simultaneously but they are not established simultaneously.

Student: Do we generate joyous effort prior to engaging in a virtuous action or is it something that is maintained manifest during a virtuous action, such as when reciting a sadhana, doing stabilizing meditation, and so forth?
Geshe Jampa Gyatso: During stabilizing meditation there is effort but it is not manifest. Prior to single-pointed equipoise there is effort, but it is not manifest when the mind is focused single-pointedly. Effort is not omnipresent in the mind. When you meditate single-pointed on the tip of your nose do you experience delight?!

THE EIGHTH MIND GENERATION

3B1C-2C2 Explaining the eighth ground

A Surpassing prayer on this ground and the way of arising from cessation
B Indicating that all afflictions are extinguished
C Indicating that the ten controls are attained

3B1C-2C2A Surpassing prayer on this ground and the way of arising from cessation

Chandrakirti's autocommentary says:

Now, to explain from the point of view of the eighth mind generation:

In order to attain higher and higher virtue than before, [8.ld]

The great being enters Immovable,
Where he becomes irreversible. [8.2ab]

The bodhisattva, for the purpose of attaining higher and higher virtue than before, will enter the eighth ground of the bodhisattva, Immovable, where he becomes irreversible.

Gedun Drup's *Mirror of the Clarification of the Thought,* as translated by Martin Willson, says:

3B1A-8A How on this stage resolution is outstanding, and he rises out of cessation

To gain merit higher and higher than before, [8.1d]

The magnanimous enters the stage at which he becomes
A never-returner, the Immovable. [8.2ab]

That magnanimous bodhisattva dwelling in the seventh stage has reason to enter this stage at which he becomes a never-returner, the Immovable; for he enters it in order to attain higher and higher virtue than before, in the seventh stage and below.

When a bodhisattva, even one of dull faculties, attains the eighth ground he attains a sign of irreversibility. This is also taught in the *Ornament for Clear Realizations*. This ground is called "Immovable" because the eighth grounder having abandoned the stains of self-cherishing, an awareness striving for solitary peace, his mind is not moved by this. Although the bodhisattvas had already abandoned self-cherishing, now its stains or latencies are also abandoned. This ground is also called "Immovable" because this bodhisattva has abandoned the afflictions.

Chandrakirti says: "In order to attain higher and higher virtue than before." The bodhisattva, as he progresses from the first to the seventh grounds, accumulates higher and higher virtue than on each of the previous grounds.

Chandrakirti's autocommentary says:

There, attaining higher and higher virtue than before is as explained [in the *Sutra on the Ten Grounds*]:

O children of the Conqueror, it is like this: for example, a great ocean-going ship is to be specially transported and is to proceed until it reaches the ocean. As soon as it has reached the ocean, it travels moved by the wind mandala, not needing to be specially transported. The

> [distance] covered in one day on the ocean due to that could not be traveled limitlessly, even during a hundred years, by the previous special transportation and travel.
>
> O children of the Conqueror, similarly, although a bodhisattva has intensely accumulated the collection of roots of virtue and practiced the mahayana, having reached the ocean of the bodhisattva's activities, the amount that the exalted wisdom of omniscience dominates in a mere moment with spontaneous exalted wisdom, that much is incomparable, it cannot be dominated without measure by the actions that were specially performed before, even in a hundred thousand eons.

The sutra sets out the analogy of a ship which when set afloat on the ocean moves very easily and without much effort. Similarly, the bodhisattva easily accumulates powerful waves of virtue because he has already completed the collection of one great countless eon of merit while on the paths of accumulation and preparation and the collection of a second great countless eon of merit while on the seven impure grounds. In this way he accumulated higher and higher roots of virtue as he progressed through the grounds. Why is such a great collection of merit needed? It is needed in order to attain buddhahood.

Chandrakirti's autocommentary says:

> *His prayers become very pure and*
> *The Conquerors make him rise from cessation.* [8.2cd]
>
> Those ten countless hundred thousand prayers, such as the ten great prayers and so forth, which were strongly planted when he generated the first mind, will become fully purified. Hence, his practice of prayer gone beyond will become exceeding.
>
> This Immovable Ground of the bodhisattvas is presented as the ground of youth. On the ninth, he will attain regency. On the tenth, he is empowered by the conquerors like a chakravartin.
>
> If the bodhisattva on this Immovable Ground has absorbed in cessation, the buddha bhagavans also make him arise from cessation.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *His prayer attains the greatest purity.* [8.2c]

This bodhisattva dwelling on the eighth stage has offered countless hundreds of thousands of prayers, which become very pure, because he completes the transcendent action of prayer [or resolution].

> *The conquerors make him rise out of cessation.* [8.2d]

Regarding him, there is reason for the conquerors to make him rise out of cessation, for they make him rise out of it in order to avoid falling to the extreme of nihilism.

The bodhisattva, having made prayers beginning from the first ground, completes the perfection of prayer when he attains the eighth ground, that is, he attains a surpassing perfection of prayer on this ground. Chandrakirti says: "Those ten countless hundred thousand prayers, such as the ten great prayers and so forth, which were strongly planted when he generated the first mind, will become fully purified." Having made prayers beginning from the first ground, on the eighth ground they are purified and he attains a surpassing perfection of prayer. This means that whenever the eighth ground bodhisattva makes a prayer it is realized. This, however, can be debated saying: "If so, why are

sentient beings not yet free from cyclic existence in that the bodhisattvas pray 'May all sentient beings be free from cyclic existence'?" Thus, instead of saying that all his prayers are realized, it is better to says that the aim or scope of his prayers is realized. According to Kunu Lama Rinpoche bodhisattvas make many prayers that cannot be realized but the very fact that they make these prayers indicates the power of their mind. The fruition of a prayer depends on the way in which the prayer is made. There is a story of a Tibetan nomad who visited the Jokhang Temple in Lhasa. In front of the statue of Shakyamuni Buddha he found himself unable to verbalize a prayer, whereas he was surrounded by women who were reciting the words of many prayers. Therefore, he just made a prayer that all the women's prayers be quickly fulfilled! We can make prayers in the same way as did Samantabhadra in the *King of Prayers*:

> Just as the hero Manjushri realizes and, likewise, Samantabhadra, I too totally dedicate all these virtues that I may follow them in their training.
> With the dedication praised as supreme by all the conquerors who come in the three times, I too totally dedicate my roots of virtue for the sake of pure conduct.

What is the difference between a dedication and a prayer? It is said that a dedication is pervaded by being a prayer, whereas a prayer is not pervaded by being a dedication. If one has not created particular roots of virtue but makes a wish, it is a prayer but not a dedication, for example, "May all sentient beings be reborn in Amitabha's pure land." Another example is the prayer "May there never be wars, famines, or calamities in all the worlds." On the other hand, if one does a practice such as reciting a sadhana and then says "Due to these roots of virtue may there never be wars, famines, or calamities in all the worlds," it becomes a dedication.

Chandrakirti says: "The Conquerors make him rise from cessation" (8.2d). In this context "cessation" is the absorption of cessation. Since a bodhisattva on the eighth ground has abandoned all the afflictions, he is able to remain in the absorption of cessation for many eons, but the conquerors instead cause him to arise from this. How do they do this? They do not do so by knocking on the door! Rather, they send out light rays that cause the bodhisattva to arise from the absorption. For example, it is like falling asleep in the sun and being awakened by a cool breeze.

Chandrakirti says: "This Immovable Ground of the bodhisattvas is presented as the ground of youth. On the ninth, he will attain regency. On the tenth, he is empowered by the conquerors like a chakravartin." This bodhisattva is empowered or initiated by the conquerors, not in the sense of a tantric empowerment, but in the sense of receiving the empowerment of great light rays.

Chandrakirti's autocommentary says:

> As is taught [in the *Sutra on the Ten Grounds*]:
>
> > O children of the Conqueror, thus the bodhisattva abiding on this Immovable Ground of the bodhisattva generated the strength of previous prayers and the buddha bhagavans make him who abides on the stream of the door of dharma to nearly accomplish the exalted wisdom of the Tathagata.
>
> [The Buddha] also spoke thus about that:
>
> > Son of good lineage, excellent, excellent. The qualities of a buddha are to be subsequently realized. If this is also the ultimate patience, then, son of good lineage, you do not have the perfect unshared qualities of a buddha such as the ten strengths and four fearlessnesses and so forth that are mine. In order to fully seek the perfect qualities of a buddha, make preparation, produce effort, yet do not forsake this very door of patience.

> Son of good lineage, although you attain abidance in such complete liberation of peace, ordinary childish beings are unpacified, extremely unpacified. Various delusions continually arise, various types of conceptions shame the mind. Think about these!
>
> Furthermore, son of good lineage, remember previous prayer,...

and so forth, is extensively set forth[237] until...

> If those buddha bhagavans had not made the bodhisattva enter in the doors of strongly practicing the exalted wisdom of omniscience, he would have passed beyond sorrow completely at that very time.[238]

The Buddha says to the bodhisattvas that although they have many qualities there are still many others to be attained. There are three levels of forbearance: the bodhisattva attains the first forbearance on the path of preparation, the second on the path of seeing, and the third on the eighth ground. This third is called "ultimate patience" or "ultimate forbearance" or "forbearance with respect to thusness." The bodhisattvas have not yet attained the ten powers, the four fearlessnesses, the eighteen unshared qualities of a buddha and so forth. Although the eighth ground bodhisattva has attained peace, the absorption of cessation, sentient beings are still experiencing suffering. The buddhas exhort him to remember the welfare of these sentient beings. They also exhort him to be mindful of his previous prayers, such as the prayers to benefit sentient beings and to realize their welfare. In this way the buddhas exhort them to arise from peace.

The Buddha says that by entering cessation prior to attaining omniscience the bodhisattva interrupts his work for the welfare of sentient beings and therefore the buddhas exhort him to continue to enact the benefit of sentient beings by arising from cessation. It is recounted that in the past there were some sages who sat absorbed in cessation in a forest, their bodies as unmoving as a rock. When they were later arisen by the light rays of a buddha, they looked for the Buddha but were told that he had already passed beyond sorrow. Flying up into the sky, their bodies fell to the ground. For this reason, this forest is called the "Forest of the Fallen Sages."

Lama Tsongkhapa's *Illumination* (Tibetan text page 423-4) says:

> *In order to attain higher and higher virtue surpassing the previous,* [8.1d]
>
> *Becoming irreversible on this,*
> *The great being enters the Immovable.* [8.2ab}

The seventh ground bodhisattva, *in order to attain higher and higher virtue surpassing the previous*, *becomes irreversible on this* ground, whereby he, the bodhisattva, *the great being, enters* the eighth, *Immovable*. The way of attaining higher and higher virtue surpassing the previous – the virtue on the seventh ground and below – is as taught in the *Sutra on the Ten Grounds*:

> O children of the Conqueror, it is like this. For example, a great ocean-going ship is to be specially transported and to proceed until it reaches the ocean. As soon as it reaches the ocean, it travels moved by the wind mandala without need to be specially transported. Due to that, the distance covered in one day on the ocean could not be

[237] From the *Sutra*: Furthermore, son of good lineage, remember previous prayers, the benefit of sentient beings to be attained and the unimaginable door of exalted wisdom. Further, son of good lineage, this is the nature (*dharmata*) of phenomena.

Whether the tathagatas arise or do not arise, this sphere of dharma (*dharmadhatu*) just remains. Thus, all phenomena are just empty and all phenomena are unobservable. The *tathagatas* are not to be differentiated simply by this. All hearers and solitary realizers also will attain this non-conceptual *dharmata*.

[238] From the *Sutra*: The benefit of all sentient beings to he done would he interrupted.

> traveled without limit, even in as much as a hundred years, by the previous special transportation and travel.
>
> O children of the Conqueror, similarly, although a bodhisattva has thoroughly accumulated the collection of roots of virtue and perfectly practiced the mahayana, having traveled in the ocean of a bodhisattva's activities, however much his spontaneous exalted wisdom suppresses the exalted wisdom of omniscient beings in a mere moment, it cannot be suppressed without measure by the actions that were specially done before, even in a hundred thousand eons.

Until it reaches the ocean is an analogy for the seventh ground and below. The travel after having entered the ocean is an analogy for the progress on the path after having attained the eighth ground.

His prayers are thoroughly purified and [8.2c]

The prayers of the eighth grounder, a million countless (10^{65}) prayers, such as the ten great prayers and so forth, that were planted before when he generated the first supramundane mind, *are thoroughly purified* on this ground, that is, the perfection of prayer becomes surpassing on this ground.

This ground is posited as the ground of a youth since on the ninth regency is attained, whereas on the tenth he is empowered by the conquerors, as is a universal king.

The roots of virtue of a bodhisattva on the eighth ground are greater than those of the bodhisattvas on the lower grounds, the seventh and below. The eighth ground is called "Immovable" in that the bodhisattva is pervaded by having achieved a sign of irreversibility and is definite to attain peerless enlightenment.

In the sutra the effort in accumulating roots of virtue of a bodhisattva on the first to the seventh grounds is likened to the transportation of a ship from the place where it was made up to the ocean. This is because there is need of great effort to transport a ship that is not yet set afloat. Likewise, a bodhisattva on the first through the seventh grounds must put effort into creating the roots of virtue of two countless great eons. On the other hand, the effort in accumulating roots of virtue of an eighth ground bodhisattva is likened to setting a ship afloat on the ocean in that once a ship is set afloat it is moves effortlessly, blown by the wind and carried along by the waves and, similarly, an eighth ground bodhisattva no longer needs to make much effort in order to progress on the path. This is because when the bodhisattva was on the previous seven grounds he made many prayers which are now purified on the eighth ground, in this way this bodhisattva attains the surpassing practice of the perfection of prayer.

Lama Tsongkhapa's *Illumination* (Tibetan text page 424-5) says:

The conquerors make him arise from cessation. [8.2d]

If he enters into cessation, or reality, on the Immovable Ground, *the conquerors* also *make him arise from* that absorption in *cessation*. The *Sutra on the Ten Grounds* says:

> O children of the Conqueror, thus the bodhisattva abiding on the bodhisattva's Immovable Ground generates the power of previous prayers. The buddha bhagavans make the one abiding in the stream of the door to qualities finely accomplish the exalted wisdom of a tathagata.
>
> [The Buddha] also spoke thus about this: Son of the lineage, excellent, excellent. This is also the ultimate forbearance with respect to the qualities of a buddha that are to be subsequently realized. Nonetheless, son of the lineage, you do not have the perfect unshared qualities of a buddha such as the ten powers, four fearlessnesses, and so forth that are mine. Yet, for the sake of thoroughly seeking the perfect qualities of a buddha, make preparation! Cultivate effort! Also do not forsake this very door of forbearance!

> Son of the lineage, although you attain abidance in such a complete liberation of peace, ordinary childish beings are unpacified, extremely unpacified. Diverse afflictions continually arise. Diverse conceptions degrade the mind. Think about them!
>
> Furthermore, son of the lineage, remember previous prayers, the welfare of sentient beings that is to be attained, and the inconceivable door of exalted wisdom.
>
> Moreover, son of the lineage, this is the reality of phenomena. Whether the tathagatas arise or do not arise, this sphere of phenomena just abides. Thus, all phenomena are just empty and all phenomena are unobservable. Hence, the tathagatas are not to be differentiated simply by this. All hearers and solitary realizers also attain this non-conceptual reality.

And:

> If the buddha bhagavans did not make this bodhisattva enter the doors of manifestly accomplishing the exalted wisdom of omniscient beings, he would thoroughly pass beyond sorrow at that very time, whereby the welfare to be enacted of all sentient beings would also be interrupted.

These [passages mean that] having attained empowerment in non-conceptual exalted wisdom on the eighth ground, when [the bodhisattva] absorbs into merely that, having arisen from it, in subsequent attainment he is exhorted to accumulate the collections as a cause of attaining the powers and so forth of a buddha. Since it is taught that the non-conceptual exalted wisdom directly realizing reality is also attained by hearers, saying "When the realization of suchness exists it is not necessary to strive in accumulating the other collections in that meditating on that is sufficient" is the babble of the unskilled.

How do the buddhas make the bodhisattvas arise from cessation? This question is answered above in the *Sutra on the Ten Grounds*. The buddhas remind the bodhisattvas of their previous prayers and the need to actualize their aims. They also remind the bodhisattvas that sentient beings are suffering saying: "Ordinary childish beings are unpacified, extremely unpacified. Diverse afflictions continually arise. Diverse conceptions degrade the mind. Think about them!" Because the hearers and solitary realizers also realize reality, the buddhas say to the bodhisattva that he should not abide alone in this realization as do the hearers and solitary realizers. Instead they remind the bodhisattva that if he does not enter the door of enlightenment but instead remains absorbed in peace, the welfare of sentient beings will be interrupted. For this reason, they should accumulate the collections by alternating meditative equipoise and subsequent attainment.

Tuesday morning, 3 April 2001

There are those who say that when emptiness is realized it is no longer necessary to continue to accumulate merit, however, this is just frivolous talk or babble.

Lama Tsongkhapa's *Illumination* (Tibetan text page 426) says:

3B1C-2C2B Indicating that all afflictions are extinguished

Chandrakirti's autocommentary says:

> Because he is thus merely arisen from cessation, therefore here:
>
> *Because the non-clinging mind does not abide together with faults,*
> *Those stains, with roots, are extinguished on the eighth ground,*
> *Delusions are exhausted and he is the, three realm's guru; yet buddhas'*
> *Endowments, endless like space, cannot be entirely attained.* [8.3]

> Due to the rising sun of non-conceptual exalted wisdom, the darkness-like delusions that were the cause of rebirth in all those previously arisen cyclic existences experienced in the three realms, together also with their roots, are only pacified. By abandoning them, although he has become the very guru of the three realms, in that context this bodhisattva is unable to attain the endowments of the buddha bhagavans. In order to attain that, it is necessary that he make effort.
>
> Because it is set forth [in the *Sutra on the Ten Ground*]:
>
> > He will pass beyond sorrow completely at that very time, he has a mere separation of attachment from the three realms because without being separated from attachment it is impossible to attain nirvana.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> 3B1A-8B All defilements are exhausted
>
> *As his mind without attachment does not remain together with faults,*
> *On the eighth stage those stains, together with their roots, are allayed.* [8.3ab]

For the bodhisattva dwelling on the eighth stage, the stains of the defilements together with their roots, are allayed; for not remaining together with the faults of the defilements, he attains mastery over the mind without attachment, non-conceptual wisdom-knowledge.

> *Although his defilements are finished, and he is guru to the three realms, he cannot*
> *Attain all the riches of the buddhas, limitless like space.* [8.3cd]

Although his defilements are finished, and he has become the guru of the three realms, he must still make effort in order to attain the perfect dharmas of the buddhas. For although he is like that, since he is unable to obtain all the riches of the buddhas, free of limit, like space, he must strive to obtain them.

One will not attain nirvana until one abandons the afflictions completely. Once the bodhisattva has completely exhausted all afflictions he enters the absorption of cessation, however, the buddhas, knowing this, cause him to arise from it. The buddhas say to the bodhisattva: "You have exhaustively abandoned the afflictions, but still you must strive to attain the endowments of a buddha." On the eighth ground the darkness of the afflictions is eliminated, like the rising sun illuminating the darkness the exalted wisdom of the bodhisattva illuminates the three realms.

This bodhisattva has abandoned the seed for taking rebirth in cyclic existence and because he has abandoned the afflictions he is called "the lama of the three existences." The three existences are above, on, and below the ground. Although this bodhisattva has become the lama of the three existences, he has not completed the qualities of a buddha and must therefore strive to attain them. Chandrakirti says: "In order to attain that, it is necessary that he make effort."

The eighth ground bodhisattva has abandoned the afflictions and has therefore attained the nirvana that is the abandonment of the afflictions. The *Sutra on the Ten Grounds* says: "he has a mere separation of attachment from the three realms because without being separated from attachment it is impossible to attain nirvana." This shows that this bodhisattva is separated from the attachment of the three realms, that is, the afflictions of the three realms, which is necessary in order to attain nirvana. This bodhisattva has therefore destroyed the foes that are the afflictions.

Lama Tsongkhapa's *Illumination* (Tibetan text page 426) says:

> *Because the mind without attachment does not abide together with faults,*
> *On the eighth ground, the stains, together with their roots, are thoroughly pacified,*
> *The afflictions are extinguished, and he becomes a lama of the three levels, yet*

He is unable to attain all the endowments, as limitless as space, of the buddhas. [8.3]

Therefore, on the eighth ground he is risen by the conquerors from cessation. *Because* on this ground *the mind that is without attachment*, that is, exalted wisdom, *does not abide together with the faults* of the afflictions, attachment and so forth, *on the eighth ground* all the darkness-like *stains*, the previously arisen afflictions, that are the cause of rebirth in cyclic existence as well as the experiences in the three realms, *together with their roots*, that is, their seeds, *are thoroughly pacified*, that is abandoned, by the rising sun of non-conceptual exalted wisdom. Thus, all *afflictions are extinguished and* [the bodhisattva] *becomes a lama of the three levels*, or the three realms. However, on this occasion of having extinguished the afflictions, this bodhisattva *is unable to attain all the endowments, as limitless as space,* that are the qualities *of the buddhas*. Therefore, the eight grounder must strive in order to attain them.

QUESTION: How is it known that all the afflictions have been extinguished on this ground?

RESPONSE: Because the *Sutra on the Ten Grounds* says:

He will thoroughly pass beyond sorrow completely at that very time...

On this ground he is free from the mind of attachment of the three realms because without the freedom from attachment that is the severance of the afflictions he cannot actualize passing beyond sorrow.

This bodhisattva has abandoned the afflictions along with their seeds. There is a difference between a seed and a latency. If it is a latency of an affliction it is not pervaded by being a seed of an affliction. The seed of an affliction is a latency implanted by a previous affliction which is a potency producing a later affliction of similar type. A latency is not pervaded by producing a later affliction, for example, the conception of true existence deposits a latency in the continuum of the bodhisattvas on the eighth, ninth, and tenth grounds but this latency is not a seed because it does not have the potential to produce a later affliction of similar type. However, these bodhisattvas have the appearance of true existence and, therefore, still have knowledge obstructions. What is a knowledge obstruction? It is a potency deposited by the conception of true existence, due to which they still have dualistic appearance. They have not abandoned dualistic appearance and the appearance of true existence. This will be explained later. In short, the eighth ground bodhisattva has abandoned the seeds of the afflictions but not their latencies.

This bodhisattva is called "a lama of the three realms" because his knowledge is the highest in the three realms. Although this bodhisattva has exhausted all the afflictions he has not yet achieved the realizations of a buddha, such as the ten powers, four fearlessnesses, the eighteen unshared qualities, and so forth. Therefore, this bodhisattva must put effort into attaining them. How is it known that an eighth ground bodhisattva has exhausted all the afflictions? The *Sutra on the Ten Grounds* says: "He will thoroughly pass beyond sorrow completely at that very time..." Since without exhausting all the afflictions it is not possible to pass beyond sorrow, that is, to attain nirvana, this sutra clearly indicates that this bodhisattva has exhausted the afflictions in that he has passed beyond sorrow.

Lama Tsongkhapa's *Illumination* (Tibetan text page 427) says:

3B1C-2C2C Indicating that the ten controls are attained

Chandrakirti's autocommentary says:

If there is separation from the attachment of the three realms there, due to it, cyclic existence will cease at that time. Hence, how will he fully complete the entire qualities of a buddha?

It is explained,

Although circling is ceased, ten powers will be attained and with these,
His essence will be shown manifold to the migrators of existence. [8.4ab]

His circling is indeed ceased, yet like that, the ten powers are about to be produced in him. With these, he will show various things of self-essence by way of the body of the nature of mind. Therefore, it does not contradict fully completing his entire collection.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B1A-8C He attains the ten powers

Although he has stopped cycling, he is attaining the ten powers. By this
He will naturally show himself variously to samsaric beings. [8.4ab]

Although he has stopped cycling [in samsara] under the control of karma and defilements, it is not contradictory that he is completing the accumulations; for he will attain the ten powers[239], and by these powers he will naturally show himself in various bodies to samsaric beings.

Although the eighth ground bodhisattva has exhausted all the afflictions, he still needs to accumulate the collections in order to attain the ten controls or powers. These eight controls are also discussed in the *Ornament for Clear Realizations*. The bodhisattva has still to attain these ten controls or ten powers in order to enact the welfare of disciples.

The eighth ground bodhisattva no longer takes rebirth in cyclic existence by the force of actions and afflictions but instead takes a body of the nature of mind which completes the collections in order to enact the welfare of sentient beings. How does he attain a body of the nature of mind? What is its cause? It is an uncontaminated action and the level of the latency of ignorance. The contaminated, or a contamination, is an affliction. An action that is not motivated by an affliction is an uncontaminated action. Is an action necessary to take rebirth in cyclic existence? An action is necessary but it does not have to be an action motivated by an affliction, that is, it can be an uncontaminated action. This is asserted by the Svatantrika Madhyamikas, it will be discussed later on in the *Supplement*.

The body of an intermediate state being is similar to, but not the same as, a body of the nature of mind. Intermediate state beings have a body that is not visible to our eyes and is not coarse. Vasubandhu says that an intermediate state being has all the sense powers complete and is not obstructed by objects. Similarly, someone who has attained a body of the nature of mind can pass through walls and so forth. The bodhisattva takes a body of the nature of mind in order to enact the welfare of sentient beings.

Chandrakirti's autocommentary says:

There, the ten powers are, as extensively taught [in the *Sutra on the Ten Grounds*]:

1. By blessing the life span for inexpressibly inexpressible eons, he attains power over the life span.
2. By the operation of unfathomable exalted wisdom definitely taking meditative stabilization to mind, he attains power over the mind.
3. By always displaying the blessing of fully adorning all the realms of the world with many arrangements of ornaments, he attains power over necessities.
4. By showing the exact time by blessing the maturation of actions, he attains power over actions.
5. By always showing rebirths in all realms of the world, he attains power over rebirth.
6. By always showing manifest complete enlightenment however he likes, at whatever buddha field and time, he attains power over prayer.

[239] *dbang.bcu*, not the powers of a tathagata, *stobs.bcu*

7. By always showing all the realms of the world completely filled with buddhas, he attains power over aspiration wishes.
8. By always showing complete manifestations of magical creations in all buddha fields, he attains power over magical emanations.
9. By always showing the Tathagata's strengths, fearlessnesses, unshared buddha qualities, marks, excellent exemplifications, and complete enlightenment, he attains power over exalted wisdom
10. By always showing the illuminated door of the dharma with non-existent ends and middle, he attains power over the dharma.

"Power over the life span" means that the bodhisattva can live as long as he likes. "Power over the mind" means that he can abide in meditative stabilization on an object as long as he likes. "Power over necessities" means that he no longer needs to put effort in acquiring necessities, they are acquired without effort. When Geshe Ben Kun Gyel was young he was a bandit and put great effort into stealing things from others. Later on his life, he engaged in meditation and strongly regretted his previous actions. He said: "When I was young I had a rifle on my shoulder, a sword on my waist, and a knife on my leg, yet I went through great hardships in order to find food for my mouth. Since I began to meditate and gave up these things, now the food does not find my mouth," meaning that he received so much food as offerings that he could not eat it all.

"Actions" can be understood to be either actions in general or the mental factor intention. "Power over actions" means that this bodhisattva experiences the ripening of his actions as he likes. "Power over rebirth" means that the bodhisattva can be reborn wherever he likes, for example, in the USA and so forth. "Power over prayer" means that he can show enlightenment wherever and whenever likes.

"Power over aspiration" means that when the bodhisattva wishes to fill the worlds with buddhas, all the worlds appear filled with buddhas. For example, the *King of Prayers* says: "On each atom are myriad buddhas surrounded by countless bodhisattvas."

"Power over magical emanations" means that the bodhisattva can manifest emanations in all the buddha lands. "Power over exalted wisdom" is attained due to showing the Tathagata's strengths, fearlessnesses, unshared buddha qualities, marks, excellent exemplifications, and complete enlightenment. "Power over the Dharma" means that he shows the illuminated door of the Dharma.

The eighth ground bodhisattva having completed the collections *will* attain these eight powers or controls, that is, he does not yet have them. These ten controls are included in the twenty-one sets of exalted wisdom, which are discussed in the *Ornament for Clear Realizations*. We too should strive to attain them by accumulating merit and purifying negativities, that is, by accumulating the two collections, the collection of merit and the collection of exalted wisdom. It is very important to unify the two collections. Each day we should study the *Middle Way*, listen to the teachings, think about them, and then meditate on them, either by doing stabilizing meditation or analytical meditation. Together with this, we should try to practice the perfections by engaging in giving, safeguarding morality, and so forth. In particular, we need to practice patience as Shantideva says: "There is no fortitude like patience, and there is no negativity as great as anger."

Tuesday afternoon, 3 April 2001

The first three controls, control over the lifespan, control over the mind, and the control over necessities are the result of generosity. The fourth and fifth, control over actions and control over rebirth, are the result of morality. The sixth, control over prayer, is the result of patience. The seventh, control over aspiration, is the result of effort. The eighth, control over magical emanations, is the result

of meditative stabilization. The ninth and tenth, control over exalted wisdom and control over Dharma, are the result of wisdom.

Chandrakirti's autocommentary says:

> The explanation of the eighth mind generation is finished. The Eighth Mind Generation from the *Explanation of the 'Supplement to the "Middle Way."'*

Lama Tsongkhapa's *Illumination* (Tibetan text page 427) says:

> QUESTION: Since, if free from the attachment of the three realms on this ground, [the bodhisattva's] rebirths in cyclic existence will cease, how does he thoroughly complete all the qualities without exception that are the causes of a buddha?
>
> *Although he ceases circling, he will attain the ten controls and, by means of these,*
> *He causes varieties of his own nature to be displayed to the migrating beings of existence.*
> [8.4ab]
>
> *Although* the eighth grounder indeed *ceases circling* in cyclic existence by the power of actions and afflictions, when this ground is attained *he will attain the ten* types of *controls*, such as control over exalted wisdom and so forth. *By means of these* ten controls, this bodhisattva, as is explained in the *Lion's Roar of Shrimaladevi Sutra,* through the body that is the nature of mind *causes various* bodies *of his own nature to be displayed to the migrating beings of existence*. Therefore, it is not contradictory that he thoroughly completes his collections.
>
> As is extensively taught in the *Sutra on the Ten Grounds* the ten controls are:
>
> 1. By blessing the life span, even of inexpressible eons, to be inexpressible, he will attain control over his life span.
> 2. By the engagement of unfathomable exalted wisdom definitely thinking about meditative stabilization, he will attain control over the mind.
> 3. By always displaying the blessings of fully adorning all the realms of the world with many arrays of ornaments, he will attain control over necessities.
> 4. By displaying himself at the proper time by blessing the ripening of actions, he will attain control over actions.
> 5. By always displaying rebirths in all realms of the world, he will attain control over rebirth.
> 6. By always displaying manifest complete enlightenment as he likes in whatever buddha field and at whatever time, he will attain control over prayer.
> 7. By always displaying all the realms of the world completely filled with buddhas, he will attain control over aspiration.
> 8. By always displaying complete emanations of magical emanations in all the buddha fields, he will attain control over magical emanations.
> 9. By always displaying the powers, fearlessnesses, unshared buddha qualities, excellent marks and signs, and manifest complete enlightenment of a tathagata, he will attain control over exalted wisdom
> 10. By always displaying the illuminating door of the Dharma that is without an end and a middle, he will attain control over the Dharma.

Since the bodhisattva on the eighth ground has exhausted the afflictions, he will no longer take rebirth in cyclic existence by the force of actions and afflictions. How does he take rebirth? He does so by means of taking a body of the nature of mind in order to enact the welfare of sentient beings.

Lama Tsongkhapa's *Illumination* (Tibetan text page 428) says:

This is the explanation of the eighth ultimate mind generation in the *Illumination of the Thought, An Extensive Explanation of [Chandrakirti's] 'Supplement to the Middle Way.'*

THE NINTH MIND GENERATION

Lama Tsongkhapa's *Illumination* (Tibetan text page 428) says:

3B1C-2C3 Explaining the ninth ground

Chandrakirti's autocommentary says:

Now, to explain from the point of view of the ninth mind generation:

On the ninth, all his various strengths become completely pure and likewise,
The perfect knowledges' specific qualities also attain full purity. [9.1cd]

On the ninth ground of the bodhisattva, the bodhisattva's surpassing strength gone beyond will become fully purified and the four fully purified specific qualities of the individual perfect knowledges will also be attained: the individual perfect knowledge of phenomena, the individual perfect knowledge of meaning, the individual perfect knowledge of definite words, and the individual perfect knowledge of confidence.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B1A-9 Explanation of the ninth stage, Good Intelligence

On the ninth, all the aspects of his power become completely pure.
He likewise attains too the fully pure dharmas of the discriminating knowledges. [9.1cd]

The bodhisattva dwelling on the ninth stage attains qualities superior to those of the eighth stage, for all the aspects of the transcendent action of power become completely pure, and likewise he also attains full purity of the own qualities of the dharmas of the discriminating knowledges.

On the ninth ground the bodhisattva attains the surpassing perfection of power. "Power" includes the ten powers, although more are listed in the *Ornament for the Subduer's Intention*. This bodhisattva also attains the four fully purified specific qualities of the four individual correct knowledges which are explained in different ways in different texts.

Chandrakirti's autocommentary says:

There,

1. The individual perfect knowledge of phenomena thoroughly knows the specific characteristics of all phenomena.
2. The individual perfect knowledge of meaning thoroughly knows the divisions of the aspects of all phenomena
3. The individual perfect knowledge of definite words thoroughly knows to show phenomena as unmixed.
4. The individual perfect knowledge of confidence thoroughly knows, uninterruptedly, the concordant causes of phenomena.

The individual correct knowledge of phenomena knows the specific definitions of all phenomena, however, since all phenomena do not have definitions, the bodhisattva understands that which induces understanding of them.

Does the bodhisattva on the ninth ground possess the four individual correct knowledges? If someone says that he does, one asks: "Are the four individual correct knowledges not unique to the exalted knower of all aspects of a buddha? Are they not part of the thirty-nine aspects of an exalted knower of all aspects which include the ten powers, the four fearlessnesses, the four individual correct knowledges, the eighteen unshared qualities of a buddha, and the three aspects of suchness, the self-arisen, and the mental aspect?"
Chandrakirti's autocommentary says:

> The explanation of the ninth mind generation is finished. The Ninth Mind Generation from the *Explanation of the 'Supplement to the "Middle Way."'*

Lama Tsongkhapa's *Illumination* (Tibetan text page 428) says:

> *On the ninth, all his powers are completely purified.*
> *Likewise, he also attains the completely pure specific qualities of the correct knowledges.* [9.1ab]

On the ninth ground, *all powers* – that is, the perfection of power – of the bodhisattva *are completely purified*. The explanation of the ten powers is as taught in the *Ornament for the Subduer's Intention*:

The powers that are presented in the sutra sets are:

- The power of thought because of never experiencing afflictions.
- The power of superior thought because of thoroughly training in the exalted wisdom of the grounds.
- The power of retention because of not forgetting the Dharma.
- The power of meditative stabilization because of never being distracted.
- The power of perfect endowments because of being skilled in distinguishing the conduct in the infinite and endless realms of the world.
- The power of control because of attaining the thorough completion of all hopes.
- The power of self-confidence because of being skilled in distinguishing the practice of all the Buddha's Dharma.
- The power of prayer because of not giving up application in the conduct of all the buddhas.
- The power of perfection because of thoroughly ripening the Buddha's Dharma, thoroughly ripening sentient beings, and not giving up the conduct of benefiting sentient beings by himself.
- The power of great love because of not giving up supreme application in protecting all sentient beings.
- The power of great compassion because of eliminating all the suffering of all sentient beings.
- The power of reality because of actualizing the reality that is like an illusion and so forth.
- The power of the blessings of all the tathagatas because of approaching the exalted wisdom of an exalted knower of all aspects.

The *Ornament for the Subduer's Intention* seems to set out thirteen powers, although Lama Tsongkhapa says that there are ten. Perhaps some of them are to be combined into one.

The power of thought refers to the fact that the ninth ground bodhisattva does not have any afflictions because he has abandoned all of them. The power of superior thought is to thoroughly train

in the exalted wisdom of the grounds. The power of retention is to not forget what one has learned or memorized. The power of meditative stabilization is to never be distracted, that is, distraction has been completely forsaken. The power of perfect endowments refers to the fact that this bodhisattva knows the conduct in the various worlds. The power of control is the completion of all hopes, that is, all the bodhisattva's hopes are fulfilled. This can be debated asking: "Does this mean that this bodhisattva has attained omniscience in that he hopes for it?"

The power of self-confidence is to be skilled in distinguishing the practice of all the Buddha's Dharma. The power of prayer is to not give up application in the conduct of all the buddhas. The power of perfection is to thoroughly ripen the Buddha's Dharma, thoroughly ripen sentient beings, and to not give up the conduct of benefiting sentient beings by himself. What do these mean? Does "to thoroughly ripen sentient beings" refer to ripening all sentient beings? Before actualizing the perfect end there are certain conditions that a bodhisattva has to meet, thus, he does not do so until all sentient beings have been ripened, until he has purified his buddha land, and until he has completed all prayers. In regard to the first, each line of Dharma that he teaches is said to ripen sentient beings and set them in the state of a superior.

The power of great love is to protect all sentient beings without bias. The power of great compassion is to eliminate all the sufferings of all sentient beings. When great love is manifest, compassion is not manifest, and vice versa.

The power of reality is to actualize the reality that is illusion-like and so forth. The power of the blessings of all the tathagatas is to approach the exalted wisdom of an exalted knower of all aspects.

Lama Tsongkhapa's *Illumination* (Tibetan text page 429) says:

> He completes the perfection of power and, *likewise*, *also attains the* four *completely pure specific qualities of the* individual *correct knowledges*:
> 1. individual correct knowledge of phenomena,
> 2. individual correct knowledge of meanings,
> 3. individual correct knowledge of definitive words, and
> 4. individual correct knowledge of self-assurance.
>
> With respect to them, it is taught in the autocommentary that by means of the first, he fully knows the individual characteristics of each and every phenomenon; by means of the second, he knows the divisions of the aspects of all phenomena; by means of the third, he knows the individual presentations of phenomena without mixing them; and, by means of the fourth he fully knows, without interruption, the concordant causes of phenomena.
>
> In other texts they are explained as the knowledge of phenomena, the knowledge of meanings to be expressed, the knowledge of definitive words that are terms, and the knowledge of the non-exhaustion of self-assurance, these being synonyms.

There can be debate about the statement "he knows the divisions of the aspects of all phenomena," asking: "Is there a division of each and every phenomenon? For example, is there a division of Sherab's nose?"
Student: There is, it is divided into two nostrils!
Geshe Jampa Gyatso: It follows that Sherab has two noses because he has two nostrils!

The individual correct knowledge of self-confidence is to fully know, without interruption, the concordant causes of phenomena.

The Tibetan word for "synonym" literally means a list of names for the same thing. For example, the sun has many different names in Hindi.

If it is a name it is not pervaded by being a definitive word that is a term. A name is not a word. If it is a word or phrase it is an object of hearing that indicates something by connecting a basis of qualities and a quality. For example, "table" is merely a name, but when "the square table" is said the basis of qualities and the quality are connected. There are names, words or phrases, and letters. Their definitions are given in *Awarenesses and Knowers* as:

- The definition of a name is: an object of hearing that causes understanding of its own meaning.
- The definition of a word or phrase is: an object of hearing which indicates [meaning] by joining substratum and attribute.
- The definition of a letter is: a vocalization which is a basis of forming the two, names and phrases.

Self-assurance is confidence that comes from knowledge. However, some people have knowledge but no self-assurance and others have self-assurance but no knowledge!

Lama Tsongkhapa's *Illumination* (Tibetan text page 429) says:

> This is the explanation of the ninth ultimate mind generation in the *Illumination of the Thought, An Extensive Explanation of [Chandrakirti's] 'Supplement to the Middle Way.'*

Wednesday morning, 4 April 2001

THE TENTH MIND GENERATION

Lama Tsongkhapa's *Illumination* (Tibetan text page 430) says:

> 3B1C-2C4 Explaining the tenth ground

Chandrakirti's autocommentary (Tibetan text page 216) says:

> Now, to explain from the point of view of the tenth mind generation:
>
> *On the tenth ground he obtains pure empowerment from buddhas everywhere*
> *And exalted wisdom will also arise as exceedingly supreme.*
> *Just as rainwater falls from rain clouds, Dharma rain also falls spontaneously*
> *From the Conquerors' children for the sake of the migrators' crop of virtue.*[10.1]
>
> The buddha bhagavans empower the bodhisattva who abides on the tenth bodhisattva ground.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> 3B1A-10 Explanation of the tenth stage, the Cloud of Doctrine
>
> *On the tenth stage, he receives holy empowerments from the buddhas*
> *Everywhere, and also wisdom-knowledge grows exceedingly great.* [10.1ab]

The bodhisattva dwelling on the tenth stage attains qualities superior to those below on the ninth stage; for he receives holy empowerments of great light rays from the buddhas of all the directions, and also his transcendent action of wisdom-knowledge[240] grows exceedingly great.

> *Just as rain falls from rain clouds, so from this buddha-son also a rain*

[240] *jñana, ye.shes*

Of Dharma spontaneously falls, for the sake of the crop of sentient beings' virtues. [10.1cd]

It should be understood that there is reason why the tenth stage is named "Cloud of Doctrine," for just as rain falls from rain clouds, so too for the sake of the crops of sentient beings' virtues, a rain of the excellent doctrine spontaneously falls from the conquerors' son dwelling on the tenth stage.

Chandrakirti's autocommentary says:

> As is taught [in the *Sutra on the Ten Grounds*]:
>
> > There, at the end of many ten hundred thousand countless meditative stabilizations, the bodhisattva meditative stabilization called "having empowerment not different than the omniscient exalted wisdom," will be manifested. As soon as it is manifested, a lotus of a huge jewel equal in size to ten hundred thousand billion [world systems], adorned with jewels having the best of all types...
>
> From the aforesaid, until:
>
> > ... extensively, will arise having a circumference of lotuses amounting to the atomic particles complete in ten hundred thousand billion [world systems]. The body of that bodhisattva also [will be] appropriate for that and alighting on its condition, will abide. As soon as attaining this meditative stabilization, sitting on that lotus, he will illuminate everywhere. He sits there and from the brow curl of the buddha bhagavans assembled from all buddha fields, rays of light will arise, giving empowerment to that bodhisattva.
>
> His exalted wisdom gone beyond will also become exceedingly pure. Like a great cloud, a rain of holy Dharma will also spontaneously descend in order to greatly increase the crop of virtue of the world.

The tenth ground bodhisattva attains the surpassing practice of the perfection of exalted wisdom. At this point, the bodhisattva is *almost* a buddha. This bodhisattva, abiding on a lotus cushion, receives the empowerment of great light rays from the treasure hair or brow curl of all the buddha bhagavans. This is an empowerment of exalted wisdom, although it is not related to the tantric empowerments. The bodhisattva progresses upward on the sutra path from the first to the tenth ground at which point, according to the tantra teachings, he enters the tantra path. When this bodhisattva enters the tantra path he finds himself on the fourth stage of the five stages of the completion stage, the meaning clear light. Perhaps this is what is meant here by the "the empowerment of great light rays." In brief, the tenth ground bodhisattva generates the meaning clear light in his continuum.

The tenth ground is called the "Cloud of Doctrine" or "Cloud of Dharma" because, just as rain falls causing crops to grow, this bodhisattva sends down a rain of Dharma causing the virtues of migrating beings to increase. The main way in which buddhas and bodhisattvas ripen sentient beings is by giving them Dharma teachings. They are not able to transfer their realizations to sentient beings, nor are they able to wash away the non-virtues, obstructions, and afflictions of sentient beings with their hands. They are also not able to take away the sufferings of sentient beings like pulling a thorn out of a foot. In this context, suffering refers mainly to mental suffering, in that physical suffering can be alleviated with the hands, for example, a surgeon can cut out a part of the body that is causing pain. In short, the buddhas and bodhisattvas can only alleviate the mental pain of sentient beings by giving them teachings. In order to do this the tenth ground bodhisattvas cause a rain of Dharma to fall. One text says that among all the activities of a buddha that of his holy speech is supreme. In other words, the enlightened activity of a buddha is of many types but the most excellent is the enlightened activity of his speech. Lama Tsongkhapa mentions this in his *Praise to Dependent-Arising*. Even in daily life when we have problems they can be alleviated to some degree by hearing the soothing speech of

others. Similarly, a bodhisattva can mentally think of many good things and physically can do many activities, but the main way in which he can be of benefit to sentient beings is by verbally giving them advice and teachings. This action of speech is also important as a means of gathering disciples in that the first way to do so is to give presents to them, while the second is to speak nicely to them. These are activities of a bodhisattva, and are also engaged in by Christians in order to convert others to Christianity. For example, they give material help to the needy, then talk to them nicely, then give them advice, and so forth. We should rejoice in such actions as by doing so we will create a great amount of merit. Lama Tsongkhapa says that rejoicing in others' good actions is the best way of creating merit. For example, we can rejoice in others who are studying well, have good conduct, and have a subdued mind. We should not be jealous of others but instead rejoice in their qualities and aspire to become like them.

> The explanation of the tenth mind generation is finished. The Tenth Mind Generation from the *Explanation of the 'Supplement to the "Middle Way."'*

Lama Tsongkhapa's *Illumination* (Tibetan text page 430) says:

> *On the tenth ground, he attains the highest empowerment from the buddhas everywhere*
> *And the surpassing exalted wisdom will also arise as supreme.*
> *Just as rainwater falls from rainclouds, likewise, so too does a rain of Dharma*
> *Fall spontaneously from the conquerors' child for the sake of the crop of virtue of migrating beings.* [10.1]

> The bodhisattva abiding *on the tenth ground attains the highest*, that is, supreme, *empowerment* of the great light rays *from the buddhas in all* ten directions. The way in which this is attained is as taught in the *Sutra on the Ten Grounds* from:
>
> > This bodhisattva, at the end of a million countless meditative stabilizations attained, actualizes the meditative stabilization called "possessing empowerment not different from the exalted wisdom of omniscient beings." Then immediately, a lotus of huge jewels equal in size to a million billion [world systems], adorned with jewels having the best of all types...
>
> Through:
>
> > ... extensively, will arise having a circle of lotuses equaling the particles that are the entirety of the subtle particles in the million billion [world systems]. The bodies of that bodhisattva also abide in conformity with them. As soon as he attains this meditative stabilization, he always appears sitting on that lotus. He sits there and from the treasure hair of the buddha bhagavans, assembled from all the buddha fields, rays of light will arise, conferring empowerment on that bodhisattva.
>
> In that bodhisattva, from among the ten perfections, *the surpassing* perfection of *exalted wisdom will also arise as supreme* – that is, will be purified.

When the bodhisattva attains the tenth ground, he abides on a lotus and the buddhas of the ten direction send forth great light rays which confer the empowerment of great light rays upon him. Unlike us, he receives this empowerment without even the need to request the buddhas for it! Instead, the buddhas, knowing that it is the appropriate time, gather around the bodhisattva in order to confer this empowerment upon him. As it says in a prayer that Lama Tsongkhapa wrote in praise of Shakyamuni Buddha: "Just like the waves of the ocean arise at the exact time..." These waves arise naturally and cannot be stopped by anyone, likewise, when the buddhas know that the time has come they perform their activities at the appropriate time.

There is a story about a family in the past. The husband had gone away and meanwhile the woman called her tailor to the home and they enjoyed themselves together. However, in the

meantime they saw the husband arriving in the distance so the woman hid the tailor in a big box and put it in a corner. When night fell, thieves broke into house and found the heavy box and carried it away. The tailor, out of fright, urinated in the box. The thieves seeing this liquid come from the box thought that there must be a special gem, a moon crystal, inside that creates a particular liquid. However, upon opening the box they found the tailor. They thought to sacrifice him and offer him to Ishvara. While talking about this, Ishvara appeared in front of them and said "Today instead of making this sacrifice just offer me this man alive." The thieves were very happy to have had this vision of Ishvara and gave the man to Ishvara and went away. Ishvara then showed himself to actually be the Buddha who gave teachings to the tailor whereby he became a foe destroyer. Thus, the buddhas' enlightened activity is fixed and appropriate to the occasion.

Lama Tsongkhapa's *Illumination* (Tibetan text page 430) says:

> The difference between the identification of exalted wisdom and the perfection of wisdom is taught in [Asanga's] *Bodhisattva Grounds*:
>
> > That knowing the presentation of all phenomena as they are is the perfection of exalted wisdom. The wisdom that engages in apprehending the ultimate is the perfection of wisdom. That engaging in apprehending the conventional is the perfection of exalted wisdom. These are the particularities of the two.

The *Bodhisattva Grounds* clearly says: "That knowing the presentation of all phenomena as they are is the perfection of exalted wisdom." In the phrase "The wisdom that engages in apprehending the ultimate is the perfection of wisdom," "the ultimate" is emptiness and the "wisdom that engages in apprehending the ultimate" is the wisdom of meditative equipoise absorbed on emptiness or the ultimate truth. In the phrase "That engaging in apprehending the conventional is the perfection of exalted wisdom," "the conventional" is the method or the vast.

The ten perfections are said to be equally pervasive. However, are generosity and morality equally pervasive? They are not, because generosity and morality are contradictory, that is, there is no common locus of the two. Generosity and so forth are not mutually and equally pervasive, whereas the ten perfections are equally pervasive in that if it is perfection of generosity it is pervaded by being a perfection of morality. On the other hand, if it is a perfection of generosity it is not pervaded by being generosity. What is generosity? Generosity is a mental factor, the definition of generosity being "the intention to give." This subject requires reflection. Along with the intention to give there is a concomitant main mind having five similarities. Is this main mind generosity? It is not. However, a main mind in the continuum of a buddha that has in its retinue the intention to give is a perfection of generosity but is not generosity.

Lama Tsongkhapa's *Illumination* (Tibetan text page 431) says:

> *Just as rainwater falls from rainclouds* for the sake of increasing the crops of worldly beings, *likewise*, *so too does a rain of* holy *Dharma* manifestly *fall*, that is, descend, *spontaneously from the conquerors' child*, the tenth grounder, *for the sake of* increasing *the crop of virtue of* the *migrating beings* who are to be subdued. For this reason, this ground is called "Cloud of Dharma."

The Tibetan nomads say that whether one puts a piece of gold or a piece of stone in the ear of donkey there is no difference for that donkey. The meaning of this is that when Dharma is given to the ear of someone who is not interested it makes no difference. The Dharma in general is a cause for the ripening of the mind but in this case there is no ripening. This is mentioned in the eighth chapter of the *Ornament for Clear Realizations* (translated by George Churinoff) saying:

Although the god of rain sends rain down,
As an impotent seed does not grow,
Although the buddhas appear,
The unfortunate do not experience excellence. [8.10]

When a rain of Dharma falls, the person for whom it is made must be a proper vessel otherwise it will have no effect. Lama Tsongkhapa says: "For this reason, this ground is called 'Cloud of Dharma.'"

Lama Tsongkhapa's *Illumination* (Tibetan text page 431) says:

> This is the explanation of the tenth ultimate mind generation in the *Illumination of the Thought, An Extensive Explanation of [Chandrakirti's] 'Supplement to the Middle Way.'*

Lama Tsongkhapa says "tenth ultimate mind generation" in that ultimate mind generation has ten divisions that correspond with the ten grounds. Is the ultimate mind generation a realization of emptiness alone or is it something more? If it is an exalted knower in the continuum of a bodhisattva directly realizing emptiness is it pervaded by being an ultimate mind generation? A conventional mind generation has to be a main mind. Here the point is whether an ultimate mind generation is necessarily a main mind. This can be discussed at length. The definition of an ultimate mind generation in the first chapter of the Jedzun Chogyi Gyeltshen's *Ocean of Sport* (Tibetan text vol. I, page 154) is:

> The <u>definition of an ultimate mind generation</u> is: a mahayana superior's main mental knower abiding in a type of realization that is a special wisdom [for which] dualistic appearances with respect to the mode of abidance of complete enlightenment have vanished, and that is either a conventional or ultimate mind generation.

All ten grounds have now been explained. On the first ground the bodhisattva attains a surpassing perfection of generosity, on the second he attains a surpassing perfection of morality, on the third he attains a surpassing perfection of patience, and so forth. According to the Svatantrika Madhyamika system, a bodhisattva attains a surpassing practice of the perfection of generosity but not a perfection of generosity because if he has attained a perfection of generosity he has definitely attained omniscience. The Prasangika Madhyamikas do not posit this in the same way, rather they say that there are two types of perfection of generosity, a mundane and a supramundane perfection of generosity. What is to be understood is that when a surpassing perfection of generosity is attained the bodhisattva does not have even a stain of miserliness. Chandrakirti's *Supplement* says that when a surpassing perfection of morality is attained the bodhisattva is completely free, even in a dream, from the stains of broken morality. This means that the bodhisattva does not break his morality, that is, he does not engage in non-virtue, even in a dream. With respect to the third mind generation, Chandrakirti says that when a surpassing perfection of patience is attained the bodhisattva does not become angry even if his body is cut into pieces, but instead his patience increases. We should make prayers and train to become like these bodhisattvas.

When the bodhisattva attains a surpassing perfection of effort he is completely without laziness. Likewise, when he attains a surpassing perfection of concentration, the bodhisattva is completely without distraction. When he attains a surpassing perfection of wisdom, there is no longer the arisal of faulty wisdom. When he attains a surpassing perfection of method he has the twelve types of skill in means, the six internal and six external. When the bodhisattva attains a surpassing perfection of prayer, all his prayers, such as the ten great prayers, are actualized. When he attains a surpassing perfection of power, he attains the ten powers. On the tenth ground he attains a surpassing perfection of exalted wisdom.

In this way the ten grounds have been discussed, next Chandrakirti sets out the qualities of these ten grounds.

Wednesday afternoon, 4 April 2001

THE QUALITIES OF THE TEN GROUNDS

Lama Tsongkhapa's *Illumination* (Tibetan text page 431) says:

3B1C-3 Presentation of the qualities of the ten grounds

A Explaining the qualities of the first ground
B Explaining the qualities of the second through the seventh ground
C Explaining the qualities of the three pure grounds

3B1C-3A Explaining the qualities of the first ground

Chandrakirti's autocommentary says:

Now, the explanation in terms of attaining the quantity of their qualities, beginning from the first mind generation:

At that time he perceives a hundred buddhas and
He also realizes their blessings,
Remains for a hundred eons in that very life and
Perfectly engages the limits of past and future. [11.1]

The intelligent one absorbs and gives up a hundred meditative stabilizations.
He shakes around and can illuminate a hundred world systems.
Likewise he ripens a hundred sentient beings with magical powers and
Goes to realms corresponding to the number one hundred. [11.2]

He perfectly opens the doors of the Dharma; the Child of the Mighty Sage,
In his own body,[241] *also displays bodies all around.*
The bodies, beautified and equipped by having their own retinue, each also
Displays children of the Conqueror corresponding to one hundred. [11.3]

As is taught [in the *Sutra on the Ten Grounds*]:

Having thoroughly come forth, he also utterly attains a hundred meditative stabilizations in a single instant, moment, and period, and also enters absorption in them; he perceives a hundred buddhas and also perfectly knows their blessings; moves a hundred world systems; goes also to a hundred realms; illuminates a hundred world systems; matures a hundred sentient beings; remains for a hundred eons; reaches the limits of the past and future up to a hundred eons; completely opens a hundred doors of the Dharma; everywhere displays a hundred bodies and also everywhere displays each body as having a retinue of a hundred bodhisattvas.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B1B-1 Qualities of the first stage

[241] All the Tibetan texts have "in his own body" rather than "from his own body."

At that time, he sees a hundred buddhas,
And from them also realizes blessings.
He can stay in the same life for a hundred eons,
And clearly perceive to those limits of past and future. [11.1]

The intelligent can enter and leave a hundred concentrations.
He can shake a hundred worlds around, and can illuminate them.
Likewise, by magical powers, he ripens a hundred sentient beings,
And also goes to pure realms to the number of a hundred. [11.2]

He can fully open doors of the Dharma. This son of the King of Sages
Can also, from his own body, manifest bodies everywhere,
Each body also, beautified and made ready with its own entourage,
Appears in company with a hundred sons of the conquerors. [11.3]

It should be understood that on the first stage, twelve hundred qualities are attained; for when he attains the first stage, that bodhisattva can see a hundred buddhas [in a very short space of time], also this bodhisattva can realize blessings from those hundred, he can remain in the same life for a hundred eons, and can clearly perceive the past and the future also to the limit of a hundred eons; this intelligent one can enter one hundred samadhi concentrations and leave them; this bodhisattva can shake around a hundred worlds and illuminate them; likewise, by miraculous powers, he can ripen a hundred sentient beings, and also go to pure lands [of the buddhas] having the number of a hundred; that bodhisattva can fully open a hundred doors of the Dharma; this son of the King of Sages can also manifest completely a hundred bodies from his own body, and each of the [hundred] bodies also appearing in company with a hundred buddha sons, is beautified and made ready by having its own entourage.

On the first ground the bodhisattva attains twelve sets of a hundred qualities:
1. He can see 100 buddhas in an instant.
2. He knows that he is blessed by those 100 buddhas.
3. He lives for 100 eons.
4. He engages the limits of the past to 100 eons and the limits of the future to 100 eons.
5. He can enter and rise from 100 meditative stabilizations.
6. He can shake 100 world systems.
7. He can illuminate 100 world systems.
8. He can ripen 100 sentient beings by means of magical emanations.
9. He can go to 100 buddha lands.
10. He opens 100 doors of Dharma, meaning that he can give many types of teachings in accordance with the needs of those to be subdued.
11. He can create 100 bodies in or from his body.
12. He also makes each of these 100 bodies have a retinue of 100 bodhisattvas.

The number of each of these twelve qualities increases on each subsequent ground. These are also mentioned in Jedzun Chogyi Gyeltshen's *Grounds and Paths*. If one understands how many qualities a first ground bodhisattva has, what need is there to mention how many a buddha has?

As was said before, an ultimate mind generation is: a mahayana superior's main mental knower abiding in a type of realization that is a special wisdom [for which] dualistic appearances with respect to the mode of abidance of complete enlightenment have vanished, and that is either a conventional or ultimate mind generation. Therefore, that it is a wisdom directly realizing emptiness alone is not sufficient for it to be an ultimate mind generation; it must be a main mental knower of a mahayana superior sustained by the wisdom directly realizing emptiness. What is the measure abiding in a type of realization that is a special wisdom and abiding in the type of realization that is a special method? This is discussed in the *Ornament for Clear Realizations*. If it is a wisdom directly

realizing emptiness is it pervaded by abiding in a type of realization that is a special wisdom? There is no pervasion. Posit! The uninterrupted path of a hearer path of seeing, this being a the wisdom directly realizing emptiness but not abiding in a type of realization that is a special wisdom. Why not? Because the wisdom directly realizing emptiness in the continuum of a hearer is not a special wisdom because it is not conjoined with a special method, the mahayana mind generation. If it abides in a type of realization that is a special wisdom it must be conjoined with a special method, the mahayana mind generation.

Lama Tsongkhapa's *Illumination* (Tibetan text page 431) says:

> *At the time he sees a hundred buddhas and*
> *Also realizes that he is blessed by them.*
> *In that lifetime he lives for a hundred eons and*
> *Also perfectly engages the limits of the past and future.* [11.1]
>
> *The intelligent one absorbs in and relinquishes a hundred meditative stabilizations.*
> *He shakes and is able to illuminate a hundred world systems.*
> *Similarly, he ripens a hundred sentient beings with magical emanations and*
> *Also goes to pure lands corresponding to the number hundred.* [11.2]
>
> *He perfectly opens the doors of Dharma. This child of the Powerful Subduer*
> *Also thoroughly displays bodies in his own body.*
> *Each of these bodies, beautified and endowed with its own retinue*
> *Is also displayed with a corresponding hundred conquerors' children.* [11.3]

At the time when the first ground, the ultimate mind generation, is attained:
(1) *this* first grounder *sees a hundred buddhas* in a brief instant.

(2) He is *also blessed by those* hundred buddhas, that is, this bodhisattva also *realizes* their blessings.

(3) *In that* very *lifetime* of abiding on that first ground, he *lives for a hundred eons*.

(4) He *also perfectly engages the limits of the past and future* for a hundred eons. This means that his seer that is an exalted wisdom also engages in the hundred eons that are the limits of the past and future.
(5) *The intelligent one*, that is, this bodhisattva, *absorbs in and* also *relinquishes*, that is, arises from, *a hundred meditative stabilizations*.
(6) This bodhisattva *shakes* a hundred world systems *and*

(7) *is able to illuminate a hundred world systems*.

(8) *Similarly*, this bodhisattva *ripens a hundred sentient beings with magical emanations* and

(9) *also goes to* the *pure lands* of a buddha *corresponding to the number*, that is having the number, *hundred*.

(10) This bodhisattva *perfectly opens* a hundred *doors of Dharma*.

(11) *This child of the Powerful Subduer also thoroughly displays* a hundred *bodies in his own body*.

(12) Also *each of these* hundred *bodies, also displayed with a corresponding hundred conquerors' children* each, is *beautified and endowed with its own retinue*.

Lama Tsongkhapa's commentary here is very similar to Chandrakirti's autocommentary. One difference is Lama Tsongkhapa's statement regarding the bodhisattva engaging the limits of the past and future for a hundred eons: "This means that his seer that is an exalted wisdom also engages in the hundred eons that are the limits of the past and future."

Is the way in which a bodhisattva shakes one hundred world systems like an earthquake? It is not. However, in the world it is sometimes said that when there is an earthquake it is because a bodhisattva has attained the first ground. In fact, when the Buddha was asked why there was an

earthquake he answered that it was because at such-and-such a place such-and-such a bodhisattva had attained the first ground.

Magical emanations are displayed by a bodhisattva in order to develop belief in sentient beings and make them ready for ripening. However, one needs to be careful about what one believes. For example, there is a story about a man in Dharamsala who, it was said, could diagnose people's illness by merely looking at their face. He was once invited by the head of the Tibetan hospital to visit the hospital. There he was taken to see some patients and was asked what illness they had. Each time he correctly gave the diagnosis, much to the surprise of the head of the hospital. However, after the clairvoyant had left, the head of the hospital asked the patients what they had thought of this man, whereupon they told him that this man had come to the hospital very early that morning and had read each of their charts!

Lama Tsongkhapa's *Illumination* (Tibetan text page 432) says:

3B1C-3B Explaining the qualities of the second through the seventh ground

Chandrakirti's autocommentary says::

The intelligent one, having attained those qualities by abiding on
Extremely Joyous, will, just like that, perfectly attain those in
Thousands by abiding on Stainless – [11.4abc]

Only those [twelve] qualities corresponding to the number one hundred that are attained by this bodhisattva who generates the first mind are to be enumerated greater, saying, 'the bodhisattva who generates the second mind will attain one thousand."

Those very qualities on the third mind generation and so forth,

on these
Five grounds the bodhisattva will attain a hundred thousand, [11.4cd]

A billion, and he will attain ten billion.
Then, he will also attain a thousand billion; a billion
Billion multiplied completely by a hundred and again
Perfectly multiplied by a thousand, will all be fully attained. [11.5]

It should be understood that the bodhisattva who generates the third mind will attain a hundred thousand of the qualities that were explained. The bodhisattva who generates the fourth mind will attain a billion. The bodhisattva who generates the fifth mind will attain ten billion. The bodhisattva who generates the sixth mind will attain a thousand billion. The bodhisattva who generates the seventh mind will attain a hundred thousand billion billion.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B1B-2 Qualities of the second to seventh stages

When the intelligent, dwelling in the Joyful, has received
These qualities, just like this the dweller on the Stainless Stage
Receives them actually in thousands. [11.4abc]

When the intelligent one dwelling on the Joyful Stage has attained these twelve hundred qualities, just like this the bodhisattva dwelling in the second stage, the Stainless, attains twelve thousand of these qualities for he attains the qualities of seeing a thousand buddhas in one instant, etc., up to manifesting as a thousand of his own body, each one being surrounded by an entourage of a thousand bodhisattvas each.

On these five stages,
The bodhisattva receives them by the hundred thousand, and [11.4cd]

The thousand million; he receives ten thousand million;
Then he receives a million million; then a thousand thousand
Million million, multiplied completely by a hundred,
And all again multiplied by a thousand, he fully attains. [11.5]

The bodhisattvas dwelling on the five stages from the third to the seventh attain the twelve categories of qualities, for on the third stage one attains twelve hundred thousand qualities, and on the fourth, twelve hundred times ten million; the fifth-stager attains twelve thousand times ten million qualities, then on the sixth stage one attains twelve hundred thousand times ten million, and on the seventh stage, one attains to the full limit twelve multiplied completely by a hundred times a hundred thousand million[242] times ten million qualities, multiplied completely again by a thousand (=$12x10^{23}$).

On each of the grounds the bodhisattva has twelve sets of qualities:
1. he sees buddhas,
2. he knows that he is blessed by these buddhas,
3. he lives for eons,
4. he engages the limits of the past and the future,
5. he enters and rises from meditative stabilization,
6. he shakes the world systems,
7. he illuminates the world systems,
8. he ripens sentient beings by means of magical emanations,
9. he goes to the buddha lands,
10. he opens doors of Dharma,
11. he displays bodies, and
12. he also displays each of these bodies with a retinue of bodhisattvas.

On the first ground the bodhisattva's twelve sets of qualities are multiplied by 100, on the second ground they are multiplied by 1000, and so forth. Note that Tibetan numbers have particular names through 10^{59}, this being called "countless."

Lama Tsongkhapa's *Illumination* (Tibetan text page 432) says:

The intelligent one abiding on the Extremely Joyous,
Having attained them, abiding on the Stainless, just like that
Perfectly attains one thousand of them. The bodhisattvas
on the five grounds fully attain a hundred thousand, [11.4]

Attain a billion, attain ten billion,
Also attain a thousand billion, and
Fully attain a billion billion multiplied completely by one hundred,
All again perfectly multiplied by a thousand. [11.5]

The intelligent one abiding on the Extremely Joyous ground, *having attained* the twelve hundred qualities, transfers to the second ground. *Just as* was explained in regard to the first, *one abiding on the Stainless perfectly attains* the set of twelve qualities in terms of *one thousand*. Regarding those very sets of twelve qualities, *the* five *bodhisattvas on the five grounds* – the third, fourth, fifth, sixth, and seventh – respectively *fully attain*

- twelve by *a hundred thousand*,

[242] *khrag.khrig* is variously defined as 10^6, 10^8, 10^{10} or 10^{11}.

- twelve by *a billion*,
- twelve by *ten billion* (10^{10}),
- twelve by *a thousand billion* (10^{12}),
- twelve by *a billion billion* (10^{18}) *multiplied completely by one hundred* – that is, a hundred billion billion (10^{20}) – and *all again perfectly multiplied by a thousand*; that is, twelve by a hundred thousand billion billion (10^{23}).

In short, these bodhisattvas have many qualities! In fact, their qualities are inexpressible. Their qualities increase on the grounds as the potential of their realizations increases. For example, due to an increase in the qualities of the mind, one attains such physical powers as being able to emanate bodies. When one sees a person with these external signs, such as his being able to create magical emanations, one can infer from this that he has inner realizations.

When I was about 16 years old, I had a classmate who was about 12 years old. When we were studying the subject of the qualities of the ten grounds in the text *Grounds and Paths*, he asked our teacher what was the point of counting these qualities since it seemed to him to be enough to know that the bodhisattvas have them, without it being necessary to know exactly how many they have. This young monk thought that it was sufficient to say that the bodhisattva have lots of qualities!

Thursday morning, 5 April 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 432) says:

3B1C-3C Explaining the qualities of the three pure grounds

Chandrakirti's autocommentary says:

> Above that since it is not possible to fully specify the qualities through numbers, they are fully specified through smallest atoms:
>
> *The one abiding on Immovable Ground without conceptualization*
> *Will attain qualities equal in number to*
> *However many atoms there are*
> *In world systems totaling a hundred thousand billion.* [11.6]
>
> By generating the eighth mind of the bodhisattva, the qualities that were shown will be attained as many as the particles of smallest atoms of a hundred thousand billion world systems.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B1B-3 Qualities of the three pure stages

The dweller in the Immovable Stage, without
Conceptualization, gains qualities whose number
Equals the atoms there are in a hundred thousand
Thrice-thousandfold world systems added together. [11.6]

The bodhisattva dwelling on the eighth stage, the Immovable Stage, who has no conceptualization grasping at true existence, attains superior qualities; for he attains qualities equal in number with how many atoms there are in a hundred thousand thrice-thousandfold world systems combined.

The qualities of an eighth ground bodhisattva total a hundred thousand billion. The world systems are classified in terms of a small thousand (1000), a middling thousand (1000^2 or a million), and a great

thousand (1000^3 or a billion). The third chapter of Vasubandhu's *Treasury of Knowledge* says that there are nine bases – Mount Meru, the four continents, the sun, moon, the desire realm gods, and the Brahma Realm – which are multiplied by a first 1000 for a total of 1000; multiplied by a second thousand for a total of 1,000,000; and multiplied by a third thousand for a total of 1,000,000,000. On the eighth ground the twelve qualities of a bodhisattva are multiplied by a hundred thousand billion.

Chandrakirti's autocommentary says:

> *The bodhisattva who abides on the ground of*
> *Excellent Intelligence will attain the qualities shown before*
> *To the extent of atoms of ten times the perfect*
> *Total of a countless hundred thousand.* [11.7]
>
> The bodhisattva who has generated the ninth mind will attain the qualities that were shown before equal to the atoms of ten times a hundred thousand countless billion world systems.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *The bodhisattva dwelling on the stage*
> *Of Good Intelligence obtains the qualities*
> *Explained above to the measure of the atoms*
> *Of countless millions all added together.* [11.7]

The bodhisattva dwelling on the stage of Good Intelligence attains superior virtuous dharmas for he attains qualities equal to the number of the atoms in ten countless hundreds of thousands [of thrice-thousandfold world systems] of the previously explained qualities, added together.

The ninth ground bodhisattva has "the qualities that were shown before equal to the atoms of ten times a hundred thousand countless billion world systems."

Chandrakirti's autocommentary says:

> *To some extent, on this tenth, his qualities*
> *Will greatly surpass the sphere of those and*
> *Will be as many as the amount of atoms existing*
> *In the total of what are not the sphere of speech.* [11.8]
>
> By generating the tenth mind of the bodhisattva, the qualities that were shown will be attained as many as the particles of smallest atoms of inexpressibly inexpressible buddha realms.

For the tenth ground bodhisattva "the qualities that were shown will be attained as many as the particles of smallest atoms of inexpressibly inexpressible buddha realms."

Chandrakirti's autocommentary says:

> The term "to some extent," of "to some extent, on this tenth, his..." indicates progression regarding the qualities to be expressed, i.e., "they are not exhausted in only merely that."
>
> Furthermore, this bodhisattva,

He is able to show instant by instant
Completed buddha bodies passed beyond number together
With bodhisattvas in the hair pores and
Likewise also gods, demigods, and humans. [11.9]

This bodhisattva who generated the tenth mind, without motivational thought, is able to show buddha bhagavans passed beyond number in each of the hair pores of his body and a sovereign retinue of immeasurable bodhisattvas in one and yet another aspect instant by instant. In addition to those he is able to show, in each hair pore in each instant, the cyclic existence of the five migrators without even mixing up the differences due to the divisions of humans and so forth.

The tenth ground bodhisattva is able to display numberless buddhas and bodhisattvas in a single pore of his body. These qualities show that such a bodhisattva has attained extremely high realizations.

Chandrakirti's autocommentary says:

The term 'also' is for the purpose of summarizing the unmentioned. That is, it summarizes the meaning up through:

> [He is] able to teach the Dharma spontaneously to sentient beings who are subdued by Indra, Brahma, mundane protectors, human kings, hearers, solitary realizers, and tathagatas, having taken the form of Indra...

– and so forth.

Extensive distinctions of the qualities should be clarified from the *Sutra [of the Ten Grounds]* itself.

The tenth ground bodhisattva is also able to display the bodies of Indra, Brahma, and so forth. In short, he can take on any form that will benefit sentient beings.

In the past in Tibet there was a lama, perhaps the Ganden throne holder, who, when he was dying, was asked by his disciples to return quickly to them. However, he refused, saying that he would not return as there was no benefit in his taking rebirth again in Tibet. His disciples insisted that he return but the lama said that if he took rebirth he would not do so in Tibet and told his disciples not to look for his reincarnation. This is also true of another famous lama who, when he was dying was asked to return. Such highly realized beings are able to see that it would be of more benefit to take rebirth even in another world system.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

Something of the tenth: his qualities
Here go far beyond verbal description;
They are as many as the atoms in
All non-objects of speech added together. [11.8]

In his pores, together with bodhisattvas,
Bodies of perfect buddhas beyond number,
And likewise devas, asuras, and humans also,
In every instant, he is able to show. [11.9]

Something of the bodhisattva dwelling on this tenth stage: he attains qualities greatly exceeding those on the ninth stage and below; for his qualities are far beyond the realm of speech, he attains qualities equal in number to as many atoms as there are in all the non-objects of speech, i.e. the buddha fields, added together; and in every

pore, he is able to show bodhisattvas and, together with them, the bodies of perfect buddhas, beyond computation, and likewise devas, asuras, and human beings too, [changing their form] from instant to instant.

The tenth ground bodhisattva's qualities are inexpressible by means of terms. This is the meaning of saying that his qualities have gone beyond the sphere of activity of speech.

Chandrakirti's autocommentary says:

> The explanation demonstrating the qualities of the bodhisattvas is finished.

Lama Tsongkhapa's *Illumination* (Tibetan text page 432) says:

> *Since one abiding on the Immovable ground lacks conceptions*
> *He will attain qualities equal in number*
> *To however many particles exist in worlds*
> *Totaling a hundred thousand billion.* [11.6]

Since from the eighth ground one cannot count the qualities in terms of a basis of numbers, they are explained to be completely counted in terms of subtle particles. *Since one abiding on* the eighth ground, *the Immovable ground*, *lacks conceptions* conceiving true existence in regard to persons and phenomena, he *will attain* sets of *qualities equal in number to however many* – that is, the number of – *particles existing in worlds totaling a hundred thousand billion*, that is, the three world systems of a billion.

> *The bodhisattva abiding on the ground of*
> *Good Intelligence, attains the qualities indicated previously*
> *To extent of the particles of ten times*
> *The perfect total of a hundred thousand countless.* [11.7]

The bodhisattva abiding on the ninth ground, *the ground of Good Intelligence*, *attains* the twelve sets of *qualities indicated previously* equal in *extent* to the number of subtle *particles of ten times the perfect total of a hundred thousand* countless – that is, a million countless world systems of a billion (10^{74}).

> *For the time being, on the tenth his qualities*
> *Greatly surpass the sphere of activity of speech and*
> *Are however many particles there are*
> *Totaling what is not the sphere of activity of speech.* [11.8]

On the tenth ground, *the qualities of this* ground, the twelve sets explained before, *greatly surpass the sphere of activity of speech and* are attained equal to the number of *however many* numbers of *particles there are totaling what is not the sphere of activity of speech*, that is, that are more inexpressible than the inexpressible buddha lands. The term "for the time being" (v. 11.8a) says that "The qualities on the tenth ground are not at all exhausted in merely what is expressed here." Stating "That expressed for the time being, or previously" expresses the order in which other qualities are indicated below.

> *He is able to display within each instant*
> *The bodies of complete buddhas together with bodhisattvas,*
> *Passed beyond counting, in his pores, and,*
> *Similarly, also gods, antigods, and humans.*

Moreover, this bodhisattva, without the motivation thinking to display emanations, *is able to display the bodies of bodhisattvas and complete buddhas*, each *passed beyond counting*, *in* each of *the pores* of his body *together* with their retinues of inestimable bodhisattvas, also in a different order, *within each instant*. *Similarly*, aside from them, he is also able to display, without mixing, the different divisions of the cyclic existence of the five migrating beings, *gods, antigods, humans*, and so forth, in each of his pores in each instant.

> The term "also" is for the purpose of condensing that not mentioned, that is, when gathering together those not mentioned it is the summarized meaning of stating:
>
> > He is able to teach the Dharma spontaneously to the sentient beings who are subdued by Indra, Brahma, worldly protectors, the kings of human beings, the hearers, solitary realizers, and the tathagatas through taking the form of Indra and so forth.
>
> This should be understood from the extensive [explanation] in the *Sutra on the Ten Grounds*.

The qualities of a bodhisattva on the three pure grounds are beyond conception. Therefore, we need faith in the validity of these scriptures, on the basis of which we can pray to become like these bodhisattvas and determine to put effort into attaining their qualities. We should make a promise to attain the qualities of the seven impure grounds, followed by those of three pure grounds, up to the buddha ground. When wishing to attain these qualities, we should be confident that we can actually attain them as in this way we will increase our courage and our determination to engage in the bodhisattva path. Even though we are not able to achieve these qualities presently, we should try to develop the mind of enlightenment thinking "I will attain enlightenment for the benefit of sentient beings." We should think "Even if I cannot help others, at the very least I will not harm them." Each morning when we wake up we should develop these positive thoughts. When we think "I will not harm others" we should think "I will not harm them with my body, speech, and mind." This is because we harm others with our body and speech directly and harm them indirectly with our mind. We should pray that our body will not become a cause for generating attachment and hatred in the minds of others. We should also pray that our speech does not become a cause for generating attachment and hatred in others' minds. Hence, we should pray that our body and speech do not become a cause for others to generate afflictions. Making such prayers and resolutions helps us accumulate the collections and makes our day more meaningful. During the day, we should be mindful of the promise that we made that same morning. In this way our human life will become meaningful. We should also rejoice in the deeds of bodhisattvas and make their achievement our own goal.

In short, how do such bodhisattvas benefit sentient beings? They do so by displaying various types of emanations even in their own body pores.

This concludes the discussion of the qualities of the ten grounds, the causal grounds.

THE RESULTANT GROUND

Lama Tsongkhapa's *Illumination* (Tibetan text page 434) says:

3B2 The explanation of the resultant ground

- A The way of initially becoming a buddha
- B Presenting the bodies and qualities
- C Indicating the emanation body
- D Proving there is a single vehicle
- E Explanation of the duration of manifest enlightenment and remaining

3B2A The way of initially becoming a buddha

1. Actual meaning
2. Dispelling arguments

3B2A-1 Actual meaning

Chandrakirti's autocommentary says:

Desiring to express just slightly the qualities of the buddha ground after that, it is explained in terms of the Buddha Bhagavan by way of actualizing praise:

Because moonlight in a stainless sky illuminates, therefore the aim
For which you strove again on the ground previous to generating
The ten strengths and strove in Akanishtha, the supreme state, peace,
The finality of all qualities, the matchless, was acquired by you. [12.1]

For example, the moon is able to illuminate the entirety of migrators in only a stainless sky. Likewise, the Bhagavan, having understood the potential for himself to gain the buddha qualities by gaining the tenth mind generation that cleanses the darkness that hinders attaining the buddha qualities, begins to strive for the latter buddha ground. The aim for which this striving was begun – the highest exalted wisdom – was acquired in only the abode of Akanishtha of the Bhagavan.

It is the finality of qualities because here qualities reach their limit and are perfected. It is also matchless because there is nothing similar to that and because there is nothing higher.

Gedun Drup's *Mirror of the Clarification of the Thought,* as translated by Martin Willson, says:

3B2A-1 Substance

Because, for the light of the moon in an immaculate sky to be bright,
Earlier, on the stage of developing the ten powers, you strove again,
The aim for which you strove in Not Low, being the highest degree, cessation,
Reaching the limit of all qualities, without match: this you attained. [12.1]

The purpose for which the Buddha, the Blessed One, made effort in the [pure land] of Not Low (Akanishtha) [i.e., only in that place], was the highest degree, cessation, the matchless, unexcelled wisdom knowledge which reaches the limit of all qualities. He received this [wisdom knowledge] because, as the light of the moon in an immaculate sky makes forms [or all sentient beings] clear, at a previous time, on the tenth stage, where one develops the ten powers, [i.e., buddhahood,] he again made an effort and received the final result.

On the tenth ground the bodhisattva again puts effort into actualizing buddhahood. In this way, all the powers for which the bodhisattvas strove on the tenth ground are actualized on the buddha ground. He attains enlightenment in the form of an enjoyment body on the basis, or body, of a being of Not Low (Akanishta). Hence, the bodhisattva actually attains buddhahood in Not Low.

Jedzun Chogyi Gyeltshen's *Ocean of Sport* quotes from the sutra that says: "A perfect buddha there, the emanation becomes a buddha here." "A perfect buddha there" refers to the tenth ground bodhisattva who takes rebirth in Not Low and attains enlightenment there. Simultaneously his emanation takes rebirth in the desire realm and attains enlightenment here. This is debated at length asking, for example: "If it is one who attains enlightenment for the first time is his body pervaded by being a body of a being of Not Low?" Some say that it is, whereas others say that it is not. In short, the tenth ground bodhisattva attains enlightenment in Not Low and simultaneously all his emanations in the desire realm also attain enlightenment. Where does a bodhisattva attain enlightenment in the form of an enjoyment body? That place is Not Low.

The qualities on the resultant ground are matchless, such as the four close placements of mindfulness and so forth which at this point are culminated. Although the four close placements of mindfulness exist in all those who have entered a path, the difference is that those of a buddha are culminated. Thus, when the bodhisattva attains the resultant ground, he attains the qualities of a buddha that are the culmination of the four close placements of mindfulness and so forth.

The enjoyment body has five certainties:

1. certainty of abode, abiding only in Not Low,
2. certainty of body,
3. certainty of retinue,
4. certainty of doctrine,
5. certainty of time.

The etymology of the word 'enjoyment' of enjoyment body indicates that he enjoys only the mahayana Dharma. The enjoyment body abides in Not Low as long as cyclic existence is not empty and emanates many emanations to all the various world for the benefit of sentient beings.

With respect to the resultant ground, Chandrakirti says: "It is the finality of qualities because here qualities reach their limit and are perfected. It is also matchless because there is nothing similar to that and because there is nothing higher." When buddhahood is attained, all qualities are matchless and the highest.

Chandrakirti's autocommentary says:

> In order to show that "There, when manifestly and completely enlightened, the Bhagavan instantly acquires omniscient exalted wisdom," it is explained:
>
> *Just as space has no divisions by the divisions of vessels, like that,*
> *Thusness has no divisions at all made by things; therefore,*
> *Having created correct comprehension about the equality of taste,*
> *You, excellent knower, instantaneously comprehend objects of knowledge.* [12.2]
>
> For example, although vases, metal bowls, and so forth are different, because of the similarity in merely lacking obstruction, the space belonging to them has no difference. Likewise, although functioning things – form, feeling, and so forth – are different, since the suchness belonging to them has no difference in having the characteristic of non-production, suchness is to be understood as of only one taste.
>
> Moreover, since only one instant of exalted knower comprehends [that equality of taste], the Bhagavan gained omniscient exalted wisdom in only one instant of exalted knower.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *Just as space lacks classification by the classes of its vessels,*
> *So reality has no classes made by its matters, therefore,*
> *Understanding perfectly that there is just one same flavor,*
> *You, good knower, understand knowables in an instant.* [12.2]

This good knower instantly fully understands all knowables, because he perfectly knows absolute reality to the limit as of just [one] same flavor, for just as the space [contained in or filling different vessels, pots, bowls, etc.,] is [the same,] merely the negation of obstructive contact, and has no separate classes by the classes of the vessels, so the absolute reality [of forms, feelings, etc.], which does not have any different classes made by the matters [or own causes and conditions of the forms, feelings, etc.], is the same by way of not arising again.

Space itself is one, it has no divisions. However, in dependence on a particular basis, a pot, a bowl, and so forth, one can distinguish the space in a pot, the space in a bowl, and so forth. Likewise, suchness is one, it can be distinguished in terms of the basis of the attribute, although not in terms of the attribute itself. For example, if there are five pots made of the same substance which fired in the same oven and so forth, each one is the same in being a pot but one in dependence on their contents, such as chili, salt, sugar, honey, and soya sauce, they come to be called "chili pot," "salt pot," and so

forth. Similarly, space, in dependence on the vessel in which it is found, is called "the space of a pot," the space of a bowl," and so forth. Likewise, emptiness has no divisions, but can be differentiated in terms of its basis.

Thursday afternoon, 5 April 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 434) says:

> *Because moonlight in a stainless sky illuminates,*
> *Earlier, on the ground on which the ten powers are generated, you strove again, and*
> *In Not Low, striving for that purpose, you gained*
> *The supreme state, peace, the culmination of all qualities, the matchless.* [12.1]

> Just as, for example, *moonlight in a stainless sky* is able to *illuminate* all migrating beings without exception, similarly, having understood that he is able to gain a buddha's qualities by gaining the tenth mind generation that purifies the darkness hindering the attainment of a buddha's qualities, *again on the tenth ground before* generating the ten powers – the buddha ground – he *strives* or puts effort into attaining the buddha ground. Moreover, the supreme state, peace – unsurpassed exalted wisdom – *the purpose of that striving*, *is gained by you*, the bhagavan, *in Not Low* (Akanishta), that is, in only that place. This exalted wisdom is the culmination of all qualities because here *all* the *qualities* that are the close placements of mindfulness and so forth *are culminated* and perfected. *They are* also *matchless* because there are none similar and because there are none that are higher.

Moonlight in a cloudless sky is able to illuminate all forms, likewise, the bodhisattva on the tenth ground has dispelled every type of obstacle to attaining the qualities of a buddha. Lama Tsongkhapa says: "having understood that he is able to gain a buddha's qualities by gaining the tenth mind generation that purifies the darkness hindering the attainment of a buddha's qualities." Having become a buddha he will not longer need to strive, whereas prior that the bodhisattva must still strive to attain the supreme state of buddhahood.

Where does the bodhisattva attain the exalted wisdom knowing all phenomena in each instant? He attains it in Not Low. The exalted wisdom of the tenth ground is not culminated exalted wisdom, it is only culminated on the buddha ground. What are the qualities of a bodhisattva that are culminated on the buddha ground? They are the four close placements of mindfulness and so forth. Lama Tsongkhapa says: "This exalted wisdom is the culmination of all qualities because here all the qualities that are the close placements of mindfulness and so forth are culminated and perfected. They are also matchless because there are none similar and because there are none that are higher."

Lama Tsongkhapa's *Illumination* (Tibetan text page 434) says:

> The translation of the first line in accordance with the autocommentary must come as was explained previously. Nagtsho's translation of the second line as "Again he strives in that by first generating the ten powers" is best.

Patsab translates the second line of verse 12.1 as "Earlier, on the ground on which the ten powers are generated, you strove again," whereas Nagtsho translates it as "Again he strives in that by first generating the ten powers." Lama Tsongkhapa says that Nagtsho's translation is best, however, he only quotes fourteen syllables in the Tibetan here, whereas the verse in the *Supplement* has fifteen syllables.

Lama Tsongkhapa's *Illumination* (Tibetan text page 434-5) says:

> Stating "only in Not Low" indicates that, for one who has not previously become a buddha, the basis for newly becoming a buddha must be a being of Not Low, whereas one who has already become a buddha before displays the manner of newly becoming a buddha in the desire realm. This is the system of the perfection vehicle.
>
> When he first becomes a buddha in Not Low, the bhagavan displays the gaining of the exalted wisdom of an omniscient being in each instant.

The basis or support of attaining buddhahood newly must be the body of a being of Not Low. On the other hand, someone who has already attained buddhahood shows the aspect of attaining buddhahood newly in the desire realm. This is the system of the perfection vehicle, whereas in the tantra vehicle the basis of attaining buddhahood newly is not necessarily the body of a being of Not Low, which is the body of a god. Instead, according to tantra, the best basis for attaining buddhahood newly is a human body and not a god body. This is because a human body or basis is the most suitable basis because it is born from a womb and composed of the six constituents. These six constituents are the three substances obtained from the father and the three substances obtained from the mother.

The *Ornament for Clear Realizations* says: "A perfect buddha there, the emanation becomes a buddha here." There is debate about this: "When someone becomes enlightened in the desire realm with the body of a fully ordained monk, is his body in the desire realm a body emanated by one in Not Low?" In short, according to the perfection vehicle the basis of one who attains enlightenment newly is necessarily the body of a being of Not Low. On the other hand, one who has already attained enlightenment can manifest the attainment of buddhahood newly in the desire realm, for example, Shakyamuni Buddha who took a supreme emanation body and showed the aspect of attaining buddhahood in this world. Who is the emanator of the emanation body? Usually it is said that if it is an emanator of a supreme emanation body it is pervaded by being a being of Not Low. How many types of emanation body are there? There are three: a supreme emanation body, an incarnate emanation body (emanation body of rebirth), and the emanation body of an artisan. If it is a tulku (literally "an emanation body" but also another title for a rinpoche) it is not pervaded by being the emanation body of a buddha.

Lama Tsongkhapa's *Illumination* (Tibetan text page 435) says:

> *Just as space does not have divisions in terms of the divisions of vessels, similarly,*
> *Because suchness does not have any of the divisions of produced things,*
> *It is just the same taste. When this is perfectly comprehended,*
> *You who possess excellent knowledge, comprehend objects of knowledge in an instant.* [12.2]
>
> *Just as*, for example, even though there are many *divisions* of different *vessels*, such as pots, metal bowls, and so forth, because the *space* belonging to these vessels, that is, which pervades them, is the same in being a mere negation of all that is obstructive, it *does not have divisions* other than that *in terms of* the different divisions. *Similarly*, even though there are many different divisions of things, such as forms, feelings, and so forth – that *produced* by their respective causes and conditions, *the suchness* lacking inherent production that belongs to them, *because of not having any divisions of production by things* at all, should be understood as being *the same taste*, that is, as being just one taste. *Since* that same taste, moreover, *is perfectly comprehended* by just one instant of an exalted knower, *you who possess excellent knowledge*, gain the exalted wisdom *comprehending* all *objects of knowledge in an instant*.

Emptiness cannot be divided, it is just one, however, there is the emptiness of a gold pot, the emptiness of a brass pot, the emptiness of a copper pot, and so forth. Thus, while emptiness cannot be divided, the basis of emptiness can be divided. If emptiness could be divided it would also be possible to divide the object of negation but this is not possible. There is debate: "Is there not a difference

between the emptiness of a sentient being and the emptiness of a buddha?" The non-affirming negative that is the mere negation of the object of negation in regard to a sentient being and in regard to a buddha are the same. Is the emptiness of true existence of the mind of a sentient being and the emptiness of true existence of the mind of a buddha not different? The non-affirming negative that is the mere negation of the object of negation is the same in both cases. On the other hand, if this is discussed in terms of the factor that is a freedom from adventitious stains there is a difference because the reality of the mind of a buddha is free from adventitious stains, whereas the reality of the mind of a sentient being is together with the adventitious stains. The first mind generation of the *Explanation of the 'Supplement to the "Middle Way"'* (J. Hopkins, *Compassion in Tibetan Buddhism*) says:

> *Even those abiding in the first mind of complete enlightenment*
> *Overcome those born from the speech of the Subduer Kings*
> *And solitary realizers through their own merit's increase.*
> *On the Gone Afar he surpasses them with his intelligence.* [1.8]

One commentary on this verse says that there is a difference in their seeing of the truth body but there is no difference in their seeing of reality.

The "many different divisions of things, such as forms, feelings, and so forth" refers to the five aggregates. These are different but their emptinesses – the non-affirming negative that is the mere negation of the object of negation, true existence – is of one taste.

Lama Tsongkhapa's *Illumination* (Tibetan text page 435) says:

3B2A-2 Dispelling arguments

A Setting out the former position
B Refuting that system

3B2A-2A Setting out the former position

Chandrakirti's autocommentary says:

> [An objection] is mentioned about that:
>
> *If, when pacification is thusness, awareness would not engage it, and without*
> *Engagement, it is also unreasonable for awareness to ascertain the object to be known,*
> *Entirely unknowing, how would it know? It would be contradictory. Without*
> *The knower, who would teach others [to be subdued] by you, saying, "Like this?"* [12.3]
>
> In presenting, "non-production is the suchness of forms and so forth," and positing that "that too is understood [by an awareness]," when presenting that "pacification [of inherent production] is suchness," one must then accept awareness as not engaging that in any way. Like this: if awareness engages suchness having the nature of non-production, having what aspect would it arise in? Therefore, since there is no aspect, awareness just does not engage suchness.
>
> If awareness does not engage, in that case, since it is also unreasonable for the subject to ascertain the object to be known, therefore, how is it worthy to be thorough knowledge? To say, "suchness is thoroughly known just without thoroughly knowing," is also unreasonable.
>
> If asked: Why?
>
> It was mentioned: Entirely unknowing, how would it know? It would be contradictory. To say, "entirely not knowing, it knows," this is a mutual contradiction. If entirely not knowing, how does it know? If the mind is unproduced, without an exalted knower, who makes others [to be subdued] by

you realize it saying, "I comprehended suchness having the characteristic like this?" Therefore, it is unreasonable.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B2A-2A Argument

It may be asked:

If reality were absence, intelligence would not perceive it.
The mind not perceiving surely cannot possess the object of knowables –
Without knowing anywhere, how could it be consciousness? That would be contradictory.
When there is no knower, how can you teach others 'It is like this'? [12.3]

"If the absolute reality [of form, etc.] were absence of inherent existence, intelligence [or wisdom] would not perceive it. The mind, not perceiving, surely cannot be a possessor of a knowable object. Without knowing an object anywhere, how could it be consciousness? It would be contradictory to consciousness. When there is no knower of such an absolute reality, how can you teach others 'The understanding of absolute reality is like this'? It is impossible."

This argument is flung by the lower schools at the Prasangika Madhyamikas. Their argument is that if the Prasangika Madhyamikas assert that the lack of inherent production of form is the emptiness of form it follows that this is known by an awareness. The lower schools say that the lack of inherent production of form cannot be posited by an awareness and cannot be engaged by an awareness. If an awareness cannot engage an object, how can an awareness know it? It follows that it is not an object of knowledge because it is not known. The lower schools say this because, for them, if it does not exist inherently it does not exist at all. They say that it is inappropriate to say that an awareness engages that which does not exist. If it does not exist inherently it cannot be an object of an awareness, and if it is not an object of an awareness how can it be said that an awareness knows it? If there is no knower there is no object of knowledge. In this way, the Prasangika Madhyamikas' assertion is contradictory and there is no knower of the lack of inherent existence. Chandrakirti says: "If, when pacification is thusness, awareness would not engage it, and without engagement, it is also unreasonable for awareness to ascertain the object to be known, entirely unknowing, how would it know? It would be contradictory."

To summarize, the lower schools say that if the lack of inherent production of form and so forth is suchness, form and so forth would be non-existent. Therefore, it is not an object of knowledge and without an object of knowledge there is no knower of it. So how can the Prasangika Madhyamika system teach "I have realized the lack of inherent production of form and so forth?" This is incorrect because it cannot be known because the object, the lack of inherent production, does not exist and therefore there is no knower of it.

Lama Tsongkhapa's *Illumination* (Tibetan text page 435) says:

OBJECTION:

"When pacification is suchness, the intellect does not engage it.
Without an awareness engaging it, the object-possessor of that object of knowledge is also not suitable to be ascertained.
Without being fully known, how can it be known? That would be contradictory.
In the absence of an exalted knower, how can you teach others saying 'It is like that'?" [12.3]

> If it is posited that "The lack of inherent production is the suchness of forms and so forth" and "That too is known by an awareness," *when* positing "The *pacification* of inherent production *is suchness*," one must assert that the *intellect*, that is, wisdom, *does not engage that* object in any way. In that case, when an awareness engages the suchness that is the lack of inherent production, the awareness would have the aspect of what object? It would not [have the aspect of any object]. Therefore, since there is no arisal whatsoever of an aspect of the object, an awareness does not engage suchness. *Without an awareness*, which is an object-possessor, *engaging* an object, since *the object that is an object of knowledge is also not suitable to be ascertained* by a mind, how is the meaning of suchness deemed to be thoroughly known? Because it is not suitable to say "*Without being* thoroughly *known*, suchness is known," *how can* an object that is not thoroughly known *be known*? *That would be contradictory*. Also when the mind that engages suchness is not produced, that is, does not arise, *in the absence of an exalted knower* of suchness *how* is it suitable for *you to teach others* – those to be subdued – stating "I comprehend the suchness that has *such* characteristics"? It is not suitable.

This is the thesis of the lower schools. The Prasangika Madhyamikas posit the pacification of inherent existence regarding forms and so forth as being an object of knowledge. The lower schools, on the other hand, say that it is incorrect that forms and so forth lack inherent existence because if they do not exist inherently they cannot be engaged by any awareness. They say that the assertion of the Prasangika Madhyamikas is incorrect because the lack of inherent production is not an object engaged by an awareness. This argument is based on the lower schools' assertion that if things do not exist inherently they do not exist at all. If things do not exist at all, then how can an awareness engage them? For this reason they say that the Prasangika Madhyamikas' statement "I realize reality" is mistaken.

Friday morning, 6 April 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 436) says:

3B2A-2B Refuting that system

1 Dispelling arguments that realizing suchness is unacceptable
2 Dispelling arguments that an exalted knower is unacceptable

3B2A-2B1 Dispelling arguments that realizing suchness is unacceptable

Chandrakirti's autocommentary says:

> Responding to this [the Prasangika says],
>
> *When non-production is thusness and awareness is also free of production,*
> *Then, through relying on that aspect, thusness is [as if] realized.*
> *Just as whatever aspect mind will have, it totally knows that object,*
> *Likewise, there is cognition through close dependence on the conventional.* [12.4]
>
> In this [world], it is said that "Consciousness cognizes the object if it apprehends the mere resemblance of its aspect." For example, it is said that "Blue is known if consciousness approaches production maintaining the aspect of blue." Likewise, it is finely designated that "Suchness is known if a knower [having] the resemblance of the aspect of suchness is produced."
>
> In order to indicate the state of resemblance of the aspect of that knower, mentioning that "When non-production is thusness and awareness is also free of production, then, through relying on that aspect, thusness is [as if] realized," it was presented by way of relying on its aspect.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B2A-2B1 Rejecting the argument of the impossibility of perceiving absolute reality

When reality is non-production, and the mind also is freedom from birth,
Then, depending on that aspect, it is as if it perceives reality.
Just as, when the mind has the aspect of anything, it comprehends
That object, so, depending on the conventional level, he cognizes. [12.4]

Although he has no conceptualization exhorting the teaching of the Dharma dependent on conventional truth, [one says that] he cognizes absolute reality, because from depending on or holding the aspect of that absolute reality, it is posited that he perceives absolute reality; for when [the object,] absolute reality, is absence of inherent production, [the subject,] the mind, too, is born having the aspect of freedom from inherent production, [like water dropped into water]. As, [for example,] a mind grasping blue is posited as comprehending that blue object whose aspect it possesses.

Objects, such as form, are not inherently produced, because of which the object-possessors realizing them are also not inherently produced. An awareness realizes suchness, the lack of inherent existence, in dependence on them. Chandrakirti says: "Then, through relying on that aspect, thusness is [as if] realized." When blue appears to an awareness, that awareness is said to apprehend blue. That awareness apprehending blue knows blue. Likewise, when the object that is the lack of inherent existence appears to an awareness, that awareness realizes that lack of inherent existence due to which it is said that that awareness realizes that object, like the awareness of blue realizes blue. If the aspect of the object appears there is an awareness apprehending that object. For example, if the aspect of yellow appears there is an awareness apprehending yellow and so forth. An object is spoken of in terms of an aspect appearing and a consciousness is spoken of in terms of apprehending an object.

"Likewise, there is cognition through close dependence on the conventional" means that suchness is realized in dependence on a conventionality or a nominality. Earlier the *Supplement* said:

Conventional truth is the method,
Ultimate truth arises from the method.
Whoever does not know the distinctions of these two
Enters an inferior path due to mistaken conceptions. [6.80]

The realization of conventional truth is the means for realizing the ultimate truth. It is necessary to rely on the realization of a nominal truth in order to gain the realization of ultimate truth. In other words, in order to realize the lack of inherent existence of form it is necessary to first ascertain form, the basis of emptiness. Without realizing the form itself one cannot realize emptiness in terms of that form.

Chandrakirti's autocommentary says:

> "Just as whatever aspect mind..." and so forth mentions the very famous example; that too was already explained. Therefore, it is presented that "Suchness is realized through designation;" it is not that something is actually known by some [knower], because both the knower and the object known are also just unproduced.

Emptiness is only realized by means of realizing a conventional truth. That is, only by ascertaining a nominal truth is one able to realize emptiness, ultimate truth. "Suchness is realized through designation" means that suchness is realized by means of a nominality. "Both the knower and the

object known are also just unproduced" means that they are both not produced inherently. Although all knowers are produced, there are objects of knowledge that are not produced.

Lama Tsongkhapa's *Illumination* (Tibetan text page 436) says:

RESPONSE:

At that time, when the lack of production is suchness and the awareness is also free from production,
Then, through relying on its aspect, it is as though it realizes suchness.
Just as the mind, having the aspect of whatever, thoroughly knows
That object, similarly, it is known in close dependence on a nominality. [12.4]

In this world, when considering that the consciousness subsequently takes on the aspect of the object, it is said that that object is known by a consciousness. *Just as*, for example, when a *mind* is produced *having the aspect* of blue it is said "*That* mind *thoroughly knows that object* blue," *similarly*, when a consciousness, an object-possessor, is produced having an aspect that is the likeness of the object suchness, it is finely imputed stating "Suchness *is known in dependence on* a *nominal* truth."

The way in which the consciousness subsequently takes on the aspect of suchness [is as follows]. *At that time*, *the lack of* inherent *production being the suchness* of the object, *and* – that is, while – the *awareness* that is its object-possessor *also* engaging having the aspect of being *free from* inherent *production*, like water poured into water, *then through relying on the aspect* of that object – that is, through apprehending it – *suchness is* posited as *realized*. Therefore, there is not the fault of the previous argument.

Nagtso's translation as "Then, to realize its suchness is to apprehend its aspect" (12.4b) is without [the words] "as though."

Here, the autocommentary says:

> Therefore, it is presented that "Suchness is realized through imputation." It is not that something is actually known by something because both the knower and the object known are also just unproduced.

The meaning of "through imputation," which is like saying "It is known in dependence on a nominality," means that it is posited as known through mere imputation without being known by means of its own entity; it is not posited that the knowledge of suchness is imputed. The meaning of stating "actually" and so forth is that it is not known through the arising of an aspect similar to blue, yellow, and so forth without being known through the mere arisal of the aspect of freedom from elaboration, in that, while the object suchness is unproduced, the object-possessor also has the aspect of not being inherently produced. In this case, when for those who propound the former position there does not arise the aspect of the object which is propounded stating:

- "There is no arising of the aspect of suchness to an awareness,
- when there is no arisal of the aspect of that object, the awareness does not engage the object,
- when it does not engage it, that object is not known, and
- when it is not known, it is contradictory for that object-possessor to be a knower,"

we too assert like that – that the awareness does not engage it and so forth. Therefore, since there is no response to that, it is taught that "Through refuting that there is no arising of the aspect of ultimate truth to an awareness, the aspect of that arises to an awareness and, through it arising, the object is posited as realized," along with examples. Due to this, those who propound that there is no non-conceptual exalted wisdom realizing ultimate truth in this system deprecate the supreme realization of a superior. Here, stating that "They instantaneously comprehend objects of knowledge" teaches that the exalted wisdom of an omniscient being is gained in just one instant and that the exalted wisdom of an exalted knower of modes does not know in terms of the object known and the knower appearing in the manner of being explicitly different. Since it seems that the way a buddha knows the modes and varieties must be understood well, it is expressed in brief [as follows].

With respect to that, since, until buddhahood is attained, a single awareness does not come to directly know both the individual appearance of a substratum and reality in a single instant, these two are posited by a knower alternately. Having become a buddha, the exhaustion without

exception of the latencies of the conception of true existence, he enters into the meditative equipoise directly realizing ultimate truth at all times, whereby

- because the meditative equipoise and subsequent attainment that is the arisal from that are not posited as alternating and
- because there is no exalted wisdom of subsequent attainment knowing the varieties that is a different entity from the exalted wisdom of meditative equipoise – as taught in the autocommentary on the *Two Truths* "Each instant of exalted knowledge pervades all the mandalas of objects of knowledge" – it must be asserted that a single exalted wisdom knows all the objects of knowledge that are the two truths.

At the time of having become an exalted wisdom that is a knower of modes in dependence on reality, since in the perspective of that awareness all dualistic appearances have been thoroughly pacified, that exalted wisdom engages as one taste, like water poured into water. At the time of having become an exalted knower of varieties in dependence on a substratum, although there is the dualistic appearance that is the individual appearance of object and object-possessor, since the latencies of mistaken dualistic appearance have been obliterated it is a dualistic appearance that is not mistaken with respect to its appearing object; it is not a mistaken dualistic appearance that is dualistic appearance. The way it is unmistaken has already been excellently explained in other [texts].

With respect to the existence of both the exalted wisdoms of meditative equipoise and subsequent attainment on the buddha ground, [Maitreya's] *Sublime Continuum* says:

> Wisdom, exalted wisdom, and complete liberation,
> Because of being clear, radiant, and pure, and
> Because of not being different from light and rays,
> Are similar to a sun disc.

The commentary to that says:

> The supramundane non-conceptual wisdom that is possessed in the continuum of a buddha, because of closely abiding to dispel the darkness to highest suchness which is an object of knowledge, is likened to clear light. The exalted wisdom of all objects of knowledge attained subsequent to that, due to engaging things – objects of knowledge – without exception in all ways, is likened to a radiant lattice of light rays.

The "supramundane non-conceptual" is meditative equipoise. Moreover, positing it in dependence on suchness is the meaning of stating "highest suchness" and so forth. The meaning of "subsequent" in "attained subsequent to" is not the subsequent of former and later times stating "subsequent to arisal from meditative equipoise," instead it refers to what is attained or arises by the force of that meditative equipoise. The meaning of "objects of knowledge" and so forth is that the exalted wisdom of subsequent attainment is posited in terms of engaging all objects of knowledge that are varieties. Hence, a knower of modes does not depend on a substratum, while a knower of varieties does not depend on reality. When this meaning is excellently understood, *Two Truths* says:

> All that is dependently produced,
> Just those appearing as they are
> Due to being devoid of the entity of investigation,
> Are directly seen by the omniscient.

And:

> When knowers, objects of knowledge,
> And their nature are not subsequently seen,
> They do not arise because signs do not arise,
> And because they abide firmly.

A buddha directly knows all appearances, or varieties, yet it is taught that he does not see either knowers or objects of knowledge in a manner of dualistic appearance. Other great beings also taught similarly. From these teachings, it is to be understood that there is not even the slightest contradiction in a single exalted wisdom coming to be two different ways of knowing in relation to two objects without the need to say: "The fact that a buddha does not see either knowers or objects of knowledge is from the point of view of his own appearance and that he sees all objects of

knowledge directly is the manner of knowing that appears to others, those to be subdued. Therefore, there is no exalted wisdom included in the buddha ground."

OBJECTION: Then the two, (1) the definition of the two truths indicated by

All things – things found by perfect
And false perception – possess two entities.
Any object of correct perception is thusness,
That of false perception is said to be conventional truth. [6.23]

and (2) this presentation are contradictory.

RESPONSE: They are not contradictory. The definitions of the two truths explained before is intended in general in that the way of knowing of the exalted wisdom of a buddha is from the point of view it being peculiar or uncommon to the tenth ground and below. Therefore, when it is from the point of view of also comprising the way of knowing of a buddha, that found by a valid cognizer that is a knower of [an ultimate] type seeing the perfect and is a valid cognizer that is a knower of [an ultimate] type regarding that object is the definition of an ultimate truth. By that, the definition of a conventional truth should also be understood. Likewise, the way of knowing the conventional and ultimate in relation to an individual object should also be understood in terms of:

- that found by an exalted wisdom that is a knower of modes and that which has become an exalted wisdom of a knower of modes with respect to that object, and
- that found by an exalted wisdom that is a knower of varieties and that which has become a knower of modes with respect to that object.

Here, it should also be remembered that our own system previously analyzed the feasibility and non-feasibility of a self-cognizer.

According to the Prasangika Madhyamika system there is no fault of suchness not being realized. Thus, the lower schools' assertion "If it is not inherently existent it does not exist at all" is incorrect. The Prasangika Madhyamikas say to the lower schools: "Just as you say that an awareness having the appearance of blue is an awareness apprehending blue, likewise, an awareness having the appearance of emptiness is an awareness apprehending or realizing emptiness."

A buddha is in meditative equipoise at all times, hence, he is absorbed in meditative equipoise in a manner of not arising from it again. On the buddha ground, meditative equipoise and subsequent attainment are one entity. However, the awareness of a buddha is called "an exalted knower knowing modes" in dependence on realizing the emptiness of, for example, form, and is called "an exalted knower knowing varieties" in dependence on knowing a basis, for example, form. A buddha's awareness is absorbed on emptiness like water poured into water. Lama Tsongkhapa says: "as is taught in the autocommentary on the *Two Truths* 'Each instant of exalted knowledge pervades all the mandalas of objects of knowledge' – it must be asserted that a single exalted wisdom knows all the objects of knowledge that are the two truths."

QUESTIONS AND ANSWERS

Student: What is the difference between a) searching for pot and not finding it and b) searching for the imputed object pot and not finding it?

Geshe Jampa Gyatso: If you look for a pot that exists and do not find it, it means that the pot is lost! If the pot did not exist in the first place, then there is no need to look for it! However, seriously speaking, there are two ways of searching for a pot. One way, the way of worldly people, is to look for a pot in the cupboards of one's house. If one searches for the pot and so forth according to the way of the world it can be found.

On the other hand, when one searches for the pot that is the imputed object on the basis of its parts, in this case it cannot be found. In this case to not find the pot means that we cannot say "such-and-such a part is the pot." This is the meaning of not finding the imputed object pot.

Student: Is looking for the pot among its parts and not finding it, the realization of the emptiness of the pot?
Geshe Jampa Gyatso: It is similar to that.
Student: Then one does not have to first identify the inherently existent pot?
Geshe Jampa Gyatso: Analyzing in this way one realizes that there is nothing that exists from the side of the basis of imputation. In other words, without saying "an inherently existent pot," from the non-finding of the basis of imputation, pot, one understands that the pot does not exist inherently.

Student: With regard to the following pairs
a) substantially existent and imputedly existent,
b) substantial existent and imputed existent, and
c) substantially established and imputedly established,
will Geshe-la please explain these according to the lower schools and Prasangika?
Geshe Jampa Gyatso: While "substantially existent" and "substantially established" are commonly said, "imputedly existent" and "imputedly established" are not.
For the lower schools if it is substantially existent it is not pervaded by being a substantial existent, for example, the person. The person is not a substantial existent, but is substantially existent and substantially established. The person is a substance, but is not a substantial existent. If it is a substance it is not pervaded by being a substantial existent. If it is a substantially established it is not pervaded by being a substantial existent. For the Prasangika Madhyamikas there is nothing that is a substantial existent. This is because if it is a substantial existent it is a phenomenon that exists without dependence on anything. Yet do substances exist? They do. What is the definition of substance? Think about it. An example of a substance is that which is composed of particles. A consciousness is also a substance because it is composed of a collection of parts and arises due to the coming together of causes and conditions. Therefore, for the Prasangika Madhyamikas a consciousness is a substance but not a substantial existent. For them there is not even the term "substantial existent."

Although we could say that something is imputedly existent and imputedly established, there is no such usage in the Tibetan. Only the term "imputed existent" is used in the sense that everything is an imputed existent.

The difference between substantial existent and imputed existent in the lower schools is that an imputed existent is a phenomenon that in order to appear to an awareness must depend on the appearance of another phenomenon. On the other hand, a substantial existent is a phenomenon that does not need to depend on the appearance of another phenomenon in order to appear to an awareness.

Student: In view of the fact that asserting emptiness as inherently existent is a conception of the extreme of *non-existence*, likewise is asserting table as inherently existent also a conception of the extreme of non-existence? If not, why?
Geshe Jampa Gyatso: Asserting emptiness to be inherently existent is not a conception of the extreme of non-existence. For the Prasangika Madhyamika system it is a conception of an extreme of existence. Also asserting a table to be inherently existent is not a conception of the extreme of non-existence. For example, someone who says "A table exists inherently" does not have the conception of the extreme of non-existence.
Student: Earlier in the *Illumination* (Tibetan text page 337) two types of extremes of non-existence were set out, that which is a deprecation and that which is a superimposition saying:

> In regard to this, saying "Since that which exists in reality cannot also exist in conventional terms, that which does not exist in reality exists in conventional terms, therefore, it does not exist ultimately" is the conception of the extreme of non-existence. Although the refutation stating "It is

> not like that" does not refute the extreme of non-existence, if one conceives "The non-existence which is the negation of the object of negation exists in reality," one falls into the extreme of the non-existence of things, due to which refuting that is also a refutation of the extreme of non-existence.
>
> That phenomena such as actions, results, and so forth exist conventionally also cannot be harmed by any valid cognizer. Their not existing or the objects and object-possessors that are conceived to not exist are an extreme of non-existence and a conception of an extreme of [non-existence]. They are not an extreme of non-existence and the conception of an extreme of [non-existence] for those such as the buddhas who are called "faultless." This is an extreme of non-existence which is a deprecation, whereas the former is an extreme of non-existence which is a superimposition.

Geshe Jampa Gyatso: This passage is not very clear, like things are obscured at dusk. I need to think about it.

Student: Geshe-la said that falling into the extremes means not only conceiving, but explicitly asserting permanence or annihilation. Nonetheless, I think that there is a difference between 1) the simple verbal accepting of the hypothesis of permanence/annihilation, just as a consequence of having already accepted the inherent existence of phenomena, and 2) the actual falling into an extreme, which presupposes the creation of a very negative karma because it is a firm decision to cultivate and propound such doctrines, as some philosophers and religious people do. Will Geshe-la please give his view about this?
Geshe Jampa Gyatso: To fall into an extreme, for example, the extreme of permanence is to say "Such-and-such exists inherently and I firmly believe in this." If someone has a conception of true existence of a pot in his continuum there is no pervasion that he conceives the pot to exist inherently. If a person has a conception of the inherent existence of pot in his continuum there is no pervasion that he has fallen into the extreme of permanence, for example, a bodhisattva on the subsequent attainment of the path of preparation through a bodhisattva on the seventh ground. The hinayana path says that such a person having the conception of inherent existence in his continuum exists through to the vajra-like meditative stabilization. Having trained in the Buddha's doctrine none of us would say "This table exists truly," instead we would say "The table does not exist truly." Therefore, we assert or accept that the table does not exist truly, even though we still have an innate conception of the true existence of the table. Do we have an acquired conception of the true existence of the table? We do not because we do not assert that it exists truly.

Student: What is the pervasion between ultimate mind generation and supramundane perfection?
Geshe Jampa Gyatso: There is a difference. For example, the great love and great compassion in the continuum of a buddha superior is a supramundane perfection but is not an ultimate mind generation. Why is it not an ultimate mind generation? Because a conventional mind generation in the continuum of a buddha superior is not an ultimate mind generation, but is a conventional mind generation. Likewise, great compassion is not an ultimate mind generation because if it is an ultimate mind generation it has to fulfill the definition of an ultimate mind generation which was mentioned previously. However, we can say that an ultimate mind generation is pervaded by being a supramundane perfection, one being a generality and one being a particularity.

Student: Geshe-la said that the ten perfections are equally pervasive – is this assertion according to Prasangika? If yes, please explain.
Geshe Jampa Gyatso: It is my own system! It is not according to Prasangika.

Student: Are the contaminated aggregates an illustration of cyclic existence?
Geshe Jampa Gyatso: If it is a contaminated aggregate it is not pervaded by being an illustration of cyclic existence, for example, the mahayana path of preparation existing in the continuum of an

ordinary being. That mahayana path of preparation is contaminated and is an aggregate, therefore, it is a contaminated aggregate. Is it an illustration of cyclic existence? It is not, that is, it is not a cyclic existence. Why? Because it is not a true suffering. It is not the factor that is the continuous joining by the force of actions and afflictions. Think about this.

Student: Does projecting karma exist in the continuum of a first ground bodhisattva?
Geshe Jampa Gyatso: No, it does not, however, this subject can be debated. For example, when someone accumulates a projecting action and then, before actualizing the projected result, attains the first ground, does he have a projecting action? He does not. This is then debated asking whether it has been abandoned. The answer is that that projecting action has passed or has disintegrated, that is, it no longer exists. This is because the Prasangika Madhyamikas do not assert latencies. In brief, if it is a projecting action it is pervaded by being a newly accumulated action. On the first ground there are no newly accumulated actions. It is said "One who sees the truth, has no projecting. One who is free from existence, has no rebirth."

Tuesday morning, 1 May 2001

(No teachings Monday, 30 April 2001)

Lama Tsongkhapa's *Illumination* (Tibetan text page 440) says:

3B2A-2B2 Dispelling arguments that an exalted knower is unacceptable

A Actual meaning
B Actual presentation of the acceptability of [an exalted knower]

3B2A-2B2A Actual meaning

Chandrakirti's autocommentary says:

To whomever mentioned "Without a knower who would teach others [to be subdued] by you, saying 'It is like this?'" it is also to be said that it is indeed true that this knower is only unproduced, yet it is not impossible to teach thusness in the world.

If asked: How?

It is said:

Whatever sounds teaching the thusness of phenomena arise
From his body of complete enjoyment, completed by merits,
Emanations, space, and others due to its magic power,
From these too, the world cognizes thusness. [12.5]

That form body residing, in which the tathagatas manifest the sphere of phenomena, the body completed by hundreds of merits, possessing unimaginable and various bodies, is totally transformed into the very cause of the bodhisattvas' complete enjoyment of the Dharma in whatever nature. Whatever sounds arise, due to the blessings of the tathagatas, from that [body] produced from hundreds of merits, from which, even at present, the variety of terminology of the scriptures can be realized – such as [from a mahayana sutra]:

Manjushri, "non-produced and non-ceasing" is the epithet of the tathagatas...

and so forth – from that the worldly become vessels to be finely taught such Dharma. Hence, they will faultlessly ascertain suchness.

Let alone [the sounds] arising from the holy body composed due to merit, whatever sounds arise, due to its blessings, from emanations that clarify the suchness of phenomena, from these too the worldly will ascertain suchness.

Not only [the sounds] arising from emanations, furthermore, although mind and mental factors are already inoperative due to its power, whatever sounds arise due to its magic powers from space and others – plants, trees, walls, rocks, and so forth – from these too the worldly cognize thusness.

This is a response to the question "If there is no exalted knower how can one teach others saying 'It is like this'?" This knower – an exalted knower – is unproduced and is absorbed on the ultimate as one taste, yet it can teach suchness to the world because the meditative equipoise and subsequent attainment of a buddha are not contradictory. Thus, while a tathagata is absorbed in meditative equipoise on suchness or the ultimate, he is still able to teach the Dharma to others without any conceptual thought as a motivation.

Gedun Drup's *Mirror of the Clarification of the Thought* (Tibetan text page 88), as translated by Martin Willson, says:

> 3B2A-2B2 Rejecting the argument of the impossibility of a knower
>
> *His complete enjoyment body, complete in merit,*
> *Manifestations, and sounds coming by their power*
> *From space and elsewhere, which teach the Dharma – reality –*
> *From these, even the world understands reality.* [12.5]

Although he has no conceptualization exciting it, this is not contradictory with his teaching the Dharma; for from the complete enjoyment body (sambhogakaya) and manifestations of that buddha, who is completed by the accumulation of merits, and the sounds arising from space, trees, and so on by the power of these manifestations, which teach the Dharma, absolute reality – from these, even the world knows absolute reality.

Because a buddha has completed the accumulation of the two collections of merit and wisdom, he can cause sounds teaching Dharma to arise from bridges, rocks, rivers, and so forth, as well as from space itself. Thus, although a buddha is absorbed in meditative equipoise on reality, he is still able to teach because he can do so in many ways, even from his crown protuberance. A buddha can also teach Dharma by means of the sound of the fluttering of the leaves of trees giving teachings on, for example, the four seals of Dharma,. The four seals are:

1. all compounded phenomena are impermanent,
2. all contaminated phenomena are suffering,
3. all phenomena are empty and selfless, and
4. nirvana is peace.

Also by the power of his blessings, a buddha can also teach through his disciples, such as in the case of Shariputra and Avalokiteshvara in the *Heart Sutra*. This occurs due to the power of a buddha's mind.

In short, buddhahood is attained in the aspect of the enjoyment body, and, while absorbed in meditative equipoise on emptiness in a manner of not arising again, a buddha simultaneously manifests emanation bodies that teach the Dharma. When sentient beings become appropriate vessels, a buddha teaches them in many ways, such as through the fluttering of the leaves of trees, and in this way gradually leads them to an understanding of emptiness. Because the complete enjoyment body cannot be seen by ordinary beings, the buddhas manifest in the form of a supreme emanation body, a creation emanation body, and an artisan emanation body. A buddha can also emanate as space, grass, trees, rocks, and so forth and from these can give Dharma teachings. Why is a buddha able to do this? It is due to his having completed the two collections. Thus, a buddha attains a complete enjoyment body which manifests emanation bodies that can also create other emanations. In short, a buddha is able to give teachings in whatever way accords with the needs of sentient beings.

Lama Tsongkhapa's *Illumination* (Tibetan text page 440) says:

> However, the response [to the question] according to your system "Who would teach suchness to others to be subdued saying 'It is like this' without knowing it?" [is as follows]. Even though it is indeed true that the consciousness comprehending suchness of the buddha ground engages its object – the ultimate that is the lack of inherent production – as one taste, it is not that it is also impossible for suchness to be realized in the world. Why is that? The meaning of this argument is that:
>
> - if [that consciousness] were to always abide on suchness in a manner of one taste, there would not exist a teacher having the conception that is a motivation to teach Dharma, and
> - if there does not exist [a teacher], there would not exist the teaching of the Dharma.

This is because after that the response given is "It is feasible to teach Dharma even without conception." The response to that argument is:

From whatever sounds teaching the suchness of phenomena
Arise from their complete enjoyment body sustained by merit and,
By the force of that, from what is emanated, space, and other,
Even the worldly cognize suchness. [12.5]

The buddhas abide in a form body. The form body of a buddha manifesting the truth body – the sphere of phenomena – and possessing an inconceivable variety of forms *sustained*, that is, strongly composed, *by* many hundreds of collections of *merit*, is *the complete enjoyment body* which becomes the cause for the enjoyment of the Dharma *of* the bodhisattvas. Thereby, from whatever sounds arise *from that* body which teach the suchness of phenomena, *even the worldly* – that is, those to be subdued – become a vessel for hearing such Dharma, *whereby they* come to unmistakenly *cognize suchness*. Leaving aside [the sounds that] arise like that from the body produced by hundreds of merit, also from *whatever sounds teaching the suchness of phenomena*

- *arise from what is emanated* by the blessings of the enjoyment body *and*, not only that but in addition,
- arise *by the force of those* emanations *from space and other* inanimate [things], plants, trees, walls, rocks, and so forth,

those to be subdued come to cognize suchness.

The argument here is that someone abiding single-pointedly on suchness is unable to give Dharma teachings because he lacks a motivation to do so, and that, if there is no motivation or conception to teach Dharma, there would be no Dharma teachings. The response is that even though a buddha abides on suchness in a manner of one taste he does not need to have a conceptual motivation to teach the Dharma due to his possessing the excellent quality of giving the Dharma effortlessly.

A buddha has a form body and a truth body. The form body consists of an enjoyment body and an emanation body, whereas the truth body consists of a wisdom truth body and a nature truth body. The complete enjoyment body is a result of having completed the collection of merit. The complete enjoyment body manifests emanation bodies which in turn can create emanations such as rocks, bridges, and trees that can give Dharma teachings. Or it can be said that by the power of the emanation body, the sound of Dharma teachings arises from space, from the fluttering of the leaves of trees, and so forth. Through hearing these teachings, sentient beings come to realize reality.

In conclusion, although a tathagata lacks the conception that is a motivation to teach Dharma, he still teaches Dharma in many ways. That he teaches without motivation and without effort can be likened to a computer which does many things without any motivation and without any effort, but just because it has been created to perform specific functions. It can also be likened to a tape recorder that produces the sound of Dharma teachings without any motivation or effort on its part, but just because that is its function. Nowadays it is easy for us to understand things due to such modern technology. While we have computers and tape recorders, in the past teachings arose from rocks, the movement of leaves, and so forth!

Lama Tsongkhapa's *Illumination* (Tibetan text page 441) says:

3B2A-2B2B Actual presentation of the acceptability of [an exalted knower]

Chandrakirti's autocommentary says:

Again, if it is asked: How do mind and mental factors, having a nature of non-existence, without conceptuality, become the very cause of the arising of the explained activity, even though present activity [of conceptual motivation] is impossible?

In order to show that, an external example is set forth:

Just as, here a wheel turned a long time with great exertion
By a potter having great strength
Turns and is seen as the cause of pots and so forth
Even though his effort is not now being produced, thus [12.6]

Likewise, without effort now being produced,
The engagement of he who dwells in possession
Of the essence of the dharmakaya from being impelled by
The virtues of beings and special prayers, is very unimaginable. [12.7]

Gedun Drup's *Mirror of the Clarification of the Thought,* as translated by Martin Willson, says:

Just as, here, a potter, with great strength,
Makes much effort for a long time turning the wheel,
Then, though his effort is not now being produced,
It turns and is seen to be cause of the pot and so on; [12.6]

So like that, without effort now being produced,
His actions, who lives in the body with Dharma nature,
Propelled by the people's virtues and the excellence
Of his prayers, are greatly beyond thought. [12.7]

The same predicate (that his teaching the Dharma is not contradictory with lack of motivating conceptualization) is so because without the conceptual activity of effort being produced in the present, the entering activity of [the buddha] who abides in possession of the nature of the dharmakaya, [since it is] propelled by the virtues of the ordinary beings to be tamed, [which ripened from hearing the Dharma thus from the buddha], and by the excellence of his own previous prayers [when he was a bodhisattva], is very much beyond the reach of thought.

It is like the way that, in this world, a wheel is turned by a potter with great strength, making much effort for a long time, and then turning without the potter's effort being produced in the present, it is seen to be the cause of pots and so on.

Chandrakirti's autocommentary says:

Because of the force of the prayers previously petitioned by the bodhisattvas saying:

> Just as the buddha bhagavans do not possess conceptuality now and are like wish-fulfilling jewels and wish-granting trees, by whom will the aims of the infinite dispositions of sentient beings be enacted by appropriately engaging those to be subdued even though already without conceptuality, in earnestly endeavoring to appropriately fulfill the aims of sentient beings and not moving from the sphere of phenomena for even an instant, may I too, like that, not pass beyond the time of subduing sentient beings.

– and because of producing actions maturing the karma of listening to the Dharma of such kinds of disciples, [actions of teaching the Dharma] like those will be manifested.

Thus should it be understood that "not exerting effort produced now, suchness is finely demonstrated and actions for the benefit of sentient beings are also accomplished."

A tathagata does not have the conceptions that are minds and mental factors yet he is able to teach the Dharma. To illustrate this Chandrakirti sets out the external example of a potter who initially has to turn his wheel with great effort but afterward continues to turn without need for effort. Another example is a large prayer wheel which initially has to be turned with great strength but then continues

to turn by itself. Just as that later turning does not depend on the effort of a being, similarly, a buddha does not need to be motivated by minds and mental factors in order to teach the Dharma because previously he completed the prayers and the collections.

There is a story about two monks who traveled from Nepal to Tibet to visit the king, Songtsen Gampo, who was considered to be an emanation of Chenrezig. However, when they arrived at his palace he appeared to them to be an executioner as he was surrounded by many corpses and was in the process of punishing others by executing them. These two men were shocked but decided to still meet the king. When the king asked them what they wanted, they said that, although they had come to meet him for Dharma reasons, having seen what was going on all they wanted was to be assured of a safe return home. The king gave them his assurance, a meal, and a place to stay for the night as well as a handful of sand each. They slept soundly and, when they woke up the next morning, found themselves in their own beds in Nepal. By the power of his mind, Chenrezig had transported them home. Thus, the buddhas can teach and benefit sentient beings in a great variety of amazing ways. There are many more examples of the enlightened activities of the buddhas. It is said, for example, that someone who has realizations can travel long distances on a sun ray. In fact it is recounted that the disciples of Gomo Tulku in one of his previous lives were able to travel in this way. The story is that Gomo Tulku was sick and unable to travel and told his disciples that in order to recover he needed to eat some fresh myrobalan fruit. One of his disciples offered to get this fruit, which is found only in Assam, and traveled there on a sun ray. He then returned to Tibet riding on a sun ray with the fruit in his hand. However, when he arrived, due to the heat of his hand, the fruit was spoiled and Gomo Tulku said that it was of no benefit to him. Gomo Tulku's cook then volunteered to go get another myrobalan fruit. He too traveled to Assam on a sun ray, where he picked up a piece of this fruit and threw it from Assam to Tibet where it landed in Gomo Tulku's lap. He ate it and was cured. If one has realizations, such things are possible.

The point here is that the buddhas, without need for effort in the present, are able to give teachings to sentient beings according to their needs. However, a doubt can arise thinking that if this is the case why does it not happen to us? The answer is that it is because we are not yet proper vessels for this to happen. When we are ready, the enlightened activities of the buddhas cannot be turned back. This is similar to the karma of sentient beings which, when it has ripened, cannot be turned back. For example, sometimes when an airplane crashes although many die there are a few survivors, this is because they did not have the karma to die. Some time ago in Brescia, Italy, there was a man who had never flown before whose friend had bought a ticket for Zurich and was unable to go. This friend offered him his ticket and he accepted it, but on the way to Zurich the plane crashed and he died. The man who has originally bought the ticket did not have the karma to die in the plane crash, whereas the other did.

We have created many actions in the past which, when the conditions arise, will bring about a result. For example, the fact that you now have the opportunity to study the Dharma is due to the ripening of actions you created in the past. In other words, that you are able to listen to, reflect on, and meditate on the vast and profound teachings of the Buddha is due to your own past actions. If you develop this hearing and thinking, you will definitely achieve realizations.

Lama Tsongkhapa's *Illumination* (Tibetan text page 341) says:

> QUESTION: In addition, even though without the conceptions that are minds and mental factors it is not possible for there to be a motivated activity in the present for teaching in that way, what becomes the cause for the arisal of the activity of teaching Dharma?
> RESPONSE: [The following] example is set out in order to show that.
>
> *Just as here a wheel spun with much effort for a long time*
> *By a potter possessing great strength,*
> *Without his generating effort in the present*

Spins and is seen to be the cause of pots and so forth, [12.6]

Similarly, without effort being produced now,
The engagement of one abiding in the possession of the nature of the truth body
Is extremely inconceivable through being propelled
By the virtue of beings and special prayer. [12.7]

Just as, for example, *here* in the world *a wheel spun with much effort by a potter possessing great strength*, even *without* the potter *generating* the *effort* to spin the wheel *in the present* since it keeps going for *long time* after that, is seen to *spin and to be the cause of* clay *pots and so forth*, *similarly*, in the lifetime of becoming a buddha, *without the* conception which is *effort being produced now*, *the engagement* in the enlightened activities of a buddha *abiding in possession of the nature of the truth body*, due to being *propelled by* the force of – that is, through the strength of –

- *the beings* who are to be subdued having accumulated the *virtue* of the thoroughly ripened action of listening to such Dharma from the buddhas who are like wish-fulfilling gems and wish-granting trees, *and*
- the buddha having made *special prayers* while a bodhisattva before,

is extremely inconceivable. What is that prayer? It is "Earnestly endeavoring to accomplish the welfare of sentient beings accordingly and not moving from the sphere of phenomena for even an instant, may I too, like that, act at the right time for subduing sentient beings."

Here the sutra citation that makes this known occurs in Nagtsho's translation.

The buddhas, by the power of their previous prayers and the completion of the collections, are able to perform enlightened activities for sentient beings. The buddhas are like wish-fulfilling gems and wish-granting trees because they give us so much. If we had a wish-fulfilling gem or a wish-granting tree it would provide all our material necessities, similarly, although the buddhas abide in the sphere of reality, they are able fulfill the wishes of sentient beings by performing the enlightened activity of giving teachings to them. That they are able to do so is because when they were bodhisattvas on the learner path they made many prayers and completed the collections of merit and wisdom. Due to this, they perform the enlightened activities at the right time in a manner of not being turned back. "Not passing beyond time" refers to, for example, the fact that the moon arises at the right time without being able to be turned back. Similarly, the sun rises without the effort of sentient beings.

Tuesday afternoon, 1 May 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 442) says:

3B2B Presenting the bodies and qualities

1 Presentation of the bodies
2 Presentation of the qualities of the powers

3B2B-1 Presentation of the bodies

A Truth body
B Complete enjoyment body
C Explanation of the body of similar cause

3B2B-1A Truth body

Chandrakirti's autocommentary says:

Now to explain in terms of the dharmakaya:

The pacification due to burning the entirety of dry firewood
Of objects to be known is the dharmakaya of the conquerors.
Then, non-produced and non-ceasing,
By stopping the mind, it is manifested by the body. [12.8]

Due to the holy body having the nature of exalted wisdom [engaging] objects of knowledge as non-produced, from burning the entirety of dry firewood of the objects to be known, this, which comes to be endowed with non-production, is the dharmakaya of the buddhas.

The *Ornament for Clear Realizations* says that "truth body" or "dharmakaya" refers to the resultant truth body – the final result attained by the force of cultivating the mahayana achieving that is the means for achieving it. In this context, Chandrakirti does not distinguish whether truth body refers to the wisdom truth body or to the nature truth body.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B2B-1A Explanation of the truth body

When all the dry fuel of cognitive obscurations
Is burnt, that cessation is the conquerors' dharmakaya. [12.8ab]

This cessation or absolute reality, freed of all stains through all the dry fuel of objects of knowledge of dualistic appearance having been burnt up, is the truth body (dharmakaya) of the conquerors, for it is like that free of all stains.

It then has no birth and has no stopping.
As mind stops, the body actualizes it. [12.8cd]

The complete enjoyment body actualizes [or receives] the truth body, which has no birth and no stopping; for by way of the stopping of the conceptual activity of mind and mental factors, it contemplates absolute reality in the manner of not arising again, [its non-conceptual wisdom-knowledge having become inseparable from absolute reality like water dropped into water].

There are two types of truth body: a wisdom truth body and a nature truth body. The wisdom truth body is the uncontaminated exalted wisdom that is a buddha's mind. The nature truth body is the reality of that mind or a true cessation existing in the continuum of a buddha superior. The nature truth body is called "the body of pacification" because it is the pacification of all conceptions of dualistic appearance. As long as the reality of the mind is together with stains it is a lineage, whereas when it becomes free of stains it is a nature truth body. When it is said that all sentient beings have the buddha lineage or buddha nature this refers to the reality of the mind of a sentient being. The main point here is that the truth body is called "the body of pacification" because the dry firewood-like knowledge obstructions have been pacified. This body of pacification that is without production and cessation is the truth body of the conquerors.

Chandrakirti's autocommentary says:

From just this point of view, it is taught [in the *Vajrachedika Sutra*]:

The buddhas view reality (dharmata), the guides are the dharmakaya.
Reality is not even an object of knowledge; it is unable to be known.

This means that the mind of a buddha is always in meditative equipoise on reality. This mind is the truth body of the buddhas. "It is unable to be known" means that such a reality cannot be known in a dualistic manner. Since a mind with dualistic appearance cannot know reality, it is only known by a mind that is free from dualistic appearance.

Chandrakirti's autocommentary says:

> This dharmakaya is "then, non-produced and non-ceasing." From just this point of view, it is taught [in a mahayana sutra]:
>
> > Manjushri, "non-produced and non-ceasing,' this is the epithet of the tathagatas.
>
> Hence, since the mind and mental factors that are its subjects do not operate [conceptually] in any way on suchness, the object of exalted wisdom, just the [enjoyment] body is conventionally presented as making [the dharmakaya] manifest.

Buddhas are called "tathagata" or "thus-gone" because they have gone beyond to thusness, which is what is unproduced and unceasing. Suchness is only known by non-conceptual exalted wisdom.

Chandrakirti says: "By stopping the mind, it is manifested by the body." Based on this line some scholars, in particular some Sakya masters, understand that the buddhas do not have minds and mental factors. They say that a buddha no longer has minds and mental factors, meaning that he no longer has conceptual minds and mental factors. Thus, they also hold that a buddha has overcome all conceptualizations. They assert this thinking that if having minds and mental factors implies having conceptual thought, whereas buddhas do not have this.

Lama Tsongkhapa's *Illumination* (Tibetan text page 442) says:

> Here the explanation from the point of view of the truth body is:
>
> *That pacification, through having burned without exception*
> *The dry firewood-like objects of knowledge, is the truth body of the conquerors.*
> *Then, unproduced and unceasing,*
> *Due to minds having ceased, it is actualized by the body.* [12.8]
>
> The body having the nature, or the essence, of the object-possessor, exalted wisdom – *that pacification*, the suchness that comes to have the aspect of an unproduced knower due to engaging in that having the aspect of an unproduced object of knowledge just as it is *through* the fire-like exalted wisdom *having burned without exception the dry firewood-like* objects that are *objects of knowledge* that appear dualistically – *is the truth body of the conquerors*. From the point of view of just that the *Diamond Cutter Sutra* says:
>
> The buddhas view reality,
> The guides are the truth body.
> Reality is not an object of knowledge
> In that it cannot be known.
>
> This teaches that:
>
> - the buddhas view reality at all times, that is, they are meditatively equipoised on it;
> - the ultimate body of the guides is the truth body; and also,
> - when that reality is known, it is not known in a manner of dualistic appearance.
>
> The truth body that is suchness *is then unproduced and unceasing*. From that point of view, it is taught in a sutra set:
>
> Manjushri, saying "unproduced and unceasing" is an epithet of the tathagatas.
>
> Hence, with respect to the object of exalted wisdom – the meaning of suchness – on the buddha ground, since the conceptions that are *minds* and mental factors, the object-possessors of that

> [suchness], *have ceased* and do not engage it in all ways, the two – the non-conceptual exalted wisdom and suchness – are engaged in inseparably, like water poured into water. Because of that, this state is presented conventionally as being initially *actualized*, that is, achieved, *by* the complete enjoyment *body*.
>
> Nagtsho's translation says:
>
> It seems that the *Irreversible Wheel Sutra* is cited to make that known.
>
> The meaning of saying "minds having ceased" (v. 12.8d) is taught in *Clear Words* to be the lack of movement of the mind, that is, the lack of conceptions, saying:
>
> Sutra says:
>
> > What is ultimate truth? If even that does not have movement of the mind, what need is there to even mention letters? Hence, it lacks conceptions.
>
> Here also the autocommentary, having explained the meaning of "pacification" to be freedom from minds and mental factors, after setting out the example that clarifies the ability to enact the welfare of sentient beings even though it is pacification – a wish-granting tree and a wish-fulfilling gem – clearly says that it is freedom from the minds and mental factors that are conceptualizations:
>
> Even though that is already non-conceptual, like a wish-granting tree and a wish-fulfilling gem...
>
> Therefore, to quote that as the source for a buddha not having exalted wisdom is a great deprecation that does not realize the meaning of the text.

The conceptual minds and mental factors of a buddha have ceased, whereas other minds and mental factors have not. What actualizes the wisdom truth body? It is the complete enjoyment body. One initially attains enlightenment in the entity of the enjoyment body, but simultaneously also attains the other three bodies. On the occasion of the meditative equipoise on reality in a manner of not arising again, the wisdom truth body is actualized; the entity that is said to actualize it is the complete enjoyment body. Conventionally a buddha performs actions for the sake of sentient beings. The fact of being simultaneously absorbed in meditative equipoise on reality and able to perform activities is a unique characteristic of the buddhas. This is because when other beings are absorbed in meditative equipoise, they are unable to perform the activities of subsequent attainment. Likewise, in order to perform the activities of subsequent attainment, they must rise from meditative equipoise. Thus, for ordinary beings the activities of meditative equipoise and the activities of subsequent attainment are contradictory or incompatible. This is true even of highly realized bodhisattvas.

For a buddha the flow of conceptual thought has completely stopped. It can also be said that all minds and mental factors of a buddha are completely free of conception. To illustrate this Chandrakirti gives the example of a wish-granting tree and a wish-fulfilling gem which are able to fulfill all mundane wishes even though they are without minds. For example, there is the story of a very poor man who only had a small fireplace made of three stones in his small hut. One day a visitor came to his hut and asked him why he was living in such a miserable situation. The poor man responded that it was because he did not own anything. The visitor asked if he would give him one of the three stones and the poor man said that he could as it was no problem to find another stone. However, the stone was in fact a wish-fulfilling gem. To the surprise of the poor man, his visitor gave him much money and told him that he would give him even more. Like this poor man, we too need to first recognize that within us is the wish-fulfilling gem of the buddha lineage and then to strive to make use of it so as to attain enlightenment.

Lama Tsongkhapa's *Illumination* (Tibetan text page 444) says:

> 3B2B-1B Complete enjoyment body

Chandrakirti's autocommentary says:

This [enjoyment body]:

The pacification body is clear like the wish-granting tree and
Non-conceptual just as the wish-fulfilling gem.
Constant until migrators are liberated in order to enrich the world,
It will appear to those devoid of elaborations. [12.9]

The holy body that is explained as making this suchness manifest is asserted as having a nature of pacification because it is free of [conceptual] mind and mental factors. "Is clear like the wish-granting tree and non-conceptual just as the wish-fulfilling gem," elucidates the conduct (ability) to enact the welfare of sentient beings even though it has the nature of pacification. It means that "Although it is already just non-conceptual, like the wish-granting tree and wish-fulfilling gem, it is the very cause of accomplishing whatever aims are actually desired."

This holy body also abides as long as cyclic existence for the sake of endowing the world. "Constant" signifies just that this abides for a long time. Therefore, it should be understood that "As long as the world and as long as space, that long the buddhas, in this manner, enact only the welfare of sentient beings and completely reside."

This holy body that is adorned by marks of hundreds of merits appears to exist to only those bodhisattvas free of elaborations – those who attained the mirror of stainless wisdom through their own accumulation of merit and exalted wisdom – it does not [appear] to those having elaborations.

Gedun Drup's *Mirror of the Clarification of the Thought* (Tibetan text page 89), as translated by Martin Willson, says:

3B2B-1B The complete enjoyment body

The cessation body is clear, like a wish-granting tree,
Or a wish-fulfilling jewel, without conception.
Till beings are freed, for the sake of the world's preparation,
It always appears to those free of elaborations. [12.9]

Although this [enjoyment body] is the body of cessation of elaborations [since it is free of conceptual activity of mind and mental factors,] it is the clear ability of benefiting sentient beings; for like a wish-granting tree and like a wish-fulfilling jewel, without conceptual activity, by appearing to bodhisattvas free of elaborations of dualistic appearance, [i.e. who have, from their own two accumulations, reached the stage of attaining the mirror of stainless wisdom,] in contemplation, it remains always until all sentient beings are liberated, for the sake of the preparation of the world.

The definition of the complete enjoyment body according to the *Ornament* is: a final form body possessing the five certainties. These five are:
1. the certainty of abode,
2. the certainty of time,
3. the certainty of body,
4. the certainty of retinue, and
5. the certainty of Dharma.

The certainty of abode refers to the certainty that the enjoyment body definitely abides in Akanishta (Not Low) in the form realm. Although the enjoyment body does not move from Akanishta, it manifests forms in many places in order to teach sentient beings in many diverse ways. The certainty of time refers to the fact that the enjoyment body abides until the end of cyclic existence, that is, until all sentient beings attain enlightenment; this is indicated by the word "constant" (verse 12.9c). The

certainty of body is that the enjoyment body is definitely adorned with the thirty-two major marks and eighty minor marks, all complete. The certainty of retinue is that the enjoyment body definitely teaches a retinue of bodhisattva superiors. Chandrakirti indicates this saying "It will appear to those devoid of elaborations" (v. 12.9d), in that those without elaborations are the bodhisattva superiors. The certainty of Dharma, which is that the enjoyment body definitely teaches the mahayana Dharma, is not mentioned here.

There is a story about one of the Ganden throne-holders who when he was about to pass away was exhorted by his disciples to return to them, however, he told them that he did not see any benefit to returning to Tibet and that there was more benefit to his being reborn as a minister in another country, therefore his disciples should not look for his incarnation. Thus, when high lamas see that there is benefit, they can take rebirth in many forms such as that of a universal emperor, a minister, and so forth. Also when Langtok Lama Rinpoche was dying his disciples asked him to return to them but he responded saying that he would not return to Tibet but would be reborn as a king in Shambala. This shows that high lamas or buddhas examine what type of rebirth will be of most benefit for sentient beings.

Lama Tsongkhapa's *Illumination* (Tibetan text page 444) says:

> *The pacified body is clear like a wish-fulfilling tree and*
> *Non-conceptual like a wish-granting gem.*
> *Constant for the sake of the wealth of the world until all migrating beings are liberated,*
> *It appears to those free from elaboration.* [12.9]

The enjoyment body, by which body the truth body is manifested, is a *pacified body* due to being free from the conceptions that are minds and mental factors. Hence, even though it is non-conceptual, being *clearly* able to enact the welfare of sentient beings *like a wish-fulfilling tree* and as *non-conceptual as a wish-granting gem*, it becomes the very cause for accomplishing the desired aims of those to be subdued. This body remains *constantly* for a long time – *until* all *migrating beings are liberated – for the sake of the wealth of the world*. Therefore, as long as there are worlds and as long as there is space, for that long the buddhas, in this way, enact just the welfare of sentient beings and thoroughly abide. The enjoyment body *appears to* bodhisattvas *free from elaborations*, that is, to just those who have attained the level of the attainment of the mirror of stainless wisdom through their own two collections; it does not appear directly to ordinary beings who are together with elaboration. [Chandrakirti's] *Seventy Stanzas on Refuge* says:

> A buddha's form body
> Blazes with the major and minor marks.
>
> By the force of the belief of migrating beings
> It takes various bodies.
> Through an immeasurable collection of merit,
> It is born as the son of a king.
>
> When seen by those abiding
> On the ten grounds,
> The complete enjoyment of the Dharma by that body
> Is the activity of the conquerors.

All four bodies of a buddha are achieved simultaneously, thus, one who achieves the truth body also achieves the form body, and one who achieves the form body also achieves the truth body. The complete enjoyment body is also called "the pacified body" due to the conceptions that are minds and mental factors having been pacified. Although lacking conception, the enjoyment body enacts the welfare of sentient beings, just as a wish-granting gem and a wish-fulfilling tree, without conception, enact the welfare of sentient beings. The enjoyment body performs its activities until all sentient beings are liberated. The enjoyment body appears only to bodhisattva superiors, those without

elaborations, it does not appear directly to ordinary beings. What body appears to ordinary beings? The emanation body appears to them. There are three types of emanation bodies: a supreme emanation body, a creation emanation body, and an artisan emanation body. How do a supreme emanation body and a creation emanation body appear?

1. A creation emanation body is born in the Joyous Land as a king who is an upholder of the Dharma and descends to the realm of human beings,
2. is conceived in the womb of a mother,
3. takes birth,
4. sports with the retinue,
5. rules the kingdom,
6. takes ordination through the cutting of his hair,
7. engages in an ascetic life,
8. strives to attain enlightenment under a bodhi tree,
9. overcomes the maras,
10. shows the aspect of attaining enlightenment in the form of a supreme emanation body,
11. turns the wheel of Dharma, and
12. passes beyond sorrow.

These are the twelve deeds of a buddha who is a supreme emanation body. There is debate about this because although it is said that a complete enjoyment body does not appear to sentient beings these twelve deeds do appear to them. Also, some say that the first nine of the twelve deeds are the deeds of a bodhisattva, whereas the last three, attaining enlightenment, turning the wheel of Dharma, and passing away, are the deeds of a buddha. In short, these are the twelve deeds of an emanation body and this emanation body is emanated by a complete enjoyment body.

Wednesday morning, 2 May 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 445) says:

3B2B-1C Explanation of the body of similar cause

1 The way of displaying all one's own activities in one body and one pore
2 The way of displaying others' activities in that place
3 Explaining the perfect mastery of wishes

3B2B-1C1 The way of displaying all one's own activities in one body and one pore

Chandrakirti's autocommentary (Tibetan text page 225) says:

> Whether arisen from the dharmakaya or arisen from the strength of the holy body of form, the holy body [that is the effect] of similar cause is other than the holy body already explained. In order to express also those [holy bodies] that [are effects] arisen due to the cause of subduing sentient beings as possessing unimaginable features of strength, it is explained:
>
> *The Mighty Sage, at just one time, in one form body*
> *Similar to its cause, shows the history of conditions*
> *Of his rebirths concluded in the past, clear and undistorted,*
> *In every detail due to completeness.* [12.10]

That being discussed here is the emanation body. "Whether arisen from the dharmakaya or arisen from the strength of the holy body of form" indicates that the emanation body can be said to arise either from the truth body or from the complete enjoyment body, however, what is being considered here is the emanation body that arises from the complete enjoyment body. "The holy body [that is the

effect] of similar cause is other than the holy body already explained" refers to the fact that the enjoyment body was already explained, while the emanation body is the holy body that is an effect similar to its cause, the enjoyment body. The complete enjoyment body displays aspects of emanation bodies for the purpose of subduing sentient beings.

Chandrakirti's autocommentary says:

> In order to show the entire extent of the situations of his own rebirths – already concluded – that occurred during the beginningless cyclic existence before the state of omniscient exalted wisdom, at the very same time, all those details due to many clear and undistorted histories, not mixed together, are spontaneously shown in just a single body of similar cause, like the reflection of a face in the orb of an extremely clean mirror.
>
> In order to express that he practices to show spontaneously in just a single holy body also all those histories of practicing the deeds of the bodhisattva – arisen wherever, however, and for whoever's welfare – it is explained:
>
> *What the buddha fields were like; what the mighty sages in them*
> *And the force and strength of their bodies and deeds were like;*
> *How many hearer sangha, what they were like, and*
> *What the forms of the bodhisattvas there were like;* [12.11]
>
> *What kind of Dharma and what the selves of that were like;*
> *The Dharma heard, what practices were practiced;*
> *What and how much generosity was presented to them;*
> *That entirely is shown in one holy body.* [12.12]

Gedun Drup's *Mirror of the Clarification of the Thought,* as translated by Martin Willson, says:

> 3B2B-1C1 How he shows all his own actions in a single pore of his body
>
> *The Sage, at just one time, in one form body*
> *Corresponding to that cause, shows all*
> *That happened in his past rebirths, now finished,*
> *Clear, unconfused, vivid, and complete.* [12.10]
>
> *What the buddha lands were like, their buddhas*
> *And what the powers of their bodies and actions were like,*
> *How many their assemblies of hearers and what they were like,*
> *What were the forms of the bodhisattvas there,* [12.11]
>
> *What sort of Dharma, what the people there were like,*
> *What deeds they used to do after hearing the Dharma,*
> *And what generosity he offered them, and how much –*
> *All this he can show in a single body.* [12.12]
>
> *Likewise, the past lifetimes when he practiced morality,*
> *Patience, perseverance, concentration, and wisdom,*
> *With nothing left out, and all his own activities,*
> *He can show clearly in even a pore of his body.* [12.13]

The Lord Buddha can show in every pore of his body all his own ways of acting; for at just the one time, in the one form body (rupakaya) corresponding to [or resulting from] the cause of the Sage's complete enjoyment body, [i.e. the manifestation body (nirmanakaya),] he can show everything that happened previously [from beginningless samsara] in his own rebirths, now finished, clear and unconfused, [not mixed together,] vivid and

complete, [like reflections in a very clean mirror]. He also shows in the one body what the buddhas' pure lands were like [in which he practiced the transcendent action of generosity – their jewel nature of lapis lazuli, etc.], [the births and so on of] those sages and what the powers of the bodies and actions of those buddhas were like, how many were their surrounding sangha of disciples and what they were like, [i.e. how they got there by their efforts in the Dharma,] what the forms of the bodhisattvas there were like, [their marks and signs, robes, food, etc.,] what sort of Dharma was taught, what sort of people there were in those realms, [their caste, and whether lay or sangha, etc.,] what deeds [of the bodhisattva] they used to do after hearing the Dharma, and what generosity he offered those buddhas and bodhisattvas, and how much. Besides all this, he shows clearly in but a pore of his body the previous times when he practiced morality, patience, perseverance, concentration, and wisdom, with nothing left out, and all his own past actions.

A buddha is able to display all his activities in all his previous rebirths, which have already ceased, "clear and undistorted, in every detail due to completeness." Among all the actions that he performed in those lives, here the text specifically mentions the practices of generosity, morality, and so forth, all of which he displays in a single pore of his body. A buddha also remembers the retinues of bodhisattvas, solitary realizers, and so forth that he had in the past and is able to display them in a single pore.

When a buddha was on the learner path he performed many activities, for example, practicing generosity and making offerings, as well as the other perfections. He made offerings to beings superior to himself and practiced generosity toward beings inferior to himself. Both of these are considered to be the practice of generosity but in this context they are differentiated.

Without mentioning the remaining perfections, just with respect to generosity the Buddha performed many activities as a bodhisattva, such as giving away material things and even his own body, these being recounted in the *Life Stories*. For example, during one the previous lives of the Buddha, there was a tigress with four cubs who was unable to find food to feed her cubs. The Buddha pierced his flesh with a thorn and offered his blood to the tigress who instead killed and ate him. Having make this karmic connection with the tigress and her four cubs, in the lifetime in which the Buddha attained enlightenment they, having been reborn as human beings, became his five main disciples. Similarly, when we eat food we should think that we do so in order to nourish the thousands of microorganisms in our body so as to create a connection with them and in this way, while practicing the generosity of giving material things in this life, to be able to give them the generosity of Dharma teachings in the future.

Chandrakirti's autocommentary says:

> When the Bhagavan practiced generosity gone beyond before, whatever things were like – the buddha bhagavans to whom veneration was made; the buddha fields having the nature of lapis lazuli, ruby, sapphire, and crystal; the length, breadth, and circumference beautified by precious trees and so forth; and finely beautified by the differences of sentient beings who were supported there; showing the births and so forth of the buddha bhagavans – the totality of that is shown in one holy body.

The Bhagavan is also able to display the buddha bhagavans he venerated in his previous lives. Are there actually lapis lazuli, ruby, sapphire, and crystal in the buddha lands? If someone says that there are, one asks: "Are they true sufferings? Are they not matter?" In conclusion, there is the appearance of lapis lazuli, ruby, sapphire, and crystal in the buddha lands but they are not the actual nature of those objects, instead they are the nature of the wisdom truth body. Where are the buddha lands of the complete enjoyment bodies? They are in Akanishta. Why are we unable to see the buddha lands? Because we do not have the karmic potential to see them. This is the same reason for which Asanga

was unable to see Maitreya other than as a female dog covered with maggots. However, Asanga generated intense compassion for the dog and, wishing to relieve her suffering, cut a piece of flesh from his thigh on which to place the maggots. Then, in order not to harm the maggots, he closed his eyes and attempted to pick them up with his tongue but was unable to do so. Upon opening his eyes, he saw Maitreya before him. He then asked Maitreya why he had not appeared to him before and Maitreya explained that, although he had always been there, Asanga had not seen him due to his karmic obscurations. To prove this, Maitreya showed Asanga the saliva that Asanga had unknowingly spit on his robes. Thus, as long as we have karmic obscurations we will be unable to see the buddhas even though they are always present.

Chandrakirti's autocommentary says:

> What perfection of force there was of the holy bodies and activities of those buddha bhagavans; how many sangha of their hearers were assembled or "what they were like and" due to what kind of Dharma exertion concordant with the Dharma did they become the sangha of hearers; what the things that were fully usable, possessed of utility, were like in the buddha realms of those buddha bhagavans – the bodies of the bodhisattvas adorned with signs and exemplifications, shapely Dharma robes, food, dwellings, and so forth; "what kind of Dharma and" doctrine having the support of one and three vehicles – all those are shown in one holy body.

The buddhas are skilled in teaching the Dharma, due to which they teach three final vehicles to some and one final vehicle to others. For this reason, the Buddha taught three final vehicles to the Vaibhashikas, Sautrantikas, and true aspectarian Chittamatrins, but taught only one final vehicle to the false aspectarian Chittamatrins, Svatantrika Madhyamikas, and Prasangika Madhyamikas. In this way, he taught in accordance with the dispositions of various disciples.

Chandrakirti's autocommentary says:

> "What the selves of that were like," birth in the caste of brahmins and so forth, endowed with form and intelligence, being householders and renunciates; having heard the Dharma and assumed trainings with remainder and without remainder, what practices were practiced; "what and how much generosity was presented to them," what food and so forth and Dharma robes, precious ornaments and so forth were presented to the buddha bhagavans along with the sangha of hearers and bodhisattvas – and "how much," how many occasions and how much quantity was presented – entirely are shown in one holy body.

The Buddha is also able to show the rebirths he took in the brahmin, royal, merchant, and warrior castes. He took these rebirths in order to teach different disciples. He also took rebirths as householders and renunciates in order to benefit sentient beings by giving them teachings in various aspects. Thus, the Buddha is able to manifest as necessary in order to subdue different types of sentient beings. The Buddha is able to take these different aspects due to having completed the two collections and having abandoned the two obscurations. In conclusion, the Buddha is able to give teachings by manifesting in whatever form is necessary in order to subdue sentient beings.

Chandrakirti's autocommentary says:

> Just as this extent of the arising of the practice of generosity gone beyond was shown:

Similarly, the lives practicing morality, patience, perseverance,
Concentration, and wisdom – those previous situations
Without omission – [12.13abc]

"Entirely are shown in one holy body," should be joined to the above.

Besides showing all situations together in one holy body, moreover:

– all [those past] activities
Are also shown clearly in one hair pore of the holy body. [12.13cd]

The Buddha is able to display all the buddha lands in a single pore of his body. Therefore, what need is there to mention that he can show much more? For example, he is able to display all his practices of the perfections of generosity, morality, and so forth in his past lives in a single pore.

Lama Tsongkhapa's *Illumination* (Tibetan text page 445) says:

> Whether arising through the force of the truth body or the form body that was explained previously, that other than the enjoyment body explained before – the entity of the emanation body, the body that is a result of similar cause to the truth body and enjoyment body – is explained [as follows] in order to express the inconceivable attributes of strength also with respect to those arisen by means of the cause of subduing sentient beings.

The emanator of the emanation body is the truth body and the complete enjoyment body. What is an emanation body? Jedzun Chogyi Gyeltshen's *Ocean of Sport* defines it as: a final truth body distinguished by not possessing the five certainties. The emanation body does not have the certainty of place because it does not abide in Akanishta, it does not have the certainty of retinue because it is not definitely surrounded by bodhisattva superiors, it does not have the certainty of teaching mahayana Dharma because it does not teach just this, and it does not have the certainty of time because it does not remain as long as cyclic existence is not emptied in that an emanation body passes away upon completing the deeds with respect to particular disciples. On the other hand, is the emanation body certain to have the major and minor marks? It does in that a buddha definitely has these marks, however, sentient beings due to their impure karma are not able to perceive them.

Lama Tsongkhapa's *Illumination* (Tibetan text page 445) says:

The Lord of Subduers, at just one time, in one form body
Of similar cause to them, displays the way
That the circumstances of his own rebirths, ceased before, happened,
Clearly and without confusion, all vividly and in their entirety. [12.10]

The Lord of Subduers, in order to display *in one form body of similar cause to* the truth and enjoyment bodies the extent without exception of the now already *ceased circumstances of his own rebirths* from beginningless cyclic existence that happened in the past, spontaneously *displays*, *at just one time*, like a reflection in an extremely clear mirror, *the way they happened* in the past, *clearly and without confusion* – that is, without mixing them with each other – *all vividly and in their entirety*.

The emanation body is able to remember and display all the previous circumstances of his past lives, clearly and without confusion, all vividly and in their entirety, in a single pore. For example, a buddha is able to display his practice of generosity to sentient beings and the offerings he made and veneration he paid to the buddhas and bodhisattvas in the past.

Lama Tsongkhapa's *Illumination* (Tibetan text page 445-6) says:

> *What the buddha lands were like, the lords of subduers in them,*
> *What the strength and force of their bodies and conduct were like,*
> *How many were the hearer sangha and what they were like, and*
> *What the forms of the bodhisattvas were like there,* [12.11]
>
> *What the Dharma was like, what he himself was like there,*
> *Hearing the Dharma, whatever conduct he practiced,*
> *Whatever generosity and how much he offered to them –*
> *This he entirely displays in one body.* [12.12]

The Bhagavan displays, when he practiced the perfection of generosity in the past,

- whatever offerings and veneration he made to whatever buddhas and
- *what the buddha lands* – the circumference having the nature of jewels, such as lapis lazuli and so forth, and beautified by the sentient beings who are the inhabitants supported on it – *were like* in which *the lords of subduers* were born and so forth,

and *entirely displays in one body*

- *what the* amazing *strength and force of the bodies and conduct of those* buddhas *were like*,
- *how many* were their retinues – the assembly of *hearer sangha* – and how they became that sangha by whatever exertion in Dharma, that is, *what they were like*,
- *what the forms of the bodhisattvas* adorned with the major and minor marks and what the fully usable, such as Dharma robes, food, and dwellings, in the buddha lands *were like*,
- *what the Dharma* taught in the one and the three vehicles *was like*,
- *what he himself in those* lands *was like* – birth in the brahmin caste and so forth, having intelligence, lay or ordained,
- having *heard the Dharma*, *whatever* bodhisattva *conduct he practiced* having taken the trainings of incomplete and complete bases of trainings,
- *whatever generosity* of food, Dharma robes, jewel ornaments, and so forth, for how long and of *how much*, *he offered* to the buddhas, bodhisattvas, and hearers.

"In which the lords of subduers were born and so forth" refers to the fact that he is able to show all his previous rebirths and the twelve deeds of an emanation body. He remembers the retinues he had as well as the teachings he gave to bodhisattvas, solitary realizers, and so forth. Within the retinue of a supreme emanation body there can be hearer, solitary realizer, and bodhisattva disciples, as well as those who have not yet entered either of the three vehicles. For this reason, he taught three final vehicles and one final vehicle in accordance with the needs of these different disciples.

Lama Tsongkhapa says: "having heard the Dharma, whatever bodhisattva conduct he practiced having taken the trainings of incomplete and complete bases of trainings." Chandrakirti says this somewhat differently: "having heard the Dharma and assumed trainings with remainder and without remainder, what practices were practiced." In general, there are seven bases of trainings. Thus, a complete base of trainings is to make a promise to refrain from all three negative actions of body and all four negative actions of speech. On the other hand, an incomplete base of training is to take the vows of a lay person or the vows of a novice monk or nun. In these cases, the base of trainings is not complete because novice monks and nuns mainly take the four root vows that are related to the three negative actions of the body – to abstain from killing, stealing, and sexual conduct – and one negative action of speech – to abstain from lying. Similarly, the vows of a lay person are not to kill, steal, engage in sexual misconduct, and lie.

"Whatever generosity of food, Dharma robes, jewel ornaments, and so forth, for how long and of how much, he offered to the buddhas, bodhisattvas, and hearers" are displayed in a single pore of his body.

Lama Tsongkhapa's *Illumination* (Tibetan text page 446) says:

> *Similarly, any previous circumstances of lives of practicing morality,*
> *Patience, effort, concentration, and wisdom,*
> *With nothing omitted – all his own conduct –*
> *He also clearly displays in but a pore of his body.* [12.13]

One should apply the explanation regarding generosity above stating "Just as he displays the extent of the occurrence of undertaking generosity, *similarly*, he displays in one body *any previous circumstances of lives of practicing* the perfections of *morality, patience, effort*, the *meditative stabilization* of the concentrations, and *wisdom* before, *with nothing omitted*." He display all these circumstances simultaneously in one body, and, in addition, *also clearly displays all his own* previous *conduct in but a pore of his body*.

Wednesday afternoon, 2 May 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 446) says:

3B2B-1C2 The way of displaying others' activities in that place

Chandrakirti's autocommentary (Tibetan text page 228) says:

Not solely showing just his own activities, furthermore:

> *Those past, present, and future buddhas who,*
> *Reaching the limits of space, teach the Dharma in exalted tones*
> *By which migrators who are gripped by suffering*
> *Take breadth and who dwell in the world;* [12.14]

> *From the first mind until the essence of enlightenment,*
> *All their activities – having understood things as*
> *The nature of illusions – like his own, are clearly shown*
> *In one hair pore, at one time.* [12.15]

If, for a while, even ordinary illusionists are able to show various kinds of things as abiding in their bodies due a mere thing like the force of mantra, would not the Lords of Whatever Moves, the buddhas, and the bodhisattvas enact them having understood the nature of things as not different from such illusory nature? Therefore, what wise ones would doubt whether it is not realized? Therefore, the wise should specially appreciate this clearly via this example.

Gedun Drup's *Mirror of the Clarification of the Thought,* as translated by Martin Willson, says:

3B2B-1C2 How he shows all the actions of others there

> *The buddhas who are past, those who will come,*
> *And those of the present, to the ends of space,*
> *Teaching Dharma with loud voice, so sentient beings*
> *Gripped by suffering take breath; living in the world;* [12.14]

> *And all their actions, from the first thought until*
> *The supreme point of enlightenment – knowing these things*
> *Are as of the nature of illusions, lie shows them clearly,*
> *Just like his own, at one time, in a pore.* [12.15]

> *Likewise, the actions of all the bodhisattvas*
> *Of the three times and the arya pratyekas*

And the shravakas, and, besides these, all the existences
Of ordinary beings, he shows at one time in a pore. [12.16]

He can show in every pore of his body all the actions of others; for the buddhas who are past, those who will come, and those of the present, as far as the limits of space, by their teaching the Dharma with the loud music of their voices, letting the sentient beings gripped (or pressed) by suffering recover their breath; living in the world; and all the actions of those buddhas from the first generation of bodhichitta to the supreme point of enlightenment – knowing that all things are as if of the nature of illusions, he shows all these at the one time in a [single] pore of his body, just as he showed his own actions. Likewise too he shows at the one time in a [single] pore all the actions of the bodhisattvas of the three times, and the arya pratyekabuddhas and the shravakas, and besides these, all the existences of ordinary beings.

A buddha can display all the buddhas of the past, present, and future in a single pore of his body. Or it can be said that just as all the buddhas of the past, present, and future give teachings so too is a single pore of a buddha's body able to teach sentient beings. A buddha gives teachings in exalted tones, whereby sentient beings gripped by suffering are given breath. In addition, a buddha is able to display the activities of bodhisattvas, solitary realizers, hearers, and ordinary beings in a single pore of his body.

If an ordinary magician is able to manifest many forms, there is no need to mention that a buddha has the ability to display the actions of all beings in a single pore. Thus, the qualities of a buddha are unimaginable, even the qualities of a single poor of his body are inconceivable. It is recounted that during a hailstorm Milarepa took shelter inside the horn of an animal, however, it seemed that Milarepa had not become small and that the horn had not become big. We limited beings cannot even begin to imagine a buddha's qualities.

Chandrakirti's autocommentary says:

Just as his own activities and the activities of other tathagatas are shown at one time in his hair pore,

Similarly, the entirety of activities of the three time
Bodhisattvas, arya solitary realizers, and hearers, and,
Beyond that, the situations of ordinary beings are
All shown in a hair pore at one time. [12.16]

Just as a buddha can display the activities of other buddhas in a single pore, so too can he display the activities of the three times of bodhisattvas, solitary realizers, hearers, and ordinary beings in a single pore.

Lama Tsongkhapa's *Illumination* (Tibetan text page 446) says:

The past buddhas, those who will arise, and
Those of the present who teach the Dharma with exalted tones
To the limits of space, whereby the migrating beings gripped by suffering
Take breath, and those who dwell in the world, and [12.14]

All their conduct from the first mind generation through
The essence of enlightenment, having understood things
To be the nature of illusions, he clearly displays them,
Like his own, at one time in a pore. [12.15]

He is able to *clearly display at one time in* one *pore the* previous *buddhas of the past, those who will arise* in the future, and the *present* buddhas

- *who teach the Dharma with exalted tones* that resound *to the limits of space*, *whereby the migrating beings gripped* – that is, afflicted – *by suffering take breath*, and
- *those who dwell in the world*, *and*
- *all the conduct of those* conquerors of the three times *from the first mind* generation *through the essence of enlightenment*,

like he displays all *his own* mode of conduct. If some ordinary illusionists are able to display various types of environments and inhabitants in their own bodies even by the mere force of mantras and substance, since the buddhas and bodhisattvas who, *having understood* that there is no difference in truth and falsity between the nature of *things* and *the nature of illusions*, meditate on this for many eons, are they not able to create those illusions? They are not [unable]. Therefore, what wise ones do not conceive them to be like that and, although realized, would doubt it? They would not, therefore, they should especially believe it by means of this example.

Likewise, he displays the conduct of all the bodhisattvas,
The solitary realizer superiors, and the hearers of the three times
Without exception and, beside these, all the situations of ordinary beings
At one time in a pore. [12.16]

Just as he displays his own conduct and the conduct of other buddhas in a pore at one time, *likewise*, can *he display the conduct of all the bodhisattvas of the three times*, *the solitary realizer superiors* of the three times, and *the hearers without exception and, beside these*, *all* the conduct of *the situations of ordinary beings at one time in* one *pore*.

In short, just as a buddha is able to show his own activities of the three times in a single pore, so too is he able to show the activities of other buddhas, bodhisattvas, solitary realizers, hearers, and ordinary beings of the three times in a single pore. The place in which the buddha is able to show his own and others' activities is a single pore of his body.

Lama Tsongkhapa says: "Therefore, what wise ones do not conceive them to be like that and, although realized, would doubt it? They would not, therefore, they should especially believe it by means of this example." In order to develop belief in the qualities of a buddha, it would be helpful to see magicians who are able to manifest horses and so forth, however, perhaps such magic can only be seen in India now. When I was in hospital in India, a magic show was arranged for the patients. The magicians, who were from Sikkim, set up a tent on the grounds and put on a show for two hours which the patients really enjoyed. One trick they did was to appear to eat playing cards, much to the surprise of the patients. They then rubbed their stomachs and Indian rupee notes came out of their mouths! They then called a patient to come on the stage and from his elbow were able to draw milk which poured down into a bucket and then suddenly turned into flowers, which the magician scattered on the audience.

How do magicians make their manifestations? They do so by means of mantras and substances. Since these ordinary beings are able to do such things, their is no need to mention that the buddhas who have inconceivable qualities are able to display the activities of others in their pores.

Lama Tsongkhapa's *Illumination* (Tibetan text page 447) says:

3B2B-1C3 Explaining the perfect mastery of wishes

Chandrakirti's autocommentary (Tibetan text page 228) says:

Having expressed the perfect holy bodies, in order to show the perfect mastery over desires even though not possessing conceptions, it is explained:

This pure one, by entertaining a wish, indeed shows
Worlds reaching [throughout] space in the sphere of one particle and
The particle pervading the directions of infinite space, yet
The particle does not become gross, the worlds do not become subtle. [12.17]

The buddha bhagavans, by way of desire, show the worlds reached by the limits of space in the sphere of a single atom, yet, neither do the worlds become subtle nor does the atom become gross. By way of mere desire, they perfectly show how their own entities abide.

Although the particle is shown to pervade the directions of infinite space, the buddha bhagavans, by way of a mere desire, show also infinite directions, the worlds of the totality of worlds, as pervaded by a single atom.

Similarly:

Not possessing conceptions, you show in each instant
Till the end of existence as many varieties of activities
As there are particles in the entirety of Jambudvipa –
The [particles] of which are countless. [12.18]

"Not possessing conceptions, the number of the variety of activities you show instant by instant until [the end of] cyclic existence is not possessed by the amount of atoms existing in the entirety of Jambudvipa." This is a praise to the Bhagavan by way of expressing the perfection of uncommon qualities.

The buddhas not only possess a perfect holy body but also possess perfect mastery over wishes.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B2B-1C3 Explanation of his perfect control over wishes

You pure ones, by making the wish for this, can show
In the space of one atom, the worlds to the ends of space,
And the atom filling all parts of the infinite worlds,
Yet the atom gets no bigger, the worlds no smaller. [12.17]

Having no conceptualization, you can show,
In every instant till samsara's end,
Different actions as many as the atoms
In all the Jambudvipas, which cannot be counted. [12.18]

He has perfect control over wish; for merely by wishing this action, the buddha, pure [of all stains], can show in the place of the [smallest] single atom the worlds as far as the limits of space, and although he shows [all] the parts of the infinite worlds filled by the single atom, that one atom does not get bigger and the worlds do not get smaller. Also, without conceptual activity, in every instant until the end of samsara, he shows different actions as many as the atoms in all the Jambudvipas, whose number cannot be counted.

A buddha is able to show all the worlds on a subtle particle. Does this mean that the subtle particle becomes very big or that the worlds become very small? This does not happen. A buddha has the ability to display them due to having completed the two collections and abandoned all stains. Due to merely having the wish to show this, a buddha is able to do so. In addition, to the ability to show all the worlds on a subtle particle he is also able to show all the numberless buddha lands on a single subtle particle. This ability is a quality unique to buddhas alone. However, if we accumulate merit and purify negativities we will become enlightened and attain these very same qualities. Therefore, these inconceivable qualities can be realized by us, although it may take longer for some than for others.

There is a story about a Mongolian who said that if one has money one can do whatever one wants, not only can one create an emanation body but also an enjoyment body! He was referring ironically to the fact that it is possible to be recognized as a reincarnate lama, a tulku (literally, an emanation body), if one has enough money.

In short, the qualities of a buddha are beyond the realm of thought.

Lama Tsongkhapa's *Illumination* (Tibetan text page 447-8) says:

> Having expressed the three perfect bodies, there is [the following] explanation in order to indicate the perfect mastery or dominion over wishes even though not possessing conceptions:
>
> *The purified one, by making a wish,*
> *Displays the worlds reaching throughout space on the area of a single particle and*
> *A particle pervading the directions of the infinite worlds, yet*
> *That particle does not become gross, and the worlds do not become subtle.*[12.17]
>
> One who performs the deeds of a buddha who is *purified* of all stains, *by* – that is, through – *making a* mere *wish*, is able to display *the worlds reaching* to the ends of *space on* the size of *the area of a single* subtle *particle*. When the extent of the base of *the infinite* – that is, of all – *worlds is* also *displayed* as *pervaded* by a single subtle *particle*, *that* one *particle neither becomes gross*, that is, bigger, nor do *the worlds become subtle*, that is, smaller.
>
> *You who do not possess conception display as many*
> *Varieties of activities in each instant until the end of existence*
> *As there are particles in all the Jambudvipas,*
> *There being no number for that amount.* [12.18]
>
> Similarly, *you who do not possess conception display as many varieties of activities in each instant until the end of existence*, that is, cyclic existence, *as are the* number of subtle *particles* existing *in all the Jambudvipas*, *there being no number for that amount*.
>
> The former is from the point of view of place, this is from the point of view of time.

"From the point of view of place" refers to the fact that a buddha can display infinite worlds on a single particle, whereas "from the point of view of time" refers to the fact that he can do this in each instant. In short, the qualities of a buddha are inexpressible. The *King of Prayers* says:

> As many buddhas as there are atoms are seated amidst the children of the buddhas on a single atom: thus, I visualize all spheres of phenomena, without exception, as filled with conquerors.

When this subject is debated, the conclusion is that a buddha can show the infinite worlds and all the buddha lands on a single particle. We need to generate faith that this is possible. From the point of view of tantra, it is said that when someone who is intelligent and examines well is compared to someone who is not so intelligent but has good visualization, it can happen that the duller person attains enlightenment more quickly because the person with sharp faculties can be distracted by his analysis and conceptualizations. In fact, all the world religions say that from faith comes many miracles. This is likened to the fact that although the sun is very hot it cannot burn a piece of paper, whereas when a magnifying glass is placed between the sun and the paper it is able to burn the paper. Here the magnifying glass is an analogy for faith, whereas the sun is an analogy for the buddhas' enlightened activities in that when we have faith we receive the benefit of the enlightened activities of the buddhas. In conclusion, the enlightened activities reach us in dependence on our faith. Although the buddhas' enlightened activities are always ready to ripen sentient beings, sentient beings need to be ready to receive these enlightened activities. The eighth chapter of the *Ornament* says:

> *Although the god of rain sends rain down,*
> *As an impotent seed does not grow,*
> *Although the buddhas appear,*

The unfortunate do not experience excellence. [8.10]

Lama Zopa Rinpoche has said that the Masters Program students need to examine whether there is anger in their mind, as well as attachment, jealousy, and so forth – all twenty-six afflictions. When any of them arise, one should immediately apply an appropriate antidote to reduce and eliminate it. Lama Zopa Rinpoche mentioned anger specifically because it is the most dangerous of afflictions because it destroys our merit. As Shantideva says in the third chapter of the *Bodhisattvacharyavatara*, there is no greater harm than anger. Similarly, Chandrakirti's *Supplement* says:

One moment of hating a conqueror child destroys
The virtues arising from giving and ethics'
Accumulated for a hundred eons.
Thus there can be no [worse] sin than impatience. [3.6]

It creates an ugly form, leads to the unholy,
And robs discrimination that knows right and wrong.
Through impatience one is quickly cast into a bad migration.
Patience creates qualities opposite to those [3.7]

Explained above. Through patience comes beauty, dearness
To the holy, skill in discriminating between
The right and wrong, birth afterwards as a human
Or god, and the extinguishment of non-virtues. [3.8]

Because anger is very destructive Lama Zopa Rinpoche asks that you constantly check your mind for its arisal and apply the appropriate antidote. Although attachment is harmful it does not destroy our merit, it may even bring benefit, for example, thinking "It would be wonderful to become enlightened, therefore, I will practice the Dharma." Attachment also becomes a branch of benefit in the case of bodhisattvas who use it to give birth to a universal king.

Thursday morning, 3 May 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 448) says:

3B2B-2 Presentation of the qualities of the powers

A Brief presentation of the ten powers
B Extensive explanation of [the ten powers]
C The way in which all the qualities cannot be expressed
D Presenting the benefits of understanding the two qualities

3B2B-2A Brief presentation of the ten powers

Chandrakirti's autocommentary says:

Because the buddha's ground is thoroughly specified by ten strengths, in order to show a mere part of its divisions, it is explained:

The strength knowing sources and non-sources,
Likewise, the awareness of the maturation of karma,
The comprehension of the various interests,
The strength knowing the various constituents, and, [12.19]

Likewise, the knowledge of superior and inferior
Faculties, [the paths] leading everywhere, and
The strength knowing the concentrations, complete liberations,
Meditative stabilizations, absorptions, and so forth, [12.20]

The knowledge recalling former states, and,
Likewise, the awareness of death, transference and rebirth, and
The strength knowing the exhaustion of contaminations:
These are the ten strengths. [12.21]

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B2B-2A Brief exposition of the ten powers

The power of knowing place and non-place,
Likewise, the awareness of karmic results,
Understanding the various wishes,
The power of knowing the various elements, [12.19]

Also, knowing the higher and lower
Faculties, the way to everywhere,
The power aware of the absorptions, deliverances,
Concentrations, contemplations, and so on; [12.20]

The knowledge remembering previous lives,
Likewise, the awareness of death and rebirth,
And the power of knowing the ending of
Contaminations – these are the ten powers. [12.21]

If the powers of the Buddha are divided, there are ten of them; for there are: (1) the power of knowing the place and what is not the place, (2) likewise, the power or awareness knowing the ripening of karma, (3) the power of understanding the various wishes, (4) the power of knowing the various elements, (5) likewise, the power of knowing the higher and lower faculties, (6) the power of knowing the paths which lead everywhere, (7) the power or awareness knowing the absorptions, the deliverances, the concentrations, the contemplations, and so on, (8) the power of knowing the recollection of previous lives, (9) likewise, the power or awareness knowing death and rebirth, and (10) the power of knowing the ending of contaminations.

The first of the ten powers is the power knowing sources and non-sources. A source is, for example, that from virtue comes happiness and a non-source is that from virtue comes suffering. The discussion of sources and non-sources can be applied to all causes and results, for example, that from a grain of rice comes a rice plant is a source and that from a grain of rice comes a pea plant is a non-source. This can be debated saying: "Do non-sources exist? Does the non-source that is virtue bringing suffering exist? Does the non-source that is a rice seed bringing about a pea plant exist?"

The second power, the power knowing the fruition of actions, knows that from virtuous actions comes the fruitional result of rebirth in the higher realms as a god or human being, whereas from non-virtuous actions comes the fruitional result of rebirth in the three lower realms. For example, if someone stumbles on a rock and falls is that a result of his karma? It is. In the *Supplement*, in the context of discussing the fact that a human being sees a river as water, a god sees it is as nectar, and a hungry ghost sees it is pus and blood, it is said that this is due to karma. This is known by buddhas alone.

The third power, the power knowing the varieties of dispositions, knows that in dependence on their dispositions different beings enter different vehicles, engage in different practices, and

achieve different results. For example, different people are disposed toward different types of food in that some like fatty foods and some do not and so forth. A buddha knows the likes and dislikes of sentient beings.

The fourth power is the power knowing the varieties of constituents. This word "constituents" (*khams*) is explained differently in different contexts. In general, there are eighteen types of constituents: a group of six objects – forms, sounds, and so forth; a group of six supporting sense powers; and a group of six supported consciousnesses. These are discussed in the context of the five aggregates, twelve spheres, and eighteen constituents. Vasubandhu's *Treasury of Knowledge* elaborates even more than eighteen constituents. A buddha knows all these constituents.

The fifth power, the power knowing superior and inferior faculties, knows the five faculties of faith and so forth. A buddha knows who has superior faculties of faith and so forth, who has middling faculties of faith and so forth, and who has inferior faculties of faith and so forth. The etymology of the word "faculty" or "power" (*dbang po*) is that they are so-called because they have the power to produced their own result, a superior's path.

The sixth, the power knowing the paths that proceed everywhere, knows the fifteen paths – the five paths of hearers, the five paths of solitary realizers, and the five paths of bodhisattvas – that lead respectively to the results of hearer foe destroyer, solitary realizer foe destroyer, and buddha. In addition, the paths that proceed everywhere also refer to the paths of action that lead to the hell realm, to the hungry ghost realm, to the animal realm, to the human realm, and to the god realm. Is there a difference between an action and a path of action? Think about it. Thus, there are paths that lead upward and paths that lead downward.

The seventh power is the power knowing the concentrations, complete liberations, meditative stabilizations, meditative absorptions, and so forth. There are four concentrations and eight complete liberations. Meditative stabilizations are of different types, for example, the meditative stabilization that is calm abiding and the meditative stabilization that is special insight. The absorptions are the nine absorptions of serial abiding: the four concentrations, the four formless absorptions, and the absorption of cessation.

The eighth power, the power mindful former states, knows the former states of sentient beings. Due to it, a buddha can say where other sentient beings were born in their past lives.

The ninth power, the power knowing death and rebirth, knows when someone will die and where they will be reborn.

The tenth power, the power knowing the exhaustion of contaminations, knows the exhaustion of the contaminations that are the afflictions.

Lama Tsongkhapa's *Illumination* (Tibetan text page 448) says:

> Because the buddha ground is distinguished by the ten powers, there is the [following] explanation in order to present a mere part of its divisions:
>
> *The power of exalted knowledge of sources and non-sources,*
> *Similarly, the awareness of the fruition of actions,*
> *The comprehension of the varieties of dispositions,*
> *The power of exalted knowledge of the varieties of constituents,* [12.19]
>
> *Similarly, the exalted knowledge of superior and*
> *Inferior faculties, those proceeding everywhere,*
> *The power of awareness of the concentrations, complete liberations,*
> *Meditative stabilizations, meditative absorptions, and so forth,* [12.20]
>
> *The exalted knowledge mindful of former states,*
> *Similarly, the awareness, of death and rebirth,*
> *The power of exalted knowledge of the extinction of contaminations –*
> *These are the ten powers.* [12.21]

A subduer's powers are:
1. *the power of exalted knowledge of sources and non-sources,*
2. *similarly*, the power of *awareness*, that is, exalted knowledge, *of the fruition of actions*,
3. the power of *comprehension of the varieties of dispositions*,
4. *the power of exalted knowledge of the varieties of constituents,*
5. *similarly*, the power of *exalted knowledge of superior and inferior faculties*,
6. the power of exalted knowledge of paths that *proceed everywhere*,
7. the *power of awareness*, that is, exalted knowledge, *of the concentrations, complete liberations, meditative stabilizations, meditative absorptions, and so forth*,
8. the power of *exalted knowledge mindful of former states*,
9. *similarly*, the power of *awareness*, that is, exalted knowledge, *of death, rebirth*, and abidance,
10. *the power of exalted knowledge of the extinction of contaminations*;

these are the ten powers.

This is the brief presentation of the ten powers.

Lama Tsongkhapa's *Illumination* (Tibetan text page 448) says:

3B2B-2B Extensive explanation of [the ten powers]

1 Explanation of the five powers: the exalted knowledge of sources and non-sources and so forth
2 Explanation of the five powers: the exalted knowledge of paths that proceed everywhere

3B2B-2B1 Explanation of the five powers: the exalted knowledge of sources and non-sources and so forth

1. The power of exalted knowledge of sources and non-sources

Chandrakirti's autocommentary says:

There, in terms of the strength that knows sources and non-sources it is explained:

From which cause something will be definitely produced,
That is taught by those who know it as the source of that.
Non-sources conflict with explanation. The knower of the infinite
To be known, obstruction abandoned, is explained as a strength. [12.22]

The statement "From which cause something…" is an illustration. Therefore, the statement "From which cause something is produced, it is like this: from non-virtues the unattractive matures. From which something is obtained, it is like this: from the arya path, nirvana," and so forth, is properly summarized. The statement "from which cause something definitely produces, that is the source (or abode) of that having the production since the source is in it (or since it abides in it)," expresses the cause by the term source (or abode) through the mode of designation.

Gedun Drup's *Mirror of the Clarification of the Thought,* as translated by Martin Willson, says:

3B2B-2B Extensive explanation

Whatever cause something is sure to be produced from
Is taught by Those Who Know it as the latter's place.
The reverse of this explanation is "not the place." Unhindered
Knowledge of these boundless knowables is explained as a power. [12.22]

He has what is explained as the power of knowing the place and what is not the place; for [the buddhas] who know this have taught that from whatever cause some result will certainly arise, that cause is the "place" of that result, [– for example, from non-virtue, an unpleasant ripe karmic result arises, and from the path of the aryas'

training, nirvana is received, etc. –] while that contrary to this explanation is [called] "not the place" [e.g., an unpleasant ripe karmic result arising from virtue] – about these infinite knowables he has received knowledge which has abandoned obstruction [or is unobstructed].

A buddha knows what is a cause that brings about a certain result and what is not a cause that brings about that result. For example, he knows that a virtuous action brings the result of happiness, that is, he knows that that virtuous actions is a source of happiness. On the other hand, he knows that a virtuous action does not bring the result of suffering, that is, he knows that that virtuous action is a non-source of suffering. Similarly, he knows that a non-virtuous actions brings the result of suffering, that is, he know that that non-virtuous action is a source of suffering. A "source" is thus the source of a result.

Chandrakirti's autocommentary says:

> That which contradicts what was explained is not the source. That from which something does not arise is not the source of that. For example, like unattractive effects do not arise from virtue and the manifestation of the eighth existence does not arise upon attaining the path of seeing. Therefore, this knower, free from the discordant class, is presented as the strength of the Buddha Bhagavan.

What is "the eighth existence"? If we take the spelling in the Tibetan text to be correct (*srid pa*) it would seem to mean that one does not take an eighth rebirth upon attaining the path of seeing. However, perhaps this is misspelled and instead should read "the eighth craving" (*sred pa*), in this case it would mean that the cause for cyclic existence, craving, no longer arises upon attaining the path of seeing.

The Buddha explains sources and non-sources in the *Sutra of the Questions of Arya King Dharanishvara*. Chandrakirti cites this sutra:

> As is taught in the *Sutra of the Questions of Arya King Dharanishvara*:
>
> > [Then, the Bhagavan again said to the bodhisattva King Dharanishvara: Son of good lineage, there, what are the actions of the Tathagata? Son of good lineage, the actions of the Tathagata are these thirty-two. What are the thirty-two? (They are the ten strengths, the four fearlessnesses, and the eighteen unshared qualities of a buddha.)]
> >
> > Son of good lineage, here, the Tathagata thoroughly knows the source as the source, exactly as it is, with the unexcelled exalted wisdom of the Tathagata. He also thoroughly knows the non-source as the non-source, exactly as it is.
> >
> > Son of good lineage, there, what is the source and what is the non-source? Son of good lineage, this is not the source and is without occasion: whatever maturation of an evil action by body, evil action by speech, and evil action by mind is desirable, pleasant, joyful, and attractive – this is the non-source. This is the source and has occasion: whatever maturation of an excellent action by body, excellent action by speech, and excellent action by mind is desirable, pleasant, joyful, and attractive – this is the source.

Evil actions of body, speech, and mind refer to the three negative actions of body – killing, stealing, sexual misconduct; the four of speech – lying, divisive talk, harsh speech, and idle talk; and the three of mind – covetousness, malice, and wrong views. A pleasant result does not arise from these negative actions. Similarly, an unpleasant result does not arise from the ten excellent actions of body, speech, and mind, only pleasant results arise from them.

Chandrakirti's autocommentary continues to quote the *Sutra of the Questions of Arya King Dharanishvara*:

> Son of good lineage, this is not the source and is without occasion: whatever miserliness makes great resources manifest, faulty morality brings about rebirth as a god and human, harmful mind brings about beauty, laziness attains clear realization, mental distraction enters into the faultless (or: into certainty), and whatever faulty wisdom well destroys all transmission of imprints.

The Buddha then discusses source and non-source in terms of resources: miserliness is a non-source of great resources, whereas generosity is a source of great resources. Similarly, faulty morality is a non-source of rebirth as a god and human being, harmful mind is a non-source of beauty, laziness is a non-source of clear realizations, mental distraction is a non-source of faultless meditative stabilization, and faulty wisdom is a non-source of the destruction of the continuity of latencies.

Chandrakirti's autocommentary continues to quote the *Sutra of the Questions of Arya King Dharanishvara*:

> Whatever action of immediate [retribution] brings about mental abiding, whatever possessor of an observation attains concordant patience, whatever thorough dwelling in repentance the mind becomes serviceable – this is the non-source. Not the source and without occasion: whatever body of a woman itself [arises in the world as] a universal monarch, Indra, Brahma [or the buddha – this is without source]...

– and so forth.

An action of immediate retribution is a non-source for the abiding of the mind. Having the observed object of true existence is a non-source of concordant forbearance, that is, forbearance with regard to the meaning of emptiness. A mind abiding in regret is a non-source of a serviceable or pliant mind. The body of woman is a non-source of a universal monarch, Indra, and Brahma.

Chandrakirti's autocommentary continues to quote the *Sutra of the Questions of Arya King Dharanishvara*:

> "This is the source and has occasion: whatever generosity makes great resources manifest and..."

– should be added having reversed all the statements.

> [Whatever morality brings about rebirth as a god and human…, patience brings about beauty..., perseverance attains clear realization..., concentration enters into certainty..., whatever wisdom well destroys all transmission of imprints – this is the source and has occasion.
>
> Whatever immaculate morality brings about mental abiding..., whatever interest in emptiness attains patience..., through whatever utter non-arising the mind becomes serviceable – this is the source and has occasion... This is the source and has occasion: whatever replacement of the body of a woman arises in the world as a universal monarch or Indra or Brahma or buddha – this is the source.]
>
> This is the first tathagata activity of the Tathagata.

Generosity is a source of great resources. Similarly, morality is a source of rebirth as a human being or god; the abandonment of a harmful mind, that is, patience, is a source of beauty; effort is a source of clear realizations; concentration is a source of abiding single-pointedly in a faultless meditative stabilization; and wisdom is a source for the destruction of the continuity of latencies.

Thursday afternoon, 3 May 2001

2. The power of exalted knowledge of the fruition of actions

Chandrakirti's autocommentary says:

> Now, in terms of the strength that knows karma and maturation, it is explained:
>
> *Also to know the karma that is desired, undesired, opposite from that,*
> *And an exhausting thing – and its extremely varied maturations –*
> *The powerful ability to individually engage without obstruction,*
> *Pervading all to be known of the three times: that is asserted as a strength.* [12.23]
>
> By fully knowing the self entities and thorough classifications and so forth, also regarding attractive karma, unattractive karma, attractive and unattractive karma, the uncontaminated cause of exhausting and the maturation of the three aspects, extremely varied like karma, pervading the entirety of worlds included in the three times, the knower that pervades the entirety of objects to be known, not having obstruction toward anything to be known – that is presented as the Bhagavan's strength that knows karma and maturation.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *Desired, undesired, their contrary and consuming cause,*
> *The knowledge of these karmas and their very varied*
> *Results, an unhindered power, perceiving individually,*
> *Embracing the knowables of the three times, is held as a power.* [12.23]

He receives what is held to be the power of knowing the ripe result of karma; for of desired, or positive, and undesired, or negative [karma], [in unmixed karma,] the reverse of these two, or mixed ("gray") karma, and karma of [uncontaminated] nature which consumes evil [or contaminated[243]] karma, and also of the very varied ripe results of these, he has received knowledge, a power or ability without obstruction, understanding them individually, and pervading all the knowables [of karmas and their results] of the three times.

A buddha knows the fruition of actions without impediment. An attractive or pleasant action is a virtuous actions, whereas an unattractive or unpleasant action is a non-virtuous action. They are so-called because virtuous actions give rise to attractive or pleasant results, whereas non-virtuous actions give rise to unattractive or unpleasant results.

This passage mentions three types of actions: (i) white actions which are virtuous actions, (ii) black actions which are non-virtuous actions, and (ii) actions that extinguish the contaminated. Contaminated actions are consumed by uncontaminated actions. In addition, a contaminated non-virtuous action is also consumed by a contaminated virtuous action. Thus, a contaminated antidote overcomes a contaminated non-virtuous action. Non-virtuous actions and contaminated virtuous actions both bring about a fruitional result, but does an uncontaminated action bring about a fruitional

[243] *zag.bcas*

result? Think about it because if it is said that an uncontaminated action brings about a fruitional result, then one asks: "Is an uncontaminated action also a fruitional cause?" If someone says that it is, one can quote the *Treasury of Knowledge* which says that a fruitional cause is a non-virtuous action or a contaminated virtuous action. According to this text a fruitional cause is pervaded by being either non-virtue or contaminated virtue. If the Prasangika Madhyamikas say that a fruitional cause is not pervaded by being one of these two, what would you say? Posit! The uncontaminated that is a cause that exhausts the black.

Chandrakirti's autocommentary says:

> As is taught [in the *Sutra of the Questions of Arya King Dharanishvara*]:
>
> > [Son of good lineage], furthermore, the Tathagata thoroughly knows just exactly as they are, the karmas and perfectly adopted karmas that arise in the past, present, and future – skilled in abode, cause, functioning thing, and maturation.
> >
> > How are they thoroughly known? Son of good lineage, here, the Tathagata thoroughly knows whatever perfectly adopted karma of the past arose from the cause of virtue, devoid of non-virtue, which in the future will issue forth [an effect] arisen from the virtuous cause. Whatever perfectly adopted karma arose from the cause of non-virtue, devoid of virtue, which in the future will issue forth [an effect] arisen from the non-virtuous cause – that too the Tathagata thoroughly knows.

The Buddha knows all the diverse actions of the past, present, and future. What are "perfectly adopted karmas"? These karmas are vows which are a source, cause, functioning thing, and maturation or fruition. When a vow is taken, because it is virtuous, it becomes a source of happiness. On the other hand, "whatever perfectly adopted karma arose from the cause of non-virtue, devoid of virtue" refers to a non-vow. Both vows and non-vows are perfectly adopted by means of a ritual.

Chandrakirti's autocommentary continues to quote the *Sutra of the Questions of Arya King Dharanishvara* which says:

> > Similarly, whatever perfectly adopted karma will in the future become concordant with degeneration (or dependent on the inferior) and will become concordant with enhancement (or dependent on the exceptional) – he thoroughly knows that too. Similarly, concordant with degeneration in the present becoming concordant with enhancement in the future, concordant with enhancement in the present becoming concordant with degeneration in the future – he thoroughly knows that too. Similarly, each and the similar class, he will thoroughly know too.

There is perfectly adopted karma that is concordant with degeneration in the future and perfectly adopted karma that is concordant with enhancement in the future. Similarly, the *Ornament* in the context of the four concentrations and four formless absorptions set out the four concordancies: those concordant with degeneration, those concordant with abiding, those concordant with enhancement, and those concordant with definite differentiation (see *Meditative States*, page 159).

"Concordant with degeneration in the present becoming concordant with enhancement in the future" refers to karmas that have degenerated in the present but will be enhanced in the future. "Concordant with enhancement in the present becoming concordant with degeneration in the future" refers to karmas that are enhanced in the present but will degenerate in the future. For example, having taken a vow, although presently we have degenerated it, we can enhance it in the future by

retaking it. Similarly, we may have weak virtue presently but in the future it can become strong, likewise, weak non-virtue presently can become strong in the future. On the other hand, now we may have strong virtue that in the future will become very weak. For example, there are people who practice Dharma strongly now but in the future may abandon it completely.

Chandrakirti's autocommentary continues to quote the *Sutra of the Questions of Arya King Dharanishvara* which says:

> Similarly, that perfectly adopted karma that was a small application in the past becoming extensive and an extensive application in the future; similarly, a small undertaking becoming a great distinction; a great undertaking becoming a small distinction; whatever perfectly adopted karma issuing forth the cause of the hearer state, whatever [issues forth] the solitary realizer state, and whatever issues forth the cause of the buddha's enlightenment – that too the Tathagata thoroughly knows.

A perfectly adopted karma that was a small application or commission can become extensive in the future. For example, one may apply oneself very little at the beginning of an activity and then gradually increase one's application. "Small undertaking becoming a great distinction; a great undertaking becoming a small distinction" means that at times the effort is great but the result is small, whereas at other times the effort is very small but the result is very great. In short, a great karma can bring about a small result and a small karma can bring about a great result.

"Whatever perfectly adopted karma issuing forth the cause of the hearer state, whatever [issues forth] the solitary realizer state, and whatever issues forth the cause of the buddha's enlightenment" means that from some perfectly adopted karma there is the attainment of a hearer's enlightenment, from other the attainment of a solitary realizer's enlightenment, and from other the attainment of a buddha's enlightenment.

Chandrakirti's autocommentary continues to quote the *Sutra of the Questions of Arya King Dharanishvara* which says:

> Similarly, whatever perfectly adopted karma, suffering in the present becoming a blissful maturation in the future; blissful in the present becoming a suffering maturation in the future – that too the Tathagata thoroughly knows.

For example, there are times when we experience many problems and suffering but later on we can experience great happiness. It can also happen that while we are very happy and relaxed in the present we may experience much suffering in the future.

Chandrakirti's autocommentary continues to quote the *Sutra of the Questions of Arya King Dharanishvara* which says:

> [Son of good lineage], thus, whatever is the karma of sentient beings of the past, present, and future, whatever is the cause and whatever is the maturation – the Tathagata, depending on only that and not others, thoroughly knows just exactly as it is. Having known, he also teaches the Dharma similarly.
>
> This is the second tathagata activity of the Tathagata.

Thus, a buddha knows all phenomena. It is recounted that someone accused the Buddha of being a liar and trickster because to those who treated him well he predicted that they would have happiness in the future, whereas to those who treated him badly he predicted that they would have suffering in the future. The Buddha responded that he was not lying and that he could in fact prove that he was not lying. He told all of the farmers in the area to bring him a small cloth bag containing some grain from their various fields. The farmers did this and the next day brought their bags, each marked in a way so that they themselves were able to identify them, and placed them in a pile. The Buddha then picked them up one by one and said "This grain is from such-and-such a field belonging to such-and-such a farmer" and handed it to the right owner. In this way, their disbelief was dispelled and they asked the Buddha's forgiveness.

3. The power of exalted knowledge of the varieties of dispositions

Chandrakirti's autocommentary says:

> Now, in terms of the strength that knows the varieties of interests, it is explained:
>
> *Desires due to the strength of the sources of attachment and so forth*
> *Are very diverse. Knowing the inferior, middling, and distinguished desires,*
> *As well as the interests covered over by others besides those,*
> *Pervading the entirety of the three time migrators, is called a strength.* [12.24]

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *The knowledge of wishes due to the sources of attachment*
> *And so on, the low, the middling, and also those held superior,*
> *And also of wishes covered by the other than those,*
> *Embracing all beings of the three times, is called a power.* [12.24]

He receives the so-called "power of understanding the various wishes," for his knowledge about the very varied desires from the power of the origin [or seed] of attachment, [hatred, and other defilements] and so on [i.e., positive dharmas, faith, etc.] – the low, the medium, and also those which are held to be superior – and also wishes covered [or obscured] by action different from these, embraces all the sentient beings of the three times.

Chandrakirti's autocommentary says:

> Here, because the term 'attachment' is an illustration of delusion, it also holds for hatred and so forth. The term "and so forth" is for the purpose of fully including the virtuous qualities of faith and so forth. The term "source" is because of saying "It is called the seed of attachment and so forth since attachment and so forth emerge from it."

From the seed of attachment there arises attachment, and from the seed of faith there arises faith.

Chandrakirti's autocommentary says:

> Thus, thoughts that are fully embraced by the seeds of attachment and so forth and faith and so forth are expressed as "special interest, special attitude, desire, and interest." Therefore, "the occurrence of the omniscient mind that acts to fully determine the differences of the specific entities regarding [those thoughts], as well as the [interests] obscuring [the seeds of the previously explained interests] due to the comprehensive use of dharmas other than those, is presented as the Buddha Bhagavan's strength of knowing the varieties of interests.

The seeds of attachment and so forth are called "special interest, special attitude, desire, and interest." Here the word "interest" or "disposition" means to aspire for something.

Chandrakirti's autocommentary says:

> As is taught [in the *Sutra of the Questions of Arya King Dharanishvara*]:
>
> > Son of good lineage, furthermore, the Tathagata thoroughly knows just exactly as they are, the many interests and varied interests of other sentient beings and other persons. Son of good lineage, how does the Tathagata thoroughly know just exactly as they are, the many interests and varied interests of other sentient beings and other persons? Whatever person abiding in attachment is interested in hatred, whatever person abiding in hatred is interested in attachment, whatever person abiding in bewilderment is interested in attachment, hatred, and bewilderment – that too the Tathagata thoroughly knows.

While abiding in attachment, one is interested in or generates hatred. Due to the condition of attachment, hatred arises. "Whatever person abiding in attachment is interested in hatred" means "Whatever person abiding in attachment is interested in the object of hatred" and "whatever person abiding in hatred is interested in attachment" means "whatever person abiding in hatred is interested in the object of attachment." "Whatever person abiding in bewilderment is interested in attachment, hatred, and bewilderment" means whatever person is interested in the object of attachment, the object of hatred, and the object of confusion. Someone can abide, for example, in virtue and be interested in non-virtue. Although someone abides in virtue he may have the tendency to lie or to steal.

Chandrakirti's autocommentary quotes the *Sutra of the Questions of Arya King Dharanishvara*:

> Whatever person abiding in virtue is interested in non-virtue, that too the Tathagata thoroughly knows. Whatever persons of small application are interested in the extensive attitude..., whatever of extensive application are interested in the small attitude – those too the Tathagata thoroughly knows.

What do "application" or "commission" and "attitude" or "thought" refer to? For example, we can do something that is a small application of body and speech with the extensive thought or attitude of the mind of enlightenment. On the other hand, we can do something that is an extensive application of body and speech, such as doing prostrations and reciting prayers, with the small thought or attitude thinking only of one's own welfare or happiness.

Friday morning, 4 May 2001

Chandrakirti's autocommentary quotes the *Sutra of the Questions of Arya King Dharanishvara*:

> Due to what interest regarding small application will there be abidance in the distinguished..., regarding the distinguished will there be abidance in the small..., regarding the definite to perfection will there be placement in the constituent definite to the faulty..., regarding the definite to the faulty will there be placement in the constituent definite to perfection..., regarding the indefinite will there be placement in the constituent definite to perfection...,

The Buddha knows those who are interested in the perfect, those who are interested in the faulty, and those who are interested in both. There are those who determine to act in a perfect or correct way but when they perform the action it is faulty. Contrarily, there are those who determine to act in a faulty way but when they perform the action it is perfect or correct. There are also those whose motivation is indefinite but when they perform the action the motivation becomes definite. In other words, although the motivation was not firm the action becomes correct.

Chandrakirti's autocommentary quotes the *Sutra of the Questions of Arya King Dharanishvara*:

> Due to what interest will there be utter passing beyond the desire realm..., due to what, the form realm..., due to what, the formless realm, and due to what [interest] will there be utter passing beyond the three realms – that too the Tathagata thoroughly knows. Having known, he also teaches the Dharma similarly.
>
> This is the third tathagata activity of the Tathagata.

The Tathagata knows who is interested in becoming free from attachment to the desire realm, who is interested in becoming free from attachment to the form realm, who is interested in becoming free from attachment to the formless realm, and who is interested in becoming free from attachment to the three realms. Since the Buddha knows the interests of sentient beings he teaches in accordance with this.

4. The power of exalted knowledge of the varieties of constituents

Chandrakirti's autocommentary says:

> Now, in terms of the strength that knows the variety of constituents, it is explained:
>
> *The buddhas, skilled in the classifications of constituents, teach*
> *The eyes etc. and that which is their nature as the constituents.*
> *The boundless exalted knower of the consummate buddhas engaging*
> *The distinctions of all types of constituents are asserted as a strength.* [12.25]

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *The buddhas, wise about the divisions of the elements,*
> *Say the natures of the eye and so on are elements.*
> *The perfect buddhas' knowledge, boundless and perceiving*
> *The distinctions of elements of all kinds is held to be a power.* [12.25]

He receives what is maintained to be the power of knowing the various elements; for the buddhas, wise about the divisions of the elements, have taught that the eye and so on, [form and so on, and eye consciousness, etc. up to mind consciousness, and their] natures, [voidness of the internal and so forth,] are elements, and, of the distinctions of these elements of all kinds, the knowledge of these perfect buddhas is infinite.

The *Treasury of Knowledge* defines an aggregate as a heap, a sphere as the door of generation and propagation of consciousness, and a constituent as a type saying:

> *Aggregate, sphere, and constituent mean*
> *Heap, door of generation, and type.* [1.17ab]

The eighteen constituents are the six objects, form and so forth; the six supporting sense powers, the eye sense power and so forth; and the six supported consciousnesses, the eye consciousness and so forth.

Chandrakirti's autocommentary says:

> 'Nature,' 'entity' and 'emptiness' are equivalents. The exalted knower of the buddhas, those who are skilled in the classifications of all constituents, which does not have obstruction to the natures of the constituents – the eye and so forth – which are the many classifications having the characteristics of internal emptiness and so forth, is presented as the strength that knows the variety of constituents.

A buddha knows all the types of constituents.

Chandrakirti's autocommentary quotes the *Sutra of the Questions of Arya King Dharanishvara*:

> As is taught [in the *Sutra of the Questions of Arya King Dharanishvara*]:
>
> > Son of good lineage, furthermore, the Tathagata thoroughly knows the eye constituent, the visual form constituent, and the visual consciousness constituent. [How are they thoroughly known?] The internal emptiness, external emptiness, and internal and external emptiness are thoroughly known...,
>
> The three emptinesses are also to be conjoined with all eighteen constituents.

In this context, the emptiness of the internal is the emptiness of the six consciousnesses: the eye, ear, nose, tongue, body, and mental consciousnesses. These are the six bases of the emptiness of the internal. The emptiness of the external is the emptiness of the six objects: forms, sounds, odors, tastes, tangible objects, and phenomena. The emptiness of the internal and external is the emptiness of the organs, the loci of the sense powers. The eighteen constituents, which are condensed into three groups of six, are the bases of the three emptinesses: the emptiness of the internal, the emptiness of the external, and the emptiness of the internal and external.

Chandrakirti's autocommentary quotes the *Sutra of the Questions of Arya King Dharanishvara*:

> He also thoroughly knows the earth constituent and so forth (i.e., water, fire, and air constituents).

The six elements – earth, water, fire, wind, space, and consciousness – are those included in the continuum of a sentient being.

Chandrakirti's autocommentary quotes the *Sutra of the Questions of Arya King Dharanishvara*:

> How are they thoroughly known? However the constituent of space exists, like that, it is thoroughly known. The desire realm (or constituent), the form realm, and the formless realm [are thoroughly known. How are they thoroughly known?] They are thoroughly known as rightly arising from complete imputation (or from total conceptualization).

According to the *Treasury of Knowledge* the space element is defined as a cavity. The earth element is that which is hard and obstructive. The water element is that which is wet and moistening. The fire element is that which is hot and burning. The wind element is that which is light and moving. The consciousness element is the thorough knowledge of individual objects.

How is the desire realm posited? The etymology of "desire realm" is that the beings of the desire realm are those who make use of objects of desire. The desire realm has six divisions or classes: three lower realms and three upper realms. Each of these realms is also further subdivided. For example, the hell realm is divided into the hot hells, cold hells, occasional hells, and neighboring hells. The hungry ghost realm is divided into hungry ghosts with internal obstacles, hungry ghosts with external obstacles, and hungry ghosts with both internal and external obstacles. The animal realm is divided into those animals are dispersed and animals that live together. Each of these beings have their respective sufferings which are explained in detail in the teachings on the Stages of the Path.

The upper realms consist of the human, anti-god, and god realms. The human realm is divided into the human beings of the four main continents and the human beings of the eight sub-continents. They too experience specific sufferings. The anti-gods are divided into thirty-six abodes. The gods of the desire realm are divided into six types, one higher than the other. The three types of beings of the lower realms and the three types of beings of the upper realms are all included in the desire realm. There are also gods of the form realm and gods of the formless realm which are included in the upper realms.

Chandrakirti's autocommentary quotes the *Sutra of the Questions of Arya King Dharanishvara*:

> Compounded constituents [are thoroughly known] as characterized by strong composition..., uncompounded constituents as characterized by non-strong composition..., the constituents of the thoroughly afflicted as characterized by adventitious delusions..., the constituents of the totally purifying as characterized by clear light by nature..., the constituent of cyclic existence as characterized by inappropriate ignorance…, the constituent of the sphere of nirvana as characterized by appropriate cognition.

Compounded constituents are those that are produced in dependence on their respective causes and conditions. Uncompounded constituents are those that are not produced in dependence on their respective causes and conditions. The thoroughly afflicted constituents are the afflicted. The completely pure constituents are clear light in nature. The constituents of cyclic existence are those fabricated by improper ignorance. The constituents of the sphere of nirvana are true cessations which are freedoms from afflictions.

Chandrakirti's autocommentary quotes the *Sutra of the Questions of Arya King Dharanishvara*:

> Whatever are constituents of the worldly abode, whatever are constituents of thoroughly abiding, whatever are constituents that subsequently lead, whatever are obstructed constituents, [whatever are constituents of application], whatever are constituents of thought, [whatever are definitely intended constituents], whatever are constituents of the supported (or the support) – the Tathagata thoroughly knows them just exactly as they are. Having known, he also teaches the Dharma similarly.
>
> This is the fourth tathagata activity of the Tathagata.

The "constituents of the worldly abode" or "the constituents of the transitory basis" refers both to the inhabitants and the environment. "The transitory basis" was discussed in the *Ornament* in the context of the observed object of a mahayana achieving.

"Obstructed constituents" refers to those that are obstructive such as a table.

Lama Tsongkhapa's *Illumination* (Tibetan text page 448-9) says:

1. The power of exalted knowledge of sources and non-sources

That definitely producing something from whatever cause
Was taught by those who know that to be the source of that.
The opposite to that explanation is a non-source. That abandonment of impediment
With respect to knowing all objects of knowledge is explained to be a power. [12.22]

A cause *definitely producing some* result *from whatever cause was taught by* the buddhas *who know that to be the source of that* result. For example, from non-virtue arises an unattractive fruition; from the learning path of a superior, nirvana is attained, and so forth. *The opposite to that explanation is* called *a "non-source*," for example, from virtue there arises an attractive fruition and by attaining the path of seeing the eighth existence is accomplished by the force of actions: these being non-sources and without an occasion. *That abandonment of impediment* – that is, that absence of impediment – *with respect to knowing all objects of knowledge* that are such sources and non-sources *is explained to be the power* of the exalted knowledge of sources and non-sources.

The power knowing sources and non-sources is a buddha's exalted knowledge that virtue is a source of happiness and non-virtue is a source of suffering, while, on the other hand, virtue is a non-source of suffering and non-virtue is a non-source of happiness.

Lama Tsongkhapa's *Illumination* (Tibetan text page 449) says:

2. The power of exalted knowledge of the fruition of actions

The exalted knowledge that individually engages with unimpeded ability and strength
The desirable and the undesirable, their opposite,
The actions that are things that exhaust, and also the great variety of their fruitions,
Pervading the objects of knowledge of the three times, is asserted to be a power. [12.23]

The exalted knowledge that individually engages with unimpeded ability and strength

- the *desirable* – virtuous – *and the undesirable* – non-virtuous actions, these two unmixed [actions],
- *the opposite of these* two, mixed actions,
- *actions that are* uncontaminated *things that exhaust* bad contaminated actions,
- *also the very* different *varieties of fruitions of those* actions,

pervading all *objects of knowledge* that are actions included in *the three times* and their results, *is asserted to be the power* of the exalted knowledge of the results of actions.

Due to the afflictions, attachment, hatred, and ignorance, one engages in non-virtuous actions; a buddha knows the fruition of these actions. Also due to the completely pure class, faith and so forth, one engages in virtuous actions; a buddha also knows the fruition of these actions. For example, when it is hot and we experience a cool breeze that breeze arises due to the ripening of a virtuous action

created in the past. In this way, all our pleasant and unpleasant experiences are due to previous actions.

Lama Tsongkhapa's *Illumination* (Tibetan text page 449) says:

3. The power of exalted knowledge of the varieties of dispositions

The exalted knowledge pervading all without exception by going to the three times
With respect to desires, due to the power of the origin of attachment and so forth –
The great variety of inferior, middling, and especially superior desires – and
Also the dispositions that cover other than those, is called "a power." [12.24]

The exalted knowledge pervading all objects of knowledge that are dispositions *without exception with respect to*

- *the desires* that are produced *by the power of the origin* – that is, the seeds – of the afflictions of *attachment* and those illustrated by [the word "attachment"], hatred and so forth, and of those included in "*and so forth*" (v. 12.24b), faith and so forth, the *very* different *varieties – inferior, middling, and especially superior desires* – and
- *also the dispositions that cover*, or obscure, the seeds of the dispositions explained before due to Dharma conduct that is *other than those* dispositions,

by *going to*, that is, engaging, *the three times is called "the power* of exalted knowledge of the varieties of dispositions."

A buddha knows the different dispositions of sentient beings. That is, he knows who aspires for objects of hatred, who aspires for objects of attachment, and who aspires for objects of ignorance. Similarly, he also knows who aspires to objects of non-hatred, who aspires to objects of non-attachment, and who aspires to objects of non-ignorance.

Lama Tsongkhapa's *Illumination* (Tibetan text page 449-50) says:

4. The power of exalted knowledge of the varieties of constituents

The buddhas who are skilled in the divisions of constituents
Taught that which is the nature of the eye and so forth to be the constituents.
The infinite exalted knowledge of the complete buddhas and
That engaging the distinctions of all the types of constituents is asserted to be a power. [12.25]

The buddhas *who are skilled in the divisions of* all *constituents taught the eye* and those included in "*and so forth*" (v. 12.25b) – the six from the ear through the mental, the six from form through phenomena, the six from the eye consciousness through the mental consciousness, and *that which is their nature*, the emptiness of the internal and so forth – *to be the constituents*. *That infinite exalted knowledge of the complete buddhas regarding the distinctions of all the types*, or divisions, of constituents *is asserted to be the power* of exalted knowledge of the varieties of constituents.

A buddha knows the six object constituents, the six supporting constituents, and the six supported consciousness constituents. When the constituents are explained extensively there are sixty-two.

QUESTIONS AND ANSWERS

Student: Earlier Geshe-la said that our faith is like a magnifying glass and that the buddhas' enlightened activities are like sunshine. How can we develop the magnifying glass of our faith?
Geshe Jampa Gyatso: Faith is of three types: desiring faith, faith of conviction, and clear faith. Faith of conviction is based on analysis and investigation of an object, due to which there arises a faith free from doubt. Desiring faith is a faith aspiring to understand the four noble truths correctly; that is, to understand that the first two truths are to be discarded and that the latter two truths are to be adopted. We also need to gain conviction in the law of actions and results. Clear or admiring faith is based on understanding the qualities of the Buddha and so forth.

Faith, simply put, is a liking for something. For example, some Tibetans say "He has faith in alcohol," meaning that that he likes alcohol. Thus, there is a relationship between liking something and having faith in it. To develop faith it is necessary to first see the qualities of an object, in this way faith in it will naturally arise.

Student: It seems that regarding some topics, such as emptiness and impermanence, it is easier to gain some understanding and some experience of them, and therefore faith in them, but that it is more difficult to have faith in the inconceivable powers of a buddha. How do we develop faith in them?
Geshe Jampa Gyatso: It is true that some things are very difficult to understand. There are some things that we can understand through reasoning, but other things, such as the qualities of a buddha, cannot be understood through reasoning. Presently we do not have the fortune to see a buddha complete with the thirty-two major and eighty minor marks, however, like a follower of faith, we can accept or believe that such a body does exist. Sometimes this is the best thing to do. In tantra it is said that it can be better to be a follower of faith rather than a stubborn logician full of skepticism. Years ago, when Geshe Jampa Tegchok was teaching at Manjushri Institute, he was invited to come to the Institute and one day went to see Volterra with Luca Corona. There Luca bought an alabaster sculpture of a human head and brought it back to Pomaia. Luca said to Geshe-la, "This is like the hard head of a geshe." Geshe-la responded, "It is like the hard heads of those living in Pomaia who, although they have been living near a Dharma center for years, have never come to a Dharma teaching." In fact, there is a Tibetan expression that says one should have neither a hard head nor a soft head. This is because if one is too soft, one will change religions and ideas constantly. The Tibetan nomads say, "If compassion is produced too easily, the continuity of anger will not be cut." For example, if someone asks us for help and one instantly thinks "O, that poor person!" and tries to help by taking care of him, then when that person starts to behave strangely anger will easily arise.

A disciple also needs faith in his teacher or lama, but this faith should be based on analysis. Therefore, it is necessary to take time to analyze whether that person is worthy of one's faith. In this way, one's faith will be steadfast and long-lasting. As long as one is not sure, one should not consider that person to be one's lama. The lama should also consider whether or not it is beneficial to take that person as his disciple. For example, when there is someone who goes to visit a monastery and immediately wants to become a monk, the abbot should ask him to stay and watch how he behaves over a period of several months in order to see whether or not he is a proper vessel for the vows. This is what is usually done in the Catholic monasteries in that aspiring priests or monks are given some work to do for the community for a trial period.

In sutra it says that faith is the forerunner of all excellent qualities. While we need both a father and mother, faith is like a mother. Just as a mother takes care of her child when he is small and as he grows, likewise, faith nourishes all our excellent qualities. Vasubandhu's *Treasury of Knowledge* says that someone having virtue but no faith is like a burned seed yielding fruit. Therefore, faith is necessary, especially the faith of conviction with respect to the law of actions and results. If we develop this, it is easy to generate other types of faith.

(There were no teachings Monday, 7 May 2001)

5. The power of exalted knowledge of superior and inferior faculties

Chandrakirti's autocommentary says:

> Now, in terms of the strength that knows superior and inferior faculties, it is explained:
>
> *Regarding the illusory and so forth – the very sharp are asserted*
> *As superior, occasions of middling and dull explained as inferior, and*
> *Regarding the eye and so forth, and mutual abilities to achieve – assimilate –*
> *Unimpeded knowing of all aspects is taught as a strength.* [12.26]

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *Very sharp delusiveness and so on, held to be high,*
> *And mediocrity and dullness of them, explained as not high,*
> *The eye and so on, and their cooperative perception –*
> *Unbroken knowledge of these, in all ways, is taught as a power.* [12.26]

He receives what is taught to be the power of knowing higher and lower faculties; for the knowledge about delusiveness[244] and so on, great sharpness of the faculties of faith and so on, which is maintained to be higher, the case of mediocrity and dullness, which are explained as lower, the twenty-two faculties of the eye and so on, and the faculties' ability function cooperatively, perceiving [each other's results] – [this knowledge of every aspect, understands without interruption.

The exalted knower of a buddha knows the superior and inferior faculties of sentient beings.

Chandrakirti's autocommentary says:

> The illusory is what is not correct – the highly superimposed. The illusory are just the faculties because of dwelling in sovereignty over generating attachment and so forth. The term "and so forth" (v. 12.26c) should be realized as including faith and so forth, having virtuous causes. Therefore, the term 'superior' expresses what is fully developed; occasions of the small and middling are expressed by the term 'inferior.' "The eye and so on" identifies the twenty-two faculties of the eye and so forth. Therefore, here, this exalted knower that does not have obstruction to comprehending the specific entities of the faculties and comprehending the specific entities that are able to achieve mutual effects, is presented as the strength knowing superior and inferior faculties.

The word "Illusory," also translated as "delusiveness" or "conceptualizations" or "indicative conceptions" (*kun tu rtog pa*), are the afflictions. They are what exaggerates or superimposes. Chandrakirti says "The illusory is what is not correct – the highly superimposed." These conceptualizations are faculties (literally, powers) because they have power or control over the production of attachment and so forth, that is, "because of dwelling in sovereignty over generating attachment and so forth."

[244] *kun.tu.rtog.pa*

A superior faculty or power is a faculty that is sharp, whereas here middling and dull faculties are considered to be inferior faculties. The eye and so forth are the twenty-two faculties that are also discussed in the fourth chapter of the *Ornament for Clear Realizations*. The twenty-two faculties are:
(1-6) the six sense powers, the eye and so forth,
(7-8) the male and female genitals,
(14) life,
(9-13) the five feelings, pleasure, suffering, mental pleasure, mental suffering, and equanimity;
– these fourteen are phenomena of the thoroughly afflicted class –
(14-19) the five, faith, effort, mindfulness, concentration, and wisdom,
(20-22) that making the unknown fully known, that fully knowing, and that possessing full knowledge
– these eight are phenomena of the completely pure class. The last three faculties are uncontaminated.

Chandrakirti's autocommentary says:

> As is taught [in the *Sutra of the Questions of Arya King Dharanishvara*]:
>
> > Son of good lineage, furthermore, the Tathagata thoroughly knows just exactly as they are the levels of the faculties of other sentient beings and other persons. Son of good lineage, how does the Tathagata thoroughly know just exactly as they are, the levels of the faculties of other sentient beings and other persons? Son of good lineage, here, the Tathagata also thoroughly knows just exactly as they are dull-faculty sentient beings as dull-faculty sentient beings. Similarly, he also thoroughly knows the middling-faculty and also thoroughly knows the sharp-faculty. What kind of faculty of illusion produces completed attachment, produces completed hatred, and completed bewilderment – that too the Tathagata thoroughly knows.
>
> The "completed" is the thoroughly transformed.
>
> > What kind of faculty of illusion produces artificial attachment, hatred, and bewilderment – that too the Tathagata thoroughly knows. What faculty of illusion produces inverted (or perverted) attachment, hatred, and bewilderment; what faculty of illusion produces attachment, hatred, and bewilderment that annihilate (or rebuke) – that too the Tathagata thoroughly knows.
> >
> > What faculties arise from virtuous causes, [what faculties arise from non-virtuous causes, what faculties arise from immovable causes,] and what faculties arise from the cause of renunciation – all those too the Tathagata thoroughly knows.
> >
> > [Son of good lineage], furthermore, the Tathagata thoroughly knows the eye faculty..." until... "thoroughly knows the faculty possessing full knowledge (i.e., the twenty-two faculties: six senses; male and female; life; pleasure, suffering, mental pleasure, mental suffering, and equanimity; faith, perseverance, mindfulness, concentration, and wisdom; making the unknown fully known, fully knowing, and possessing full knowledge).
> >
> > Whatever faculty, arisen from the cause of the eye faculty, is placed (or comes to reside) in the ear faculty, [not being in the nose, tongue, and body faculties] – that too the Tathagata thoroughly knows.
>
> The ear faculty and so forth should also be understood similarly.

A buddha knows which faculties function as a cause for the production of afflictions. What is the measure of sharp, middling, and dull faculties? They are posited in terms of their ability to analyze an object, thus, superior intelligence in analyzing an object is a sharp faculty, middling intelligence in analyzing an object is a middling faculty, and inferior intelligence in analyzing an object is a dull

faculty. Thus, an inferior faculty is unable to realize its object quickly and is unable to discriminates its object well.

Chandrakirti's autocommentary continues to quote the *Sutra of the Questions of Arya King Dharanishvara*:

> To the sentient being who possesses the faculty of generosity yet applies in morality, the Tathagata, knowing superior and inferior faculties, makes talk of generosity. Similarly, to the [sentient being who] possesses the faculties of morality, patience, perseverance, concentration, and wisdom, yet applies in generosity and so forth, [the Tathagata, knowing superior and inferior faculties], makes discourse of morality and so forth.
>
> Similarly, [one should also understand extensively with regard to all the [thirty-seven] practices harmonious with enlightenment]

There are some sentient beings whose faculties are more developed in generosity, the buddha knowing this teaches them morality and so forth. In order that they take up the remaining perfections, the buddhas say, for example, that the practice of morality is superior to the practice of generosity.

Chandrakirti's autocommentary continues to quote the *Sutra of the Questions of Arya King Dharanishvara*:

> [To the] sentient being who possesses the faculty of the hearers' vehicle yet applies himself in the solitary realizers' vehicle, [the Tathagata makes discourse of the hearers' vehicle]...,
>
> should similarly be applied:

To those whose faculty concords with the hearers' vehicle the buddhas say that the solitary realizers' vehicle is superior and in this way the buddhas gradually lead them to the great vehicle.

Chandrakirti's autocommentary continues to quote the *Sutra of the Questions of Arya King Dharanishvara*:

> [Those sentient beings having faculties that lack good fortune, appearing as without good fortune, the Tathagata, having cognized them as not being vessels, places in equanimity. sentient beings having faculties of good fortune, appearing as fortunate, the Tathagata, having cognized them as fortunate, pays respect and teaches the Dharma.]
>
> Son of good lineage, hence, the Tathagata thoroughly knows the fully ripened faculties of all sentient beings as "the fully ripened faculties," just exactly as they are...; thoroughly knows the not fully ripened as "the not fully ripened," just exactly as they are...; thoroughly knows those not definitely emerged as "those not definitely emerged," just exactly as they are...; also thoroughly knows those with definite emergence as "those with definite emergence," just exactly as they are.

To those sentient beings who have not yet generated the mind of definite emergence the buddhas praise definite emergence. In the Vinaya there is a discussion of the six topics in this regard: who definitely emerges, to what one definitely emerges, how one definitely emerges, and so forth. In short, to what one definitely emerges is liberation and from what one definitely emerges is cyclic existence.

One has to definitely emerge from cyclic existence because it is only a net of faults; through understanding this one generates a strong determination to definitely emerge from it. For example, if there are two friends who initially have a good relationship but later on one of them begins to find fault with the other, to criticize him, and to trick him, then the second person will leave him behind.

Chandrakirti's autocommentary continues to quote the *Sutra of the Questions of Arya King Dharanishvara*:

> Whatever type of faculty of sentient beings there is, whatever application there is, whatever attitude there is, arisen from whatever cause, whatever condition there is, whatever referent there is, whatever finality there is, whatever limit there is – all these the Tathagata thoroughly knows just exactly as they are.
>
> This is the fifth tathagata activity of the Tathagata.

In short, a buddha knows the various kinds of faculties of sentient beings. "Whatever type of faculty of sentient beings there is" refers to the fact that a buddha knows the eye sense power and so forth of sentient beings. "Whatever application there is" or "whatever commission there is" refers to the fact that, due to a faculty, one engages an object, for example, due to the eye sense power one engages a form; this seeing of form is an application or a commission of an action. In order to look at a form, for example, a movie, there must first be the thought or attitude wishing to see the movie, due to which one then actually goes to the cinema, sits down, and directs one's eyes to the screen. There are also causes and conditions for seeing a form, for example, the conditions for seeing a movie include the equipment and the people who work in the cinema, whereas the cause for the movie includes the producer and so forth. The object or referent is the movie. "Whatever finality there is," or whatever conclusion there is, is to, for example, enjoy the movie.

Lama Tsongkhapa's *Illumination* (Tibetan text page 450) says:

5. The power of exalted knowledge of superior and inferior faculties

> *Unobstructed exalted knowledge of all aspects with respect to comprehending*
> *Conceptualizations and so forth, the very sharp, asserted to be the superior and*
> *The occasions of the middling and dull explained to be the inferior,*
> *The eye and so forth, and the ability to mutual establish each other, is taught to be a power.*
> [12.26]

The *conceptualizations* that are incorrect excessive elaborations, since they exert power over the production of attachment and so forth, are faculties (powers). *Unobstructed*, or unimpeded, *exalted knowledge of all aspects with respect to* each of the respective entities of:

- *the very sharp*, the faculty of faith and so forth included in "*and so forth*" (v. 12.26b), which are *asserted to be the superior*, and the *occasions of middling* faculty *and* occasions of *dull* or lesser faculty which are *explained to be the inferior*,
- the twenty-two faculties of *the eye and so forth*,
- *the ability to* accomplish, or *establish*, *mutual* results of the faculties,

is *taught to be the power* of exalted knowledge of superior and inferior faculties.

Lama Tsongkhapa's *Illumination* (Tibetan text page 450) says:

3B2B-2B2 Explanation of the five powers: the exalted knowledge of paths that proceed everywhere

6. The power of exalted knowledge of paths that proceed everywhere

Chandrakirti's autocommentary says:

> Now, in terms of the strength that knows the paths leading everywhere, it is explained:
>
> *Some paths lead to conquest, some to the solitary realizer's*
> *Enlightenment, the hearer's enlightenment, the hungry ghosts, animal,*
> *God, human, hell, and so forth. Knowledge about those –*
> *Unimpeded and boundless – is asserted as a strength.* [12.27]

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *Knowledge of any path that leads to buddhahood, any*
> *To a pratyeka's awakening, or shravaka's awakening,*
> *Or to ghost or animal, divine or human, hell and other*
> *Realms, unbroken and boundless, is held to be a power.* [12.27]

He receives what is maintained to be the power of knowing the paths which lead everywhere; for he enters uninterrupted, boundless knowledge about any paths that lead to the state of a conqueror, any to the enlightenment of a solitary realizer or to the enlightenment of a hearer, or to the preta, animal, deva, human, and hell realms and so on, [the various right and wrong paths, etc.].

Chandrakirti's autocommentary says:

> There, the term 'path' expresses the route. The path having the character of leading to every path is the path leading everywhere. Some paths are asserted to buddhahood; some to the enlightenment of the solitary realizer; some to the enlightenment of the hearer; some are to the gods up to the hells. The term "and so forth" means illustrated in various aspects.
>
> There, the Tathagata thoroughly knows whatever path leads somewhere, exactly as it is: "that path leads there." Therefore, this unobstructed exalted knower of the Bhagavan, the subject of every path, is presented as the strength that knows the paths leading everywhere.

Here a 'path' is not a physical path or route but is an inner path of action, there being actions and paths of action. Chandrakirti says: "The path having the character of leading to every path is the path leading everywhere." In general, a path to enlightenment or buddhahood is: an exalted knower conjoined with an uncontrived thought of definite emergence. An uncontrived thought of definite emergence is a path because it is a path leading to enlightenment. There are paths that lead to the hearers' enlightenment, to the solitary realizers' enlightenment, and to the bodhisattvas' enlightenment.

"Some are to the gods up to the hells" means that there are also paths that lead to the god realm, to the human realm, to the animal realm, to the hungry ghost realm, and to the hell realm. Chandrakirti says: "Some paths lead to conquest, some to the solitary realizer's enlightenment, the hearer's enlightenment, the hungry ghosts, animal, god, human, hell, and so forth" (v. 12.27abc). What produces these is a path. A virtuous action is a virtuous path of action that leads to the upper realms and a non-virtuous action is a non-virtuous path of action that leads to the lower realms. Vasubandhu's *Treasury of Knowledge* says that the seven non-virtues of body and speech are actions and paths of actions, whereas the three non-virtues of mind are only paths of actions. The avoidance of the ten non-virtues is a path leading to high status, the god and human realms, and to definite

goodness, enlightenment. On the other hand, the ten non-virtues are a path leading to the three lower realms.

Chandrakirti's autocommentary says:

> As is taught [in the *Sutra of the Questions of Arya King Dharanishvara*]:
>
> > Son of good lineage, furthermore, the Tathagata thoroughly knows just exactly as they are, [the knowers of] the paths leading everywhere. How does he thoroughly know? He thoroughly knows just exactly as they are also the constituents of sentient beings who are destined to perfection, thoroughly knows also the constituents of sentient beings who are not destined and who are destined to corruption.

There are three types of actions: actions that are definite to the perfect, actions that are not definite to the perfect, and actions that are definite to the wrong. Chandrakirti says: "destined to perfection..." "not destined..." and "destined to corruption." Vasubandhu's *Treasury of Knowledge* instead discusses aggregates definite to the perfect, aggregates not definite to the perfect, and aggregates definite to the wrong.

Chandrakirti's autocommentary quotes the *Sutra of the Questions of Arya King Dharanishvara*:

> The constituents of sentient beings with destiny are thoroughly known like this: those sentient beings who have the strength of the cause, excellence of former application, understanding through a mere portion, having minds of sharp faculty, those having the good fortune of complete liberation whether the Tathagata shows the Dharma or whether he does not show it, the Tathagata, having understood the previous causal strength, shows the Dharma [through which they will be completely quickly liberated].

Some sentient beings, due to their former application or commission, do not need an extensive explanation, but are able to understand through receiving a mere portion of a teaching. This section of the sutra discusses actions definite to the perfect.

Chandrakirti's autocommentary quotes the *Sutra of the Questions of Arya King Dharanishvara*:

> The constituents of sentient beings without destiny are [thoroughly] known like this: those sentient beings who have the strength of the condition, who have the characteristic of those to be fully matured, also to those who will be completely liberated if they meet with concordant advice and subsequent teaching, who will not be completely liberated if they do not meet with it, the Tathagata perfectly speaks such and such discourse having cause and condition. Because, having heard such Dharma from the Tathagata, they will attain the effect through appropriate thorough application, the buddha bhagavans arise for their benefit.

This section of the sutra discusses actions not definite to the perfect. For example, when these sentient beings meet a proper teacher they are lead to liberation and so forth, whereas if they do not meet such a teacher they will not attain liberation.

Chandrakirti's autocommentary quotes the *Sutra of the Questions of Arya King Dharanishvara*:

> The constituents of sentient beings who are destined to corruption are thoroughly known like this: whether the Tathagata shows the Dharma or does not show it to those sentient beings who did not make extensive training, are of little understanding and hope, are dull-witted [and] are not vessels [of the teaching], they lack the good fortune of complete liberation. Hence, having cognized them as not being vessels, the Tathagata is impartial; for their sake the bodhisattvas put on armor.

This section discussions actions that are definite to the wrong. The buddhas are unable to help when the "constituents of sentient beings are destined to corruption," therefore, they remain impartial without giving teachings to such beings.

Tuesday afternoon, 7 May 2001

Chandrakirti's autocommentary quotes the *Sutra of the Questions of Arya King Dharanishvara*:

> Furthermore, the Tathagata thoroughly knows the threefold path of attachment. What are the three? Whatever path of attachment exists produced from the aspect of beauty; also whatever path of attachment exists produced from the aspect of subsequent attachment, also whatever path of attachment exists produced from the cause of previous predispositions.
>
> He also thoroughly knows the threefold path of hatred. Whatever path of hatred exists produced from the cause of anger, also whatever path of hatred exists produced from a not fully completed attitude, also whatever path of hatred exists produced from previous predispositions.
>
> He also thoroughly knows the threefold path of bewilderment. Whatever path of bewilderment exists produced from the cause of ignorance, also whatever path of bewilderment exists produced from the cause of the view of the transitory collection, also whatever path of bewilderment exists produced from the cause of doubt.
>
> – comes extensively.

There are three types of paths produced from attachment, three types of paths produced from hatred, and three types of paths produced from confusion or bewilderment. A path of attachment is a cause producing attachment. Attachment is produced from an attractive object. Attachment is also produced from another attachment, that is, due to thinking that something is beautiful there arises attachment then later, due to habituation, attachment is subsequently produced again. Attachment is also produced from a past dormant cause.

There are also three paths of hatred. "Whatever path of hatred exists produced from the cause of anger" means that anger is the cause of hatred. In general, anger and hatred are considered to be synonymous but here they are differentiated in that anger arises first and then hatred. "Whatever path of hatred exists produced from a not fully completed attitude" means that, one's wish not having been fulfilled, hatred is produced. There is also "whatever path of hatred exists produced from previous predispositions."

There are also three paths of confusion or bewilderment which are produced from ignorance, the view of the transitory collection, and doubt. We can all understand how confusion comes from doubt. Confusion is a synonym of ignorance. Doubt is an obscuration with respect to an object. For example, if one thinks that perhaps Dharma practice does not bring about a result one becomes confused and then gives it up. Three types of doubt are set out in *Awarenesses and Knowers*: doubt concordant with the fact, doubt that does not concord with the fact, and equal doubt.

Chandrakirti's autocommentary quotes the *Sutra of the Questions of Arya King Dharanishvara*:

> Thus, however many paths there are of all sentient beings that arise from the cause of engaging and the cause of avoiding, the exalted wisdom sight of the Tathagata engages all of them without obstruction.
>
> This is the sixth tathagata activity of the Tathagata.

Lama Tsongkhapa's *Illumination* (Tibetan text page 450) says:

6. The power of exalted knowledge of paths that proceed everywhere

> *Unobstructed exalted knowledge with respect to those paths proceeding*
> *To the state of a conqueror, those to the enlightenment of solitary realizers and*
> *To the enlightenment of hearers, to the hungry ghosts, animals, gods, humans,*
> *And hell beings, and so forth, is asserted to be the power of the infinite.* [12.27]

Unobstructed and unimpeded *exalted knowledge with respect to*

- *those paths* proceeding *to the state of a conqueror*,
- *those* paths proceeding to *the enlightenment of solitary realizers*,
- those proceeding *to the enlightenment of hearers*,
- those *proceeding to the hungry ghosts, animals, gods, humans, and hell beings*, and
- the various types presented by "*and so forth*" (v. 12.27d) – those paths that are definite to the perfect and to the wrong and so forth –

is asserted to be the power of exalted knowledge of paths that proceed to *infinity*, or everywhere.

Paths that proceed everywhere include those that proceed to the thoroughly afflicted and those that lead to the completely pure. Those that proceed to the completely pure are those that lead to the enlightenment of the three vehicles:

- those paths proceeding to the state of a conqueror,
- those paths proceeding to the enlightenment of solitary realizers, and
- those paths proceeding to the enlightenment of hearers.

Those paths proceeding to the thoroughly afflicted are those proceeding to the hell, hungry ghost, animal, human, and god realms.

Here the words "and so forth" (v. 12.27d) refers to the paths that are definite to the perfect, the paths that are not definite to the perfect, and the paths that are definite to the wrong.

7. The power of exalted knowledge of the thoroughly afflicted and completely pure

Chandrakirti's autocommentary (Tibetan text page 239) says:

> Now, in terms of the strength that knows the concentrations, the complete liberations, the absorptions, and the rising of the fully deluded and the completely purifying, it is explained:
>
> *The differences in particular yogins in the infinite worlds,*
> *What are the concentrations and eight complete liberations, what are the*
> *Tranquil abiding and what are the different absorptions, the one and the eight:*
> *Unobstructed knowledge regarding them; this is explained as a strength.* [12.28]

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *The various yogins in the infinite worlds have different*
> *Absorptions, eight deliverances, those in calm abiding,*
> *And the kinds of contemplations, of which there are one and eight;*
> *Unhindered knowledge of these is explained to be a power.* [12.28]

He receives what is explained as the power of knowing the absorptions, deliverances, and so on; for he enters unimpeded knowledge of the [infinitely] different [divisions] of the varieties of meditators in the infinite worlds, the [four] absorptions, the eight deliverances, those who dwell in calm abiding, and the kinds of contemplation, of which there are one and eight [i.e., the "nine attainments of successive stations" – the four dhyanas, the four formless absorptions, and cessation of perception and feeling].

Chandrakirti's autocommentary says:

> There, there are infinite classifications of the differences of yogins in the infinite worlds. The concentrations are four. The complete liberations are eight. Tranquil abiding is meditative stabilization having the characteristic of one-pointed mind concerning virtue. The absorptions of successive occupation are nine: the four concentrations, the four formless absorptions, and the cessation of discrimination and feeling. The causes of the fully deluded are ignorance and inappropriate attention and so forth. The causes of the completely purifying are such things as terms concordant with others and appropriate specific individual attention and so forth. Therefore, the exalted knower having no obstruction regarding the concentrations and so forth, there being infinite individual classifications due to the divisions of yogins, is presented as the strength knowing the rising of the concentrations, complete liberations, meditative stabilizations, absorptions, the fully deluded and completely purifying.

The concentrations are the four concentrations of the form realm. The eight complete liberations are:
1. the complete liberation of the embodied looking at a form,
2. the complete liberation of the formless looking at a form,
3. the complete liberation of the beautiful,

– these three are included in the form realm –

4. the complete liberation of infinite space,
5. the complete liberation of infinite consciousness,
6. the complete liberation of nothingness,
7. the complete liberation of the peak of cyclic existence,

– these four are included in the formless realm –

8. the complete liberation of the absorption of cessation.

Meditative stabilizations are calm abiding and special insight. The word "calm abiding" which in the Tibetan text is in the dual plural tense also implies special insight. The absorptions are the nine serially abiding absorptions:
(1-4) the four concentrations,
(5-8) the four formless absorptions, and
(9) the absorption of cessation.
In addition, there are the 55 thoroughly afflicted phenomena and the 53 completely pure phenomena, for a total of 108 phenomena which are known by a buddha.

Chandrakirti says: "Tranquil abiding is meditative stabilization having the characteristic of one-pointed mind concerning virtue." The absorption of cessation refers to the cessation of coarse discriminations and feelings, which are what produce conceptions and afflictions. They are ceased in order to abide in peace.

Chandrakirti says: "The causes of the fully deluded are ignorance and inappropriate attention and so forth." Inappropriate attention is a condition for the arisal of the thoroughly afflicted or fully deluded.

Chandrakirti says: "The causes of the completely purifying are such things as terms concordant with others and appropriate specific individual attention and so forth."

Chandrakirti's autocommentary quotes the *Sutra of the Questions of Arya King Dharanishvara*:

> As is taught [in the *Sutra of the Questions of Arya King Dharanishvara*]:
>
> > Son of good lineage, furthermore, the Tathagata thoroughly knows all consciousnesses just exactly as they are: the rising of the concentrations, complete liberations, meditative stabilizations, absorptions, the fully deluded and the completely purifying. How are they thoroughly known? The Tathagata thoroughly knows that which is the cause and that which is the condition of sentient beings' generation of the fully deluded. The Tathagata also thoroughly knows that which is the cause and that which is the condition of becoming completely pure.
> >
> > There, what is the cause and what is the condition? The cause of the fully deluded of sentient beings is inappropriate attention. The condition of the fully deluded of sentient beings is ignorance. Ignorance is the cause. [Karmic] formations are the condition. [Karmic] formations are the cause. Consciousness is the condition...,
>
> – until,
>
> > Delusions are the cause; karma is the condition. View is the cause; craving is the condition. Predispositions are the cause; fully rising is the condition.
> >
> > There, what is the cause and what is the condition of the completely purifying [factors] of sentient beings? Two causes and two conditions. What are the two? Terms concordant with others and appropriate individual specific attention. Furthermore, two: skill in single-pointedness regarding tranquil abiding and penetrative insight...,
>
> – is found extensively.

Here the following questions are posed: "What are the causes and conditions of the thoroughly afflicted? What are the causes and conditions for the completely pure?" The sutra then answers these questions. The cause of the thoroughly afflicted is improper mental attention and the conditions are karmic formations. Due to improper mental attention, the cause, one superimposes attractiveness on an object and then, due to ignorance acting as a condition, attachment is generated. Similarly, due to improper mental attention, the cause, one superimposes repulsiveness on an object, and then, due to ignorance acting as a condition, hatred is generated. However, since the main cause binding us in cyclic existence is ignorance, it is ignorance that has to be abandoned. How is it abandoned? It is cut by the ax of the wisdom realizing selflessness.

Chandrakirti says: "Predispositions are the cause; fully rising is the condition." This means that when the dormant afflictions arise afflictions are generated.

"Terms concordant with others" refers to the names of phenomena which concord with their respective objects or meanings. "Appropriate individual specific attention" refers to hearing a term and reflecting on its meaning. These two are causes of the completely pure. "Skill in single-pointedness regarding tranquil abiding and penetrative insight" are conditions for the completely pure.

Chandrakirti's autocommentary quotes the *Sutra of the Questions of Arya King Dharanishvara*:

> This is the cause of complete purity of sentient beings; this is the condition – that too the Tathagata thoroughly knows. Similarly, son of good lineage, since the tathagatas are endowed with exalted wisdom, they are isolated from desire; isolated from evil non-virtuous practices; having joy and bliss produced from isolating investigation and analysis; absorbed in the first concentration – risen from cessation. Absorbed in cessation – arisen from concentration. They also absorb in the eight complete liberations in the forward order, reverse order, and unordered.

Here the Buddha lists the five branches of the first concentration which are condensed under the three: the antidote branch, benefit branch and basis branch. The antidote branch includes the branches of (i) investigation and (ii) analysis, the benefit branch includes the branches of (iii) joy and (iv) bliss, and the basis branch is the branch of (v) meditative stabilization. "Absorbed in the first concentration – risen from cessation. Absorbed in cessation – arisen from concentration" refers to alternating cessation with the four concentrations and four formless absorptions. The basis of alternation is the four actual absorptions of the concentrations and the four actual absorptions of the formless absorptions. That which is alternated is, for example, the mind of the desire realm or the nine serially abiding absorptions.

The sutra says: "They also absorb in the eight complete liberations in the forward order, reverse order, and unordered." A buddha absorbs in the eight complete liberations in the forward order, the first to the eighth, and in the reverse order, the eighth to the first. He also absorbs in them without any particular order.

Chandrakirti's autocommentary quotes the *Sutra of the Questions of Arya King Dharanishvara*:

> Meditative stabilization is shown as absorption; absorption is shown as meditative stabilization, yet the meditative stabilization of the Tathagata has no mixture of all and the Tathagata has no meditative stabilization to be absorbed in with the referential. One meditative stabilization of the Tathagata manifests all meditative stabilizations. The Tathagata, without rising from a single meditative stabilization, absorbs in all meditative stabilizations, yet the Tathagata does not have engagement in one mind from another. Non-equipoise is not observed with the Tathagata.
>
> The meditative stabilization of the Tathagata is unable to be viewed by anyone; the meditative stabilization of the hearers is outshone by the meditative stabilization of the solitary realizers. The meditative stabilization of the solitary realizers is outshone by the meditative stabilization of the bodhisattvas. The meditative stabilization of the bodhisattvas is outshone by the meditative stabilization of the Tathagata. The meditative stabilization of the Tathagata is not outshone; the exalted wisdom of the Tathagata engages it without being outshone.
>
> Due to what instructions and what subsequent teachings the meditative stabilizations of the hearers are produced, that too the Tathagata thoroughly knows. Due to what [instructions and what subsequent teachings] the meditative stabilizations of the solitary realizers and due to what [instructions and what subsequent teachings] those of the bodhisattvas are produced, that too the Tathagata thoroughly knows. Having known, he also similarly instructs and similarly subsequently teaches.
>
> This is the seventh tathagata activity of the Tathagata.

Instructions are of two types: exhortations and subsequent teachings.

Lama Tsongkhapa's *Illumination* (Tibetan text page 450) says:

7. The power of exalted knowledge of the thoroughly afflicted and completely pure

Unimpeded exalted knowledge with respect to the differences
Regarding particular yogis in the infinite worlds –
Those having the concentrations, eight complete liberations, whatever calm abiding,
Any kind of meditative absorption, the one and the eight – is explained to be a power. [12.28]

Unimpeded exalted knowledge with respect to the infinite *different* divisions in terms of the *particular*, or specific, *yogis* existing *in the infinite worlds* – the four *concentrations*, *the eight complete liberations*, *whatever calm abiding* or meditative stabilization, *any kind of meditative absorption, the one and the eight* – that is, the nine meditative absorptions of serial abiding – *those* that are thoroughly afflicted and completely pure, *is explained to be the power* of exalted knowledge of the thoroughly afflicted and completely pure.

The meditative stabilizations of yogis are infinite but include the four concentrations, the eight complete liberations, calm abiding and special insight, the nine serial abiding absorptions, and so forth.

8. The power of exalted knowledge mindful of former states

Chandrakirti's autocommentary says:

Now, in terms of the strength knowing the recollections of former states, it is explained:

Abiding in cyclic existence as long as bewilderment has existed, the beings
Who evolved from each former self and from other sentient beings,
However infinite, with bases, together with the place and aspect;
Knowing whatever there were is explained as a strength. [12.29]

"As long as bewilderment," this statement explains the very object of the exalted knower recalling former states, the beginningless continuum of rebirths, one after another. "Sentient beings, however," this statement is expressed to include the endless realms of sentient beings. Mentioning, "with bases," summarizes that, explained from the viewpoint of just having causes. "From such and such [a place], my color [or caste] was such, [my] aspect was like this..." and so forth is just like the sutra. There, by recalling that "[my] color was such," one recollects together with aspect. By recalling that "there I dwelled, and then, having died and transferred, I was reborn in such and such [a place]; then having died and transferred, I was born here," one recollects together with place. The rest is recollection together with causes.

Thus, whatever exalted knower of the Buddha Bhagavan is without obstruction regarding previous existences together with bases, together with places, and together with aspects is the strength that knows the recollection of former states. With this strength, the buddha bhagavans comprehend just exactly as they are each and every past movement of the mind and mental factors. It is presented that "due to merely knowing the modes of being endowed with good fortune and not endowed with good fortune, they teach the Dharma having effects."

The buddhas know the former states of themselves and other sentient beings, that is, they know what rebirths there were, where they were taken, and how many there were.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *The past samsaric lives, as long as there's been delusion,*
> *Of himself and other beings, every samsaric being,*
> *Limitless as they are, with their bases and with their countries;*
> *The awareness of whatever these were is explained as a power.* [12.29]

He receives what is explained as the power of knowing recollection of previous lives; for his mind knowing about his own past lives in samsara, as long as delusion existed, and those of other sentient beings, every one of the infinite samsaric beings, as many as there have been, with their bases [or substance,[245] with their appearances, "I and others were this color,"] and with their countries, ["After that he was born in such and such a place,"] understands whatever these were without hindrance.

The buddhas know and are able to say in what state we were born before, where, with what complexion, and so forth. They are also able to say due to what actions we took such-and-such a rebirth.

It is also said that due to the presence of a buddha other sentient beings are also able to remember where they were reborn before. However, in general, sentient beings do not know their former states due to their past lives being innumerable, whereas a buddha is able to know this because he has abandoned all obstructions along with their seeds. For this reason, the buddhas are able to say that first one was born in this place, next one was born in that place, and so forth.

Chandrakirti says: "Abiding in cyclic existence as long as bewilderment has existed." This means that as long as there is ignorance there is cyclic existence. This ignorance or confusion is the first of the twelve links of dependent-arising. Due to beginningless ignorance as a cause one creates karmic formations which deposit latencies on the mind. The potency of an action deposited on the mind increases just like the interest on money deposited in a bank increases. The consciousness can also be likened to a field and the latency deposited on the consciousness by ignorance can be likened to a seed planted in a field by a farmer. The eighth link of craving is then likened to water and manure and the ninth link of grasping to heat. Due to these two conditions, the seed becomes ready to give rise to a sprout, this state being likened to the ninth link of existence or becoming. The arisal of a sprout from the seed is likened to the fourth link of name and form. The growth of the sprout into a pea plant with leaves is likened to the fifth link of the six spheres. The arisal of flowers on the plant is likened to the sixth link of contact. The arisal of peas on the plant is likened to the seventh link of feelings. The eleventh link of birth is likened to the production and ripening of the sprout and the twelve link of aging and death is likened to the growth and withering of the plant and then the cutting of the plant by the farmer.

In short, sentient beings are reborn in cyclic existence due to ignorance. A buddha knows the former states of all sentient beings.

The burning of grass and trees by fire is like the destruction of cyclic existence together with its causes by the wisdom realizing selflessness. Just as fire can burn an entire forest so too can the wisdom realizing selflessness burn all of cyclic existence together with its causes.

If while walking we were to fall and hurt ourselves, some would say that this is due to karma and some would say that it is due to the condition of stepping on a loose stone. We have created infinite actions in our lives in beginningless cyclic existence. Some sentient beings are fortunate and some are unfortunate, why is this? A fortunate sentient being is someone who has created merit in the past, whereas an unfortunate sentient being is someone who has not created merit in the past. Even

[245] *rgyu*

commonly speaking, we say that someone who has much wealth and many belongings is someone who is fortunate due to having a lot of merit and someone who is poor and destitute is someone who is unfortunate due to not having created merit in the past. In this way we judge the past by what we see in the present.

Chandrakirti's autocommentary says:

> As is taught [in the *Sutra of the Questions of Arya King Dharanishvara*]:
>
> > He recalls the previous state of that sentient being. What the previous causes were like and due to what causes, whatever sentient beings totally arose, the Tathagata, having thoroughly known the previous cause of' that, also teaches the Dharma similarly. The Tathagata also thoroughly knows the past movements of the minds of all sentient beings. After the mind having observation of something, the mind having observation of something [else] was produced; due to what observation was it produced and due to separating from what observation did it cease – that too the Tathagata thoroughly knows.

"The mind having observation" refers to the mind having the observed object that is true existence. Due to this, one is reborn and, in that rebirth, one again has the observed object that is true existence, that is, one has the conception of true existence. The Tathagata also knows "due to what observation was it produced and due to separating from what observation did it cease." Due to what does the conception of true existence cease? It ceases due to separating from the observed object that is true existence.

Chandrakirti's autocommentary quotes the *Sutra of the Questions of Arya King Dharanishvara*:

> Thus, however much the mind of one sentient being operates, continuing from one [mind] to another, after a mind like that, a mind like this arises; also after that one like this arises – that is difficult to show even by showing in words for as many eons as the grains of sand of the River Ganges. Similarly, the Tathagata thoroughly knows the continuity from one individual mind to another like that, even of all sentient beings. To take an imaginary case, even if the Tathagata showed it reaching the end of the future, it would not reach the limit of his exalted wisdom. This knowledge of the Tathagata recollecting former states is inconceivable and unparalleled. Immeasurable, its limits are not easy to show.

The exalted knowledge of the tathagatas of former states is inconceivable and unparalleled or unmatched. It is not easy to demonstrate its limits.

Chandrakirti's autocommentary quotes the *Sutra of the Questions of Arya King Dharanishvara*:

> Since the Buddha is the best of the herd, the Tathagata recollects about those sentient beings, "O, remember thus, those sentient beings produced roots of virtue in relation to a buddha or produced them in relation to the hearers or produced them in relation to the solitary realizers. It is like this: due to the strength of a buddha, those sentient beings will also recollect. The Tathagata observes the roots of virtue in relation to those [and] – since due to this and that at any rate they will become irreversible to complete liberation due to the vehicle – teach such and such Dharma.
>
> This is the eighth tathagata activity of the Tathagata.

The tathagatas remember and remind sentient beings that they produced roots of virtue in relation to buddhas, in relation to solitary realizers, or in relation to hearers. "It is like this: due to the strength of a buddha, those sentient beings will also recollect." The buddhas then teach the Dharma to sentient beings accordingly.

Lama Tsongkhapa's *Illumination* (Tibetan text page 451) says:

8. The power of exalted knowledge mindful of former states

Any unimpeded awareness regarding the sentient beings of existence
Who are oneself and every other sentient being of the past,
Who as long as there is confusion abide in existence, however many infinite there are,
Together with bases and together with places, is explained to be a power. [12.29]

Any unimpeded *awareness regarding the sentient beings of existence who are oneself and every other sentient being* at the time of the *past*, *who as long as there is confusion abide in* the *existence* that is a beginningless continuum from one [life] to another – *however many infinite* sentient beings *there are* –

1. the mindfulness that they are *together with bases*, that is, causes,
2. the mindfulness that they are together with aspects, remembering "I and others had such-and-such a color,"
3. the mindfulness that they are *together with places*, that is, remembered places, remembering "They were born in such-and-such a location like that,"

is explained to be the *power* of exalted knowledge mindful of former states.

The buddhas remember (i) the causes of the rebirths, (ii) the aspects of the rebirths, that is, the shapes and colors of the bodies, and (iii) the place of rebirth of themselves and all sentient beings.

9. The power of exalted knowledge of death and rebirth

Chandrakirti's autocommentary says:

Now, in terms of the strength that knows death-transference and rebirth, it is explained:

Knowing the infinite death-transferences and rebirths of each sentient being
Of the sentient beings who abide in the worlds reaching the limits of space,
In many details; at that time, since engaging unimpeded – all aspects
Completely purified – is asserted as a strength. [12.30]

Death-transference is the disintegration of the aggregates. Rebirth is the rejoining with the aggregates. Those death-transferences and rebirths of the entirety of the worlds reached by the extent of the space element that are joined due to the work of a great variety of karmas are thoroughly known exactly as they are by the Tathagata, spontaneously in a single instant. His exalted wisdom having no impediment to any object, not having obstruction due to purifying all aspects – this is presented as the Tathagata's strength that knows death-transference and rebirth. The Bhagavan not only knows the death-transference and rebirth of sentient beings, it is presented that "He also thoroughly knows, without being incomplete, all the many varieties of evolution, disintegration, and so forth with the divine eye."

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

Knowing the death and rebirth of every sentient being

Of the beings which are in the worlds as far as the ends
Of space, many and varied, perceiving at that time,
Without break, in all ways, purely and boundlessly, is held a power. [12.30]

He receives what is maintained to be the power of knowing death and rebirth; for his knowledge about the deaths and rebirths of every sentient being of the sentient beings which there are in the worlds as far as the limits of space, made varied by karma, and manifold, perceives at that time uninterruptedly and in every way, and is quite pure and without limit.

This ninth power knows when sentient beings will die and where they will be reborn, whereas the eighth power knows where sentient beings were born in former lives. "Knowing the infinite death-transferences and rebirths of each sentient being" means that the buddhas know exactly when each and every sentient being will die and where they will be reborn, in whose womb they will be conceived, and so forth. The buddhas know this due to possessing the divine eye.

"All the many varieties of evolution, disintegration, and so forth" refers to the evolution and the disintegration of the world systems. This is mentioned here because when sentient beings take rebirth, except for those of the formless realm, they do so in a particular place or world. Although those in the formless realm have subtle form, they do not have coarse form. Thus, the buddhas know the vessel worlds and their inhabitants. The evolution and the disintegration of the world systems is discussed in Vasubandhu's *Treasury of Knowledge* in terms of the four types of eons: the eon of formation, the eon of abidance, the eon of disintegration, and the empty eon, the latter being the eon in which there is nothing left except space in that the world system has been destroyed and the sentient beings have been reborn elsewhere. The vessel world consists of a billion world systems, due to which there are a billion Jambudvipas and so forth.

In short, we do not know where we will be reborn upon dying. On the other hand, the buddhas know this and, if we have the fortune to meet them, can tell us this. It is also possible to know when we ourselves will die and where we will be reborn up to as many as a hundred lives through attaining clairvoyance. For example, as they approach death the gods of the form realm and formless realm with their clairvoyance see that they will be reborn in the lower realms due to which they experience great suffering. In fact, there are people who, having attained an actual absorption, think that they have attained liberation but then, as they approach death, see with their clairvoyance that they will be reborn in the lower realms and, therefore, come to think that liberation does not exist. In this way, they generate the wrong view thinking that liberation does not exist. Thus, although an actual absorption is attained one can degenerate from that level.

Chandrakirti's autocommentary says:

> As is taught [in the *Sutra of the Questions of Arya King Dharanishvara*]:
>
> > There, the divine eye of the Tathagata is this: that eye sees in the buddha fields of the ten directions – deep due to the sphere of Dharma, reached by the extent of the space element, immeasurable, utterly passed beyond enumeration – those disintegrations and evolutions subsequently beheld by some sentient beings to appear as fields. Whoever appears as some sentient being, he sees all the death-transferences and rebirths, the happy migrations and bad migrations and the detailed migrations exactly in accordance with karma. Whoever appears as some bodhisattva, he sees all the death-transferences, entries into the womb, and arisings. Whoever appears as some buddha, he sees all the manifest complete awakenings, the turnings of the wheel of Dharma, the giving up of the compositional factors of life, and the total passing away from sorrow (parinirvana). Whoever appears as some hearer, he sees all the complete liberations and the total passing away from sorrow. Whoever appears as some solitary realizer, he sees all the exhibitions of magical powers and purification's of gifts.

> Whatever sentient beings do [not] appear and whatever are not paths of the eyes of the five clairvoyances of the outsiders, not of the hearers, not of the solitary realizers, and not of the bodhisattvas – those too appear to the divine eye of the Tathagata. Further, those sentient beings who are invisible within the area of circumference of a chariot wheel, appearing to the Tathagata are very many; the gods and humans of a great thousand billion world systems are not like that. Similarly, the realms of sentient beings that are invisible are immeasurable. Thus, the divine eye of the Tathagata completely views the realms of sentient beings in all the buddha fields called "the sentient beings that are to be subdued by the Buddha." However many are the classes of sentient beings to be subdued by the Buddha, that amount of tathagatas arrive before them and subdue those sentient beings – yet this is not understood by others, the sentient beings who are not [buddhas].
>
> This is the ninth tathagata activity of the Tathagata.

If a sentient being has the karma and the time is appropriate, the buddhas appear in front of him and subdue him.

Lama Tsongkhapa's *Illumination* (Tibetan text page 451) says:

9. The power of exalted knowledge of death and rebirth

> *The exalted knower that is unobstructed, completely pure in all ways, infinite,*
> *Due to engaging, at this time, in the deaths and rebirths of each sentient being*
> *Of all the sentient beings abiding in the worlds extending to the limits of space,*
> *Many and varied, is asserted to be a power.* [12.30]

The exalted knower of *infinite* objects, *due to engaging unobstructedly*, that is unimpededly, *at this time by means of an exalted knower completely pure in all ways in the deaths and rebirths*, the joining with aggregates, *of each sentient being of all the sentient beings* in the *many abodes in the worlds extending to the limits of space*, made *varied* through the fabrication of the varieties of actions, *is asserted to be the power* of exalted knowledge of death and rebirth.

In daily life we should meditate when it is time to meditate, practice when it is time to practice, study when it is time to study, and relax when it is time to relax. Practicing Dharma does not imply living in isolation, it is said that one can attain liberation even while living as a lay person in a family. Thus, it all depends on our own mind. Having listened to teachings, we should reflect and meditate on them.

Wednesday afternoon, 9 May 2001

10. The power of exalted knowledge of the extinction of contaminations

Chandrakirti's autocommentary says:

> Now, in terms of the strength that know the exhaustion of contaminations, it is explained:
>
> *Knowing the afflictions along with imprints of the conquerors that*
> *Will perish quickly due to the strength of knowing all aspects and*
> *The afflictions of the learners and so forth that are ceased by awareness –*
> *Unimpeded and infinite – is asserted as a strength.* [12.31]
>
> There, the afflictions are ignorance, attachment, and so forth because of afflicting the three worldly realms. That which subsequently proceeds to defile and stain the mind is an imprint. "Reaching the border of afflictions," "familiarity," "root," and "imprint" are equivalent. Even

> though the uncontaminated path has already abandoned the afflictions, all hearers and solitary realizers are unable to abandon them (i.e., imprints). Like, even though sesame oil, flowers, and so forth have already been removed, one observes subtle qualities by meeting with them in pots, woolen cloths, and so forth. Thus, since imprints exist although the afflictions are abandoned, even though arhats have already overcome the behavior of proceeding by jumping around, having been monkeys before arhats, and speaking to female servants, having been brahmins in the past, the opposite is also observed.
>
> There, the imprint of ignorance becomes an obstacle to fully distinguishing the objects of knowledge. The existence of the imprints of attachment and so forth are also causes of such kinds of operation of body and speech. Furthermore, the imprints of ignorance, attachment, and so forth are overcome only in the omniscient mind and buddha; they are not in others.
>
> Therefore, the omniscient mind of the buddhas with regard to totally abandoning the remaining imprints of afflictions and abandoning the afflictions that are propagated by them, which does not have obstruction regarding anything, is presented as the strength that knows the exhaustion of contaminations.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *The power of omniscience quickly destroys the defilements of*
> *The victorious ones, together with their imprints, and*
> *Awareness stops the defilements of disciples and so on.*
> *Unbroken, infinite knowledge of this is held as a power.* [12.31]

He receives what is maintained to be the power of knowing the ending of contaminations; for he enters the uninterrupted, infinite knowledge of the power of knowing in every way quickly destroying or abandoning the defilements of the victorious ones, together with their imprints, and the disciples or hearers, and so on, [which includes the solitary realizers,] stopping defilements by uncontaminated awareness [or wisdom].

What are the contaminations? They are the afflictions. Chandrakirti says: "There, the afflictions are ignorance, attachment, and so forth because of afflicting the three worldly realms." An affliction is a mental factor that functions to make the mind unpacified and unruly. Even though foe destroyers have abandoned the root and secondary afflictions, their latencies remain.

Chandrakirti says: "Like, even though sesame oil, flowers, and so forth have already been removed, one observes subtle qualities by meeting with them in pots, woolen cloths, and so forth." Even after sesame oil has been removed from a bottle its odor remains, and even after flowers have been removed from a woolen cloth their fragrance remains. Another example is having poured coffee into a cup, even after it has been consumed, if we sniff the cup, the odor of coffee remains; this odor is likened to latencies or imprints. Another example is the smell of cooking food in a kitchen that remains even after the food has been eaten. Similarly, after having eaten a clove of garlic, the taste remains in one's mouth. Likewise, even though attachment has been abandoned its stains still remain. Thus, although hearer and solitary realizer foe destroyers have abandoned the afflictions, they still have their latencies. Due to these latencies, they engage in such behaviors as jumping from tree to tree like monkeys, because in the past they were born as monkeys and therefore have the latencies for such behavior. Foe destroyers also engage in such verbal activity as cursing others, such as saying "May Sherab immediately become ill," due to having been brahmins in the past. Such behaviors are unfortunate states of body and speech of foe destroyers.

As well as having latencies of non-virtuous behavior, we also have latencies of virtuous behavior which can be likened to a fragrant ointment applied to the body, the pleasant scent of which remains even after the ointment has been absorbed into the skin. Because latencies are developed over

a long period of familiarity, they are also only removed over a long period of application of the antidote. For example, someone who is habituated to drinking may be able to stop for a few days but then easily returns to this habit because it is difficult to give up this habit due to the previous strong familiarity with it.

Who free of latencies? Only buddha superiors are free from or have abandoned all the latencies of the afflictions. According to the Prasangika Madhyamika system the afflictions are afflictive obstructions, whereas their latencies are knowledge obstructions. Is there a common locus of an afflictive obstruction and a knowledge obstruction? There is not because if it is a consciousness it is not a knowledge obstruction. Is ignorance not a knowledge obstruction? Is there not an unafflicted ignorance? Although unafflicted ignorance is presented by the term "ignorance," it is not ignorance because it is not a mental factor. Is there not a knowledge obstruction that is an unafflicted ignorance? Why is it called "ignorance"? It is so-called because it is an obscuration that obscures with respect to the subtle secret point, the specific inconceivable knowledge of the buddhas.

Chandrakirti's autocommentary says:

> As is taught [in the *Sutra of the Questions of Arya King Dharanishvara*]:
>
> > Son of good lineage, furthermore, since the Tathagata has exhausted all contaminations, his rebirths are exhausted. "Pure behavior was adhered to; what was to be done was done; another existence beyond this will not be known." Without contaminations, the mind completely liberated, wisdom completely liberated, having manifested his clairvoyance, accomplished – he abides.
> >
> > There, the knowledge of the exhaustion of contaminations of the Tathagata is completely purified, stainless, totally pure, clear light; all propagation due to imprints is well destroyed. The exhaustion of contaminations of the hearers is measurable; the imprints are not well destroyed. The exhaustion of contaminations of the solitary realizers is measurable; devoid of great compassion, they are devoid of courage. The exhaustion of contaminations of the Tathagata is endowed with the best of all aspects; all propagation due to imprints is well destroyed. Always upheld by great compassion, fearless, not devoid of courage, not outshone by all the worlds; endowed with one instant of mind. Why? The Tathagata has no imprints of karma; has no imprints of afflictions; has no imprints of faulty behavior.

Sentient beings have the latencies of actions, the latencies of afflictions, and the latencies of faulty behavior, whereas buddhas do not. Think about what these three types of latencies are. For example, the latencies of anger are the latencies of afflictions. These latencies are present in our mind and, when the right conditions are met, they are activated and anger is produced. We should examine our own mind for attachment and anger throughout an entire day or an entire week to see which is more prevalent. We will probably find that attachment is present more often than anger. There are some weeks when there are no occasions of anger, whereas attachment arises continuously due to being close to objects of desire. We can check our own experience to see whether or not this is true. Even when we fall asleep, attachment is manifest in that we have a liking for sleep. Also when we eat, attachment is present. Thus, if we compare attachment and anger we will see a difference in the frequency of their arisal. Due to the presence of attachment we have a pleasant appearance, whereas due to the presence of anger we have an unpleasant appearance. However, although anger rises less often it is very dangerous in that it destroys our roots of virtue, whereas attachment does not. When anger arises it disturbs our body and mind and destroys our mental peace. Yet, since attachment is an affliction, in the long term it only has disadvantages and shortcomings.

The word "contamination" (*zag pa*) in colloquial Tibetan means to fall down. Also in Dharma a contamination or an affliction is what causes one to fall into and remain stuck in the mire of cyclic existence.

In conclusion, a latency is a knowledge obstruction. The latency of an affliction is of two types: one that is an afflictive obstruction and one that is a knowledge obstruction. The potential of a previous attachment to bring about a subsequent attachment is a latency and a seed of an affliction. There is also a latency of an affliction that is unable to bring about a future affliction, this is only a latency, it is not a seed. Why is it not a seed? It is not a seed because it is unable to bring about a result even though the conditions are encountered. In general, a seed is that which is able to bring about a result when its respective conditions are encountered.

Chandrakirti's autocommentary quotes the *Sutra of the Questions of Arya King Dharanishvara*:

> It is like this: for example, the sky is totally pure by nature, not abiding together with dust and smoke. Likewise, the Tathagata's knowledge of the exhaustion of contaminations does not abide together with the imprints of karma and afflictions. Immediately upon thoroughly abiding in such exhaustion of contaminations, he teaches the Dharma in order for sentient beings with contaminations and with appropriation to exhaust the contaminations and abandon appropriation.
>
> Saying "O sentient beings, arisen from constantly conceptualizing the imperfect, you should realize individually just exactly as they are the contaminations and appropriations" to them, the Tathagata teaches the Dharma with examples that set out this and that, [so that] they will, by all means, thoroughly know just exactly as they are the contaminations as imperfect and having thoroughly known, by not appropriating any phenomena whatsoever, will also totally pass beyond sorrow.
>
> Son of good lineage, this is the tenth tathagata activity of the Tathagata.

Lama Tsongkhapa's *Illumination* (Tibetan text page 451-2) says:

10. The power of exalted knowledge of the extinction of contaminations

> *Unobstructed exalted knowledge regarding the quick disintegration*
> *Of the afflictions, along with their latencies, of the conquerors*
> *By the power of an exalted knower of all aspects, and the cessation of the afflictions*
> *Of learners and so forth by an awareness, is asserted to be an infinite power.*[12.31]

Unobstructed, that is, unimpeded, *exalted knowledge regarding the disintegration*, that is, destruction, *of* all *the afflictions*, attachment and so forth, *along with their latencies by the power of the conquerors who are exalted knowers of all aspects and the cessation*, that is, abandonment, *of the afflictions of learners* – the hearers – and the solitary realizers, who are included in "*and so forth*," *by an awareness*, that is, an uncontaminated wisdom, *is asserted to be the infinite power of the* exalted knowledge of the extinction of contaminations. Stating "*quick*" (v. 12.31a) indicates that the remaining extremely subtle latencies are instantaneously abandoned by the exalted wisdom of a buddha.

Here, regarding the latencies of the afflictions the autocommentary says:

> That which subsequently proceeds to defile and stain the mental continuum is a latency. "The end of afflictions," "familiarity," "root," and "latency" are synonyms.

It also says that although hearer and solitary realizer foe destroyers have abandoned the afflictions they are not able to abandon the latencies. In addition, the knowledge obstructions are also taught stating:

> With respect to that, the latencies of ignorance become a hindrance to fully distinguishing objects of knowledge.
>
> Since in this system the conception of a self of phenomena is asserted to be an affliction, the main knowledge obstructions must be the latencies of mistaken dualistic appearance. That identification of the knowledge obstructions is not clearly taught in other [texts] by the father Arya [Nagarjuna] and his son, therefore, it is consolidated in this very teaching here.

The presentation of the knowledge obstructions is not clearly taught by Arya Nagarjuna and his son Aryadeva, nor is it by Buddhapalita. On the other hand, Chandrakirti's autocommentary indicates that the latencies of ignorance are the knowledge obstructions. Lama Tsongkhapa says: "the main knowledge obstructions must be the latencies of mistaken dualistic appearance." There is a difference between mistaken dualistic appearance and the factor of mistaken dualistic appearance. Is dualistic appearance a knowledge obstruction? Some say that it is and others say that it is not. Those who say that it is not specify that it is "the factor of dualistic appearance" that is a knowledge obstruction. Is the appearance of true existence a knowledge obstruction? Is it an object of abandonment? It is an object of abandonment, in that it is abandoned when one becomes a buddha. If the appearance of true existence is an obstruction, which of the two obstructions is it? It is a knowledge obstruction. Is the true existence which appears to the eye consciousness of an ordinary sentient being a knowledge obstruction? Is the appearance of a truly existent pot to an eye consciousness a knowledge obstruction? The appearance of true existence is an object of abandonment. Since it is an object of abandonment is it impermanent? Is the appearance of true existence to an eye consciousness of an ordinary being impermanent? If someone says that it is not, one says that it is impermanent because it is a knowledge obstruction. If someone says that it is impermanent, then one says that it is not impermanent because it is permanent, because if it is an established base it is pervaded by being it. Whatever appears to the eye consciousness of an ordinary being is pervaded by appearing to truly exist. If being an established base it is pervaded by being it, then it is pervaded by being permanent.

Thursday morning, 10 May 2001

Chandrakirti's autocommentary says:

> Thus, the Tathagata, possessing inconceivable objects of exalted wisdom besides what was fully culminated in all aspects, is endowed with all qualities other than those. He remains indistinguishable from the dharmakaya. Each of the extensive qualities is comprehensible solely by the example of the sky. These ten strengths of the buddha bhagavans, the protectors of protectorless migrators who have entered into the four great rivers called "desire," "becoming," "view," and "ignorance," will be fully purified in all aspects on the buddha ground of Perpetual Light.
>
> Enough amplification.

The buddhas abide single-pointedly absorbed in meditative equipoise on reality. Chandrakirti says: "He remains indistinguishable from the dharmakaya." The buddhas are the protectors of protectorless migrators who have fallen into the four rivers of desire, existence, view, and ignorance. "Desire" can be, for example, the desire to go somewhere such as Bologna, Palermo, and so forth. However, here it specifically means desire for the five desirable objects. We have fallen into the river of desire for these five objects. These four rivers can be discussed in terms of cause and result. The four rivers that are causes are (i) desire, (ii) existence, (iii) the view of the transitory collection, and (iv) ignorance. The four rivers that are results are (i) rebirth, (ii) aging, (iii) sickness, and (iv) death. This is taught in Lama Tsongkhapa's *Three Principal Aspects*. Having fallen into these rivers, the best of refuges is the Buddha.

Lama Tsongkhapa's *Illumination* (Tibetan text page 452) says:

> The autocommentary also says:
>
> > The latencies of ignorance, attachment, and so forth are, moreover, overcome only in omniscient beings and buddhas; they are not in others.
>
> Therefore, the seeds of the afflictions which are taught in regard to the extinction of the seeds of the afflictions in hearer and solitary realizer foe destroyers and from the eighth ground onward are not the same as the latencies of afflictions explained here. The path of release that initially abandons the very subtle latencies simultaneous with the two – one approaching the generation of the last uninterrupted path in the continuum of the tenth grounder and one approaching the cessation of the very subtle – is the first instant of a buddha's exalted wisdom. Because of that, they are said to disintegrate by the power of an exalted knower of all aspects.
>
> In this way, all the objects of knowledge taught to be known by this power are manifest, whereas, since it is not suitable for them to be indirectly realized, they must be known by means of appearing to the direct perceiver of a buddha. Furthermore, it is clearly explained in the commentary on [Nagarjuna's] *Sixty Stanzas of Reasoning* that this is not a system [positing that objects of knowledge] are known without the arising of their aspect. Therefore, it is also not that present [phenomena] are directly comprehended, whereas the two, past and future [phenomena], are indirectly comprehended. Moreover, at the present time – for example, today – the two, past and future which are relative to that, do not exist, whereby these two are not comprehended at this time, however, it is not contradictory that today's exalted wisdom of an exalted knower knows all the past and future. For example, although the sprout at the time of the seed is not produced by the seed, it is not contradictory that a seed produces a sprout.

An exalted knower of all aspects does not realize anything indirectly, but realizes all things directly. For example, it is now 11:30 AM, a buddha directly knows the phenomena of this time and also directly knows the phenomena of 12 AM, 1 PM, and so forth and also directly knows the phenomena of earlier this morning at 9 AM, 10 AM, and so forth. Although the phenomena of this morning no longer exist, for example, he knows, for example, that Sherab this morning at 9 AM did such-and-such activity. He also directly knows, as do we, that Sherab is presently translating. In addition, a buddha also knows what Sherab will do later this afternoon and evening. Thus, omniscient mind knows all phenomena directly.

Lama Tsongkhapa's *Illumination* (Tibetan text page 453) says:

> 3B2B-2C The way in which all the qualities cannot be expressed

Chandrakirti's autocommentary says:

> Thoroughly determining the distinctions of the qualities, such as each of the hair pores of the holy body of form of the buddha bhagavans, the signs and exemplifications of the great being, the strengths, fearlessnesses, and unshared qualities of a buddha, and so forth, is experienced by only the Buddha. If, when he speaks them, blessing the extent of the holy life span to inconceivable countless eons that are the object of his own exalted wisdom and not having other activities – even if thus spoken very quickly, the qualities will not be fully completed; then why mention by the bodhisattva? What need is there to mention the solitary realizers and hearers being unable to know or express the completed qualities of the buddha?

The qualities of the buddhas are inexpressible in that we cannot even express a portion of them. However, there is no need to mention that they cannot be expressed by us ordinary beings since they cannot even be expressed by tenth ground bodhisattvas. Those who are not buddhas cannot ascertain "the distinctions of the qualities, such as each of the hair pores of the holy body of form of the buddha

bhagavans, the signs and exemplifications of the great being, the strengths, fearlessnesses, and unshared qualities of a buddha, and so forth." These qualities were explained previously. Even if the buddhas themselves were to live for countless eons and were to express their own qualities very quickly, their expression could not be completed. If the buddhas themselves cannot complete the expression of their qualities, what need to mention that the bodhisattvas cannot do this? Chandrakirti also says: "What need is there to mention the solitary realizers and hearers being unable to know or express the completed qualities of the buddha?"

Chandrakirti's autocommentary says:

> This very meaning is explained by way of an example:
>
> *The winged do not return out of lack of space,*
> *They return back due to exhausting their own strength. Likewise,*
> *Learners together and Buddha's children will return,*
> *Not expressing the qualities of the buddha, limitless like space.* [12.32]
>
> Like this: although the garuda gains headway by the strength of the wind of broad wings, it does not turn back in space due to completely exhausting space, yet it does due to lack of its own strength and headway. Likewise, to some degree, since even those bodhisattvas who acquire unimaginable complete liberation thoroughly abiding on the tenth ground are unable to express the qualities of the Tathagata, they return from the limitless space-like qualities not due to fully completing the qualities, they return due to fully depleting the strength of their minds. If so, why mention solitary realizers or hearers realizing the final qualities?
>
> When this is their situation about fully knowing or expressing the qualities of buddha, therefore, for the likes of us blinded by the cataract of ignorance, for whom perfect reality is hidden, how could there be the opportunity to express the qualities of the Tathagata? Therefore, it is explained that "this is just not the case."

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> 3B2B-2C How all the qualities cannot be described
>
> *Just as a bird will not return for lack of space,*
> *But will return hither because his own strength fails,*
> *So disciples and also buddha-sons will turn back*
> *Without describing the buddhas' qualities, endless like space.* [12.32]

It should be understood that the failure of the shravakas, pratyekabuddhas, and bodhisattvas to describe all the qualities of the Buddha is not from exhaustion of the buddha's qualities; for by the exhaustion of the mental abilities of the disciples or shravakas, pratyekabuddhas, and sons of the buddhas, they turn back without describing the qualities of the buddha, which are infinite like space. For example, if the garuda bird flies in the sky, this lord of birds does not turn back because of lack [or exhaustion] of space, but returns here because some time his own strength is exhausted; it is like this.

The qualities of the buddhas are as limitless space, just as there is no exhaustion of space there is no exhaustion of the qualities of a buddhas. Even garudas, the kings of birds, who are extremely strong do not return due to having exhausted space but return due to having exhausted their ability to fly. Similarly, even the tenth ground bodhisattvas are unable to express the qualities, not due to exhausting the qualities of a buddha, but due to exhausting the strength of their intellect. Since this is the case for bodhisattvas, there is no need to mention that hearers and solitary realizers are unable to express the qualities of buddhas, let alone mention that ordinary beings cannot express these qualities.

Chandrakirti's autocommentary says:

> *Therefore, how could one such as I be able*
> *To know and to express these qualities of yours?*
> *Yet, since Arya Nagarjuna explained them,*
> *Giving up qualms, I mentioned just a little.* [12.33]

> Thus, indeed I do not have full knowledge of a mere portion of the qualities of the Tathagata. Although that is the case, my discussing a mere part of one class of qualities without hesitation is through dependence on another. Just that was mentioned saying "since Arya Nagarjuna explained them."

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *How, therefore, could anyone like me*
> *Understand and describe your qualities?*
> *But abandoning fears, I have said just a little about them,*
> *After Arya Nagarjuna's explanation.* [12.33]

How, Buddha, could someone like me, the author of the bhashya, be able understand and describe all these qualities of yours? He could not. However there is reason why, casting aside misgivings, I have said just a little of these qualities; it is because, since Arya Nagarjuna has explained those qualities, I have taught following him.

In this way, Chandrakirti diminishes his pride saying that he has described the qualities of the buddhas, not out of his own understanding of them, but in dependence on Nagarjuna's explanation of them.

A buddha's qualities can be condensed into:

1. the qualities of a buddha's body,
2. the qualities of a buddha's speech,
3. the qualities of a buddha's mind, and
4. the qualities of a buddha's enlightened activities.

What are the qualities of a buddha's body? They are the thirty-two major and eighty minor marks (or the thirty-two signs and eighty exemplifications). The qualities of a buddha's speech are the sixty-four melodious qualities. The qualities of a buddha's mind are the twenty-one sets of uncontaminated exalted wisdom. Then, there are the twenty-seven enlightened activities of a buddha. These qualities, excluding those of his speech, are discussed in the eighth chapter of the *Ornament for Clear Realizations*. In conclusion, the qualities of a buddha are inexpressible, yet we need faith that they are possible to achieve.

Lama Tsongkhapa's *Illumination* (Tibetan text page 453) says:

> All the qualities of a buddha [are as follows]. If the [expression of] the qualities is not completed even though the buddhas themselves bless their lifespan to countless eons and mention them extremely quickly without passing beyond other enlightened activities, why mention [that their expression cannot be completed] by the bodhisattvas? Hence, what need is there to also mention whether the solitary realizers and hearers can know or express the culminated qualities? The meaning of this is explained by means of an example:
>
> *Just as the lord of the birds does not return due to a lack of space,*
> *But returns here due to exhausting its own strength, similarly,*
> *The buddhas' children along with the learners return*

Without expressing the infinite space-like qualities of the buddhas. [12.32]

Like this, just as a garuda due to the strength of the wind of his broad wings, even though he is a suppresser of adversaries, when flying in the sky, *the lord of the birds does not return due to a lack of*, that is, due to exhausting, *space*, but eventually, by flying on and on, *returns here due to exhausting his own strength* and force, *similarly*, that *the buddhas' children* abiding on the great ground and the solitary realizers *along with the learners*, the hearers, *return without expressing the infinite space-like qualities of the buddhas* is not due to their completing the qualities but is due to the power of their own minds having been depleted.

Therefore, how can one such as myself
Know and express your qualities?
Nonetheless, abandoning qualms, I have mentioned them just a little
Since they were explained by Arya Nagarjuna. [12.33]

Because they are unable to completely express the qualities of the buddhas, *how can one such as myself*, the author of the autocommentary, *know and express the qualities of you* buddhas? We are not able. *Nonetheless*, without understanding even a mere part of the qualities of a buddha by my own power, *abandoning qualms*, that is, without hesitation, I have *mentioned* the qualities *just a little* in dependence on *Arya Nagarjuna's explanation of these* qualities.

Here there is nothing more to add to the explanation already given.

Lama Tsongkhapa's *Illumination* (Tibetan text page 454) says:

3B2B-2D Presenting the benefits of understanding the two qualities

Chandrakirti's autocommentary says:

In summary, in this treatise the qualities of the buddha – the profound, the dharmata, and the extensive – are finely indicated. There:

The profound is emptiness.
The other qualities are the extensive.
By knowing the mode of the profound and extensive,
These qualities will be attained. [12.34]

Gedun Drup's *Mirror of the Clarification of the Thought,* as translated by Martin Willson*,* says:

3B2B-2D Advantages of knowing the two qualities

The profound is voidness, and
The other qualities are the vast. [12.34ab]

The kinds of the buddha's qualities consist of two, for they are the profound qualities, voidness, the cause and effect of the truth body (dharmakaya), and the other qualities, the vast.

By knowing the way of the vast and profound,
These qualities will be attained. [12.34cd]

Understanding the way of the profound and the vast and practicing it is necessary because these two qualities of the Buddha will be attained.

All the qualities of a buddha can be condensed into the two: (i) the quality of the profound and (ii) the quality of the vast. Maitreya's *Sublime Continuum* also sets out the eight qualities of the Buddha Jewel which are condensed into the last two of the eight: the quality of one's own welfare and the quality of others' welfare. When these two sets are correlated*,* the quality of one's own welfare corresponds to

the quality of the profound, that is, the truth body, and the quality of others' welfare corresponds to the quality of the vast.

The first three of the eight qualities of the Buddha Jewel listed in *Sublime Continuum* are:

- the truth body is uncompounded in that it is not compounded by causes and conditions,
- the truth body spontaneously and effortlessly accomplishes all, and
- the truth body is inconceivable and inexpressible.

These three are the quality that fulfill one's own welfare, the seventh quality of the Buddha Jewel, or, according to the *Supplement*, the quality of the profound. In addition, the Buddha Jewel has the three qualities of:

- exalted knowledge,
- mercy, and
- ability.

These three are the quality that fulfill others' welfare, the eighth quality of the Buddha Jewel, or, according to the *Supplement*, the quality of the vast. Due to possessing exalted knowledge, mercy, and ability, a buddha has the capacity to bring about the welfare of trainees. For example, if the child of an armless mother were to fall into a river and be swept away, although the mother would know this and would have mercy for her child, she would lack the capacity to save her child. On the other hand, if she had arms she would also have the capacity to save her child. Similarly, a buddha needs all three qualities of exalted knowledge, mercy, and ability in order to enact the welfare of others.

How are these qualities attained? Chandrakirti says: "By knowing the mode of the profound and extensive, these qualities will be attained" (v. 12.34cd). It is usually said that the bodies of a buddha are attained by completing the two collections of merit and wisdom, however, this means the same as knowing the mode of the profound and vast.

Lama Tsongkhapa's *Illumination* (Tibetan text page 454) says:

> *The profound is emptiness,*
> *Other qualities are the vast.*
> *By understanding the mode of the profound and vast,*
> *One will attain these qualities.* [12.34]

> In brief, this treatise presents the two qualities of a buddha, the profound and vast. *The profound is emptiness* – the truth body – and the emptinesses of the base and path. Those that were explained that are *other* than that, the *qualities* of the eleven grounds, the powers, and so forth *are* the qualities that are *the vast*. *By understanding* well *the mode* of the qualities of such *profound and vast*, *one will attain these* two *qualities* of a buddha by meditating, having understood the two meanings.

Lama Tsongkhapa's explanation is slightly different from that of Chandrakirti in that he says "The profound is emptiness – the truth body – and the emptinesses of the base and path." Thus, there is the emptiness of the base, emptiness of the path, and emptiness of the result. What is the emptiness of the base? It is the reality of a mind that is suitable to transform into a nature body. The emptiness of the path is the reality of a mind that has become path. The emptiness of the result is the emptiness of the mind that has become a wisdom truth body – this being the nature body.

Lama Tsongkhapa says: "Those that were explained that are other than that, the qualities of the eleven grounds, the powers, and so forth are the qualities that are the vast." The first to the tenth grounds are the causal grounds, whereas the eleventh, the buddha ground, is the resultant ground, the Ground of Perpetual Light.

"The two meanings" are the profound and the vast.

In this way, Lama Tsongkhapa sets out the stages of hearing, thinking, and meditating. First one should listen to teachings, then reflect on them, and then meditate on them by means of both

stabilizing meditation and analytical meditation. The word "meditation" means to familiarize oneself with an object. There are different objects of meditation such as compassion, emptiness, and so forth. How should one meditate on compassion? How should one meditate on emptiness? Meditation on compassion is to transform one's mind into the entity of compassion. Meditation on emptiness, on the other hand, is to take emptiness as one's object of the mode of apprehension and to familiarize with it. Also when meditating on a buddha's image, one takes that image as one's object of the mode of apprehension. Like compassion, meditation on love is to transform the mind into the entity or nature of love.

Thursday afternoon, 10 May 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 454) says:

3B2C Indicating the emanation body

Chandrakirti's autocommentary says:

> Now, the emanation body is explained in terms of definitely arising spontaneously, achieving happy migrations, and so forth for the emergence of the common aims and common methods of all the hearers, solitary realizers, and bodhisattvas, besides the emergence of any aims of ordinary beings:
>
> *Again, with the unshakable body, having come to the three existences, you display*
> *Descent, rebirth, enlightenment, and also the wheel of pacification with emanations.*
> *Thus, with compassion, you lead the world of those with deceitful and conscientious*
> *Behavior, bound by many nooses of hope, without exception to nirvana.* [12.35]
>
> Although the Bhagavan has already passed from the three realms, the emanation body displays the relationship with father, mother, son, and so forth and accords with the world. Having descended into the three realms, by way of teaching the Dharma that is appropriate, he sets those having the various kinds of behavior and constituents of sentient beings into nirvana, out of compassion; not due to wishing fame and compensation.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B2C Exposition of the manifestation body

> *You Who have the unshakable body appear again in the three worlds –*
> *Your emanations descend, take birth, are enlightened, and turn the wheel of peace.*
> *Thus, with compassion, you lead beyond sorrow worldly beings without exception,*
> *Agitated with all sorts of actions and bound by many nooses of wishing.* [12.35]

The Buddha, the Blessed One, has the perfect manifestation body because, having the unshakable body, from the truth body he again appears in the three worlds, [below, on, and above the earth,] his manifestation bodies descending from Tus□ita, taking birth, being enlightened, and also turning the wheel of the Dharma of peace [or nirvana]: thus, with compassion, he leads into nirvana all the world [or sentient beings], who have fear and agitation,[246] i.e., all sorts of actions, and are bound by many noose of wishing [or craving].

The emanation body is seen by ordinary beings, hearers, solitary realizers, and bodhisattvas, as well as by the buddhas themselves. The buddhas, by means of emanation bodies, enact the common and

[246] *gyo.bag*

uncommon aims of these individuals, thereby leading beings to the happy migrations. The buddhas, who remain unmoving from the truth body, display the aspects of descending from the Joyous Land to Jambudvipa, taking birth in the womb of a mother, attaining enlightenment, turning the wheel of Dharma or the wheel of pacification, and so forth.

"Bound by many nooses of hope" refers to sentient beings who are bound by nooses of hope. The buddhas untie these nooses and lead sentient beings to nirvana.

Although the buddhas have attained enlightenment, they descend to this world and are conceived in a womb as a child having a father and mother. Or it can be said that a buddha appears as a man who takes a wife who gives birth to a child. For example, Shakyamuni Buddha was born to King Shuddhodana and Queen Maya, and later took Yashodhara as his wife who gave birth to their son Rahula.

Chandrakirti says: "he sets those having the various kinds of behavior and constituents of sentient beings into nirvana, out of compassion, not due to wishing fame and compensation." From the point of view of tenets, the first turning of the wheel of Dharma was mainly for the Vaibhashikas and Sautrantikas, the second turning of the wheel of Dharma was for the Madhyamikas, and the third turning of the wheel of Dharma was for the Chittamatrins. From the point of view of vehicle, the first wheel of Dharma was turned mainly for the followers of the hinayana, the second for the followers of the uncommon mahayana, and the third for the followers of the common mahayana. In short, the Buddha turned these wheels of Dharma in accordance with the dispositions of various types of trainees.

Lama Tsongkhapa's *Illumination* (Tibetan text page 454) says:

> Now, the emanation body, which arises for the common welfare and means of hearers, solitary realizers, and bodhisattvas and also arises in whatever way is suitable for the aims of ordinary beings, is explained from the point of view of acting to achieve the happy migrations and so forth:
>
> *Once again you, who possess an unmoving body, having come to the three existences,*
> *Display, by way of emanations, descent and birth, as well as the wheel of enlightenment and peace.*
> *Thus, you, with compassion, lead all the world having deceitful and conscientious behavior,*
> *Bound by many nooses of hope, to nirvana.* [12.35]

The definition of an emanation body in *Seventy Topics* is: a final form body not possessing the five certainties. The emanation body of this context is a supreme emanation body which shows the twelve deeds. A supreme emanation body is seen by hearers, solitary realizers, and ordinary beings and enacts the common and uncommon aims of these beings.

Lama Tsongkhapa says: "is explained from the point of view of acting to achieve the happy migrations and so forth." This means that the emanation body is a cause for beings to achieve the happy migrations. The emanation body is also called "the body for others' welfare." Who are "others" and what is their "welfare"? "Others" are the gods and human beings, that is, the beings of the happy migrations. Their "welfare" is nirvana. Thus, a supreme emanation body is the cause for these beings to achieve nirvana. In other words, a supreme emanation body leads beings who are not in the happy migrations to the happy migrations and leads those who are in the happy migrations to nirvana.

Lama Tsongkhapa's *Illumination* (Tibetan text page 454) says:

> Even though you have already gained the truth body, *once again you, who possess a body unmoving* from meditative equipoise on suchness, *having come to the three existences* – below the ground, on the ground, and above the ground – *display by way of emanation* bodies the relationships of a son with a father and mother through *descending* from the Joyful Land to the

> place of human beings, *taking birth*, and so forth, and *also* display, in accordance with their faculties, *the wheel* of Dharma for entering the city of *enlightenment and peace*, nirvana. *Thus, you, with* great *compassion* that does not depend on a wish for fame and compensation, *lead* or place *all the world* – those possessing the various constituents and behaviors of sentient beings – *bound by many nooses of hope*, that is, craving, *to nirvana*. In regard to "*having deceitful and conscientious behavior*" (v. 12.35c), the translation in [Jayananda's] *Explanatory Commentary* accords with the commentary that says "having various behaviors."

The buddhas descend from the Joyful land to Jambudvipa and lead the beings bound by wishes and craving to liberation from this bondage. There is a Tibetan expression that says "The Tibetans are impoverished by hope, and the Chinese are impoverished by doubt." This means that the Tibetans continuously hope and therefore achieve nothing, while the Chinese are overcome by suspicion and therefore achieve nothing. For example, some people have great hope that things will just drop into their lap and others have great suspicion.

Lama Tsongkhapa's *Illumination* (Tibetan text page 455) says:

> 3B2D Proving there is a single vehicle

Chandrakirti's autocommentary says:

> Therefore, having thus made a presentation of the holy body of the Tathagata, indicating three vehicles for the single vehicle is explained as indeed having an intention:
>
> *Because here, apart from knowing thusness there is no other fundamental eliminating*
> *All stains; divisions of transformations of phenomena's thusness are also not relied on*
> *And also this subjective intelligence of thusness does not become diverse.*
> *Therefore, you showed migrators an unequaled, inseparable vehicle.* [12.36]

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> 3B2D Establishing that there is one vehicle
>
> *Because apart from knowledge of reality there's no effective*
> *Remover of all stains, also the reality of dharmas not depending*
> *On classes of aspects, the wisdom whose object is voidness also does not differ:*
> *Therefore, you taught to sentient beings an unequal, undivided vehicle.* [12.36]

He taught to the sentient beings to be tamed a single, undivided vehicle not equal with other vehicles, because of this: that since the absolute reality of phenomena does not depend on classes of dissimilar appearance, the intelligence [or wisdom-knowledge] which has absolute reality as its object, also has no different ways of apprehending, and there is no effortfull [or principal] remover of all stains apart from direct knowledge of absolute reality.

There is only one final vehicle, not three. Thus, the teachings on three vehicles are interpretable meaning teachings. The intention of teaching three vehicles was in order to lead those of the hearer and solitary realizer vehicles for the time being. In the first chapter of the *Ornament for Clear Realizations*, in the context of lineage, four types of ulterior intentions are discussed. The first, a sutra having an ulterior intention regarding engaging, is "The five aggregates are the load, the person is the bearer." Here the ulterior intention is to cause non-Buddhists to engage in the Buddhist teachings, in that this statement is similar to their own doctrine.

The second, a sutra having an ulterior intention regarding characteristics or natures, is "Other-powered phenomena and thoroughly established phenomena are established by way of their own

character; imputational factors are not established by way of their own character." This sutra was taught in order to guide the Chittamatrins.

The third, a sutra having an ulterior intention regarding antidote, is that which recounts the story of King Bimbisara who was put in prison by his son who made a plot together with Devadatta – the prince planning to kill his father to become king and Devadatta planning to kill Shakyamuni Buddha in order to become the principal teacher. However, the prince, having come to regret having put his father in prison, promised half his kingdom to the person who could tell him that his father had not died there. Hearing this, people stampeded toward the prison, but the noise and commotion frightened the king who died of a heart attack. The prince experienced intense regret for his action and sank into depression, but the Buddha, knowing the time was right, appeared before him and said: "Father and mother are to be killed. One who kills a brahma and his retinue will be purified." Hearing this, the prince emerged from his regret and thought about what the Buddha had said to him, and thereby came to realize that the Buddha's statement did not refer to the father and mother who had given him his body but referred to the father-like afflictions and mother-like actions who bring about rebirth. He also understood that by killing the afflictions and actions rebirth would come to an end. In this way, this teaching acted an antidote.

The fourth type is a sutra having an ulterior intention regarding transformation. This means that by means of false letters or words, a true meaning is conveyed.

In addition, there are also four types of intentions: an intention regarding equality, an intention regarding time, an intention regarding meaning, and an intention regarding the thought of persons. For example, a sutra having an intention regarding equality is "One time I was born as Buddha Vibhashumi." This means that no matter what aspect is taken, all buddhas are equal. This is discussed in Gyeltshap Je's *Ornament For the Essential Explanation* and in Haribhadra's *Clear Meaning Commentary*, the latter saying that the teaching on three final vehicles requires interpretation, has an intention, and is not a definitive meaning teaching.

The autocommentary says that the sutra that teaches three final vehicles has a specific intention. The word "vehicle" usually refers to a path, this being the great vehicle and the lesser vehicle. Defined roughly, a vehicle is the thought, or the exalted wisdom, that carries the load of either one's own or others' welfare. The lesser vehicle mainly carries the load of one's own welfare, whereas the great vehicle mainly carries the load of others' welfare. The great vehicle is an exalted knower distinguished by possessing the six greatnesses. In general, the great vehicle is the thought able to carry the load of others' welfare. There is only one final vehicle for the attainment of enlightenment and thus there is only one final result, enlightenment or buddhahood. Therefore, no matter what vehicle one follows for the time being, in the end one must attain the buddha ground. The true aspectarian Chittamatrins, however, maintain that there are three final vehicles that lead to their three respective results that are nirvanas without remainder. Thus, according to them the purpose of following a vehicle is to attain a nirvana without remainder. They say that having followed the hearer vehicle and attained the nirvana without remainder of a hearer, there is no need to progress to another vehicle. They also say that, when a nirvana without remainder is attained, the continuum of compounded phenomena ceases and all that remains is a mere sphere, a true cessation, a nirvana. At that time, do the knowledge obstructions become non-existent by means of an antidote? They do not, they become non-existent due to their basis or support having become non-existent. Here the basis or support is the person. Since the person becomes non-existent, that supported on it become non-existent. When a nirvana without remainder is attained, a mere sphere remains. The Prasangika Madhyamika school debates this saying:

> *At the time of nirvana the self would definitely be annihilated.*
> *In the moments prior to nirvana,*
> *It would be produced and disintegrate. Since the agent would not exist, their results would not exist.*

That accumulated by another would be consumed by someone else. [6.128]

The Prasangika Madhyamikas say that it follows that when the nirvana, which is that to be attained, is attained, there is no attainer, and that when there is the attainer there is no object to be attained. It is like saying that when there is an eater there is no food, and when there is food there is no eater. This is way in which the Prasangika Madhyamikas debate with the lower schools.

Friday morning, 11 May 2001

A vehicle is an exalted knower that is the bearer of the load of either of the two welfares.

Chandrakirti's autocommentary says:

> He who does not understand suchness is unable to abandon the afflictions without residue. The thusness that exists with all things, without exception, having a nature of production, was also already indicated as indistinguishable. Even different seeing does not have divisions there; hence this suchness is just not transformed. Because there are no divisions and transformations, therefore the subjective exalted wisdom of thusness is also one nature.
>
> Like this: if the nature of exalted wisdom were multiple, suchness would not be realized because of not realizing the nature exactly as it abides. Because, like that, the subjective exalted wisdom of thusness is undistinguishable due to suchness being unique, therefore, three vehicles do not exist since there is only a single vehicle. This is because of the statement appearing [in the *Sutra of the White Lotus of the Holy Dharma*]:
>
> > Kashyapa, when all phenomena are realized as just equal, it is nirvana. That, moreover, is just one, not two, nor three.
>
> 'Great' in the statement "Great Vehicle" means the buddha bhagavans because they possess the exalted wisdom that is free of obscurations due to abandoning ignorance without residue. Their vehicle is the Great Vehicle because of "*prisha uddhara*" and so forth, the letter '*ta*' [in the Sanskrit *mahata yana*] changing into just '*a*' (i.e., the Sanskrit *mahata yana* becomes mahayana).
>
> Alternatively, since it is a vehicle and it is also great, it is the Great Vehicle because those possessing a buddha's inconceivable exalted wisdom have entered it; or because of being the subject of the limitless classifications of things; or because of abandoning unknowing without exception. Hence, it is the Great Vehicle since it is a vehicle and it is also great.
>
> If it is asked: If nirvana is only one, why are the vehicles of the hearers and the solitary realizers also indicated to pass completely beyond sorrow?
>
> To explain this doctrine as being intentional:
>
> *Because there exist these degenerations producing faults in migrators, therefore,*
> *The world will not enter the deep, the profound, sphere of the buddha.*
> *Because you, Tathagata, possess wisdom together with the method of*
> *Compassion, and because you volunteered "I will liberate sentient beings,"* [12.37]
>
> Five degenerations (or dregs) are indicated due to bringing about an unserviceability of bodies and minds: the degenerations of sentient beings, the eon, afflictions, views, and life span. Because they obstruct even the desire for the unsurpassed exalted wisdom of the Tathagata, being the cause of the very powerful operation of the afflictions, because of destroying superior higher interests, therefore, since a buddha's exalted wisdom is profound, the world will not enter what is difficult to fathom. Yet, the Bhagavan does not cultivate forgetfulness concerning those to be liberated due to merely this – migrators not being vessels. Because the Bhagavan possesses wisdom together with

> the method of compassion and because the Bhagavan previously made prayers "I will liberate sentient beings," therefore, he does not rely on indolence to completely liberate them and seeks the method of their complete liberation because it is, without doubt, necessary to accomplish his promise by way of other aspects.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *Since there are these degenerations producing faults in sentient beings,*
> *Therefore the world cannot understand the Buddha's profound sphere of action.* [12.37ab]

There is reason why he did not initially make those to be tamed enter the great vehicle; for some worldly folk [or tamable beings] would not understand the profound sphere of action of the Buddha, because sentient beings have the producers of faults, the five degenerations [of sentient beings, the eon, delusions, views, and lifetime].

Since there is the flourishing of the five degenerations or five dregs, the Buddha knows that sentient beings are not ready to enter the mahayana and therefore first teaches them the hearer and solitary realizer vehicles. The five degenerations, literally the five dregs, are so-called in that they are likened to the dregs of, for example, tea leaves which settle to the bottom of the cup and then come up when stirred. The five degenerations are:
(i) the degeneration of sentient beings, the stature of sentient beings is gradually has been gradually decreasing since the beginning of the eon;
(ii) the degeneration of the eon, the fortunate eon has vanished and presently there is the eon of fighting, sickness, and so forth;
(iii) the degeneration of afflictions, this being in relation to lay people whose afflictions are increasing due to which they have more desire and more dissatisfaction due to which they fight over belongings, power, and so forth;
(iv) the degeneration of views, this is in relation to the ordained who hold to their own views and then fight and argue with other systems; and
(v) the degeneration of lifespan, the average lifespan at the time of the Buddha was 100 years but gradually this is diminishing. In fact, it is said that at the end of every cycle of 100 years the lifespan diminishes by one year. Nowadays, very few people live to 100 years. Although it may appear that presently people are living longer due to modern comforts and technological developments, there are in fact many more dangerous diseases, such as cancer and AIDs, as well as harm caused by chemicals in food and so forth.

Presently the five degenerations or dregs are as if they have burst out of their container. However, it is said that at such a time even a little Dharma practice becomes very powerful. In this way, someone who does hundreds of years of Dharma practice in the fortunate eon and someone who does one year of Dharma practice in this degenerate eon create equal merit. This is due to the great amount of unfavorable conditions for Dharma practice that have to be overcome by the Dharma practitioners of this eon.

Chandrakirti's autocommentary says:

> Because there are these many conditions hindering migrators from entering the Great Vehicle and it is, without doubt, necessary to place the worldly in nirvana:
>
> > *Therefore, like the wise man that formed, as an interlude, an attractive city*
> > *To relieve the fatigue of a group of beings who set out for a jeweled island,*
> > *You made learners apply the mind to the mode of pacification and taught*
> > *This vehicle separately to those whose minds were trained in detachment.* [12.38]

> This example should be ascertained in the [*Sutra of] the Exalted White Lotus of the Holy Dharma*. The summarized meaning is this: just as the leader actually manifested a city for relaxation until they reached the jeweled island, likewise, the Bhagavan, from the point of view of method, also taught two vehicles, the vehicles of the hearers and the solitary realizers, ahead of the Great Vehicle, being a method to attain the [Great Vehicle] and being the support of the happiness of pacification.
>
> There, to those attaining abandonment of the afflictions of samsara, afterwards, only the Great Vehicle is finely indicated. Having fully completed the collections, it is also doubtlessly necessary for them, like the buddhas, to attain omniscient exalted wisdom, This doctrine of a single vehicle is also to be ascertained in the *Compendium of Sutras* and so forth.

Gedun Drup's *Mirror of the Clarification of the Thought,* as translated by Martin Willson*,* says:

> *Because you, Sugata, have great wisdom together with compassionate method,*
> *And because you made the promise, "I shall liberate sentient beings",* [12.37cd]
>
> *Therefore, like the wise man who, to ease soon the weariness of his band*
> *Of travelers to the Land of Jewels, created meanwhile a pleasant city,*
> *You put the minds of disciples on these vehicles, the quick way of peace,*
> *And also teach to those quite free, those with trained minds, separately.* [12.38]

There are reasons why he taught the vehicles of the hearers and solitary realizers, so that those of the disciple, or hearer, and solitary realizer families should apply their minds to the way of quickly calming suffering, and afterwards taught the great vehicle separately to those with trained minds, quite free of defilements: because the Sugata has wisdom [skilled in the means] of taming those to be tamed, together with the method of compassion; and because, having promised [when he was a bodhisattva], "I shall liberate all sentient beings," he has to make them reach the goal. For example, he is like the skillful leader who, to remove quickly the weariness of a company of people traveling to the Land of Jewels, temporarily created or manifested a pleasant city.[247]

Although there is only one final vehicle*,* the buddhas teach three in accordance with the dispositions of sentient beings. This is likened to the ship captain who emanated a city in order that a group of merchants could rest on their way to a jewel island. While we are not trying to reach a jewel island*,* we are trying to reach enlightenment.

Lama Tsongkhapa's *Illumination* (Tibetan text page 455) says:

> Thus, having explained the presentation of the three bodies, it is explained that there is an intention in presenting one vehicle as three vehicles:
>
> *Because, here, other than understanding suchness, there is no other earnest dispeller of all stains;*
> *The suchness of phenomena also does not depend on the divisions of transformations; and*
> *The intelligence that is the object-possessor of suchness is also not different –*
> *You presented an unequaled and inseparable vehicle to migrating beings.* [12.36]
>
> Why is that? It is *because*, *here,*
>
> - *other than understanding* the *suchness* of phenomena *there is no earnest*, that is, principal, *dispeller of all* the *stains* of the two obstructions,
> - *the suchness of phenomena also does not depend on the divisions of* dissimilar *transformations*,

[247] *Saddharmapundarikasutra* VII.

- whereby, also *the intelligence that is the object-possessor of suchness* – that is, exalted wisdom – *is not of different* or dissimilar types comprehending objects,

you, the Subduer, *presented* one *vehicle*, *which is not equal* to any other vehicle and is *inseparable, to* the *migrating beings* who are to be subdued because [the *White Lotus of the Excellent Doctrine Sutra*] says:

> Kashyapa, when all phenomena are realized to be just equal, that is nirvana. That, moreover, is one, it is not two, nor three

Arya [Nagarjuna] also taught in accordance with the *Supplement* stating:

> Because the sphere of phenomena is inseparable,
> You presented that lacking the divisions of vehicles
> As three vehicles,
> In order for sentient beings to enter.

These [passages indicate] that all the afflictions cannot be extinguished without realizing suchness. However

- the explanation that, since there is no great difference in the suchness of phenomena, there are different ways to progress to nirvana and different causal vehicles that realize and do not realize suchness, and
- the explanation that there are some results or vehicles that do not progress to other vehicles after attaining the mere nirvana that is the extinction of the afflictions

were taught in order to lead trainees for the time being. When this presentation is well realized, the intention of the explanations regarding the lesser vehicle as lacking the realization of the selflessness of phenomena will be realized.

QUESTION: There is only one nirvana which, having been attained, does not require progression to other paths. So why are the vehicles of the hearers and solitary realizers also presented as passing beyond sorrow?

RESPONSE: It is explained that presenting in this way has an intention:

> *Because there exist the degenerations producing faults in migrating beings,*
> *The world does not engage in the deep and profound sphere of activity of a buddha.*
> *Because you, Sugata, simultaneously possess wisdom and the method of compassion, and*
> *Because you promised "I will liberate all sentient beings,"* [12.37]
>
> *Like the wise one who formed a pleasant city in the meantime to dispel the fatigue*
> *Of a group of beings who had set out for an island of jewels,*
> *You made the learners apply their minds to the means of pacification, and*
> *Taught this vehicle separately to those with trained minds, completely devoid.*[12.38]

Because there exist the five *degenerations* of (i) sentient beings, (ii) the eon, (iii) afflictions, (iv) views, and (v) lifespan that, making body and mind unserviceable, become the cause *producing* the strongest *faults* – that is, afflictions – *in migrating beings*, they destroy the especially strong aspiration and, thereby, obstruct interest in the exalted wisdom of a buddha. *Because of that, the world* – those to be subdued – *do not engage in the sphere of activity of a buddha*, difficult to fathom due to being *profound*. *Because you, Sugata*, *simultaneously possess* the *wisdom* that is skilled in the methods for subduing those to be subdued and the *method that is the compassion* which does not have forgetfulness regarding their welfare, and *because you*, when previously a bodhisattva, *promised "I will liberate* all *sentient beings,*" it is necessary to definitely accomplish that by way of other kinds of methods. Because there are many hindrances to migrating beings engaging in the great vehicle and because it is also necessary to definitely place migrating beings in nirvana, as is taught in the *White Lotus [of the Excellent Doctrine Sutra]*, *like the wise* captain who, when *setting out for an island of jewels* in the middle of the ocean, *formed*, or emanated, *a pleasant city to dispel in the meantime the fatigue of the group of beings* who had been traveling for a long time until they reached the island of jewels, *you*, Bhagavan,

- on the side of the great vehicle, taught that which is a method for attaining the great *vehicle*, the two vehicles of the hearers and solitary realizers, to the *learners*, the hearers, and the solitary realizers who are illustrated by [the word "learners"] in order *to apply their minds to* the happiness that is a *means of pacification*, and,

- then taught just the great vehicle *separately*, that is, subsequently, to *those with trained minds completely devoid* of the afflictions of cyclic existence.

These [statements] also [indicate] that, like the buddhas, having completed the collections, one must doubtlessly attain buddhahood. That one vehicle is established is be understood from that taught in the *Compendium of Sutras* and so forth:

> Because they are taught in many sutras as exhausted in one vehicle.

The teaching on three final vehicles is a teaching possessing an intention, whereas the teaching on one final vehicle is definitive. The Buddha taught three final vehicles for the followers of the lesser vehicle who are unable to abandon both obstructions, the afflictive obstructions and the knowledge obstructions. Because they are unable to abandon the knowledge obstructions, the Buddha taught them three final vehicles. This is the only reason for the Buddha to have taught three final vehicles, he did not do so in terms of whether or not the followers of the lesser vehicle have the realization of the selflessness of phenomena. However, such people are unable to apply their intelligence realizing the selflessness of phenomena as an antidote to the knowledge obstructions, rather it becomes an antidote only to the afflictive obstructions. Earlier in the *Supplement* it was said that although hearers and solitary realizers do cultivate the realization of the selflessness of phenomena they do not do so in a complete way. What is a complete way? It means that one's wisdom is able to function as an antidote to both obstructions. The followers of the lesser vehicle do not meditate in a complete manner because they are unable to realize the selflessness of phenomena by means of infinite types of reasonings.

Thus, the purpose in teaching three final vehicles was in order for some trainees to take a rest on the way to enlightenment, however, in the end they too are led to buddhahood. Haribhadra's *Clear Meaning Commentary* on the *Ornament for Clear Realizations* also says that the teaching on three vehicles is an interpretable meaning teaching and not an definitive meaning teaching. Jedzun Chogyi Gyeltshen's *Ocean of Sport* also quotes the *White Lotus Sutra* which discusses seven points: why three final vehicles were taught, the purpose in teaching them, and so forth. Nagarjuna also says:

> Because the sphere of phenomena is inseparable,
> You presented that lacking the divisions of vehicles
> As three vehicles,
> In order for sentient beings to enter.

The sphere of phenomena, that is, emptiness, is without divisions. Thus, the emptiness of a pot and the emptiness of a pillar are one; this emptiness is the mere negation of true existence. The Buddha taught three final vehicles in order for sentient beings with particular dispositions to enter their respective vehicles. Without realizing emptiness, it is not possible to extinguish all the afflictions. Whatever vehicle one enters, one must realize emptiness. The conception of a self of phenomena is an afflictive obstruction, it has to be abandoned in order to become a foe destroyer. Whether one enters the hearer or solitary realizer vehicle, in order to attain the state of a foe destroyer the afflictive obstructions must be abandoned. Thus, the Buddha taught three vehicles in order to gradually lead such people to the great vehicle.

QUESTIONS AND ANSWERS

Student: What is the definition of contaminated karma and what is the definition of uncontaminated karma?

Geshe Jampa Gyatso: Although there is a discussion of "uncontaminated karma," it is not sure that it is actually uncontaminated. A contaminated action is an action accumulated with the motivation of afflictions. An uncontaminated action is an action that is not motivated by afflictions but is motivated by a subtle level of the latency of ignorance or by a subtle knowledge obstruction. The only uncontaminated in the continuum of a sentient being is single-pointed non-conceptual meditative

equipoise on emptiness. Hence, everything else in the continuum of sentient beings is contaminated. The exalted wisdom of meditative equipoise on the path of preparation is contaminated because it is conceptual. The word "contaminated" has many interpretations.

Student: Does a bodhisattva superior create contaminated karma? If not, then when he generates aversion how is this karma classified?
Geshe Jampa Gyatso: Bodhisattvas on the first and second grounds have anger but there anger is not like ours. On the third ground there is no manifest anger. The first mind generation of the *Supplement* says that a bodhisattva superior of the first ground does create contaminated karma:

His devotion to giving even his own flesh
Is reason for inferring the unimaginable. [1.9cd]

When someone cuts his flesh, a first ground bodhisattva does not become angry but gladly gives his flesh away. It is not clear whether a first ground bodhisattva generates anger or not, but he does create contaminated karma. However, this is not the projecting karma included in the twelve links of dependent-arising nor is it accomplishing karma.
Student: So what is this contaminated karma?
Geshe Jampa Gyatso: A contaminated action is an action accumulated with the motivation of afflictions! For example, a bodhisattva superior generates attachment and out of this gives birth to a child.
Student: Therefore, an uncontaminated path can create contaminated karma because a bodhisattva on the first ground onward is always on an uncontaminated path?
Geshe Jampa Gyatso: If it is a path it is not pervaded by being uncontaminated. If it is an uncontaminated existing in sentient beings it must be an exalted wisdom of meditative equipoise.

Student: What are the definitions of "path of action" and "action" according to Prasangika?
Geshe Jampa Gyatso: According to Prasangika, action is form. Form is of two types: revelatory form and non-revelatory form. Non-revelatory form cannot be seen with the eyes. In the Prasangika Madhyamika system the discussion of actions being form is similar to the presentation in Vasubandhu's *Treasury of Knowledge*. There are three types of form:

1. form that can be indicated and is obstructive, for example, a table,
2. form that cannot be indicated and is obstructive, and
3. form that cannot be indicated and is not obstructive, for example, non-revelatory form, such as the form that is a vow and the form that is a non-vow.

There are also forms that are a phenomena sphere and forms that are a form sphere. A form that is a form sphere is, for example, the appearance of form that appears to only an eye consciousness. A form that is a phenomenon sphere is the appearance of form that appears only to a mental consciousness.

An action is an action of body and speech, that is, action that is expressed through body and speech. A path of action is the motivation from which the seven actions of body and speech arise. The three non-virtues of mind are called "paths of action" because they are paths producing the seven non-virtues of body and speech. It is the same for virtue, thus, the three virtues of mind are "paths of actions" in that they are paths producing the seven virtues of body and speech. The seven non-virtues and the seven virtues of body and speech are actions.

Student: According to Prasangika, are the ten non-virtues both actions and paths of action?
Geshe Jampa Gyatso: I said before that the seven of body and speech are both actions and paths of actions, whereas the three of mind are only paths of actions.

Student: Does a buddha create any type of karma?
Geshe Jampa Gyatso: A buddha does not create karma. However, this subject is debated asking, for example, "Does a buddha not have intention?" The creation of karma is only possible on the grounds of sentient beings, not on the buddha ground. But it can be debated: "Do buddhas not have vows? Do they not have intention? Are these not karma? Are the enlightened activities of a buddha not actions?" However, the creation of karma is only applicable to us sentient beings.

Student: In the presentation of the buddha bodies, the explanation of the body of similar cause refers to the emanation body. What is the 'similar cause' in this context?
Geshe Jampa Gyatso: The emanation body is similar to the complete enjoyment body. Because the complete enjoyment body emanates the emanation body, the emanation body is a body that is similar to the cause, the completion of the collections of merit and exalted wisdom. Or it can be said that the emanation body emanated by the complete enjoyment body is similar to its cause, the complete enjoyment body. The emanation body is similar to the complete enjoyment body in terms of displaying the deeds of a buddha, although it appears distinctly to different trainees.

Student: If a buddha can see the future, does this mean that our entire path to enlightenment is certain or fixed?
Geshe Jampa Gyatso: No, it is not fixed. The buddhas know that Emily will be born in such-and-such a place at such-and-such a time and will become a buddha. The buddhas know that Emily will go to such-and-such a Dharma center and teach such-and-such people the Dharma. Although these future events do not exist know, they do exist.

Student: What is the difference between the aspects of the subjective mode of apprehension of (i) the vajra-like exalted wisdom of meditative equipoise of the uninterrupted path, the actual antidote, and (ii) the exalted wisdom of meditative equipoise of the uninterrupted path having emptiness as its object of the mode of apprehension?
Geshe Jampa Gyatso: These two are the same in being meditative equipoise on emptiness. The uninterrupted path of the mahayana path of seeing of the first ground is a meditative equipoise on emptiness; its object of the mode of apprehension is emptiness. It is not called "vajra-like" because it is not able to destroy the knowledge obstructions. Only the uninterrupted path at the end of the continuum of a sentient being which is able to destroy the knowledge obstructions is called "vajra." Thus, the vajra-like meditative stabilization is only that at the end of the continuum of a sentient being.

Student: Chandrakirti, as a basis for distinguishing between interpretable meaning and definitive meaning teachings according to the Prasangika Madhyamikas, presents both the *Teachings of Akshayamati Sutra* and *King of Meditative Stabilization Sutra*, whereas Lama Tsongkhapa presents only the *Teachings of Akshayamati Sutra* in his *Treatise Differentiating the Interpretable and Definitive*. Is there a reason for this?
Geshe Jampa Gyatso: It is only because the *Teachings of Akshayamati Sutra* is the main reference for this. Emptiness is the definitive meaning.

END

Monday afternoon, 14 May 2001

The second chapter of Jedzun Chogyi Gyeltshen's *Ocean of Sport* sets out a discussion of one final vehicle and three final vehicles. However, in conclusion there is only one final vehicle because all sentient beings enter the mahayana and attain the enlightenment of the buddha ground. So why did the Buddha teach three final vehicles? He taught them in order to guide those beings who have obstacles and whose minds do not have an expansive enough attitude to enter the mahayana right from the beginning. Why are there these obstacles? Think about it. However, the main obstacle is self-cherishing. The mahayana is a mind thinking about others, whereas some people's minds are not compatible with this attitude. With respect to this, there are stories in the teachings on the Stages of the Path about events that took place in the past. For example, there is a story about an old woman who owned a cow. She wanted to mate it with an ox in order for it to give birth to a calf and then produce milk. However, while taking her cow to the ox, she met some monks who asked her where she was taking the cow and, becoming embarrassed, turned back. On another occasion, she asked young monk for advice about what to do in order to have her cow produce milk and he told her to recite the refuge prayer:

> To the Buddha, the Dharma, and the Supreme Community
> I go for refuge until enlightenment.
> Through the merit from generosity and the other perfections,
> May I achieve the state of a buddha for the sake of all sentient beings.

However, the woman felt that she could not possibly think to attain enlightenment for the benefit of all sentient beings so the monk gave her another prayer to recite:

> I go for refuge to the Three Jewels
> So that my cow, Ayadevi, becomes pregnant,
> Gives birth to a calf, and
> Produces much milk and butter.

The woman liked this prayer and recited it day and night and eventually the cow became pregnant, gave birth to a calf, and produced much milk from which the woman was able to make much butter. She then offered butter and milk to the monastery of the young monk but they did not need it. However, because the cow continued to produce milk without end, the woman began to think about what had happened. She came to understand that only the words "I go for refuge to the Three Jewels" of the prayer she had been taught were meaningful. In short, there are many obstacles to entering the mahayana.

Lama Tsongkhapa's *Illumination* (Tibetan text page 457) says:

3B2E Explanation of the duration of manifest enlightenment and remaining

1 Explanation from the point of view of the time of manifest enlightenment
2 Explanation from the point of view of the time of remaining

3B2E-1 Explanation from the point of view of the time of manifest enlightenment

Chandrakirti's autocommentary says:

> Now, to explain in terms of the time of the Bhagavan manifesting enlightenment and the time of abiding:

As many as are the particles of smallest atoms found in the entirety
Of directions and buddha lands, for that many eons too,
The Tathagata has reached noble most supreme enlightenment.
Nonetheless, you do not declare this secret of yours. [12.39]

The buddha bhagavans do indeed exhibit rebirth and passing beyond sorrow by way of the emanation body, yet the measure of how long ago was the time of the manifest complete enlightenment – that which is the cause giving rise to the emanation body – is to be expressed. The eons of manifest complete enlightenment of the Bhagavan are as many as the amount of particles of smallest atoms existing in the amount of world systems that are lands of the exalted wisdom of the Tathagata.

Because this is difficult to be highly appreciated by those who have not previously accumulated roots of virtue, it is not to be declared; it is explained to some – to those highly appreciating that – in order to accumulate inestimable merit.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

3B2E-1 Explanation of the time of actual enlightenment

As many as the tiniest atoms of atoms of all the places
In the buddha realms of the directions are the eons
When sugatas have reached the highest, holy enlightenment. [12.39abc]

The number of demonstrations of the buddhas' way to the supreme point of enlightenment is inconceivable, for as many as the tiniest atoms of atoms that exist in the places of all the buddha lands of the ten directions are the eons in which sugatas have gone to the highest, holy enlightenment.

Nevertheless, you do not relate these secrets of yours. [12.39d]

However, to some of those to be tamed he did not relate these secrets of his, because for those who have not accumulated roots of merit previously, it is hard to have conviction.

A supreme emanation body displays the twelve deeds ranging from descending from the Joyful Land through passing beyond sorrow. The number of times it demonstrates the attainment of enlightenment is inconceivable. A buddha displays the aspect of attaining enlightenment in this world system and simultaneously displays it in a billion other world systems. Because of this, it is to be understood that the time since the attainment of enlightenment is countless. However, when some people are told about this, because it is difficult for them to believe it, they think that it is a trick. On the other hand, those have accumulated sufficient roots of virtue in the past do believe it.

Even though a buddha has descended to the world, we still need the karma to see him and to receive teachings from him. In other words, we need fortune, that is, the accumulation of roots of virtue, in order for this to happen. Who sees a supreme emanation body? It is an ordinary being with pure karma. "Pure karma" refers to virtuous karma. Those with impure or negative karma are unable to see a buddha because it obscures their mind.

Lama Tsongkhapa's *Illumination* (Tibetan text page 457) says:

As many as are the particles that are subtle particles existing in
The places that are all the buddha lands of the directions,
For that many eons has the Sugata also gone to most holy supreme enlightenment,
Nonetheless, this secret of yours is not to be divulged. [12.39]

As many as are the number of *particles that are the subtle particles existing in the places that are all the buddha lands of the* ten *directions*, *for that many eons have* you, *the Sugata*, *also gone to most holy supreme enlightenment*. It is so, *nonetheless*, because it is difficult for those who have not accumulated roots of virtue in the past to believe it, *this secret of yours is not to be divulged*, yet it is explained here in order for those who strongly believe in it to accumulate inestimable merit.

The explanation by Jayananda's *Explanatory Commentary* "Moreover, it is expressed so since the truth bodies of all the buddhas are one, otherwise other buddhas would not arise" is not correct because the autocommentary teaches [the truth body] from the point of view of the arisal of the emanation body. Also the explanation "The cause for the arisal of the emanation body is intended to be the truth body" is also not feasible

- because if the measurement of having gone to the truth body is asserted to be merely that, the fault of there being no occasion of buddhahood for other persons would also be accrued here, and
- because, if the truth bodies of all the buddhas were one, it would be completely contradictory in that, when the past buddhas became buddhas, the truth bodies of those who did not become buddhas in the past and the truth bodies of those who are yet to become buddhas would have already been attained in the past.

Hence, the measure of having gone to the essence of enlightenment is indicated, but not the measure of the length of time since having become a buddha. Therefore, the amount that the emanation body displays the way of once again becoming a buddha in the essence of enlightenment after having become a buddha is indicated. Thus, Nagtsho's translation [of the root verse] is the best:

As many as the subtle particles existing
In all the lands, the places of the buddhas, of the ten directions,
For that long also your, the supreme sugata's, enlightenment will arise.

Instead of understanding it in this way, if it is explained as in the *Explanatory Commentary*, it becomes an object taught in the root text (v. 12.39d) without explaining [the word] "secret."

There are faults in asserting the truth bodies of all buddhas to be one. Lama Tsongkhapa says: "The explanation by Jayananda's *Explanatory Commentary* 'Moreover, it is expressed so since the truth bodies of all the buddhas are one, otherwise other buddhas would not arise' is not correct because the autocommentary teaches [the truth body] from the point of view of the arisal of the emanation body."

In short, the attainments of enlightenment are numberless. It is said, for example, that there is one human body, whereas there are in fact many. Each person has a different body, yet if it is asked "Are they all human bodies?", the answer is that they are. The instants of human bodies in all this world is about 6 billion. Each human has a body, some being attractive, some ugly, some tall, some short, and so forth. Are they all human bodies? They are. Similarly, the attainments of enlightenment can be posited as numberless. When the six billion human beings attain enlightenment there will be six billion enlightenments. In conclusion, there are numberless enlightenments.

Lama Tsongkhapa's *Illumination* (Tibetan text page 458) says:

3B2E-2 Explanation from the point of view of the time of remaining

Chandrakirti's autocommentary says:

Having thus expressed somewhat the time of manifest complete enlightenment, after that it is explained in terms of the time of abiding:

As long as all the worlds have not progressed to total supreme peace
And space has not been totally annihilated, for that long the Conqueror,
Produced from the Wisdom Mother with the nurse of mercy,
Will enact the tradition. Hence, how could you possess total peace? [12.40]

> The Bhagavan, having been born from the mother – the wisdom gone beyond – was entrusted to the nurse of compassion. Hence, the future life span of the Bhagavan should be known to exist as long as all worldly ones are not transformed into buddhahood and as long as space is not overcome.

A buddha remains or abides as long as there is space.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> 3B2E-2 The time of remaining
>
> *As long as the whole world has not gone completely to highest peace,*
> *And space has not been destroyed, so long will you Victorious One*
> *Born of the mother wisdom, with the nurse of loving compassion,*
> *Act in this way, so how do You have highest tranquillity?* [12.40]

How does he have a one-sided tranquillity? He does not, since as long as all the world has not gone completely to the highest peace, and space has not been destroyed, the Victorious One, born of the mother, [the transcendent action of] wisdom, through the nurse of compassion, acts in this way, remaining until samsara is empty.

A buddha, out of nurse-like compassion, remains until cyclic existence is emptied. A buddha abides in cyclic existence for the sake of all sentient beings until they all attain buddhahood. How is enlightenment attained? Enlightenment is attained when the two collections are complete. Chandrakirti says: "The Bhagavan, having been born from the mother – the wisdom gone beyond – was entrusted to the nurse of compassion." A buddha, having been born, is entrusted to the nurse of compassion. In other words, the perfection of wisdom gives birth to a buddha who is then cared for by the nurse of compassion and remains as long as space is not emptied, that is, until there are no more sentient beings because they have all attained the buddha ground.

Chandrakirti's autocommentary says:

> If it is asked: What is the compassion of all the buddhas such that in order to accomplish the welfare of all sentient beings it nurtures them for endless periods?
>
> In order to show that the Bhagavan, subsequently perceiving the world as the basis of undergoing various sufferings, does not possibly completely pass beyond sorrow because the Compassionate One turns away from the mind of passing beyond sorrow, it is explained:
>
> *What your mercy is like for the family of beings, who have consumed*
> *Poisoned mundane food out of the fault of bewilderment, is unlike*
> *A mother's suffering for a son who is pained from eating poison.*
> *Thus, the Protectors have not reached total supreme peace.* [12.41]
>
> The term "mundane food" expresses the five attributes of desire. Due to strongly grasping to them, they also become poisonous when consumed because of being the cause of extensive suffering. Also, strong grasping to them as true in reality is produced through the fault of bewilderment.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *To your love for your family, the people who, through the fault of delusion,*
> *Have eaten the poisoned food of the world, a mother's suffering for*
> *Her son, in pain from eating poison, is not similar.*

Therefore, protectors, you have not gone completely to highest peace. [12.41]

He, the Protector, does not go completely to a one-sided highest peace because the suffering mind arising in a mother when her son has eaten poison and is in pain is nothing like the loving compassion which he has for his family, the beings who, through the fault of delusion, [grasping at true existence,] eat the poisoned food of the [five] worldly enjoyments.

If an only son ingests poison, his mother will experience much pain and worry. This is an analogy for the love of the buddhas for the sentient beings who have eaten the poisoned food of the five desirable objects. Why are the five desirable objects illustrated here by poisoned food? It is because, just as eating poisoned food produces pain, likewise, when sentient beings have attachment and adherence to the five desirable objects they experience suffering similar to that of eating poisoned food. In our own experience we can see that most of our sufferings arise from attachment to the five desirable objects. How does this strong adherence to them arise? It arises due to the fault of ignorance or confusion. Chandrakirti says: "Also, strong grasping to them as true in reality is produced through the fault of bewilderment." Hence, strong attachment to the five desirable objects, due to which we circle in cyclic existence, is caused by confusion.

What is the compassion of a buddha like? It is like the mercy of a mother for her only son who has eaten poisoned food. Due to his compassion for sentient beings, a buddha does not pass beyond sorrow.

Chandrakirti's autocommentary says:

> There, just as mercy is born in the Bhagavan towards samsaric beings eating poisonous food, torment is not likewise generated in a mother towards someone other than her beloved only son. Therefore, how could one with compassion possess the idea to completely pass beyond sorrow? Because compassion overcomes the mind of passing beyond sorrow, in order to demonstrate that the Bhagavan, subsequently seeing the world as being the basis of undergoing the variety of sufferings, does not possess a passing completely beyond sorrow, it is explained:
>
> *Because the unwise with minds that grasp to things and non-things obtain sufferings*
> *At the birth time and destruction, produced from leaving and meeting the unpleasant and pleasant,*
> *And wicked migrations; therefore, since the world became an object of mercy, your mind,*
> *Compassionate Bhagavan, turned from peace. Hence, you have no passing beyond sorrow.* [12.42]
>
> There, because – the unskillful with awarenesses that strongly grasp to things, having confidence in actions (e.g. karma) and effects, view rebirth as gods and humans as existent and, hence, definitely obtain the sufferings of birth and death and also experience the suffering of separating from pleasant objects and the suffering of meeting with unpleasant objects; [while the unskillful] having awareness that strongly grasps to things as non-existent, who are endowed with wrong view, also obtain fallen migrations such as hell and so forth and the suffering mentioned above – therefore, the compassion of the Bhagavan Buddha, having observed suffering, turns his mind away from passing beyond sorrow and abides.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *Because those whose minds, by ignorance, grasp at things and at the nonexistence of things*
> *Find sufferings at times of birth and death and produced by losing and meeting the pleasant and unpleasant*
> *And migration to lower realms; therefore, the whole world becoming the object of love,*

Compassion, O lords, turns your mind aside from peace, and you do not have nirvana. [12.42]

He does not have the nirvana of one-sided peace, because since those whose minds, by lack of knowledge [of absolute reality], grasp at things as truly existent, or the phenomena [of cause and effect] as non-existent, receive sufferings on the occasions of birth and death, and arising from separation from pleasant [objects] and meeting the unpleasant, and migration to the lower realms, therefore, since the whole world has become the object of his great loving compassion, the Lord's mind is turned aside from [seeking one-sided] peace by great compassion.

A buddha turns away from attaining nirvana in order to help sentient beings who are experiencing many types of sufferings. Sentient beings, due to being unskilled, strongly adhere to things as truly existent, whereby, they take many rebirths and in each one experience the sufferings of birth and death. The suffering of death is the greatest of sufferings. In addition, sentient beings experience the suffering of separating from pleasant objects and the suffering of meeting unpleasant objects. For example, meeting a pleasant person makes us happy, whereas meeting an unpleasant person makes us unhappy.

Chandrakirti says: "[the unskillful] having an awareness that strongly grasps to things as non-existent, who are endowed with wrong view, also obtain fallen migrations such as hell and so forth and the suffering mentioned above." Due to the wrong view conceiving things to be non-existent, sentient beings create negative actions and are reborn in the lower migrations, the hells and so forth. This is also taught in the teachings on the Stages of the Path.

Chandrakirti says: "therefore, the compassion of the Bhagavan Buddha, having observed suffering, turns his mind away from passing beyond sorrow and abides." Because a buddha does not tolerate the suffering of sentient beings he does not pass beyond sorrow but remains in order to help them. How long does a buddha abide? He abides until space is emptied of sentient beings. It can be asked: "If a buddha abides that long why did Shakyamuni Buddha only live eighty years?"

Student: The Buddha showed passing beyond sorrow to teach impermanence but because he has a vajra body he does not actually die.

Geshe Jampa Gyatso: Have you seen his vajra body?! The Buddha showed the aspect of passing beyond sorrow in order to guide sentient beings who have a strong conception of permanence.

In short, be mindful of the fact that the five desirable objects are like poisoned food, therefore, just as when we eat poisoned food we experience much pain and even death, so too will be experience much suffering if we continue to use the five desirable objects. Thus, we should avoid generating strong attachment and adherence to them.

Tuesday morning, 15 May 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 458) says:

> *As long as all the worlds have not progressed to supreme total peace and*
> *As long as space has not been thoroughly destroyed,*
> *For that long you conquerors, who are born from the mother wisdom, due to the nurse of compassion*
> *Act in this way. Therefore, how could you possess total peace?* [12.40]

The duration of the future lifespan of a *conqueror* is *as long as all the worlds* – those to be subdued – *have not progressed to supreme total peace*, that is, as long as they have not become buddhas, *and as long as* uncompounded *space has not been thoroughly destroyed*, *for that long* the buddhas *born from the mother* that is the perfection of *wisdom* and entrusted to *the nurse of* great *compassion act in this way* explained before. Therefore, *how could* you who are like that *possess* the *peace* that is biased*?*

The buddhas abide as long as space has not been emptied of migrating beings. The buddha bhagavans are born from the mother-like perfection of wisdom and are cared for by the nurse-like compassion. In short, due to the buddhas themselves having compassion they do not pass beyond sorrow.

Lama Tsongkhapa's *Illumination* (Tibetan text page 458-9) says:

> QUESTION: What is the compassion of the buddhas like that cares for sentient beings for endless periods in order to accomplish the welfare of all sentient beings?
> RESPONSE:
>
> *Your mercy for worldly beings – the family of those very beings who have eaten poisoned food*
> *Due to the fault of confusion – is not like the suffering of a mother*
> *For her son who is pained from having eaten poison;*
> *Thus, the protectors do not go to supreme total peace.* [12.41]
>
> *By* the force of *the fault of* the *confusion* conceiving true existence, *worldly beings* eat with strong adherence to *food*, that is, the five desirable objects, thereby becoming the cause for extensive suffering. Therefore, the *mercy you* develop for *the family* – what is mine – *of those very beings who have eaten what is poisoned is not like* the mind of *suffering* developed by *a mother for her* only *son who is pained from having eaten poison*. *Thus, the protectors*, the buddhas, *do not go to the supreme total peace* that is biased.

Sentient beings have strong adherence to the five desirable objects due to which they generate attachment and so forth. The five desirable objects are likened to poisoned food, in that when they are made use of sentient beings experience suffering. Seeing this, the buddhas generate great compassion for sentient beings. A mother, ignoring her own pain, suffers when her only son experiences the pain of having ingested poisoned food. Due to thinking about her child's suffering, she does not think about her own suffering. Similarly, the buddhas, seeing the suffering of migrating beings, do not enter into the peace that is one-sided or biased.

Lama Tsongkhapa's *Illumination* (Tibetan text page 459) says:

> *Because the unskilled have awarenesses that adhere to things and non-things,*
> *Suffering is produced from the occasions of birth and disintegration, separating from the pleasant, and meeting with the unpleasant, and*
> *The migrations of the wicked are attained. Therefore, since the world thoroughly becomes an object of great compassion,*
> *Your minds, bhagavans, out of compassion turn away from peace, whereby you do not possess nirvana.* [12.42]
>
> *Because* of that, since those who are *not skilled* in the meaning of suchness – *having awarenesses that* strongly *adhere to things* as truly existent – view rebirth as a god and human as existing due to belief in actions and results, they are definitely afflicted with the suffering of the *occasions of birth and disintegration* – that is, death – and experience *the suffering that is produced through separating from pleasant* objects *and meeting with unpleasant* objects. Those having an awareness that adheres to *the things* that are causes and results *as non-existent*, possessing wrong view, *attain the migrations of the wicked* – that is, the bad migrations of the hells and so forth – as well as the suffering that was explained earlier. *Therefore*, *since* the beings of *the world thoroughly become objects of* great *compassion*, *your minds, bhagavans, out of* great *compassion turn away from* exertions for a biased *peace*, *whereby you* abide in the world *without possessing the nirvana* that is a biased peace.

Those who unskilled in suchness, strongly adhering to things, that is, actions and results, create actions that bring about rebirth as a god or human being. However, although born in the happy migrations they still experience the various sufferings of birth, death, separating from pleasant objects,

meeting with unpleasant objects, and so forth. There are eight types of sufferings mentioned in the teachings on the Stages of the Path, one of which is the suffering of separation from pleasant objects, such as our friends, and another of which is the suffering of encountering the unpleasant.

In addition, those who view actions and results as non-existent commit negative actions and are reborn in the lower migrations where they also experience the suffering of birth, death, separating from the pleasant, encountering the unpleasant, and so forth. For example, we can see that dogs experience happiness when their master is present and suffer when separated from him.

CONCLUSION

Lama Tsongkhapa's *Illumination* (Tibetan text page 460) says:

> 3C The way in which the treatise was composed

Chandrakirti's autocommentary says:

> *Bhikshu Chandrakirti, having drawn this tradition*
> *From the* Treatise of the Middle Way,
> *Expressed it consistent with scripture and*
> *In accordance with oral instructions.* [13.1]
>
> *That "just as this dharma does not exist*
> *In other than this [*Treatise*], likewise,*
> *Also the tradition found here does not exist*
> *Elsewhere," should be ascertained by the wise.* [13.2]

That, "just as, except for the *Treatise on the Middle Way*, this dharma called 'emptiness' is not unmistakenly expressed in other treatises, likewise, also the tradition which was related here by us along with responses to objections, arisen from this tradition [of the *Treatise*], like the dharma of emptiness, does not exist in other treatises," please should be ascertained by the wise.

Chandrakirti was a bhikshu, a fully ordained monk. The *Treatise on the Middle Way* is Nagarjuna's *Fundamental Wisdom*. Chandrakirti composed his *Supplement* based on the *Treatise on the Middle Way* and in accordance with the Buddha's scriptures and the oral instructions. The Buddha's scriptures are the Perfection of Wisdom Sutras, whereas the oral instructions are those of Nagarjuna.

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> 3C The way in which the treatise was composed
>
> *Bhiks□u Chandrakirti compiled this text*
> *From the* Treatise on the Middle Way,
> *Relating it in accordance with*
> *Instructions and with oral teachings.* [13.1]

This text, *Madhyamakavatara*, does not have the fault of being written according to Bhiks□u Shri Chandrakirti's own pleasure; for it is gathered from the *Treatise on the Middle Way*, *Mulamadhyamakakarika*, and related in accordance with [sutra] instructions of definitive meaning and with Nagarjuna's oral teachings.

> *Just as this Dharma is not found*
> *Except here, likewise also*
> *The method appearing here is not*
> *Found elsewhere, the wise should know.* [13.2]

It should be understood that those striving for liberation should enter this method, for the learned must know that, just as this unerringly taught Dharma of voidness does not exist except in this text on Madhyamaka, so too the method appearing here does not exist in other texts.

Since the subject matter of Nagarjuna's *Fundamental Wisdom* does not exist in other texts, it is suitable to engage in hearing it and thinking about it.

Chandrakirti's autocommentary says:

> Therefore, that which is stated by some saying "That very tradition that is propounded by the Sautrantikas as ultimate is accepted as conventional by the Madhyamikas," should be understood as being stated by only those obviously unaware of suchness, which is the meaning of the *Treatise on the Middle Way*. Further, those who imagine "that propounded as ultimate by the Vaibhashikas is conventional for the Madhyamikas" are also only totally unaware of thusness, the meaning of the *Treatise*, because of the unsuitability of such supramundane phenomena and mundane phenomena being similar. The wise should ascertain that "This tradition is uncommon."

Some scholars say that what is asserted to be ultimate truth by the Sautrantikas is asserted to be conventional truth by the Madhyamikas, however, such people do not understand the meaning of the *Treatise on the Middle Way*. How do the Sautrantikas posit ultimate truth? They say that an ultimate truth is that which is ultimately able to perform a function. However, the Madhyamikas do on accept that there is anything that is ultimately able to perform a function, in fact according to them such a thing is not an object of a valid cognizer.

Other scholars say that what is presented to be ultimate truth by the Vaibhashikas is asserted to be conventional truth by the Madhyamikas, but this too is incorrect. The Vaibhashikas define an ultimate truth is: a phenomenon that is such that, if it is broken or mentally separated into parts, the mind apprehending that object does not cease. This is not asserted by the Madhyamikas to be conventional truth. Therefore, that which is indicated by the Sautrantikas and Vaibhashikas to be ultimate truth is not asserted to be a nominal or conventional truth by the Madhyamikas. For them, since these so-called "ultimate truths" are not objects of a valid cognizer, they do not even exist conventionally. Thus, the scholars who make such statements do not understand the meaning of the *Treatise on the Middle Way*.

Chandrakirti says: "The wise should ascertain that 'This tradition is uncommon.'" There are eight uncommon features of the Prasangika Madhyamika system which are uncommon to specific tenet systems.

Chandrakirti's autocommentary says:

> Therefore, since those who become frightened by ascertaining the mere words, not knowing the heart intention of the Acharya and without having already ascertained the meaning of suchness, totally abandon this supramundane dharma; therefore, saying "This *Supplement into the Treatise on the Middle Way* was composed in order to unmistakenly show the suchness that is the meaning of the *Treatise*," it is explained:
>
> *Out of fear due to the color of the very vast ocean of Nagarjuna's intellect,*
> *Beings discard to a great distance what are excellent traditions.*
> *Hence, the water that opens the kamuda [flower] of his*
> *Unblossomed verses now completely fulfill the hopes of Chandrakirti.* [13.3]

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *Frightened by the color of the vast ocean of Nagarjuna's mind,*
> *People have avoided his right method by a great distance. Now,*
> *The water from the opening of the kumuda – the unfolding*
> *Of his karikas – fulfills completely Chandrakirti's hopes.* [13.3]

It should be understood that there is an excellent reason for composing this treatise; for, although people propounding true existence, [the Chittamatrins and so on,] being frightened by the color of the very vast ocean of Acharya Nagarjuna's mind, [black in its scarcely fathomable depths,] have avoided Nagarjuna's right method by a great distance, yet the water from the opening of the kumuda lotus which is the unfolding of the *Mulamadhyamakakarika* now fulfills the hopes in the mind of Chandrakirti, [the moon which opens this lotus].

Some people who are unable to understand the meaning of the *Treatise on the Middle Way* become frightened even by ascertaining the mere words. Chandrakirti composed the *Supplement to the 'Middle Way'* in order "to unmistakenly show the suchness that is the meaning of the *Treatise*." Thus, there is a purpose to Chandrakirti composing his treatise, the *Supplement*: it is to bring those who are far from the meaning of Nagarjuna's *Treatise on the Middle Way* closer to it. For example, an unopened flower bud can be likened to the mind of those of the lower schools. In order to blossom it needs to be watered; this is likened to Chandrakirti composing the *Supplement* in order to open the minds of the followers of the lower schools.

Chandrakirti's autocommentary says:

> If asked: Did not the Elders Vasubandhu, Dignaga, Dharmapala, and so forth, those authors of treatises who have already come, frightened by merely hearing the letters, fully reject this unmistakenly indicated meaning of dependent arising?
>
> It is said like that!

Vasubandhu was initially a Sautrantika but later became a Chittamatrin. Dignaga and Dharmapala were Chittamatrins. These three scholars were unable to bear the words of Nagarjuna's *Treatise on the Middle Way* that say that there is not the slightest atom of inherent existence. Instead they assert that phenomena exist inherently and truly, and, therefore, reject Nagarjuna's teachings. In fact, Vasubandhu is know to have once said, "Nagarjuna is a manifestation of a mara and my brother is his follower. The mahayana is like a space-flower." Vasubandhu's older brother was Asanga, a follower of Nagarjuna in that he too asserted the mahayana. According to the Vaibhashikas and Sautrantikas the mahayana is not the words of the Buddha, that is, it was not taught by the Buddha. Thus, for these two lower schools it is not feasible to accept Nagarjuna's *Treatise on the Middle Way*.

It is recounted that once Vasubandhu went to visit his brother Asanga, in whose room there were the five treatises that composed by Asanga himself, and picking one up began to read it. Vasubandhu's mind was captivated by what was written in these texts and he became a Chittamatrin, that is, he came to accept the mahayana. Vasubandhu, having initially been a hinayanist who deprecated the mahayana, composed the *Treasury of Knowledge* in order to purify this negative karma. Because the *Treasury of Knowledge* was composed for the purpose of purifying the negative karma of abandoning the Dharma, it is said that studying this text purifies this heavy karma.

Dignaga had four main disciples, one of whom was expert in the perfection of wisdom, another in Vinaya, another in Abhidharma, and another in the Treatise of Valid Cognition.

Chandrakirti's autocommentary says:

If asked: How is this to be realized?

It is explained:

> *This profound terrifying thusness, already explained, will be definitely realized by beings*
> *Out of prior familiarity. Others will not comprehend it though they listen extensively.*
> *Therefore, having seen those systems contrived by their minds, like pudgalavadin texts,*
> *Avoid the mind enjoying texts accepted by other traditions apart from this!* [13.4]

It should be understood that "just as the Forders, those who did not previously deposit imprints of strong interest in emptiness in their mental continua, [temporarily] abandoned the afflictions of the three realms – the desire, form, and formless – and saw they were able to join other tenets, yet were unable to be strongly interested in the ultimate intricately demonstrated by the Lord of Sages, likewise, they also already possess much listening to such types, yet do not utilize comprehending emptiness due to lacking the seeds of great interest in emptiness."

Thus, even in these very days, some who have deposited imprints of strong interest in emptiness in other lifetimes appear to realize the depths of emptiness out of only the strength of the cause. Even from the scriptural traditions of the Forders, those who decrease seeing it as true are seen to judge the depths of emptiness out of only the strength of the cause. Therefore, apart from the scriptural tradition of the Madhyamika, even having studied those systems concerning the texts of others contrived by their minds, like that done in the scriptural traditions of those who elucidate a self, avoid a joyous intellect. One should not realize surprise about other systems contrived by their minds; one should realize surprise only about great interest in viewing one's own emptiness!

Gedun Drup's *Mirror of the Clarification of the Thought*, as translated by Martin Willson, says:

> *This fearsome, profound reality which we have explained, will be truly understood*
> *By some from previous habit; others will not understand it though they listen much.*
> *Therefore, one should see that the latter's method is arbitrary, and reject the mind enjoying*
> *Treatises accepted by other schools apart from this, such as Pudgalavadin texts.* [13.4]

It should be understood that since methods teaching ultimate truth [apart from Madhyamika methods] are not the thought of the buddhas, one should see that they are written arbitrarily, and reject the attitude which delights in treatises accepted by other schools, other than this Madhyamika school, such as treatises propounding self-existence of the personality. For this fearsome, profound, absolute reality explained above will be understood truly by a person from habitual impressions of [very great] devotion to voidness in previous [lifetimes], but others will not understand this profound meaning even if they listen extensively.

Someone who lacks the latencies of emptiness from previous lifetimes, even if skilled in other texts, does not listen to this text and does not approach the realization of emptiness. Those who are skilled in the non-Buddhist schools, the Forders, do not believe in emptiness due to not having deposited these latencies in other lives. However, they do become free from the attachment of the three realms – the desire realm, form realm, and formless realm – by means of abandoning the objects of abandonment of the mundane path of meditation. They, therefore, separate from the attachment of the desire realm and attain an actual absorption of the form realm. They then separate from the attachment of the form realm and attain the actual absorptions of infinite space through nothingness. In this way they separate from attachment, that is, the coarse afflictions, up to the level of Nothingness. However, they do not believe in the Buddha's teachings on emptiness due to not having deposited the latencies of listening to teachings on emptiness in their past lives.

Tuesday afternoon, 15 May 2001

Lama Tsongkhapa's *Illumination* (Tibetan text page 460) says:

> *This system, compiled by the monk Chandrakirti*
> *from the* Treatise on the Middle Way,
> *Is expressed in accordance with the scriptures and*
> *In accordance with the instructions.* [13.1]
>
> *Just as this Dharma does not exist in others,*
> *Likewise, also the system that occurs here*
> *Should be ascertained by the wise*
> *Stating "It does not exist in others."* [13.2]

The system of this unmistaken commentary on the intention of the protector Nagarjuna, *having been compiled by the monk* Glorious Chandrakirti *from* [Nagarjuna's] *Treatise on the Middle Way – Fundamental Wisdom* – and so forth, is *expressed in accordance with the scriptures*, the sutras of definitive meaning, *and in accordance with the instructions* of Arya Nagarjuna. *Just as this Dharma* called "emptiness" *is not* unmistakenly expressed *in other treatises* apart from the scriptural system of the Middle Way, *likewise*, we ask that *also the system that occurs here* – that described by us here together with objections and responses – *be ascertained by the wise stating* "Such a Dharma of emptiness *does not exist in other treatises*." This is why the autocommentary says that those Madhyamikas who state "Whatever the Sautrantikas and Vaibhashikas say is ultimate is asserted by the Madhyamikas to be conventional," say this due to not understanding the suchness of the *Treatise on the Middle Way* because it is unsuitable for a supramundane Dharma to be similar to a mundane Dharma. Hence, since they posit all assertions of what is nominally presented as lacking establishment by way of its own character, they are a system that asserts tenets, such as that of the two proponents of objects who present on the basis of establishment by way of its own character, not only do not exist as the ultimate of their own system but do not exist even nominally. Thus, it is admonished "Understand that our own system is not only uncommon to the Chittamatrins, but it is uncommon to the system of the other Madhyamikas who comment on the intention of Nagarjuna and Aryadeva!" With respect to this, since Acharya [Chandrakirti] accepts Acharya Buddhapalita's commentary as valid, he does not imply any criticism of him, whereas, the two – the system of the conquerors' son Shantideva and the system of this acharya – appear to be very similar.

In dependence on the presentation of the two truths on the basis of there not existing establishment by way of its own character even nominally, there are many uncommon explanations that do not accept the tenets of the Svatantrikas, a basis-of-all, and so forth, however, they are not discussed here since they are extensively explained in the *Treatise Differentiating the Interpretable and Definitive* and so forth.

Although there are non-Buddhists who abandon the afflictions of the desire realm through those of Nothingness, they cannot understand the subject matter of the *Treatise on the Middle Way* due to not having the latencies of emptiness. Even the scholars of the lower Buddhist schools become frightened upon seeing the words setting out emptiness of the Prasangikas. The Vaibhashikas, Sautrantikas, Chittamatrins, and Svatantrika Madhyamikas are unable to realize the uncommon system of the Prasangika Madhyamika. For example, the elders, such as Vasubandhu, Dignaga, and Dharmapala, although skilled in philosophy are not able to realize the uncommon system of the Prasangika Madhyamika, this system being considered uncommon in that it has assertions that are uncommon to or not shared with the lower schools. The wise should understand that this is the case.

Vasubandhu, Dignaga, and others composed texts according to the Chittamatra system, these being unlike Prasangika Madhyamika system. Chandrakirti says that he is unable to understand their minds, meaning he does not know what their level of realization is. One text says: "Those like me can judge their own mind, but they cannot judge the mind of others. If they do, they will degeneration their own realizations." Gyeltshap Je's commentary on Dharmakirti's *Commentary on [Dignaga's] Compendium of Valid Cognition* says that we should be careful not to criticize others because we do not

know who is a holy being and therefore risk falling into a pit of fire. It is recounted, for example, that when Shantideva lived in Nalanda Monastery in India he was known as the "One with three realizations," these three being eating, sleeping, and defecating. At that time in the monastery there was a tradition that every fifteen days a monk would give teachings in a nearby nunnery. When Shantideva's turn came to teach, the nuns, in order to make fun of him, constructed an extremely high throne but without any steps up to it. The monks from Nalanda also came to hear the teachings. However, when Shantideva arrived he pressed the high throne down to a normal level with his hand and sat down. He then asked the nuns "What Dharma should I teach today?" They asked him to teach something new that had never been taught before. Shantideva then began his teaching which became the text *Engaging in the Bodhisattva Deeds*. When he came to the ninth chapter of this text, which is dedicated to the perfection of wisdom, he flew up into the air through an opening in the roof with his legs in the vajra position and continued on to the Glorious Mountain in the south. However, the foe destroyers in the audience who had the clairvoyance of divine ear were able to hear the remaining teachings. Thus, although Shantideva appeared to be very simple he had in fact great realizations, demonstrated by his ability to fly. Some of the monks later went to the Glorious Mountain and asked him what was the text the *Compendium of Learning* that he had referred to in his teachings on *Engaging in the Bodhisattva Deeds*. He told them that this text, written on rolled leaves, could be found hidden in the rafters of his room in Nalanda.

In short, we should not disparage other people as we do not know who is wise and who is a fool.

Lama Tsongkhapa's *Illumination* (Tibetan text page (461-3) says:

> OPINION: The supramundane is others' systems, which have passed beyond the nominalities of the world, and the mundane is our own system.
> RESPONSE: Since this contradicts the statement in the autocommentary "[They] thoroughly abandon the supramundane phenomenon," it must be the opposite, that is, the meanings of "mundane" and "supramundane" are the systems that do not realize and do realize suchness just as it is.
>
> Because this way of explaining the intention of the Arya is uncommon, those who do not understand the intention of the Arya and who, without ascertaining the suchness of the scriptures, are frightened by the mere letters that present emptiness, abandon this supramundane Dharma. Therefore, that "The *Supplement to the 'Middle Way'* was composed in order to unmistakenly present the suchness that is the meaning of the *Treatise on the Middle Way*" is explained:
>
> *Out of fear due to the color of the extremely vast ocean of Nagarjuna's intellect,*
> *Beings abandon to a far distance that which is the excellent system,*
> *But this water that opens the kumuda flower of his unfolding verses,*
> *Now completely fulfills the hopes of Chandrakirti.* [13.3]
>
> *Out of fear due to the* dark gray *color of the extremely vast ocean* difficult to fathom *of* Arya *Nagarjuna's intellect* realizing the profound, *the beings* who are proponents of Chittamatra and so forth indeed *abandon to a far distance that which is the excellent system* of Nagarjuna, yet *the water that opens the kumuda flower of the unfolding verses* of the Middle Way text acts to open the kumuda, *now fulfilling the hopes* in *Chandrakirti's* mind.
> QUESTION: If it is like that, did the authors of treatises who already came, the elders Vasubandhu, Dignaga, Dharmapala, and so forth, frightened also by hearing the mere letters, thoroughly abandon this unmistaken teaching on the meaning of dependent and related arising?
> RESPONSE: That is what is said. In regard to saying that, the texts of Vasubandhu and Dignaga that are free from argument could indeed be interpreted as the system of Cognition Only, but it is difficult for those like us to thoroughly realize just what the assertions of these acharyas are.
> QUESTION: Moreover, who realizes that profound meaning?
> RESPONSE:
>
> *The terrifying profound suchness that was already explained is definitely realized*
> *By beings through previous familiarity.* [13.4ab]

The terrifying profound meaning of *suchness that was already explained* before seems to be *definitely realized by those beings who previously familiarized* with the latencies of strongly aspiring for emptiness in other lives.

Here, Nagtsho's translation as follows appears to be better than Patshab's translation:

> Those possessing the inferior scriptural system of the Forders viewing true existence are seen to realize emptiness by the force of the cause.

Chandrakirti's *Supplement* says:

> *Although they listen extensively, it is not comprehended by others.*
> *Therefore, having seen the systems that are contrived by their own minds, just as you would the scriptural systems that express a self,*
> *Give up the mind that likes those other than this – the texts that assert others' systems.* [13.4bcd]

Just as other schools, those who have not previously deposited the latencies of strongly aspiring for emptiness in their mental continuum, as is explained in *Abhidharma*, abandon, for the time being, the manifest afflictions of the three realms excluding those of the Peak of Existence, and are seen to be able to closely connect to other tenets, yet are unable to strongly aspire for emptiness, the ultimate of the teachings taught by the Buddha, similarly, *although* these acharyas possess *extensive listening* to many scriptures, the profound meaning *is not comprehended by* them, that is, by *others*. *Therefore*, since *the system* of teaching the ultimate of those other than the Madhyamaka system does not become the intention of the Buddha, *having seen*, or viewed, *those that are contrived by their own minds*, *give up – just as you would the scriptural systems that express*, or clarify, *a self* of persons – *the mind that likes texts asserting the systems of other* acharyas, those that are *other than this* Madhyamaka system; that is, do not be amazed by other systems that are contrived by their own minds, but be amazed by just the strong aspiration for our own view of emptiness.

Lama Tsongkhapa says that one should give up enjoying texts that are other than those of the Madhyamika system. One should "be amazed by just the strong aspiration for our own view of emptiness."

Lama Tsongkhapa's *Illumination* (Tibetan text page 463) says:

3D Dedicating the virtue of having composed the treatise

Chandrakirti's autocommentary says:

> *By whatever merit I have attained through relating Acharya Nagarjuna's good tradition,*
> *Pervading the ends of the directions and white as autumn's moving star in the sky*
> *Of my mind – blue due to afflictions – or jewel-like in the hood of the snake of my mind,*
> *May the entire world realize thusness and quickly progress to the ground of the Sugata*. [13.5]

Gedun Drup's *Mirror of the Clarification of the Thought,* as translated by Martin Willson, says:

3D Dedicating the merits of composition

> *By whatever merits I have received from recounting Acharya Nagarjuna's right method,*
> *Which fill the quarters, like white stars in autumn in the sky of my mind made blue*
> *By defilements or like a jewel in the head of the serpent of my mind,*
> *May all the world perceive reality, and quickly go through to the stage of sugatahood.* [13.5]

By whatever merits I have received from recounting Acharya Nagarjuna's right method, which fill the limits of the directions and are white like the zodiacal constellations in autumn amidst the sky of my mind made blue [or black] by defilements or like a jewel in the head of the serpent of [the author's] mind, may the whole world directly realize absolute reality, and quickly win through to the stage of sugatahood, [called "Universal Light"].

Lama Tsongkhapa's *Illumination* (Tibetan text page 463) says:

> *Due to the merit, pervading the limits of the directions, I have attained from describing the excellent system of Acharya Nagarjuna –*
> *White as the moving autumn stars in the sky of my mind, blue from the afflictions,*
> *Or like a jewel in the snake hood of my mind,*
> *May all the worlds without exception realize suchness and then quickly progress to the sugata ground.* [13.5]

By the force of the extensive accumulation of *merit*, *pervading the limits of the directions* that *I have attained*, which arose *from describing*, or explaining, *the excellent system* of the Middle Way of the great *acharya*, Arya *Nagarjuna*, by thoroughly clarifying the collection of scriptures and reasonings – *as* completely *white as the moving autumn stars* in the midst of *the sky of my mind* made dark *blue by the* collection of *afflictions* or *like a jewel in the snake hood of my*, the author's, *mind*, *may all the worlds* of sentient beings *without exception realize* the profound *suchness* just as it is, *then quickly progress to the ground of a sugata*, called "Universal Light." Nagtsho's translation says:

> Whatever merit has been attained through resounding the beautiful system of Nagarjuna in all directions... [13.5a]

Glorious Chandrakirti dedicates the merit he has accumulated from composing the *Explanation of the 'Supplement to the "Middle Way"'* to the attainment of the buddha ground, Universal Light, by all sentient beings. Chandrakirti sets out an analogy as poetic license. He says that most sentient beings' minds are obscured or blackened by the afflictions, but that among the afflictions there are some white or positive minds, just as in the blue sky there are white stars. In this way, Chandrakirti dedicates the white stars of his merit found among the dark blue sky of the afflictions. Chandrakirti also likens his merits to a jewel in the hood of the snake of his, the author's, mind. It is said that the eight types of great nagas have ornaments of jewels on the snake hood that covers their heads. Thus, Chandrakirti likens the black or negative minds to a snake hood in which there are at times positive thoughts, these being likened to the jewels in the snake hood. In this way, Chandrakirti dedicates his merit that all the worlds of sentient beings without exception realize the profound suchness just as it is and then quickly progress to the sugata ground called "Universal Light."

Lama Tsongkhapa's *Illumination* (Tibetan text page 463-4) says:

4 Meaning of the conclusion

- A The acharya who composed it
- B The translators and pandits who translated it

4A The acharya who composed it

Chandrakirti's autocommentary says:

> That completes the *Explanation of the 'Supplement to the "Middle Way,"'* elucidating the manner of the profound and the extensive, composed by Acharya Chandrakirti who looked up to the supreme vehicle, possessed undeprivable wisdom and compassion, and who, by extracting milk from the picture of a milking cow, overcame grasping to true [existence].

The *Supplement to the 'Middle Way'* clarifies the manner of the profound and extensive. The profound manner or mode is emptiness. The *Supplement* explains that even though all the phenomena ranging from form through the exalted knower of all aspects are not established by way of their own character or do not exist inherently, agents and actions are still feasible. The extensive manner refers to the

explanation of the three qualities of this context and the eleven grounds, the causal grounds and the resultant ground. The three qualities of ordinary beings are set out in the *Supplement* (Hopkins, *Compassion in Tibetan Buddhism*) saying:

> *The mind of compassion, non-dual understanding,*
> *And the altruistic mind of enlightenment*
> *Are the causes of children of conquerors.* [1.1]

Thus, the three qualities are compassion, the understanding of non-duality, and the mind of enlightenment. Compassion is of three types: compassion observing mere sentient beings, compassion observing phenomena, and compassion observing the non-observable. Chandrakirti praises the first type of compassion (Hopkins, *Compassion in Tibetan Buddhism*) saying:

> *Homage to that compassion for migrators who are*
> *Powerless like a bucket traveling in a well*
> *Through initially adhering to a self, an 'I',*
> *And then generating attachment for things, 'This is mine.'* [1.3]

There is then a discussion about how migrating beings wander in cyclic existence like a bucket in a well. It is said that first, sentient beings adhere to the existence of a self thinking "I," and then generate the view of the transitory collection of mine. Due to this conception of mine, beings create karma. This is taught also in Nagarjuna's *Precious Garland* (Hopkins, *Buddhist Advice for Living and Liberation*) saying:

> As long as the aggregates are conceived
> So long thereby does the conception of I exist.
> Further, when the conception of I exists,
> There is action, and from it there also is birth.
>
> When these three pathways mutually causing each other
> Without a beginning, middle, or an end,
> This wheel of cyclic existence
> Turns like the wheel of a firebrand.

Like a swiftly turning firebrand, the three paths of cyclic existence have no beginning, middle, or end. The three paths are

1. the thoroughly afflicted path of afflictions,
2. the thoroughly afflicted path of actions, and
3. the thoroughly afflicted path of rebirth.

Due to these three paths one continues to circle in cyclic existence like the circling of a firebrand. Seeing this, one generates compassion.

The three paths can be related to the twelve links of dependent-arising. The thoroughly afflicted paths of afflictions are the first, eight, and ninth links (ignorance, craving, and grasping); the thoroughly afflicted paths of actions are the second and the tenth links (karmic formations and existence); and the thoroughly afflicted paths of rebirth are the remaining seven links which are suffering (consciousness, name and form, the six entrances, contact, feeling, birth, aging and death).

Chandrakirti (Hopkins, *Compassion in Tibetan Buddhism*) praises the third type of compassion, the compassion observing the non-observable, saying:

[Homage to that compassion for] migrators
Seen as evanescent and empty of inherent
Existence like a moon in rippling water. [1.4ab]

How would one praise the second type of compassion? By changing the words of this verse as follows:

[Homage to that compassion for] migrators
Seen as empty of permanence,
Like a moon in rippling water.

Seeing sentient beings in these ways it becomes easy to generate compassion for them. Chandrakirti (Hopkins, *Compassion in Tibetan Buddhism*) says:

Mercy alone is seen as the seed
Of a conqueror's rich harvest,
As water for development, and as
Ripening in a state of long enjoyment,
Therefore at the start I praise compassion. [1.2]

Since compassion is so important it is praised by Chandrakirti at the very beginning of his text.

In short, the *Supplement to the 'Middle Way'* was composed by Acharya Chandrakirti. There is a story related to the reference here about extracting milk from the picture of a cow. When Chandrakirti was living in Nalanda Monastery the monks kept cows in order to provide the monastery with milk. When it was Chandrakirti's turn to milk the cows, although he let the cows roam completely free without taking care of them, he was able to provide the monastery with milk each morning. The monks wondered how this was possible and went to see how Chandrakirti managed this. Looking into his room, they saw that he extracted milk from a picture of a cow drawn on the wall of his room. This is the reason that here the text says: "who, by extracting milk from the picture of a milking cow, overcame grasping to true [existence]."

Lama Tsongkhapa's *Illumination* (Tibetan text page 464) says:

> This completes the *'Supplement to the "Middle Way,"'* clarifying the manner of the profound and extensive, composed by Acharya Chandrakirti, who practiced the supreme, vehicle, possessed unassailable wisdom and compassion, and who, by extracting milk from a drawing of a cow, overcame the adherence to true existence.

This completes the 'Supplement to the "Middle Way,"' clarifying the manner of the profound and extensive in Nagarjuna's system, *composed by* the great *acharya*, glorious *Chandrakirti*, holder of knowledge and renowned to have attained the illusion-like meditative stabilization *who* thoroughly *practiced the supreme*, highest *vehicle*, *possessed* amazing *wisdom and compassion unassailable* by the discordant class, *and who, by extracting milk from a drawing of a cow, overcame* sentient beings' *adherence to true existence*.

Chandrakirti extracted milk from the drawing of a cow in order for sentient beings to overcome their adherence to true existence.

Lama Tsongkhapa's *Illumination* (Tibetan text page 464) says:

4B The translators and pandits who translated it

Chandrakirti's autocommentary says:

> The sources were written mostly in accordance with sutra,
> And thereafter, when two versions were possible, it was
> Translated to agree with the term's meaning in the root text and commentary.
> Act honestly! It is to be analyzed.

Translated at the Ratnagupta Vihara in the Kashmiri city of Anupatna, during the reign of the Kashmiri king, the Glorious Aryadeva, by the Indian Abbot Tilaka Kalasha and the Tibetan translator Venerable Patsab Nyima Drag, in accordance with the Kashmiri text. Later, at the Rasa [i.e., Lhasa] Ramoche, that very Tibetan translator encountered the eastern Aparanta text and properly correcting [the first version], settled it.

The size of this text is one-sixth of a *bampo* short of twelve *bampos*, having three thousand five hundred and fifty stanzas.

Lama Tsongkhapa's *Illumination* (Tibetan text page 464) says:

> Translated at the Ratnagupta Vihara, in center of the city of Anupama in Kashmir, during the life of the Kashmiri king, glorious Aryadeva, by the Indian abbot Tilaka and the Tibetan translator Venerable Patshab Nyimadrag, in accordance with the Kashmiri text. Later, at the Ramoche in Rasa (i.e., Lhasa), the Indian abbot Kanakavarma and that very translator compared it to the eastern Aparanta text and correcting it well, settled it.

Translated [from Sanskrit into Tibetan] *at the Ratnagupta Vihara, in center of the city of Anupama in Kashmir, during the life of the Kashmiri king, glorious Aryadeva, by the Indian abbot Tilaka* Kalasha (Drop Vase) *and the Tibetan translator* Patshab Nyimadrag*, in accordance with the Kashmiri text. Later, at the Ramoche in Rasa (i.e., Lhasa), the Indian abbot Kanakavarma* (Golden Armor) *and that very translator compared it to the eastern Aparanta text and correcting it well, settled it* by means of studying it.

The compilation of the common points in terms of the author's colophon and the translator's colophon is from the point of view of revising it through combining the two, the separate translation of the root verses and the root verses in the commentary.

Lama Tsongkhapa's colophon

> The supreme essence of all the teachings of the Conqueror,
> The profound middle way free from extremes, the path of dependent-arising,
> Having abandoned the two extremes, just as prophesied in regard to the Teacher,
> Supreme Arya Nagarjuna precisely composed his commentary.
>
> Although many systems of the wise commenting on the intention
> Of Aryadeva, the holy system far from that,
> Glorious Buddhapalita composed a complete commentary
> On the systems of Chandrakirti and Shantideva.
>
> With respect to the assertions of the three lords of tenets,
> Having synthesized them into one, they are well explained
> With conclusive analysis of the essential points and precise words,
> Whereby, the supreme Prasangika system is established to be stainless.

Even those aspiring to this system in this northern land,
Not following the extremely subtle ways of reasoning and
Having inferior fortune regarding the profound meaning,
Disparage the supreme system that they do not realize.

To eliminate the stains to seeing much and
To clarify the profound path for the few of good fortune,
I too strove in all lives
In order not to be separated the supreme path.

By the virtue that arose from this hardship here,
May all migrating being fully realize the profound essential points and
Exerting themselves constantly to accomplish it night and day,
Always please the conquerors and their sons.

As a result of the persistent urging of the virtuous spiritual friend Lhulaka Chupa Legpa Pel, who offered a mandala of forty silver coins, and the persistent urging of many virtuous spiritual friends who strongly aspired to this Dharma and whose mental capacity for the meanings and realizations is not low, saying "Make an extensive conclusive analysis of the general meaning of [the middle way] that has complete explanations of the difficult points of the autocommentary and that clarifies the words and meanings," the glorious Tsongkhapa Losang Dragpa, a yogi of the great middle way and a monk from the east who had done much listening, composed this [text] called *Illumination of the Thought*, *An Extensive Explanation of [Chandrakirti's]* '*Supplement to the "Middle Way"'* at Ganden Monastery, the place of total victory.

SARVAMANGALAM

English translator's colophon of the *Explanation of the 'Supplement to the "Middle Way"'*:

English colophon Translated into English and edited at Istituto Lama Tzong Khapa, near Pisa, Italy, by Gelong Thubten Tsultrim (George Churinoff), 1994. This working draft is based on a first draft of the translation by the translator with the kind assistance of Tibetan Abbot, Geshe Jampa Gyatso and the translator Acharya Thubten Jampa (partial), following the Peking and Derge editions of the Tibetan text. The first draft was completed January 23, 1991. Seventy copies of this working draft were offered on the occasion of the teaching of this text by His Holiness the Dalai Lama at Sera Monastery, South India, October 31, 1994.

Reprinted January 2000 for the exclusive use of the Masters Program.

English translator's colophon of the *Illumination of the Thought:*

This preliminary translation of part of Lama Tsongkhapa's *Illumination of the Thought*, the commentary on verses 6.8 onward of the *Supplement to the 'Middle Way,'* was done by Joan Nicell (Getsulma Tenzin Choden), and checked and corrected by the Tibetan interpreter and translator Thubten Sherab Sherpa, for use by the Masters Program students on the occasion of the oral commentary by the most precious virtuous spiritual friend Geshe Jampa Gyatso at Istituto Lama Tzong Khapa, Pomaia (Pisa), Italy, during the period May 2000 to May 2001. This translation was then corrected on the basis of Geshe Jampa Gyatso's oral commentary and appears in the weekly transcripts of these teachings, however, it still requires further checking and editing and should in no way be considered final.

Whatever merit has been created is dedicated to the long and healthy life of Geshe Jampa Gyatso,
the ongoing success of the FPMT Masters Program, and
the flourishing of all the Dharma activities of the precious spiritual guides,
Lama Zopa Rinpoche and Lama Osel Rinpoche.

THE END

Extra questions related to the *Middle Way*:

Student: Does stanza 12.39 of the *Supplement* indicate the time from the Buddha's enlightenment until now, or does it indicate how long the Buddha will remain from now (Tibetan text of *Illumination*, page 458)?

> *As many as are the particles that are subtle particles existing in*
> *The places that are all the buddha lands of the directions,*
> *For that many eons has the Sugata also gone to most holy supreme enlightenment,*
> *Nonetheless, this secret of yours is not to be divulged.* [12.39]

Geshe Jampa Gyatso: The amount of supreme emanation bodies is indicated, not the measure of how long a buddha remains after his enlightenment. A buddha attains enlightenment in Not Low (Akanishta) and displays emanation bodies to sentient beings who display the attainment of enlightenment in different places. The time of enlightenment is not just once in Not Low but enlightenment is attained many times in the form of emanation bodies who enact the twelve deeds of a buddha.

Student: Does the supreme emanation body of Shakyamuni Buddha exist at the present time in this world? If someone were to see a buddha with all the signs and exemplifications in the present time in this world, would that necessarily be a supreme emanation body?
Geshe Jampa Gyatso: A supreme emanation body with all the signs and exemplifications does not presently exist in this particular world. This is because the period in which Shakyamuni Buddha showed the various deeds has come to an end and he is now enacting the attainment of enlightenment in other worlds. His Holiness the Dalai Lama says that when someone attains the great level of the mahayana path of preparation that person sees buddha statues as actual buddhas in the aspect of supreme emanation bodies and can converse with them. In one text it says: "In front of one with very strong belief, Shakyamuni Buddha appears." We can think of the story of Asanga who did not see Maitreya even though he had been in the cave with him all the time.

Student: In the presentation of the third bodhisattva ground, Lama Tsongkhapa says that a third ground bodhisattva attains the four pure concentrations, four pure formless absorptions, the four pure immeasurables, and the five pure clairvoyances. However, it seems that the bodhisattva attains the concentrations, formless absorptions, immeasurables, and clairvoyances prior to the third ground. Therefore, what is the distinction between these 'pure' attainments and the mere attainments? And does a bodhisattva attain these "pure" attainments on the third ground or before? How do these attainments become "pure"?
Geshe Jampa Gyatso: I would have to refresh my memory by looking at *Illumination* again in order to answer the question. But, in general, on the third ground a bodhisattva attains, from among the three higher trainings, the surpassing higher training of the mind. In the commentary it does not say "higher training in meditative stabilization" but instead says "higher training of the mind." The higher training of wisdom is attained on the fourth, fifth, and sixth grounds. On the fourth ground the bodhisattva attains a wisdom skilled in the coarse and subtle thirty-seven harmonies with enlightenment, on the fifth ground he attains a wisdom skilled in the coarse and subtle four noble truths, and on the sixth ground he attains a wisdom skilled in coarse and subtle dependent-arising, that is, the forward and reverse orders.

An actual absorption of a first concentration can be either pure or uncontaminated. An uncontaminated actual absorption of a first concentration is one that is suitable to transform into a superior's uncontaminated path. A pure actual absorption of a first concentration is of four types: that concordant with degeneration, that concordant with abiding, that concordant with enhancement, and that concordant with definite differentiation. A pure actual absorption of the first concentration

concordant with degeneration is an actual absorption of the first concentration that will degenerate due to the arisal of afflictions or an actual absorption of the first concentration in which an affliction will arise in the next moment. A pure actual absorption of the first concentration concordant with abiding is one that is presently an actual absorption of the first concentration and in the next moment will remain that. A pure actual absorption of the first concentration concordant with enhancement is an actual absorption of the first concentration which in the second moment will become an actual absorption of the second concentration. A pure actual absorption of the first concentration concordant with definite differentiation is an actual absorption of the first concentration that in the second moment will become the entity of an uncontaminated path.

Student: It is said that the eighth ground bodhisattva will attain the ten controls. Does this mean that he attains them on the eighth ground, or that he merely attains a similitude of them on the eighth ground?
Geshe Jampa Gyatso: He only attains a similitude of them on the eighth ground in that the actual controls are only attained on the buddha ground.

Student: According to the Prasangika school what is the pervasion between the perfect end and the uncommon absorption of cessation?
Geshe Jampa Gyatso: The perfect end is emptiness, whereas an uncommon absorption of cessation is an exalted knower. However, the actualization of the perfect end means to absorb in meditative equipoise on emptiness in a manner of not arising again. In short, the absorption of cessation is not an emptiness, whereas the perfect end is an emptiness.

Student: What is the difference between anger and hatred according to Buddhism?
Geshe Jampa Gyatso: In general, they are the same. In the Treasury of Knowledge the six subtle increasors that are root afflictions include anger, which is considered to be the equivalent of hatred.

Student: In the transcript of Geshe-la's *Ornament* teachings (week 14, p. 35, 31 May 2001), it says: "In the perspective of an exalted knower of all aspects seeing modes – that is, a seer of modes – conventional truths do not exist, that is, it does not see varieties." Is the object of this isolate – "in the perspective of an exalted knower of all aspects seeing modes" – an omniscient consciousness? If not, it seems that the mind conceiving this isolate would be a wrong consciousness. Would Geshe-la please comment on this? In short, is the seer of modes not an omniscient consciousness?
Geshe Jampa Gyatso: It is
Student: It is not an omniscient consciousness because in its perspective varieties do not exist.
Geshe Jampa Gyatso: In the perspective of that seer of modes varieties do not exist, therefore, they cannot appear to it. Even in the perspective of a seer of modes in the continuum of a superior in meditative equipoise if varieties were to exist they would be an object of negation. That varieties do not exist in the perspective of a seer of modes does not mean that the seer of modes does not realize varieties. Therefore, a seer of modes of a buddha does see varieties. The omniscient consciousness seeing modes sees varieties, but in the perspective of a seer of modes seeing modes the omniscient mind seeing modes does not see varieties.
Student: What is the purpose of this presentation?
Geshe Jampa Gyatso: To make you confused!

END
